(6) The Indian and Iranian rites, though scarcely baptismal, are worth noting, especially when they are taken in connexion with the rites of initiation (see § 12) which are their complement. Among the ancient Hindus (and, less completely, in modern times) the following ceremonies were performed. Before the navel-string was cut the Jātakarman rite was performed for male children, and while the sacred formulæ were recited, the child was fed with honey and butter. Ten or twelve days after birth the father performed, or caused to be performed, the Nāmadheya, or rite of naming, giving the child a secret name besides the name for common use, which had to be auspicious if he were a Brāhman, connected with power if a Kṣatriya, with wealth if a Vaiśya, or contemptible if a Sūdra. Later, there were rites in connexion with first leaving the house, making the tonsure, etc. Other writers speak of the child being ceremonially washed, or dipped in the sacred waters of the Ganges or some other river (*Laws of Manu*, ii. 29, 30; Dutt, *Civ. in Ancient India*, London, 1893, i. 262; Zimmer, *Altindisches Leben*, Berlin, 1879, p. 320). Little is known of the birth ceremonies among the ancient Iranians beyond those already described, and the statements sometimes made regarding the use of a kind of baptism may rest on erroneous renderings of passages in the sacred books (see Geiger, *Civ. of E. Iran*, London, 1885, i. 56, and translator's note). Beausobre (*Hist. Manich.*, Amsterdam, 1734–39, lib. ix. cap. 6, sec. 16) says the child was carried to the temple, where the priest plunged it into a vessel of water, and the father gave it a name. Corresponding to the Hindu feeding with honey and butter is perhaps the old custom of giving the newly-born child some haoma-juice and aloes, in order to confer wisdom upon it, as well as to drive off fiends and evil spirits (*Sad Dar*, xxiv.; *Shāyast la-Shāyast*, x. 15–16; and cf. Gomme, *Eth. in Folk-lore*, London, 1892, p. 129, for the purpose of this ceremonial feeding). Among modern Parsis there are no formalities in connexion with name-giving, the mother conferring a name upon the child (Geiger, i. 57, translator's note), although the *joshi* (astrologer) 'first gives out the names the child can bear according to its affinity to the stars under whose influence it was born' (Karaka, *History of the Parsis*, London, 1884, i. 161–162). With them, the Bareshnum rite (see § 12 (2)) washes away all defilement contracted in the womb.

(7) Among the ancient pagan races of Europe similar customs were also found. The heathen Teutons had a baptismal rite long before Christian influences had reached them. The ceremony took place immediately after birth, the father sprinkling the child, giving it a name, and consecrating it to the household gods. In this way he acknowledged it as his own, and after the rite the child could not be exposed, as it had now become one of the kin. The ceremony was known as *vatni ausa*, 'sprinkling with water' (Grimm, *Teut. Myth.*, London, 1880–83, ii. 592). References to the rite occur in the *Chronicles*. Snorro Sturleson (*Chron.* c. 70) relates that a noble, in the reign of Harold Harfagr, took a newborn child, and, pouring water upon its head, called it Haco. Pope Gregory III. directed the missionary Boniface how to proceed in such cases where this pagan baptism had already been used. Mallet (*North. Antiq.*, London, 1770, i. 335) rightly shows the true nature of such rites when he says they were intended to preserve children 'from the sorceries and evil charms which wicked spirits might employ against them at the moment of their birth.' The Celts also had similar customs; and here the priest is more in evidence, although, as some think, the method of naming and the whole of Druidism were taken over from the non-Celtic races with whom the Celts found themselves in contact. Saga and legend alike give many instances of the Druid bestowing a name on the child from some casual circumstance which had happened at the birth or after, —a method of name-giving common among various savage races. As with the Eskimos, the name was an entity, an actual substance put upon the child by the Druid. Occasionally, also, a baptismal rite is mentioned as performed by the Druid; *e.g.* Conall Cernach was so baptized (Windisch, *Irische Texte*, Leipzig, 1891–97, iii. 392, 423). There is no reason to think with M. D'Arbois de Jubainville (*Rev. Celt.* xix. 90), that there is here only a product of the imagination of the saga-writers, reflecting Christian ideas, since such a rite is so wide-spread in paganism, while (see (8)) some trace of it still remains as a survival on Celtic ground (Rhys and Jones, *The Welsh People*, London, 1900, 66 f.; W. Stokes, *Cóir Anmann* [in Windisch, *Irische Texte*, iii.] sec. 251; and *Academy*, 1896, p. 137). The birth-ritual of the Greeks (among whom ritual purification occupied so large a place) was as follows: The child was at once bathed in water, sometimes mixed with oil or wine. On the fifth or seventh day, a more formal purification took place (the ἀμφιδρόμια), and the child was also carried round the fire. On this day or on the tenth day, on the occasion of a family festival, which was also sacrificial, the father recognized the child, which (as in the Teutonic instance) could not then be exposed, and the name, usually that of a grandparent, was given (see scholium on Aristotle, *Lysistr.* 757). The Romans, on the Dies Lustricus,—the ninth day after birth for boys, the eighth for girls,—conferred a name on the child, which was passed through water, the nurse at the same time touching its lips and forehead with saliva to avert magical and demoniac arts (Macrobius, *Saturnalia*, lib. i. cap. 16).

(8) It is curious to observe how, occasionally, a pre-Christian rite remains as a superstitious observance, even where Christian baptism is common.

A good example of this occurs among the Lapps, who, in heathen times, had a ceremony called *laugo* (see more fully art. BIRTH, Finns and Lapps). This consisted in bathing or sprinkling the child with water in which alder-twigs had been placed, while a name was given to it, and it was placed under the protection of Sarakha, the birth-goddess. At any illness the ceremony was repeated and a new name given. But when Christian baptism was introduced, the old rite was still continued privately, both by way of confirming the Christian rite and continuing the advantages supposed to be given by the heathen ceremony (Pinkerton, *General Collection of . . . Voyages and Travels*, London, 1808–1814, i. 483; Ploss, i. 257, 258). Such a case as this distinctly points to the rationale of ethnic baptismal rites as already set forth, viz. a defence against evil influences as well as a removal of 'uncleanness.' The baptismal ceremony of the pagan Celts already referred to has not altogether been destroyed by the use of the Christian rite; for even now, in remote districts, the following survival is found. After birth, the nurse drops three drops of water on the child's forehead *in Nomine*. A temporary name is given until the real name is conferred in the Christian ceremony. This earlier baptism keeps off fairies (evil influences) and ensures burial in consecrated ground. It is thus a clear survival of an earlier purificatory and protective rite, which at the same time admitted to the tribal religious privileges (Carmichael, *Carmina Gadelica*, 1900, i. 115). The pagan rite also persists with the Lithuanian peoples on the Baltic coast. On the evening before the baptism by the priest, the child is bathed in warm water, while an old woman kills a cock at the place where the child was born (*L'Anthropologie*, v. 713).

8. *Suggested influence of Christian and Jewish rites.*—The possibility of the derivation of some of these ethnic baptismal rites from Jewish or Christian sources should not be overlooked. Dr. Nassau suggests this in the case of the West African ceremonies; nor is it improbable in this and in other cases when we consider the diffusion of belief, ritual, myth, folk-tale, or of art and industrial products outwards from various centres, and their ready acceptance by races at a great distance from such centres. But, on the other hand, similar beliefs everywhere produce similar results, and the universality of the opinions regarding uncleanness, the contagion of evil, and harmful spirits, as well as concerning the power of water, may quite easily have given rise to similar purificatory rites in various regions and religions, without any necessary recourse to imitation of Jewish or Christian rites. To these, name-giving was sometimes attached, here by accident, there by intention. Frequently, too, what makes these heathen rites appear so much to resemble the Christian sacrament is the use of Christian formulæ in describing them by those who have witnessed them and have been struck with the resemblances rather than with the differences. The universality and, in some cases, the antiquity of these rites point to their originality.

9. *Religious and social aspect of the rites.*—Analyzing the various examples of ethnic baptism, we note several points. First, the purificatory washing frequently passes over into a mere symbolic act of sprinkling, a process analogous to the change in the Christian rite from dipping to pouring water over the candidate. Next, the religious aspect of the rite is emphasized by the dedication of the child to the gods (Polynesia, Mexico, etc.); by the solemnity of the act; by its frequent performance by priest or medicine-man (various African tribes, Polynesians, Mexicans, Peruvians, Mayas, Tibetans, Chinese, Hindus, Iranians, and Celts), or by the father as house-priest; by the use of 'medicine' in addition to, or in place of, water; and by the general intention of the rite as already pointed out. Lastly, the social aspect of the rite is emphasized in its public performance, occasionally by the headman of the community; by the reception of the child into the kin; by the feast held on the occasion, which is attended by the relatives; and also by the common custom of naming after an ancestor. (For examples of name-giving by itself, accompanied by a feast attended by relatives, or as making the child a member of the kin, see Hind, *Labrador*, 2 vols., Lond. 1863, i. 286; *JAI* xix. 324 [Torres Straits]; *BE*, Third Report, p. 246 [Omahas, the child's face is marked with the privileged symbolic decoration]; *L'Anthrop.* x. 729 [Borneo]). Thus ethnic baptism, accompanying the act of name-giving, cannot be considered as a casual rite, but must be regarded as one of considerable importance for the religious and social life of the child. The occasional performance of the rite by the mother or by other women of the tribe must have originated through the matriarchate and descent through the mother.

10. *Baptism with blood.*—The aspect of the baptismal rite as a formal admission into the clan or tribe is further seen in those cases where the child or, later, the youth is sprinkled with his father's or kinsman's, or with sacrificial, blood. Among the Caribs the newborn child was sprinkled with blood drawn from the father's shoulder, to give it courage and generosity, and, since the life of the clan is in the blood, to admit it to the circle of the kin (Rochefort, *Iles Antilles*, 1660, p. 550). Among certain Australian tribes at the initiation of youths, it is customary for the older men to cut themselves and let the blood run upon the novice, the object being to strengthen him, or to transfuse the kin-life into him. Especially is this the case where the smearing with blood takes place after the pretended killing and restoration of the candidate, when he also receives a new name (Howitt, pp. 658, 668; Frazer, *Totemism*; and for corresponding uses of blood, Spencer-Gillen[b], p. 596 f.). Among the Alfoers the child is smeared with swine's blood (Bastian, *Die Völker der östlichen Asien*, Jena, 1866–1871, v. 270); and on the Gold Coast, rum (replacing blood) is squirted over him by the father (Ellis, *Tshi-speaking Peoples*, London, 1887, p. 233). The modern Arabs retain the custom from heathen times of washing a child's forehead with the blood of an animal sacrificed to a saint whose favour has caused the child's birth, and whose protection is thus expected to be given to him. There is also some idea of identifying the child with the sacrifice by which he is redeemed (Curtiss, *Prim. Sem. Rel.*, Chicago, 1902, p. 201). In heathen times this rite had greater significance as bringing the child within the stock; he was dedicated to the stock-god in connexion with a sacrifice, the blood of which was daubed on his head. The blood united god and child. The child was also named and its gums rubbed with masticated dates (symbolic food-giving rite, cf. § 7(6), India, Persia) on the morning after its birth, probably by the priest. All these rites signified reception into the privileges, social and religious, of the kin-group (W. R. Smith, *Kinship in Arabia*, Cambridge, 1903, p. 152 f.).

11. *Use of saliva.*—The same intention of acknowledging kinship, and of bestowing it ceremonially through contact of the child with something belonging to the kinsman, is seen in several rites where the child is rubbed with the saliva of a relative or is spat upon. Actual examples in connexion with the giving of a name are found among the

Mandingos and Bambaras of West Africa, the priest spitting thrice in the child's face (Park, *Interior Districts of Africa*, Edin. 1860, p. 246). Among the Banyoro of Uganda, on the third or fourth day after the child is born, the priest presents it to the ancestral spirits and begs their favour for it, accompanying each special request by spitting on the child's body and pinching it (Sir H. Johnston, *Uganda Protectorate*, Lond. 1902, ii. 587). Muhammad is said to have done the same when he named his grandson Ḥasan (Ockley, *Saracens*[4], Lond. 1847, p. 351). Persius, in his *Satires* (ii. 31), ridicules the female relative who rubs the baby's forehead with saliva when it receives its name (see § 7 (7) for the Roman custom). The practice survives in the use of spittle in baptism in the early Church and in modern Roman Catholic usage, as well as in folk-custom in Europe. Here the intention is altered, and the purpose is to ward off the evil eye, spells, witches, and fairies. But this, which brings the custom into line with the general powers of water in this direction, is probably derivative. Saliva is in many other instances used to ward off evil, but it probably does so because it is a bond between two or more persons who thus form a strong array against the powers of evil (see Hartland, *LP*, London, 1894–96, ii. 261 f.).

12. *Baptism at initiation.* — These social and religious aspects of the rite are also marked in the ceremonies at initiation to tribal or totem-group privileges, or to sacred mysteries. As an example of those initiatory rites, we may first refer to such a simple form as the sprinkling of girls who have just reached womanhood, as practised among the Basutos (Casalis, p. 267). This form of purification is analogous to the tatuing, scourging, fasting, etc., of other peoples, undergone by the boy or girl on arriving at puberty, as a means of driving out evil (see under these titles). We have noted that baptismal and cognate rites at birth or soon after have the effect of admitting the child into the community or into the religious privileges of the tribe. But sometimes this admission, however it is accomplished, is deferred until the dawn of manhood or womanhood, or a little earlier, or is repeated then, as in savage initiations to the totem clan or to the tribal mysteries (see TOTEM, MYSTERIES). In such cases the same ideas of purification from the infection of evil, sometimes by means of water, or again by sprinkling with or bathing in blood, by circumcision, or by simulated death and re-birth, are found, with the intention of introducing the postulant to a fuller life.

(1) As an example of such ceremonies in the higher religions, the Brāhmanic rites may be referred to. The ceremony of *Upanaya*, or initiation to the privileges of religion, took place when a boy had arrived at years of discretion. The *guru* asked the boy's name, and, taking water, sprinkled his hands with it three times. In modern times the investiture with the threefold sacred thread, which is blessed by a Brāhman, while texts from the sacred books are recited over it and it is sprinkled with holy water, is the chief part of this rite. Before this the boy is not called a Brāhman; but now he becomes 'twice-born' or regenerate, and it is open to him to read the sacred books, and to take part in prayers and in the religious ceremonies (Manu, ii. 36; Dutt, i. 263; M. Williams, *Rel. Thought and Life in India*, London, 1883, p. 358).

(2) This ceremony resembles that of the Parsis, whose sacred books lay strong emphasis upon the uncleanness contracted by the child in the womb of its mother (see § 2). In order to be free from all such defilement, it is necessary for each one at or before the age of 15 to perform the elaborate purificatory ceremonies of the Bareshnum, else at death he will not pass the Chinvat bridge. The rite includes sprinkling with *gomez* and washing with *gomez* and water (for the ceremony see *SBE* i. 122; xviii.). About the same time, and still in view of the pre-natal defilement, the sacred girdle thread is assumed, 'to establish the wearer in the department of Ormazd, and to take him out of the department of Ahriman' (*Sad Dar*, x.). The result of these ceremonies is to make the youth *navazad*, 'newly-born,' a term corresponding to the Brāhmanic 'twice-born,' and to the view taken of such ceremonies elsewhere, while he now becomes a member of the community (West, *Pahlavi Texts*, i. 320, iii. 262; *Shāyast la-Shāyast*, x. 11).

(3) A species of baptismal rite occurred as a formula of admission in separate religious societies or mysteries. Candidates for admission to the Egyptian mysteries of Isis were baptized by the priest, the result being purification and forgiveness of sins. '[Sacerdos] stipatum me religiosa cohorte deducit ad proximas balneas et prius sueto lavacro traditum, præfatus deûm veniam, purissime circumrorans abluit' (Apuleius, *Met.* xi.).

(4) In the ritual of the Orphic mysteries the mystic affirmed ἔριφος ἐς γάλ' ἔπεσον, 'a kid I have fallen into milk,' but the significance of the words is uncertain, and they do not seem to point to a rite of immersion in milk. The use of milk in early Christian baptism—the newborn in Christ drinking the food of babes—may suggest a symbolic drinking of milk in the rite (for a discussion of the formula see Miss Harrison, *Proleg. to Greek Rel.*, Cambridge, 1908, p. 596 f.).

(5) But of all such purificatory rites the best known are those of the Greek Eleusinia, in which the initiation was most searching, and no one could be admitted to the celebration of the mysteries who had not undergone it, while to reveal these to the uninitiated was a criminal act. Purification by water was part of the preliminary rites, which were regarded as a kind of new birth. The candidate bathed, and emerged from the bath a new man with a new name. This purification, or κάθαρσις, is constantly referred to by the Greek Fathers, especially Clem. Alex., as a parallel to the Christian rite of baptism both in its nature and in its intended effects of admitting to a higher life, to the 'Greater Mysteries' (*Strom.* v. 71, 72). Whatever view of sin was held in the doctrine of the Mysteries, whether it was highly ethical or simply ceremonial, these purificatory rites freed the candidate from the stain of sin and prepared him for the revelation to come, while he himself was required to be ἀγαθὸς εὐσεβὴς καὶ ἅγνος. By the preliminary ceremonies the candidates became τεληταί, and were admitted to the τελεστήριον and the revelations which awaited them there (Lobeck, *Aglaophamus*, Königsberg, 1829; Foucart, *Recherches sur les mystères d'Eleusis*, Paris, 1895).

(6) Similar purificatory rites entered into the ceremonies of the various Religious Associations which, entering Greece from the east, gained such a hold over the people. The candidate was examined to prove whether he was 'pure, pious, and good,' ἅγνος εὐσεβὴς κἀγαθός, and all members who had become impure had to submit to purificatory rites. Such impurities were, however, material rather than moral, and correspond on the whole to those savage tabus which had to be removed by various rites. The eating of pork or garlic, connexion with a woman, contact with a corpse, the defilement of murder, are some of those enumerated on inscriptions or in Greek writers. Purification was of different kinds, according to the society; sometimes it was by means of water thrown on the head, as in savage baptismal rites. Plutarch describes these vigorously as ῥυπαραὶ ἀγνεῖαι, ἀκάθαρτοι καθαρμοί, but all alike had to do with outward

purification alone. Theophrastus and Plutarch (*Char.* 16; *de Super.* 3) give an excellent picture of the man who was careful to perform all such purifications after every defilement, imaginary or real —'Call the old woman who will purify thee by rubbing thee with bran and clay; plunge in the sea and pass the day seated on the ground.' Menander also refers to purifications by means of water drawn from three different sources, and into which salt and lentils had been thrown (*Deisidaimon*, frag. 3). Later, the philosophers explained them by saying they were the image of that purity of the soul which alone was agreeable to the gods (Cicero, *de Leg.* ii. 10); but their nature and intention obviously connect them with primitive purificatory and baptismal rites, and explain the existence of the latter as a preliminary of entrance to the Mysteries.

Of all these associations, the initiatory rites of the worshippers of Sabazios, a Phrygian god, corresponding on the whole to Dionysus, are best known to us from the scorn which Demosthenes poured upon them (*de Corona*, 313). They are an excellent type of such initiatory baptismal rites as form our third class. The period is B.C. 315, and Demosthenes says to Æschines: 'When you became a man, you assisted your mother in the initiations. At night you clothed yourself in a fawn-skin. *You poured on the candidates water from a bowl*, you purified them, you rubbed them with clay and bran; then you made them stand upright after the purification, and say, "I have fled the evil, I have found a better"' (*ἔφυγον κακόν, εὗρον ἄμεινον*). These rites, which had only the slenderest ethical value, led up to the revealing of the Mysteries and the sacred symbols of the association. The society which worshipped the Thracian goddess Cotytto was ridiculed under the title of *βάπται* by dramatists like Eupolis and poets like Juvenal, and the title suggests a purification by water similar to that practised by the worshippers of Sabazios (Foucart, *Associations rel. chez les Grecs*, Paris, 1873). The daubing with clay or dirt is a common savage practice at initiations, and doubtless in the Mysteries it was a survival of some earlier primitive rite. In the Mandan mysteries the candidate was covered with clay and then washed (Catlin, *O-Kee-Pa*, London, 1867, p. 21); the same is recorded of the Busk festival of the Cree Indians—the ceremony removing them 'out of the reach of temporal punishment for their past vicious conduct' (Adair, *Hist. of Amer. Ind.*, London, 1875, p. 98 f.); in the Victorian and other Australian rites of initiation, as well as in Fiji, the body was covered with charcoal, mud, and clay, and then washed (Brough Smyth, *Abor. of Vict.*, London, 1878, i. 60; Howitt, *op. cit.* p. 536); in Banks Island the youth is blackened with dirt and soot and then washed (Codrington, *Melanesians*, Oxford, 1891, p. 87); and a similar rite is referred to as occurring in West Africa (W. Reade, *Savage Africa*, London, 1863). Name-giving accompanies most of these ceremonies which introduce the candidate to a new life; the symbolism of removing the dirt is expressive of the passing from an old to a new life.

(7) Mithraism, perhaps the most eclectic of all religious faiths, is frequently accused of borrowing many of its ceremonies from Christianity. The early Fathers, like the Roman Catholic missionaries in the case of the religions of Mexico and Peru, and of Buddhism, did not hesitate to say that Mithraism was the devil's counterfeit of Christianity, as they described its rites with their ready resemblance to Baptism, Confirmation, and Holy Communion. But while there may have been deliberate imitation, the actual rites were already in use both in Persia and Greece, and, as Cumont says, Mithraism was *Parsisme hellénisé*. The initiatory ceremonies were many—by blood, by fire, by fasting; while, as in many savage mysteries, death and resurrection were simulated as typifying the dawn of a better life. The purification by water washed away sin, and was thus a kind of adult baptism, while the later stage of sealing the candidate's forehead as the mark of his initiation to the grade of 'soldier,' was compared by Tertullian to the rite of confirmation (Cumont, *Mysteries of Mithra*, Chicago, 1903, p. 157). We may refer, finally, to a baptism of blood, the Taurobolium, used for purification, whether personally or by proxy, as well as in initiating the candidate to the rites of the Great Mother, which became so popular all over the Roman Empire at the dawn of Christianity. The underlying idea of the Taurobolium (*q.v.*) bears a curious resemblance to the doctrine of regeneration in Christian life. The candidate was seated in a trench underneath an open grating on which a bull was sacrificed. The blood, as it fell through the roof, gushed all over him, and he was then declared to be re-born. Monuments which commemorate this baptismal rite on the part of its grateful recipients, speak of him by whom it was received as 'regenerate,' *renatus in æternum Taurobolio* (Prudentius, *Peristeph.* x. 101 f.; Sainte-Croix, *Mystères du paganisme*, Paris, 1817, i. 95). Whether original or imitated from Christianity, these later classic Mysteries speak of the growing need of a new life and of certitude in matters of faith. These were supplied by Christianity, and, after a long struggle, it gave the deathblow to the pagan Mysteries.

13. *Ethnic rites in folk-custom.*—Finally, reference must be made to the superstitious views entertained by European peasants regarding Christian baptism. These are a direct inheritance from pre-Christian beliefs as to the vulnerability of the newly-born child to attack from evil spirits until certain rites, such as those enumerated above, have been performed. Christian baptism, taking the place of those earlier baptismal rites, has in folk-belief been credited with their efficacy; the beliefs concerning them have been directly transferred to it; and the unanimity as concerns this transference is seen by the similarity of the superstitions among Celts, Scandinavians, Germans, Slavs, and the Latin-speaking races. With the first three groups fairies are feared, and they have taken the place of evil spirits. These have great power over an unbaptized child; hence the utmost precautions are taken to guard it from their power, and to prevent its being stolen away and an ugly changeling left in its place. Baptism, however, is the complete safeguard against these terrors. Among the last two groups it is generally some evil demon or witch whose power over the child is neutralized by baptism; with some of the Slavs and with the Greeks (a survival from classical times) it is the *Lamia*, regarded as a being half-demon, half-witch, who has power over the unbaptized. But even where the fairy belief is prevalent, the witch's power over the unbaptized is also feared. In early mediæval times, witch and wise-woman and midwife were hardly discriminated; all alike were the survival of the priestesses of a goddess of fertility, to whom an occasional sacrifice of a child was made. This custom survived as a vague belief that witches took a toll of unbaptized children on Walpurgis night (Grimm, *op. cit.* iii. 1060–1061; Pearson, *Chances of Death*, London, 1897, ii. *passim*). But in all cases the real power of fairy, demon, or witch over the unbaptized child lay in this, that the child was yet a pagan, and therefore, until it had been received into the Christian fold, was the natural prey of those who were clearly pagan witches, fairies, and demons. This is emphasized

in the fact that the child, till baptized, is in Sicily and Spain called by some name signifying its unregenerate character—Jew, Moor, Turk, Pagan, or (in Greece) Drakos (see Hartland, *Science of Fairy Tales*, London, 1891, p. 100 f.). In Greece, too, it is believed that an unbaptized child may disappear as a snake. This belief in the unbaptized child's being a pagan is further illustrated by the idea, found in various parts of England and in Scotland, that such children, if they die, become fairies, or that their souls wander about restlessly in the air till the day of judgment, as well as in the curious 16th cent. Irish custom of leaving the male child's right arm unchristened so that it might deal a deadlier blow. All these customs denote not only the survival of paganism and its ideas in Christianity, but also the continued struggle between the two forces when the latter had ostensibly triumphed (see a paper by G. L. Gomme, *Folk-Lore*, iii. 17).

LITERATURE.—Ploss, *Das Kind*, vol. i., Berlin, 1882; E. Tylor, *Primitive Culture*[3], vol. ii., London, 1891; Baring-Gould, *Origin and Development of Religious Belief*, London, 1869–70, i. 397 ff.; MacCulloch, *Comparative Theology*, London, 1902, ch. xii.; Nassau, *Fetichism in West Africa*, 1904, p. 212 f.; Grey, *Polynesian Mythology*, 1855, p. 32; Mallet, *Northern Antiquities*, Eng. tr., London, 1770, i. 335.

J. A. MACCULLOCH.

BAPTISM (New Testament).—The term 'baptism' does not occur in the LXX, either in its more general (*βαπτισμός*) or more special form (*βάπτισμα*). While the verb *βάπτειν*, 'to dip' or 'immerse' (*e.g.* Ex 12[22], Lv 4[6. 17], Job 9[31]), occurs there frequently, we find the intensive *βαπτίζειν*—with which alone we are concerned when dealing with baptism—only four times: twice in a literal sense, of bathing (2 K 5[14], Jth 12[7]), once metaphorically (Is 21[4] *ἡ ἀνομία με βαπτίζει*, cf. Mk 10[38f.], Lk 12[50]), and once of ritual lustration (Sir 31[30] [34[25]] *βαπτιζόμενος ἀπὸ νεκροῦ*).* The earlier and more usual word for such lustration is *λούεσθαι* (Lv 14[8f.] 15[5ff.], cf. Jn 13[10], He 10[22] *λελουσμένοι τὸ σῶμα ὕδατι καθαρῷ*), the middle voice denoting the active participation of the subject of purification, as also in the NT use of *ἀπολούεσθαι* in connexion with baptism (Ac 22[16], 1 Co 6[11]). But with the NT *βαπτίζειν* emerges prominently and without any explanation of its specific sense, viz. thorough washing for religious cleansing, as though this were already fixed by the current usage of later Judaism, of which Sir 31[30] is itself a significant instance (cf. Lk 11[38], Mk 7[4]). Both forms of the substantive, *βαπτισμός*, *βάπτισμα*, occur, the former in a more general sense (Mk 7[4], He 9[10], cf. 6[2] where the specific meaning is included), the latter in the specific sense of 'cleansing rite of initiation' into a new religious status (defined by the context), whether John's or Christ's (Mk 1[4] ‖, Lk 7[29] 20[4], Ac 1[22] 10[37] 13[24] 18[25] 19[3f.], Ro 6[4], Eph 4[5], Col 2[12], 1 P 3[21]). Naturally *βάπτισμα* becomes the regular ecclesiastical term for the rite, along with *λουτρόν* ('washing,' later passing into the more concrete sense of 'laver,' *lavacrum*), already found in Sir 31[30] [34[25]], cf. Ca 4[2] 6[5 (6)]; thus *λουτρὸν τοῦ ὕδατος* (Eph 5[26]), *λ. παλιγγενεσίας* (Tit 3[5]).

1. **Sources.**—In what follows we have to do, not with ritual washings or lustrations generally, but only with that special form of religious washing which admitted to the Christian sphere or community. Accordingly we say nothing about the prevalence, both on Semitic and non-Semitic soil, of such lustrations (like those of the Essenes) as have no bearing on baptism as a public rite of incorporation into a religious fellowship with God and man, and that once for all. In fact we need begin our study no further back than the point at which the term first emerges in the Bible—the baptism of John the Baptist, and what it assumes.

(*a*) *The baptism of John and its associations.*—OT religion rests upon the notion of *a covenant relation* between Jahweh the God of Israel and Israel as a people or religious unit. When the actual state of Israel was in accord with the will of God, as expressed in the Torah unfolding the contents of His covenant, then Israel was 'righteous' and in the enjoyment of 'salvation,' or full well-being as determined by Divine favour. But such a state, conceived as indicated by obvious national prosperity, was felt to have been fully realized only at intervals in the past, and was certainly not Israel's when John the Baptist appeared. For was not the alien in power in the Holy Land? It was felt, also, that only by that supreme intervention of God, as Israel's true King, which was thought of as His Messianic Kingdom, —and beyond which there was no further horizon, —could that betterment or 'redemption of Israel' come for which all true Israelites longed and waited. Yet the best among them, and John in particular, knew that only through a radical change in the nation's religious state, in conduct both public and private, could this deliverance be reached. Messiah would come only to a righteous Israel, fit and ready for God's holy rule in its midst. Hence a general repentance towards God and His covenant, such as the prophets of old had called for, was needed ere the Spirit of the Lord could be 'poured forth' in that fullness which was to mark the Messianic age. John stood forth, then, in the spirit of those prophets, to preach his 'baptism of repentance'—a repentance symbolized by cleansing with water (Jer 4[14], Ezk 36[25ff.], Zec 13[1])—with a view to the near approach of 'the Kingdom of God.' Such a baptism was primarily corporate in idea, relative to salvation as of a holy people—an Israel answering to its idea as in vital covenant with its God. This is the main reason, at least, why Jesus was able to accept John's 'baptism of repentance' without any feeling of sin save in a corporate sense. To Him personally it was but an act of obedience to a Divine ordinance — 'a righteousness' (Mt 3[15]). But as yet salvation, even for Israel, was only a promise conditional upon obedience to Messiah when He should be manifested, and with Him the Kingdom or real Sovereignty of God. Hence John claimed no saving virtue for his baptism, only a certain preparedness when it was the outward sign of an inward penitence; the real gift of a new experience was to come with the higher order of 'baptism' which Messiah Himself would impart. This was not to be with 'water' at all, but with Holy Spirit, *i.e.* a holy inspiration of soul, such as the prophets had foretold (Mk 1[8], cf. Mt 3[11], Lk 3[16] 'holy spirit and fire').

(*b*) *The relation of Messiah's baptism to the Forerunner's.*—Of this contrast, however, there was at first no sign in Christ's ministry. While not Himself administering water-baptism, like His forerunner, Jesus permitted His disciples (themselves doubtless baptized by John [cf. Lk 7[29f.], Jn 1[35ff.]], and so forward to do for their new Master's preaching what John had done to seal his own) to do so for a time, *i.e.* during the preliminary stage when He was preaching parallel, as it were, with John (Jn 3[22ff.] 4[1f.]). During this period Jesus' message was outwardly the same as John's in tenor, viz. 'Repent ye; for the kingdom of heaven is at hand' (Mt 4[17], cf. Mk 1[15], which is perhaps rather less accurate here). Such a practice, however, seems confined to the early Judæan preaching; we find no trace of it in the later stages, which began with John's imprisonment and Jesus' return to Galilee (Mk 1[14] ‖).

* In 2 K 5[14] *ἐβαπτίσατο* translates טבל, 'dip,' and in Is 21[4] *βαπτίζει* paraphrases בעת, 'fall upon, startle.' The Heb. original of Judith and of Sir 31[30] is no longer extant.

Baptism never appears among the conditions of discipleship (*e.g.* Mt $8^{21f.}$, Lk 9^{59-62}); and this silence can hardly be accidental. We find instead, in final interviews with the inner circle, promise of a Spirit-baptism, to which John had referred as distinctive of Messiah (see Lk 24^{49}, Ac $1^{4f.}$ 11^{16}, Jn 20^{22}, cf. Jn 14–16). But nothing is said as to water-baptism as entering into Messianic baptism (the two are contrasted in Ac 1^5 11^{16}), which is referred to in terms recalling His own words about the purely spiritual baptism of suffering (Mk $10^{38f.}$‖). Christ's direct sanction, then, for water-baptism by His followers after His own earthly life (Jn 3^5 does not apply here) must depend on our view of Mt 28^{19} [Mk 16^{16} not being an original part of Mark's Gospel].

There is no real ground for doubting the authenticity of Mt 28^{19} as part of Mt.'s Gospel in its final form (cf. F. H. Chase in *J ThSt* vi. 483 ff.). But this is far from settling its historicity as a word of Jesus Himself. The clause touching baptism as part of the 'discipling' of 'all the nations' might easily arise as merely descriptive and directive of the Church's actual practice in the matter, whenever and wherever this Gospel was composed. For the same reasons it cannot be held to settle the question of the formula originally used (see the careful discussion in Rendtorff, *Die Taufe im Urchristentum*, 1905, p. 89 ff., for both points). Further, had Paul known of such a commission to baptize, he could hardly have said, as he does in 1 Co 1^{17} 'Christ did not commission me to baptize, but to evangelize.' Cf. p. 881^a.

(*c*) *Apostolic baptism.*—This, in its conjunction of water-baptism with the Spirit sensibly outpoured, seems due to the Apostles' own initiative, like other primitive Christian rites, the forms of which were adopted instinctively from their Jewish training. Thus when, on the crucial Day of Pentecost, the Messianic Spirit described in Jl $2^{28ff.}$ was felt to be 'poured out' upon Messianic Israel, in fulfilment of Jesus' promise and in ratification of His Messianic dignity (Ac 2^{33-36}), it was most natural that Peter, appealed to for the terms of participation in the manifest Divine presence, should reply: 'Repent, and let each of you get baptized in the name of Jesus Messiah unto remission of your sins, and ye shall receive the free gift of the Holy Spirit,' and so escape the fate of 'this crooked generation'—revealed as such in its treatment of Messiah. This thought connected itself with the closing words of the passage just cited from Joel: 'And it shall be, that whosoever shall invoke the name of the Lord shall be saved,' *i.e.* from wrath in 'the day of the Lord, the great and notable day.' There was a recognized connexion between solemn invocation of the Lord as Protector and the rite of baptism. Possibly this had existed in John's baptism; it certainly did so in that of proselytes, with which the former was perhaps felt to have affinity—an affinity which affronted Pharisees and scribes (Lk 7^{30}). Thus Maimonides (*Issure Biah*, 13) says: 'Israel was admitted into covenant by three things; namely, by circumcision, baptism, and sacrifice. Circumcision was in Egypt. . . . Baptism was in the wilderness before the giving of the Law, for it is said: "Thou shalt sanctify them . . . and let them wash their garments . . ." So, whenever a Gentile desires to enter the Covenant of Israel and place himself under the wings of the Divine Majesty, and take the yoke of the Law upon him, he must be circumcised and baptized, and bring a sacrifice.' This passage bears directly upon the baptism of Gentile Christians; but it casts light also on the genesis of Jewish Christian baptism; for, apart from circumcision, the cases were largely parallel. Sinful Israelites, too, needed to re-enter the covenant in a deeper sense ('the new covenant' of Jer $31^{31ff.}$, Mk 14^{24}‖, 1 Co 11^{25})—on the basis of Messiah's 'sacrifice' for them (Is $53^{4ff.}$, cf. Ac $8^{30ff.}$, He 9–10)—so placing themselves 'under the wings of the Shekinah' for protection (cf. He 6^1 'Repentance from dead works and faith fixed upon God,' and Ac 20^{21} 'Repentance towards God and faith towards our Lord Jesus'), and pledging themselves to obedience to the Lord's will, under the yoke of His Law; and in this connexion the 'clean water' of Ezk $36^{25ff.}$ would readily occur to mind (cf. Zec 13^1). Here the words of Ananias to Saul are instructive: 'Arise, get thyself baptized (middle voice, as usual), and so wash away from thyself thy sins, invoking his name' (Ac 22^{16}).

How fundamental was this conception of water-baptism as denoting, on the one hand, confession of sins and renunciation of the old, false allegiance they involved, and, on the other, confession of Jesus as Messiah or Lord (as Jahweh was Israel's Lord) and loyalty to the new and true allegiance (cf. Ac 20^{21}), appears from Ro $10^{8ff.}$, in allusion to the act of baptism. In that passage Christians are described as 'those who invoke Jesus as Lord,' Jl 2^{32} being cited in support of the description (cf. Ac $9^{14.\ 21}$). 'With the mouth confession is made unto salvation' (Ro 10^{10}); that is the outward or objective side of the faith in the heart on which 'righteousness' is bestowed, and which expresses itself both in the water of baptism and in the word of the mouth to which Paul here directs attention. The very phrasing of this parallel statement suggests that salvation was at first thought of mainly in its collective aspect (in keeping with OT religion). It was the community's state of true prosperity, in which through confession of faith in baptism—*from* the old sinful state *to* the new, holy, or consecrate one—the justified individual came to participate. Indeed, Judæo-Christians tended always to realize this objective side of admission to the covenant sphere of 'the saints' (cf. Col $1^{12f.}$ 'who rescued us from the sway (ἐξουσία) of darkness, and transferred us into the kingdom of the Son of his love; in whom we have the redemption, the remission of sins') more than the subjective side of the believer's fitness, *qua* believer, for such admission, formally and definitively, in the act and article of baptism, 'sealed' by manifest Holy Spirit power or inspiration. Hence, though Paul's teaching as to baptism starts from the common basis of primitive Judæo-Christian thought, it goes far further in inwardness and psychological analysis; and it is needful to study the two types of representation apart, when we come to consider more closely the significance attaching to the rite and its symbolism.

Baptismal 'laying on of hands' confirms the view of baptism as simply an Apostolic practice derived from Jewish usage. As referred to in He 6^2, 'doctrine of baptisms (Christian and Jewish, *e.g.* John's, cf. Jn 3^{25}, Ac $19^{2ff.}$) and of laying on of hands,' it is a piece of Jewish symbolism for which no word of Christ can be cited, adopted to express union between the new believer and the holy community. As such it constituted the psychological moment when the Messianic gift, or Spirit-baptism, was, as a rule, experienced (Ac 8^{17} 19^6, yet see $10^{44ff.}$ for 'the gift' before baptism and apart from laying on of hands). There is no evidence that this act was confined to Apostles (the case in Ac $8^{15ff.}$ is exceptional, as the admission through Apostles of a *new class* of believers, the Samaritans); it might be performed by any member of the Spirit-bearing community. This appears not only from Ac $9^{17f.}$ (cf. 8^{38}) but also from 1 Co 1^{14}, where Paul could not so have spoken had he performed this most impressive part of baptism in the case of his Corinthian converts generally. It was an edifying symbol, with no constant or essential relation (save, perhaps, in the minds of the simpler sort) to Spirit-baptism, God's 'seal' of 'ownership' upon His 'heritage' in 'the saints' (Eph $1^{14.\ 18}$, cf. Tit 2^{14}).

2. Significance of baptism.—(*a*) *One, yet various.*—From the first, and in all circles, baptism implied definite identification with Jesus as Messiah or Lord, the head of the Messianic kingdom or the Body, the determinative centre of life for the whole spiritual organism. After 'baptism in the name of the Lord,' a man was regarded as 'in Christ' or 'in the Lord.' Jesus the Christ was Himself the Covenant (Is 49^8) for His own, and He,

as Lord, became the very sphere of the religious personality of the baptized, hence fitly called 'Christians.' The metaphor of the marriage bond, used in the OT of the moral union between Jahweh and Israel, is in the NT applied to the relation between Christ and the Church; and baptism was as the marriage rite, openly sealing for the individual this intimate spiritual relation already virtually present in faith, as marriage is in plighted love (Eph 5^{23-32}, cf. 1 Co 6^{17} 'he that is joined unto the Lord is one spirit'). The matter was, however, conceived rather differently in different circles. Jewish Christians viewed baptism mainly on its objective or collective side, through the OT associations of covenant and Messiah, as related to the solidarity of Israel, the chosen people; while Paul thought more of the subjective and personal side, bound up with his profound idea of faith as the bond between the believer and his spiritual Head, 'our life' (Col 3^4). But to both baptism was corporate in idea, 'into one body' (1 Co 12^{13}, cf. $10^{1f.}$), while repentance and faith were presupposed in the baptized, by Jewish Christians no less than by Paul. Still the difference of emphasis remains, and shows itself in the figures used, Paul's being the more experimental or psychological. He alone could pen passages like Ro $6^{2ff.}$, Gal 2^{19-21}, implying such spiritual identity with Christ by faith as resulted in his distinctive metaphor of baptism as formally marking transition from death to new life (Ro $6^{1ff.}$, 2 Co 5^{14-17}, cf. 1 P 3^{21} $4^{1f.}$ $1^{2.}$ $2^{2f.}$, which are probably adaptations of Pauline ideas to a less mystical mode of thought).

(*b*) *The psychological side of baptism.*—In all attempts to extract from the NT a connected view of primitive baptismal thought and practice, we must never forget its essentially experimental nature. Really to enter into its meaning, we must enter the very souls of the primitive Christians and share their experiences. In so doing, we get our best aid from analogous fresh Christian beginnings, whether in revivals of religious life, as seen, *e.g.*, in George Fox's *Journal*, or on the more virgin soil of the mission field. While the former analogy warns us against exaggerating the value of the rite, as compared with the Spirit-baptism—the distinctive Christian element (Ac 1^5),—the latter saves us from divorcing the inner reality altogether from the outer symbol. Due proportion between the two is preserved by the vital experiences of mission converts, in relation both to previous state and to alien environment. So seen, baptism is the seal by which life-giving faith (as in Abraham's circumcision, Ro $4^{10f.}$) is ratified, and so confirmed through a definitive *act* in which consciousness of separation *from* the sphere of moral deadness, and *unto* that of full moral life, is enhanced and made the more effective for the subsequent 'walk in newness of life.' It is thus truly an 'efficacious seal' for faith, yet only for faith. It completes and makes more vivid the experience of 'regeneration'—both objective, as between the old social world and the new, and subjective, as between two inner states of the soul. So is it 'regenerative washing and Holy Spirit renewal' (Tit 3^5) in an experimental, a religiously real sense; it is the final stage in experience of 'salvation' (in principle) from self and 'the world' to God and His Kingdom of Christian fellowship.

(*c*) *Symbol and sacrament.*—It is not a bare symbol, as of something already complete, but a sacrament, *i.e.* a symbol conditioning a present deeper and decisive experience of the Divine grace, already embraced by faith. But all is psychologically conditioned, being thereby raised above the level of the magical or *quasi*-physical conception of sacramental grace, native to paganism, but alien to perfected Hebraism—the religion of revelation and faith.

The recent attempt of the strict 'religious-historical' school in Germany and elsewhere to trace the influence of the magical, non-ethical notion of sacraments, prevalent in the 'syncretist' or mixed religious consciousness of the age, upon the NT writers and their circles, is for the most part mistaken. It minimizes the Hebraic basis of primitive Christianity, not only in Palestine, but also outside it. In particular, it fails to read Paul's language sufficiently in relation to his personal experience and essential teaching of faith as the universal coefficient of all spiritual blessing (ἐκ πίστεως εἰς πίστιν, Ro 1^{17}); while it does not distinguish enough between Paul's own belief and the suggestions of terminology used by him in becoming 'to the Greeks a Greek.' In a word, it confuses Paul the missionary with Paul the theologian. The only excuse for this theory as regards baptism lies in false exegesis of a single passage, 1 Co 15^{29}, where Paul in passing seized upon an *arg. ad hom.* from a usage existing among his Christian converts, without meaning to give it his positive sanction (see 11^{34} for minor abuses as left over against his own coming). On the whole subject see Rendtorff, *Die Taufe im Urchristentum*, pp. 16–37.

3. **The baptismal formula.**—To sum up: as baptism had in Judaism come to mean *purificatory consecration*, with a twofold reference—from an old state and to a new—, so was it in Christianity. It denoted (1) the convert's attitude towards his past sinful state with its 'dead works,' or towards God as sinned against (He 6^1, Ac 20^{21})—repentance; and (2) his new attitude, faith towards God (He 6^1) or Christ (Ac 20^{21}), as the ground of hope for the future, of which Christ's resurrection was the guarantee or type (cf. 1 P 3^{21}). The practical effect was remission of past sins or justification, the token of which was the gift of the Holy Spirit, in sensible experience, as marking Divine acceptance of the new subject of Messiah's Kingdom.

All this is present in germ in Peter's words (Ac 2^{38-40}), 'Repent, and let each of you get himself baptized in the name of Jesus Christ unto remission of sins,' etc. The phrase 'in the name' now calls for closer consideration. It is clear from contemporary usage (*e.g.* Ac 1^{15}, Rev 3^4 11^{13}) that 'name' was an ancient synonym for 'person.' Parallels, moreover, from the colloquial Greek of the time show that the expression 'in the name' was itself widely used, especially in solemn or formal connexions, and with special reference to proprietorship. Thus a payment is made εἰς ὄνομά τινος, 'into so-and-so's account'; a petition is presented εἰς τὸ τοῦ βασιλέως ὄνομα, 'to the king's person'; and, still more significantly in our connexion, soldiers swear 'in the king's name' (Rendtorff, *op. cit.* p. 9 f.). Such solemn invocation of the king's name in token of personal allegiance answers exactly to one marked aspect of baptism (cf. 2 Ti $2^{3f.}$), which was further developed in Christian thought after the Apostolic Age, in the notion of the *militia Christi* (see Harnack's monograph so entitled). Only, in primitive Christian baptism, 'the name,' possibly as sum of the Divine perfections (cf. Ps 115^1 where 'mercy' and 'truth' are elements of God's name), was invoked, in the first instance, for mercy and protection. In any case the formula 'in the name of,' with or without associations from OT usage (= בְּשֵׁם rather than בְּ, so Dalman), came to have in all Christian circles—though with different shades of thought, as between typical Jews and others—the pregnant sense of identification between the baptized and Him in whose name baptism took place. The one became thereby the personal property of the other, as part of the people of peculiar possession (λαὸς εἰς περιποίησιν with other synonyms in 1 P $2^{9f.}$; περιούσιος, Tit 2^{14}) and the 'bondservant' of the true Lord (see 2 Co 4^5), as all NT writers agree in putting it. That this was the essence of the matter appears from the very title, 'the Lord Jesus,' usual among Gentile converts, just as 'the Christ' or 'Christ Jesus' was in more Jewish circles. 'The Lord Jesus' seems, indeed, to grow out of the central phrase of the baptismal con

fession, viz., 'Jesus is Lord.' Reading 1 Co 12^{3} 'No man can say Κύριος Ἰησοῦς save in Holy Spirit' (cf. 1^{2b} 6^{11}), in the light of Ro 10^{9} 'If thou confess "the utterance" (ῥῆμα, more fully τὸ ῥ. τῆς πίστεως ὃ κηρύσσομεν) in thy mouth (phrases just quoted from Dt 30^{14}, cf. Eph 5^{26} 'cleansing it with the washing of water ἐν ῥήματι'), to wit, Κύριος Ἰησοῦς (cf. Ph 2^{11}), and believe in thy heart that God raised him from out the dead (in proof of Messianic Lordship, Ro 1^{4}), thou shalt be saved'—one perceives this clearly. 'Christ Jesus,' as distinct from 'Jesus Christ' (=Jesus the Christ), perhaps arose from a similar Jewish Christian form of confession, 'Jesus is Christ (Messiah)'—whence 'one Lord, one faith, one baptism' (Eph 4^{5}). But did the formula used in baptism, εἰς τὸ ὄνομα τοῦ Κυρίου Ἰησοῦ (Ac 8^{16} 19^{5}, 1 Co 6^{11}), embrace more than this distinctive element, having, for instance, such explicit reference to the unity of God as must have been the heart of proselyte baptism? This is suggested not only by 1 Co 8^{6} (ἡμῖν εἷς θεός, ὁ πατήρ, ἐξ οὗ τὰ πάντα καὶ ἡμεῖς εἰς αὐτόν, καὶ εἷς Κύριος, Ἰησοῦς Χριστός, δι' οὗ τὰ πάντα καὶ ἡμεῖς δι' αὐτοῦ, cf. Eph $4^{5f.}$), but also by the constant dual form of Apostolic salutations and benedictions (cf. Rev 14^{1} 'having his name and the name of his Father written on their foreheads'). The use of a Trinitarian formula of any sort is not similarly suggested, in spite of 2 Co 13^{14}. Ac $19^{2f.\,5}$ tells against any view that explicit reference to the Holy Spirit occurred in baptism: so also 1 Co 6^{11}. It is probable, then, that God the Creator was in some way confessed in baptism (cf. Hermas, *Mand.* i. 1: 'First of all yield belief [πίστευσον] that God is one,' etc.); yet exactly in what form remains an open question, one which depends upon another, to which attention has recently been directed (see A. Seeberg, *Der Katechismus der Urchristenheit*, 1903).

4. Procedure in baptism.—Here light is cast forward by Jewish proselyte baptism and backward by sub-Apostolic Christian usage, both of which make it unlikely that baptism was a bare rite of confessing a sacred Name, followed by immersion in water. This were too formal and abstract a conception to suit the intense moral reality of the religious crisis in question. The rite itself had a concrete setting of ethical exhortation and pledging, to which missionary experience of all ages affords parallels. According to this conception, the confession Κύριος Ἰησοῦς was probably the answer of practical allegiance, given by the candidate for baptism, to instruction in the rudiments of Christian piety, on lines best indicated by the 'Two Ways' of Life and Death, preserved in expanded form in the first half of the *Didache*. Thus the confession in baptism ('in the name of the Lord,' *Did.* 9^{5}, and perhaps originally in 7^{1} likewise) pledged the baptized to the Christian obedience (cf. Justin, *Apol.* 6, βιοῦν οὕτως δύνασθαι ὑπισχνῶνται)—a pledge which may have been weekly renewed in early Christian worship, at least in certain regions. For in Bithynia-Pontus, according to Pliny's *Epistle* of *c.* 112 A.D., the Christians used in their Lord's Day morning meeting to 'pledge themselves with a solemn oath (*sacramento se obstringere*) not to the commission of any crime, but to avoidance of theft, robbery, adultery, breach of faith, denial of deposit when called upon.' This is most suggestive, not only as to the genius of primitive Christian worship as profoundly ethical in tone, but also as to the obligations undertaken in baptism, no doubt in very solemn and explicit fashion, including the witness of those best able to answer (sponsors) for the candidate's good faith and fitness. Thus the *Didache*, after giving the 'Two Ways,' continues: 'All these things first pronounce and so baptize,' a practice probably referred to in Mt 28^{19} 'Disciple all nations, baptizing them into the name . . ., teaching (διδάσκοντες) them to observe all the precepts I have given to you' (ὅσα ἐνετειλάμην=a διδαχὴ Κυρίου consisting of ἐντολαί). There is, moreover, hardly a doubt that the bulk of the 'Two Ways,' as found in the *Didache* and related documents, goes back to the Jewish ethical instruction, on a monotheistic basis, given to proselytes among the Diaspora, under the figure of a Way of Life and a Way of Death set before men, found in the OT, but also among Greek moralists. To this, in its earliest Christian form, reference may be found even in the Pauline letters (*e.g.* 2 Th 2^{15} παραδόσεις ἃς ἐδιδάχθητε, Ro 16^{17} τοὺς . . . παρὰ τὴν διδαχὴν ἣν ὑμεῖς ἐμάθετε ποιοῦντας, where διχοστασίαι and σκάνδαλα are in view, 1 Co 4^{17} τὰς ὁδούς μου τὰς ἐν Χριστῷ [Ἰησοῦ], καθὼς πανταχοῦ ἐν πάσῃ ἐκκλησίᾳ διδάσκω). Most significant is the language of Ro $6^{15ff.}$, where occurs the notion of prior 'bond-service' to sin 'unto death,' followed by obedience to a τύπος διδαχῆς issuing in new 'bond-service' to 'righteousness,' or to God and Christ, and the end 'life eternal.' So again 2 Ti 2^{19} 'Let every one that nameth the name of the Lord forthwith abstain from iniquity,' which is the human side of the seal placed on God's firm 'foundation' of piety among men. All this suggests such a formal renunciation of the service of Sin as the Way of Death, and a placing of oneself under obedience to Christ as Lord, as emerges after the sub-Apostolic age in the *abrenuntiatio diaboli* and the ranging of oneself with Christ (Χριστῷ συντάσσομαι; cf. the Two Ways of 'teaching and dominion' in Barn. 18). This is perhaps the key to the description of baptism in 1 P 3^{21}, 'not a putting away of filth in the sphere of the flesh (as by water), but the appeal of a good conscience directed to God,' as pledged to give part and lot in Christ's resurrection to those who yield 'obedience of faith' to God in Him. This appeal may refer specially to the invocation of the Name by the candidate, in answer to the baptizer's interrogation as to his acceptance *ex animo* of the true allegiance; whereupon the latter sealed the reception of the candidate into the holy community by invoking 'the fair name' of the Lord Jesus upon his head (see Ja 2^{7}, cf. Rev 7^{3} 9^{4} 14^{1} 22^{4}).

This human sealing by sacred formula was normally countersigned, as it were, on the Divine part by the Messianic gift of a holy enthusiasm ('Holy Spirit' as a phenomenon in the human spirit), the spirit of adoption, through the deeper and abiding consciousness of which the Christian henceforth utters his soul in the word 'Father' (Ro 8^{15}, the Aramaic exclamation, *Abba*, even passing into use in Gentile circles; cf. *Maranatha*, 'Lord come,' 1 Co 16^{22}, *Did.* 10). Such Divine 'confirming' of the baptized 'into Christ' as a member of His Body, by an 'unction,' a sealing, a giving of the Spirit in 'earnest' (ἀρραβών, 2 Co $1^{21f.}$), took place in experience at baptism. But as it issued from a more secret working of the Spirit, as author of the faith which qualified for baptism, so it gave place to an abiding 'fellowship of the Holy Spirit' (2 Co 13^{14}) in which Christians shared and by which they were 'led' in their 'walk' (Ro $8^{9.\,14.\,16}$, Gal 5^{16-26}). The effect of all this was such a spiritually real, or mystical, union with Christ that in baptism Paul regarded Christ as 'put on' like a robe (Gal 3^{27}), or again as entering the believer as his 'life' (Ro 8^{10}, Gal 2^{20}).

Immersion and affusion.—Immersion seems to have been the practice of the Apostolic age, in continuity with Jewish proselyte baptism; and it is implied in Paul's language, especially in his figure of baptism as spiritual burial and resurrection (Ro 6^{3-5}, Col 2^{12}). But the form was not held

essential; and when conditions presented practical difficulties—whether local, climatic, or due to physical weakness—it came to be modified (cf. *Did.* 7). The most usual form, of which we have evidence from the 2nd cent. onwards, as regards adults, was that of standing semi-immersed in water, up to knees or waist, combined with threefold pouring over the head (trine affusion).

5. Adult and infant baptism.—So far we have been dealing with adult baptism only. It alone occupies attention in the NT, as it does mainly in missionary literature to-day. But this by no means exhausts the facts of the case, as we may learn from the analogy of Jewish missions and their baptism of proselytes. The idea that a parent should enter a religion or covenant-relation with God as an individual merely, *i.e.* by himself as distinct from his immediate family, would never occur to the ancients, least of all to a Jew. There were no 'individuals' in our sharp modern sense of the term. All were seen as members of larger units, of which the family was the chief in the time of Christ, when the clan and nation were no longer so overshadowing as in earlier days. The *paterfamilias* included legally and in social ethics the members of his household. Any change in his religious status *ipso facto* affected them. Hence to any one familiar with the modes of antique thought, no proof in any given case is needed that children from their birth were regarded as sharing their parents' religious status, objectively or socially considered: the *onus probandi* falls entirely on those who, under the influence of certain modern modes of thought, would maintain the contrary. Now, not only is there no evidence in the NT read historically, *i.e.* with due regard to the interest of the writer and his original readers in what is said or implied, that children stood to the Christian community in a different relation from that belonging to them in ancient religions generally, and especially in Judaism; but what we know of the Jewish practice touching proselytes—which usually regulated practice among Gentile Christians—makes it most improbable that Christianity here introduced any novel usage. Had such been the case, it must have been emphasized, and could hardly have failed to leave its mark somewhere on the NT. Those who were to be reared 'in the Lord's training and admonition,' and to obey their parents 'in the Lord' (*i.e.* for Christian motives, Eph 6^{1-4}), must have been viewed as already Christians in status or objectively—ranking, according to their stage of development, with 'those of the household of faith' and not with 'those without.' This went back to infancy; for Paul regards the child of faith, even on one side only, as thereby 'holy,' *i.e.* objectively in covenant with God (1 Co 7^{14}). No subjective difference between such children and others is implied any more than in Judaism itself. But as in Judaism the child's objective status was conditioned by circumcision, it is natural to suppose that in the Church it was so by baptism (cf. Col $2^{11ff.}$). The only possible doubt is whether the child was regarded as baptized vicariously in its parent, or whether the rite was administered to it also. For the latter alternative we have not only the analogy of circumcision in Israel, but also proselyte baptism. Thus we read that 'a little proselyte' is baptized without his intelligent consent, on the principle that one may act for another to his advantage, though not to his disadvantage, apart from his knowledge and consent. Where the proselyte father brings the children, their solidarity with him as their head or authority is enough to warrant baptism; where only the mother, baptism is conferred 'on the authority of a *beth din*' or Jewish court of law (see C. Taylor, *Two Lectures on the Teaching of the Twelve Apostles*, p. 54 ff.). In either case its effect is only provisional; the child is brought within the covenant so far as social or family life goes, but his personal or subjective relation to the covenant waits on the development of reflective will, just as with the circumcision of a born Jew, who, as a rule, became a 'son of the Law,' and was publicly accepted into the visible membership of the Synagogue, only on his thirteenth birthday. Thereupon a father became free from the burden of his son's sins, *i.e.* full responsibility for his religious condition. Here is the obvious analogue of Christian 'Confirmation,' or joining the Church on personal confession. The regeneration effected by baptism in the case of an adult proselyte was meant in an objective sense, to define his new relations with his holy environment; for 'a newly made proselyte is like a newborn child' (Bab. *Yebamoth* 48*b*). So was it with children both of proselytes and of Christians. Their status of holiness or salvation was objective, and from the nature of the case only objective. It related to the holy or saving environment amid which they stood, first by birth and then by formal covenant seal—ratifying their birthright of good (cf. Ac 2^{39}) so far as human act and recognition could, *i.e.* corporately and as basis for 'training and admonition' in the Lord. The subjective reality waited for the emergence of the subjective conditions, as with child proselytes, who, on coming to years of discretion (like young Jews), were free to repudiate the objective relations in which they found themselves, without thereby being classed and treated as 'apostates.' That is, all was provisional as regards subjective reality. There was no idea of infant baptismal 'regeneration' in the later and still prevalent sense, a confusion of thought responsible for anti-pædobaptist reaction—away from primitive practice, to some extent also away from the primitive attitude to the 'children of the covenant.' Such confusion between the objective and subjective senses of holiness and salvation (united in the case of adult subjects of baptism) arose naturally enough once terms were transferred from Jewish to Gentile soil, with its less ethical and more physical notions of religious grace. Here the influence of the 'Mysteries' played a considerable part in working a change, which was unconscious for the most part in the minds of Gentile converts. See, further, § 2 of next article.

LITERATURE.—For Jewish baptisms, especially that of proselytes: Schürer, *HJP* II. ii. 319 ff. (later German ed. 1898, iii. 129 ff.); see also separate article BAPTISM (Jewish), and *JE* art. 'Baptism.' For Jewish practice in relation to Christian: C. Taylor, *Two Lectures on the Teaching of the Twelve Apostles*, 1886, p. 54 ff.; J. E. Hanauer, *Baptism, Jewish and Christian*, 1906. For the Greek and other ethnic analogies: F. M. Rendtorff, *Die Taufe im Urchristentum*, Leipzig, 1905, where full references will be found to recent German discussions of the *Religionsgeschichtliche* type and a sober criticism of the same (cf. preceding art.). Fuller refs. in Hastings' *DB*, art. 'Baptism,' to which may be added E. Vaucher, *Le Baptême*, Paris, 1894.

J. V. BARTLET.

BAPTISM (Early Christian).—*1.* **The origin of Christian baptism.**—There are three possible views. The traditional belief is that baptism was instituted by Christ in His parting address to His disciples; but in recent times it has been maintained either that baptism was a custom used by the Jews, practised by John the Baptist, and inherited by the early Christians, or that it was adopted by the Christians from the Græco-Roman world. Of these three the choice must probably be made between the first and the second—the third is not by itself adequate to explain the facts, though it is probable that the general ideas of the Græco-Roman world did much to determine and modify the exact form which early Christian baptism took. The evidence consists so largely of the

exegesis and criticism of the same passages that the case for and against each view cannot be put separately. The main Scripture passages concerned are Mt 28^{19}, Mk 16^{16}, and Jn 3^5, of which Mt 28^{19} is the central piece of evidence for the traditional view of the institution of baptism by Christ. It describes the Risen Lord as saying to His disciples, 'Go ye and make disciples of all the nations, baptizing them into the name of the Father, the Son, and the Holy Spirit.' If it were undisputed, this would, of course, be decisive, but its trustworthiness is impugned on the grounds of textual criticism, literary criticism, and historical criticism.

(*a*) *Textual criticism.*—In all extant MSS and versions the text is found in the traditional form, *πορευθέντες οὖν μαθητεύσατε πάντα τὰ ἔθνη, βαπτίζοντες αὐτοὺς εἰς τὸ ὄνομα τοῦ πατρὸς καὶ τοῦ υἱοῦ καὶ τοῦ ἁγίου πνεύματος, διδάσκοντες αὐτοὺς τηρεῖν πάντα ὅσα ἐνετειλάμην ὑμῖν*, though it must be remembered that the best manuscripts both of the African Old Latin and of the Old Syriac versions are defective at this point. The evidence of Patristic quotations is not so clear. It was formerly thought to be as unanimous as that of the MSS and Versions, but F. C. Conybeare (*ZNTW*, 1901, p. 275 ff.) has shown that this is not true, at least in the case of Eusebius of Cæsarea.

The facts are in summary that Eusebius quotes Mt 28^{19} twenty-one times, either omitting everything between *ἔθνη* and *διδάσκοντες* or in the form *πορευθέντες μαθητεύσατε πάντα τὰ ἔθνη ἐν τῷ ὀνόματί μου, διδάσκοντες, κ.τ.λ.*, the latter form being the more frequent. He also quotes it four times in the ordinary text; but it is significant that these four quotations are all in the later writings of Eusebius [once in the Syriac Theophany, iv. 8 (Lee's tr. p. 223), once in *contra Marcellum*, p. 3 O, once in the *de Ecclesiastica Theologia*, v. p. 174*a*, and once in the letter of Eusebius to the Church at Cæsarea quoted by Socrates, *HE* i. 8. 33; it should be noted that there is reason to think that the Syriac translator is giving, not the text of Eusebius, but the version to which he was accustomed (cf. Burkitt, *Evangelion da-Mepharreshe*, ii. 171), and that the authorship of the *contra Marcellum* and the *de Ecclesiastica Theologia* is doubtful (cf. Conybeare, *ZNTW*, 1905, p. 250 ff., and a reply by Gerhard Loeschcke, *ib.* 1906, p. 69 ff.)]. At first sight this evidence seems to prove that Eusebius, in his earlier writings at all events, used MSS of the Gospels which omitted the command to baptize in Mt 28^{19}, but Riggenbach ('Die trinitarische Taufbefehl,' *Beiträge zur Forderung christl. Theol.* 1903) and Chase (*JThSt*, 1905, p. 481 ff.) have argued that his method of quotation is due to the influence of the *arcani disciplina*. This suggestion does not seem to bear examination, for the quotations in Eusebius are not found in works intended for unbelievers or for catechumens. The most reasonable view seems to be that Conybeare has shown that the quotations in Eusebius point to a text which omitted the baptismal formula, though it is still open to question whether Eusebius knew also the traditional form. It is naturally important to ask whether there is any other evidence for the 'Eusebian' type of text. Conybeare thinks that he can see traces of it in Justin Martyr, *Dial.* xxxix. 258, and liii. 272, and in Hermas, *Simil.* ix. 17. 4; but none of these passages is convincing, and perhaps more striking than any of them is the passage in which Justin gives a description of the regeneration of Christian converts in connexion with baptism (*Apol.* i. 61). Here he quotes a saying of Christ ('Except ye be born again ye shall not enter into the kingdom of heaven') as a proof of the necessity of regeneration, but falls back upon the use of Isaiah and Apostolic tradition to justify the practice of baptism and the use of the trine formula. This certainly suggests that Justin did not know the traditional text of Mt 28^{19}.

Whether the 'Eusebian' text, if its existence be granted, has any real claim to be regarded as a serious rival to the traditional form, is a wholly different question. The answer depends on the view taken of the general problem of textual criticism. If a high value be attached to the existing MSS of the NT, the traditional text, though no longer unassailed, must be accepted. But if it be thought (as many critics think) that no MSS represent more than comparatively late recensions of the text, it is necessary to set against the mass of manuscript evidence the influence of baptismal practice. It seems easier to believe that the traditional text was brought about by this influence working on the 'Eusebian' text, than that the latter arose out of the former in spite of it.

(*b*) *Literary criticism.*—The objection raised to Mt 28^{19} by literary criticism is that it can be shown by a comparison with the other Gospels to be no part of the earliest tradition. The greater part of Mt 28 rests on a source almost or quite identical with our Mark, which is generally recognized as the oldest and best account of the life of Christ; it is possible, though perhaps improbable, that the writer was acquainted with the lost conclusion of Mark, but the method in which Matthew treats his sources is such that it is impossible to be certain that any one sentence (such as 28^{19}) was found in it. The other accounts of the parting words of our Lord differ so much, that it is improbable that they may be traced to any common documentary source. Still it is possible that they represent a common tradition which reported our Lord's parting words, and they may be examined in order to see if they suggest that those parting words contained any command to baptize, whether in the trine name or in the name of the Lord.

The accounts which we possess are Mt $28^{18\text{-}20}$, Mk $16^{15\text{-}18}$, Lk $24^{44\text{-}49}$, and perhaps Jn $20^{21\text{-}23}$. Of these Mk $16^{15\text{-}18}$ is generally considered to be a patchwork composition based on Matthew and Luke. If this be so, it affords evidence that at the time when it was written baptism was connected with the preaching of the gospel. It does not support the trine formula, but rather the 'Eusebian' text (cf. *ἐν τῷ ὀνόματί μου* in 16^{17}), and it is as easy to think that the reference to baptism was derived from contemporary usage as from Mt 28^{19}. Lk 24^{47} is more closely allied with the Eusebian than with the traditional text, and both this passage and Jn $20^{21\text{-}23}$ suggest that the earliest form of tradition as to the Lord's parting words to the disciples said nothing about baptism. It may be argued that the idea of repentance and forgiveness of sin was for early Christianity so closely connected with that of baptism that one implies the other. But this is not the point. It is probable that baptism and the preaching of the gospel went hand in hand from the beginning. The question is whether this was due to their direct association in the 'parting words' of the Lord, or to other causes. The evidence of Mt 28^{19}, if the traditional text be sound, points to the former alternative; but the Third and Fourth Gospels suggest that the earliest tradition knew only of a command to preach the gospel of repentance for the forgiveness of sins. In the case of the Third Gospel this argument is especially strong. Either Luke knew of the commission to baptize (whether in the trine name or not) and omitted it, or he did not know it. It seems impossible to find any reason why he should have omitted it. At first sight this argument holds equally good for the Fourth Gospel, but it is not nearly so strong, as the writer has not unreasonably been thought to show a tendency to omit the material side of the sacramental rites of early Christianity, because of a tendency to over-emphasize its importance. Hence he omits the institution of the Eucharist. So that his omission to connect baptism with the forgiveness of sins in Jn 20^{23} is not so strong an argument as is the similar omission by Luke.

On the whole, then, the evidence of literary criticism is against the historical character of the traditional text of Mt 28^{19}.

(*c*) *Historical criticism.*—The objection made to the authenticity of Mt 28^{19} from the standpoint of historical criticism is that the references to baptism in the Acts point to the earliest form as baptism 'in the name of the Lord.' Thus it is not, like the previous objections, directed against the command as a whole, but against the formula used in it.

Christian baptism, when connected with the mention of a formula, is alluded to four times in the Acts (2^{38} 8^{16} 10^{48} 19^5), and the formula is never that of Mt 28^{19}, but is twice *ἐν τῷ ὀνόματι Ἰησοῦ Χριστοῦ* (2^{38} 10^{48}) and twice *εἰς τὸ ὄνομα τοῦ κυρίου Ἰησοῦ* (8^{16} 19^5). That this was the usual formula of Christian baptism is supported by the evidence of the Pauline Epistles, which speak of being baptized only *εἰς Χριστόν* (Gal 3^{27}) or *εἰς Χριστὸν Ἰησοῦν* (Ro 6^3). Is it possible to reconcile these facts with the belief that Christ commanded the disciples to baptize in the trine name? The obvious explanation of the silence of the NT on the trine name, and the use of another formula in Acts and Paul, is that this other formula was the earlier, and that the trine formula is a later addition. It would require very strong arguments to controvert this presumption, and none seems to exist (a statement of curious attempts, ancient and modern, is given in 'Baptism' in Hastings' *DB*, vol. i., by Dr. A. Plummer).

The cumulative evidence of these three lines of criticism is thus distinctly against the view that Mt 28^{19} represents the *ipsissima verba* of Christ in

instituting Christian baptism. If this be so, it is plain that neither Mk 16^{16} nor Jn 3^5 can prove the institution. Mk 16^{16} has been incidentally dealt with; Jn 3^5 is more difficult. Doubts have been cast on the text of this verse, so far as the reference to water is concerned, but for the present it is enough to point out that, even if the reference to baptism be undisputed, it does not follow that it implies the institution of baptism by Christ; it rather suggests a practice which He found existing and accepted. It is also necessary to remember that in the present position of the criticism of the Fourth Gospel no one can confidently build on historical statements which are found only in that document.

The case against the indirect evidence in support of the traditional view is less convincing. The position in defence of that view is that, even if the evidence in Acts be admitted to prove that baptism in the trine name was not instituted by Christ, it shows that from the beginning it was unquestioningly practised by all Christians, and it is urged that this would not be so if it had not been instituted by Christ. Against this it is alleged that the last conclusion is unwarranted, and that some of the evidence in the Epistles, properly regarded, tells against rather than for the traditional view. The crucial passage is 1 Co 1^{14-17}:

εὐχαριστῶ ὅτι οὐδένα ὑμῶν ἐβάπτισα εἰ μὴ Κρίσπον καὶ Γάϊον ἵνα μή τις εἴπῃ ὅτι εἰς τὸ ἐμὸν ὄνομα ἐβαπτίσθητε. ἐβάπτισα δὲ καὶ τὸν Στεφανᾶ οἶκον· λοιπὸν οὐκ οἶδα εἴ τινα ἄλλον ἐβάπτισα. οὐ γὰρ ἀπέστειλέν με Χριστὸς βαπτίζειν ἀλλ' εὐαγγελίζεσθαι.

It is urged with great force that Paul could not possibly have written this if Christ had given the definite command to baptize, related in Mt 28^{19}. It is possible to argue that Paul is speaking of himself, not of the other disciples; but this introduces a limitation into the commission to baptize which cannot be supported, and is also contrary to the constant claim of Paul that he has the Apostolic commission as fully as any of the other apostles.

Thus, so far as the negative side of the argument is concerned, the opponents of the traditional view have decidedly the better case. The weak spot in their position is when they attempt to give any positive explanation of the origin of Christian baptism. The suggestion is that baptism was an already existing custom which the Church took over from the beginning. But if so, from what source did it take it? The answer is that that side of baptism which is concerned with cleansing from sin is found in Græco-Roman and Jewish as well as in Christian baptism, and was a feature of John's baptism, in which also it had an eschatological significance. It was, in fact, part of the common stock of ideas of the 1st century.

Similarly, the use of the 'name' in baptism is only part of the complex of doctrine connected with the use of names as a means of employing the power which belonged to the original owner of the name. This also was common to Jew and Gentile alike. It is therefore plain that, on what may be termed the negative side of baptism, *i.e.* the side which is especially connected with purification, and so far as the use of the 'name' is concerned, there is no reason to quarrel with the view that Christian baptism is an adaptation of customs and ideas which were common to the whole world in the time of Christ. There is nothing in them so strange as to force us to suppose that they were due to the special institution of Christ. The more difficult side of the question is concerned with the relation of baptism to the gift of the Spirit. The baptism of John did not claim to give the Spirit, nor did Jewish baptism. It is also not quite possible to prove the existence of exactly the same thing in the Mysteries, though they did undoubtedly present cognate ideas, especially that of regeneration. This is therefore the strongest point of the argument for either a specifically Christian or a specifically Græco-Roman origin for baptism. The Pauline Epistles are the earliest evidence for a connexion between baptism and the gift of the Spirit. If this view was not known to the Jews, St. Paul must have received it from the original disciples (who again received it from Christ), or have adopted it from the general stock of Græco-Roman ideas. Yet the *prima facie* strength of this argument must be qualified by the following considerations:

(1) In the first place, it may be thought with much reason that Christ spoke of the Spirit, and compared it, as the ground of Christian life, with baptism, which was the ground of discipleship to John the Baptist. If so, a natural confusion of thought would be made stronger by the fact that the beginning of the life in the Spirit did, in fact, often coincide with the water-baptism which marked the initiation of the Christian. That it was coincidence and not identity would not be observed until later, but that it was observed can be seen in the Acts.

(2) In the second place, there seems no reason to doubt the tradition in the Gospels that John the Baptist himself referred to a baptism in the Spirit. Such a reference seems to go back to the use of a passage in the OT which lies behind his baptism, viz. Ezk 36^{25-27}. In $36^{25f.}$ we read: 'I will sprinkle clean water upon you and ye shall be clean (baptism). . . . A new heart will I put within you (μετάνοια [?]).' This clearly is the background of John's preaching; but it leads up to the next verse: 'And I will put my spirit within you.' It does not therefore seem too much to say that the teaching by John the Baptist of a water-baptism of repentance for the remission of sins, to the mind of any Jew familiar with the OT, seemed to fulfil this passage, and so inevitably suggested that the gift of the Spirit, which fulfilled the second half and was found in the Christian Church, was to be looked for also in baptism.

(3) Moreover, our real knowledge of popular Jewish theology and religious observances in the time of Christ is small. It is true that the official Rabbinical religion had no sacramental washings or baptisms, and probably did not give any such interpretation to the baptism of proselytes; but the Essenes probably went further in this direction, attaching a sacramental meaning to their baptisms; and it is possible that this view was common among the people outside the official classes. If so, this may have been an important factor in the genesis of Christian baptism (see Bousset, *Die Religion des Judentums*, pp. 230 and 529 ff.).

These arguments cannot be said to prove that Christ did not institute baptism, but they may fairly be said to show that the existence of Christian baptism is most intelligible on the supposition that it was a Jewish custom which the Christians took over, modifying it by the natural adoption of the 'name,' and by an equally natural connexion with the gift of the Spirit. Moreover, there is certainly no satisfactory positive evidence that Christ did institute baptism. It is therefore more probable that the origin of Christian baptism is the adoption and adaptation of a Jewish custom than that it was directly and specially instituted by Christ. This is also far more probable than that it was first borrowed by St. Paul from the Græco-Roman world. At the same time, baptism was certainly one of the elements in Christianity which was most likely to obtain a favourable reception from the Roman world, and this may have led to the emphasis which was laid upon it, and to the rapid development of the doctrine connected with it.

2. Baptism in the NT.—i. *DOCTRINE OF BAPTISM.*—(1) IN THE PAULINE EPISTLES.—There are four main ways in which baptism is regarded in the Pauline Epistles.

(*a*) *Union with Christ.*—In Ro $6^{3ff.}$ the immersion in and the rising out of the water are regarded as a union with the death and resurrection of Christ. 'Are ye ignorant that all we who were baptized into Christ Jesus were baptized into his death? We were buried with him through baptism into death: that like as Christ was raised from the dead through the glory of the Father, so we also might walk in newness of life.' Baptism is thus the beginning of a new life of union with the risen Christ. The same idea is found in Gal 3^{27} 'As many of you as were baptized into Christ did put on Christ,' and in Col 2^{12} '. . . buried with him

in baptism, wherein ye were also raised with him . . .' In the light of these passages it is difficult to doubt that St. Paul regarded baptism as more than symbolical; it was an act which really brought about the result ascribed to it, and not merely an acted description of that result, which was actually caused by something else.

(*b*) *The gift of the Spirit.*—In 1 Co 12[12] the baptized are regarded as members of Christ's body, inspired by the same Divine spirit: 'For as the body is one, and hath many members, and all the members of the body, being many, are one body; so also is Christ. For in one Spirit were we all baptized into one body . . .' At first sight this seems an idea which is difficult to reconcile with the former; but the difference is probably quite superficial. To St. Paul the Christ of spiritual experience and the Spirit were almost if not quite identical. This may be seen in Ro 8[9-17] and 2 Co 3[17].

(*c*) *Cleansing from sin.*—In 1 Co 6[11], where baptism is not mentioned but certainly implied, it is represented as a cleansing effected through the name of the Lord and through the Divine spirit: 'Ye were washed, ye were sanctified, ye were justified in the name of the Lord Jesus Christ and in the Spirit of our God.' This view is complementary to the others, and describes some of the results which follow from them. The importance of this passage is that it explains that baptism can produce these effects because it works 'in the name,' and so links up baptism with the view, prevalent at the time in almost every circle, that the pronunciation of the name of any one could, if properly used, enable the user to enjoy the benefit of the attributes attached to the original owner of the name (see also art. NAME).

Thus the Pauline doctrine of baptism is that on the positive side it gives the Christian union with Christ, which may also be described as inspiration with the Holy Spirit, while on the negative side it cleanses from sin. This it accomplishes by the power of the name of the Lord Jesus Christ, and by the sacramental effect of the water, according to the well-known idea that results could be reached in the unseen spiritual world by the performance of analogous acts in the visible material world. Baptism is regarded as really giving these results, and not merely as a sign that they have been, or can be, obtained in some other way.

(*d*) *Vicarious baptism.*—It would also seem from 1 Co 15[29] that St. Paul recognized the practice of vicarious baptism for the dead. It is impossible that 'Else what shall they do who are baptized for the dead? If the dead are not raised at all, why then are they baptized for them?' can refer to anything except vicarious baptism.

(2) IN THE PAULINE EPISTLES OF DOUBTFUL AUTHENTICITY.—Under this heading it is perhaps wisest to deal with the evidence of Eph 5[26f.], Tit 3[5-7].

In Ephesians the cleansing efficacy of the water is emphasized, and is connected with the 'word' ('having cleansed it by the washing of water with the word'). This emphasis is somewhat stronger than anything in the unquestioned Epistles, but it is practically implied in 1 Co 6[11], in which passage also the 'name' may correspond to the 'word' (ῥῆμα) of Ephesians. In Titus the union with Christ's risen life is regarded as a new birth; 'according to his mercy he saved us through the washing of regeneration and renewing of the Holy Spirit.' The phrase 'regeneration' is strange to the Pauline vocabulary, but the idea which it conveys is involved in Ro 8[14] 'For as many as are led by the Spirit of God, these are sons of God,' when taken in connexion with the view that the Spirit was given in baptism (cf. also Gal 3[26f.], where the idea of sonship to God and baptism are closely connected).

(3) IN 1 PETER.—The only place in the Catholic Epistles which explicitly speaks of baptism is 1 P 3[21] '. . . which (*i.e.* water) in the antitype doth now save you, namely baptism, not a putting away of the filth of the flesh, but a "question" of a good conscience toward God. . . .' Here the doctrine of the 'real' efficacy of baptism is clearly asserted; but there is a protest against too material an emphasis on the water, to counteract which mention is made of a συνειδήσεως ἀγαθῆς ἐπερώτημα. It is not quite certain what this phrase means. It is improbable that it refers to prayer to God, for ἐπερωτῶ is never used in this sense, or of inquiry after God, for this would require ἐπερώτησις, and the best interpretation seems to be that it is a reference to the question directed to a convert at his baptism (see C. Bigg, '1 Peter' in *The Intern. Crit. Comment.* p. 165). In this 'a good conscience' probably defines the content of the demand made on the candidate—it was of a moral rather than a doctrinal nature. The writer also goes on to explain that the water of baptism receives this power 'through the resurrection of Jesus Christ, who is on the right hand of God, having gone into heaven, angels and authorities and powers being made subject unto him' This seems to be an explanation why the name of the Lord was so potent in baptism: He had triumphed over death, and regained life, and those who used His name were able to use His power to do the same. It is true that no actual statement is made in 1 Peter that baptism was in the name of the Lord, but no one is likely to dispute that this was the case.

(4) IN THE SYNOPTIC GOSPELS.—Christian baptism is mentioned only in Mt 28[19] and Mk 16[16]. The former passage ('Go ye into all the world and make disciples of all the nations, baptizing them into the name of the Father, the Son, and the Holy Spirit') claims the direct institution of baptism by Christ, but its authenticity is open to doubt (see § 1).

Here it is only necessary to ask, What is the meaning of the formula translated 'in the name of'? The question is whether εἰς τὸ ὄνομα means the same as ἐν τῷ ὀνόματι. The probability seems to be that the two phrases are, in the late Greek of the NT, identical. It is now common knowledge that εἰς and ἐν were interchangeable in late Greek, and the Latin and Syriac translators of Mt 28[19] clearly took this view, which is convincingly defended by J. Armitage Robinson in *JThSt* vii. (Jan. 1906) in answer to an article by F. H. Chase in *JThSt* vi. (July 1905). The meaning of the writer of the Gospel (or of the redactor who added the clause relating to baptism) was that Christians had the power of baptizing in the name communicated to them by the Lord who had gained the power (ἐξουσία) over everything in heaven and earth. The idea is parallel with that in 1 P 3[21f.].

In Mk 16[16] ('He that believes and is baptized shall be saved') baptism is regarded as a necessary means to salvation, but no further details are given.

(5) IN THE ACTS.—The references to baptism in the Acts are doctrinally important in connexion with the formula used, and with the relation between baptism and the gift of the Spirit. The former point is sufficiently discussed in § 1. The latter may best be formulated thus: (*a*) There is in the Acts a series of passages in which baptism seems to be clearly identified with the gift of the Spirit; (*b*) there is a second series in which it is clearly distinguished from this gift; and (*c*) there is a third series which either does not allude to the point, or may be interpreted equally well on either hypothesis. This third series can, of course, be disregarded (such passages are Ac 8[36-39] 16[15] 16[33] 18[8] 22[16]); but an attempt must be made either to interpret the two others in such a way as to remove the apparent contradiction, or to see in the difference between them an indication of different sources.

(*a*) The passages which seem to identify baptism with the gift of the Spirit are Ac 1[5] 2[38] 11[16] and 19[2-6]. In 1[5] ('John indeed baptized with water; but ye shall be baptized with the Holy Spirit not many days hence') a contrast is apparently drawn between John's baptism and Christian baptism, the latter being regarded as baptism with the Holy Spirit; but as the narrative goes on to describe the fulfilment of this promise on the day of Pentecost, in which there is no suggestion of baptism

in the ordinary literal sense, it is probable that the word 'baptize' in 1^5 is used metaphorically, and not with reference to ordinary Christian baptism. This interpretation is supported by Ac 11^{16}, where the words of 1^5 are quoted by St. Peter in connexion with the episode of Cornelius, for here the gift of the Spirit is conferred without baptism in water, and baptism in water is given to those who have already received the Spirit. In Ac 2^{38} St. Peter says: 'Repent and be baptized . . . and ye shall receive the gift of the Holy Spirit.' This certainly seems to identify the gift of the Spirit with baptism, but it is not decisive. The context is that the promise made in Ac 1^5 has just been fulfilled, and St. Peter says, 'Be baptized and you also shall receive the same gift.' The *prima facie* suggestion that this means: 'You shall receive it through baptism,' is discounted by the fact that this was not the way in which the disciples had received it, and it is significant that we are not told that those who were baptized did receive the Spirit, but merely that they were added to the Church. Thus it is possible that the meaning of the passage really is that baptism was the means of entry into the Church, to the members of which the Spirit would ultimately be given. Similarly ambiguous is Ac $19^{2\text{-}6}$. Here we have the case of certain Ephesians who had become Christians, but had been baptized not with Christian baptism, but with the baptism of John. St. Paul said to them: 'Did ye receive the Holy Spirit when ye believed? And they said unto him, Nay, we did not so much as hear whether the Holy Spirit was given. And he said, Into what then were ye baptized? And they said, Into John's baptism. And Paul said, John baptized with the baptism of repentance, saying unto the people that they should believe on him which should come after him, that is, on Jesus. And when they heard this, they were baptized into the name of the Lord Jesus. And when Paul had laid his hands upon them, the Holy Spirit came on them.' The *prima facie* interpretation certainly connects the gift of the Spirit with baptism; not so much because the Spirit was actually given, as because of St. Paul's second question. It is, however, possible that his surprised question was due, not to the non-reception of the Spirit, but to their ignorance; his first question supports this view, for it seems to contemplate the possibility of Christian belief and baptism without the gift of the Spirit. If so, the writer may have intended to connect the gift of the Spirit with the laying on of hands rather than with baptism. Thus in each case the *prima facie* connexion of baptism with the gift of the Spirit is indecisive: a different interpretation is possible, and which of the two should be followed must depend on the evidence of the other series of passages.

(*b*) The passages which distinguish baptism from the gift of the Spirit are Ac $8^{12\text{ff.}}$ and $10^{47\text{f.}}$ The former is the incident of the first Samaritan converts. When Peter and John came to Samaria, they prayed for the converts 'that they might receive the Holy Spirit, for as yet he was fallen upon none of them, only they had been baptized into the name of the Lord Jesus. Then laid they their hands on them, and they received the Holy Spirit.' Here it is plain that the gift of the Spirit was separate from baptism, and there is no suggestion that the baptism was imperfect; the 'name of the Lord Jesus' is the usual formula in Acts for Christian baptism. In $10^{47\text{f.}}$ the matter is less simple. The narrative relates that, while St. Peter was speaking, the Holy Spirit fell on Cornelius and his company. 'Then answered Peter, Can any man forbid water that these should not be baptized, which have received the Holy Ghost as well as we? And he commanded them to be baptized in the name of Jesus Christ.' Obviously in this case the gift of the Spirit was not dependent on baptism, but it appears true that the case of Cornelius was regarded as an exception. The general rule was that baptism came first, and the gift of the Spirit afterwards. The implication is that the two were separate even in normal cases, but this is not definitely stated.

If an attempt be made to bring these data together, and so establish the doctrine of baptism held by the writer of the Acts, the starting-point must be Ac $8^{12\text{f.}}$ as the most definite of all the passages. It shows that (*a*) baptism was the regular and general initiation to membership in the Church; (*b*) the Spirit was not conferred in baptism, but given after it, and was specially connected with the laying on of hands by the Apostles. This explains Ac $19^{2\text{ff.}}$, in which the situation partly resembles that in Ac $8^{12\text{ff.}}$. The Ephesians, like the Samaritans, were, at least in some sense, Christians, but had not received the Spirit. The difference between the two incidents is that the Ephesians, unlike the Samaritans, had received imperfect baptism. Therefore St. Paul did not merely 'lay hands' on the Ephesians, as the Apostles did on the Samaritans, but first had them baptized. The gift of the Spirit was, however, due to the laying on of hands, and not to the baptism. In this way the two classes of passages can be so interpreted that they all fall into place in one system of doctrine, and there is no need to postulate a variety of sources in the Acts with different views on baptism.

A difficulty, however, arises out of the relation of Acts to the Pauline Epistles. Which is the truer or earlier presentment of early Christian thought—that which closely connects baptism and the gift of the Spirit, as the Epistles do, or that which separates them, as the Acts does? The followers of van Manen would probably say that Acts represents an earlier stratum of thought, that early Christian baptism was like John's—only for the remission of sin—and that the idea of the gift of the Spirit in this connexion was a late ecclesiastical figment due to external influences, which has left traces in the Epistles. But this is probably an inadequate view. The fact is that the Acts distinguishes where the Epistles do not, and so is probably the later document. St. Paul simply connects baptism with the gift of the Spirit; he makes no fine distinctions. St. Luke, while constantly bringing the two together, is apparently anxious to maintain that the gift of the Spirit is not the direct result of baptism, but is more closely bound up with the laying on of hands by the Apostles.

(6) In the Epistle to the Hebrews.—In He $6^{4\text{-}6}$ and in $10^{22.\ 23}$ the references to baptism are probable but not explicit. In the latter passage the writer says:

'Let us draw near with a true heart in fulness of faith, having our hearts sprinkled from an evil conscience, and our body washed with pure water: let us hold fast the confession of our hope that it waver not.'

It is almost certain that this is an indication that the writer regarded baptism as the necessary beginning of Christian life; but, like the writer of 1 Peter, he connects the spiritual cleansing with a good conscience (though he expresses it negatively and 1 Peter positively); and in the last sentence it is probably possible to see a reference to the baptismal profession of faith represented in 1 Peter by *ἐπερώτημα*. In the former passage he says:

'For as touching those who were once enlightened and tasted of the heavenly gift, and were made partakers of the Holy Spirit, and tasted the good word of God, and the powers of the age to come, and fell away, it is impossible to renew them again unto repentance.'

Here the reference to baptism is rendered probable by the fact that *φωτισμός* afterwards became a technical term for baptism. It is, however, necessary to point out one qualification to the view that 'enlightenment' means baptism.

In the immediately preceding verses the writer says: 'Therefore let us cease to speak of the first principles of Christ, and press on unto perfection; not laying again a foundation of repentance from dead works and of faith towards God, of the teaching (*v.l.* namely, the teaching) of baptisms and laying on of hands, and of resurrection from the dead, and eternal judgment' (He $6^{1.\ 2}$). Here he regards baptism as one of the foundations of Christian life, but he joins to it the laying on of hands. Now it seems probable that St. Luke connected the gift of the Spirit with the laying on of hands rather than with baptism itself (see § 2, i. (*b*)), whereas St. Paul connected it with the latter. Therefore it is impossible to say precisely what the writer of Hebrews regarded as the effect of baptism, and what as the effect of the laying on of hands. It is possible that enlightenment and tasting of the heavenly gift may be intended to be especially connected with baptism, and the gift of the Spirit with the laying on of hands; but in the absence of further evidence certainty is impossible, and perhaps the writer was not concerned with this question. His interest lay rather in the question of sin after baptism; from passages such as $2^{1\text{-}4}$ $3^{12\text{-}4^{11}}$ $6^{4\text{-}12}$ and $10^{19\text{-}31}$, it is clear that he regarded a relapse into sin as unforgivable, and it is probable that 6^6 ought to be regarded as implying the existence of a school of thought which maintained the possibility of a second baptism in case of relapse.

(7) In the Johannine writings.—These books give little information on the subject of baptism. In Jn 3^{22} it is stated that Jesus baptized, but the text is open to suspicion in view of Jn 4^2 which denies that He did so: 'Jesus himself used not to baptize, but his disciples.' In any case there is no reference to the doctrine of baptism. In Jn 3^5 in the received text there is a clear reference to baptism, which is described as regeneration by

water and the Spirit. It may, however, fairly be questioned whether the words 'water and' are really original in the text. They are without connexion with the context, and seem to have been unknown to Justin Martyr. If they be omitted, the reference to baptism is only indirect; in view of such passages as Tit 3^{5-7} it can scarcely be doubted that there is some connexion, but it would seem to be rather of the nature of a significant silence as to the material element, which amounts to a protest against the emphasis laid on it in other circles. Even if the words be retained, it remains true that the emphasis in the passage is entirely on the Spirit and not the water. This characteristic treatment of baptism is exactly parallel with that of the Eucharist, the institution of which is not mentioned, but the doctrine of which is fully expounded on the spiritual side.

In the Johannine Epistles there is no definite allusion to baptism; there are many references to the gift of the Holy Spirit, but there is no proof that the writer connected it with baptism, though in the light of the information of other documents it is extremely probable that this is the meaning in 1 Jn $2^{20\text{-}27}$ of the reference to an 'anointing from above'—it is the gift of the Spirit bestowed in (or at least connected with) baptism. Perhaps more important, though even less explicit, is $5^{16f.}$ 'If any man see his brother sinning a sin not unto death, he shall ask, and God will give him life for them that sin not unto death. There is sin unto death: not concerning this do I say that he should make request. All unrighteousness is sin, and there is sin not unto death.' This passage is intelligible only in light of the discussion as to the possibility of forgiveness for sin after baptism. The writer tries to solve the difficulty by introducing a distinction between mortal and venial sin.

Summary of doctrine of baptism in NT.—As a summary of these results from a study of the NT, certain lines of development of doctrine which begin to manifest themselves may be pointed out. The earliest writings, the Pauline Epistles, regard baptism as a cleansing from sin and as the means whereby Christians join the life of Christ—which in Pauline thought is almost (and probably quite) identical with the gift of the Spirit. There is, however, no attempt to explain its working except that it was 'in the name of,' and so endued with the power of, the Lord Jesus Christ, who had been raised from the dead. In later documents the development of more than one line of thought may be traced. In the Pauline Epistles of doubtful authenticity emphasis is laid on the cleansing from sin given by the water of baptism, and the idea (already implied by the other Epistles) of regeneration is formulated. This development was rather in the direction of a magical conception of baptism. Against this we find traces of protest. (*a*) The writer of the Acts would seem to represent a school of thought which associated the gift of the Spirit with the laying on of the hands of the Apostles rather than with baptism itself. (*b*) In 1 Peter and perhaps in Hebrews emphasis is laid on a confession of faith by the baptized person, probably of a moral rather than a theological nature. It is possible that this is a protest against a magical view of 'the name' in baptism. (*c*) The writer of the Fourth Gospel is anxious to emphasize the importance of the gift of the Spirit rather than that of the water; obviously this is closely related to the line of thought represented by Acts; and if 1 Peter represents a protest against a magical view of 'the name,' these documents represent a protest against a magical view of the water. (*d*) A different line of development is testified to by the Epistle to the Hebrews and 1 John. As soon as baptism was regarded as the forgiveness of sin,—that is, from the beginning,—the question of sin after baptism must have arisen. Hebrews bears witness to, and protests against, a tendency to allow a repetition of baptism. The writer regards sin after baptism as beyond forgiveness. The writer of 1 John, on the other hand, bears witness to the fact that this teaching was already found to be too severe, and begins the distinction, so important for the later Church, between mortal and venial sin.

ii. *METHOD OF BAPTISM.*—On this point we have hardly any information in the NT. The language of Ro $6^{1ff.}$ is thought to point to immersion, and it is said that this is confirmed by the descriptions in the Gospels of the baptism of Christ; but these arguments cannot be pressed. It is still less safe to argue from the etymological meaning of *βαπτίζω* as a frequentative of *βάπτω*; for the meaning of words depends ultimately on use, not on etymology, and *βαπτίζω* means by use 'to wash ceremonially' (cf. Lk 11^{38} 'he wondered that he had not washed [*ἐβαπτίσθη*] before dinner'). Here partial ablution is certainly intended; and it must remain doubtful whether immersion was ever actually practised, though St. Paul's language certainly points to the view that it was regarded as an ideal. The formula used was 'in the name of the Lord Jesus Christ' or some synonymous phrase; there is no evidence for the use of the trine name. There was no doubt from the beginning a confession of faith by the convert, but the only probable reference to this as a formal part of the act of baptism is 1 P 3^{21} [the text of Ac 8^{37} in the AV is certainly late].

There is no indication of the baptism of children, and no suggestion that baptizing was the privilege of a class; but it would seem from 1 Co 1 that St. Paul delegated the office of baptizing to some one else, and Blass argues that this is implied by Ac 10^{48} 'And he (St. Peter) commanded them to be baptized in the name of Jesus Christ.' The suggestion is that he did not actually baptize them himself.

3. **Baptism in the 1st and 2nd centuries.**—i. *IN ORTHODOX CIRCLES.*—(1) BARNABAS.—The writer of Barnabas is interested in baptism only so far as it concerns his main thesis that the promises in the OT refer to the Christians and not to the Jews. In ch. 11 he illustrates this thesis from baptism. He argues that Is $16^{1f.}$ $45^{2ff.}$ $33^{16ff.}$, Ps 1^{3-6} are all prophecies which find a fulfilment in Christian baptism. It is only incidentally in the last paragraph (§ 11) that he gives any description of baptism: *καταβαίνομεν εἰς τὸ ὕδωρ γέμοντες ἁμαρτιῶν καὶ ῥύπου, καὶ ἀναβαίνομεν καρποφοροῦντες ἐν τῇ καρδίᾳ τὸν φόβον καὶ τὴν ἐλπίδα εἰς τὸν Ἰησοῦν ἐν τῷ πνεύματι ἔχοντες.* This seems to imply immersion, but otherwise throws no light on baptismal practice. Doctrinally it shows that the writer regarded baptism as a 'real' cleansing from sin *opere operato*. It is possible that he regarded it as conferring the gift of the Spirit, and that this is the meaning of the phrase *ἐν τῷ πνεύματι*; but obviously this exegesis is open to doubt. Finally, the phrase *εἰς τὸν Ἰησοῦν* may be a reference to the baptismal formula, but the text is uncertain.

(2) I CLEMENT. — There is no reference to baptism in this document.

(3) IGNATIUS.—Nothing in the genuine epistles of Ignatius throws any light on the doctrine of baptism, but in accordance with his general emphasis on episcopal supremacy he insists that baptism may not be performed 'without the bishop'—*οὐκ ἐξόν ἐστιν χωρὶς τοῦ ἐπισκόπου . . . βαπτίζειν* (*Smyrn.* viii. 2)—which probably means without the permission of, rather than without the presence of, the bishop.

(4) HERMAS. —The *Shepherd* of Hermas gives little information as to the practice of baptism, but manifests a considerable interest in the doctrine. The passages which are important are *Vis.* iii. 3, iii. 7, *Mand.* iv. 3, *Sim.* ix. 16. The foundation, he says, is a belief in the necessity and efficacy of baptism. In *Vis.* iii. 2 the Church is represented as a tower built over water, and in iii. 3 it is explained that this is because *ἡ ζωὴ ὑμῶν*

διὰ ὕδατος ἐσώθη καὶ σωθήσεται. This must mean that baptism is the foundation of the Christian life, and the next sentence may be a reference to the baptismal formula: τεθεμελίωται δὲ ὁ πύργος τῷ ῥήματι τοῦ παντοκράτορος καὶ ἐνδόξου ὀνόματος. This is rendered probable by the fact that in *Sim.* ix. the condition of entry is described as the 'name of the Son of God.' It is also clear that baptism was regarded as really effecting an essential change in Christians; and from the emphasis which is laid upon it, it would seem that this was regarded as primarily due to 'the name'; but the water is also mentioned. The most important passage is *Sim.* ix. 16. 3 f.:

πρὶν γάρ, φησί, φορέσαι τὸν ἄνθρωπον τὸ ὄνομα τοῦ υἱοῦ τοῦ θεοῦ νεκρός ἐστιν· ὅταν δὲ λάβῃ τὴν σφραγῖδα, ἀποτίθεται τὴν νέκρωσιν καὶ ἀναλαμβάνει τὴν ζωήν. ἡ σφραγὶς οὖν τὸ ὕδωρ ἐστίν· εἰς τὸ ὕδωρ οὖν καταβαίνουσι νεκροὶ καὶ ἀναβαίνουσι ζῶντες.

But this strongly defined doctrine naturally called for development on various points.

(*a*) There was the danger of a purely magical and unethical view of baptism. To counteract this, in *Sim.* ix. great emphasis is laid on the insufficiency of 'the name' if it be not accompanied by the Christian virtues. These are represented as twelve virgins, and the explanation given of them in *Sim.* ix. 13. 2 is that they are ἅγια πνεύματα. Without being endued with them no one can enter the kingdom of God—ἐὰν γὰρ τὸ ὄνομα μόνον λάβῃς, τὸ δὲ ἔνδυμα παρὰ τούτων μὴ λάβῃς, οὐδὲν ὠφελήσῃ· αὗται γὰρ αἱ παρθένοι δυνάμεις εἰσὶ τοῦ υἱοῦ τοῦ θεοῦ. ἐὰν τὸ ὄνομα φορῇς, τὴν δὲ δύναμιν μὴ φορῇς αὐτοῦ, εἰς μάτην ἔσῃ τὸ ὄνομα αὐτοῦ φορῶν.

(*b*) A natural result of the emphasis laid on the insufficiency of baptism without virtue was a proportionately increased emphasis on the question as to sin after baptism which (cf. § 2 i. (*b*)) seems to be discussed in Hebrews and to be implied in 1 John. The distinction between various sins which appears in 1 John is unknown, and the position adopted in Hebrews, though substantially confirmed, is in some degree relaxed. This question is dealt with in *Mand.* iv. 3. Hermas asks the Shepherd ἤκουσα, φημί, κύριε, παρά τινων διδασκάλων ὅτι ἑτέρα μετάνοια οὐκ ἔστιν εἰ μὴ ἐκείνη, ὅτε εἰς ὕδωρ κατέβημεν καὶ ἐλάβομεν ἄφεσιν ἁμαρτιῶν τῶν προτέρων (considering that Hermas is a Roman document, and that the earliest witness to Hebrews is the earlier Roman document I Clement, it is not impossible that this is a reference to Hebrews 6[4-6]) and the answer is καλῶς ἤκουσας, οὕτω γὰρ ἔχει, ἔδει γὰρ τὸν εἰληφότα ἄφεσιν ἁμαρτιῶν μηκέτι ἁμαρτάνειν, ἀλλ' ἐν ἁγνείᾳ κατοικεῖν. This is simply a re-affirmation of the doctrine of Hebrews, but a relaxation is then introduced. God has instituted μετάνοιαν, and has appointed the Shepherd as the angel to watch over it; but this may be used only once—μετὰ τὴν κλῆσιν ἐκείνην τὴν μεγάλην καὶ σεμνὴν ἐάν τις ἐκπειρασθεὶς ὑπὸ τοῦ διαβόλου ἁμάρτῃ μίαν μετάνοιαν ἔχει. One of the main objects of the Shepherd seems to have been the emphasizing of μετάνοια, which is clearly (cf. esp. the *Similitudes*) regarded in a concrete way which approached the later ecclesiastical use, and is half-way to meaning 'penance.'

(*c*) Another result in practice of the assertion of the high standard of Christian life, and the danger of relapse after baptism, was a tendency to postpone baptism. Against this Hermas protests in *Vis.* iii. 7, where those who shrink from baptism for this reason are compared with the stones which he saw in *Vis.* iii, 2: πίπτοντας ἐγγὺς ὑδάτων καὶ μὴ δυναμένους κυλισθῆναι καὶ ἐλθεῖν εἰς τὸ ὕδωρ.

(*d*) In the sphere of doctrine a natural consequence of the stress laid on the necessity of baptism was inquiry into the ultimate fate of the righteous unbaptized dead. Hermas settled this inquiry by ascribing to the apostles the function of baptizing in Hades (cf. esp. *Sim.* ix. 16. 5 and 6: οἱ ἀπόστολοι καὶ οἱ διδάσκαλοι οἱ κηρύξαντες τὸ ὄνομα τοῦ υἱοῦ τοῦ θεοῦ, κοιμηθέντες ἐν δυνάμει καὶ πίστει τοῦ υἱοῦ τοῦ θεοῦ ἐκήρυξαν καὶ τοῖς προκεκοιμημένοις, καὶ αὐτοὶ ἔδωκαν αὐτοῖς τὴν σφραγῖδα τοῦ κηρύγματος. . . . ἐν δικαιοσύνῃ γὰρ ἐκοιμήθησαν καὶ ἐν μεγάλῃ ἁγνείᾳ· μόνον δὲ τὴν σφραγῖδα ταύτην οὐκ εἶχον).

(5) THE DIDACHE.—In this document there is no information as to the doctrine of baptism, but much concerning the practice, and it is unfortunate that there is no possibility of fixing either its date or provenance with certainty. The passage which actually deals with baptism is ch. vii., and runs thus:

Περὶ δὲ τοῦ βαπτίσματος, οὕτω βαπτίσατε· ταῦτα πάντα προειπόντες βαπτίσατε εἰς τὸ ὄνομα τοῦ πατρὸς καὶ τοῦ υἱοῦ καὶ τοῦ ἁγίου πνεύματος ἐν ὕδατι ζῶντι. ἐὰν δὲ μὴ ἔχῃς ὕδωρ ζῶν, εἰς ἄλλο ὕδωρ βάπτισον· εἰ δ' οὐ δύνασαι ἐν ψυχρῷ, ἐν θερμῷ. ἐὰν δὲ ἀμφότερα μὴ ἔχῃς, ἔγχεον εἰς τὴν κεφαλὴν τρὶς ὕδωρ εἰς ὄνομα πατρὸς καὶ υἱοῦ καὶ ἁγίου πνεύματος. πρὸ δὲ τοῦ βαπτίσματος προνηστευσάτω ὁ βαπτίζων καὶ ὁ βαπτιζόμενος καὶ εἴ τινες ἄλλοι δύνανται· κελεύεις δὲ νηστεῦσαι τὸν βαπτιζόμενον πρὸ μιᾶς ἢ δύο.

The main points in the ceremony thus described seem to be these:

(*a*) The recitation of the previous part of the *Didache* (the 'Two Ways'). This seems to imply a developed system of preparation for candidates for baptism, of a moral rather than a theological kind.

(*b*) Baptism in the trine name. But it must be noted that in the following Eucharistic section mention is made of those who are baptized 'into the name of the Lord.'

(*c*) Immersion, by preference in running (ζῶν) water, is the rule, but affusion is recognized as legitimate.

(*d*) Previous to the ceremony, the baptizer, the baptizand, and any other who will are to fast.

It is probable that this document belongs to the 2nd cent., perhaps to the earlier half; but the evidence is not conclusive, and one must not regard arguments based on the 'Two Ways' as valid for the dating of the *Didache* as a whole.

(6) II CLEMENT.—In II Clement vi. 9, vii. 6, and viii. 5–6 there are three indirect references to baptism, which is spoken of as the seal (σφραγίς). They are all concerned with emphasizing the necessity of sinless life after baptism, and so form one of the links between this document and Hermas; but they are only homiletic, and do not throw any light on the question of repentance after baptism.

The use of σφραγίς, which afterwards became very common, has sometimes been traced to the influence of the Mysteries; but this is probably not the case—at least directly. More than any other expression it emphasizes the eschatological hope which was never far from the early Christian mind: those who had the correct seal would pass into the Messianic Kingdom at the day of judgment. It thus helped to unite the two—logically somewhat inconsistent—ideas of sacramental and eschatological salvation. Passages of importance, besides those in II Clem., are Hermas, *Sim.* viii. 6, ix. 16; Clem. Al. *Quis Deus salv.* 39. 42, *Strom.* ii. 3, *Exc. Th.* 83. 86, *Ecl. Proph.* 25: and in later writers, *Clem. Hom.* xvi. 19; *Acta Theclæ*, 25; *Const. Apost.* 2. 14, 39, 3. 16; Hippol. *de Antichristo*, 6. 59; Ps.-Hippol. *de Consumm.* 42; *Acta Philippi*, 28; Eus. *HE* 6. 5, 6, *Vit. Const.* 4. 62. 1. See also Hatch, *Hibbert Lectures*, p. 295 ff.; Anrich, *Das antike Mysterienwesen*, p. 120 f.; and Gebhardt and Harnack, *Patres Apost.*, note on II Clem. vi. 6.

(7) JUSTIN MARTYR.—In his first *Apology* (*c.* 150) Justin gives (ch. 61 ff.) a description of Christian baptism. It may be best treated as falling under three heads: (*a*) a description of the rite, (*b*) an exposition of the doctrine concerning it, and (*c*) a justification of this doctrine.

(*a*) *Description of the rite.*—This is given in ch. 61. 65:

Ὅσοι ἂν πεισθῶσι καὶ πιστεύσωσιν ἀληθῆ ταῦτα τὰ ὑφ' ἡμῶν διδασκόμενα καὶ λεγόμενα εἶναι, καὶ βιοῦν οὕτως δύνασθαι ὑπισχνῶνται, εὔχεσθαί τε καὶ αἰτεῖν νηστεύοντες παρὰ τοῦ θεοῦ προημαρτημένων ἄφεσιν διδάσκονται, ἡμῶν συνευχομένων καὶ συννηστευόντων αὐτοῖς. ἔπειτα ἀγονται ὑφ' ἡμῶν ἔνθα ὕδωρ ἐστί, καὶ τρόπον ἀναγεννήσεως, ὃν καὶ ἡμεῖς αὐτοὶ ἀναγεννήθημεν, ἀναγεννῶνται. ἐπ' ὀνόματος γὰρ τοῦ πατρὸς τῶν ὅλων καὶ τοῦ σωτῆρος ἡμῶν Ἰησοῦ Χριστοῦ καὶ πνεύματος ἁγίου τὸ ἐν τῷ ὕδατι τότε λουτρὸν ποιοῦνται . . . (c. 65) ἡμεῖς δὲ μετὰ τὸ οὕτως λοῦσαι τὸν πεπεισμένον καὶ συγκατατεθειμένον ἐπὶ τοὺς λεγομένους ἀδελφοὺς ἀγομεν, ἔνθα συνηγμένοι εἰσί, κοινὰς εὐχὰς ποιησόμενοι ὑπέρ τε ἑαυτῶν καὶ τοῦ φωτισθέντος καὶ ἄλλων πανταχοῦ πάντων εὐτόνως, ὅπως καταξιωθῶμεν τὰ ἀληθῆ μαθόντες καὶ δι' ἔργων ἀγαθοὶ πολιτευταὶ καὶ φύλακες τῶν ἐντεταλμένων εὑρεθῆναι, ὅπως τὴν αἰώνιον σωτηρίαν σωθῶμεν. Ἀλλήλους φιλήματι ἀσπαζόμεθα παυσάμενοι τῶν εὐχῶν . . . and then follows an account of the Eucharist, which was immediately celebrated.

The important points in this description are the definite allusion to a period of instruction preceding baptism; the trine formula; the 'moral' vow; and the obviously developed character of the service. It is also usually thought, probably rightly, that the opening words of the description imply a reference to a definite creed; if so, this may perhaps be identified with an early form of the *Symbolum Romanum*, to which some critics see allusions in *I Apol.* 13, 21, 31, 42, 46, 52, in *Dial.* 32, and in some other passages which are collected in Gebhardt and Harnack's *Patres Apost.* 1. 2, p. 128 ff. Negatively it is remarkable that there is no allusion to the laying on of hands, such as is prominent in Acts, or to any connexion of baptism with the bishops, such as is found in Ignatius. The agreement with the *Didache*, both negatively and positively, is remarkable.

(*b*) *The doctrine of baptism.*—Justin regards baptism chiefly as a new birth, and in the passage quoted above refers to it as ἀναγέννησις. He also regards it as a forgiveness for past sin; and he

expresses his doctrine (apparently using some older source, see below) on this point in ch. 61:

ἐπειδὴ τὴν πρώτην γένεσιν ἡμῶν ἀγνοοῦντες κατ' ἀνάγκην γεγεννήμεθα ἐξ ὑγρᾶς σπορᾶς κατὰ μίξιν τὴν τῶν γονέων πρὸς ἀλλήλους, καὶ ἐν ἔθεσι φαύλοις καὶ πονηραῖς ἀνατροφαῖς γεγόναμεν, ὅπως μὴ ἀνάγκης τέκνα μηδὲ ἀγνοίας μένωμεν, ἀλλὰ προαιρέσεως καὶ ἐπιστήμης, ἀφέσεως δὲ ἁμαρτιῶν ὑπὲρ ὧν προημάρτομεν τύχωμεν ἐν τῷ ὕδατι, ἐπονομάζεται τῷ ὕδατι τῷ ἐλομένῳ ἀναγεννηθῆναι καὶ μετανοήσαντι ἐπὶ τοῖς ἡμαρτημένοις τὸ τοῦ πατρὸς τῶν ὅλων καὶ δεσπότου θεοῦ ὄνομα, κ.τ.λ.

Thus, if one may press his words, he seems to have connected forgiveness especially with the water, and the new life with 'the name.' It was, however, the name that gave the water the power to remove sin. Justin also regarded baptism as bestowing the gift of the Spirit. In *Dial.* 29 he says: τίς ἐκείνου (*i.e.* Jewish) τοῦ βαπτίσματος χρεία ἁγίῳ πνεύματι βεβαπτισμένῳ. Also, at the conclusion of the passage just quoted from ch. 61, he describes baptism as an 'enlightenment' (καλεῖται δὲ τοῦτο τὸ λουτρὸν φωτισμός, ὡς φωτιζομένων τὴν διάνοιαν τῶν ταῦτα μανθανόντων).

(*c*) *Justification of baptism.*—The correctness of the doctrine and practice of baptism is proved by Justin by an appeal to the OT, to the words of Christ, and to Apostolic tradition. The necessity of regeneration is proved by the saying of Christ, ἂν μὴ ἀναγεννηθῆτε οὐ μὴ εἰσέλθητε εἰς τὴν βασιλείαν τῶν οὐρανῶν, which seems to be a free quotation of Jn 3[3]. That this regeneration can be effected by baptism is proved by Is 1[16-20] 'Wash you, make you clean,' etc.; and the explanation of the way in which this was effected is introduced by καὶ λόγον δὲ εἰς τοῦτο παρὰ τῶν ἀποστόλων ἐμάθομεν τοῦτον, and then follows the passage quoted above (*Apol.* 61). It is remarkable that it is to this λόγος, and not to Mt 28[19], that Justin turns for a justification of the trine formula.

Besides this direct justification, Justin uses a curious argument from heathen religion. His view was that this was the result of demonic attempts to deceive the world by producing false fulfilments of prophecy. This theory he applied to the whole of Christian and heathen systems, which represented the true and false fulfilment of OT prophecy. Thus the lustrations of the Greeks were demonic recognition of the truth of baptismal doctrine.

(8) IRENÆUS.—This writer nowhere gives an account of the practice of baptism, but his doctrine concerning it is expressed positively in the Ἀπόδειξις τοῦ ἀποστολικοῦ κηρύγματος and negatively in his *adversus Hæreses*, while from these passages it is also possible to find some reference to the practice of the Church in his time.

In the Ἀπόδειξις, ch. 3 (*TU* xxxi. 1), he says:

'The Faith . . . as the Presbyters, the disciples of the Apostles, have delivered it to us . . . above all teaches us that we have received baptism for the forgiveness of sins in the name of God the Father, and in the name of Jesus Christ, the Son of God, who was incarnate, died, and rose again, and in the Holy Spirit of God; and that this baptism is the seal of eternal life, and the regeneration to God, by which we become the children, not of mortal man, but of the eternal and everlasting God.'

In ch. 7 he explains why the trine formula was necessary:

'And therefore the baptism of our regeneration takes place through these three points, because God the Father blesses us with regeneration through the Holy Spirit by means of His Son. For those who bear the Spirit of God in themselves are led to the Word, that is, to the Son, but the Son leads them to the Father, and the Father lets them receive incorruptibility. Therefore without the Spirit it is impossible to see the Word of God, and without the Son no one can approach the Father. For the recognition of the Father is the Son, and the recognition of the Son is through the Holy Spirit, but the Son gives the Spirit, in accordance with His function, following the good pleasure of the Father, to those whom the Father will have and as the Father will.'

This positive statement is borne out by the negative statements in the *adversus Hæreses*. In III. xviii. 1 (ed. Harvey) he refers to baptism as the *potestatem regenerationis in Deum*, and identifies it with the gift of the Holy Spirit. Similarly in I. xiv., when speaking of the Marcosian heresy in relation to baptism, he implies that baptism is the ἀπολύτρωσις τοῦ Χριστοῦ κατελθόντος, which the Marcosians regarded as a separate rite, though his own phrase is again τοῦ βαπτίσματος τῆς εἰς θεὸν ἀναγεννήσεως.

The two important pieces of information concerning the practice of baptism conveyed in these passages are (1) the use of the trine formula, which for the first time is connected definitely with Mt 28[19]; and (2) the use of a Confession of Faith, as distinct from any moral or ethical vow. The allusions to this Confession in *adversus Hæreses*, I. i. 20 and I. ii. 1 identify it with an early form of the *Symbolum Romanum*; and the passage quoted above from the Ἀπόδειξις, ch. 3, suggests that Irenæus derived it from the teaching of those Presbyters of Asia Minor to whom he so often alludes. The fact mentioned above (7), that Justin also seems to show signs of a knowledge of the *Symbolum Romanum*, suggests that the λόγος of the Apostles to which he alludes in *Apol.* i. 61 may be the same writing or tradition of the Presbyters as that referred to by Irenæus.

(9) TERTULLIAN.—This writer tells us more about the practice and doctrine of baptism than any previous authority.

(*a*) *The practice.*—This is summed up in *de Corona*, 3:

'Aquam adituri ibidem sed et aliquanto prius in ecclesia sub antistitis manu contestamur nos renuntiare diabolo et pompæ et angelis ejus. Dehinc ter mergitamur amplius aliquid respondentes quam dominus in evangelio determinavit. Inde suscepti lactis et mellis concordiam prægustamus, exque ea die lavacro quotidiano per totam hebdomadem abstinemus.'

But this sketch was not intended to be complete, being given only as a proof that catholic practice outran Scripture, and must be supplemented by numerous allusions in other books. From these we can form the following scheme for the practice of baptism in the Church of Africa in the time of Tertullian.

(α) There was a preliminary period of preparation by fasting, vigils, and confession (cf. *de Bapt.* 20: 'Ingressuros baptismum orationibus crebris jejuniis et geniculationibus et pervigiliis orare oportet et cum confessione omnium retro delictorum').

(β) A public renunciation of the devil before the head of the community (*antistes*) followed (cf. *de Cor.* 3), at which sponsors or a sponsor were also present (*de Bapt.* 18). This 'renunciatio' seems to take the place of the moral vow implied by 1 Peter, Justin Martyr, and the *Didache*. As it is practically certain that Tertullian was acquainted with the *Symbolum Apostolicum*, it is probable that this also formed part of the baptismal rite; but there appears to be no definite statement to that effect in Tertullian.

(γ) The name of God was invoked on the water, in order to give it the power of sanctifying those who were baptized (*de Bapt.* 4): see passages quoted below.

(δ) Trine immersion in the trine name (cf. *de Cor.* 3 6c and *adv. Prax.* 26: 'nam nec semel sed ter ad singula nomina in personas singulas tinguimur').

(ε) Immediately after coming out of the water unction was administered (*de Bapt.* 7: 'Exinde egressi de lavacro perunguimur benedicta unctione de pristina disciplina, qua ungui oleo de cornu in sacerdotio solebant,' etc.).

(ζ) There followed the laying on of hands (*de Bapt.* 8): 'Dehinc manus imponitur per benedictionem advocans et invitans spiritum sanctum').

(η) After this there was a ceremonial tasting of milk and honey (*de Cor.* 3: 'Inde suscepti lactis et mellis concordiam prægustamus,' and *adv. Marc.* I. 14: 'sed ille quidem usque nunc nec aquam reprobavit creatoris qua suos abluit . . . nec mellis et lactis societatem qua suos infantat'), followed by abstinence from washing for the whole of the next week (*de Cor.* 3: 'exque ea die lavacro quotidiano per totam hebdomadem abstinemus'). The minister of this ceremony was usually the bishop or, with his sanction, the presbyters and deacons; but this was a 'right of order' not 'of necessity,' and every Christian man (but not woman) might baptize in case of need (*de Bapt.* 17: 'Dandi quidem habet jus summus sacerdos qui est episcopus; dehinc presbyteri et diaconi, non tamen sine episcopi auctoritate, propter ecclesiæ honorem, quo salvo salva pax est. Alioquin etiam laicis jus est. Quod enim ex æquo accipitur ex æquo dari potest . . . proinde et baptismus æque dei census ab omnibus exerceri potest'). No special time was necessary for baptism, but Easter and Whitsun were especially suitable (*de Bapt.* 19: 'Diem baptismo sollemniorem Pascha

præstat . . . exinde Pentecoste ordinandis lavacris lætissimum spatium est. . . . Ceterum omnis dies domini est, omnis hora, omne tempus habile baptismo; si de sollemnitate interest, de gratia nihil refert').

(*b*) *The doctrine of baptism.*—Tertullian's views, though in the main the same as those of earlier writers, show a development on certain points. Baptism is the source of salvation and of forgiveness of sins, a regeneration, and a gift of the Holy Spirit. But the following points are elaborated:—

(*a*) The question is raised in the *de Baptismo* 3–6 why and how sanctification was to be found in baptism. The answer given by Tertullian is too long to quote in full, but the argument is as follows:—There was from the beginning a special affinity between water and the spirit, which had hovered over it at the Creation (Gn 1^2), and the same spirit returns to the water if God be invoked, and so gives it the power of imparting sanctification. He argues that there is no reason for doubting this, seeing that it is generally recognized that water is frequently the means by which evil spirits entrap unwary men. Moreover the incident of the pool of Bethsaida (Bethesda) in Jn 5^{1-9} led him to think that the sanctification of the water was effected by an angel who descended for the purpose. It is not plain, nor is it for the present purpose material, how far Tertullian identified this angel with the Spirit itself (cf. Adam, 'Lehre v. d. hl. Geist in Hermas und Tertullian' in the *Theol. Quartalschrift*, Jan. 1906).

(*β*) The distinction between cleansing from sin and the gift of the Spirit, which is made in Acts, is emphasized, and a further distinction is introduced between the cleansing of the soul and of the body. The body is cleansed from sin by the water, the soul by the 'answer' of the candidate (*de Resurr. Carn.* 48 [where it is argued that baptism implies a resurrection of the flesh]: 'anima enim non lavatione sed responsione sancitur'). The gift of the Spirit in baptism is connected with the laying on of hands and not with the water (*de Bapt.* 6 and 8: 'non quod in aquis spiritum sanctum consequamur, sed in aqua emundati sub angelo spiritui sancto præparamur . . . dehinc manus imponitur. . . . Tunc ille sanctissimus spiritus super emundata et benedicta corpora libens a patre descendit . . .'). The 'benedicta' in the last phrase explains the meaning attached by Tertullian to the unction: it blessed the body (and sacramentally the soul) of the candidate just as the water cleansed it, and so prepared it for the gift of the Spirit.

(*γ*) Tertullian held strong views as to the proper recipients of baptism. These were due to his belief that sin after baptism was either unforgivable (only martyrdom could atone for some sins [cf. *de Pud.* 9]), or at least exceedingly dangerous (cf. *e.g. de Bapt.* 8: 'Itaque igni [*sc.* mundus] destinatur, sicut et homo qui post baptismum delicta restaurat'). The result was that he objected to child baptism as dangerous both to the child and to the sponsors (*de Bapt.* 18: 'Itaque pro cuiusque personæ condicione ac dispositione etiam ætate cunctatio baptismi utilior est, præcipue tamen circa parvulos . . .'). For the same reason he dissuaded the unmarried and widows from baptism (*de Bapt.* 18: 'non minore de causa innupti quoque procrastinandi in quibus tentatio præparata est tam virginibus per maturitatem quam viduis per vacationem, donec aut nubant aut continentiæ corroborentur'). The suggestion of his words is that he would not countenance the marriage of the baptized, a position maintained later on in Edessa by Aphraates, but was willing to baptize those who were already married—unlike Marcion, who would consent to baptize only those who were unmarried or had divorced their wives.

(*δ*) In two passages (*de Resurr. Carn.* 48, and *adv. Marcion.* *b.* 10) Tertullian speaks of the reference in 1 Co 15^{29} to a baptism for the dead. In the former place he uses it as an argument for the resurrection of the flesh: 'certe illa præsumptione hoc eos instituisse contendit qua alii etiam carni ut vicarium baptisma profuturum existimarent ad spem resurrectionis, quæ nisi corporalis non alias sic baptismate corporali obligaretur.' Here there is nothing to show whether Tertullian was actually acquainted with a vicarious baptism for the dead, but the suggestion of the other passage is that he had no such knowledge. Here he uses the same argument in favour of a material resurrection, but prefaces the following obscure statement: 'quid, ait, facient qui pro mortuis baptizantur si mortui non resurgunt? Viderit institutio illa. Kalendæ si forte Februariæ respondebunt illi pro mortuis petere. Noli ergo apostolum novum statim auctorem aut confirmatorem eius denotare, ut tanto magis sisteret carnis resurrectionem, quanto illi qui vane pro mortuis baptizarentur fide resurrectionis hoc facerent.' In view of the generally affirmative sense of 'si forte' in Tertullian, it seems probable that he means that St. Paul was using an argument from the Roman custom of special sacrifices for the departed (cf. Oehler's note, *ad loc.*), and this renders it improbable that Tertullian was acquainted with any contemporary Christian custom of baptism for the dead.

(*ε*) The question of heretical baptism first appears in Tertullian. He did not recognize it as in any sense valid, and a heretic who afterwards joined the Church was re-baptized (*de Pud.* 19: 'unde et apud nos ut ethnico par immo et super ethnicum hæreticus etiam per baptisma veritatis utroque homine purgatus admittitur'; *de Bapt.* 15: 'Hæretici autem nullum habent consortium nostræ disciplinæ, quos extraneos utique testatur ipsa ademptio communicationis. Non debeo in illis cognoscere quod mihi est præceptum, quia non idem deus est nobis et illis, nec unus Christus, id est idem, ideoque nec baptismus unus quia non idem, quem cum rite non habent sine dubio non habent . . .'; cf. also *de Præscr. Hær.* 12). It should be noted that the *de Baptismo* probably belongs to the pre-Montanist period of Tertullian, while the *de Pud.* is Montanist.

(10) CLEMENT OF ALEXANDRIA.—Clement does not so frequently discuss baptism as do some of the other writers, but his standpoint seems to be similar to theirs. The chief passages in which he deals with baptism are in the *Pædagogus*. He draws a parallel between the baptism of Christ and that of Christians, and claims that each had the same effect. Christ, on the side of His human nature, was regenerated in baptism and made perfect by the regeneration; so also with Christians: *τὸ δὲ αὐτὸ συμβαίνει τοῦτο καὶ περὶ ἡμᾶς, ὧν γέγονεν ὑπογραφὴ ὁ κύριος· βαπτιζόμενοι φωτιζόμεθα, φωτιζόμενοι υἱοποιούμεθα, υἱοποιούμενοι τελειούμεθα, τελειούμενοι ἀπαθανατιζόμεθα 'ἐγώ' φησί 'εἶπα, θεοί ἐστε καὶ υἱοὶ ὑψίστου πάντες'· καλεῖται δὲ πολλαχῶς τὸ ἔργον τοῦτο, χάρισμα καὶ φώτισμα καὶ τέλεον καὶ λουτρόν* (*Pæd.* 1. 6, the whole of which chapter is important for defining Clement's attitude).

But Clement's chief interest was directed to proving not so much that baptism was the beginning of the new life as that it was complete, in opposition to the Gnostics, who introduced a series of stages. Of course, Clement did not mean to exclude the idea of progress, but only to assert that baptism was the dividing line between two states essentially differing from each other. Probably the doctrine of Tertullian as to the relation between the water and the Spirit would not have been strange to Clement. He argues that there is a special reason for water in baptism, because of its power of mixing with milk, which represents the Logos, and thinks that the union of the Logos with baptism is similar to that of milk with water: *καὶ ἡν ὁ Λόγος ἔχει πρὸς τὸ βάπτισμα κοινωνίαν, ταύτην ἔχει τὸ γάλα τὴν συναλλαγὴν πρὸς τὸ ὕδωρ, δέχεται γὰρ μόνον τῶν ὑγρῶν τοῦτο καὶ τὴν πρὸς τὸ ὕδωρ μίξιν ἐπὶ κάθαρσιν παραλαμβανόμενον καθάπερ τὸ βάπτισμα ἐπὶ ἀφέσει ἁμαρτιῶν* (*Pæd.* 1. 6, p. 120, ed. Stählin).

Similarly in *Protrep.* 10 (p. 72, ed. Stählin) he speaks of the *ὕδωρ λογικόν*. Yet it must be admitted that it is not easy to say precisely what was Clement's view as to the exact relation between symbols and their signification; there is room for a good monograph on his sacramental doctrine.

Clement, like Tertullian, did not recognize the baptism of heretics as genuine. This is proved by an exegesis of Pr 9^{18a}: *εἶτα ἐπιφωνεῖ 'οὕτω γὰρ διαβήσῃ ὕδωρ ἀλλότριον' τὸ βάπτισμα αἱρετικὸν οὐκ οἰκεῖον καὶ γνήσιον ὕδωρ λογιζομένη* (*Strom.* I. 19, p. 62, ed. Stählin).

On the question of repentance after baptism, Clement takes a much more lenient position than Tertullian or even Hermas. In the *Quis dives salvetur* (chs. 39–42) he devotes a long argument to proving that genuine repentance and consequent salvation is never too late, and supports it by the long and well-known story of St. John and the brigand captain.

ii. *AMONG HERETICS.*—(1) MENANDER.—Menander, who, according to Irenæus, was the successor of Simon Magus, attributed to baptism the power of conferring immortality.

Cf. Iren. I. 17: 'Resurrectionem enim per id quod est in eum baptisma accipere ejus discipulos et ultra non posse mori sed perseverare non senescentes et immortales,' and Tert. *de Anima*, 50: 'Menandri Samaritani furor conspuatur dicentis mortem ad suos non modo non pertinere, verum nec pervenire. In hoc scilicet se a superna et arcana potestate legatum, ut immortales et incorruptibiles et statim resurrectionis compotes fiant qui baptisma ejus induerint.'

It is, however, difficult to think that a view of this kind could have long endured; that baptism, in a certain sense, conveyed immortality was a generally received Christian teaching, and possibly Menander did not mean much more than this.

(2) THE VALENTINIANS.—The main authority for the doctrine of these heretics is the *Excerpta Theodoti* of Clement of Alexandria. The whole passage, *Exc. Theod.* 76–86, is most instructive, and is the most important extant passage for deter-

mining the doctrine of baptism as it existed among the Valentinians, or, indeed, any other heretics, for it differs from the evidence of almost all other writers in being extracted from heretical writings, and not from orthodox polemical books.

Baptism is an *ἀναγέννησις*. By its means we are born into the world dominated by Father, Son, and Spirit, and so become superior to all other powers. It is also a death to the previous life; but this refers to the soul (*ψυχή*), not to the body (*σῶμα*). Up to the time of baptism man is under the control of Fate (*εἱμαρμένη*), but by baptism and *γνῶσις* he is released from this control, and the verdict of astrologers (which is recognized as valid for the rest of mankind) is rendered unimportant. The baptized person is, through regeneration by Christ, taken up into the Ogdoad. It was further explained that as the water of baptism quenched *τὸ αἰσθητὸν πῦρ*, the invisible part could quench the *νοητὸν πῦρ*. So far as the rite is concerned, we are told that fasting and prayer are desirable before baptism in order to prevent the entrance of evil spirits in addition to the Holy Spirit. From ch. 22 of the *Excerpta Theodoti* it also appears that the rite of baptism contained an imposition of hands, and that the formula used ended with the phrase *εἰς λύτρωσιν ἀγγελικήν* (for a formula used by the Marcosians containing this phrase see below). The doctrine underlying this is that the angels, with whom we are in some way connected, have been baptized for us; and this explanation is given to 1 Co 15[29]—in which the 'they' refers to the angels, and 'the dead' for whom they are baptized is mankind.

(3) THE MARCOSIANS.—The authorities for these heretics are Irenæus and Hippolytus. They belonged to the Valentinian school, and, like the class of heretics who are represented later in a more developed form by the Pistis Sophia, did not merely, as Marcion, allow a repetition of baptism in case of sin, but had actually two forms differing from each other in function. Their first baptism was not a means of regeneration; it merely had the negative function of the forgiveness of sin, and is described in Iren. I. xiv. 1 as a baptism *τοῦ φαινομένου Ἰησοῦ ἀφέσεως ἁμαρτιῶν*. The second baptism was called *ἀπολύτρωσις*, and according to Hippolytus was regarded as raising those who participated in it above the power of sin, even though they committed it (. . . *εὐκόλους μὲν εἶναι διδάξας πρὸς τὸ ἁμαρτάνειν, ἀκινδύνους δὲ διὰ τὸ εἶναι τῆς τελείας δυνάμεως, καὶ μετέχειν τῆς ἀνεννοήτου ἐξουσίας, οἷς καὶ μετὰ τὸ βάπτισμα ἕτερον ἐπαγγέλλονται ὃ καλοῦσιν ἀπολύτρωσιν* . . . Hippol. *Refut.* vi. 41). The justification for this was found, as Marcion found his for a renewed baptism, in Lk 12[50] ('I have a baptism,' etc.); and the references in the Epistles to an *ἀπολύτρωσις ἐν Χριστῷ Ἰησοῦ* were explained as references to this sacrament (Iren. *l.c.*). This 'redemption' was regarded as the same as that of the Spirit which entered Jesus at His baptism, and was the power of regeneration and of entrance into the Pleroma (*λέγουσι δὲ αὐτὴν ἀναγκαίαν εἶναι τοῖς τὴν τέλειαν γνῶσιν εἰληφόσιν, ἵνα εἰς τὴν ὑπὲρ πάντα δύναμιν ὧσιν ἀναγεγεννημένοι· ἄλλως γὰρ ἀδύνατον ἐντὸς πληρώματος εἰσελθεῖν, ἐπειδὴ αὕτη ἐστὶν ἡ εἰς τὸ βάθος [τοῦ βύθου] κατάγουσα αὐτούς*, Iren. *l.c.*).

As to the rite itself there seems to have been no uniformity of practice. Irenæus distinguishes seven varieties, and leaves it quite uncertain what was the relationship subsisting between them (Iren. I. xiv. 2).

The seven varieties are as follows: (*a*) A ceremony referred to as a spiritual marriage. There is no definite statement that a water-baptism formed part of it, and perhaps the contrary is to be inferred from the general drift of Irenæus's language. (*b*) A ceremony of baptism with the formula *Εἰς ὄνομα ἀγνώστου πατρὸς τῶν ὅλων, εἰς ἀλήθειαν μητέρα πάντων, εἰς τὸν κατελθόντα εἰς Ἰησοῦν, εἰς ἕνωσιν καὶ ἀπολύτρωσιν καὶ κοινωνίαν τῶν δυνάμεων*. (*c*) In another circle a Hebrew or Syriac formula was used, of which the text is very corrupt in Irenæus, but the meaning, according to Harvey's re-construction, was 'in the name of the Wisdom of the Father, and of Light, which is called the Spirit of Holiness, for the Angelic Redemption.' It is not stated whether this formula was used in connexion with water; but it probably was. (*d*) Irenæus gives an important extract from the rites of a fourth, but his meaning is not clear, and the Syriac words are difficult to re-construct (see Harvey's note); it is therefore best to give the text: *Ἄλλοι δὲ πάλιν τὴν λύτρωσιν ἐπιλέγουσιν οὕτως· τὸ ὄνομα τὸ ἀποκεκρυμμένον ἀπὸ πάσης θεότητος, καὶ κυριότητος, καὶ ἀληθείας, ὃ ἐνεδύσατο Ἰησοῦς ὁ Ναζαρηνὸς ἐν ταῖς ζωαῖς τοῦ φωτὸς τοῦ Χριστοῦ, Χριστοῦ ζῶντος διὰ πνεύματος ἁγίου εἰς λύτρωσιν ἀγγελικήν. Ὄνομα τὸ τῆς καταστάσεως· Μεσσία οὐφαρὲν ναμεμψαιμὰν χαλδαίαν μοσομηδαία ἀκφρανὰ ψαούα Ἰησοῦ Ναζαρία. καὶ τούτων δὲ ἑρμηνεία ἐστὶ τοιαύτη· οὐ διαιρῶ τὸ πνεῦμα, τὴν καρδίαν καὶ τὴν ὑπερουράνιον δύναμιν τὴν οἰκτίρμονα· ὀναίμην τοῦ ὀνόματός σου, Σωτὴρ ἀληθείας. καὶ ταῦτα μὲν ἐπιλέγουσιν οἱ αὐτοὶ τελοῦντες. Ὁ δὲ τετελεσμένος ἀποκρίνεται· ἐστήριγμαι, καὶ λελύτρωμαι, καὶ λυτροῦμαι τὴν ψυχήν μου ἀπὸ τοῦ αἰῶνος τούτου, καὶ πάντων τῶν παρ' αὐτοῦ ἐν τῷ ὀνόματι τοῦ Ἰαώ, ὃς ἐλυτρώσατο τὴν ψυχὴν αὐτοῦ εἰς ἀπολύτρωσιν ἐν τῷ Χριστῷ τῷ ζῶντι. Εἶτα ἐπιλέγουσιν οἱ παρόντες· Εἰρήνη πᾶσιν, ἐφ' οὓς τὸ ὄνομα τοῦτο ἐπαναπαύεται· ἔπειτα μυρίζουσι τὸν τετελεσμένον τῷ ὀπῷ τῷ ἀπὸ βαλσάμου [τῷ ὀποβαλσάμῳ]· τὸ γὰρ μύρον τοῦτο τύπον τῆς ὑπὲρ τὰ ὅλα εὐωδίας εἶναι λέγουσιν.* Whatever the precise meaning of this extract may be, it is clear that the service bore a marked resemblance to Catholic practice. There is the use of a formula 'in the name of'; a service of question and answer alternating between the administrator and the recipient of the rite; unction; and apparently at an earlier part of the ceremony water-baptism. This last point is rendered probable by the beginning of the next section. (*e*) A fifth party rejected water, but used instead an unguent of water and oil, with a formula similar to those given above, and also using balsam. (*f*) A sixth party rejected the whole of the outward ceremony, and said that knowledge alone was the true Redemption. (*g*) Finally, there were those who in other respects seem to have agreed with those mentioned above as the fifth party, but deferred baptism until after death. Epiphanius perhaps thought that this must mean 'in articulo mortis' (Epiph. xxxvi. 2), but the text of the Latin Irenæus is clear: 'Alii sunt qui mortuos redimunt ad finem defunctionis, mittentes eorum capitibus oleum et aquam,' etc. (Iren. I. xiv. 4); for 'mortuos' can only mean dead, and Theodoret (*HE* i. 11) alludes to the same practice. The object of this was to safeguard the soul of the dead person in its journey through the realm of the spirit-world. This view may be paralleled with the Pistis Sophia, and seems to have Egyptian affinities.

(4) THE CARPOCRATIANS.—Irenæus (I. xx. 3) says of these heretics: *τούτων τινὲς καὶ καυτηριάζουσι τοὺς ἰδίους μαθητὰς ἐν τοῖς ὀπίσω μέρεσι τοῦ λοβοῦ τοῦ δεξίου ὠτός*. It seems probable that this was an attempt to provide a literal fulfilment of the promise of a baptism with the Holy Spirit and with Fire.

(5) MARCION.—The evidence for Marcion is given by Tertullian and Epiphanius. According to Tertullian (*adv. Marc.* iv. 11), Marcion 'morti aut repudio baptisma servat,' which seems to mean that he refused baptism except to those who were prepared to put away their wives, or were at the point of death. The reason for this provision was that Marcion's doctrine led him to exclude married life. Epiphanius (*adv. Hær.* I. xlii. 3) says that Marcion admitted a second and third baptism in case of sin after baptism (*ἔξεστιν ἕως τριῶν λουτρῶν, τουτέστι βαπτισμῶν, εἰς ἄφεσιν ἁμαρτιῶν διδόσθαι*). He adds that Marcion had himself been obliged to make use of this provision, and that a Scripture basis was found in Lk 12[50] (*βαπτισθεὶς ὁ κύριος ὑπὸ τοῦ Ἰωάννου ἔλεγε τοῖς μαθηταῖς, βάπτισμα ἔχω βαπτισθῆναι . . . καὶ οὕτω τὸ διδόναι πλείω βαπτίσματα ἐδογμάτισεν*). Esnik, an Armenian writer, also attributes vicarious baptism to him.

(6) TERTULLIAN'S OPPONENTS.—From the language used by Tertullian in the *de Baptismo* it is clear that there was a party which denied the necessity of baptism. One of them he identifies (*de Bapt.* i. 1) with the Cainites, but it does not follow that this applies to them all. From his treatise we can re-construct, at least partially, their arguments.

The following can be distinguished:—(*a*) The Lord Himself did not baptize (see the reply in *de Bapt.* 11). (*b*) The Apostles were never baptized (answered in *de Bapt.* 12). (*c*) Baptism is not necessary to those who have faith, as Abraham had (answered in *de Bapt.* 13). (*d*) St. Paul says: 'Christ sent me not to baptize' (answered in *de Bapt.* 14).

(7) THE ACTS OF THOMAS.—This curious document probably represents views and practices which obtained in the neighbourhood of Edessa towards the close of the 2nd century. It is doubtful whether they come from an orthodox circle, and it is perhaps probable that they represent the views of Bardesanes.

The following accounts of baptism are to be found:—(*a*) In chs. 26–27, the baptism of King Gundaphorus and his brother Gad. Of this the text presents two recensions. The shorter (probably a 'Catholic' version) only relates the fact; it mentions the water and the trine formula. The longer (apparently Gnostic) does not mention water, but only an anointing with

oil, which is called *σφραγίς*. The formula which is used is: *ἐλθὲ τὸ ἅγιον ὄνομα τοῦ Χριστοῦ τὸ ὑπὲρ πᾶν ὄνομα· ἐλθὲ ἡ δύναμις τοῦ ὑψίστου καὶ ἡ εὐσπλαγχνία ἡ τελεία· ἐλθὲ τὸ χάρισμα τὸ ὕψιστον· ἐλθὲ ἡ μήτηρ ἡ εὔσπλαγχνος· ἐλθὲ ἡ κοινωνία τοῦ ἄρρενος· ἐλθὲ ἡ τὰ μυστήρια ἀποκαλύπτουσα τὰ ἀπόκρυφα· ἐλθὲ ἡ μήτηρ τῶν ἑπτὰ οἴκων ἵνα ἡ ἀνάπαυσίς σου εἰς τὸν ὄγδοον οἶκον γένηται· ἐλθὲ ὁ πρεσβύτερος τῶν πέντε μελῶν, νοὸς ἐννοίας φρονήσεως ἐνθυμήσεως λογισμοῦ, κοινώνησον μετὰ τούτων τῶν νεωτέρων· ἐλθὲ τὸ ἅγιον πνεῦμα καὶ καθάρισον τοὺς νεφροὺς αὐτῶν καὶ τὴν καρδίαν, καὶ ἐπισφράγισον αὐτοὺς εἰς ὄνομα πατρὸς καὶ υἱοῦ καὶ ἁγίου πνεύματος.* After this baptism the Eucharist followed immediately.

(*b*) In ch. 121 Mygdonia is baptized in the trine name, and the Eucharist follows immediately.

(*c*) In chs. 131–133 is the account of the baptism of Siphor. Here we are given a valuable statement of the doctrine of baptism: *τὸ βάπτισμα τοῦτο ἁμαρτιῶν ἐστὶν ἄφεσις· τοῦτο ἀναγεννᾷ φῶς περιεκχυνόμενον· τοῦτο ἀναγεννᾷ τὸν νέον ἄνθρωπον· τοὺς ἀνθρώπους μειγνύον πνεῦμα καινοῦν ψυχήν, ἀνιστῶν τρισσῶς καινὸν ἄνθρωπον, καί ἐστι κοινωνὸν τῶν ἁμαρτιῶν ἀφέσεως.* So far as the rite is concerned, it consists of unction with the formula *Σοὶ δόξα ἡ τῶν σπλάγχνων ἀγάπη· σοὶ δόξα τὸ τοῦ Χριστοῦ ὄνομα· σοὶ δόξα ἡ ἐν Χριστῷ δύναμις ἱδρυμένη.* After this follows baptism in water (for which purpose a basin [*σκάφην*] is used—so that submersion was not practised) in the trine name, and finally the Eucharist.

(*d*) In chs. 157–158 is the account of the baptism of Ouazenes, Tertia, and Mnesara. The main features are the same: first, unction with oil (over which the name of Jesus has been invoked) with the formula—*Ἐν ὀνόματί σου, Ἰησοῦ Χριστέ, γενέσθω ταῖς ψυχαῖς ταύταις εἰς ἄφεσιν ἁμαρτιῶν καὶ εἰς ἀποτροπὴν τοῦ ἐναντίου καὶ εἰς σωτηρίαν τῶν ψυχῶν αὐτῶν*; secondly, baptism in water in the trine name; and, thirdly, the Eucharist. It is noteworthy, in view of Tertullian's protest against the custom of baptism by women, that Mygdonia, not Judas Thomas, anoints the women.

Thus it would seem that the circle of Christians whose practice is represented by the *Acts of Thomas* used a form of baptism in which unction with an elaborate formula of consecration preceded baptism, properly so called, in the trine name, and that the Eucharist always followed immediately. The unction with oil was more important than the water-baptism—so much so that in ch. 26 the latter is not mentioned at all. It is even possible that the references to water-baptism in the other passages are interpolations. The doctrinal ideas which play the greatest part are regeneration, forgiveness of sin, a new life, and the gift of the Spirit, which seem to be communicated directly through the unction. It is also noticeable that the *Acts of Thomas* regards baptism and married life as incompatible.

Summary of 1st and 2nd centuries.—The data supplied by the preceding paragraphs give the material for making certain generalizations as to the practice and doctrine of baptism, during the 1st and 2nd centuries. It is, of course, the special object of an Encyclopædia article to give information rather than draw conclusions; but attention may be directed to the following points, which seem to be cardinal:—

(1) The information given as to the practice of baptism is, as a rule, incidental, and never quite explicit; yet the main features are fairly clear. As might have been expected, the rite gradually became more and more complicated. The earliest form, represented in the Acts, was simple immersion (not necessarily submersion) in water, the use of the name of the Lord, and the laying on of hands. To these were added, at various times and places which cannot be safely identified, (*a*) the trine name (Justin), (*b*) a moral vow (Justin and perhaps Hermas, as well as already in the NT in 1 Peter), (*c*) trine immersion (Justin), (*d*) a confession of faith (Irenæus, or perhaps Justin), (*e*) unction (Tertullian), (*f*) sponsors (Tertullian), (*g*) milk and honey (Tertullian). There was also, no doubt, an infinite variety of expansion in detail, especially among heretical sects (cf. especially the Marcosians), and there were probably fixed forms for the administration of the sacraments, of which traces may be seen even in this period (Justin, Tertullian, and especially the *Didache*), but the existing baptismal services strictly belong to the 3rd century.

(2) As to the doctrine of baptism we have more information, though here also much of it is incidental. The dominant ideas were those of forgiveness of sin, regeneration, and the gift of the Holy Spirit. To some extent these three ideas may be fairly described as three ways of regarding baptism rather than as three separate benefits conferred by it. In baptism, the Christian passes from one sphere of life to another. He is born again to another world, and, whereas in the world which he leaves he was under the control of sin, evil spirits, and fate,* in the world which he enters he is under the control of the Holy Spirit. So far is this view carried, that baptism can be spoken of as a resurrection, though, as a rule, the gift conferred in baptism was regarded eschatologically so far as its complete realization was concerned (see the use of *σφραγίς* in II Clem., p. 385[b] above).

The change effected by baptism was attributed to the 'name' and to the water, which were regarded as actually effective and not merely symbolic. This view is strange to modern minds, especially to Protestants, but it was part of the common stock of ideas of the 2nd cent., among heathen and Christians alike. A somewhat subordinate part is usually played by the laying on of hands and by unction; but probably both of these were regarded as cardinal in some places (see especially Tertullian and the *Acts of Thomas*). The general theory which underlies these views seems to be the well-known belief that by using the correct name it was possible to exercise the power of the bearer of the name. By this means the Spirit was brought into the water (in the *Acts of Thomas* into the oil) and thus communicated to the baptized person. The clearest expression of this view is found in Tertullian, but in a more or less developed form it was no doubt universal, except among a few heretics (*e.g.* Tertullian's opponents, and some of the Marcosians).

As the rite became more complicated, there was a tendency to connect various details with various sides of the doctrine. Especially was this so with regard to the laying on of hands; this, at least sometimes, was peculiarly connected with the gift of the Spirit, and the effect of the immersion in water was limited to the forgiveness of sins (see especially Tertullian, and compare the same tendency even earlier in the Acts). But this distinction was probably never universal, or to any large extent the subject of discussion.

In its crudest form the theory of baptism was quite unethical; and there are many traces among early writers that they were aware of this difficulty. None of them, however, really succeeded in doing more than putting ethical requirements side by side with their sacramental theories, and demanding both without really co-ordinating them intelligibly (cf. Hermas and the development of the moral vow of which the first traces can probably be found in 1 Peter).

In connexion with the name (which may mean one or more names) the question of formula arises. The earliest known formula is 'in the name of the Lord Jesus,' or some similar phrase; this is found in the Acts, and was perhaps still used by Hermas, but by the time of Justin Martyr the trine formula had become general. It is possible that the older formula survived in isolated communities, but there is no decisive contemporary evidence. The tendency was all the other way, and it is probable that there were in use many formulæ of an elaborate nature (see the Marcosians and the *Acts of Thomas*). The difficulty is to distinguish between

* The question of Fate will receive a full treatment in a separate article. Justin and orthodox writers generally were inclined to deny its influence, but some Gnostics recognized its supremacy over the unbaptized (Theodotus in Clement of Alexandria).

the formula properly so called, and what we should now call the baptismal service attached to it. Probably the truth is that this distinction was somewhat foreign to the spirit of the 2nd cent.; it was only gradually that a difference began to be made between the essential formula and other words which were connected with it.

Starting from the belief that baptism was the beginning of a new life, released from sin and inspired by the Holy Spirit, men naturally were forced to ask what was the relation of the regenerate person to sin. The earliest view was that sin was excluded. Probably some even thought that sin was impossible to the baptized, but at least it is clear from the Epistle to the Hebrews that sin after baptism was in some circles regarded as irremediable. Practical experience must soon have shown that if this view were held few could hope to see salvation, and the problem which thus arose was dealt with in diverse ways. The most obvious solution was to re-baptize those who sinned. This view was adopted by the school opposed to that of the writer of the Epistle to the Hebrews, and was common to most of the Gnostic sects (see *e.g.* Marcion). In the orthodox (as they afterwards came to be) circles this view was always rejected, and the difficulty was met in two ways—by the introduction of the theory of *μετάνοια*, rapidly developing into Penance, and by the attempt to distinguish between deadly and venial sin (cf. especially Hermas and 1 John). Among the practical results of this difficulty was the tendency, which long survived, to postpone baptism until death was approaching (cf. especially Hermas and Tertullian; similarly the Marcosians, whose sacrament of 'Redemption' was partly a repetition of baptism, partly a new rite that seems sometimes to have postponed its reception to the time of death). It would be an interesting subject for study how far the Catholic practice of extreme unction may once have been connected with a similar view. It is, however, plain that this postponement must sometimes have been carried too far, and death anticipated baptism. Baptism for the dead seems to have been practised by the Marcosians in such cases, and there are a few traces of a parallel custom of vicarious baptism.

Besides this line of development, which recognized that sin after baptism was possible, there was another which denied that the regenerate were able to sin. They were risen from death, and any sin which their bodies might commit belonged to the realm of death: it was thus indifferent, and could not affect the risen life of the regenerate. This theory, which was obviously likely to give rise to the wildest excesses, is probably a partial explanation of the charge of immorality often brought against Christians. It appears from Hippolytus that some of the Marcosians adopted this view, and it is probable that the same is true of the Carpocratians.

The relation of baptism to marriage is a cognate question. Some sects certainly thought that marriage was of the nature of sin, and rejected it altogether (cf. especially Marcion and the *Acts of Thomas*). The Church in general never seems to have taken this view; but Tertullian, probably even in his pre-Montanist days, regarded marriage as forbidden to those who had already been baptized.

In the earliest part of this period it seems probable that baptism was regarded as a sacrament which could be administered by all Christians, though it was in practice doubtless reserved for the head of the community (cf. Justin Martyr). The line of thought, as mentioned above, represented in the Acts, which distinguished between the actual immersion in water (which gave forgiveness of sins, and could be administered by every Christian) and the laying on of hands (which gave the Spirit, and was the prerogative of the Apostles), perhaps survived only in part. Tertullian shows that the doctrinal distinction was observed in the African Church (it seems very doubtful if this was true of every Church), but the evidence is not clear that the distinction was made between the ministerial rights of clergy and laity. In any case, as it was certainly the practice for the clergy—not the laity—to baptize, the question was not likely to come to the front. But a similar problem began to appear during the 2nd century. What was the value of heretical baptism? The answer, of course, turned on that given to the implied previous question, 'What is a Christian?' The 2nd cent. writers did not really reach a more advanced point than the affirmation that only a Christian could give Christian baptism (the attempt of Ignatius to confine the administration of the rite to the bishop and those whom he licensed was really only a secondary result of quite a different question), and the Catholic Church triumphed in its attempt to exclude all the heretical sects as non-Christian. Thus the rule was more or less fixed that heretical baptism was invalid, but 'heretical' meant heretics such as the Marcosians and other Gnostics, and the question probably never became a burning one. Still the principle was established, and became extremely important in the 3rd cent., when it was applied to the quite different types of heresy which then became predominant.

LITERATURE.—There is no satisfactory book on the history of early Christian baptism before the great baptismal controversy in the 3rd century. Useful information will be found in Höfling, *Das Sacrament d. Taufe*, Erlangen, 1848; W. Heitmüller, *Im Namen Jesu*, Göttingen, 1903, and *Taufe und Abendmahl bei Paulus*, Göttingen, 1905; F. M. Rendtorff *Die Taufe im Urchristentum*, Leipzig, 1905; W. Bousset, *Hauptprobleme der Gnosis*, Göttingen, 1907; H. Windisch, *Taufe und Sünde im ältesten Christentum*, Tübingen, 1908.

KIRSOPP LAKE.

BAPTISM (Later Christian).—1. From the second to the eighth century.—'Since the middle of the second century the notions of baptism in the Church have not essentially altered. The result of baptism was universally considered to be forgiveness of sins, and this pardon was supposed to effect an actual sinlessness which now required to be maintained' (Harnack, *Hist. of Dogma*, Eng. tr. vol. ii. p. 140). Baptism, in the words of Firmilian, was the life-giving bath (*lavacrum salutare*), the second nativity: it involved the washing away of the filth of the old man, the forgiveness of the old sins of death, the becoming sons of God through a heavenly re-birth, the being renewed unto life eternal by the sanctification of the Divine bath (see *Ep.* 75, *ap.* Cyprian). How the nature and effects of regeneration were conceived by some of the leading writers in these centuries will be discussed in a later paragraph. The net result of the development of thought and practice in this period was to define the essentials of Baptism, and to lay stress on the importance of the ritual act, as itself conferring indispensable spiritual blessings. 'In Baptism by the institution of God, the material element of water, together with the prescribed form of words, is used to confer spiritual gifts' (Stone, *Holy Baptism*, p. 214). This sentence from a modern writer adequately describes the conviction which, with increasing clearness, controlled the mind of the Church subsequently to the 2nd century.

I. *THE INTRINSIC VALUE OF THE RITUAL ACT.*—This was emphasized principally (*a*) in the dread of repetition, (*b*) in the diminished importance attaching to the administrator of the rite, (*c*) in the tendency to regard conscious faith on the part of the recipient as non-essential. The first two points are evidenced mainly by the recognition of schis-

matic and even of heretical baptism as valid, provided water was used, and the subjects were baptized in the name of the Father and of the Son and of the Holy Spirit. The third point most clearly emerges in the growing custom of infant baptism.

(*a*) The question of *heretical baptism* was raised acutely in the controversy between Cyprian and Pope Stephen. In dealing with converted heretics, different Churches followed divergent traditions. The Roman Church required only that the returning heretic be received with the laying on of hands. Pope Stephen's position is summed up in the sentence: 'Si quis ergo a quacumque hæresi venerit ad vos, nihil innovetur nisi quod traditum est, ut manus illi imponatur in pœnitentiam' (Cyp. *Ep.* 74). The practice in Alexandria appears to have been the same (Eus. vii. 2, 7). Firmilian, bp. of Cæsarea in Cappadocia, opposes the custom of Asia Minor to the custom of the Romans. There it had always been assumed that any baptism outside the Church was invalid. Returning heretics were re-baptized, or rather received true baptism for the first time. At Carthage, the Roman custom seems to have prevailed (in spite of the attitude of Tertullian [see above, p. 386 f.]), and Cyprian was making an innovation when he insisted that all heretics should be baptized on joining the Church (see Eus. *HE* vii. 3, and note Cyprian's defence of truth against custom in *Epp.* 70–76). The African bishops followed Cyprian's lead.

The divergence in the customs of Rome and Asia may be accounted for by the differing characters of the heresies with which each had to deal. Asia Minor in particular and the East in general were troubled with a variety of fantastic sects, and it appears from a letter of Dionysius, in Eus. *HE* vii. 9, that some who came over from heresy had the gravest misgivings as to the worth of the baptism they had received. The sects in the East frequently adopted such peculiarities both in creed and practice as to render the position of Firmilian natural, if not inevitable. At Rome, on the other hand, the practical issue lay in the re-admission of Novatians, who were schismatics rather than heretics. They had broken from the Church on a question of discipline. In matters of faith they were quite orthodox. Their baptism did not seriously depart from the Church's model. There was no difficulty in accepting such baptism as valid.

The central arguments advanced by Stephen and his supporters were: (1) the appeal to tradition, for which Stephen claimed Apostolic authority (cf. Anon. *de Rebaptismate*, opening); (2) the majesty of the name of Jesus, which could not but be effective wherever and however pronounced. Thus Cyp. in *Ep.* 74 states his adversaries' position as follows: 'Effectum baptismi majestati nominis tribuunt, ut qui in nomine Jesu Christi ubicumque et quomodocumque baptizantur, innovati et sanctificati judicentur' (cf. also Firmilian, *Ep.* 75, *ap.* Cyp.). It is not clear that Stephen regarded baptism 'in nomine Jesu Christi' as valid; but the anonymous author of the *de Rebaptismate* apparently accepted the use of the earlier formula as sufficient. 'The invocation of the name of Jesus ought never to seem vain to us, because of the reverence due to it and the power that resides in it.' Stephen was prepared to adopt the conclusion that, where water and the correct formula were used, the character and creed of the administrators became a matter of indifference.

The positions laid down by the author of the *de Rebapt.* are not necessarily representative of his side, but they deserve notice. He held that heretical baptism did not of itself confer the gift of the Spirit, but it created a possibility of spiritual receptiveness which made its repetition superfluous. The imposition of hands supplied all defects. He distinguished baptism with water from baptism with the Spirit; and though within the Church the two were usually connected, they are clearly separable in the NT, and may be administered distinctly at all times; so that a man may receive water-baptism among the heretics, and the baptism with the Spirit through the laying on of hands at his entrance into the Church. He also claims that sound faith in the administrator cannot be an essential to the validity of water-baptism; for the disciples baptized while the Lord was with them, and while they understood His doctrine very imperfectly. The Divine name possesses peculiar powers, even when invoked by men who do not believe. Strangers to Christ, workers of iniquity, have cast out devils in His name. Consequently the name, by whomsoever invoked in baptism, is of itself operative, and a further invocation means reiterating baptism.

This distinction between water-baptism and baptism with the Spirit really turned the flank of Cyprian's position. He maintained that heretics could not give Christian baptism, because they did not possess the Holy Spirit. To Cyprian, the Romans seemed to be involved in the contradiction of asserting that a man could be born spiritually in a community destitute of the Spirit (*Ep.* 74). A valid baptism requires the invocation of the Holy Spirit; but it is impossible for heretics who do not possess the Holy Spirit to call down His blessing on the water (*Ep.* 70). If baptism is essentially spiritual, if it means regeneration, then it is impossible outside the Church. Nor can it be contended that the heretics hold the same faith. Even mere schismatics, like the Novatians, are at bottom heretics, and do not hold the same creed. Their baptismal confession does not coincide with that of the Catholic Church; for when they question the candidate and say, 'Credis remissionem peccatorum et vitam æternam per sanctam ecclesiam?' then they lie, because they have not the Church. The heretic and the schismatic cannot bestow forgiveness of sins; that is, their baptism cannot confer any of the blessings associated with baptism. In other words, they cannot baptize. There is only one baptism, that of the Church; and so, Cyprian maintained, those who come over from heresy are not re-baptized in the Church, but baptized (*Ep.* 71).

The controversy did not immediately arrive at a definitive issue. The divergence of practice did not at once disappear. The Donatists in the 4th century practically took their stand on Cyprian's rejection of heretical baptism, and they seem at one time to have represented national feeling in Africa. But in general neither Cyprian's sweeping rejection nor Stephen's indiscriminate acceptance received the approval of the Church. The Catholic line was that laid down in the Council of Arles (314), whose eighth canon runs thus: 'De Afris quod propria lege sua utuntur ut rebaptizent, placuit ut si ad ecclesiam aliquis de hæreticis venerit, interrogant eum symbolum, et si perviderint eum in Patrem et Filium et Spiritum Sanctum esse baptizatum, manus ei tantum imponatur ut accipiat Spiritum Sanctum. Quod si interrogatus non responderit hanc trinitatem, baptizetur.' In this council the African bishops, who sided with Cæcilian against the Donatists, abandoned Cyprian's attitude towards heretical baptism. This rule eventually met with general acceptance. In the East, at any rate in Asia, it was reluctantly adopted (Cyril) and carefully applied. The title-deeds of any heretical baptism were carefully scrutinized. Any departure from orthodox custom, such as the Eunomians' substitution of one immersion for three, was eagerly noted and condemned. Basil clearly leans to the view of Firmilian and Cyprian, but grudgingly admits the canonical validity of baptism by the Cathari (see letter 1881 in 'Library of Post-Nicene Fathers'). In the West, the rule was more readily adopted and more graciously applied. The weight of Augustine's authority was thrown on this side (see *de unico bapt. c. Petil.* ch. 3, for the main principle).

The central significance of the whole controversy lay (1) in the assumption, common to both parties, that there can be only one baptism,* and that this baptism is essential to salvation; and (2) in the progress made towards establishing the objective validity of the sacrament, defined as complete in the use of the correct material and the orthodox formula.

(*b*) *The Donatist controversy* carried the insistence on the objective validity of the sacrament still further. The gist of the Donatist contention was that the sacrament was invalidated by the misbelief or misconduct of the administrator. More particularly, the denial of the faith in time of persecution rendered all the sacramental acts of such traitors worthless. The Donatists followed Cyprian in believing that the character of the administrator affected the value of the rite. To admit this would have thrown doubt on the sacramental life of the past, and would have made the efficacy of the sacraments depend upon men. The defenders of the Catholic position would never consent to this conclu-

* Ultimately this was disputed only by the obscure sect of Hemerobaptists.

sion. Optatus asserts unhesitatingly the essential efficacy of the ritual act: 'The sacraments are holy in themselves, not through men' ('sacramenta per se esse sancta, non per homines,' *de Schismate Don.* v. 4). The three essentials to baptism are the Holy Trinity, the believer, and the administrator. But, while the first two are indispensable, the last is only *quasi*-necessary. The administrator is not the lord of baptism, but the agent: *i.e.* any administrator will serve the purpose (see Harnack, *op. cit.* v. 45). Augustine took up a similar standpoint. Baptism, as defined in the 8th canon of the Council of Arles, confers an indelible stamp on the recipient, which *ipso facto* requires no renewal. To suppose that it does not is to do wrong to the sacrament, to deny the power of God in it. It is impossible to summarize here the numerous writings of Aug. against the Donatists, but the following points may be noted:—

(1) Aug. is clear that the use of water, together with the words prescribed in the Gospel, suffices to make a valid baptism. The correct episcopal benediction is not essential. Heretical prayers may even be pernicious, but they cannot destroy the efficacy of the sacrament, provided the Gospel words are employed (*de Bapt. contra Don.* vi. 25). Here Aug. distinctly denies the importance attributed by Cyprian (see above) to the cleansing of the water by a correct benediction.—(2) In accordance with his own principles, Aug. regards lay baptism as valid. He is inclined to assert that any one who has truly received baptism* can pass on the gift, though, of course, he distinguishes the *sacramentum baptismi* from the *sacramentum dandi baptismum*. But Aug. does not doubt that a layman who baptizes in the name of the Trinity has conferred a valid baptism, whether he acts under the pressure of necessity or not. If he acts in a case of urgency, his action is at least pardonable, if not praiseworthy. If he baptizes when there is no need for him to undertake another man's office, his action is wrong, and may mean damnation for baptizer and baptized alike, but none the less is the baptism valid (*contra Ep. Parm.* ii. 13). This is an emphatic statement of the comparative unimportance of the minister, and of the all-importance of the ritual act.—(3) It is difficult to see what Aug. understood by the stamp (χαρακτήρ) conveyed in baptism, but it seems to be a permanent possibility of spiritual receptiveness, such as is suggested by the author of the *de Rebaptismate*. At least, Aug. is prepared to concede this efficacy to heretical baptism, because in itself the stamp does not connote the spiritual blessings secured by baptism within the Church. Heretical baptism conveys a something which is essential to salvation,—this must be maintained, if the sacrament is not to suffer wrong,—but the heretic derives no benefit from this possession so long as he remains a heretic. He possesses baptism, but he does not possess it unto salvation. 'Aliud est non habere, aliud non utiliter habere.' In fact, the stubborn heretic or schismatic receives baptism, not to his profit, but to his eternal loss. The man who has received heretical baptism carries about with him a hidden treasure, which he can enjoy only in the bosom of the Church. In this way Aug. was able to reconcile his belief in the objective efficacy of the sacrament with his conviction that union with the Catholic Church could alone ensure a saving use of baptismal grace.

The Donatist controversy thus completed the development initiated in the dispute between Cyprian and Stephen. The two essentials of baptism, water and the Gospel formula, stand out with increasing clearness, and the minister is recognized to be of comparative unimportance.

(*c*) The insistence on the intrinsic efficacy of the ritual act is further evidenced by *the tendency to regard conscious faith on the part of the recipient as non-essential*. It is interesting to notice that this was one of the points of difference between the Manichæans and the Christians. To the former, a baptism apart from conscious faith was absurd.

There is an illuminating story in Aug.'s *Confessions*, bearing on this point. A sick friend of his was baptized while unconscious. Aug., who was at the time under the influence of Manichæan ideas, was ready to treat the matter as a joke, thinking that he would laugh at a baptism which he had received 'while utterly absent both in mind and feeling' (*mente ac sensu absentissimus*). The friend, however, took the matter more seriously, and Aug., as he tells the tale, clearly thinks that the baptism had wrought a real change *in corpore necientis* (*Conf.* Iv. 4).

But the principal evidence for the growth of the view that baptism was of worth apart from conscious faith in the recipient is to be found in the custom of infant baptism. The existence of the custom from the time of Tertullian is undeniable, and Tertullian's plea for delaying the baptism of children does not imply that the practice against which he protests was of recent growth.*

Origen is familiar with the practice of child baptism, and assumes that it comes down from Apostolic times (*Com. in Rom.* v.). Cyprian's letter to Fidus (*Ep.* 59) discusses the question whether, in the case of infants, baptism should be postponed till the eighth day or not. Fidus wished to make the rite parallel with circumcision, and suggested that the babe was unclean immediately after birth. Cyprian and his colleagues decided that a babe might be baptized at the earliest possible moment, and they repudiated Fidus's suggestion, by saying that to kiss a new-born babe is in a manner to kiss the hands of God the creator. The whole discussion implies that infant baptism had long been in vogue. In the third century, infant baptism was regarded as an Apostolic institution at least in North Africa and in the Alexandrian churches. But while the evidence for the existence of the custom in the third century is overwhelming, we are, as Harnack says, 'in complete obscurity as to the Church's adoption of the practice.' The clear 3rd cent. references to child baptism interpret it in the light of original sin, and if the adoption of the practice is due to this interpretation, it is almost certainly a late 2nd cent. development. Cyprian clearly understands infant baptism in this sense (*Ep.* 59). Origen seems to have based its necessity on the pollution acquired in birth (*Hom.* viii. and xii. *in 1 Cor.*), while in his case the idea of pre-existence also suggested that infants were burdened with the sins of a previous life which might be removed in baptism (*de Prin.* iii. 5). This deduction of the need of infant baptism from the idea of original sin, or from that of pre-existence, may safely be regarded as a theological after-thought. The first is the product of reflexion on the writings of St. Paul. It is probable that men pondered long on the conception of original sin before they drew any such conclusion. References to original sin in Clement of Rome or other writers earlier than Cyprian cannot be held to imply a knowledge of the custom of infant baptism. Moreover, the idea that infants needed to be baptized for the remission of sins is contrary to all that is known of early Christian feeling towards childhood. The teaching of Jesus about children runs counter to any such notion, and, however little His sympathy for the young was appreciated, it was not forgotten (see Burkitt, *Gospel Hist. and its Transmission*, p. 285 f.). The most natural interpretation of the much-disputed text in St. Paul, 1 Co 7^{14}, is that Christian parentage in itself somehow hallowed childhood. Tert. speaks of the innocence, the guiltlessness of children, and apparently deduced from it that baptism was unnecessary (see *de Bapt.*, ed. Lupton, p. 52, n. 1). In this he represents what seems to have been the primitive Christian feeling, if the *Apology of Aristides* interprets that feeling aright: 'And when a child is born to any one of them, they praise God; and if, again, it chance to die in its infancy, they praise God mightily, as for one who has passed through the world without sins' (Syriac Version, c. 15, ed. J. Rendel Harris, Camb. *TS*). Perpetua's vision of her little brother Dinocrates, as in heaven, alive and well, shows how people clung to the idea that children as such belong to the

* This is Jerome's position: 'Ut enim accipit quis, ita et dare potest' (*Dial. c. Luciferianos, ap.* Höfling, i. p. 505).

* The fact that Tert. uses the term *parvulus* and not *infans* is of no particular significance. He is not thinking of new-born babes, but the reference to sponsors (and indeed his whole discussion) implies that the children concerned are incapable of a public profession of faith. The principle involved is the same, though clear evidence for the baptism of new-born babes is not forthcoming till Cyprian's letter to Fidus.

Kingdom. In such an atmosphere, a baptism of infants for the remission of sins is hardly conceivable.

But it is probable that the custom did not originate with theologians. It should be noted that even in the 3rd cent. infant baptism cannot be described as a Church-custom. That the Church allowed parents to bring their infants to be baptized is obvious: that some teachers and bishops may have encouraged them to do so is probable, though there is no reason to suppose that Tertullian's position was peculiarly his own. But infant baptism was not at this time enjoined or incorporated in the standing orders of the Church. [It was not till the middle of the 5th cent. that the Syrian Church made infant baptism obligatory (see *DCA* p. 170).] Indeed, in the 4th cent. so prominent a teacher as Gregory of Nazianzus, who was in general eager to persuade people not to postpone baptism, urged the inadvisability of baptizing children before they were three years old, 'when they are capable to hear and answer some of the holy words' (*Or. de Bapt., ap.* Wall, ch. 11, § 7). Again, this does not sound like a personal idiosyncrasy of Gregory. In any case, it is probable that the custom arose from the pressure of parents and not through the direct advocacy of the Church. If this be so, the reason for the adoption of the custom may perhaps be sought outside the idea of the remission of sins. The Pelagians held that infants were baptized, not in order that their sins might be remitted, but in order that they might be sure of admission into the Kingdom of Heaven. Unbaptized infants would not be punished, but could not go to Heaven. Among other passages, they set great store by a well-known utterance of John Chrysostom, which runs thus:

'You see how many are the benefits of Baptism. And yet some think that the Heavenly grace consists only in forgiveness of sins: but I have reckoned up ten advantages of it. For this cause we baptize infants also, though they are not defiled with sin: that there may be superadded to them Holiness, Righteousness, Adoption, Inheritance, a Brotherhood with Christ, and to be made Members of him' (see Aug. *c. Julian.* I. vi. *t.*).

Aug., in commenting on this extract, has no difficulty in showing that Chrysostom believed in original sin; but he does not succeed in disproving the Pelagian contention that Chrysostom found a reason for baptizing infants other than the need of the remission of sins or the need of getting rid of original sin. And though at first sight the Pelagian view of the necessity of infant baptism—the view that through it alone can certain positive advantages be secured—looks as if it were hammered out in the exigencies of controversy, yet it may after all be more primitive than that which eventually came to the front through the influence of Augustine.

Undoubtedly the Pelagian position harmonizes with some seemingly primitive Christian ideas about baptism. It has been suggested that baptism was fromt he first regarded as a Messianic sign. To be baptized was to be sealed for the coming Kingdom (see Schweitzer, *Von Reimarus zu Wrede*, p. 373 f.; and note use of term σφραγίς referred to on p. 385[b], and on Hermas, p. 384 f.). Baptism had a positive eschatological importance. To enter the Kingdom at all, one must wear the seal. The thought is expressed most simply in the apocryphal *Acts of Thomas*, where one of the Apostle's converts says: 'Give us the seal: for we have heard you say that the God whom you preach recognizes His sheep by the seal.' In the narrative, an anointing with oil follows; but this not improbably represents a primitive Christian view of baptism. Now it is possible that this thought even in NT times may have led parents to wish to have their children baptized. The primitive eschatological expectations may have introduced the custom—in which case it will be very early. In any event, the influence of Jn 3[5], as Höfling points out, played an all-important part in developing the custom of infant baptism. This text laid hold of the imagination in the 2nd century. Before any explanation of the necessity of re-birth had been thought out, the mere statement that to see the Kingdom a man must be born of water would trouble the minds of some whose children had died unbaptized. To such doubt and fear the practice probably owed its origin. The influence of the OT, and especially of the rite of circumcision, must also be taken into consideration; but, in general, the idea *extra ecclesiam nulla salus* made people anxious to enrol their children as Church members as quickly as possible.

When once the custom had been introduced, the interpretation which Aug. put upon it was almost inevitable. The conviction that there could be only one baptism, and that therefore baptism means always the same thing, to wit, remission of sins (the reference to 'one baptism' in Eph. is a constant factor in all discussions in this period); the use of the term 're-birth' in Jn 3, suggesting that baptism is a necessary supplement to natural birth; the ascetic view of marriage; the Pauline doctrine that flesh and blood cannot inherit the Kingdom of God—all these elements combined to establish Aug.'s view. The Pelagians, in saying that children must be baptized, not in order to secure the remission of sins, but in order to secure the Kingdom, were introducing two baptisms—as clear a heresy as re-baptism itself. Moreover, the Pelagians could give no satisfactory account of the fate of infants who died unbaptized. They would obtain eternal life and happiness, but not the Kingdom. Aug. denies the distinction (see *ad Marc.* i. 20, and *Sermo* 294, where he says: 'hoc novum in ecclesia prius inauditum est, esse salutem æternam præter regnum Dei'). If those who die unbaptized are outside the Kingdom, they must be in eternal misery, even though their torment be *mitissima et tolerabilior* (*Enchiridion*, 93). Baptism would be needless if it did not mean remission of sin. Since then the Pelagians admit that children should be baptized, and since children are innocent, the sin remitted to them must be original sin. That they are sinful is clear from the fact that Jesus called them to Himself, and He came to call not the righteous, but sinners (*ad Marc.* i. 19). But from Aug.'s standpoint the more serious error of the Pelagians lay in their optimistic view of human nature. To Aug. original sin was the most awful and obvious fact about men. The impossibility of keeping God's law apart from God's grace is written clear in all experience. The human will in itself is hopeless. 'We cannot do justly unless we are helped of God' (*ad Marc.* ii. 5). Human nature is tainted, and grace is a necessity from the first. The taint is explained monastically. Aug. admits that there is such a thing as a *bonum conjugii*, a legitimate use of wedlock, but he claims that all men are born of incontinence, and 'hoc est malum peccati in quo nascitur omnis homo. . . . Sed nemo renascitur in Christi corpore, nisi prius nascitur in peccati corpore' (*ad Marc.* i. 29; cf. the discussion of the significance of virgin-birth, *Ench.* 34). In all this, Aug. is developing the thought already suggested in Cyprian. His position found emphatic approval in the Council of Carthage held in 418–9, which promulgated the following canon:

'Item placuit ut quicunque parvulos recentes ab uteris matrum baptizandos negat, aut dicit in remissionem quidem peccatorum eos baptizari sed nihil ex Adam trahere originalis peccati quod lavacro regenerationis expietur (unde sit consequens ut in eis forma baptismatis in remissionem peccatorum non vera sed falsa intelligatur) Anathema sit' (*ap.* Wall, *Infant Baptism*, ch. 19).

Though, as Höfling maintains, the final preva-

lence of infant baptism must not be ascribed entirely to Aug., yet his defence of the practice must have done much to commend it. The emphasis on original sin made the rite seem natural and reasonable; for if, by their first unconscious and involuntary birth, children were born into an inheritance of sin, it was just that a second birth equally involuntary and unconscious should give them at least the chance of being co-heirs with Christ.* But however they interpreted the practice, the whole development implies the concentration of attention on the intrinsic efficacy of the ritual act. Aug. commends the African Christians because they spoke of baptism as salvation (*salus*). The giving of the sacrament to those 'who could not with their own heart believe unto righteousness, nor with their own mouth make confession unto salvation' witnesses to man's conviction of its inherent power to bestow spiritual blessings.

The growth of the practice of infant baptism broke in on the natural connexion between instruction, conscious faith, and the sacrament. The customary arrangements for the ceremony and the prescribed order rested on the assumption of conscious faith in the subjects. Up to the close of the 5th cent., baptism was still administered as a rule by the bishop (though later on the presbyters became the usual ministers—the anointing with oil on the forehead and confirmation being reserved for the bishop), and special seasons were devoted to the administration of baptism. Easter and Pentecost were observed in the West, and from the close of the 4th cent. many Popes made repeated attempts to confine baptisms to those seasons (see *DCA*, p. 165). The Eastern Churches further set apart Epiphany for this purpose, and local churches developed special usages. In case of necessity, baptism was administered at any time. Arrangements of this kind were natural when baptism regularly followed the catechumenate. The special seasons disappear when infant baptism becomes universal. Similarly, the whole ritual was designed for adults. The confession of faith in particular points to this; and it must be admitted that the institution of sponsors was a somewhat clumsy device to adapt to infants a ceremony which had clearly been ordered at a time when their baptism was not thought of. The Church reckoned baptized children as being among the faithful. The awkwardness of speaking of infants as *fideles* was felt by Bp. Boniface, to whom Aug. addresses a letter on the subject (*Ep.* 23). In the 8th cent., Theodulph (*de Ordine Baptism.* 1) naively remarks: 'Infantes ergo et audientes et catechumeni fiunt, non quo in eadem ætate et instrui et doceri possint, sed ut antiquus mos servetur, quo apostoli eos quos baptizaturi erant primum docebant et instruebant.' The ritual is frankly unsuitable for infants, but it is retained because the tradition that instruction and faith precede baptism is undeniably primitive.†

It should, however, be noted in this connexion, that it was never supposed that baptism apart from faith would suffice to secure eternal life.‡ Faith was still essential; but whereas faith had as a rule preceded baptism, it was now held that baptism would be equally effective if it preceded faith. And even so, a vicarious faith was required for the valid baptism of infants. Not only the sponsors, but the whole congregation, help to forward the communication of the Holy Spirit to the baptized child (see Aug. *Ep.* 23 *ad Bonifacium*). It is also true that baptism was administered only to children who would be instructed and trained in the Christian faith. It was never thought, or at least men were never encouraged to think, that the mere isolated act of baptism ensured salvation, even though the African Christians called it *salus*.

It remains to explain the ultimate prevalence of infant baptism. The catechumenate, and with it adult baptism, continued so long as the Church was making converts from heathenism. But infant baptism was not universally adopted by believers. For not only was the example of Constantine the Great, who postponed his baptism till near death, undoubtedly fashionable, and not only did many who were within the close range of Christian influence delay the decisive step, but there is reason to suppose that many baptized Christians did not in the 4th cent. push forward the baptism of their children. Gregory of Nazianzus, whose parents were both Christians, was not baptized till he was come to years of discretion (see Wall, vol. ii. ch. 3). The same was true of Ephraim Syrus (Butler, *Lives of the Saints*), and probably of Basil the Great (see Introd. to vol. viii. in 'Library of Nicene and Post-Nicene Fathers,' p. xvi). The want of reference to infant baptism in Basil's discussions of the subject, and the general character of his treatise, suggest that many were brought up in their homes, and were not put forward as candidates for baptism until they entered the catechumenate in riper years. The postponement of Aug.'s baptism till he was thirty-three years old is usually attributed to the heathenism of his father. But the passage in the *Confessions* (bk. I. ch. xi. in Gibb and Montgomery's ed.) suggests that Monica was not anxious to have Aug. baptized, except when he was in danger of dying. During an illness, Aug. was on the point of being baptized, when he recovered. The crucial passage runs thus: 'Dilata est itaque mundatio mea, quasi necesse esset, ut adhuc sordidarer, si viverem, quia videlicet post lavacrum illud maior et periculosior in sordibus delictorum reatus foret.' The alleged reason must have weighed with his Christian mother, not with his heathen father. If this interpretation be correct, then Monica's view was characteristic of many Christians in the 4th century. 'Although,' says Harnack, 'the principle was maintained that baptism was indispensable to salvation, still people dreaded more the unworthy reception of it than the risk of ultimately failing to receive it. In the 4th cent. it was still very common to postpone it, in order not to use this sovereign remedy till the hour of death' (*op. cit.* iv. 284). Another motive of such conduct lay in the thought that a life of indulgence could be washed clean by a deferred baptism. The unbaptized man could safely enjoy himself. 'Let him alone, let him do what he will; he is not yet baptized' (Aug. *Conf.* I. xi.). This sentiment is re-echoed by the objectors to whom Basil addresses his work. Aug. and other Church teachers could not deny the main premiss here assumed. They could urge the dangers of delay, but they did not deny that baptism, so deferred, would still be efficacious if received. Aug. regards it as one of the signs that grace does much more abound that, whereas Adam's fall involves us in original sin, the grace of the Second Adam in baptism removes not only original sin but all the sins we have ourselves committed. Many were anxious that they and their children should secure this more abounding grace. Moreover, men hesitated before the *pondus baptismi*, the moral obligations of the step. In Edessa, at the time of Aphraates, baptism may have meant the adoption of celibacy and been confined to a spiritual aristocracy, 'the sons of the

* Cf. *e.g.* the sentence in Theodulph, the 8th cent. bp. of Orleans, who says (*de Ordine Baptism.* 7): 'nec immerito dignum est ut qui aliorum peccatis obnoxii sunt, aliorum etiam confessione per mysterium baptismatis remissionem originalium percipiant peccatorum.' Aug. provided just this kind of *raison d'être* for infant baptism.

† Incidentally, the evidence of the ritual is against a very early date for the practice of infant baptism.

‡ That faith and baptism are inseparable is emphasized in Basil, *de Sp. Sanc.* 12.

Covenant' (see Burkitt, *Early Eastern Christianity*, p. 255 f.; but see also Connolly, *JThSt* vi.).

In the course of the 5th cent. infant baptism became the prevailing usage. The action of the Syrian Church in enforcing on parents the duty of having their children baptized has already been noticed. Many causes contributed to this result. The Christianization of society diminished the numbers of adult converts, and so lowered the importance of the catechumenate. The influence of Aug. and other Church Fathers was cast on this side. The growth of the penitential system served to remove in part man's fear of the *pondus baptismi*, while the readiness of the Church to administer the *viaticum*, or last sacrament, to all (see *DCA*, p. 2014), and eventually the practice of Extreme Unction, combined to meet the needs which had previously sought satisfaction in deferred and clinic baptism. Also, towards the latter part of this period, the penitential system became the means of moral instruction, which had previously been provided by the catechumenate. In the Church's dealings with the Teutonic nations, the baptism of converts resembled the baptism of infants in so far as systematic instruction in the faith was postponed till after baptism. It is true, Clovis and his followers were baptized on confession of faith; but the rude German warriors did not submit, and were not expected to submit, to a course of instruction such as had been given to catechumens. The catechumenate disappeared in the West, 'because, as whole peoples were baptized at once, infant baptism was introduced as a matter of course' (K. Müller). The Church opened her doors to infant and barbarian, partly because only so could she influence them, and partly because she believed that baptism could of itself confer benefits before faith was instructed or even existent.

(*d*) Some further illustrations of the importance attached to baptism, at least in the earlier portion of this period, may be adduced here. (1) As soon as Christianity became the State religion, *baptisteries* were among the first public buildings to be erected by believers. 'Of the construction of baptisteries in the time of Constantine the Great we have abundant proof' (*DCA*, p. 174). The practice of erecting separate buildings for the celebration of baptism continued in the West at least all through this period. It served to add solemnity to the rite of initiation. (2) The *elaboration of the ritual* served the same end. On p. 386 f. the development up to the time of Tert. is briefly summarized. If we compare the account in Theodulph of Orleans with that statement, the following additions are obvious. The practice of infant baptism by the close of the 8th cent. has led to the inclusion of the rites of the catechumenate in the *Ordo Baptismi*. The infants are first made catechumens, then breathed upon by the priest to receive the breath of the new life (insufflation). This is followed by exorcism and the reception of salt. It is probable, from Aug.'s reference in *de Pecc. remiss.* c. *Pel.* i. 34, that those rites were associated with infant baptism as early as his day. The *scrutinium*, to which Theodulph next refers, can have been only a form in the case of infants. The nose and ears were then touched with spittle, while the priest said 'Ephphatha.' This was followed by an anointing of the breast and shoulders with oil. This seems to be a weakened form of the preparatory unction which was certainly in use in the East in the time of Cyril of Jerusalem (see *Catech. Lect.* xx. 3). After baptism, Theodulph mentions the bestowing of white robes and of a mystic veil on the candidate, in addition to the chrism referred to by Tertullian. The clothing of the baptized with white garments is quite early, well-attested in the 4th century. Theodulph does not refer to the practice of handing over candles or torches to the neophytes to be lit up towards the close of the service, but the usage is clearly evidenced in Gregory of Nazianzus and in Ambrose, and is still preserved in the Roman ritual (see Höfling, i. 543). The use of milk and honey, mentioned in Tert., does not appear in Theodulph, and the history of this usage is obscure. As late as the 9th cent. there seems to have been a custom in some Western churches of mixing milk and honey in the communion wine offered to infants (Höfling, i. 546). A Gallican sacramentary adds the washing of the feet (*lotio pedum, pedilavium*) to the other ceremonies. Perhaps the most important addition after the 2nd cent. was the elaborate renunciation of the devil, together with all his works and pomps. The ceremonial development is an elaborate repetition of the central idea of the rite in additional symbolic acts. It tended to increase the mystery element in baptism. (3) A well-known story related in Socrates (*HE* ii. 16) forms the most striking illustration of the 4th cent. belief in the objective validity of the sacrament. The story is simply that the bishop of Alexandria accepted as valid a baptism administered by Athanasius as a boy to some companions who joined him in a game of pretence in which the ceremonial was imitated. The writer in *DCA* (p. 167) remarks that, whether true or legendary, 'it serves equally to illustrate the feeling of the Church at the time the story was first told.' Though baptism declined somewhat in importance after the 5th cent., the point of view here obtained was never lost. It was held (1) that baptism is essential to salvation;* (2) that baptism is valid if water and the true formula be used; (3) that baptism so administered confers an indispensable spiritual gift. This leads on to the discussion of—

II. *THE CONCEPTION OF BAPTISMAL GRACE IN THIS PERIOD.*—The primary gift in baptism is, of course, the remission of sins. 'Baptizati sumus, et fugit a nobis solicitudo vitæ præteritæ' (Aug. *Conf.* ix. 6). In the case of children, it is the guilt of original sin which is removed. There is an interesting observation in Cyril to the effect that 'remission of sins is given equally to all, but the communication of the Holy Ghost is bestowed according to each man's faith' (*Catech. Lect.* i. 5). The grace of forgiveness was, at any rate, assured. But baptism means more than this. It is essentially regeneration, and perhaps two main ideas may be grouped under this head: (1) the loosening of Satan's hold over the soul, (2) an organic inward change. (1) It is clear that to Cyprian baptism appealed as a peculiarly strong form of exorcism. Just as the Red Sea drowned Pharaoh, so baptism drowns the devil out of a man. 'Cum tamen ad aquam salutarem, atque ad baptismi sanctificationem venitur, scire debemus et fidere, quia illic diabolus opprimitur et homo Deo dicatus divina indulgentia liberatur . . . Spiritus nequam . . . permanere ultra non possunt in hominis corpore, in quo baptizato et sanctificato incipit spiritus sanctus habitare' (*Ep.* 76). Cyprian has previously pointed out that in exorcism the devil often plays the deceiver and says he has gone out when he has not; but the life-giving water is a sure means of expulsion. Somewhat similarly, in the apocryphal *Acts of Thomas*, a woman out of whom a devil has been cast asks the Apostle to give her the seal, 'that yonder fiend may not return to me again' ('Thomasakten,' § 49; *ap.* Hennecke, *Neutest. Apoc.*). In the baptism of infants, the exorcism and the renunciation were but parts of the process which was

* The only exception contemplated was martyrdom. Thus Cyril: 'If a man receive not baptism he has not salvation, excepting only the martyrs, who even without water enter the Kingdom' (*Catech. Lect.* iii. 10; cf. Baptism by Blood).

completed in immersion. Every one, in virtue of birth, stands within the kingdom of Satan. This, to Aug., is clear from the fact that the soul of a new-born infant suffers 'several passions and torturings of the body, and, what is more dreadful, the outrage of evil spirits' (*de Pecc.* iii. 10). Why are infants exorcised at all, if they do not belong to the household of Satan? (*de Pecc.* i. 34). Aug.'s views here rest ultimately on the grand conception of the two cities, the City of God and its rival. The transition from the latter to the former is effected in baptism.

(2) Not only, however, is the devil driven out of possession, but the soul is cleansed and reformed in the process of regeneration. At times, and in the case of some persons, even bodily tendencies are completely removed. In a wonderful letter (*Ep.* 1), Cyp. speaks of the thorough change of character wrought in baptism. He explains to Donatus that for a long time he was sceptical on the subject. He could not believe that the extravagant man could be made thrifty, the luxurious induced to return to simplicity, the licentious persuaded into chastity.

'With enticements always gripping a man fast, revelling must as usual attract, pride as usual inflate, anger inflame. Greed will not cease to disquiet, cruelty will not lose its sting. The delight of ambition, the overwhelming power of lust, will not be less. So I thought. . . . But after the taint of my past life had been washed away with the aid of the regenerating wave, after light had poured from above into my cleansed heart, now calm and pure, after the second birth had made me a new man by the draught of the heaven-born spirit, then forthwith, in a wonderful fashion, things I had doubted became certain; closed doors opened; dark places were filled with light; what had seemed difficult was now easy; what I thought impossible became possible; so that I could not but see that the "I" of my previous fleshly birth, which had lived bound to sins, had been of the earth, whereas the "I," in which the Holy Spirit now breathed, had begun to be of God' (*Ep.* i. 3).

Without attempting to analyze this beautiful passage, we may recognize that for Cyp. baptism meant the lessening of temptation. On this he is elsewhere very emphatic; for, when a correspondent is puzzled that sick persons after being baptized are still tempted of the devil, Cyprian's answer is practically to deny the fact (see *Ep.* 76). The same thought is expressed more crudely in the *Acts of Paul and Thekla*, where Thekla says, 'Give me the seal in Christ, and no temptation will invade me' (Hennecke, *op. cit.* 'Paulusakten,' § 25). The passage in the *Confessions* (i. 11), where Aug. wonders whether it would not have been better for him to have been baptized earlier, suggests that he would have sinned less in that case, not only because of the sense of responsibility attaching to baptism, but also because of the grace to live up to that responsibility which he would thereby have received. But this idea hardly needs illustration. The lessening of the power of temptation is brought about in two ways, viz. by the loosening of the hold of previously formed sinful habits, and by the gift of new life in the Spirit. The distinction is most interestingly presented in a passage from Basil:

'Hence it follows that the answer to our question why the water was associated with the Spirit is clear; the reason is because in baptism two ends are proposed: on the one hand, the destroying of the body of sin that it may never bear fruit unto death; on the other hand, our living with the Spirit and having our fruit in holiness: the water receiving the body as in a tomb figures death, while the Spirit pours in the quickening power, renewing our souls from the deadness of sin unto their original life. This then is what it is to be born again of water and of the Spirit, the being made dead being effected in the water, while our life is wrought in us through the Spirit' (*de Sp. Sanc.* 15; Oxford tr. by C. H. Johnston).

This first end—the death unto sin in baptism—is, of course, a commonplace in all discussions of the subject. The tendency was to conceive the grace of baptism as specially directed to counteract concupiscence, which formed the primary factor in original sin (see Aug. *Ench.* 64). Among the rhetorical epithets which Gregory of Nazianzus applies to baptism, not the least significant is his description of the new birth as λυτικὴ παθῶν, in contrast to carnal birth. Basil, again, explains the pillar of cloud as 'a shadow of the gift of the Spirit who cools the flame of our passions by the mortification of our members' (*de Sp. Sanc.* ch. 14).* So much, indeed, was expected of this destruction of sinward tendencies, that Hilary had to warn his readers against supposing that baptism would restore to them the innocence of childhood. Similarly Aug. is very careful not to exaggerate the benefits of baptism when he says (*de Pecc.* i. 39):

'Evacuatur [caro peccati] non ut in ipsa vivente carne concupiscentia conspersa et innata repente absumatur et non sit, sed ne obsit mortuo [parvulo] quæ inerat nato. Nam si post baptismum vixerit, . . . ibi habet cum qua pugnet, eamque adiuvante Deo superet, si non in vacuum gratiam eius susceperit. . . . Nam nec grandibus hoc præstatur in baptismo (nisi forte miraculo ineffabili omnipotentissimi creatoris) ut lex peccati quæ inest in membris repugnans legi mentis, penitus extinguatur et non sit: sed ut quicquid mali ab homine factum, dictum, cogitatum est, cum eidem concupiscentiæ subjecta mente serviret, totum abo-leatur, ac velut factum non fuerit, habeatur.'

For Aug. baptism means the breaking down of sinful habit, the bestowal of a special grace of resistance, but not the entire removal of the enemy. The new life in the Holy Spirit is not altogether distinct from this loosening of sinful habit, but it is something more than this. 'Baptism purges our sins and conveys to us the gift of the Holy Spirit' (Cyril, *Catech. Lect.* xx. 6). More than once in the 4th and 5th cent. literature the thought appears that baptism makes a Divine impress (*effigies*) on the raw material (*terra*) of human nature (Aug. *Conf.* i. 11, xiii. 12). The raw material is, so to speak, cleansed for the reception of the Spirit, and then receives the stamp of the image of God. 'The water cleanses the body, the Spirit seals the soul' (Cyril, *Catech. Lect.* iii. 4). The natural powers of men did then and there receive a Divine reinforcement. Hilary claims that the doctrine of the Trinity can be understood only by the regenerate mind. 'Novis enim regenerati ingenii sensibus opus est ut unumquemque conscientia sua secundum cœlestis originis munus illuminet' (Hil. *de Trin.* i. 18). The power and presence of the Spirit were bestowed in baptism, though, according to Cyril, the gift of the Spirit was proportioned to faith (*Catech. Lect.* i. 5). Thus baptism did not simply secure the remission of sins: it tamed the fierceness of temptation; it broke 'the power of cancelled sin'; it began the new life.

Note on Confirmation and Baptism.—At the beginning of the 3rd cent., Confirmation and Baptism were universally parts of the same rite. This close connexion continued to be normal for the 3rd and 4th cents., though in the West Confirmation began to be detached from Baptism 'shortly before the middle of the 3rd century' (Harnack, *op. cit.* ii. 141, n. 3). By the close of the period, they are usually separated in the West (see Theodulph, *de Ordine Baptism.* 17); but 'it was not till the thirteenth century that the two ordinances were permanently separated, and an interval of from seven to fourteen years allowed to intervene' (*DCA*, p. 425).

The writers of this period do not hesitate to attribute the very highest spiritual blessings to baptism (see, *e.g.*, the authorities cited in Stone, *Holy Baptism*, ch. v. n. 11). But it is difficult to say how far they attributed these blessings to baptism in the narrow sense of the term, as distinct from Confirmation. A definite line of doctrine associated the cleansing with immersion, and the gift of the Holy Spirit with the imposition of the hands of the bishop. The man who was baptized and not confirmed was like a cleansed temple without a Divine tenant. This view rested on a very early tradition (see p. 382 f. on Acts and 387 on Tert.). It appears in Cyp. (*Ep.* 74, § 5), and most clearly in Cornelius's verdict on Novatian (Eus. *HE* vi. 43). Novatian had been baptized on his bed during sickness. On recovery he failed to receive the supplementary rites: more particularly he was not sealed by the bishop. Since he missed this, how could he have received the Holy Ghost? (οὐ μὴν οὐδὲ τῶν λοιπῶν ἔτυχε, διαφυγὼν τὴν νόσον, ὧν χρὴ μεταλαμβάνειν κατὰ τὸν τῆς ἐκκλησίας κανόνα, τοῦ τε σφραγισθῆναι ὑπὸ τοῦ ἐπισκόπου. Τούτου δὲ μὴ τυχών, πῶς ἂν τοῦ Ἁγίου Πνεύματος ἔτυχε;). Perhaps this passage should not be pressed, as it is the product of controversy; but it is evidence for the practice of the Church in the case of 'clinics.' If they recovered, their baptism, which would otherwise have been counted sufficient in itself, must be completed by Confirmation

* The connexion between chastity and baptism had been over-emphasized in some heretical sects. Cf. p. 388 on Marcion, and also note *Acts of Thomas* here.

if it was to be effective.* It further shows that normally baptism was not complete without the laying on of hands, and consequently this part of the ceremony was essential to the reception of the Holy Ghost.

The development of thought on the subject during this period seems to have been briefly this :—

(1) Cyprian and his supporters regarded immersion and the laying on of hands as inseparable parts of the same sacrament, which could not safely be administered apart. This latter assertion is aimed at the Roman view. See *Ep.* 73, and note the strong view of Remesianus (in *Cypriani Opera*, ed. Hartel, i. p. 639): 'Neque enim spiritus sanctus sine aqua separatim operari potest nec aqua sine spiritu. Male ergo sibi quidam interpretantur ut dicant quod per manus impositionem spiritum sanctum accipiant et sic recipiantur, cum manifestum sit utroque sacramento debere eos renasci in ecclesia catholica' (Harnack, ii. p. 141, n. 1).

(2) As we have seen earlier, the author of the *de Rebaptismate* contends that spiritual baptism is essentially bound up with the laying on of hands, and that, though water and Confirmation are necessary to a complete Christian baptism, yet the two parts of the one rite may be sundered in time. The benefits of immersion are latent until the rite is supplemented by the laying on of hands. On this view, as on Cyprian's, the laying on of hands is essential to the gift of the Holy Spirit, but the two parts of the one sacrament are separable. It may be noted here that, even after baptism began to be more frequently administered by presbyters and deacons, and the episcopal Confirmation was separated from baptism in point of time, they were not immediately regarded as distinct sacraments. Confirmation completes baptism. Thus the Council of Elvira (324 ?) ordered that in the case of those who had been baptized by a deacon, 'sine episcopo vel presbytero,' the bishop 'per benedictionem perficere debet.' In this edict, baptism by the presbyter includes the laying on of hands: but Jerome seems to confine the latter to bishops, who were to travel round their districts and lay hands on the baptized *ad invocationem Sp. Sancti* (see *DCA*, 'Confirmation,' p. 425, where *c. Lucifer.* 4 is cited). In the 8th cent. Theodulph, as noted, expressly reserves Confirmation to the bishop. However, the canon of the Council of Elvira clearly shows that Confirmation was regarded as the necessary complement to Baptism, and that the two ordinances could be received at different times (cf. also *Tracts for the Times*, 67, p. 153 n.).

(3) Jerome, in his discussion with the Luciferians, asserts that the Holy Spirit is bestowed in true baptism; and he regards the insistence on episcopal Confirmation as mainly a matter of Church order, intended rather for the honour of the priesthood than for any rule of necessity ('ad honorem potius sacerdotii quam ad legem necessitatis'). He argues that those who are baptized in outlying districts, and who fail to be confirmed, would be in a deplorable position, if the gift of the Holy Spirit can be received only through the laying on of hands. He claims that the case of the eunuch whom Philip baptized proves that the Holy Spirit is really given in baptism (*Dial. c. Lucif.*, *ap.* Höfling, i. 505). In this position, Jerome represents the development which was almost inevitable as soon as baptism and Confirmation were considered as separable within the Church, and the separation was no longer that between heretical baptism and orthodox Confirmation. In the latter case, it was natural to assert that the gift of the Holy Spirit depended on Confirmation; in the former it was equally natural to claim that there was a clear bestowal of the Holy Spirit in baptism apart from Confirmation. The ultimately predominant view in the West was expressed in a Gallician homily (author unknown) on Pentecost, from which the following sentences are taken: 'Ergo Sp. Sanctus, qui super aquas baptismi salutifero descendit illapsu, in fonte tribuit plenitudinem ad innocentiam, in confirmatione augmentum præstat ad gratiam. Quia in hoc mundo tota ætate victuris inter invisibiles hostes et pericula gradiendum est, in baptismo regeneramur ad vitam, post baptismum confirmamur ad pugnam, in b. abluimur, post b. roboramur. Ac sic continuo transituris sufficiunt regenerationis beneficia, victuris autem necessaria sunt confirmationis auxilia.' In this way Baptism and Confirmation tend to become two independent sacraments, each really bestowing the Spirit, and each endowed with a special grace.

In Augustine's discussion of heretical baptism, the conception of special graces attaching to baptism and the laying on of hands had been clearly emphasized. Baptism of itself imparted a certain stamp to the soul, and the *manus impositio* resulted in the bestowal of that highest gift of the Spirit, the bond of love which could be received only in communion with the Catholic Church (see passages collected in Höfling, i. 506 f.). This highest gift of love was necessary to the heretic if what he had received in baptism was not to work him eternal ruin; it was equally necessary to the orthodox believer, *ad confirmationem unitatis in ecclesia*—to borrow the phrase of a later writer, Haymo.

It should further be noted that all the effects of baptism were the work of the Holy Spirit. Even where there is a tendency to regard baptism as a preparatory cleansing, this cleansing is in itself the gift of the Holy Spirit, an evidence of the operation of the Holy Spirit in the soul of the baptized. The emphasis on this is universal. Take, *e.g.*, Origen's insistence on the importance of the invocation: 'The bath of regeneration . . . is no longer mere water: for it is sanctified by a mystic invocation' . . . οὐκέτι μὲν ψιλὸν ὕδωρ· ἁγιάζεται γὰρ μυστικῇ τινι ἐπικλήσει (*ad* Jn 3[5] fr. 36). If in Aug. the invocation is not felt to be indispensable, the reason is that all water has been consecrated, both by the baptism of Jesus and by the fact of the Holy Spirit brooding over it at creation. Water is the natural instrument of the Spirit, and it is cleansing only because the Spirit works through it. Thus in the *Ench.* Aug. points out that, though Christians are said to be born of water, they are not sons of water, but sons of the Spirit and of their mother the Church (cf. Basil, *de Sp. Sanc.* 15). All that takes place in baptism is spiritual; and even those who connect the Holy Spirit most closely with Confirmation recognize a gift of the Spirit in baptism, if they accept baptism as valid at all. Indeed it is mainly in limiting the benefits of heretical baptism that the earlier view found in Tert. is pressed. When men's thoughts were not troubled with the question presented by the separation of the two ordinances, they unhesitatingly attributed the gift of the Spirit in the fullest sense to baptism. Thus Basil (*op. cit.* 15) distinctly connects the pouring in of the Spirit and the beginning of the new life with immersion. 'The water receiving the body as in a tomb figures death, while the Spirit pours in the quickening power, renewing our souls from the deadness of sin unto their original life. . . . In three immersions, then, and with three invocations, the great mystery of baptism is performed.' Though Basil even here does not use the term 'the indwelling of the Spirit,' yet surely it is implied; and this is the unembarrassed expression of the natural Christian view of baptism. For further discussion see Mason, *Relation of Confirmation to Baptism*, and Höfling, § 94.

III. *THE BEARING OF BAPTISM ON THE CHURCH LIFE OF THIS PERIOD.* — One or two general observations must be added here.

(*a*) The whole development in the earlier centuries here under review reflects *the influence of the pagan background on the Church's life.* It is true that the institution of baptism cannot be traced to a Gentile source. But the insistence on the objective efficacy of the sacrament is largely the result of pagan presuppositions. The idea of regeneration may not be derived from the heathen world; men's preoccupation with it comes from this source (cf. Heitmüller on John, in *Die Schriften des NT*, ii. 743). It may be that no parts of the Christian ceremonial are borrowed from the Mysteries: but the tendency to add to the solemnity of initiation, which is implied in the ceremonial development, is one of the characteristics of the Mysteries. The close connexion of baptism with exorcism and with the renunciation of the devil is derived not from the NT, but from the demon environment in which the Church was actually living. If the bestowal of grace through visible objects be a primitive Christian conception, the emphasis on the material means was largely evoked by pagan feeling. The purpose of the sacramental side of the Church's life may have been designed to give that assurance of real contact with God somewhere which so many despairing pagans failed to find anywhere. It may be doubted whether the certainty about God for which men longed intensely could have been mediated on any large scale to the world at that time except through the conception of sacramental means of grace.

In this connexion the reader must be referred to the popular views mentioned on p. 394. Some of these betray a non-Christian emphasis. It is probable that the Punic Christians who spoke of baptism as *salus* implied much that Aug. would have hesitated to endorse. A perhaps more than Christian confidence seems to be displayed on sarcophagi of the 4th and 5th centuries, since the present writer understands that the description of the deceased as 'baptized' was as reassuring as phrases like *inter sanctos*.

(*b*) The rite of baptism *focused attention on some central Christian truths.* Thus, those who received it were led to reflect on the doctrine of the Trinity. In the teaching of Aug. the idea of regeneration in itself suggested and enforced the fundamental concept of grace. Baptism meant that salvation is God's work, and apart from Him it does not even begin (cf. *Tracts for the Times*, 67, pp. 91–97).

(*c*) As interpreted by the great teachers, *e.g.* Basil and Cyril of Jerusalem, *baptism became a powerful moral lever.* The ethical and the sacra-

* This consideration rather weakens the force of the argument based on Cyp. *Ep.* 76. There Cyp. argues that *clinici*, although merely sprinkled (*perfusi*) and not immersed (*loti*), are as truly baptized as any, and that in them the Holy Spirit dwells. But, as he seems to be speaking of recovered *clinici*, it cannot be assumed with Darwell Stone (*op. cit.* p. 80) that they had not been confirmed.

mental were neither separated nor opposed in the minds of the Fathers of the 4th and 5th centuries. *ἆρα πᾶς ὁ βαπτισθεὶς τὸ τοῦ εὐαγγελίου βάπτισμα ὀφειλέτης ἐστὶ κατὰ τὸ εὐαγγέλιον ζῆν*—is the conclusion of the discussion of the first question in Bk. ii. of Basil's work on Baptism. It is the motto of all his treatment of the subject. To him baptism is primarily a death, which commits us to a new life (see his *de Bapt.* i., and *de Sp. Sanc.* 15, § 35, and cf. Cyril, *Catech. Lect.*, Introd. § 4, and Lect. ii.). Clearly his view of baptism and its moral effects is derived from the conversions which must have been constantly associated with the rite. And his exposition of the life demanded from the baptized shows that it was possible only to a morally renewed character. The association of this moral change with baptism, and the emphasis on the moral obligations therein assumed, must have made it a powerful factor in raising the moral life. Moreover, the preparation for baptism and the actual ceremony marked most impressively the convert's complete break with paganism. The Christians thought of themselves as a distinct race (cf. Aristides); it is difficult to over-estimate the moral stimulus of the solemn initiation which made a man a member of that race. But the influence of baptism in this direction was certainly diminished as the catechumenate decayed. The moral power of infant baptism could never be as great.

(*d*) It must, however, be remembered that the decay of the catechumenate and the practice of infant baptism enabled the Church to Christianize the barbarian nations more rapidly than if the older system had been retained. 'At a later time, baptism brought a man under the jurisdiction of the Church. The Inquisition had no authority over a non-baptized person. To baptize a man was therefore to bring him under jurisdiction. Thus, in the case of the Saxons in Charles the Great's day, and the Danes in Alfred's, baptism was a token of submission' (note by Foakes-Jackson). With this readier admission to the Church went, no doubt, *the decay of the Puritan conception of the Church*. 'But it is clear that if the Church was to gain any hold upon the society of the old world which was to pass away, or upon the new races that were to take their place, it must receive them into its fold as they were' (A. V. G. Allen, *Christian Institutions*, p. 408). This was certainly true of the new races.

2. The Middle Ages and the Council of Trent.—Though Scholasticism devoted much attention to the sacraments, the mediæval Church added little to the doctrine of Baptism. The position arrived at in the earlier period was simply defended and defined against heresy and malpractice. Developments were few. The re-statement of the orthodox view in the Lateran Council of 1216 may be taken as the starting-point for a few observations. The definition there adopted was 'Sacramentum vero baptismi, quod ad invocationem individuæ trinitatis, videlicet, Patris et Filii et Spiritus Sancti, consecratur in aqua tam parvulis quam adultis, in forma ecclesiæ a quocumque rite collatum, proficit ad salutem' (Labbe, *Concilia*, xi. 143).

(*a*) The main point asserted here is that *baptism does produce a real effect which makes for salvation, even in infants.* Innocent III. held that, as original sin was contracted by infants *sine consensu*, so they could be freed from it, *per vim sacramenti*, before they were of an age to understand and consent. Similarly, he thought that baptism would be effective if administered to men asleep or mad, provided they had previously shown an intention of receiving the sacrament. Only a definite resistance at the time of baptism could render it inoperative (Denzinger, *Enchiridion*, 341 f.). Repentant Waldensians must approve the baptism of infants (*ib.* 370). Earlier Councils had anathematized heretics who asserted 'parvulis inutiliter baptismum conferre.' The Lateran Council of 1139 condemned those who rejected the *baptisma puerorum*. Denzinger identifies these heretics with the followers of Peter of Bruys and Arnold of Brescia. Similarly, the Council of Rheims in 1148 condemned the Henricians. The general sacramentalism of most Scholastics, early and late, emphasized the real effectiveness of baptism. To Hugo de S. Victor, Augustine's definition of a sacrament as *signum rei divinæ* seemed inadequate. He preferred to speak of a sacrament as 'corporale vel materiale elementum foris sensibiliter propositum, ex similitudine repræsentans, ex institutione significans, et ex sanctificatione continens aliquam invisibilem et spiritualem gratiam.' Similarly, the sacraments of the NT differ from those of the OT by being more effective. The latter promise, whereas the former give, salvation (see the well-known sentence in Peter Lombard *ap.* Hagenbach, *Dogmengesch.*[3] 452). Later, Thomas Aquinas holds that 'necesse est dicere sacramenta novæ legis per aliquem modum gratiam causare.' That the NT sacraments work *ex opere operato* was a not uncommon view (cf. Hagenbach, p. 453, n. 7). Consequently Thomas Aquinas regarded baptism as a *causa instrumentalis* of grace, though he held that it 'does not act by virtue of its own form, but only through the impulse it receives from the principal agent' (Harnack, vi. 206). For this reason the institution or appointment of the sacrament is all-important to Aquinas. He was the first to trace all the seven sacraments of the Schoolmen back to Christ, whose Passion made them of worth. More especially in Baptism, as in Confirmation and Ordination, a certain stamp (*character*) is irrevocably assumed by the recipient (see the definition by Eugenius IV.: 'Inter hæc sacramenta, tria sunt, Baptisma, Confirmatio, et Ordo, quæ characterem *i.e.* spirituale quoddam signum a ceteris distinctivum imprimunt in anima indelebile, unde in eadem persona non reiterantur'). From this standpoint the Lateran Council of 1216 had rebuked the Greeks for re-baptizing those whom the Latins had already baptized (Denz. 361). Some of the Schoolmen seem to have doubted whether baptism conveyed to infants anything more than the remission of the guilt of original sin. But in 1312, Clement V. lent the weight of his authority to the alternative doctrine that not only was guilt remitted, but 'virtutes ac informans gratia infunduntur quoad habitum, etsi non pro illo tempore quoad usum' (Denzinger, 411).

(*b*) *The general necessity of water-baptism to salvation was steadily maintained*, Jn 3[5] being the chief authority for the position (see Bull of Eug. IV.; cf. Denz. 591). Thomas Aquinas, however, regarded Flagellants as, equally with the martyrs, baptized in blood; and such baptism made the use of water non-essential. Also, the clear intention to be baptized might stand for the deed. Thus Innocent III. declares that an unbaptized priest (!), who died *sine unda baptismatis* but strong in faith, must be held to have reached the joy of the land celestial (see Denz. 343). But baptism *aut in voto aut in re* is necessary. This position was maintained against the Cathari, who rejected water-baptism as an empty ceremony. It would also be maintained against those who, following Joachim de Flore, regarded sacraments as a temporary expedient, doomed to disappear in the Kingdom of the Spirit. That the sacraments might ultimately be left behind was not denied; but that such a stage had been reached or was imminent, or that such a stage would ever come to the Church Militant on earth, was not to be admitted.

(*c*) *The minister of baptism was usually the priest*, and in the mission churches of Germany

the ceremony was by preference administered in the mother-church of a given group (Hauck, *Kirchengesch. Deutschlands*, iv. 23). But the Lateran Council of 1216 is careful to state that baptism is valid, by whomsoever duly administered. In cases of necessity, no restriction is observed, provided the minister keeps to the Church's form and intends to do what the Church does. Eugenius IV. states the matter thus: 'Minister huius sacramenti est sacerdos, cui ex officio competit baptizare. In causa autem necessitatis non solum sacerdos vel diaconus, sed etiam laicus vel mulier, immo etiam paganus et hæreticus baptizare potest dummodo formam servet Ecclesiæ et facere intendat quod facit Ecclesia' (Denz. 591). Innocent III. does not even emphasize the occasion of necessity, and in the earlier Middle Ages lay baptism may have been not infrequent. The Church was also careful to assert that the character of the minister did not impugn the validity of the sacrament. This view was urged against the Waldensians, on whom Innocent III. imposed the following recantation: 'Sacramenta quoque . . . licet a peccatore sacerdote ministrentur, dum Ecclesia eum recipit, in nullo reprobamus' (Denz. 370). This position needed also to be upheld in the face of popular superstition. Thus, somnambulists were popularly supposed to have been baptized by drunken priests, and in 1375 there was an uproar in a Dutch town because an epidemic of St. Vitus's dance was attributed to the incontinence of the priests who had administered baptism (see Lecky, *Hist. of Rationalism*, i. 399, note). The prevalence of such ideas would make it necessary to assert that the sacrament depended on the intention and not on the character of the minister. That, however, a minister was necessary was as steadily maintained. Innocent III. condemns the self-baptism of a dying Jew (Denz. 344).

(*d*) *The essentials of baptism remained unchanged.* The rite was duly administered if the name of the Trinity was invoked, and if water was used. Some phrase must be used to state the fact that the candidate is being baptized. It is not enough to say 'In nomine Patris et Filii et Spiritus Sancti,' and immerse. The omission of 'Ego baptizo te' is condemned by Alexander III., and the condemnation was repeated in 1690 (Denz. 331, 1184). But both the Latin formula 'Ego baptizo te in nomine . . .' and the Greek 'Baptizatus est talis in nomine . . .' are recognized as valid by the Bull of Eugenius IV. (Denz. 591).

As to the second element, the use of true natural water, hot or cold, was alone recognized in baptism (see Eug. Bull). Innocent III. declared a baptism of an infant *in extremis* with human saliva to be invalid (Denz. 345). A special sanctity attached to water. The earlier discussions as to the possibility of baptizing in wine or milk or sand were not seriously revived.

Perhaps the only important change in the form of baptism was the general substitution in the West of sprinkling for immersion. The West seems always to have been readier to alter tradition in this matter than the East. Thus, while the East retained trine immersion, Gregory the Great had permitted, in Spain, the adoption of one immersion (*Ep.* i. 43, ratified in Council of Toledo, 633). Affusion had from the earliest times been permitted, at least in cases of necessity. In the Middle Ages, from the 13th cent. onwards, *baptisma per aspersionem* became more and more common. The decree of Innocent III., cited in the previous paragraph, implies it. Thomas Aquinas compared sprinkling with immersion, and, while preferring the latter as better representing the death to sin, regarded the former as valid. Clement V. formally recognized the practice (1305), and in the 15th century Lyndwood (iii. 25) declared that 'it is sufficient that a small drop of water thrown by the baptizer touch him who is to be baptized. It is sufficient that water which has been sprinkled touch some part of the body' (cited *ap.* Stone, p. 272). It appears that England did not so readily abandon the older practice of immersion as the Continental churches. According to Floyer (*History of Cold Bathing*, p. 63, ed. 1706), Erasmus noted it as a singularity in England that infants were still immersed, and sprinkling did not become general till after the Reformation (see Wall, pt. ii. ch. 9, for full discussion).

(*e*) In Germany, at least, *an attempt was made to magnify the office of godfather.* It was expected that godfathers would instruct their godchildren in the Creed and the Lord's Prayer (Hauck, *op. cit.* iv. 38). This was a poor substitute for systematic instruction by the priest, but it was an attempt to attach a real responsibility to the office of godfather. The Council of Trent subsequently emphasized the importance of sponsors by forbidding marriage between persons who stood in the relationship of godfather and godchild. They were regarded as within the prohibited degrees (Sessio 24, ch. 2).

The moral power and general importance of baptism were diminished by the enhanced value set on the sacrament of Penance. In the decrees of the Lateran Council of 1216, the decree relative to baptism is immediately followed by a reference to penance: 'Et si post susceptionem baptismi quisquam prolapsus fuerit in peccatum, per veram pœnitentiam *semper* potest reparari.' The early Church had refused to follow the Novatians and condemn penitents to despair; but, whereas the early Church held out hope to the penitent, the mediæval Church offered them the assurance of recovery in the sacrament of Penance. This tended to minimize the horror of post-baptismal sin, or, perhaps it would be truer to say, it recognized the absence of any such distress in the mediæval believer.

The Council of Trent systematized the mediæval doctrine and practice. In the 5th session, original sin and the relation of baptism to original sin were discussed. Adam's transgression meant that he lost his original righteousness, incurred God's wrath, became liable to death, was under the power of Satan, and suffered a change for the worse in body and spirit. These effects are transmitted to all his posterity. This sin of Adam is passed on to every one, and can be removed only by the merit of Christ. His merit avails for young and old in the sacrament of baptism. Infants are to be baptized, not that sins of their own committing may be forgiven, but 'ut in eis regeneratione mundetur quod generatione contraxerunt.' The necessity of regeneration rests on Jn 3^5. The guilt of original sin is removed in baptism, and the regenerate are no longer sinful in the eyes of God, though there remains in them a root of concupiscence which is left for them to struggle against. This concupiscence must not be called 'sin,' if by the term it is implied that there is anything in the regenerate which can properly be called sin. It is sin only in so far as it comes from sin and leads to it. During the 7th session, the Council put forth 16 anathemas on the subject of baptism. They assert the following points: the baptism of John is not the same as that of Christ; natural water is necessary to baptism; the Church of Rome has the true doctrine on this subject; heretical baptism, administered in the name of the Trinity and with the true intention of the Church, is valid; baptism is not a matter of choice, but is necessary to salvation; the baptized can lose grace, through sin, even if they retain faith; the baptized are bound not simply to believe, but also to keep the whole

law of Christ: the baptized must conform to the teaching of the Church; vows made after baptism cannot be regarded as cancelled by the baptismal confession; post-baptismal sin cannot be done away with merely by the memory of baptism; a repentant apostate does not need to be re-baptized; no one should assert that a candidate for baptism must be of the same age as our Lord at His baptism; infants must not be denied baptism because they cannot exercise conscious faith; the ratification of baptism by the baptized when of age is not optional.

The Council regarded baptism as the *causa instrumentalis* of justification, adopting the phrase of Thomas Aquinas (Sess. vi. ch. 7), and further distinguished between Baptism and Penance. In the former the priest does not act as judge. He must admit all to baptism. Baptism means a new creation, and is the free gift of grace. It cannot be repeated. Penance, on the other hand, is controlled by the priest as a judge, can be repeated, and is rightly described as a laborious baptism.

A brief analysis of the Roman ritual for administering baptism to infants may complete this section. The priest meets the company at the door of the church. After the question, What do you want of the Church? and the answer, the priest drives out the unclean spirit by exsufflation. He then makes the sign of the cross with his finger over the forehead and over the heart of the child. After two prayers, salt—the salt of wisdom—is given to the child. A further prayer is followed by exorcism. The priest now brings the child into the church and approaches the font, repeating the Creed and the Lord's Prayer as he goes. A second exorcism is pronounced, and the priest wets his finger, and with it touches the ears and nostrils of the child, saying 'Be opened.' The sponsors on behalf of the child renounce the devil with all his pomps and works, and the priest proceeds to anoint the child with holy oil, on the breast and between the shoulders, in the form of a cross. The sponsors repeat the Creed. Baptism follows by triple affusion or by immersion. Where there is a doubt whether the child has not already been baptized, the priest prefaces the formula with the words 'si non es baptizatus.' The child is now anointed with the holy chrism on the top of the head. A white cloth is placed on his head and a lighted candle is given to him or his godfather to hold. The ceremony concludes with a benediction.

The developments of the Reformation will most readily be classified by their relation to this standard of doctrine and practice.

3. The Reformation Period and after.—The mediæval development, summed up in the Tridentine decrees, had emphasized the paramount importance of the sacraments for religion. The sacraments are pre-eminently the means of grace, and by them the Divine influence is accommodated to the varying necessities of differing periods of the Christian life. With Baptism is bound up the grace of regeneration, the forgiveness of original sin, and of all actual sins committed before its reception. Without it we cannot enter on the Christian life. Other sacraments—Confirmation, Penance, and the Eucharist—are ordained of God to provide the grace demanded by the later needs of the believer. The essential efficacy of baptism was strongly asserted. It imprints even on passive recipients a Divine impress or character.* An elaborate ritual, if explained and understood, enforced the central idea of the new birth by symbolic reiteration; if unexplained and misunderstood, it still enhanced the sense of mystery surrounding the sacrament, though it tended to produce popular superstition.* For good or ill, it increased the importance of the ceremony. This standard of doctrine and practice underwent considerable modification in the Protestant Churches.

It would involve needless repetition to discuss in detail the position of each Church. Instead, we shall show how the views of the sacrament were affected by some of the leading ideas of the Reformation, giving illustrations from the formularies and practices of particular Churches. The changed conception of grace which carried with it a revised conception of the means of grace; the new idea of faith, and the fresh emphasis thrown upon it; the appeal from tradition to the Bible; the humanism and rationalism of the Renaissance—all these influences in their several ways profoundly affected the doctrine and practice of baptism. These leading forces may be discussed in order, though any attempt to keep them rigidly apart must be artificial.

A. The Conceptions of Grace and Faith.—The Reformers' conceptions of grace and faith are inseparably connected. It is a commonplace that the fundamental fact in the Reformation, at least as dominated by Luther, was the renewal of the Pauline experience of justification by faith. Forgiveness of sins and fellowship with God became realities to a penitent trust in the Divine Love. The assurance to which faith clung was mediated through the word or promise of God, however preached. The entry of the grace of God into the believing heart might be effected in many ways—by prayer, by the ministry of a preacher, by the reading of the Bible. Faith comes by hearing. Wherever the influence of Luther or of Calvin went, this kind of faith—a conscious penitent trust in the Gospel—was aroused, and it tended to revolutionize men's views of the sacraments.

(1) *The sacraments came to be regarded as one means of grace among others.* To Luther the sacraments are nothing but 'a peculiar form of the saving word of God (of the self-realizing promise of God)' (Harnack, vii. p. 216). The influence of the sacraments was thus assimilated to the influence of preaching. Calvin, in the first edition of the *Institutes*, discusses prayer and faith before he comes to the sacraments at all. *The sacraments have ceased to be central.* Other means of grace—prayer, the devotional study of the Scriptures, the development of preaching—have been placed alongside of and even above them. This tendency has worked itself out in Protestantism over against Roman Catholicism, in Calvinism as contrasted with Lutheranism, and in the Puritanism of Dissent in distinction from Anglicanism. To illustrate from the last only, the Puritans wanted lectures, Archbishop Laud wanted an altar; and, as Dr. Forsyth says, the sermon holds the central place in the church life of Nonconformity which the Mass holds in Roman Catholicism. In general, it followed that for the Reformers the sacraments were not absolutely indispensable; they did not communicate a grace which could not otherwise be mediated. 'Believers before and without the use of sacraments communicate with Christ' is one of the heads of agreement between Zürich and Geneva in 1554. It is not true, of course, that all Reformers or Reformed Churches would have accepted the following position of Calvin, but it represents an undeniable characteristic of Protestantism:

* See Tyndale, *Doctrinal Treatises*, p. 276f

* Attention was in the main concentrated on the gift of God in the sacrament. The grace accorded in baptism was held by the Thomists to be necessarily and reasonably associated with water, while the Scotists would regard the spiritual effect as an arbitrarily predetermined synchronism with the use of the element. In either case, emphasis is thrown on the sacrament as a certain and indispensable means of grace.

necessary, and could not be a result of argument, but was a state of heart.'

But if baptism be the public confession of such a faith, and if it be the assurance of God's forgiveness in answer to such faith, then it is a natural corollary that baptism should be administered only to such as have passed through this experience.

'If the fundamental evangelical and Lutheran principle is valid, that grace and faith are inseparably inter-related . . . then infant baptism is in itself no Sacrament, but an ecclesiastical observance: if it is in the strict sense a Sacrament, then that principle is no longer valid' (Harnack, vii. 251).

Not many Protestants were prepared to draw the logical conclusion and abandon the practice of infant baptism. A threefold division of the Reformed Churches followed. (*a*) There were those who confined baptism to adults, or rather to conscious believers, *e.g.* the Mennonites in Holland and Germany (see separate article), the Baptists in England and America, and the Plymouth Brethren. (*b*) Some Churches retained infant baptism, and fell back on earlier ideas of baptismal regeneration. The Lutheran and Anglican Churches represent this tendency. (*c*) Yet other Churches retained the custom, but altered its significance.

(*a*) The position of the first requires little further explanation. The earliest Baptist Confession, printed at Amsterdam in 1611, is quite explicit.

Art. 13 declares that 'every Church is to receive all their members by baptism upon the confession of their faith and sins, wrought by the preaching of the gospel, according to the primitive institution and practice. And therefore Churches constituted after any other manner, or of any other persons, are not according to Christ's testament.' Art. 14: 'Baptism, or washing with water, is the outward manifestation of dying unto sin and walking in newness of life: and therefore in nowise appertaineth to infants.' Other Confessions add little to this.

The following points deserve attention: (*a*) The Baptist position involved the Puritan conception of the Church. The Church is the communion of saints. As one of the Confessions says (Hanserd Knollys Soc. i. 40), the servants of God are 'to lead their lives in a walled sheepfold, and in a watered garden.' The early Baptist Churches were apt to be strongly disciplinary. (*β*) Though in other Confessions (*op. cit.* pp. 42, 226) the benefits signified by baptism are unfolded, yet the emphasis falls on the idea of baptism as a public profession of personal faith. This is still characteristic (cf. art. ANABAPTISM, i. 410[b]). (*γ*) The essence of the Baptist doctrine was, and is, the contention that no one can or should be made a Christian without the conscious co-operation of his own will. They asserted the liberty of the individual conscience. Their opposition to 'the Bloudy Tenent of Persecution' was based on first principles, and was not simply due to their being in a minority. Similarly, it seems a natural development of their position that communion should be open. At first, most Baptists were strict Baptists, *i.e.* only baptized believers could join the Church and take part in the communion (see Art. 13 of Confession just cited). The American Churches still lean to this side. But from early days some Baptists held that the question must be left to the individual for decision, *i.e.* those who were personally convinced of the truth of believers' baptism must act up to the conviction. Those who did not share this conviction, but still professed belief in Jesus Christ, were welcomed to Church-fellowship. See app. to Confession drawn up in 1688 (*Conf. of Faith*, Hanserd Knollys Soc. p. 244): 'The known principle and state of the consciences of divers of us . . . is such that we cannot hold church communion with any other than baptized believers, and Churches constituted of such: yet some others of us have a greater liberty and freedom in our spirits that way.' The majority of Baptist Churches in England to-day are open in this sense, and the throwing open of Church membership in the face of trust-deeds led to one or two interesting lawsuits in the 19th cent. (see G. Gould, *Open Communion and the Baptists of Norwich*, 1860). The practice of open communion seems to be the natural issue of the stress laid on the individual will. (For the whole point cf. Harnack, vii. 125, on 'The Anabaptists.') (*δ*) The dangers of the Baptist position clearly lie on the side of spiritual pride and the over-development of religious self-consciousness. An exceptional, because boyish but still instructive, instance may be studied in Gosse, *Father and Son*, pp. 211–217.

(*b*) The dilemma as to infant baptism, occasioned by the new emphasis on faith, was met by Luther in another manner. 'Luther retained infant baptism rather as the sacrament of regeneration' (Harnack, vii. 251). He fell back on the Roman doctrine. He strove to retain the connexion between faith and baptism by continuing the *interrogatio de Fide* and the presence of sponsors in the rite, and by supposing that there is a kind of faith bestowed on infants. Similarly, Calvin maintained that 'infants may have infused into them a kind of faith and knowledge, though not ours.' Or, again, the faith of the parents might be taken as standing for the faith of the children. Thus Beveridge claims that the children of Christian parents are disciples. This was, in fact, the abandonment of the Protestant view of faith (see Harnack, *loc. cit.*). As already pointed out, some Calvinists were prepared to give baptism as a sign of a regeneration that should follow (see p. 401). Luther, on the other hand, distinguished between regeneration and justification. Regeneration was an inward effect, wrought in baptism. Justification, the inner experience of repentance and forgiveness, was a distinct and later stage in religious development. The Church of England retained infant baptism on somewhat similar terms. Regeneration is carefully distinguished from conversion, and the former may precede the latter.

'Conversion is the act whereby, in response to and by the power of divine grace, the soul turns to God in the desire to accept and do His will. Regeneration is the gift which God bestows on the soul by producing in its nature such a change as imparts to it the forgiveness of original sin, and makes it to be accepted by God instead of under His wrath' (Darwell Stone, *op. cit.* p. 35).

The Church of England likewise retained sponsors and the *interrogatio de Fide*, which is essentially an attempt to make faith still the introduction to baptism. Again, the Reformers' first conceptions of faith and of regeneration are abandoned, and an approximation is made to the Roman doctrine.

(*c*) The retention of infant baptism did not, however, always mean the restoration of the older interpretation of the practice. The Puritans in England objected to the institution of godfathers and godmothers, and in their Admonition of 1571 complained that 'they prophane holye baptisme, in toying folishly, for that they ask questions of an infante which cannot answere' (*Puritan Manifestoes*, p. 26). In the form of baptism adopted in Geneva there are no sponsors, and no profession of faith is made on behalf of the child. The parents or other responsible persons recite the Creed, as the faith which they hold and in which they intend to bring up the child. Thus in the order for the administration of baptism in the Presbyterian Church of England, based on the Westminster Confession, the minister says to the parents: 'Seeing it is your duty to nourish and bring up this child for God, it is fitting that you renew the confession of your faith before God and this congregation.' There is no attempt to preserve the connexion between faith and baptism by a vicarious declaration of faith and of willingness to be bap-

for original sin and for sins committed before baptism. According to Luther, baptism is, for penitent faith, the assurance that God is a forgiving God. According to the former, baptism brings a definite grace, a limited forgiveness, to meet particular sins. According to the latter, baptism witnesses to the constant attitude of God towards a contrite heart. It follows from this, that in the Roman view post-baptismal sin requires a fresh bestowal of grace, a further sacrament; in Luther's view, it suffices to remember the assurance of forgiveness once received in baptism. So the Council of Trent aimed the 9th anathema of Session vii. at this latter doctrine, while Luther held that the Council did not understand the Gospel.

Calvin's teaching does not differ in essentials from that of Luther on this point. Baptism is first and foremost an assurance of forgiveness and of imputed righteousness. 'In baptism we perceive that we are covered and protected by the blood of Christ, lest the wrath of God, which is truly an intolerable flame, should lie upon us' (*Inst.* IV. xv. 9). Or, as Becon says, 'By it we are removed from the fierce judging-place to the court of mercy' (2 Bec. 635, Parker Society). Calvin, too, says that 'at whatsoever time we are baptized, we are washed and purified once for our whole life. Wherefore as often as we fall we must recall the remembrance of our baptism, and thus fortify our minds' (cf. 4 Bul. 356 and 3 Whitg. 17 and 141 in Parker Society). The grace given in baptism is not confined to forgiveness. According to Calvin, baptism is conducive to faith, not only by being an assurance of forgiveness, but also by giving us the grace of the Holy Spirit, to form us again to newness of life. Christ by baptism has made us partakers of His death, ingrafting us into it. This is mortification (the death of the old man) and regeneration (the birth of the new). Moreover, baptism so unites us to Christ Himself as to make us partakers of all His blessings (*Inst.* IV. xv. 6). Somewhat similar definitions of baptismal grace may be found in Article 27 of the Church of England and in the Westminster Confession.

It should be noted that, though Calvin speaks of regeneration in baptism, his master-thought is still the forgiveness of sins and the imputing of Christ's righteousness to us. For he holds that baptism means the removal of the guilt of original sin and not the destruction of original sin itself. Ro 7 is the experience of the baptized Christian. Here he would fall under the anathema pronounced in the Tridentine decree about original sin (Sessio v. § 5). For a vigorous statement of Calvin's view, compare the Westminster Confession, 'Of the Fall.'

But more important than the definition of baptismal grace is the thought that baptism is not so much the means whereby God conveys these blessings to the soul, as the sign and seal whereby He confirms and ratifies His promises to the believer. The obsignatory view of the sacrament is the essentially Calvinist view. Baptism is a kind of sealed instrument assuring us of forgiveness. It is an authoritative declaration on God's part of His willingness to fulfil the new covenant with the baptized. The phrase 'sign and seal' is the characteristic one. Depraved human nature can dispense with no props for faith. In the sacrament, God condescends to give an outward attestation of inward blessings.

The following illustrations may be adduced:—(1) Art. 27, Church of England: 'Baptism is . . . also *a sign of regeneration* or new birth, whereby, as by an instrument, they that receive Baptism rightly are grafted into the Church: *the promises of the forgiveness of sin* and of our adoption to be the sons of God by the Holy Ghost *are visibly signed and sealed: Faith is confirmed*, and Grace increased by virtue of prayer unto God.' It has already been observed that this article goes beyond the Calvinist standpoint in regarding the sacrament as something more than a sign or seal (see above, under (2)). But the blessing of the forgiveness of sin is surely understood in the broader Protestant and not in the narrower Roman sense, and the language about the signing and sealing of the promises is quite in accord with Geneva.* (2) The Westminster Confession (ch. xxviii.): 'Baptism is a sacrament of the New Testament, ordained by Jesus Christ . . . to be unto (the party baptized) *a sign and seal of the Covenant of Grace*, of his ingrafting into Christ, of regeneration, of remission of sins, and of his giving up unto God through Jesus Christ to walk in newness of life.' The Confession goes on to say that in baptism 'the grace promised is not only offered, but really exhibited and conferred by the Holy Ghost, to such (whether of age or infants) as that grace belongeth unto, according to the counsel of God's own will.' But this means little more than that baptism was a reliable sign of assurance—for the elect! The last words throw the whole into doubt. The position is simply Calvinist. A Particular Baptist (*i.e.* Calvinistic Baptist) Confession of 1688 holds almost exactly the same language (see *Confessions*, Hanserd Knollys Soc. p. 226).

It was in pursuance of this obsignatory view of the sacraments that those of the OT were placed by Calvinists alongside of those of the NT. The OT sacraments and the baptism of John were similarly signs witnessing to the Divine promises. They were as effective signs as the sacraments of the NT. Calvin maintained, against the Schoolmen, that the baptism of John was the same as Christian baptism, 'only he baptized in the name of him who was to come, the Apostles in the name of him who was already manifested.' Similarly, the Westminster Confession (ch. xxvii.) asserts that 'the Sacraments of the Old Testament in regard of the spiritual things thereby signified and exhibited were, for substance, the same with those of the New' (cf. 4 Bul. 354, Parker Soc.).

(4) As Baptism is primarily a confirmation of faith, *it presupposes conscious faith.* The effectiveness of the sacraments depends on faith. The sacraments, including baptism, are appeals to faith; they cannot act where faith is not. Of sacraments in general, Luther laid down the proposition that they are efficacious, *non dum fiunt sed dum creduntur* (Harnack, vii. 216). Leo X. condemned Luther for considering it heretical to suppose that the sacraments could confer justifying grace on all who did not make active objection (Denz. 625). In other words, Luther held that passive reception was not enough, positive faith was essential. Of Baptism in particular, the Larger Catechism asserts that 'in the absence of faith, baptism continues to be a bare and ineffectual sign' (Harnack, vii. 251). Luther also claimed that baptism represents and requires a continual penitence. 'Baptism means that the old Adam must be drowned in us day by day through daily sorrow and repentance, . . . and that there must daily come forth and arise a new man' (Harnack, vii. 217 n.). Calvin is equally clear: 'From this sacrament, as from all others, we gain nothing, unless in so far as we receive in faith' (*Inst.* IV. xv. 15). The assurance of Divine forgiveness can come only to a living faith. Moreover, baptism is also a confession of such faith. It is not only God's seal to the New Covenant; it is man's. It is 'a sign of profession' (Art. 27, Church of England). Baptism had always been a confession of faith. Almost every *Ordo Baptismi* contains a recital of the Creed. But to the Protestant, faith meant more than the recital of the Creed. It presupposed penitence, and was an undertaking to walk in newness of life. A passage in Gosse, *Father and Son* (p. 200 f.) represents an idea of faith which obtained a wide currency in Protestantism:

'As a rule, no one could possess the Spirit of Christ without a conscious and full abandonment of the soul; and this, however carefully led up to and prepared for with tears and renunciations, was not, could not be, made except at a set moment of time. *Faith in an esoteric and almost symbolic sense was*

* Parallels among the Elizabethans are frequent. Thus Bradford: 'It requires that we should be regenerate, and confirms and seals our regeneration.' Or Becon: 'Of itself it brings not grace, but testifies that he who is baptized has received grace' (2 Brad. 289; 2 Bec. 220). And later, Burnet's view that 'our Saviour has made baptism one of the precepts though not one of the means necessary to salvation' develops a somewhat similar, though not exactly parallel, teaching (Burnet on Art. 27).

necessary, and could not be a result of argument, but was a state of heart.'

But if baptism be the public confession of such a faith, and if it be the assurance of God's forgiveness in answer to such faith, then it is a natural corollary that baptism should be administered only to such as have passed through this experience.

'If the fundamental evangelical and Lutheran principle is valid, that grace and faith are inseparably inter-related . . . then infant baptism is in itself no Sacrament, but an ecclesiastical observance: if it is in the strict sense a Sacrament, then that principle is no longer valid' (Harnack, vii. 251).

Not many Protestants were prepared to draw the logical conclusion and abandon the practice of infant baptism. A threefold division of the Reformed Churches followed. (*a*) There were those who confined baptism to adults, or rather to conscious believers, *e.g.* the Mennonites in Holland and Germany (see separate article), the Baptists in England and America, and the Plymouth Brethren. (*b*) Some Churches retained infant baptism, and fell back on earlier ideas of baptismal regeneration. The Lutheran and Anglican Churches represent this tendency. (*c*) Yet other Churches retained the custom, but altered its significance.

(*a*) The position of the first requires little further explanation. The earliest Baptist Confession, printed at Amsterdam in 1611, is quite explicit.

Art. 13 declares that 'every Church is to receive all their members by baptism upon the confession of their faith and sins, wrought by the preaching of the gospel, according to the primitive institution and practice. And therefore Churches constituted after any other manner, or of any other persons, are not according to Christ's testament.' Art. 14: 'Baptism, or washing with water, is the outward manifestation of dying unto sin and walking in newness of life: and therefore in nowise appertaineth to infants.' Other Confessions add little to this.

The following points deserve attention: (*a*) The Baptist position involved the Puritan conception of the Church. The Church is the communion of saints. As one of the Confessions says (Hanserd Knollys Soc. i. 40), the servants of God are 'to lead their lives in a walled sheepfold, and in a watered garden.' The early Baptist Churches were apt to be strongly disciplinary. (*β*) Though in other Confessions (*op. cit.* pp. 42, 226) the benefits signified by baptism are unfolded, yet the emphasis falls on the idea of baptism as a public profession of personal faith. This is still characteristic (cf. art. ANABAPTISM, i. 410[b]). (*γ*) The essence of the Baptist doctrine was, and is, the contention that no one can or should be made a Christian without the conscious co-operation of his own will. They asserted the liberty of the individual conscience. Their opposition to 'the Bloudy Tenent of Persecution' was based on first principles, and was not simply due to their being in a minority. Similarly, it seems a natural development of their position that communion should be open. At first, most Baptists were strict Baptists, *i.e.* only baptized believers could join the Church and take part in the communion (see Art. 13 of Confession just cited). The American Churches still lean to this side. But from early days some Baptists held that the question must be left to the individual for decision, *i.e.* those who were personally convinced of the truth of believers' baptism must act up to the conviction. Those who did not share this conviction, but still professed belief in Jesus Christ, were welcomed to Church-fellowship. See app. to Confession drawn up in 1688 (*Conf. of Faith*, Hanserd Knollys Soc. p. 244): 'The known principle and state of the consciences of divers of us . . . is such that we cannot hold church communion with any other than baptized believers, and Churches constituted of such: yet some others of us have a greater liberty and freedom in our spirits that way.' The majority of Baptist Churches in England to-day are open in this sense, and the throwing open of Church membership in the face of trust-deeds led to one or two interesting lawsuits in the 19th cent. (see G. Gould, *Open Communion and the Baptists of Norwich*, 1860). The practice of open communion seems to be the natural issue of the stress laid on the individual will. (For the whole point cf. Harnack, vii. 125, on 'The Anabaptists.') (*δ*) The dangers of the Baptist position clearly lie on the side of spiritual pride and the over-development of religious self-consciousness. An exceptional, because boyish but still instructive, instance may be studied in Gosse, *Father and Son*, pp. 211–217.

(*b*) The dilemma as to infant baptism, occasioned by the new emphasis on faith, was met by Luther in another manner. 'Luther retained infant baptism rather as the sacrament of regeneration' (Harnack, vii. 251). He fell back on the Roman doctrine. He strove to retain the connexion between faith and baptism by continuing the *interrogatio de Fide* and the presence of sponsors in the rite, and by supposing that there is a kind of faith bestowed on infants. Similarly, Calvin maintained that 'infants may have infused into them a kind of faith and knowledge, though not ours.' Or, again, the faith of the parents might be taken as standing for the faith of the children. Thus Beveridge claims that the children of Christian parents are disciples. This was, in fact, the abandonment of the Protestant view of faith (see Harnack, *loc. cit.*). As already pointed out, some Calvinists were prepared to give baptism as a sign of a regeneration that should follow (see p. 401). Luther, on the other hand, distinguished between regeneration and justification. Regeneration was an inward effect, wrought in baptism. Justification, the inner experience of repentance and forgiveness, was a distinct and later stage in religious development. The Church of England retained infant baptism on somewhat similar terms. Regeneration is carefully distinguished from conversion, and the former may precede the latter.

'Conversion is the act whereby, in response to and by the power of divine grace, the soul turns to God in the desire to accept and do His will. Regeneration is the gift which God bestows on the soul by producing in its nature such a change as imparts to it the forgiveness of original sin, and makes it to be accepted by God instead of under His wrath' (Darwell Stone, *op. cit.* p. 35).

The Church of England likewise retained sponsors and the *interrogatio de Fide*, which is essentially an attempt to make faith still the introduction to baptism. Again, the Reformers' first conceptions of faith and of regeneration are abandoned, and an approximation is made to the Roman doctrine.

(*c*) The retention of infant baptism did not, however, always mean the restoration of the older interpretation of the practice. The Puritans in England objected to the institution of godfathers and godmothers, and in their Admonition of 1571 complained that 'they prophane holye baptisme, in toying folishly, for that they ask questions of an infante which cannot answere' (*Puritan Manifestoes*, p. 26). In the form of baptism adopted in Geneva there are no sponsors, and no profession of faith is made on behalf of the child. The parents or other responsible persons recite the Creed, as the faith which they hold and in which they intend to bring up the child. Thus in the order for the administration of baptism in the Presbyterian Church of England, based on the Westminster Confession, the minister says to the parents: 'Seeing it is your duty to nourish and bring up this child for God, it is fitting that you renew the confession of your faith before God and this congregation.' There is no attempt to preserve the connexion between faith and baptism by a vicarious declaration of faith and of willingness to be bap-

tized, made in the name and on behalf of the child. The Calvinist Churches thus broke with a practice that claimed to come down from Hyginus in the 2nd century. Moreover, the ritual act is not conceived as in itself conveying regeneration at the time. 'Baptism (is) the sacrament of admission into the visible Church, in which are *set forth* our union to Christ and regeneration by the Spirit, the remission of our sins and our engagement to be the Lord's' (Articles of Faith, Presbyterian Ch. of Eng. 20). And in the ritual service, the minister is directed to pray that God will grant 'that this child, *having been in God's own good time born again by the Holy Ghost*, may come to years of understanding, that he may confess the only true God, and Jesus Christ whom He has sent.' Baptism then stands not for an inner change necessarily wrought at the moment in the unconscious child, but for the recognition of the fact that the children of believers are already part of the visible Church, and should be at once admitted. It is, further, a declaration of God's goodwill towards the child, and the sign and seal that He will in His good time fulfil in the child the promises set forth therein. In baptism the parents solemnly engage themselves to bring up the child in the fear of the Lord.

The Wesleyan Church, which did not start from the Calvinist basis, but made much of conversion, retains infant baptism in a similar sense. There is no recitation of the Creed at all. After baptizing the child, the minister says: 'We receive this child into the congregation of Christ's flock, *that he may be instructed* and trained in the doctrines, privileges, and duties of the Christian religion; and *trust* that he will be Christ's faithful soldier and servant unto his life's end.' It is most significant that this declaration is followed by the four short petitions (*e.g.* 'Grant that the old Adam in this child may be buried') which in the Church of England service precede baptism. The Wesleyans pray that God will fulfil in the future the promises symbolized in the ritual act: in the Church of England, prayer is offered that these results may then and there be initiated.

To the Congregationalists infant baptism is little more than a dedication service. The Calvinist Churches generally, and some other bodies, have thus retained the practice and altered its meaning.

In the Churches which retained infant baptism, the sense of personal responsibility connected with believers' baptism was attached to a later rite of admission to the full privileges of Church membership. Confirmation in the Lutheran Church and in the Church of England, First Communion among the Presbyterians, Covenanting with God among the Wesleyans, are in practice equivalent to believers' baptism. Confirmation in the Church of England is administered to the baptized when they have come to years of discretion, 'to the end that they may themselves with their own mouth and consent ratify and confirm' the promises made for them in baptism. This view and use of Confirmation is distinctly Protestant. In the West, Baptism and Confirmation had become separated in point of time; they were still united in the East, and were administered to children in succession, being immediately followed by the Communion. The Western separation of the two Sacraments did not, however, imply that Confirmation was to be given only to those who had made a profession of conscious faith after reaching years of discretion. Confirmation was not intended to be the ratification of baptismal vows. The Council of Trent anathematized those who regarded Confirmation as nothing else than a catechetical exercise by which those on the borders of manhood professed the grounds of their faith before the Church (Sessio 7, 'De Conf.,' canon 1). The Church of England did not treat Confirmation as simply this, but, under the influence of Protestantism, she did limit it to adolescents, in order that it might serve this purpose.

[Cf. D. Stone's plea for restoring the primitive and Greek practice of confirming infants. He notes that the Church of England continued and emphasized the mediæval separation of Confirmation from Baptism. He does not sufficiently recognize that this emphasis is the result of the Reformation—a concession to the Protestant conception of faith (*Holy Baptism*, p. 186).]

The sacrament of Confirmation is in effect dependent on the previous confession of faith. This meant a recognition of the fundamental connexion between grace and faith. Instead of abandoning infant baptism, most Protestant Churches put a fresh meaning into Confirmation or its equivalent. They thus adhered to the view that the full privileges of the Christian life could not be bestowed unless consciously desired.

The reasons for the retention of infant baptism were many and complex. The Reformers were not all eager iconoclasts. Luther and the most influential Elizabethans departed only slowly from traditional doctrine and custom. Moreover, the new practice of adult baptism was connected with a party that was socially despised and politically discredited. A supporter of adult baptism might be supposed to come from Münster. All the leading Reformers ascribed Anabaptism to the devil. A cloud of suspicion and contempt hung over Baptists and Mennonites in the 17th century. They were suspected of being ignorant and revolutionary.

The Baptist historian, Thomas Crosby, is constantly twitting Neal, the learned author of the *History of the Puritans*, with an affected contempt for Baptists. Here is one passage: 'the Rev. Mr. Neal has given us an account of [Vavasor Powell] and tells us he was educated at Jesus Coll., Oxon.; and had he been an illiterate man, it's not unlikely but he would have told us also that he was a Baptist' (Crosby, *Hist. of Baptists*, iii. 6).

But there were deeper reasons than conservatism and the bad name attaching to the practice of believers' baptism through the early Anabaptists. (*α*) Wherever a lively belief in original sin and the guilt attaching thereto continued, it was natural to bestow on infants the sign of the forgiveness of sins. It is perhaps noteworthy in this connexion that the first little group of Baptists were General or *Arminian* Baptists. (*β*) The doctrine of election made some recoil from the Puritan conception of the Church. It is, they argued, presumption to anticipate God's judgment by confining church membership to those apparently saved. The very attempt tends to hypocrisy. The Church ought rather to welcome all men. Along these lines Zwingli very strongly criticizes the 'Catabaptists' and defends the practice of infant baptism. As baptism is admission to the visible Church, it is not for human judgment to attach conditions. (*γ*) But more important than these was the feeling that in religion one cannot separate parent and child. The child of believing parents has, *ipso facto*, a claim on the Church. The Church must recognize 'the spiritual unity of the family' by welcoming the child. Burnet (on Art. 27) says, 'It is legitimate that parents be allowed to bring their children under federal obligations, and, therefore, procure to them a share in federal blessings.' The idea of the covenant, and the parallel between baptism and circumcision, powerfully influenced men's minds. A covenant that binds the parent binds the child also. And if the covenant of the OT admitted children by circumcision on the eighth day, surely the terms of the new covenant are not so harsh as to exclude children altogether. The Lord's welcome to little children, and the fact that children were reckoned holy through their parentage alone (1 Co 7^{14}), were held to put any such restriction out of court. The anomalies presented

by infant baptism to the Protestant conception of faith were met by an appeal to the parallel institution of circumcision. Baptism, Calvin admits, implies repentance; but so did circumcision, as is clear from Jer 4^4. The rule that baptism should follow faith is not invariable: for circumcision comes after faith in Abraham and before intelligence in Isaac. It may be said that the parallel with circumcision was the chief ground for defending infant baptism as agreeable with the Scriptures, while Mk $10^{14.\ 15}$ and 1 Co 7^{14} were the chief reasons for supposing it to be 'agreeable with the institution of Christ.' It was further urged that, since men believed in God's goodwill towards children, the sign of that goodwill should not be withheld from them. 'How sweet is it to pious minds to be assured not only by word, but even by ocular demonstration, that they are so much in favour with their heavenly Father, that He interests Himself in their posterity! . . . It is no slight stimulus to us to bring them up in the fear of God' (Calvin, *Inst.* IV. xvi. 32). (*δ*) With others, especially in the Church of England, the earlier ideas of sacramental efficacy, coupled with the obvious sense of Jn 3^5, were the dominant influence.

(5) Before passing on to discuss the effect of the Protestant appeal to Scripture, one other development of the conceptions of faith and grace as essentially inward must be examined. *The Quakers' rejection of water-baptism* was based, no doubt, in part on principles peculiar or almost peculiar to them; but it also sprang from the renewed experience of justification by faith which they possessed in common with other Protestants. Both points require illustration.

(*a*) The doctrine of the inner light was not a universally accepted doctrine among the Reformers. Its assertion sundered the Quakers from the Calvinists. Calvin advocated the use of sacraments because carnal, depraved, human nature could grasp the spiritual only through the material, and needed every sort of aid if it was to retain faith at all. To Calvin, sin was the fundamental thing in men. But if Calvin preached sin, G. Fox preached perfection. He and his followers denied the dogma of human depravity. Deeper than sin lies the something of God in every man. Men must be turned to this inward teacher, and cease to trust in the outward and the creaturely. From this point of view sacraments are not a means of grace but a source of error, an entanglement in the lower realms of religious life.

(*b*) But, without pushing their peculiar tenets, the Quakers had a strong case in the ground they shared with Protestants in general. It was admitted that God's answer to faith was not tied to the sacraments. All Protestants agreed that the grace of God was conveyed, if not as certainly, yet as really, through preaching and through prayer as through the sacraments. To the Calvinist, baptism was the sign and seal of a spiritual reality, which it did not necessarily confer. But if this be so, if the forgiveness signified in baptism and the communion with Christ offered in the Eucharist are granted to us in other ways, why insist thus on the outward ceremonies? Our opponents, says Barclay,

> 'account not those who are surely baptized with the baptism of the Spirit, baptized, neither will they have them so denominated, unless they be also sprinkled with or dipped in water: but we, on the contrary, do always prefer the power to the form, the substance to the shadow: and where the substance and power is, we doubt not to denominate the person accordingly, though the form be wanting. And, therefore, we always seek first and plead for the substance and power, as knowing that to be indispensably necessary, though the form sometimes may be dispensed with, and the figure or type may cease, when the substance and antitype come to be enjoyed, as it doth in this case' (*Apology*, p. 300).

The essential thing in baptism is the answer of a good conscience towards God. Where that pure and spiritual baptism is present, the use of water is indifferent. The Quaker position raised the question of the nature of the New Covenant. Did not the new differ essentially from the old in this, that now God would directly and immediately commune with the individual? Barclay's attempts to explain away NT references to water-baptism are bits of unsuccessful exegesis; but the truth 'the kingdom of God is within you' (Lk 17^{21}) does not depend on the correct interpretation of *ἐντός*.

(*c*) The Quakers were indirectly the successors of Joachim de Flore, who thought sacraments would disappear in the realm of the Spirit. 'The baptism of John,' said Barclay, 'was a figure, commanded for a time, and not to continue for ever' (*Apol.* Prop. xii.). He, with good reason, identified water-baptism with that of John. The other Protestant Churches vehemently denied this view of baptism as a temporary institution. Thus the Westminster Confession (ch. xxviii.) asserts that 'Baptism is by Christ's own appointment to be continued until the end of the world.' With this compare the orthodox creed in the Baptist Confessions of Faith (Hanserd Knollys Soc. p. 147).

B. The Appeal from Tradition to the Bible.—The influence of the Reformers' appeal to Scripture is more easily traced in the realm of practice than in that of doctrine. That the study of the Scriptures suggested some new doctrines is beyond doubt. Thus the beginnings of the Baptist denomination consisted of two small groups who successively detached themselves from the Independents because they were convinced, rightly or wrongly, that in the NT baptism was administered only to believers. The first group, the General or Arminian Baptists, broke off from the Independents in Amsterdam in 1611, under John Smith and Helwisse. These two had derived their views from their own study of the Scriptures. They first baptized themselves; but when John Smith discovered that the Mennonites were already teaching the doctrine of believers' baptism, he was baptized again by a Mennonite pastor. The first Particular or Calvinistic Baptist Church was formed in a similar way in England about the year 1638. Certain members of an Independent church in London became convinced that 'Baptism was not for infants, but professed believers' (see Shakespeare, *Baptist and Congregational Pioneers*, pp. 180–184). Here, too, the influence of the study of the Scriptures was the prime factor. But all Protestant Churches claimed to justify their positions from the Scriptures, and it would be tedious to explain the justification each advanced. The more general effects of the appeal to Scripture may be traced in (*a*) the Protestant simplification of ritual, and (*b*) the tendency to take a somewhat legalistic view of the obligation of baptism.

(*a*) *The simplification of ritual* was not everywhere carried out with equal thoroughness. Luther at first retained the Roman *Ordo* almost exactly as it stood, though the traditional developments were accorded a steadily diminishing importance. When the demand for a simpler ritual, based on the appeal to Scripture, made itself effectively heard, it was resisted on the ground that the Church is free to make modifications in such comparatively non-essential matters. (For the whole history, see Höfling, vol. ii. §§ 119–121.) In England, the signing with the cross and the presence of sponsors were retained, and the other ceremonies summarized in a previous section were discarded. The Church of England, like the Lutherans, showed a greater reverence for tradition: at the same time, the simplifications introduced to avoid superstition, and to promote decency and order, were really the outcome of a desire to get nearer to NT usage

The Puritans objected to the traditional elements still remaining in the Prayer-Book Order of Baptism, as having no warrant in Scripture. The Genevan Order was still simpler. 'Chrisms, tapers, and other pomposities' were abolished, as 'they have been devised without authority from the word of God.' Baptism by immersion was reintroduced by the believers in adult baptism, as being the Scriptural and only lawful method.* In brief, all Protestant Churches held themselves at liberty to revise the baptismal office, in so far as its elements were derived from tradition and not from Scripture; while some wished to make the ritual conform to a Scripture model.

(*b*) The authority attributed to the Scriptures went some way to create *a new legalism*. Thus the Baptists insisted on the duty of accepting immersion. This was the form instituted by Christ, and it became part of religious obedience to follow it. To be immersed was to fulfil more perfectly than others a command of Christ. This tended to legalize the religion of Jesus, and to emphasize the value of obedience to a ceremonial observance—a step towards Pharisaism. From a literalism of this kind the more conservative Churches were preserved by their adherence to tradition, and Calvin escaped through his strong common sense.† The other Churches did not escape legalism in other directions. When the sacramental efficacy of Baptism and its bearing on salvation were questioned by Rationalism, the defence was apt to be: this is part of the Divine will revealed in the NT, and it must simply be accepted. Hooker's defence of the Church of England doctrine of Baptism rests largely on the plain sense of Jn 3^5, which is taken as the final ruling of the Divine Lawgiver on this subject. This kind of appeal to Scripture is simply legalistic. It may further be paralleled in the strong tendency to interpret the NT in harmony with the OT. The explanation of baptism by means of circumcision seems to belong to a new Judaistic Christianity.

C. The Humanism and Rationalism of the Renaissance.—The Reformation was influenced by the growing interest in the natural as opposed to the supernatural, and the assertion of individual independence which marked the later Middle Ages. This favoured views of baptism which removed mystery, and which made it the sign, not of a man's dependence on, but of his adhesion to, the Church. Baptism then becomes a mere symbol or a confession of faith.

Zwingli treated baptism as a symbol, though by no means as insignificant. 'Baptismus est regenerationis symbolum . . . sed non ita ut qui baptisati sunt ob id renati sunt' (Answer to Quest. 17, in a letter on some questions raised by a Catabaptist). Some account of his views may be found in Lecky's *Hist. of Rationalism*.

Socinus emphasized the confession-side of Baptism. It is—

'the rite of initiation by which men, after obtaining knowledge of the doctrine of Christ and acquiring faith in Him, become bound to Christ and His disciples, or are enrolled in the Church, renouncing the world . . . professing, besides, that they will regard the Father, Son, and Holy Spirit as the only Guide and Master in religion, and in the whole of their life and conversation, and by their ablution and immersion and emersion, declaring and as it were exhibiting that they lay aside the defilement of sin, that they are buried with Christ, that they desire henceforth to die with Him and to rise to newness of life, and pledging themselves that they will really carry this out, receiving also at the same time at which this profession is made and this pledge taken the symbol and sign of the remission of sins and even the remission itself' (Harnack, vii. 151).

As Harnack says, the stress is laid here on the confession, and the last clause sounds like an afterthought. The tendency to emphasize the confession made in baptism was not confined to Socinianism; the Anabaptists, *e.g.*, regarded baptism mainly as a badge or mark distinguishing Christians from others (cf. art. Anabaptism, i. 410). This shows the influence of Rationalism in so far as it implies less interest in the sacramental side.

But the ultimate influence of Rationalism is to be discerned in the serious issues, for the doctrine of baptism, raised by Biblical criticism, by the science of comparative religion, and by the study of religious experience.

Literature.—*General*: Höfling, *Das Sacrament der Taufe*, 2 vols., Erlangen, 1846–8; Harnack, *History of Dogma*, Eng tr., 7 vols., London, 1896–9; Hagenbach, *Dogmengeschichte*^{5}, 1845 [useful quotations]; A. V. G. Allen, *Christian Institutions*, London, 1898; Darwell Stone, *Holy Baptism*^{4}, London, 1905; Marriott, art. 'Baptism,' in Smith's *DCA*; art. 'Taufe,' in *PRE*^{3}.

Roman position: Wilhelm and Scannell; *Manual of Theology*, vol. ii. [1898], give a clear concise statement; Denzinger, *Enchiridion*^{5}, 1874, is indispensable.

Church of England: for mediæval practice, consult Maskell, *Monumenta Ritualia*, vol. i. p. ccxl f. For Reformation settlement, see index vol. to the Parker Society's publications; Hooker, *Eccl. BAPTISM (Indian).—In the initiatory rites which are peculiar to the great religions of India and their various sects, there is nothing which can be regarded as exactly parallel to Christian baptism, except the general fact that such rites imply admission to or public recognition of a definite religious status. In the Christian rite the use of water is based on a natural symbolism which has appealed to the human mind in all ages, and of this we have abundant examples in the purificatory ceremonies of all Indian religions. Hinduism abounds in such *baptisms* or washings as are referred to in Mk 7^4. These are founded on the association of religious purity with water used either in bathing or in sprinkling the person or thing to be sanctified.

In the rite of initiation into the Sikh religion we have the nearest approach to the form of Christian baptism; but even in the symbolism of the rite there is, as we shall see, a fundamental difference.

* *Sprinkling and immersion.*—It has already been noted that the dipping of infants continued in England after the custom had altered in Europe. Sprinkling became more general in England about 1600, and was apparently the accepted custom by 1640 (Denne, *Contention for Truth*, 1658). With regard to adults, the first Mennonites and Baptists received the rite by affusion. Mr. Shakespeare says of the former, that 'they administered baptism by affusion, until in 1620 a section called the Collegianten, at Rhynsberg, began to immerse.' A certain Mr. Blunt introduced baptism by immersion among the Particular Baptists at the beginning of 1642. The practice was widely taken up, many being baptized for the second, or for the third time, as the case might be. It was this that roused up Dr. Daniel Featley to write his book against Baptists, in which he claimed to dip the dippers head over ears in argument. Partly in reply to this work, the Baptist Churches published a Confession in 1646, which is their first public declaration in favour of immersion. 'That the way and manner of the dispensing this ordinance is dipping or plunging the body under water: it being a sign must answer the thing signified, which is the interest the saints have in the death, burial, and resurrection of Christ' (*Confessions*, p. 42). For the whole subject, see Shakespeare, *op. cit.* pp. 186–189.

The Socinians, as is clear from the Racovian catechism of 1619, and some Anabaptists had baptized by immersion before this.

† 'Whether a person is to be wholly immersed, and that whether once or thrice, or whether he is only to be sprinkled with water, is not of the least consequence: Churches should be at liberty to adopt either according to the diversity of climates, although it is evident that the term *baptize* means "to immerse," and that this was the form used by the primitive Church' (*Inst.* iv. xv. 19).

The Sikh religion, which is professed by about two millions of the people of the Panjāb, is of comparatively modern origin. Nānak, its founder, who flourished in the 16th cent., was one of the many religious scholars of India in whose mind the philosophy which underlies Hinduism awakened a protest against the current idolatry. He was a follower of Kabīr, and was also influenced by the writings of the Marāṭhī poet Nāmdeva, who flourished about the year A.D. 1300. Passages from the writings of Kabīr and Nāmdeva are found incorporated in the *Granth* ('the Book'), the religious book of the Sikhs ('disciples'). While Hindu pantheism easily lends itself to the support of polytheism and idolatry, that side of it which emphasizes the oneness of the Supreme Existence has always been cropping up in the form of protests against the worship of the many. Nānak may be taken as an example of this frequently repeated tendency. From the movement which he initiated, there emerged under him as its first *guru*, and under his nine successors ending with Guru Govind Singh, a religion which, rejecting idolatry and caste, emphasizes the doctrine of the Divine unity. So far as this doctrine dissociated itself from its original pantheistic foundation and approached the deistic conception, we may recognize in its subsequent development the influence of the Muhammadan religion with which it was in constant contact.

The distinct religious community into which the followers of Nānak were ultimately organized bears the name of the *Khālsa*. Initiation into the Sikh religion takes place by admission to the Khālsa by means of a rite called the *Pahuḷ*.

The *Pahuḷ* is thus described in the *Life of Govind Singh*, the last of the gurus:

'When the guru had returned from the hills to Anandpur, he assembled the societies of the disciples and told them that he required the head of a disciple, and that he who loved his guru should make this offering. Most of them were terror-stricken, and fled; but five of them rose and offered resolutely their heads. These five he took into a room, and told them that, as he had found them true, he would give them the *pahuḷ* of the true religion. He made them bathe, and seated them side by side; he dissolved purified sugar in water and stirred it with a two-edged dagger, and, having recited over it some verses taken from his Granth in praise of the Timeless One, he made them drink some of this sherbet; some of it he poured on their heads and the rest he sprinkled on their bodies. Then, patting them with his hand, he cried with a loud voice, "Say, The Khālsa of the Vah Guru! Victory to the holy Vah Guru!" After he had given the *pahuḷ* to these five in this manner, he took it likewise from them; and in this way all the rest of his disciples were initiated, to whom he gave the name of the Khālsa, adding to the name of each the epithet Singh ('lion'). Then he gave the order that whoever desired to be his disciple must always have five things with him, the names of which begin with the letter *k*, viz., his hair (*kes*) which must not be cut, a comb (*karppa*), a knife (*kathar*), a sword (*kithpal*), and breeches reaching to the knee (*kachh*); otherwise he would not consider him a disciple.'

The rite itself is older than this mention of it in the *Life of Govind Singh*, for it is referred to in the *Life of Nānak*, written by Guru Arjun, the fifth guru, in the beginning of the 17th century. As it is not mentioned in the *Granth*, it would appear to be later in origin than the time of Nānak. It was not, however, instituted by the last guru, Govind Singh, who in the passage just quoted from his life is described as administering an old-established rite.

It is by no means clear that we ought to regard this rite as parallel to baptism except in the mere fact that it marks initiation into the membership of a religious community. The place given to bathing in the description quoted is subsidiary; the essential parts are the drinking of the sherbet and the utterance of the words 'Vah Guru!' In its oldest form the rite included nothing more than this, and its original as well as its later purpose is to express communion and fellowship through joint participation in food and drink. This, according to all Hindu standards, is the ultimate test of religious fellowship, and the Sikh *pahuḷ* appears to be only one form of expressing this fact of religious communion. It is interesting to notice that, while devotion to the guru is included in the ceremony, the stress is laid on the marks of fellowship. The Christian rite of baptism admits to the fellowship of the visible Church; but the emphasis is not laid on this side of the sacrament. The sacrament of baptism expresses in the first instance a relation of the individual to God, not to the community of His people. Even in the sacrament of the Lord's Supper, while the communion of believers with each other is an important element in the meaning of the rite, the thought of the believer's relation to his Lord is predominant in every interpretation of the sacrament. This is an illustration of a characteristic difference between Indian religions and Christianity.

In orthodox Hinduism the ceremony that approaches nearest in its specific function to baptism is the *Muñj* ceremony, called also *Upanayana* (Skr. *upa* and *nī*, 'leading up to a teacher,' 'initiation'), by which the members of the twice-born (*dvija*) castes are admitted to their respective privileges. The material element in this ceremony is the investiture with the sacred thread; and, as one part of the rite consists in investing the subject with a girdle made of *muñj* grass, in the case of Brāhmans, it is known amongst them as the *Muñj* ceremony. This investiture with the sacred thread, called *upavīta* (*upa* and *vyā*, 'to cover' or 'clothe') or *yajñopavīta* because it entitles to the privilege of offering sacrifices, must take place between the ages of 8 and 16, 11 and 22, 12 and 24, in the Brāhman, Kṣatriya, and Vaiśya castes respectively.

Bathing is not an integral part of this ceremony. The *yajñopavīta*, or sacred thread, which in the case of the Brāhman is a triple thread of cotton yarn, in the case of the Kṣatriya of hemp, and in the case of the Vaiśya of wool, is placed over the left shoulder and allowed to hang down on the right side of the wearer. At the time of investiture the youth is placed with his face turned towards the sun, and is made to walk round a fire three times. Then the guru, taking the thread in his hand, consecrates it by repeating the *Gāyatrī*, the invocation to Savitṛ, the sun, taken from *Rigveda*, iii. 62. 10—*tat savitur varenyaṁ bhargo devasya dhīmahi dhiyo yo naḥ prachodayāt*, 'that we may attain the glorious light of the god Savitṛ, may he further our prayer.'

After the thread is put on, the youth takes a staff in his hand (of different kinds of wood, according to caste) and goes forth to beg alms. This alms he begs of his mother, or, if she is dead, of his maternal aunt, and, failing her, of a sister. This symbolizes a covenant to support his guru and himself.

The next step is the learning of the *sandhyā*, or prayers appointed for the principal parts of the day, morning, noon, and evening.

The last act of the ceremony is the *mauñjibandham*, or the tying on of a girdle of *muñj* grass. Before the girdle is put on, the guru teaches the boy the Savitṛ *mantra*. Bending with his right knee on the ground and saluting the guru with *namaskār*, he says, 'Repeat to me the Savitṛ *mantra*.' Then the guru, wrapping the hands of the boy with his garment, takes hold of them with both his hands and makes him repeat the *mantra*, at first line by line, and finally the whole. The young man thus initiated enters on the *Brahmachāri* ('disciple') period of his life (see ĀSRAMA

Now, while all the external features of baptism are absent from this rite, there is a certain inner

resemblance between the two in the place which each occupies in the scheme of the religious life. The most striking fact in connexion with the Hindu rite is that by virtue of its performance the initiated ranks as twice-born. The idea that a certain act of religion marks the second birth presents a parallel to the Christian idea of baptism, whether regarded as 'a sensible sign' or as a sacrament carrying with it a spiritual effect, in its relation to regeneration. Looking beneath the outward surface of the rite, may we not recognize in it the expression of a deep human conviction that man as he enters this world is not fit for his spiritual kingdom, that he must be born again if he is to possess it? 'Except a man be born again, he cannot see the kingdom of God' (Jn 3^3).

If we look for any parallel to baptism in the Zoroastrian religion, which, although the ancient home of the faith is in more northern lands, is to-day an Indian religion, we may find it in the ceremony called *Naujot*, by which Parsi children, both boys and girls, receive religious initiation after they have attained the age of six years and three months. Indeed the modern Parsi sometimes actually speaks of it as baptism. The name *Naujot* indicates that it marks the beginning of a new religious authorization, the outward symbol of which is the investiture with the *sudra*, or sacred shirt, and the *kusti*, or sacred thread, a thread of seventy-two strands worn round the body. In this ceremony the officiating priest recites verses from the Avesta Scriptures, and with his own hands places the *sudra* on the boy or girl to be initiated, and binds the sacred thread. On each side stands a brazier from which flames arise, fed by pieces of fragrant sandal-wood; and, while the verses are being chanted, grains of rice are thrown towards the recipient of the ordinance. The *Naujot* is frequently made the occasion of a great social gathering, followed by a feast in which sometimes many hundreds of persons participate. So much does the social aspect predominate over the religious, that the chanting of the priest is sometimes drowned by the strains of a brass band discoursing the most secular and jovial airs. The sense of incongruity is felt by any one who tries to associate the ceremony with a spiritual purpose. In their origin such ceremonies had, no doubt, a religious meaning; but they have to a large extent lost it, and have become the badges of a community rather than a vehicle of spiritual instruction. An interesting fact in connexion with the *Naujot* ceremony is its administration to girls as well as to boys. The Parsi woman wears the sacred thread. No Hindu woman can wear it.

In the light of such developments the high spiritual significance of Christian baptism stands out more clearly; but even Christian baptism may lose its higher meaning if the purpose which it subserves as a mark of the Christian faith be permitted to overshadow its meaning for the individual soul.

LITERATURE.—See under INITIATION.

D. MACKICHAN.

BAPTISM (Jewish).—The fact that Judaism gained accessions from the Gentile world gave rise to an application of the practice of ceremonial ablution altogether new in Jewish religious life, viz., the baptism of proselytes. Precisely as the rite of bathing after cohabitation or nocturnal pollution was, in the period after the destruction of the Temple, regarded by the Rabbis both as a purification and as a kind of consecration for intercourse with the sacred words of the Law, so was the bathing of proselytes considered as at once a purification from heathenism and an initiation or consecration of the convert before his admission amongst the people of God. It was a ceremony not unlike Christian baptism so far as the individual who desired to become a Jew was conducted to the bath, and there immersed himself in the presence of the Rabbis, who recited to him portions of the Law. The proper term, however, is the 'immersion of proselytism' (טבילת גרות), as it is designated, *e.g.*, by Rashi.

The antiquity of proselyte baptism.—Epictetus, the Stoic philosopher, who taught in Rome till A.D. 94, and subsequently lived at Nicopolis, in Epirus, had heard of the practice, and speaks of it, indeed, as a matter of common knowledge. In his conversations, as recorded by the historian Arrian, prefect of Cappadocia, he illustrates the maxim that a man's profession of faith should be carried out in practical life, by referring to the fact that many Hellenes are called, or call themselves, Jews, Syrians, or Egyptians, simply because they have adopted the religious usages of one or other of those peoples. But, he proceeds, when a man goes only half-way in such a matter, it is usually said of him that 'he is no Jew, but has merely the semblance of one'; while, if he takes upon himself the arduous life of 'the baptized and the elect,' he is really what he calls himself (viz. a Jew).*

In the Rabbinical literature (*Mechilta*, on Ex 12^{48}) it is stated that a lady named Valeria, along with her female slaves, was received into Judaism by a bath of immersion. This story may possibly go back to a time at least equally remote. The Babylonian Talmud (*Yebhāmōth*, fol. 46*a*, at foot) contains the tradition that Eliezer and Joshua, who both flourished towards the end of the 1st cent. A.D., disagreed in their views regarding the conditions under which a proselyte should be received, Rabbi Eliezer asserting that circumcision without immersion, Rabbi Joshua that immersion without circumcision, was sufficient. It has been handed down as the admittedly valid finding that both immersion and circumcision, and—in theory at least—an oblation as well, were indispensable conditions of admission to the Jewish communion.

We have thus good authority for believing that proselyte baptism was practised towards the end of the 1st century. It is probable, however, that till about this time baptism was not regarded by all teachers or in all countries as a ceremony associated with the act of embracing Judaism. In view of this circumstance the silence of certain writers, in passages of their works where a reference to the practice might have been expected, loses the force which has sometimes been attributed to this particular case of *testimonium e silentio*.† In one passage of the Mishna, proselyte baptism seems to be merely a bath of ceremonial purification, which the proselyte must take as one who 'comes from the foreskin.'‡ The ceremonial of the practice likewise would be developed gradually. Making all the reservations necessary in view of the diffusion, conception, and various forms of the rite, we may safely assume that the Jewish baptism of proselytes was not of later origin than Christian baptism.

According to Talmudic testimony, the baptism of proselytes took the form of an immersion carried out in accordance with the Rabbinical regulations for ceremonial purification, and in presence of three, or at least two, witnesses. The candidate, if a male, was first of all circumcised, and when the wound had healed [this is left out of account in *Pes.* viii. 8] he was taken to the bath. While he stood in the water the Rabbis ('disciples of the wise') who happened to be among the witnesses once more recited to him some of the great and the lesser commandments. Then the convert made a complete immersion, and stepped forth as a fully privileged Israelite. A female was, for modesty's sake, taken to the water by women, the 'disciples of the wise,' as legal witnesses, standing behind the curtain that served as a door. She was then placed in water up to the neck, and, while she remained in this position, the Rabbis, without seeing her, but within hearing, gave their prelection upon the commandments. She thereafter drew her head under water, and at that moment it was necessary for the witnesses to look on; then, as she came out of the bath, the men retired with averted faces. The bap-

* *Dissert. Epicteti*, ii. 9 (ed. Upton, London, 1841, i. 214 *f.*): ὅταν δ' ἀναλάβῃ τὸ πάθος τὸ τοῦ βεβαμμένου καὶ ᾐρμένου, τότε καὶ ἔστι τῷ ὄντι καὶ καλεῖται Ἰουδαῖος. The perfect participles are conclusive.

† This applies specially to Philo Alex., Josephus (*Ant.* XIII. ix., XX. ii.), and Juvenal (*Sat.* xiv. 96).

‡ *Pes.* viii. 8: 'A mourner may bathe and eat his *pesach* in the evening, but *not along with* the sacred meats. One who receives news of a death and one who gathers bones [a gravedigger] may bathe and eat (his *pesach*) *along with* the sacred meats. A proselyte who has become a proselyte on the evening before the *pesach* [*i.e.* the day before] (concerning him) the school of Shammai says: "He may bathe and eat his *pesach* in the evening." But the school of Hillel says: "One who comes from the foreskin is as one who comes from the grave."' Note that, according to Nu 19^{16}, one who touches a grave remains unclean for seven days.

tism of a proselyte could not legally be performed by night, or on a Sabbath or any other holy day.*

This description is to be understood as one of constitutive validity. Baptism, according to it, must be administered by orthodox Judaism whenever proselytes are to be received into its community.

The necessity of proselyte baptism was argued by the Talmudic scholars from the fact that, according to Ex 19[10. 14. 22], the Israelites were commanded 'to sanctify themselves' before the deliverance of the Law at Sinai. That sanctification involved ablution, but was designed by the writer as a necessary condition of meeting with Deity. The Rabbis, however, believed that this act was ordained in view of the holy covenant which was to be completed by a sacrifice (Ex 24[4-8]), but which was about to be instituted from the Divine side by the giving of the Law (Ex 20). They thus assumed that even at that early stage an ablution was the ordained means of gaining admission into the covenant.† We find, however, that proselyte baptism was regarded also as a bath of purification, designed to remove the uncleanness of heathenism (cf. the passage of the Mishna, *Pes.* viii. 8, already cited). Thus, in the case of a woman who was desirous of embracing Judaism, and who had taken the bath required after menstruation, this act was credited to her by a certain Rabbi Joshua as equivalent to the bath required of proselytes.‡ It is a current opinion among Christian theologians that baptism (of children) takes the place of circumcision. The incident just referred to might suggest the idea that proselyte baptism was originally sanctioned by Jewish teachers anxious to make converts, as a more agreeable rite than the other. This surmise, however, has not a shred of evidence to support it; while in the case mentioned by Josephus (*Ant.* XX. ii. 4), circumcision was simply remitted.

From the fact that the Jewish religion claimed to be a Divine revelation, and from such utterances as that of Philo (*de Pœn.* i.), 'the proselyte comes from darkness into light,' or the Rabbinical principle that 'the proselyte is like a newborn child,' it would be erroneous to infer that the baptism of proselytes was the rite of initiation into the mysteries of the Jewish religion. As a matter of fact, the baptism was always preceded by instruction in religious doctrine, and thenceforward there were no further revelations to be made. The Rabbinical principle just quoted, to judge from its discussion amongst the teachers themselves, was concerned exclusively with the *civil* relations of the proselyte: he was required, on this interpretation, to alienate himself entirely from his former interests, and even from his still heathen kindred; he must not inherit their property, he cannot commit incest with them, etc.§

Our prefatory note regarding the characteristics of proselyte baptism is thus confirmed by these early references. This testimony, at the very most, encourages the idea that the ceremony in question, with its twofold signification, was not seldom understood as merely a bath of purification.

LITERATURE.—Rabbinic texts (Talmudic, etc.) are collected by H. Ainsworth, *Annotations on the Pentateuch*, 1612 ff. (at Gn 17); John Lightfoot, *Horae Hebraicae* (at Mt 3[6]); J. A. Bengel, *Ueber das Alter der jüdischen Proselytentaufe*, 1814; M. Schneckenburger, *Ueber d. Alter d. jüd. Proselytentaufe und deren Zusammenhang mit dem johann. u. christl. Ritus*, Berlin, 1828 (pp. 4–32 are a survey of the older literature); E. Schürer, *GJV*[3], iii. 129 ff.; artt. 'Baptism,' by S. Krauss, and 'Proselyte,' by E. G. Hirsch, in *JE*; also art. BAPTISM (Muhammadan).—Historically considered, the Muslim rite of purificatory ablution, *wuḍū'* and *ghusl* (see MUHAMMADANISM, § 6), goes back to divergent forms of Christian baptism. Muhammad and his early followers were called by the heathen Arabs Sabæans (*q.v.*), a name applied also in the Qur'ān (ii. 59, v. 73, xxii. 17) to a sect mentioned with respect beside the Jews and the Christians. This name, evidently, is derived from the Aramaic root *ṣabā'*, or *ṣabā'*, 'to dip,' 'immerse,' and means 'dippers,' or 'baptizers,' and was used originally for different heretical Christian sects of Hemerobaptists, Elkesaites (*q.v.*), and Mandæans (*q.v.*), who practised frequent ceremonial ablution (see Wellhausen, *Reste*[2], p. 236 f.; in 1st ed. p. 205 ff.). Of baptism, however, in the precise sense, no trace appears in Islām, although there are many stories in European crusading legend of Muslims who accepted it; and that some distinguished Muslims were knighted by Christians, with all the necessary ceremonies, appears to be practically certain (Lane-Poole, *Saladin*, p. 387 ff.).

Baptism among Christians is regarded by Muslims as an initiatory rite of purification, parallel with circumcision. A very curious description of the rite, as viewed by them, is given by al-Bīrūnī, from Abū-l-Ḥusain al-Ahwāzī, in his *Chronology of Ancient Nations* (tr. Sachau, p. 288 ff.). He introduces it under Epiphany, in giving an account of the calendar of the Melkite Syrian Christians in Khwarizm, as Epiphany for the Oriental Church is a commemoration of the baptism of Christ. This description is either fanciful and imaginary or is of some obscure local rite. It agrees with none of the great Oriental rites. In Egypt the Copts used to observe the Eve of Epiphany (*laīlat al-ghiṭās*), the 10th of Tūba (=the 17th or 18th of January), as a great river-festival, plunging into the Nile as a memorial of the baptism of Christ, and believing that on that night it could prevent and cure all illnesses. In this festival and usage the Muslims also joined, and al-Mas'ūdī, who was in Egypt in A.D. 942, describes it as a great popular ceremony presided over by the Iḫshīd himself (*Murūj adh-dhahab*, ii. 364 f. of Paris ed.). It is now observed by Copts only, and by them not to any great extent. Even the plunging into the Epiphany tank in churches has become greatly disused, and the foot-washing of Maundy Thursday has taken its place. For the religious ceremony see *The Blessing of the Waters on the Eve of the Epiphany*, by John, Marquess of Bute, London, 1901. But among Muslims there is at least one curious custom which appears to be a survival. In the mosque of ad-Dashṭūṭī, just outside of the Bāb ash-Sharīya at Cairo, there is a well and a tank (*maghṭis*), and it is the popular belief that if any one afflicted with a fever (*ḥummā*) plunges into the tank three times in three weeks he will be healed (*Al-ḫiṭaṭ al-jadīda*, iv. 112). Others make the healing power of this *maghṭis* much more general, and describe how the sick folk descend into it by the light of a candle (Michell, *Egyptian Calendar*, p. 122).

One obscure passage in the Qur'ān has generally been held by Muslims to be an allusion to baptism, and most translators of the Qur'ān have accepted that view. In Qur'ān ii. 132, after the story of Abraham, how he was a *ḥanīf* of the primitive religion as contrasted with the faiths of the Jews and Christians, there is an exclamatory outburst, 'The kind of dipping (*or* dip, *ṣibgha*) of Allāh! And who is better than Allāh as to a kind of dipping (*or* dip)? And we are worshippers of him.' The precise syntactical construction of *ṣibgha* we need not here consider. It is plain that, lexicographically, in the oldest Arabic usage (*Lisān*, x. 319 ff.) the word means either the act of dipping one thing into another, as, *e.g.*, a camel dips its lips

into water; or the thing into which something else is dipped. Thus *ṣibgha* came to be the regular word for 'dye,' and *ṣibgh* is used in Qur'ān xxiii. 20 for 'sauce.' The oldest exegetical tradition (Ṭabarī's *Tafsīr*, i. 423) sees in Qur. ii. 132 a reference to Christian baptism. It differs only as to the nature of 'the kind of dipping of Allāh,' some holding that it is the *fiṭrat Allāh*, the original nature in which Allāh constituted all creatures, and from which Jews and Christians are perverted only by their parents (see Krehl, in *SSGW*, hist.-phil. Klasse, July 1st, 1870, p. 99), and others that it is Islām, the religion (*dīn*) of Allāh.

In the great scholastic commentary *Mafātīḥ al-ghaib* of Rāzī (d. A.D. 1209) a considerable advance is made, and the idea of 'dipping' has become distinctly 'dyeing' (i. 505). The first explanation is that the 'dyeing' of Allāh is the religion of Islām, and that it is so called (*a*) because Christians dip their children in a yellow water and say that it is a purification, and that they have thereby become Christians; or (*b*) because Jews and Christians dye their children in their respective faiths, in the sense that they instil these into them (said to be a possible meaning of the Arabic); or (*c*) because the form of Islām appears evidently from the traces left by purification and prayer, as Allāh has said (Qur. xlviii. 29), 'Their signs are on their faces from the trace of prostration,' *i.e.* the mark of dust on the forehead; or (*d*) the difference between the true faith and the false is as evident as that between colours or dyes. Or it may be the original nature of man mentioned above, or circumcision; but Rāzī inclines to the first view.

It may, however, be doubted whether any idea of baptism was in Muhammad's mind. To him baptism would have suggested either *wuḍū'* or *ghusl*, which, indeed, had sprung from it. The chapter in which the word *ṣibgha* occurs is called 'Of the Heifer,' from a section (vv. 63–68) evidently derived from Nu 19, which prescribes how a red heifer should be slaughtered and burned and its ashes used for ritual purification ('Red Heifer' in Hastings' *DB* iv. 207 ff.). Further, the same root *ṣaba'*, used in Qur. ii. 132, is that used in Aramaic for the purificatory dipping connected with the ritual of the Red Heifer (Levy, *Chaldäisches Wörterbuch*, p. 312, *s.v.*). It seems, then, at least possible that Muhammad had in mind some such process, and not either baptism or dyeing. That the oldest exegetical tradition should be in error is not surprising. The earliest interpreters of the Qur'ān were evidently as far from a genuine oral tradition going back to Muhammad himself as were the translators of the LXX from a tradition going back to the Hebrew prophets.

D. B. MACDONALD.

BAPTISM (Polynesian).—A rite closely resembling baptism has been observed in some of the Polynesian Islands. The best-known custom is that of New Zealand. For five days after the birth of a child both the mother and the infant are *tabu*, and remain in a sacred house. The women of the neighbourhood then assemble and give the child its first name, meanwhile dipping a twig in water and sprinkling the infant with it. Some months later, at the feast of the giving of the (second) name, the *tohunga* (priest) dips a twig in water and sprinkles the child's head, uttering formulas in an archaic and practically unintelligible dialect, the words varying according to sex. In the northern island of New Zealand the child was not sprinkled, but was immersed. In both islands the infant was dedicated to Tu, the god of war, and the mother was forbidden to see the ceremony, although, on rare occasions, young people were allowed to be present. An additional baptism was also performed when a boy reached the age of eight, that he might become strong and manly. In the Fiji Islands the first bath of a child was celebrated with a feast, although this is hardly baptism. On the other hand, there is at least an approach to baptism in the custom observed in the island of Rotuma, by which the chief rubbed the face, gums, and lips of the newborn child with a mixture of sea-water and coconut oil; while in the island of Uvea the birth of an infant was celebrated with a feast, at which the child's head was sprinkled with water. The ceremony has been described as the removal of the *tabu* which rests upon the newborn child.

LOUIS H. GRAY.

BAPTISM (Teutonic).—The practice of sprinkling children with water shortly after birth, as found among many aboriginal races, prevailed also among the Teutons in heathen times. In the 2nd cent. A.D. the famous physician Galen had learned that it was their custom to immerse the infant directly after birth in cold river-water; and about the same period, as well as later, it is recorded by Greek writers that the inhabitants of the Rhine country, who are designated Celts, but who were unquestionably Teutons, employed the river as a test of legitimacy, immersing all their infants therein in the belief that the illegitimate would sink. Unfortunately our authorities for the southern Teutons, and, to a large extent, those for the northern, yield no evidence regarding this primitive rite, the reason being that those authorities date almost entirely from Christian times, when Christian baptism had become the general custom. On the other hand, the practice finds frequent mention in the Icelandic sagas and the Eddic poetry. It is there spoken of as *ausa vatni*, 'to sprinkle with water,' and in the sources it is clearly discriminated from *skíra*, 'to cleanse,' 'to baptize' in the Christian sense.

The writings in which the expression occurs belong in all likelihood to the Christian period, but the people spoken of as actually observing the practice were certainly pagans (cf. K. Maurer, *Wasserweihe*, 5 ff.). The custom probably took its rise in religious ceremonial. By the Teutons, as by many other races, water was thought to be the *habitat* of supernatural, and especially of beneficent, powers, and the act of suffusion therefore brought the child under the influence of these. Hence the claim of the master-magician in the *Hávamál* (v. 158): 'This I can make sure when I suffuse a man-child with water—he shall not fall when he fights in the host; no sword shall bring him low.' The rite was performed by the child's father, or by one near of kin, or by some person of standing with whom the father was socially on familiar terms.

Intimately connected with this initiation by water was the act of naming the child. Both ceremonies, in fact, were performed at the same time by one and the same person, and between the infant and the name-giver there was thus constituted a special bond of union, which was of life-long duration, and was signalized by the name-giver's bestowing a gift upon the child at the ceremony itself. In connexion with the birth of Harald Gráfeld, for instance, we are told that 'Eirikr and Gunnhild had a son whom Haraldr

Haarfager suffused with water, and to whom he gave the name, ordaining that he should be king after his father Eirik' (*Heimskringla*, ed. F. Jónsson, i. 161). In virtue of this act of naming, which counted as the first legal transaction relative to the child, the latter acquired its status, so to speak, as a human being, and was admitted into the legal union of consanguinity. Hence, while initiation by water was in the first instance a religious function, the giving of the name was a legal one; as both were performed by the same individual, however, the former soon acquired a legal significance likewise. So long as a child had not gone through the ceremony of suffusion, its life was as fully at the father's disposal as that of a child who had taken no nourishment; he might expose it, or even kill it. After suffusion, however, the child enjoyed the full legal protection involved in consanguinity. This legal provision still remained in force in the legislation of the Northern Teutons even after the introduction of Christianity, and when baptism had superseded the older rite; according to the earlier Norwegian law, indeed, the murder of an unbaptized child was much more leniently dealt with than that of one who had been baptized. This distinction was not abolished till king Magnus Erlingsson altered the law in the latter half of the 12th century. The provincial codes of Sweden and Denmark still retain traces of this ancient heathen point of view. Even when the slayer was a stranger, *i.e.* a person other than the parents, a much more moderate wergeld was exacted by Swedish law if the victim was still a heathen, *i.e.* unbaptized. Similar enactments are found in the Anglo-Saxon and the Frankish codes.

In the legislation of the Southern Teutons, no doubt, it was the ceremony of naming rather than that of baptism that gained prominence as the function which brought the child under the higher protection of the law. From this circumstance it is inferred by Maurer that the rite of initiation by water was not of Teutonic origin at all, but was adopted from the Christian peoples with whom the Northern Teutons came into contact upon the islands of the Western Sea. Bearing in mind, however, the genuinely Teutonic principle, still firmly rooted among many Teutonic peoples, that baptism invests the child with a higher legal status, and, above all, the fact that throughout practically the entire Teutonic race a child's right of inheritance first becomes operative at its baptism—regulations never found among non-Teutonic peoples—we feel that Maurer's contention is untenable. The circumstance that among the Southern Teutons the ceremony of naming, as marking the child's entrance into his higher legal rights, took the leading place, and that, further, this ceremony was fixed for the ninth day after birth, goes rather to show the influence of the Roman practice of naming the child and presenting him in the temple on the *dies lustricus*.

E. MOGK.

BAPTISM BY BLOOD.—Two uses of the expression 'baptism by blood' must be distinguished: (1) a literal use as applied to the practices of pre-Christian and ethnic religion, and (2) a metaphorical use, denoting the sufferings of Christian martyrs.

(1) *Literal use.*—Among all primitive races the blood of beasts or of men plays an important part in religious ceremonies. In the East especially it had peculiar purgative and propitiatory properties ascribed to it, as being the seat and vehicle of life. The ancient Arabs sprinkled blood to lay evil spirits (cf. Wellhausen, *Reste arab. Heidentums*[2], 127), and a similar act was observed in Vedic ritual (cf. Hillebrandt, *Vedische Opfer und Zauber*, 176, 179). Hebrew notions concerning blood were so far spiritualized that there is only one instance in the OT (1 K 22[38]) which can properly be described as indicating a merely superstitious or magical use of blood (cf. Hastings' *DB* i. 257, *s.v.* 'Bath, Bathing'). For its employment in Jewish ceremonial see separate artt. COVENANT, PURIFICATION, SACRIFICE. Hellenic ritual is not without examples of cathartic sprinkling of blood (cf. Apollonius Rhod. *Argonaut.* iv. 704 f.; Æschylus, *Eum.* 282 f.), and in the Roman Lupercalia there was a piacular use of dog's and goat's blood (cf. Warde Fowler, *Roman Festivals*, 311). But it was probably at a somewhat late date and under the influence of prevailing Eastern cults that the practice of immersion in blood, resulting in moral cleanness, was brought into the Empire. In the Taurobolium and Criobolium (Hæmobolium, cf. Orelli's *CIL*, No. 2334) the worshipper, issuing drenched with blood of bull or ram from the pit over which the beast had been slaughtered, was regarded as being cleansed from his sins and ready for eternity (cf. 'taurobolio criobolioque renatus in æternum,' *Berlin CIL* vi. 510). See separate artt. CRIOBOLIUM, GREAT MOTHER, TAUROBOLIUM. For savage rites of purification by blood-sprinkling, cf. J. G. Frazer, *Adonis Attis Osiris*, 251; and for Scandinavian and German parallels, cf. Grimm, *Deutsche Mythologie*[4], i. 45; and U. Jahn, *Opfergebräuche*, 31. Cf. also p. 372[b].

(2) *Metaphorical use.*—In the Christian Church allusion is very early made to a baptism by blood in connexion with martyrdom. Polycarp (A.D. 156), who stripped himself of his garments at the stake, may very well have wished to signify by so doing a preparation for baptism by blood and fire; and although the action seems to have been unusual enough to attract the attention of Lucian, who in his *de morte Peregrini* describes Peregrinus as making a similar preparation for death, it was probably not the first time that a Christian martyr tried to carry out in his own person the prophecy of Mk 10[39] (cf. H. F. Stewart, *Invocation of Saints*, 54, 55). The germ of the idea that death for Christ had the effect of baptism, viz., remission of sin, is found in Melito of Sardis (*c.* 170 A.D.), who in an extant fragment (ed. Otto, xii.) says that two things confer forgiveness of sins, viz., baptism and suffering for Christ. Hermas (*Pastor*, iii., *Simil.* 9, § 20) says much the same: 'Omnium eorum deleta sunt delicta, quia propter nomen Filii Dei mortem obierunt.'

But the first definite mention of baptism by blood in Christian literature is probably a passage in the *Passio S. Perpetuæ* (A.D. 202): 'a sanguine ad sanguinem ab obstetrice ad retiarium lotura post partum secundo baptismo' (*Passio S. Perpetuæ*, 118). To about the same date may be assigned the *de Baptismo* of Tertullian, who says: 'est quidem nobis etiam secundum lauacrum, unum et ipsum, sanguinis scilicet, de quo dominus, habeo, inquit, baptismo tingui, cum iam tinctus fuisset' (*de Baptismo*, 16, cf. Lupton's ed. *ad loc.*).

The distinction between the first and second baptism made by Tertullian in this passage and elsewhere is maintained by the anonymous author of *de Rebaptismo*, and by Cyprian, who says (*de Exhort. Martyr.* præf. 3) that the first baptism (by water) gives remission of sins, while the second (by blood) gives union with God and man, or the final victory of God and Christ.

Origen holds that baptism by blood excludes the possibility of sin, and ventures to assert its superiority over baptism by water (*Hom. in Jud.* vii. 473; cf. Redepenning, *Origenes*, ii. 28).

These notions, struck out under stress of persecution, were taken up in times of peace by later writers, *e.g.* Ambrose, Augustine, Cyril of Jerusalem, Gregory of Nazianzus, and Gennadius, and became the established teaching, until finally scholastic divinity definitely adopted the scheme of *baptismum sanguinis aquæ flaminis* (sc. *spiritus sancti*) (cf. Thomas Aq. *Summa*, p. iii., q. xi. xii., where baptism by blood is assigned a higher place than the other two).

It is doubtless possible to regard the expression baptism by blood, fire, tears as merely rhetorical (so *DCA* i. 169, *s.v.* 'Baptism'); but Hagenbach (*History of Christian Doctrine*[6], i. 286) points out that the parallel between the efficacy of water and blood rests upon the antithesis which the Fathers desired to maintain between man's free will and the influence of Divine Grace. In baptism by water man appears as a passive recipient; in baptism by blood he contributes something of his own.

STEWART.

BAQILĀNI.—Baqilāni († A.H. 403 = A.D. 1012) was initiated into the system of orthodox theology associated with the Ash'arites—so named from the founder of the school—by his teacher Mugāhid, a pupil of Ash'arī himself († A.H. 324 = A.D. 935) and Bāhili († A.H. 327 = A.D. 938). The aim of this school was to safeguard the doctrines of the Qur'ān against the rationalistic tendencies of the Mu'tazilites, and at the same time to maintain a conciliatory attitude towards the claims of reason and the philosophy which contended for the rational interpretation of the Qur'ān and the exclusion of all its irrational elements. Baqilāni, in his endeavour to hold the balance even between the two conflicting parties, was regarded by some as simply a Mu'tazilite, *i.e.* a rationalist and an infidel, but the majority saw in him the champion of orthodoxy among the Ash'arites. His whole active life was given to his polemic against the liberalism of the Mu'tazilites. That he had a potent influence upon Muslim theology may be inferred from the fact that his opinions are cited in conjunction with those of al-Ghazālī († A.H. 505 = A.D. 1111), the greatest theologian of Islām, and his teacher Juwaini († A.H. 478 = A.D. 1085), by ibn Taimīya († A.H. 728 = A.D. 1327) in his Letters (Cairo, 1323), p. 62, by Qushgi († A.H. 879 = A.D. 1474) in his Commentary on Tūsi's († A.H. 672 = A.D. 1273) 'System of Doctrine,' (*Tagrid*), Treatise ii., 'Inquiry concerning the will,' and by many others. Baqilāni's system is practically that of Ash'arī (see AL-ASH'ARĪ, p. 111), although he certainly grafted several philosophical doctrines upon the orthodox theology, such as the doctrine of atoms, the doctrine of empty space, the idea that the will (especially in God) abhors the contrary of the thing willed, and that one accident cannot become the substratum of a second. The extant dicta of Baqilāni, however, are too meagre to substantiate any further differences of note.

All we know of his external life is that he was born in humble circumstances, his father being a greengrocer in Baṣra, and that he held the office of a judge in the same city. From the latter fact comes the title by which he is best known, viz., Qādī Abū Bakr, but his full name was Abū Bakr Aḥmed ibn Ali ibn at-Taiyib al-Baqilāni.

BARDS.

Breton (E. ANWYL), p. 412.
Irish (DOUGLAS HYDE), p. 414.
Welsh (E. ANWYL), p. 416.

BARDS (Breton).—Though the Breton tongue is closely related to Welsh, the history of Breton poetry is far more meagre than that of Wales. The reason for this is that in Brittany the ruling classes and those sections of the community that had literary interests turned, even in the early Middle Ages, to the French tongue for the satisfaction of their literary wants. The result was that in mediæval times there appears to have been in Brittany no powerful and clearly established literary tradition, carried on by professional or semi-professional bards, as there was in Wales; while, in later times, there was no popular demand for native poetry except when it was of a purely popular kind (such as the ballads called *Gwerziou* and *Soniou*), or took the form of religious drama. Count Hersart de la Villemarqué, in his zeal for his native land, imagined that in mediæval Brittany a body of heroic poetry had flourished; but there are, unfortunately, nowhere to be found any traces of such poetry. Nor have we in the case of Breton, as we have in the case of Welsh, marked evidences of that linguistic conservatism which tends to keep the literary tongue distinct from the spoken language of a people. Breton has far more of the characteristics of a colloquial language than Welsh, and it approaches nearer in many respects to some of the Southern Welsh dialects than to the Welsh literary tongue. One of the great obstacles to the view that Chrétien de Troyes derived his Arthurian material and nomenclature from Brittany is that, apart from popular folklore, there is no evidence of any Arthurian literary cycle in mediæval Brittany at all; and the other British heroes, who are associated with Arthur, do not appear even to have been known in Brittany; while in Wales, on the other hand, they were the leading heroes both of prose and of verse narrative. In Wales the centres of the bardic system were the courts of the princes, but in Brittany there is no evidence whatsoever of any systematic princely patronage given to Breton poetry. As M. Loth of Rennes says, there is no continuous Breton text of any kind before the end of the 15th century. The language certainly was written before then, since we have Breton glosses and Breton proper names in writing; so that it is all the more strange, if Brittany had a flourishing literature in Breton, that there should be in existence no single fragment of it. In his *Chrestomathie bretonne* M. Loth says:

'After having invaded all the coasts of the Armorican peninsula from the Couesnon to the Loire, after having had the upper hand in the old dioceses of Dol, Saint-Malo, Saint-Brieuc, Tréguier, Léon, Cornouailles, and Vannes on the Nantes coast, and in the interior having commenced to cross, from the 8th to the 9th cent., even the Vilaine to the neighbourhood of Redon, Breton is found, after the 11-12th cent., suddenly thrust back

towards the West, and from this period it occupies almost the same area as it does to-day. The alliances of Breton chiefs with French families, whether of French Brittany or of France itself, or of the Anglo-Norman zone, were not slow to make French the language of the aristocracy and the instrument of intellectual culture, even in the Breton-speaking zone. The most ancient texts in mediæval Breton bear witness to this: they are almost all translations or imitations from the French; they are entirely penetrated with French words.'

M. Loth shows how Breton was, even in mediæval times, relegated to a lower place. Yet, as he points out, we should not be justified in thinking that there had never been in Brittany such a thing as Breton culture or Breton literature. He argues quite justly that the very existence up to the 16th cent. of the complicated Breton system of versification implies a literary period during which that system was evolved; such a system, which, he says, has features in common with the versification of Wales and Cornwall, implies the existence at one time of a school of bards or wandering Breton poets (*trouvères bretons*). It is significant, however, that the Breton metres bear far fewer traces of professional elaboration than do those of Wales. In this case M. Loth is inclined to explain the complete disappearance of the older body of poetry by the very limited circle to which it appealed or the oral character of its transmission. The significant fact for all students of Celtic influences on French mediæval literature is that not a line of Breton mediæval literature exists before the 15th century. How meagre the remnants of Breton poetry are, as compared with those of Wales, will be seen from the following list of the fragments and portions of Middle Breton poetry from the 15th and subsequent centuries that have come down to us:

(1) A Breton fragment in the farce of M. Pathelin (Loth, *RCel* iv. 451, v. 225). (2) A score of quite mutilated verses, probably in the Vannes dialect and of the end of the 15th cent. (published by Loth, *ib.* viii. 161). (3) A metrical life of St. Nonn, the mother of St. David, in the form of a Mystery play (published in 1837 by the Abbé Sionnet, with a translation by the Breton grammarian and lexicographer, Le Gonidec, and by M. Ernault, *ib.* viii. 230 ff.). The only source of this mystery is a MS in the Bibliothèque Nationale of the 15th century. The story is that of the Latin *Life of St. David* dramatized. The scene is laid mainly in Wales, but an attempt is made to localize some features of the story in Brittany, such as the burial of St. Nonn at Dirinon.

From the 16th cent. onwards the chief compositions written in Breton have been Mystery plays, which show unmistakably the influence of French models.

In 1530 there was published *Le Grand Mystère de Jésus*, of which a copy exists in the Bibliothèque Nationale. From the evidence of language, M. Loth believes that this Mystery was written about the date of its publication. A second edition was published at Morlaix in 1622 by Georges Allienne. M. Loth points out that the edition followed by the Breton translator is that of Arnoul Gresban, or rather that of Jean Michel, played at Angers in 1486, and soon afterwards printed by Vérard. The same book also contains a Breton version of the *Transitus Beatæ Mariæ* (*Tremenvan an ytron guerches Maria*), the *Fifteen Joys of Mary* (*Pemzec leuenez Maria*), and the *Life of Man* (*Buhez Mabden*). For the two latter there are no known French originals. Another Breton Mystery, which was published in the 16th cent. and afterwards in the 17th, was *Le Mystère de Sainte Barbe*. The first edition was published in 1557, and the second in 1647. The former was printed at Paris for Bernard de Leau, printer of Morlaix (see 'Bibliographie des traditions et de la littérature populaire de la Bretagne' [pp. 315–316], by H. Gaidoz and Paul Sébillot, published at Paris [1882] as an extract from the *RCel*). This Mystery has been reprinted after the 1557 edition, with the variant readings of the 1647 edition, by a distinguished Breton scholar, M. E. Ernault, professor at the Faculty of Letters of Poitiers (Nantes, Société des bibliophiles bretons, 1885). This drama is substantially the same as the printed French drama of the same name, but M. Loth shows that there are differences between the two plays sufficiently marked to justify the supposition that the Breton drama is an adaptation of a French version parallel to that which has been printed. Another Breton Mystery is *The Mirror of Death*, composed in 1519 and printed in 1575, at the Convent of St. Francis of Cuburien. This Mystery is in private hands, and M. Loth states that he was able to obtain a copy of a portion of it only through the good offices of the Abbé Corré of Lesneven, who transcribed it.

In the 17th cent. we find also some Breton hymns published by Tanguy Gueguen in 1650, but there has been no development of hymnology in Breton comparable for a moment with that of Wales. In the 18th cent. the work of adapting and copying Mystery plays was carried on vigorously, and we have the following among other compositions of this type:

(1) *Robert le Diable*, a Mystery in six acts and two days. This bears the date 30th November 1741. M. Loth shows it to be of French origin, but states that it is very different from the play of 'Robert le Diable' in the *Miracles de Notre-Dame*, t. vi. (Société des anciens textes français), and also from the *Mystère du xive siècle*, published at Rouen in 1836. (2) *The Creation of the World*. The oldest known MS of this play was written in 1760, and is, like the Cornish *Gwreans an bys* ('The Creation of the World'), an imitation of the French. (3) *The Tragedy of St. Alexis*. This was represented in 1799, and is a translation into Breton from French, though its precise French source is not known. M. Loth points out that it is very different from the Miracle play of 'St. Alexis' in the *Miracles de Notre-Dame*, t. iii. p. 282 (Société des anciens textes français).

The leading Breton poet of the 19th cent. is Luzel (François-Marie), who was born on 6th June 1821 at Plouaret, Côtes-du-Nord, on the boundary of Lannion and Guingamp. Breton literature and the revival of Breton life in the 19th cent. owe probably more to the work of Luzel than to that of any other man. The Vicomte Hersart de la Villemarqué (1st half of 19th cent.) undoubtedly did much to call attention to the history and literature of Brittany, but his uncritical attitude towards popular Breton poetry, which he imagined to be of remote antiquity, and his readiness even to alter, in accordance with his preconceived ideas, the text of the popular poems which he published, led to a reaction. Luzel, on the other hand, possessed the true scientific as well as the poetic spirit of his age, and was alive to the importance of basing theory on ascertained concrete fact. It is to his zeal that we owe the collection of numerous copies of Mystery plays that were scattered over Brittany. Nor did he confine his researches to plays; he also gathered together a considerable body of popular Breton ballad poetry, the *Gwerziou Breiz-Izel* and the *Soniou Breiz-Izel*. It is in these simple popular poems that we see the true reflexion of the poetic spirit of Brittany. Wales has, indeed, in her *Penillion telyn* a certain body of popular poetry, but it consists for the most part of isolated verses; and, by the side of the earlier and later traditions of that poetry which is the fruit of conscious personal skill, the popular poetry of Wales has perhaps not been adequately prized. In Wales, too, there is a considerable ballad literature, which has characteristics that are very similar to those of the popular poems of Brittany.

Breton popular poetry has a simple and artless character, but its very simplicity gives it a charm of its own. It is fond of those narrative and dramatic incidents which often occur even in the humbler life of man. It has various moods, but the graver and sadder strain of a life of toil predominates. This poetry is especially interesting as the expression of a racial psychology that has been in close touch with Nature through hard toil on land and sea, and which has had, moreover, a life far away from that of the great centres of the wider world. In spite of the close kinship of the Welsh and Breton tongues, the Welsh and Breton types of mind are at the present day in many respects very different. The Breton mind is conservative, the Welsh mind is progressive; Brittany is the great Roman Catholic stronghold of France, Wales is the great Nonconformist stronghold of Southern Britain. The individualistic as well as the collective movements of the 19th cent. have met with a hearty response in Wales; and the industrial problems of the age are nowhere more keenly felt than in some of the populous centres of Wales. The spirit of competition has pervaded even her literary sphere. Yet it is pleasing to see the growth at the present day of a certain *rapprochement* between Wales and Brittany, which is proving a stimulus to Breton literature and to Breton institutions. One feature of this *rapproche-*

ment has been the exchange of visits at the National Eisteddfod of Wales and the Celtic festivals of Brittany by delegates from the two countries. In these visits the Marquis de l'Estourbeillon, M. Fustec, M. le Goffic, and M. Jaffrennou, one of the ablest living poets of Brittany, have taken an active part. To M. le Goffic Brittany owes a deep debt of gratitude for the active part which he has taken in the publication of Breton ballads, and the stimulus which these have been to the further composition of those simple poems in which the Breton mind delights.

LITERATURE.—J. Loth, *Chrestomathie Bretonne*, 1re partie, 'Breton-Armoricain,' Paris, 1890; Luzel, *Gwerziou Breiz-Izel*, i., Paris, 1868, ii. 1874, also *Soniou Breiz-Izel* (*Poésies Lyriques*), Paris, 1890, and *Bepred Breizad* (*Toujours Breton*), with a French tr. by J. Haslé, Paris, 1865; Count Hersart de la Villemarqué, *Poèmes Brewns du Moyen Âge*, Paris (n.d.), also his *Barzas-Breiz*, Paris, 1839, [2] 1845, [3] 1867; P. Sébillot and Henri Gaidoz, *Bibliographie des traditions et de la littérature populaire de la Bretagne*, Paris, 1882, pp. 277–338 [this bibliography is invaluable for the study of all phases of Breton life]; Loth, *Emigration bretonne en Armorique du ve au viie Siècle de notre ère*, Rennes, 1883; Anatole le Braz, *Le Théâtre Celtique*, Paris (n.d., but probably 1905) [this work has a most valuable résumé of the characteristics of Breton literature]; Victor Tourneur, 'Esquisse d'une histoire des études celtiques' (*Bibl. de la Faculté de Philos. et Lettres de l'Université de Liège*, fasc. xv.), Liège, 1905; Keller and E. v. Seckendorff, *Volkslieder aus der Bretagne*, Tübingen, 1841; Souvestre, *Les derniers Bretons*, 1836, new ed. Paris, 1875; Hartmann and L. Pfau, *Bretonische Volkslieder*, Cologne, 1859; Tom Taylor, *Ballads and Songs of Brittany*, London, 1865; Ernault, 'Poèmes bretons, Merlin, Lez-Breiz, traduits du breton du Barzaz-Breiz en vers français (*Mémoires de la Société d'Emulation des Côtes-du-Nord*, t. xix. [1881]); Luzel, *De l'Authenticité des chants du Barzaz-Breiz*, Saint-Brieuc and Paris, 1872; Liebrecht, art. on the authenticity of *Barzaz-Breiz*, in *GGA*, 7th April 1869.

E. ANWYL.

BARDS (Irish).—The earliest poems of the Irish bards are lost; but although it is not easy to re-construct for ourselves, with any degree of fullness, the functions and surroundings of the pre-Christian poets, we are by no means without data to attempt such re-construction. We know, in the first place, that the poet was regarded as possessed of powers sufficiently supernatural to make even princes tremble; for with a well-aimed satire he could raise boils and disfiguring blotches upon the countenance of his opponents, or even do them to death by it. This belief continued until the later Middle Ages; and, even down to the days of Dean Swift, the Irish poet was credited with the power of being able to rhyme at least rats and vermin to death. Again, the early Irish poet was, by virtue of his office, a judge in all cases of tribal disputes and in other matters. He was also, if not a Druid himself, probably closely allied with the Druidic order; and when Christianity superseded Druidism in the 5th cent., the mantle of Druidic learning seems to have fallen upon his shoulders; and amid Christian times he seems to a large extent to have continued the Druidic traditions. His verses prior to the 6th or 7th cent. were not rhymed, but seem to have depended for their effect upon diction—a sort of rhythm, and perhaps to some extent alliteration.

The Irish memory, always very tenacious, has handed down to us in some of our oldest MSS several verses said to be the first ever made in Ireland. These are ascribed to no less a person than Amergin, brother of Eber, Ir, and Eremon, the three early Milesian conquerors, sons of Milesius himself, to whom (or to whose uncle Ith) every free Celtic family in Ireland traces itself back to this day, just as the Teutonic races of Germany traced themselves to one of the three main stems that sprang from the sons of Mannus, whose father was the god Tuisco. These verses of Amergin, like all other very early Irish poems that have come down to us, are composed in a kind of rhetoric or unrhymed outburst, called *rosg* by the Irish; and there can be little doubt that they were handed down from grandfather to father and from father to son, perhaps for hundreds of years before the Irish Celts became acquainted with the art of writing, which they probably did in the 3rd cent., when, having become acquainted with letters through the Romanized Britons, they invented for themselves their curious Ogam alphabet. As it has always been the belief of the Gaels that these verses of Amergin's were the earliest ever composed in Ireland, it may very well be that they actually do represent the oldest surviving lines in the vernacular of any country in Europe except Greece alone:

'I am the wind which breathes upon the sea,
I am the wave of the ocean,
I am the murmur of the billows,
I am the ox of seven combats,
I am the vulture upon the rock,
I am a beam of the sun,
I am the fairest of plants,
I am a wild boar in valour,
I am a salmon in the water,
I am a lake in the plain,
I am a word of science,
I am a point of the lance of battle,
I am the man who creates in the head (*i.e.* of man) the fire (*i.e.* the thought).
Who is it that throws light upon the meeting on the mountain (if not I)?
Who announces the ages of the moon (if not I)?
Who teaches the place where couches the sea (if not I)?'

It is only natural that D'Arbois de Jubainville, whose translation of these very difficult verses is here given, should discern in them a strong vein of Pantheism, which appears to run through the poem. It may, however, have no such pregnant signification, and may be merely a panegyric, couched in metaphor, upon the prowess of the singer himself. Another poem ascribed to the same Amergin appears to be an invocation of Ireland, of which he and his brothers took possession for the Milesians. It is unrhymed, has a tendency towards alliteration, and shows a strongly marked leaning towards dissyllabic diction, as—

'I invoke thee, Erin,
Brilliant, brilliant sea,
Fertile, fertile hill,
Wavy, wavy wood,
Flowing, flowing stream,
Fishy, fishy lake,' etc.

The Irish annalists themselves have never been agreed as to the time when Amergin is supposed to have sung these verses, some dating it as far back as 1700 B.C., and others placing it as late as 800 B.C.. All that we can say with certainty is that they are very old. In like manner we find preserved the earliest satire said to have ever been pronounced in Ireland, and other pieces of the same nature, all undoubtedly of great antiquity and almost unintelligible, despite the heavy glosses added to them by the Irish of the Middle Ages.

After the general establishment of Christianity in Ireland, which was largely owing to Saint Patrick, who commenced his missionary labours about the year 432—though there were Christians in the South of Ireland before his time—we find the poets still occupying a very high position. In the preface to the old law-book the *Seanchus Mór*, some of whose tracts in their present form cannot, says Jubainville, be later than the close of the 6th cent., we read that the Old Law had been reduced to form by the Irish poets long before St. Patrick's time. 'Whoever the poet was,' says the text, 'who connected it by a thread of poetry before Patrick, it lived until it was exhibited to Patrick. The preserving shrine is the poetry, and the Seanchus, or Law, is what is preserved therein.' The tract itself begins thus:

'The Seanchus of the men of Erin—what has preserved it? The joint memory of two seniors, the tradition from one to another, *the composition of poets*.'

Here it is that we probably come upon the real secret of the early poet's importance, which, as we know, placed him next to the prince and rendered

his person sacrosanct. This importance arose from the fact that, in an age when writing was not known or used, he, and he alone, possessed the power of throwing law, history, and, above all, genealogy, into such forms as could be stereotyped upon the only material then available—the human memory. We know from Cæsar (*de Bell. Gall.* VI. xiv. 4) that the Gaulish Druids who could write, and who used Greek letters for ordinary purposes, nevertheless refused to commit to writing any of the considerable number of verses which they were obliged to learn. Cæsar seems to think that they did this partly to keep their lore a secret known only to themselves, and partly to strengthen the memory of their disciples. It is very probable, however, that the Druids' verses, in which, as in the verses of the early Irish poets, laws, genealogies, rights, and prohibitions were enshrined, had had their origin, in Gaul as in Ireland, long before the art of writing had been diffused, and the priestly class, always conservative by nature, had continued to hold fast to tradition, not only in the matter of their learning, but also in their manner of transmitting it. There is no indication, however, that the Irish ever imitated them in this respect, or showed any repugnance to committing to writing their own traditional lore, so soon as letters had once become common amongst them.

The schools of the Irish poets subsisted for generations, side by side with the colleges of the clergy, in Ireland, but they were perhaps less firmly localized, and showed a tendency to attach themselves to the personalities of their master-poets and teachers rather than to particular localities. It is also probable that there may have been a certain amount of confusion when the ancient Druidic schools began to break up and disintegrate, or rather before the 'sons of learning,' as the Irish called the students who attended them, began to specialize; and it is nearly certain that the offices of historian, judge, poet, and genealogist were not sharply distinguished from one another for many generations. This will be the more readily understood if we remember that one of the principal tasks of the historian in early times was to preserve the tribal genealogies upon which the holding of land, and indeed the entire tribal system, depended. But both his history and genealogy were preserved in a shrine of poetry, and whoever was master of the contents of this poetry became, naturally and inevitably, the judge, who alone was able, from his own knowledge, to settle the disputes of the tribe and the suits of its individual members. Indeed, the office of poet did once legally carry with it the office of judge as well, according to Irish accounts, until the reign of Conor Mac Messa, shortly before the birth of Christ. He it was who first made a law that the office of poet should not of necessity carry with it the office of judge also; for, says the old text, 'poets alone had the power of judicature from the time that Amergin Whiteknee [the son of Milesius mentioned above as being the first Irish poet] delivered the first judgment in Erin.'

The profession of poet was so popular in early Ireland, that at one time, it is said, one third of the patrician families followed this calling. They expected to be supported by the general public, and terrorized the wealthy with the threat of their satire. They constituted an intolerable burden upon the productive working part of the nation, and three distinct attempts were made to get rid of them altogether, the last at the Synod of Drumceat in A.D. 590, where their numbers were greatly cut down and their prerogatives restricted, though, to counterbalance this, certain endowments of land were apportioned to provide for their schools. These institutions actually continued, with scarcely a break, until the 17th cent., when those few who escaped the spear of Elizabeth fell beneath the sword of Cromwell. In these schools, which were the lineal descendants of the old pre-Christian Druidic foundations, there gradually arose a complete system of specialization in learning. There still exist fragments of the metrical text-books used in these schools, preserved in the *Book of Leinster* (*c.* 1150) and other MSS, and that they date, partially at least, from pre-Christian times seems certain from their prescribing, amongst other items of the poet's course, a knowledge of the magical incantations called *Tenmlaida*, *Imbas forosnai*, and *Dichetal do chennaibh na tuaithe*. The poet was also obliged to learn an incantation called *Cétnad*, of which the text says:

'It is used for finding out a theft: one sings it, that is to say, through the right fist on the track of the stolen beast [observe the antique assumption that the only kind of wealth to be stolen is cattle], or on the track of the thief in case the beast is dead, and one sings it three times on the one track or the other. If, however, one does not find the track, one sings it through the right fist and goes to sleep upon it, and in one's sleep the man who has brought it away is clearly shown and made known,' etc.

Another *Cétnad* to be learned is one which desires length of life, and is addressed to 'the Seven Daughters of the Sea, who shape the thread of the long-lived children.' Another curious operation with which the poet had to make himself familiar was the *glam dichinn*, intended to punish any king or prince who should refuse to a poet the reward of his poem. The poet, says the text,

'was to fast upon the lands of the king for whom the poem was to be made; and the consent of thirty laymen, thirty bishops [a Christian touch added in later times to make the passage pass muster], and thirty poets should be had to compose the satire.'

The proceedings were weird and terrifying. There were seven grades of poets, of which the *ollamh* [*ollav*] was the highest, and the whole seven were to go,

'at the rising of the sun, to a hill which should be situated at the boundary of seven lands, and each of them was to turn his face to a different land, and the *ollamh's* face was to be turned to the land of the king who was to be satirized, and their backs should be turned to a hawthorn which should be growing on the top of a hill; and the wind should be blowing from the north; and each man was to hold a perforated stone and a thorn of the hawthorn bush in his hand; and each man was to sing a verse of his composition for the king, the chief poet to take the lead with his own verse, and the others in concert after him with theirs; and each of them should place his stone and his thorn under the stem of the hawthorn tree; and, if it was they who were in the wrong in the case, the ground of the hill would swallow them; and, if it was the king who was in the wrong, the ground would swallow him, and his wife, and his son, and his steed, and his robes, and his hound,' etc.

It is evident that these magic incantations and terrifying ceremonies found amongst the remnants of the poets' books are really remnants of the pre-Christian teaching of the Druidic schools, which had embodied themselves in the text-books of later times. They show at once the superstitious reverence with which the poets must have been regarded, and the extreme antiquity of their schools and text-books; for it can scarcely be contended that such pieces of obvious Paganism had their origin after Ireland had been Christianized.

The Irish poet was not called a 'bard' but a *file* (*filla*). The bard was, in comparison with him, only a rhymester; and, though both existed side by side, there was the greatest disparity of status. Where the *file* received his three cows for a poem, the bard bore away only a calf. The distinction between the *file* and the bard seems to have come to an end during the long-continued wars with the Norsemen, when much of Ireland's internal policy was thrown into the melting-pot. There were seven orders of *file*, and the highest had something like a twelve years' course before he attained his degree. The bards were divided into 'free' and 'un-free' bards. There were eight classes of each, and each class was allotted by law the metres which it was allowed to make use of. A lower class could not use the metres belonging to a higher

class. Whether the Celts invented rhyme seems open to doubt. Zeuss, the father of Celtic learning, asserts that they did. One thing is certain: we find the Irish as early as the 7th century—that is, long before any other people in Europe made use of it—bringing rhymed poetry to a high pitch of perfection. It is no exaggeration to say that by no people on the globe, at any period of the world's history, was poetry so cultivated and so remunerated as it was in Ireland during the Middle Ages, and even down to the 17th century. In the 16th and following centuries the poets fell under the ban of the English State, because, as Spenser puts it, their poems were 'tending for the most parte to the hurte of the English or [the] mayntenaunce of theyre owne lewde libertye, they being most desirous thereof.' The severest Acts were passed against them, and numbers of them were hanged. The present writer cannot recall a single poet who took the side either of the English invaders or of the Reformation. So thoroughly was all indigenous Irish civilization stamped out under the Penal Laws, that, by the close of the 18th cent., there was probably not a single person living who could compose in any of the 400 metres practised by the ancient schools. A new school of poetry arose among the unlearned, and accentual metres took the place of syllabic poetry, and so it continues to this day.

Outside of its marvellous development of metric, the most interesting feature of Irish poetry is perhaps its appreciation of nature in all its moods, its love of the sea, the forest, and wild scenery, which it seems to have developed long before other European literatures.

LITERATURE.—O'Curry, *Manners and Customs of the Ancient Irish*, 3 vols., London, 1873, and the same author's *Lectures on the MS Materials of Ancient Irish History*, Dublin, 1878; Hardiman, *Irish Minstrelsy, or Bardic Remains of Ireland*, London, 1831; Thurneysen, 'Mittelirische Versiehren,' *Irische Texte*, 3rd ser. i., Leipzig, 1891; *Transactions of the Ossianic Society*, vol. v., 'The Proceedings of the great Bardic Institution,' Dublin, 1860; O'Donovan, *Book of Rights*, Dublin, 1847; Sigerson, *Bards of the Gael and Gall*[2], London, 1907; Keating, *History of Ireland* (Irish Texts Society's ed. 1908), iii. 93 ff.; Atkinson, *On Irish Metric*, Dublin, 1884; Hyde, *Literary History of Ireland*, London, 1899.

DOUGLAS HYDE.

BARDS (Welsh).—1. Definition and scope of the term.—In Welsh the modern form of the term for a poet is *bardd* [*dd* = English soft *th*], but, at an earlier stage in the history of the language, the form was *bard*. In one of the old Welsh glosses (8th or 9th cent.) on Martianus Capella the word 'epica' is glossed as *bardaul* [= mod. Welsh *barddol*]. In the Cornish Vocabulary (Zeuss-Ebel, p. 1070), 'tubicen' is explained as *barth* [*th* = W. *dd*] *hirgorn* ('the bard of the long horn'), while in Breton the corresponding form *barz* is given in the Catholicon as *menestrier* ('a mime'). In Welsh, as in Irish, the term 'bard' preserved the meaning which it had in Gaulish. Posidonius, quoted by Athenæus (vi. 49, p. 246[c-d]), refers to the poets of the Celts as βάρδοι (*bardoi*), and says that these are poets who utter praises with song. The same writer, quoted by Strabo (iv. 4. 4, p. 197), speaks of βάρδοι, οὐάτεις (*vates*), and δρυίδαι (*druidai*) as 'three tribes' (-ρία φῦλα) among the Celts, the bards being 'composers of hymns and poets' (ὑμνηταὶ καὶ ποιηταί). Diodorus, also (v. 31. 2), speaks of the bards of the Gauls as 'composers of songs' (ποιηταὶ μελῶν), while he further states that they sang, accompanied by instruments like lyres, praising some and reviling others. One of these instruments in use among the Britons, as we learn from Venantius Fortunatus, was called *crotta* (Welsh, *crwth*). It will be seen from these references that the bards appear to have had a recognized place in Celtic social life, and one of the most characteristic features of the development of poetry in Wales has been the close association of the bards and their productions with the satisfaction of certain social needs of a literary character.

The existence of the term 'bard' in the same form in both the Goidelic and the Brythonic branches of the Celtic family shows that it was in use before the separation of these two branches. At the same time it can hardly have been used as a professional term in the period of Italo-Celtic unity (to which philological considerations point), since there is no trace of it in the Italic languages, while the term corresponding to οὐάτεις (Lat. *vates*, Irish *fáith*, Welsh *gwawd*, 'song') appears to have been common to Italic and Celtic in that period. It was probably as the official spokesman in song of the feelings of his tribe on important occasions that the Celtic bard gained his name. He would be the recognized composer for his community of elegies and eulogies and, if need were, of satires. His elegies and eulogies may well have included in their scope not only the recently dead, but also the famous heroes of the tribe or family with which he was associated, while hymns in praise of the gods were no doubt from time to time composed by these official interpreters of tribal feeling. Cæsar (*de Bell. Gall.* VI. xiv. 4) tells us that it was the practice of the Druids to teach their disciples a large body of oral poetry, which they were not allowed to commit to writing, lest thereby their memory should be impaired.

Much of the interest of the evolution of Welsh poetry consists in a study of its correlation with the varying social needs of the Welsh community, and also the gradual growth of a body of poetry which, as in modern countries generally, is an individual rather than a social product. It is of interest, too, to note how the poetry of Wales has been the expression, not only of various literary wants of a social character, but also of the thoughts generated by the beauty of Nature and by the vicissitudes of human life. It contains many poems and lines of true insight and real æsthetic beauty, and shows that the minds of many Welsh poets have been attuned to the signal grandeur and charm of the scenery of Wales.

2. The bards in the Welsh laws.—In the Welsh laws of Howel Dda (10th cent.), the bards have a recognized place in the social order, and have official representatives in the royal household. The three bardic grades appear to have been (1) *Pencerdd* ('chief of song'), or *Bardd Cadeiriog* ('the throned bard'); (2) *Bardd teulu* ('the bard of the house-host or retinue'); and (3) bards of the lowest grade, who were called sometimes *Clerwyr*, sometimes *Oferfeirdd* ('superfluous bards'), and sometimes *Beirdd Yspydeit* ('bards receiving entertainment'). The throned bard sat next below the judge of the court in the upper portion of the hall, while the bard of the household sat on one hand of the chief of the household in the lower portion, the chief of the household being a son of the king, or his nephew, or some other member of the blood-royal. One of the duties of the chief of the household, we are told, was to place the harp in the hands of the bard of the household at the three principal feasts (Easter, Whitsuntide, and Christmas). One of his privileges, too, was that he could have a song from the bard of the household whenever he might desire it. One section of the Welsh laws enumerates the duties and privileges of 'the bard of the household,' and among them the following:—

'He is to have his land free, and his horse in attendance, and his linen clothing from the queen, and his woollen clothing from the king. He is to have the clothes of the steward at the three principal festivals. When a song is desired, the chaired bard is to begin, the first song of God and the second of the king who shall own the palace, or, if there be none, let him

sing of another king. After the chaired bard, the bard of the household, is to sing three songs on various subjects. If the queen desire a song, let the bard of the household go to sing to her without limitation, in a low voice, so that the hall may not be disturbed by him. He is to have a cow, or an ox, from the booty obtained by the household from a border-country, after a third has gone to the king; and he is, when they share the spoil, to sing the "Monarchy of Britain" to them. When he shall go with other bards he is to have the share of two.'

The throned bard, or chief of song, who stood in the highest position of all, has his functions and privileges also described.

'He is to have his land free. He is to begin with a song of the Deity, and next of the king who shall own the palace, or of another. The chief of song only is to solicit, and of the common gains of himself and companions he is to have two shares. He is to have twenty-four pence from every minstrel, when he may have finished his instruction. He is to have twenty-four pence from every woman on marriage, if he have not received it from her before. He is to have the *amobyr* ("marriage-fee") of the daughters of the minstrels. He is to lodge with the *edling* ("heir-apparent").'

For a bard of unusual skill the term *prydydd* was sometimes employed, and the chieftainship of song was obtained by a bardic contest (*ymrysson*) in the form of a dispute between the two candidates. An *ymrysson* of this kind (probably incomplete) is still extant (see *Myvyrian Archaiology*[2], p. 154*a*). Other terms used in the mediæval period were *Culfardd* (found in the *ymrysson* in question), and *Posfardd*, the earliest instance of which is in the Book of Taliessin (14th cent.), poem i., l. 13, but the precise force of these terms is uncertain.

It is clear from these indications that the professions of the poet and the minstrel were closely linked together, and practised, not infrequently at any rate, by the same person. The chief of song appears to have exercised magisterial functions over those of lower rank, and also to have been the umpire in bardic disputes. Another function which the Welsh bards (even the *pencerdd*) exercised was that of the story-teller (*cyfarwydd*), and the term *Mabinogi*, representing the oldest stratum of Welsh mediæval narrative, appears to be derived from *mabinog*, a term found in some of the triads for an apprentice or disciple bard, possibly because this body of narrative was committed to memory by the bardic beginner. The men who composed the mediæval vaticinations (*daroganau*), such as we find in the Black Book of Carmarthen and the Book of Taliessin, were called *derwyddon*. In the *Collatio Canonum* (Paris, *Bibl. nat.*), 3182 (prior to end of 11th cent.), *dorguid* (or *darguid*=*derwydd*) is a gloss on 'pithonicus,' and means 'a seer.'

3. The oldest remains of Welsh poetry.—The oldest remains of Welsh poetry now extant are contained in the following documents: (1) *A MS of the paraphrase of the Gospels into Latin hexameters, made by C. Vettius Aquilinus Iuvencus*, in the University Library at Cambridge, transcribed in the 9th century.

This MS contains two Welsh poems written in the pre-Norman Welsh script and orthography, which are from all indications contemporary with the Welsh glosses of the 9th century. The first poem is a hymn, not unlike some of those contained in the Black Book of Carmarthen (see below), and the second a personal poem expressive of loneliness and sadness, of the same *genre* as the 'Llywarch Hen' poetry of the Black Book of Carmarthen and the Red Book of Hergest. The subjective strain of this fragment is characteristic of this type of early poetry.

(2) *An 11th cent. MS of St. Augustine's 'de Trinitate,'* now in the Library of Corpus Christi College, Cambridge.

In the opinion of the late Mr. Henry Bradshaw, three lines and a word of Welsh verse have been written by Johannes, son of Sulien, Bishop of St. David's (1071–1089). These lines are of interest, because they are undoubtedly taken from a poem of which we have some fragments in the Book of Aneirin (see below).

(3) *The Black Book of Carmarthen* (12th and early 13th cent.).

This MS contains some poems by Cynddelw Brydydd Mawr, which are undoubtedly of the 12th cent.; also certain vaticinations put into the mouth of Myrddin (Merlin), which clearly refer to historical events of the 12th century. These vaticinations are expansions of the legend of Myrddin and the story of the battle of Arderydd (see MERLIN). The first poem in this MS deals with the same topic in the form of a short dialogue between Myrddin and Taliessin. One of the features of the poetry of the Black Book of Carmarthen is the fondness which it shows for the dialogue form. The fragments of old Welsh poetry which it contains consist, in addition to the preceding poems, of hymns, a dialogue between the soul and the body, a series of stanzas commemoratory of Welsh heroes, called 'The Stanzas of the Graves,' a group of poems which are related to the Arthurian legend, and a few other poems referring to legendary characters and episodes. Part of the interest of these poems consists in the indications which they give of the existence of a body of Welsh poetry forming a heroic cycle, parallel to the prose narratives of the Mabinogion and Geoffrey of Monmouth, and to the allusions and summaries of the Triads. The poems of this cycle were not, as a rule, long, and consisted sometimes only of a few *englynion* ('stanzas'). Occasionally, as in the poems attributed to Llywarch Hen, we find a note of genuine poetry, as in the graphic description of the scenes of winter. Some of this poetry doubtless goes back at least to the 9th cent., since it is similar in style to the second Welsh poem of the Codex Juvenci. It is not improbable that subjective soliloquies of this kind were evolved out of more objective heroic poems descriptive of battle and adventure.

(4) *The Book of Aneirin* (early 13th cent.).

This MS contains the poem called 'Y Gododin,' a long poem of 938 lines, together with shorter poems called 'Gorchan Tutvulch,' 'Gorchan Adebon,' 'Gorchan Cynvelyn,' and 'Gorchan Maelderw,' the last-mentioned poem being attributed in the MS to Taliessin. Part of it is written in an orthography akin to that of the glosses, and a close analysis of it shows that it consists in parts of fragments of poems identical with portions of 'the Gododin.' 'The Gododin,' too, when analyzed, reveals signs of being of a composite character; it contains some repetition of stanzas, and series of stanzas have been broken up by intervening matter. 'The Gododin' is best regarded as a corpus of short poems relating mainly to the battle of Catraeth, fought between the Britons of the North and the men of Deira and Bernicia. The family which holds the leading place in this body of verse is that of Cynvarch, to which Cynon ab Clydno Eiddin and Urien Rheged belonged. It is of interest to notice that, in one line of 'Gorchan Maelderw,' Arthur is mentioned in words which imply that he was a leading figure in this cycle.

(5) *The Book of Taliessin* (14th cent.).

This MS contains a collection of poetry that has clear links of connexion with the earlier heroic cycle. Just as in the vaticinations the personality of Myrddin is brought into the foreground and made the mouthpiece of prophecy, so in the Book of Taliessin the legend of Taliessin is taken as a basis, and he is made the mouthpiece of verses narrating events legendary and historical in the past, at which in the course of his transformations he had been present. The poetry that is attributed to him is interspersed with allusions to the monastic studies of the Middle Ages, which suggest that it was composed by a monk (or monks) rather than a professional bard. Much of the interest of this poetry, which is very difficult and obscure, is that it has preserved for us many verse parallels to narratives contained in the Mabinogion and the Triads, and, among them, some very interesting fragments of Welsh Arthurian legend. We here find, too, references to certain of the characters of the Four Branches of the Mabinogi, which enable us to supplement the account given of them in prose. Some of the poems in the book bear evidence of being poems of the heroic type, cognate with 'the Gododin' and the oldest parts of the Black Book of Carmarthen, and it is worthy of note that the interest appears to centre round Urien Rheged.

(6) *The Red Book of Hergest* (14th and 15th cents.).

This MS, which belongs to Jesus College, Oxford, and which is deposited for greater safety in the Bodleian Library, contains a considerable body of poetry belonging to the same strata as the MSS already mentioned. It is especially rich in poetry of the type attributed to Llywarch Hen, as, for instance, the elegies on Cynddylan and Urien Rheged. Doubtless much of this poetry has grown by accretion round an older nucleus, and the topography suggests that Powys (Mid-Wales) was the chief region where it was developed. It is in this body of poetry that much of the charm of early Welsh verse consists, though much that was once thought to be pre-Norman was doubtless composed in the Norman period; and some of the poetry may even owe its origin to the Abbey of Strata Marcella (in Welsh *Ystrad Marchell*), near Welshpool, in Montgomeryshire, where it is probable that the Red Book of Hergest was copied.

(7) In the White Book of Rhydderch and the Red Book of Hergest texts of the Mabinogion there are a few *englynion* embedded in the narrative, as, for example, in Branwen, daughter of Llyr, Math ab Mathonwy, and Kulhwch and Olwen. Possibly these *englynion* may be older than the prose narrative, and may be as old as any portion that is extant of Welsh poetry.

There can be little doubt that the struggle with the English gave rise to a series of poems commemorative of the chief battles and their heroes, but it is difficult to say whether any of these poems

are now extant. The existing body of pre-Norman Welsh poetry shows signs of evolution, due to the emphasizing of the personality of the poets who were connected with the chief heroic figures, and the attribution to them of sentiments and poetry that seemed appropriate to them. For example, Aneirin is made to relate his own visit to the warriors at Catraeth, his imprisonment, and his escape; Taliessin is made to give the story of his transformations and his relations with Maelgwn Gwynedd and Elphin; Llywarch Hen is made to utter lamentations over the past, and Myrddin' prophecies as to the future. Behind these developments, however, there lies in each case the older and simpler objective type of Welsh poetry.

4. The historical poetry of the 'Gogynfeirdd.'—This body of poetry is contained in the *Myvyrian Archaiology*, and is undoubtedly contemporaneous with the persons and the events which it describes. It was written by the leading Welsh poets of their day, who were in close touch with the princes whose elegies and eulogies they for the most part sing. It is not improbable that much other poetry was composed in Wales at the time, but it is the work of the court-poets alone that has come down to us. This poetry shows all the traces of professional skill and technique: the language is singularly terse, the vocabulary and grammar are largely archaic and traditional, and there are not a few reminiscences of the older poetry. Bravery and generosity are the qualities most extolled in the princes. Allusions to battles and similar historical events are frequent. War is the dominant theme, though there are occasional glimpses of an interest in nature and even of the poetry of love. The spirit of this historical poetry is clearly akin to that of the earlier heroic poetry, to the characters of which it is full of allusions. There is not a trace within it of colloquialism, or of an effort after the simplicity of prose. Here and there we find lines of signal strength and beauty; but the poet, as a rule, aims far more at vigour and force than at æsthetic charm. The following are the chief representatives of this type of Welsh poetry in the 12th and 13th centuries:—

Meilir (1120–1160), the bard of Gruffydd ab Cynan, prince of Gwynedd. Gwalchmai, son of Meilir (1150–1190), the bard of Gruffydd ab Cynan's son, Owain Gwynedd. This poet, as his poem 'Gwalchmai's Delight' shows, had a genuine appreciation of nature. Cynddelw Brydydd Mawr (1150–1200), the bard of Madog ab Meredydd, prince of Powys (Mid-Wales). His verse is distinguished by strength and terseness rather than beauty, but he too, in a poem addressed to Eva, daughter of Madog, shows something of that delicate sense of beauty which characterized his contemporary Gwalchmai. Owain Cyveiliog (1150–1197), a prince, whose elegy on his dead warriors shows traces of the study of 'The Gododin' and of genuine poetic feeling. In Hywel ab Owain Gwynedd (1140–1172) we have a princely bard, whose love-poems have the true ring of Welsh amatory poetry, and show unmistakably that the poetic appreciation of Nature had its representatives in Wales even amid the stress of war. Llywarch ab Llywelyn (1160–1220) wrote for the most part in honour of the line of Gwynedd and of Llywelyn ab Iorwerth, perhaps the greatest prince of that line. The same tradition was carried on by Dafydd Benvras (1190–1240), Einiawn ab Gwalchmai (1170–1220), Einiawn Wann (1200–1250), Elidyr Sais, Llywelyn Fardd, Bleddyn Fardd, and others. Einiawn ab Gwalchmai composed a very striking elegy on Nest, daughter of Hywel. During this period poetry, too, was composed in honour of the Lord Rhys of Deheubarth (S. Wales) and his descendants, by Cynddelw Brydydd Mawr, Phylip Brydydd (1200–1250), and by Prydydd Bychan (1210–1260). In this body of poetry we find, too, several religious poems, which show that there was no definite cleavage between the ecclesiastical and the secular poetry of Wales. The spirit of this epoch of Welsh poetry may be regarded as culminating in the elegy written by Gruffydd ab Yr Ynad Coch (1260–1300) on Llywelyn ab Gruffydd, the last prince of Gwynedd, who was killed in 1282. This elegy is one of the finest in the Welsh language.

5. Welsh poetry from the death of Llywelyn to the Reformation.—It is a striking testimony to the vitality of Welsh poetry that the fall of Llywelyn appears to have made no appreciable difference to its progress. In Gwynedd, as had already been the case in other parts of Wales, some of the leading families became successors to the princes in their support of the poets. Among these families, none was more prominent than that of Tudur ab Goronwy of Penmynydd, Anglesey, the ancestor of Henry VII. In various parts of Wales new zones of poetry grew up, grouped round centres of lay and ecclesiastical patronage; for the great abbeys of Basingwerk, Valle Crucis, Aberconwy, Cymmer, Strata Marcella, Strata Florida, Whitland, Neath, Talley, Margam, and Tintern, together with the priories of Beddgelert, Cardigan, Carmarthen, and Monmouth, were important factors in the encouragement of Welsh literature. Side by side with the composition of original works had gone the translation of secular and religious legends from French, and the works of the poets bear abundant evidence of acquaintance with the names and the atmosphere of romance, both native and foreign. The fall of Llywelyn would appear to have turned the current of the Welsh Muse towards those gentler themes which were never alien to her. The language became simpler and more intelligible, though in formal eulogies and elegies the older style still maintained itself.

Of the newer poetry the chief representatives were Gruffudd ab Maredydd, Gruffydd ab Dafydd ab Tudur, Hywel ab Einion Lygliw, Llywelyn Goch ab Meurig Hen, and Dafydd ab Gwilym. Of these, Hywel ab Einion Lygliw is best known as the author of a poem on Mynanwy of Dinas Bran, Llywelyn Goch as the author of a remarkably fine elegy on Lleucu Llwyd of Pennal, while Dafydd ab Gwilym is the author of about three hundred poems characterized in many instances by vivid observation of nature, fertility of imagination, a most catholic sympathy, and genuine poetic insight. His exact date cannot be determined with certainty, but he flourished approximately in the first half of the 14th century. It is clear from his poetry that he was in touch with all the leading zones of Welsh poetry in his time, those of Anglesey, North Cardiganshire, Emlyn, Morgannwg, and Gwent. In Anglesey he would appear to have been in his youth associated in some capacity with a monastic institution, but his poetry is animated by a deliberate anti-ascetic tendency and an intense passion for nature. Much of Dafydd ab Gwilym's skill consists in his power of describing the essentials of an object or a scene in a few telling lines. His spirit is that of a refined humanism, and his verse bears the impress of elegant and cultured surroundings. His poems abound in allusions to native and other legends and romances, and the various series, which certain of his poems form, are, as it were, so many romances in verse. His favourite metre is the *Cywydd*, a metre invented either by himself or by one of his contemporaries, by stringing together a series of couplets consisting of the last two lines of an *englyn*; or else this metre, if not then invented, was one which had been kept in the background of the poetry of the earlier period, since no instance of it before the time of Dafydd ab Gwilym appears to be extant. In all his poems, except his formal eulogies and elegies, Dafydd ab Gwilym eschews archaisms, and aims at a simple and lucid, yet original and artistic, style. The singular richness of his genius created a new epoch in Welsh poetry, and he is succeeded by a number of imitators, especially in his love-poetry. It would be a mistake, however, to suppose that his was the sole influence current in Welsh poetry at this time. We find in Sion Cent (about 1350), for instance, emphasis laid on the ethical rather than the ritual or ascetic side of religion, and a note of poetic realism in a poem expressing sympathy with the toiler.

One of the most characteristic features of Welsh poetry at all periods has been its fidelity to the facts of human life in Wales, a life mainly of toil by land and sea; to the prominence in consciousness of the essential facts of the common lot of man, those of birth, of death, of the uncertainty of life, of disappointment, of failure, of poverty and struggle, relieved by love, by the beauty of Nature, by occasional success, by the kindness and generosity of friends, and by the charm of the muse. Until the accession of Henry VII. we find at intervals the continuance of the older tradition of the poetry of war and political interest, as in the poems of Iolo Goch (late 14th and early 15th cent.), the friend of Owen Glyndwr (Glendower), Gutto'r Glyn (1430–1468), and Lewis Glyn Cothi (1440–1490). The political interests of these periods are reflected also in the *Brudiau*, or 'Vaticinia,' to which they gave rise. In some of its aspects Welsh poetry was closely associated with the highly developed social life of the time, and requests for favours and thanks for favours granted

were not complete without being embodied in verse. This led to the practice of minute descriptions of various objects, animate and inanimate, and at times there is a tendency to have recourse to over-ingenious and far-fetched comparisons.

The chief imitators of Dafydd ab Gwilym are Dafydd Nanmor (1330–1390), Bedo Aerddren (*c.* 1480) and Bedo Brwynllys (*c.* 1450), Bedo Phylip Bach (*c.* 1480), Ieuan Deulwyn (1460–1490), and Dafydd ab Edmwnt (1440–1480).

The intimate connexion of the Welsh poets of this period with the life of their country, and their often high sense of literary art, make their works invaluable for a study of the Welsh mind and of its social and other ideals at this time. Here, again, certain zones of poetry, often flourishing around the home of some powerful patron, rise into prominence, such as the North-East zone, where we have the 'three brothers of Marchwiail' (*c.* 1350), and also Iolo Goch, Meredydd ab Rhys, Gutto'r Glyn, Dafydd ab Edmwnt, and Guttyn Owain (1450–1480); the South-East zone, where Bedo Brwynllys, Hywel Dafi (*c.* 1450), Lewis Glyn Cothi, Iorwerth Fynglwyd, Ieuan Deulwyn, and others flourished; while there were other important zones around Tywyn in South-West Cardiganshire, and Machynlleth in Montgomeryshire. A large portion of the poetry of this period is still extant in MS, and, under the encouragement of the University of Wales, its serious and thorough study is now commencing. As the poets of the period were in close touch with the leading families of Wales, they reflect very faithfully the dominant ideas of the circles wherein they moved, especially during the Wars of the Roses. In these poems, too, we see the contrast between Welsh rural life, which was in harmony with the Welsh tradition, and that of the boroughs, which were practically English garrisons established in Wales.

In some cases the bardic profession was continued from father to son, as in the case of Howel Swrdwal (1370–1420) and Ieuan ap Howel Swrdwal, Tudur Penllyn and Ieuan ap Tudur Penllyn, Dafydd Nanmor the elder, Rhys Nanmor, and Dafydd Nanmor the younger. The poets who most reflect political movements during this period are Iolo Goch, Dafydd Nanmor, Lewis Glyn Cothi, and Gutto'r Glyn. The joy felt by Wales in the accession of Henry VII. is reflected in a poem by Dafydd Llwyd addressed to 'Henry VII. after he had won the kingdom, and to Arthur his son when he was born.' Several of the Welsh bards appear to have regarded the accession of Henry VII. as in some degree a restoration of the prestige of Wales.

One of the most striking features of this period is the interest taken in the language and metre of Welsh poetry, and even in the Red Book of Hergest there is a grammar of the Welsh language and an account of Welsh versification, which appears to have been widely copied and studied. During this period, too, the bardic profession became so popular that its maintenance threatened to become a burden on the country, and means had to be devised to distinguish between the competent and the incompetent. Whatever gatherings of their own the Welsh bards may have had when they met from time to time at the courts of the princes and the houses of their patrons, it is certain that the Carmarthen Eisteddfod of 1451 had a very definite aim and purpose, namely, to serve as a bardic assize for the repression of the wanderings of uncertified bards and minstrels. The leading spirits at this Eisteddfod were Gruffudd ab Nicolas, a prominent Carmarthenshire gentleman; Llawdden, a bard from South Wales; and Dafydd ab Edmwnt, from the zone of North-East Wales. These emphasized the importance of skill in the twenty-four alliterative metres of Welsh poetry, and devised a regular system of bardic graduation. The Glamorganshire bards rebelled against the stringency of this system, and set up a system of their own. There are indications that, coincident with the introduction of English music into Wales, English metres, easier in character than those of the Welsh tradition, came in also. The consequence was that a new impetus was given to poetic composition, and the number of professional bards steadily grew. In 1524 and 1568, Eisteddfodau, or Bardic Assizes, had again to be held to seek once more to classify the bards. It is significant that these two Eisteddfodau were held at Caerwys, in Flintshire, within the North-East zone, where Welsh poetry was at this time most flourishing. The leading bard of the first Caerwys Eisteddfod was Tudur Aled, from Llansannan, in Denbighshire, a nephew and pupil of Dafydd ab Edmwnt. This brilliant poet is distinguished by his skill in description and in the composition of striking couplets. His pupil, Gruffudd Hiraethog, was the teacher of some of the leading bards of the Second Caerwys Eisteddfod, such as Simwnt Fychan, William Cynwal, Sion Tudur, and William Llŷn. In North Wales poetry flourished at this time chiefly in the North-East zone, but there was also an important zone in South Carnarvonshire and West Merionethshire and another in Montgomeryshire, with which Dr. John Davies of Mallwyd, a prominent Welsh grammarian and lexicographer of the reigns of Elizabeth and James I., was in contact. The Mostyn family at Gloddaeth, near Llandudno, and Mostyn, in Flintshire, and the family of Salisbury of Rug, near Corwen, were great patrons of Welsh poetry at this time. Some of the most beautiful poetry of the Tudor period is that attributed to Rhys Goch ab Rhiccert (see Iolo MSS). It is characterized by intense feeling for Nature and a genuine æsthetic sense. The older social poetry, too, contains, especially in William Llŷn, some very striking and graphic lines. The period of the Reformation was one of great activity in the poetic zones, especially of N. Wales.

6. **Welsh poetry from the Reformation to the present day.**—During the period of the Commonwealth, Welsh poetry received little support or encouragement, owing to the decay of several of the older Welsh families, which were strongly Royalist in sympathy. Moreover, the Welsh gentry had ceased by this time, apart from exceptional cases, to cultivate the Welsh tongue, so that the older social poetry fell into the background. Nevertheless, it was in the period of the Commonwealth that Huw Morus of Pontymeibion in East Denbighshire, a strong Royalist and a brilliant composer of love poems, continued the tradition of the 'Rhys Goch ab Rhiccert' poetry, which was largely the outcome of the newer musical needs of Wales. The brothers Gruffudd, William, and Rhisiart Phylip of Ardudwy carried on the literary tradition of their father, Sion Phylip, and there is extant a poem on the death of Charles I. written by William Phylip. After the Restoration we find this tradition carried on in Merionethshire by Sion Dafydd Laes, who wrote an elegy on Charles II., and in South Carnarvonshire from about 1692–1714 by Owen Griffith of Llanystumdwy. The newer and freer type of poetry was also represented by the hymns, carols, ballads, etc., which began to emerge into prominence and show that Welsh poetry was beginning to appeal to a new Welsh-speaking public. In the middle of the 18th cent. an able family of Welshmen, of whom Lewis Morris (the great-grandfather of the late Sir Lewis Morris) is the best known representative, gave a great impetus to the revival of Welsh poetry by collecting MSS and by encouraging young Welshmen of scholarship and genius to compose and publish poetry of a high order in the Welsh tongue. The antiquarian

movement, chiefly inaugurated by Edward Llwyd (Lhuyd), keeper of the Ashmolean Museum at Oxford, also quickened an interest in the Welsh language in young Welshmen of ability and education; and it is significant that some of the leading Welsh poets of the new movement were Oxford graduates, such as Goronwy Owen, Evan Evans (Ieuan Brydydd Hir), and William Wynn. At the same time the great religious awakening of the 18th cent. bore fruit in Wales in the publication of a large number of hymns by writers of real poetic power, such as William Williams of Pantycelyn in Carmarthenshire (author of the English hymns 'Guide me, O thou great Jehovah,' and 'O'er those gloomy hills of darkness'), Dafydd Jones of Caio, and others. The new Welsh-reading public of the middle and poorer classes, whose vernacular was still Welsh, read the new poetry, both secular and sacred, with avidity, and literary societies for the cultivation of Welsh literature sprang up in the Welsh community of London and in many parts of Wales. Many members of the Welsh aristocracy, too, gave their patronage to the new movement by contributing prizes to successful competitors in the revived Eisteddfodau, the most prominent result of the new interest taken in Welsh poetry being the revival of the Eisteddfod, mainly through the exertions of Owain Jones (Owain Myfyr), Dr. Owen Pughe, and Iolo Morgannwg. The competitions connected with the Eisteddfod and the facilities which the Welsh press now afforded to the publication of poetry led to renewed activity in various poetic zones, as, for instance, that of Carnarvonshire, where Dafydd Ddu Eryri, Robert ab Gwilym Ddu, Dewi Wyn o Eifion, and others rose into prominence, and that of Denbighshire, associated with the names of Robert Davies of Nantglyn and Twm o'r Nant, the latter of whom, by his 'Interludes,' sought to supply the rudiments of a Welsh drama, which had been only meagrely represented in the past by some portions of Biblical plays. The national Eisteddfod was followed by the institution of provincial and local competitions, which have stimulated the composition of a great deal of Welsh poetry in addition to what is spontaneously composed as in other countries. Much of the Welsh poetry of the 19th cent. is of high literary merit, and is a very true and worthy interpretation of the life and aspirations of Wales, both on the religious and on the secular side. Many of the best Welsh poets of the 19th cent. have been ministers of religion, and, with rare exceptions, the poetry of Wales in this important period, which may be truly called the Golden Age of Welsh poetry, has a high and serious purpose, and is not marred by meanness or frivolity. The Welsh language has had for centuries a literary tradition, which is distinct from the spoken dialects, and the literary tongue is the speech of public speaking and of Welsh literature.

The chief poets of the 19th cent., in addition to those already named, have been Eben Fardd (1802–1863), Islwyn (1832–1878), Emrys (1813–1873), Hiraethog (1802–1883), Ceiriog (1832–1887), and Hwfa Mon. Of recent years lyric poetry has been especially cultivated, and the younger generation of poets show in their works clear traces of the study of current English, and in some cases of Continental, poetry. The æsthetic spirit and a conscious striving after beauty of form are very conspicuous in current Welsh poetry, but, apart from certain brilliant exceptions, there is often a lack of naturalness and spontaneous grace. At the same time, Welsh poetry is very living at the present day, and poetic expression is in no sense behind the remarkable evolution of Welsh social life in education, politics, etc. It is no mere antiquarian resuscitation of past ideals, but a living exponent of the mind of the Welsh people.

LITERATURE.—J. Gwenogfryn Evans, *Report on MSS in the Welsh Language* (for Historical MSS Commission), London, vol. i. 1898, vol. i. pt. 2, 1899, vol. i. pt. 3, 1905, vol. ii. pt. 1, 1902, pt. 2, 1903, pt. 3, 1905; Edward Owen, *Catalogue of MSS relating to Wales in the British Museum*, London, issued by the Cymmrodorion Society, 1900; Skene, *The Four Ancient Books of Wales*, Edinburgh, 1868; *Myvyrian Archaiology*, 1st ed., London, 1801, 2nd ed., Denbigh, 1870; Edward Llwyd, *Archæologia Britannica* (Oxford Univ. Press, 1707); *The Gododin*, by Aneirin, tr. by William Probert, London, 1820, tr. by John Williams (Ab Ithel), Llandovery, 1852, tr. and annotated by T. Stephens and ed. by T. Powel (printed for Cymmrodorion Society), London, 1888; John Davies (of Mallwyd), a selection of Welsh poetry under the title *Flores Poetarum Britannicorum*, 1st ed. 1710, 2nd 1814, 3rd (reprint) 1864; T. BARLAAM AND JOSAPHAT.—See BUDDHA.

BARNABITES.—The Congregation of the Regular Clergy of S. Paul Decollato (commonly called 'Barnabites' from their ancient house of S. Barnabas in Milan, which was opened in 1547) goes back to the beginning of the 16th century. Its founder was Antonio Maria Zaccaria, a nobleman of Cremona, recently canonized by the Church of Rome (May 27, 1897). About the year 1530 Zaccaria united himself with Bartolomeo Ferrari and Giacomo Antonio Morigia (Milanese gentlemen, who after their death gained through their reputation for holiness the title of 'venerable'), for the purpose of founding a Congregation of priests who should employ themselves in arousing the somnolent faith, in removing abuses, in reforming the manners of the clergy and of the people, and in bringing them back to the practice of true Christian piety.

By his Brief dated Bologna, Feb. 18, 1533, which commences, *Vota per quæ in humilitatis spiritu*, Clement VII. granted to Zaccaria and to Ferrari authority to set up the new religious Order. Paul III. by two other Briefs, *Dudum felicis recordationis Clementi*, etc. (July 25, 1535), and *Pastoralis*

officii cura, etc. (Dec. 1, 1543), placed the Order in direct dependence on the Holy See, granting it likewise many rights and privileges; and finally, Julius III. confirmed the Order by his Brief of Feb. 22, 1550, *Rationi congruit et convenit honestati*, etc. (cf. *Litteræ et Constitutiones SS. PP. pro Congregat. Clerr. Regg. S. Pauli Apostoli*, Rome, 1853, p. 3 ff.). In the meantime Zaccaria died prematurely in 1539 at the age of 37, after having set on foot in Milan various pious works, viz. spiritual conferences for ecclesiastics; a pious society of married people; and, in conjunction with the Countess Ludovica Torelli, an Order called the 'Angelicals of S. Paul,' for which he had also obtained the approval of Paul III. in 1535.

But the work of Zaccaria was continued by his two companions who outlived him, Ferrari († Nov. 25, 1544) and Morigia († Oct. 23, 1545), and by their successors. Towards the middle of the 16th cent. we find them scattered in Brescia, Verona, Padua, Vicenza, Venice, Cremona, and Ferrara, intent on preaching with zeal to the people, instituting confraternities of lay persons, and reforming monasteries, regardless of the hatred which they began to excite and of the persecutions which were directed against them. A fierce persecution arose against them where one would least have expected it, viz. in the territory of the free Venetian Republic. They were accused before the Republic of being political revolutionaries, emissaries of the Spaniards to the injury of the Venetian seigniory, and as being infected with heresy; and they were compelled to quit the territory of the Republic within the space of ten days. Nor did the matter end here, for, when Father Gianpietro Besozzi and Father Paolo Melso went to Rome, whither the same accusations had been carried, they were immediately thrown into prison, where they remained until, by the assistance of Ignatius Loyola and others, they were able to make their position clear and to unmask the conspiracy formed against the Congregation (cf. Arist. Sala, *Biografia di S. Carlo Barromeo*, Milan, 1858, Dissert. ii. p. 251).

1. **Colleges.**—Shortly after this time the Barnabites began to establish themselves definitely outside Milan; but, as we need not trace minutely their later vicissitudes, we give here some dates which will serve to afford an idea of their subsequent diffusion and increase in Italy and beyond.

In Italy the first college, or house, of the Barnabites outside Milan was founded at Pavia in 1558, for the purpose of educating their young adherents in literature and sacred learning. Next in chronological order come: in Cremona, the college or house of S. Vincenzo, founded in 1570 and suppressed in 1810, and the house of S. Luca, founded in 1881; in Monza, S. Maria di Carrobiolo, consecrated by the help of S. Carlo Borromeo, opened in 1571, suppressed in 1810, and re-established in 1825; Casale in 1573; Vercelli in 1574; in Rome, S. Biagio in 1575, afterwards S. Carlo ai Catinari in 1611, suppressed in 1810 and re-established in 1814, by the Bull of Alexander VII. the residence of the General Superior of the Congregation from 1660 onwards; in Milan, S. Alessandro, founded in 1589, suppressed in 1810, and re-established in 1825; Zagarolo in 1592; Pisa in 1594; in Bologna, S. Andrea in 1598, the Seminary of S. Peter in 1743, further, the college of S. Luigi in 1774, renewed, after its suppression, in 1816; Novara in 1539; Sanseverino in 1601; in Lodi, S. Giovanni delle Vigne founded in 1605, suppressed in 1810, and re-established at S. Francesco in Lodi in 1833; in Asti (in Piedmont), S. Martino, founded in 1606, suppressed in 1802, and re-established in 1822; in Perugia, S. Ercolano, founded in 1607, suppressed in 1775, and then passing to the House of Jesus, which was likewise suppressed in 1804 and re-established in 1837; Acqui in the same year 1607; in Naples in 1608, S. Caterina della Corona di Spine, in 1610, S. Maria di Portanova, which was suppressed in 1809, S. Giuseppe-in-Pontecorvo after 1818, S. Maria di Caravaggio in 1821, the college Bianchi at Monte Santo from 1860; in Turin, S. Dalmazzo, a parish which was entrusted to the Barnabites in 1609 and taken from them only from 1810 to 1826; in Genoa, S. Paolo il Vecchio in 1609, then in 1650 S. Bartolomeo degli Armeni, in 1895 the Institute Vittorino da Feltre; Aquila, 1610; Foligno, 1612; Tortona, 1618; Chieti and Pescia, 1664; in Florence, S. Carlo from 1627 to 1783, the Institute della Querce from 1867; in Leghorn, S. Sebastiano, founded in 1629, suppressed in 1810, and re-established in 1814; Piacenza, 1632; Reggio, 1664; Alessandria, 1659; Crema, 1664; Parma, 1668; Udine, 1680; Finale Marina and Bergamo, 1711; Porto Maurizio, 1736; Aosta, 1748; in Moncalieri (in Piedmont), the Royal College Carlo Alberto, founded in 1836; S. Felice-a-Cancello (Terra di Lavoro), founded in 1854.

2. **Missions.**—The first mission of the Barnabites outside of Italy was in the island of Malta, whither they went in 1582 at the urgent solicitation of the principal heads of the Order of Malta, Father Paolo Maletta of Milan and Father Antonio Marchesi of Bergamo, and where they remained two years with profit to the inhabitants and to the Order of Malta itself. Later, in 1610, as we gather from a Brief of Paul V., King Henry IV. of France obtained some Barnabites to labour in Béarn in the work of destroying the heresy of Calvin, viz. Fathers Fortuné Colome, Remigio Polidori, Hilaire Martin, etc. Almost at the same time S. Francis de Sales introduced them into Savoy to direct the college of Annecy. The Barnabites were thus able to penetrate from Béarn and Savoy into France. We may cite among the houses of Savoy and of France those of Annecy, Thonon, Montargis, Lescar, Paris, Estampes, Dax, Bonneville, Mont-de-Marsan, Bourg-Saint-Andéol, Loches, Bazas, Guéret, Oléron, Condamines-sur-Arve, and, after the Revolution, the college of Gien (Loiret), opened in 1856 under the auspices of Dupanloup, and the house in Paris, re-opened in 1857, owing to the influence and goodwill of the celebrated Russian count, Gregory Schouvaloff, who had passed from the Orthodox to the Catholic faith, and then had entered the Order of Barnabites. In 1820 the Holy Congregation of the Propaganda sent Fathers Mario Malagnino, Alfonso Caccia, and Cornelio Porzio into Valtellina; but this mission, notwithstanding its fruitfulness, did not lead to the establishment of the Barnabites in that region infested by heretics. In 1625 some Barnabites were sent into Austria by Urban VIII. in consequence of a request made to him by Ferdinand II. for some 'religious' fitted to labour in the conversion of heretics and unbelievers; and these Barnabites were placed in possession of the parish of S. Michael in Vienna, which was the parish of the Imperial court. They afterwards occupied other parishes, as, for instance, that of Mittelbach from 1661, and that of S. Margaret in Uligine from 1774. In 1719 the Barnabites took part in the missions in Asia. Among the first were Fathers Filippo M. Cesati and Sigismondo Calchi (both of Milan), and Onorato Ferrari (of Vercelli), who, as members of an embassage of Clement XI. to the Emperor of China, went to Pekin. The result of the embassage did not correspond to the hopes entertained of it; and, in fact, an Imperial edict forbade the preaching of the gospel. Notwithstanding, it came about that Father Ferrari was able to stay some time in China, where in a few years he converted many adults to the faith, and baptized very many abandoned and dying

children. Father Cesati with a companion repaired to Cochin-China with the title of 'vicar apostolic,' and Father Calchi with some others went into the Indian kingdoms of Ava and Pegu, where they all afterwards concentrated themselves. The mission in these two kingdoms was entirely entrusted to the Barnabites by Benedict XIV. in 1740, and there they maintained missionaries (of whom more than one suffered martyrdom) until the suppression of the religious orders (Sala, *op. cit.* p. 284).

The history of this mission is recorded in the *Description of the Burmese Empire* by the Barnabite missionary Sangermano, who laboured in Burma in 1783–1808 (d. 1819). After Calchi went to Syriam (then the chief port of Pegu) in 1721, a number of other missionaries came about 1728, meeting with such success that Benedict XIV. appointed a vicar apostolic. Many churches were built—at Syriam were a house and church, a college for 40 students, and an orphanage for girls; at Ava a church; at Pegu a church and house; at Monla a church, presbytery, and college, with 6 churches in the environs of the city and 2 churches in Subaroa; at Chiam-sua-rocca 6 churches; at Rangoon a church, a house, an orphan-school, and a convent. In 1745 the Vicar Apostolic Galizia and two priests were treacherously murdered, and the mission languished until 1749, when Fr. Nerini, who had been forced by the disturbances to leave Burma, returned. A second severe blow befell the mission at the capture of Syriam in 1756, when Nerini was killed. The mission soon recovered, however, and continued its activity until 1832, when the religious orders were suppressed by Napoleon III. Among the Barnabite scholars attached to this mission special mention is due Fr. Percoto (d. at Ava, Dec. 12, 1776), who is recorded to have translated some Buddhist works from Burmese into Italian, and also to have made Burmese versions of Genesis, Tobit, Matthew, the Gospels, the Mass, and prayers and catechisms.

At that ill-omened epoch the Congregation counted not a few conspicuous members; and, not to mention Cardinal Gerdil of Savoy (1718–1802), a distinguished philosopher, Fathers Quadrupani (ascetic writer), Paolo Frisi and Francesco de Regi (eminent scientists), and others, who had been dead but a few years, it numbered among its members Father Francesco Fontana (1750–1822), General Superior of the Congregation, companion of Pius VII. in his imprisonment, and afterwards Cardinal; Father Luigi Lambruschini (1776–1854), who was afterwards archbishop of Genoa, Cardinal and Secretary of State; Francesco Saverio Bianchi, who has recently been beatified; Father Antonio Maria Cadolini, afterwards bishop of Ancona and cardinal († 1851); Fathers Stanislao Tomba († 1847) and Carlo Giuseppe Peda († 1843), who were made bishops, the former of Forlì, the latter of Assisi; and Fathers Felice and Gaetano De Vecchi (ascetics), Ermenegildo Pini and Mariano Fontana (scientists), Antonio Grandi (orator and poet), Giuseppe Racagni and Bartolomeo Ferrari (scientists), and others. In the preceding centuries the Congregation had already given to the Church: Alessandro Sauli, bishop of Aleria in Corsica, and afterwards of Pavia, who has recently been canonized († 1592); Carlo Bascapè, bishop of Novara († 1615); Juste Guérin, prince and bishop of Genoa; Francesco Gattinara, bishop of Turin; Giacomo Morigia, archbishop of Florence and afterwards Cardinal; Cristoforo Giarda, bishop of Castro; Giovanni Maria Percoto, bishop of Mosul and vicar apostolic of Ava and Pegu; Pio Manador, bishop of Segna and Modruss in Croatia; and, in the various branches of learning, Agostino Tornielli (annalist); Redento Baranzano (1590–622; scientist); the Venerable Bartolomeo Canale (ascetic writer); Bartolomeo Gavanti (writer on ritual); Dominique De la Motte, Maurice Arpaud, Jean Niceron (historians); Remi Montmeslier, Gabriele Valenzuela, Cosme De Champigny, Tommaso Rovere (Rotarius), Salvatore Corticelli (grammarians); Isidore Mirasson, Father Colome, etc.

Commencing with the year 1865, missions were established in Sweden and Norway by Father Paul Stub († 1892 at Bergen), who was afterwards joined by other Fathers (Moro, Tondini, Almerici). In Belgium the Barnabites opened a house in 1886 at Mouscron, and another in Brussels in 1895; while, on the expulsion of all 'religious' from France in 1905, the majority of the Barnabites sought refuge in Great Britain. In 1903 the Order undertook some missions in Brazil. At present the Barnabites, who number almost 300, have about 20 monasteries in Italy, 5 in Austria, and some in Spain, besides those already noted in Belgium.

3. Constitutions.—The Constitutions, or Statutes, of the Barnabites, of which the first nucleus is traceable back to the founder Zaccaria, and of which a first body was already formulated and published in 1552, were not definitive until 1579 (*Constitutiones Clerr. Regg. S. Pauli Decollati libris quattuor distinctæ*, Milan, 1579; other editions, Milan, 1617; Naples, 1829; Milan, 1902), when, after the examination made of them by S. Carlo Borromeo and their approval by the General Chapter, they finally had the sanction of Pope Gregory XIII. by his Brief of Nov. 7.

The greater part of these Constitutions have reference either to personal sanctification, of which they urge the attainment by suggesting suitable exercises as an aid to the observance of the three vows of obedience, chastity, and poverty; or they refer to the sanctification of others, to be attained through the ministry of preaching, of confession, of the school, etc. Others have reference to the reception of new members into the Order, mode of dress, etc.; and, finally, others concern the administration of the Order.

With regard to this last the following are some of the rules:—The General Superior of the Congregation is elected by suffrage. His office lasts three years, but he may be re-elected, though not more than once. All the members of the Order owe him obedience, but at the same time every member may have recourse to him, since he is their common Father. His ordinary Council is composed of four Assistants, who are nominated by the General Chapter every time it meets. His usual residence was changed from Milan to Rome during the pontificate of Alexander VIII. (1690). The habit of the members is a coarse black soutane, closely resembling that of the regular clergy. Unlike the Jesuits and Theatines, they recite Office in choir; and their other distinguishing characteristics are thus summed up by Currier (*History of Religious Orders*, p. 363):

'Besides the fast-days of the Church, these Religious fast on every Friday of the year, the two last days of Carnival, and from the first Sunday of Advent until Christmas. They abstain every Wednesday and observe a rigorous silence from the evening examination until after Matins the following day. In the beginning, like the Theatines, they practised extreme poverty, neither possessing revenues nor begging, but at a later period they accepted real estate and revenues. Besides the three vows, they bind themselves by a fourth, never to seek after dignities within or without the Order, and not to accept them outside of the Order without the permission of the Pope. Their lay-brothers are not admitted to the habit until after a trial of five years.'

The Congregation of the Barnabites, like all the other religious Orders, is divided into provinces, which until a few years ago were six, namely, the province of Lombardy; that of Piedmont, which included Liguria; the Roman province, which embraced Lazio, Umbria, and Emilia; and the Neapolitan, the German, and Franco-Belgian-Brazilian provinces. In each province a Father is nominated as Superior of the houses which the province contains. Every house has its own Superior, who, like the General and Provincial Superiors, has a Council which he must consult on the affairs of his own particular administration. All Superiors are nominated for three years only at the most. The local Superiors may be changed at the end of every year, or may be re-elected after the termination of the three years. The General Chapter meets every three years in Rome. Several

of the members who compose it are elected by the local and provincial chapters. The General Chapter examines the affairs of the Order, nominates or confirms the Superiors, and provides for the general well-being by means of monitions and decrees. The Barnabites, like all the great religious Orders, are in immediate subjection to the Supreme Pontiff.

The continuation of the *Bibliotheca* of Ungarelli will shortly be published by the writer of this article.

G. BOFFITO.

BARODA.—1. Name and history.—The original form of the name Baroda is said to be Skr. *Vaṭodara* (*vaṭa*, 'banyan-tree,' *udara*, 'cavity') 'in the heart of a banyan grove'; according to others, it is based on the shape of the city, supposed to resemble a banyan leaf; a local legend (*BG* vii. 829) suggests a cult of this sacred tree. The name is given to an important native State and its capital, situated in the provinces of Gujarāt and Kāṭhiāwāṛ in W. India. Other early names were Chandāvatī, 'city of sandalwood' or 'of the Jain king Chandan'; Vīrāvatī or Vīrakshetra, 'land or field of heroes.' The State consists of various fragments of territory enclosed within the British dominions, this condition being due to the troublous times which followed the Marāthā occupation from A.D. 1705 onwards, and successive annexations and re-distributions in contests with the Marāthā Peshwā and the British Government. The dominions of the Gāikwār ('cowherd'; cf. the ritual tendance of cattle in Central India, *NINQ* i. 154 f.) occupy an area of 8099 square miles. They formed in ancient times part of the kingdom of Anhilvāda, the capital of which is now represented by the ruins of Pāṭan at the extreme N. boundary. This kingdom, weakened by the raids of Maḥmūd of Ghaznī, who sacked the temple of Dwārka (wh. see) in 1206, finally succumbed to the attack of Alā-ud-dīn Khiljī in 1298. The present Marāthā dynasty was founded by Pīlājī Gāikwār (1721–32).

2. Statistics of religion.—The total population amounted in 1901 to 1,952,692, including 1,546,992 Hindus (79·22 per cent.); 165,014 Muhammadans (8·54 per cent.); 176,250 Animists (9·02 per cent.); the balance (3·31 per cent.) being made up of Jains, Parsis, Christians, Sikhs, and Jews. Of the Hindus, who form the vast majority of the population, about two-thirds are Vaishṇavas, or followers of Viṣṇu, and the remainder are nearly equally divided between Śaivas, or worshippers of Śiva, and Śāktas, or worshippers of the Mother-goddesses. Among the two last classes there are few sub-sects, the divisions among the Śaivas representing the Orders of ascetics, whose differences are based more upon external observances than upon doctrine; and the Śāktas, as usual, fall into the two classes of 'right-hand' (*Dakshiṇa-mārgī*) and 'left-hand' (*Vāma-mārgī*), the former worshipping their deities in public, the latter following the foul secret Tantrik cultus. The Vaishṇavas have been more fertile in forming sub-sects, of which eleven were recorded at the last enumeration. Of these, five worship Kṛishṇa (Kṛṣṇa) in one or other of his manifestations; four the demi-god Rāma; the Kabīrpanthīs are followers of Kabīr, the saintly founder of the sub-sect (A.D. 1485–1512); and the Gaṇeśapanthi are worshippers of Gaṇeśa or Gaṇpati, god of luck and remover of obstacles. This enumeration, however, tends to exaggerate the sectarian character of the local Hinduism. According to the latest authority:

'Though thus there are three principal sects in the Hindu religion prevalent in this State, the followers of neither are exclusive; they pay homage to all the deities, but are bound more to the special deity of their cult. It is only the bigoted of any one sect who despise the worshippers of deities other than their own. But only few such are found amongst the extremists' (*Census Report*, 1901, i. 187).

The Marāthā ruling dynasty have brought with them from the Deccan as their family god Khaṇḍobā, 'sword father,' the chief guardian deity of the Kunbī caste, from which the Marāthās have mainly sprung (*BG* xviii. pt. i. 290). Regarding this and similar gods Sir A. Lyall (*Asiatic Studies*[2], i. 30) writes:

'These are now grand incarnations of the Supreme Triad; yet, by examining the legends of their embodiment and appearance upon earth, we obtain fair ground for surmising that all of them must have been notable living men not so very long ago.'

3. Hinduism.—In its public and private worship (*pūjā*) the local form of Hinduism differs little from the standard type. The public service carefully provides for the exclusion of all castes regarded as unclean; and even those of lower rank than the 'twice-born' (*dvija*) are kept at a distance and are not allowed to touch the temple images. Each household, again, has its private deities, and the animistic basis of the faith is shown in the general cult of Śītalā, the goddess of smallpox; the sun and planets; cows, bulls, serpents, and the mongoose (*Herpestes mungo*), the destroyer of noxious snakes; of trees, such as the banyan, *pīpal* (*Ficus religiosa*), and the acacia; of stones representing Śiva, Viṣṇu, and Gaṇeśa, and the conch-shell; of jewellery and books of account; and of arms carried by the military classes (*Census Rep.* 1901, i. 122 ff.).

Among other observances the chief are fasts; vows (most of which are special to women); pilgrimages; and the domestic rules of ritual (*saṁskāra*) prescribed for each stage of life—conception, birth, marriage, death. The chief holy places within the State are Dwārkā (wh. see), Sidhpur, the place where obsequial rites for the repose of the soul of a mother can most properly be performed, as those for a father are done at Gayā (wh. see) in Bengal; Bechrājī, where a married woman of the Chāran or herald caste has been deified as an incarnation of the Mātā, or Divine Mother, and is worshipped in the form of the *yoni*, or symbol of the female sex (*BG* vii. 609 ff.); and Karnālī on the banks of the sacred river, the Narbadā.

4. Jains.—The Jains, though numerically weak, are important on account of their wealth and their lavish expenditure on temples, many of which are of recent construction and examples of exquisite workmanship and decoration (*Census Rep.* 1901, i. 149).

5. Animists.—The animistic tribes, found in the forest tracts, belong chiefly to the Gāmit, Bhil (wh. see), Dublā, and Chodhrā tribes. Each of these has its special tribal deity, which is worshipped either in a public service conducted by the *bhagat*, or medicine-man, or in less important cases by the votary himself. One of these, Kavādio Dev, has no image or temple; but he is supposed to live in a gloomy ravine; another, one of the Mother-goddesses, is represented by a huge boulder. Besides these, the tiger, alligator, and various Mothers who repel disease are worshipped, the

ritual being like that common to the other N. Dravidian (wh. see) tribes (*ib.* i. 155 ff.).

6. Parsis.—One of the chief sacred places of the Parsis is Navsāri, which they occupied in A.D. 1142, after leaving their first settlement at Sanjan. Here they have erected numerous fire-temples, and towers of silence for the exposure of the dead. Here burns the sacred fire, which they claim to have brought with them from Persia (*BG* vii. 566 ff.; Dosabhai Framji Karaka, *Hist. of the Parsis*, 1884, i. 37; Modi, *A Few Events in the Early History of the Parsis*, Bombay, 1905).

7. Christians.—The increase in the number of Christians, due to missionary work among the forest tribes and to the establishment of orphanages during the recent famines and plague epidemics, is noteworthy. The community which in 1872 numbered 313 had in 1901 increased to 7691.

LITERATURE.—J. A. Dalal, *Census Report*, 1901, vol. xviii. of *Reports of the Census of India*; F. A. H. Elliott, *Bombay Gazetteer*, vol. vii., 1883; J. Forbes, *Oriental Memoirs*, 1813; A. K. Forbes, *Rās Mālā, or Hindoo Annals of the Province of Goozerat*[2], 1878. For the early Muhammadan history see Elliot-Dowson, *Hist. of India*, 1866–77; Sir E. C. Bayley, *Local Muhammadan Dynasties of Gujarat*, 1886; J. Grant Duff, *History of the Mahrattas*[3], 1873. W. CROOKE.

BARSOM (Av. *baresman*).—'Barsom' is the name given at the present day to a collection of small metal-wire rods (*tāī*)—used in the chief ceremonies of the Parsis—representing the cut stems of a plant which can no longer be identified. The number of the rods varies, according to the ritual in which they are used; the lowest permissible number seems to have been three, while the numbers five, seven, and nine are also mentioned. The number now varies between five and thirty-three. These small rods, as used to-day, are bound together with a girdle formed of a date leaf or leaves. For the particular ceremonial recitals in which they are used see Haug's *Essays*, p. 396 ff., and Darmesteter, *Le Zend-Avesta*, i. p. lxxiii. f.; see also there the description of the detailed operations with which their use is accompanied. It may be mentioned that the *barsom* is frequently sprinkled with the holy water (*zaoθra, zōr*), and with the consecrated milk in the *yasna*, or chief ceremony.

The number *thirty-three* shows that the rods represent, even yet, most sacred objects and personified ideas, for that number is especially mentioned in *Yasna* i. 10, iii. 12, as applying to the *ratus* of the *yasna* ceremony. What these special ideas originally were is no longer clearly defined. But, reasoning from the origin of their application, we may readily arrive at their significance. Few doubt that we have in the *barsom* (*baresman*) a form of *barezi§*, Vedic Skr. *barhis*, the 'straw cushion' upon which the gods of the Veda were supposed to sit, as they descended in response to the sacrifice, and upon which also offerings to them were spread—and this at a time when the ancestors of the present Indian deva-worshippers and of the *Ahura-* (*Asura-*) worshippers were one and the same people, and when 'Veda' and 'Avesta' were blended in some now lost name for the one common holy lore. Several points are in favour of this, apart from the etymology: chiefly the word 'spread,' which is used of the *barsom* as of the Vedic *barhis*. The rod-twigs, indeed, are hardly 'spread' now, except upon the *māh-rū* (a sort of rack with two crescents for supports), the moon-faced stand upon which they, for the most part, rest. But the *barhis* was and is 'spread' as 'straw'; compare the passage in Herodotus (i. 132), where he describes, if somewhat loosely, the offering of a Persian Mazda-worshipper: 'He "spreads" [the verb used is *ὑποστάσσειν*] the softest grass he can get, and places the pieces of flesh upon it.' (This item, by the way, is one of many which show how widely this form of worship was diffused in Persia, and how long it had been implanted there, seeing that the Greeks could speak of it so familiarly as belonging to Persia in general, and not merely to a province of it. See also the Inscriptions of Darius at Behistūn, etc., where *Auramazda* is regularly mentioned as the God of all the Empire 'who made this earth and yon heaven.'*)

The *barsom* is, and was then, a sacred object frequently used in the holiest sacrificial ceremonies, especially in the celebration of the main Sacrificial Service, in the course of which the Gāthas were sung without curtailment. It must therefore be understood by all serious Parsi worshippers to represent something of the most sacred character; and on closer examination it may recall at times the entire throng of personified ideas which we might, with some reason, describe as 'godlets,' whose worship, however, when sincere, did not in any conceivable sense approach idolatry, but was a mere sacrificial reverence. Further, all the symbolic rods were united by the sacred 'girdle,' as if to express the thought of oneness. And when we press our inquiries a little further, we see that the *barsom* with its uses is but the persistence of an original idea which was dear to the Indo-Iranian peoples while as yet they were undivided.

Avesta and Pahlavi literatures add a number of details concerning the barsom, for which some similar plant might be substituted (*Yas.* xxii. 3). In conjunction with the 'libation' (*zaoθra*), it is used in calling Ahura Mazda and all other sacred beings, to whom it, with other holy objects, is duly consecrated (*Yas.* iv.; *Vīsp.* xi. 2), to the sacrifice (*Yas.* ii., which bears the special name of *Barsam Yašt*; cf. *Yas.* xxii.; *Vīsp.* ii.); an important part of the worship of Ahura Mazda is that 'one should offer barsom an *aēša* long, a *yava* (grain?) broad' (*Vend.* xix. 19); and it is also used in the *Šrōš Darūn*, which grants to the soul of the dead the protection of Sraosha on its passage to the future life (*Yas.* iii.). Sraosha was, indeed, 'the first who spread forth the barsom, both of three twigs, and of five twigs, and of seven twigs, and of nine twigs [the Pahlavi commentary on *Nīrangistān* xc. raising the number of twigs to 551], (reaching) both to the knee and to the midleg, for both the worship and the prayer and the propitiation and the glorification of the Amesha Spentas' (*Yas.* lvii. 6), and the offering of barsom to the sacred fire is one of the acts which bring the blessing of that element (*Yas.* lxii. 9). The barsom is numbered among the sacred beings and objects to which sacrifice is offered (*Yas.* lxxi. 23) and which are invoked to be present at the sacrifice (*Vīsp.* x. 2), besides having obedience to them solemnly inculcated (*Vīsp.* xii. 3). The barsom is among the offerings to be made by the 'Aryan lands' to Tishtrya (*Yt.* viii. 58); with it Haoma offered sacrifice to Mithra (*Yt.* x. 88), who, if a pious priest sacrifices with barsom, bestows blessings on him who employs the sacerdotal

* [The barsom is also alluded to at least thrice by other Greek writers: Strabo, p. 733, *τὰς δ' ἐσφδὰς ποιοῦνται* [*sc.* οἱ Μάγοι] *πολὺν χρόνον ῥάβδων μυρικίνων λεπτῶν δέσμην κατέχοντες*; Dinon, as quoted by the scholiast on Nicander's *Theriaca*, 618, *καὶ τοὺς μάντεις φησὶ Μήδους ῥάβδοις μαντεύεσθαι*; and the *Acts of St. Sīra, Rom.*, May, iv. 17. 6 (written in the reign of Chosroës II., d. 628), *τὰ ξύλα δι' ὧν ἐμάγευσεν κατὰ τὴν τοῦ Ζωροάστρου δαιμονιώδη παράδοσιν*. It is likewise mentioned by Armenian and Syriac writers (as by Eznik, *Against the Sects*, tr. Schmid, Vienna, 1900, pp. 92, 97; Hoffmann, *Auszüge aus syr. Akten pers. Märtyrer*, Leipzig, 1880, pp. 94, 111). It should furthermore be noted that many scholars (*e.g.* Pinches, *DB* iv. 629) see in the words of Ezk 8[17], 'and, lo, they put the branch to their nose,' an allusion to the barsom. Herein they are probably right (for an opposing view see Toy, *EBi* ii. 1463), and it may also be suggested, at least tentatively, that the זְמֹרָה, 'twigs of a strange one (*i.e.* of a foreign god),' of Is 17[10] may likewise refer to the barsom.—L. H. G.]

mediator (*Yt.* x. 137–139); and, in turn, barsom is among the offerings to be made to Haoma (*Yas.* xxv. 3). Even Ahura Mazda, who did sacrifice with it to Vāyu, the Wind (*Yt.* xv. 2), and to Ashi, Righteousness (*Yt.* xvii. 61), comes swiftly to one whose offering includes the barsom (*Yt.* xii. 2–3), and with it the Fravashis (*q.v.*) must be invoked (*Yt.* xiii. 27). In like manner it is used in sacrifice to the sun (*Nyāyiš* i. 16), the fire (*Yas.* lxii. 1), Mithra and Rāma Hvāstra (*Vend.* iii. 1), and Anāhita (*Yt.* v. 98, 126–127), as well as at the Rapithwina, or midday sacrifice (*Āfrīngān* iv. 5–7). So great, indeed, is the virtue of a single offering of barsom, as of a single offering of wood for the sacred fire, that by it the just is exalted and the Druj (the demon of evil) is weakened, Asha (Righteousness) is increased, and all the just are borne to Paradise (*Fragments of Tahmuras*, xxiv.).

Turning to the Avesta ritual concerning the barsom, we observe that the corrupt passage *Yašt* xv. 55 seems to imply that it should be gathered after dawn but before full daylight. He who has carried a corpse alone must remain thirty paces from the barsom (*Vend.* iii. 15–17; cf. *Šāyast lā-Šāyast* ii. 18), and a menstruous woman or one suffering from leucorrhea must keep half that distance (*Vend.* xvi. 4; cf. *Šāyast lā-Šāyast* iii. 10–11, 20, 32–33; *Sad Dar* lxviii. 14), while cuttings of the hair and nails must be buried the latter space away (*Vend.* xvii. 4). The barsom must be removed from a house in which either a human being or a dog (a sacred animal in Zoroastrianism) has died (*Vend.* v. 39–40), though in the purification of a house, after the expiration of the proper period of mourning, which varies according to the degree of kinship, the barsom plays an important rôle (*Vend.* xii. 1 ff.). Barsom may not be carried along a road over which the corpse of a human being or a dog has been borne until the path has been duly purified (*Vend.* xviii. 14–22), and milk drawn from a cow that has eaten of such a corpse may not be used in connexion with the barsom within a year after such an act (*Vend.* vii. 77). Prosperity shuns the place where a heretic (*aśemaoγa*) dwells, until he is slain and sacrifice is offered to Sraosha for three days and three nights with barsom, fire, and *haoma* (*Vend.* ix. 56–57). Among the penalties for killing an otter (*udra*) are the binding of 10,000 bundles of barsom and the presentation of barsom to 'holy men,' *i.e.* priests (*Vend.* xiv. 4, 8), while 1000 bundles must be tied up by him who has had intercourse with a menstruous woman or one suffering from leucorrhea (*Vend.* xviii. 72). If a libation be poured into the barsom or the sacred fire, it becomes operative 'for the victory of the non-Aryan lands' (*Nīrangistān* lxviii.), and the binding of the barsom is one of the most important parts of the sacrifice (*Nīrang.* lx.). For a variety of ritual prescriptions relating to the barsom, reference may be made to *Nīrang.* (ed. Darmesteter, *Le Zend-Avesta* iii., and Darab Dastur Peshotan Sanjana, Bombay, 1894) lxix.–lxx., lxxiv., lxxix., xcvii. ff. (although the greater part of the text of the last passage is so corrupt in its present form as to defy translation); *Šāyast lā-Šāyast* viii. 18; *Dādistān-ī Dīnīk* xliii. 4–5, xlviii. 17; *Epistles of Mānūščihar* iii. 13; Darmesteter, *Le Zend-Avesta* i. 398, 407.

According to Pahlavi literature, the evils of the last times will be such that the barsom may be arranged in the very house of the dead (*Bahrām Yt.* ii. 36), although the righteous man will still strew it, even if he cannot do it 'as in the reign of King Vištāsp' (*Bahrām Yt.* ii. 58; for other eschatological data connected with the barsom see *Bahrām Yt.* iii. 29, 37). The barsom might be consecrated by women (*Šāyast lā-Šāyast* x. 35). Faulty consecration was, however, possible if the barsom had too many twigs, or was cut from an improper plant, or was held toward the north, the region of the demons (*Šāyast lā-Šāyast* xiv. 2), an intentional substitution of such improper barsom being a very serious sin (*Dīnkarṭ* VIII. xliv. 65). The barsom was a powerful agent against all demons, fiends, wizards, and witches (*Dīnā-ī-Māīnōg ī-Khraṭ* lvii. 28); it played a part 'on the day of battle and evil deeds of war' (*Dīnkarṭ* VIII. xxvi. 24); and it is particularly interesting to note that a distinct barsom-ordeal (*baresmōk-varīh*) was known (*Dīnkarṭ* VIII. xix. 38, xx. 12, 66), although no details are given concerning it.

The barsom is also mentioned in the Persian *Šāh-Nāmah*, which records that King Bahrām Gūr and his bride were met by a Zoroastrian priest bearing barsom in his hand, and also that Yazdigird, the last Sasanian king, asked the miller who gave him shelter in flight for a bundle of barsom that he might say grace before eating (Pizzi, *Il Libro dei re*, Turin, 1886–88, vi. 465, viii. 442), a custom to which allusion is also made elsewhere (Rehatsek, *JRASBo* xiii. 88). It is possible that the five-twigged barsom is represented on a coin of Bahrām II. (276–293), which shows two figures on opposite sides of a fire altar, one of the men holding the 'ring of sovereignty' and the other the object in question (Dorn, *Collection de monnaies sassanides de feu le lieutenant-général J. de Bartholomaei*, i., St. Petersburg, 1873, pl. iv. No. 13). In modern times, as has already been noted, the barsom in India is ritually represented by small wire rods; but in Kirman, Anquetil du Perron (*Zend-Avesta*, Paris, 1771, ii. 532) records the use of twigs of the pomegranate, tamarind, or date-tree; and at the present time 'in Yezd the tamarisk bush is used to form this bundle, and it is bound with a slender strip of bark from the mulberry tree, probably in exactly the same manner as it was in Zoroaster's day,' brass rods being substituted only in winter or at other times when it is impossible to obtain living branches (Jackson, *Persia Past and Present*, New York, 1906, p. 369 f. and plate). See also YASNA.

L. H. MILLS and LOUIS H. GRAY.

BARTER.—Barter is the name given to the simple and elementary form of traffic in which goods are directly offered in exchange for goods. An article upon barter is from one point of view an essay on the functions of money and the inconvenience of its absence, since barter is that form of exchange in which money is not employed as the intermediary of trading. Barter was the primitive mode of doing business before a measure of value or a common medium of exchange was devised. In such a set of conditions there are manifest difficulties; without a common denominator it is not easy to compare the values of the articles exchanged or to arrive at an economic principle of bargaining. In any particular exchange the two parties must adjust their contract by their respective wants for each other's commodity and the desire of each to part with his own superfluities. Thus the fisherman would need to measure his fish against the potatoes of the gardener at one moment and the bread of the baker at another, and so on round the whole circle of his purchases. It is obvious that a system of exchange so elementary and so casual must belong to a primitive period of society. A very slight advance in the methods of production, in separation of employments, and in traffic would inevitably lead to the use of a medium of exchange which would serve at once as a standard measure and as an accepted go-between;

some substance would be adopted for the double purpose, which all would willingly receive in exchange for their own commodities, and which could in turn be parted with easily for others. The thing selected to serve these utilities in any community would be in the first place something much in common demand for its service or its attractiveness, and such a substance would have certain qualities of durability and approximate stability which would recommend it. The article adopted would vary with the locality. The various stages in this early employment of a primitive money need not be here pursued; by degrees the more essential qualities of good money would emerge, and thus the currency of modern times would be gradually evolved. See art. MONEY.

The term *barter* or *truck* is more usually applied to the exchange of articles for use; the term *purchase* suggests the employment of money and buying for future sale or commerce. The Old Testament supplies a good example of a transaction by payment in kind or barter. In 1 K $5^{10f.}$ we read that Hiram king of Tyre 'gave Solomon cedar trees and fir trees according to all his desire,' and that 'Solomon gave Hiram 20,000 measures of wheat for food to his household and 20 measures of pure oil.'

Many forms of barter still exist in highly civilized communities; the domestic servant barters her services for food, housing, and a sum of money; the farm labourer is often paid partly in *kind*, by the use of a cottage, a garden, supply of milk, butter, etc., and partly by money wages. If we consider *real* wages, *i.e.* what money wages will buy, we see that in reality labour is exchanged for a supply of necessaries and comforts. In modern times we find some publications such as *The Exchange and Mart*, which revive the old form of barter by advertising certain articles for sale and stating the articles desired in exchange for them. Private individuals, like schoolboys, often practise barter; and bits of furniture, old garments, and even plots of land are exchanged for other desirable things.

In uncivilized countries barter is widely prevalent. Stanley in his journeys through Africa took quantities of cloth, brass rods, etc., with which to purchase food; similarly cargoes of old rifles, knives, bottles, powder, etc., have been sent to some places to be exchanged for the natural products of the country.

Under a system of barter there is a difficulty in securing mutuality of wants, or what Jevons called 'the double coincidence of exchange,' viz., that each party shall desire that which the other offers. Again, barter requires each article to be measured in terms of every other article of traffic, necessitating a separate bargain for each, and consequently a large and varied list of the ratios of exchange. A further drawback is the impossibility in some cases of dividing the article or of fractional payments; the pig or the rifle must be exchanged for something which is deemed an exact equivalent.

Competition (*q.v.*) has little play under barter. The mode of exchange is not such as can supply a market and give a market value. It is usually a case of a single exchange in which the values are determined by the individual wants and capacities of the two parties to the exchange.

The evolution of trade was from barter to money purchases. Modern trade tends to revert to a refined form of barter by the employment of paper substitutes for money currency; promises, credit documents, and what is called 'representative money' take the place of coin. The highly organized systems of Banking and the Clearing House have provided a mechanism which in effect reduces much of trade and commerce to barter, while preserving a measure of value and a reserve of the standard for reference and for use in emergency.

And if home trade has been reduced mainly to barter again, much more has foreign commerce. Imports pay for exports; goods and services are the only ultimate means of buying goods and services from other countries. Their values are expressed in terms of money, but the actual exchange is effected almost without the passage of a coin. The foreign trade of Great Britain, amounting to more than £1,000,000,000 a year (or nearly £25 per head of her population), is transacted with the transmission of a very trivial sum in gold.

Imports and exports are balanced against each other by means of bills, and the mechanism of the money market enables the exchange of these instruments of credit representing debts to accomplish the equalization of the debts. The operations become a vast series of barter transactions, reduced to simplicity by the ingenious arrangements of a highly organized commercial system.

Under this refined system of trading no particular parcel of goods is exchanged for any other particular parcel of goods, but each is represented by a bill. These bills are exchanged, *i.e.* bought and sold freely, by the persons doing business in the different countries, so that the equation is ultimately secured. The settlements need not be, nor are they, direct. Each country need not balance its accounts for goods with each of its customer countries so as to equalize their actual imports and exports to one another. But country A may pay its debts to country B by a bill upon C, just as is done by merchants at home. By this system of foreign exchanges bills become an article of commerce; and, following the law of supply and demand, they rise and fall in value, and are a means of regulating commerce and equalizing sales and purchases all over the world.

Thus trade which started with simple exchange by barter has come, under a highly complex civilization and a world-wide commerce, to be once more only barter of a very refined kind, after passing through many stages and degrees of money purchase. Much the greater part of the business of nations is accomplished without the actual employment of money at all, except as a unit of measurement and a reserve force hidden away in the strong rooms of banks.

BASIL.—See CAPPADOCIAN THEOLOGY.

BASILIDES, BASILIDIANS.—1. Sources.—Basilides was one of the most famous Gnostic teachers in the 2nd century. We are told by Epiphanius (*Hær.* xxiii. 1) that he was a fellow-pupil of Saturnilus in the school of Menander, at Antioch. This statement has been largely accepted, though it is by no means certain that Epiphanius had any trustworthy information on the subject. It is quite as likely to be simply an inference of his own from the fact that Saturnilus and Basilides are coupled by Irenæus (I. xxiv. 1), who, however, says that Saturnilus put forward his system in Syria, but Basilides in Alexandria. Apart from the reference in the *Acts of Archelaus* (c. 55 in Routh, *Rel. Sac.* v. 196) to his preaching among the Persians, to be discussed later, we have no evidence for any activity outside Egypt. Possibly Epiphanius, who visited Egypt, had some warrant for his account of the places outside Alexandria where Basilides worked. The same uncertainty surrounds the date of his activity, but we shall probably be safe in accepting the usual view (cf. Clem. *Strom.* vii. 106) that his work fell mainly

within the reign of Hadrian (A.D. 117–138).* He claimed to have received his doctrine from the Apostle Peter through Glaucias (Clem. *l.c.*). His chief disciple was his son Isidore. According to Hippolytus (*Philos.* vii. 20), they asserted that Matthias communicated to them a doctrine which he had received from Christ. They also appealed apparently to Zoroastrian authorities. Basilides wrote a work entitled *Exegetica*, that is, 'Expositions,' in 24 books (*Strom.* iv. 88; Euseb. *HE* iv. 7. 7). This was apparently an exposition of the Gospels. We learn from Origen (*Hom. 1 in Luc.*) that he wrote a Gospel. It is extremely unlikely that Origen with his facilities for information should be mistaken upon this point. From the fragments which are preserved to us, we may infer that Basilides probably commented on the First, Third, and Fourth Evangelists, possibly also on Mark; and it is by no means unlikely that he based his commentary on his own compilation from the Gospels. He is also said to have written incantations and odes; but these are entirely lost. His son Isidore wrote several works —first, a treatise on Ethics, which, perhaps, is identical with the *Parænetics* mentioned by Epiphanius (xxxii. 3); secondly, a treatise on the Parasitic Soul (*Strom.* ii. 113); and, thirdly, *Expositions of the Prophet Parchor*, which must have contained at least two books, since we have a quotation from the second (*Strom.* vi. 53).

The problems which are presented to us by this school of Gnostics are of an exceptionally perplexing and baffling kind. The accounts given of Basilides' system are hopelessly irreconcilable, and the new evidence which has come to light has made the problem still more difficult. Before the publication of the *Philosophumena* of Hippolytus in 1851, the main sources of information were the account of the system in Irenæus' great work against heresies, and the related accounts in later heresiologists; information given by Eusebius concerning a refutation of Basilides by Agrippa Castor; and some extracts from the works of Basilides and his son Isidore, given by Clement of Alexandria, Origen, and the author of the *Acts of Archelaus*. Even these authorities were so difficult to reconcile, that Neander (followed by Gieseler) treated the account of Irenæus as referring to a later development of the sect, and said that, were it not for the fact that Clement of Alexandria referred to the misconduct of later Basilidians in language similar to that employed by Irenæus, we should be tempted to suspect that the Basilidians whom the latter describes had no connexion whatever with the founder. The discovery of the long lost *Philosophumena* or *Refutation of all Heresies*, now unanimously assigned to Hippolytus, introduced a new complication. Hippolytus gives an account of Basilides' system which differs fundamentally from that of Irenæus. The majority of scholars, including Jacobi, Uhlhorn, Baur, Möller, and Hort, accepted the new evidence. The attack on Hippolytus' account was led by Hilgenfeld (see Literature at end of present art.), who received the very influential support of Lipsius, and at a later time of Harnack and other scholars. At present the tendency seems to be to regard the account of Hippolytus as valueless (except in isolated details) for the re-construction of Basilides' own system. But the theory that Hippolytus was duped by a forgery seems to be losing ground, and the opinion prevails that the document he employed was a genuine Gnostic treatise circulated among the later Basilidians. Finally, a new manuscript of the *Acts of Archelaus*, containing the complete Latin translation, was discovered by Traube a few years ago, and made accessible by C. H. Beeson in 1906 ('Hegemonius, Acta Archelai,' in *Die gr. christl. Schriftsteller in den ersten drei Jahrhunderten*). The text we previously possessed broke off in the middle of an important extract from Basilides. The newly found manuscript completes the quotation. It should be added that the task of the scholar is rendered more difficult by the fact that the texts are often corrupt, and, even where this is not the case, frequently not very intelligible.

The view that the account of Hippolytus rested on a forgery was first suggested in 1885 by George Salmon in an article in *Hermathena*, entitled 'The Cross References in the Philosophumena.' In reading the work of Hippolytus he had often been struck by the coincidences between the various systems. These had, in fact, drawn the attention of earlier scholars; but Salmon thought them suspicious, and formulated a theory to account for them. This was that Hippolytus became known as a zealous purchaser of Gnostic documents, the demand created a supply, the unscrupulous dealer forged a certain number of treatises purporting to be documents of Gnostic schools, and these were eagerly purchased by the credulous bishop, who in this way included in his work accounts of systems which had never really existed. Attention was drawn to Salmon's article by Harnack (*ThLZ* x. [1885] 506 f.), and in his *Gesch. des NT Canons* (1889, i. 765 f.) Zahn signified his adhesion. Salmon's theory was taken up by Stähelin in a special investigation, 'Die gnost. Quellen Hippolyts,' *TU*, 1890. Salmon had said comparatively little about Basilides, but Stähelin sought to show that the theory applied to this part of Hippolytus' account as well as to that of the minor sects. For a time the theory found several supporters, including C. Schmidt (*Gnost. Schriften in kopt. Sprache*, 1892, p. 557) and G. Krüger (*PRE*^{3}, *s.v.*). It has, however, been rejected not only by those who, like J. Drummond (*Character and Authorship of the Fourth Gospel*, 1903, pp. 316–331), assert the originality of Hippolytus' account, but by Anz (*Zur Frage nach dem Ursprung des Gnostizismus*, 1897, p. 9) and Bousset (*Hauptprobleme der Gnosis*, 1907, p. 128). Bardenhewer in his *Patrology* also judges that 'this hypothesis offers too violent a solution of the problem.' Even Harnack, who in his *Gesch. der altchristl. Literatur* (1893, vol. i. p. 157) spoke of Hippolytus' sources as probably a forgery, expresses himself with greater reserve in his *Chronol. der altchristl. Literatur* (1904, vol. ii. p. 231). The present writer can only repeat the unfavourable judgment he expressed in a notice of Stähelin's work in the *Classical Review*, 1892. In the first place, the coincidences may readily be accounted for by the fact, which Stähelin himself admits, that Gnostic documents circulated freely from one school to another. Secondly, since they were thus in a measure public property, it is difficult to understand how the forger could command prices high enough to reward him for his trouble. Thirdly, it is still more difficult to explain the very striking difference in the level of speculative power which is displayed in the different systems. Few, it may be imagined, would assent to Stähelin's view that the author, in the words he quotes from Basilides on the non-existent God, was trying to turn the whole Gnostic scheme into ridicule, which would surely have been a dangerous game to play if he had wished to palm off his forgeries as genuine. Rather they will recognize in the system a speculative power not inferior to that displayed in Valentinianism,

* E. Schwartz argues that we must take Basilides and Saturnilus at least to the time of Trajan, probably earlier (*Ueber den Tod der Söhne Zebedaei*, 1904, p. 20 f.). He thinks that, while we need not accept the Gnostic claims to possess a tradition from the Apostles, we may well distrust the 'tendency' chronology of their opponents.

and account for the strange language which the author employs by his effort to explain the inexplicable—all the more that his language has parallels in that of other deep thinkers. Moreover, Stählin assumes rather than proves that Clement is on the side of Irenæus, whereas several scholars who have no preference for Hippolytus' account have recognized that it is very difficult to harmonize Irenæus with the quotations given by Clement. For these reasons we may justifiably reject this theory, which postulates a writer of incredible versatility combined with such strange limitations, and assume that, whether Hippolytus presents us with the genuine system of Basilides or not, he at any rate communicates a system which was really professed in the Basilidian school.

The account of Basilides given by Hegemonius in the *Acts of Archelaus* has also created suspicion. Gieseler argued that the Basilides there mentioned was to be distinguished from the heresiarch of Alexandria, inasmuch as he is said in the *Acts* to have been a preacher among the Persians. Hort considered that his denial had some show of reason, but on the whole regarded the arguments in favour of the identification as preponderating (Smith-Wace, *DCB* i. 277[a]). He should therefore not have been quoted by G. Krüger (*PRE*[3] ii. 431) as agreeing with Gieseler. Usually the assertion that he was a preacher among the Persians is regarded as incredible. Thus Lipsius declares that, if the Disputation of Archelaus makes Basilides a Persian, 'the remark is hardly necessary that this false statement is simply a deduction from the dualism of the Basilidian system' (*Gnosticismus*, 1860, col. 109). It is also rejected by Zahn and Harnack; while Krüger thinks that, although we cannot control the statement, it is not so improbable as Zahn considers it; and Hilgenfeld says that Basilides may quite well have been in Persia and learnt Persian dualism at first hand. The statement should probably be set aside and accounted for as by Lipsius. It is quite another question, however, whether we should reject the author's account of Basilides' beliefs, and, in particular, the extract which he gives from his work. This is said to be taken from the thirteenth book of his treatises, and, inasmuch as it contains an exposition of the parable of the Rich Man and Lazarus, the work should probably be identified with Basilides' twenty-four books on the Gospels which bore the title *Exegetica*. The real objection felt by those who accept the genuineness of Hippolytus' account is that, while this is monistic in character, the account of Hegemonius seems to pledge Basilides to dualism. There can be no question that the author of the *Acts* understood him to be a dualist, but that, of course, does not settle the question. He may have misunderstood Basilides, especially since his preoccupation with Manichæism made such an interpretation of the Gnostic not unnatural for him. Accordingly we cannot attach decisive weight to his impression, in spite of the fact that he had the complete work before him. If, however, the extract given is genuine, it must rank with those preserved by Clement of Alexandria, and it seems to the present writer that we have no good ground for disputing its authenticity.

2. System of doctrine.—We may now proceed to an exposition of the various systems which have come down to us. Unfortunately it is not possible to re-construct the somewhat desultory references in Clement of Alexandria, treating of ethics rather than metaphysics, into a complete system. It will accordingly be best to begin with the accounts which profess to give us the original system.

(*a*) We take first that of *Irenæus* (I. xxiv. 3–7), which presents points of contact especially with the description he gives of the views of Saturnilus.

According to Irenæus, Basilides began with the unborn Father, and represented Nous as His firstborn. Nous gave birth to Logos, Logos to Phronesis, Phronesis to Sophia and Dynamis. From the last two came the first series of principalities, powers, and angels, who created the first heaven. From these emanated the second angelic series, who created the second heaven; and so on till 365 heavens came into existence. The angels in the lowest heaven created the world, and divided it among themselves. Their chief was the God of the Jews, who aroused hostility by His favouritism to His own people. Thus all other nations were stirred up to be at enmity with the Jews. Hereupon the supreme God interfered to save the world from destruction, and sent His firstborn Nous, *i.e.* Christ, to deliver those that believe in Him from the world-angels. He appeared in human form and taught, but at the crucifixion changed forms with Simon of Cyrene, so that the latter was crucified in the form of Jesus, while Christ Himself stood by and mocked at His enemies in the form of Simon; for, since He was incorporeal, He was essentially invisible, and so He returned to the Father. Hence no one who really knows the truth will confess the Crucified, for, if he does so, he is a slave to the world-angels; but, if he understands what really happened at the crucifixion, he is freed from them. The Basilidians denied the salvation of the body, asserting that it was subject to corruption, and that the soul alone is saved. They had no hesitation in eating meats offered to idols, and regarded every form of immorality as a matter of complete indifference. They also practised all kinds of magical arts, and sought to enumerate the names of the angels in the 365 heavens. The name given to Christ, in which He ascended and descended, was *Caulacau*; and just as Caulacau passed through the various heavens in His descent from the Father and returned to Him and remained invisible and unknown to all, so those who have learnt the doctrines of the system and known the names of the angels may themselves know all, but be known of none. Their mysteries they kept secret, and said that only one out of a thousand, or two out of ten thousand, were capable of knowing them. They had no hesitation in denying their faith under stress of persecution. They adopted the theories of mathematicians, and thus made out the positions of the 365 heavens. The chief of these they asserted to be Abraxas, and on that account the numerical sum of the letters in this word was 365.

It is unnecessary to supplement the account of Irenæus by reference to the other heresiologists who give us an essentially identical system; but there are some features which call for notice at this point. Even those scholars who most warmly vindicate the superiority of Irenæus' exposition generally recognize that he is quite unjustified in the charge of immorality which he brings against Basilides. Clement of Alexandria (*Strom.* iii. 508 ff.) rebukes the misconduct of the later members of the sect by reference to the teaching of the founder and his son. The docetic character of the Christology and the denial of the real humanity of Jesus must also be decidedly rejected, in view of Clement's explicit testimony to the effect that from a certain taint of sinfulness Basilides held Jesus, in virtue of His humanity, not to be exempt. The story that Basilides taught the crucifixion of Simon of Cyrene is generally rejected, though Pfleiderer (*Urchristentum*[2], ii. 384) considers that the statement in the Fourth Gospel that Jesus went out bearing the cross for Himself (Jn 19[17]), was intended to repudiate the Synoptic statement that Simon of Cyrene helped Jesus to carry His cross, and was elicited by the turn given to the story by Basilides. It is further noteworthy that in this account only five Æons are interpolated between the supreme God and the angels of the first heaven. Those who re-construct the original system by a fusion of this account with that of Clement of Alexandria, make the five into seven by borrowing two from Clement of Alexandria, and thus attribute to Basilides the usual Heptad. It is very questionable, however, whether they are correct in doing so. In any case nothing can be built on a combination of this kind. Moreover, Bousset has pointed out parallels to the scheme as given by Irenæus. The name *Caulacau* occurs in an unfortunately corrupt sentence,* but it is

* 'Quemadmodum et mundus nomen esse in quo dicunt descendisse et ascendisse saluatorem, esse Caulacau' (Iren. *adv. Hær.* i. 24). The general sense must be that given above, but the text is unintelligible in its present form. Hilgenfeld

sufficiently clear that it is intended to be the mystic name of Christ. It occurs in other Gnostic systems, and was probably derived from Is 28[10]. The statement in Tertullian (*de Præscr. Hær.* 4) that Abraxas was the name given by Basilides to the supreme God is quite incorrect, and is not in harmony even with Irenæus. The fact that a considerable number of gems bear the word *Abrasax*, or more rarely *Abraxas*, on them has caused them to be regarded as Gnostic gems, many of them produced by the Basilidians. An enormous literature has been devoted to them, but it is now generally agreed that if any connexion existed it was of the slightest kind, most of the gems being of pagan origin. Harnack says: 'Not everywhere where Abraxas is mentioned are we to think exclusively of the Basilidians. It is doubtful whether even a single Abraxas gem is Basilidian' (*Altchrist. Lit.* i. 161). Numerous suggestions have been put forward as to the origin and meaning of the term. None of them can be regarded as in any way satisfactory. The word is more probably an artificial formation, which may have originated in some form of speaking with tongues, and been brought into prominence by the fact that, like Μειθράς and Νεῖλος, it was the numerical equivalent of 365.

(*b*) The account given by *Hippolytus*.

This account starts with a very transcendental doctrine of God. A definition is quoted from Basilides, in which language is strained to raise God above all the limitations involved in affirmations about Him. Even to predicate existence would be to limit Him, and thus to negative His absoluteness. Accordingly Basilides starts with the time when there was Nothing—using the term in a sense similar to that in which John Scotus Erigena spoke of God as Pure Nothing. That the author does not intend his words to be taken as a negation of all existence is clear from what follows. If we speak of God as Ineffable, we fall into self-contradiction, for the epithet is in itself a description; but God is not even Ineffable, since He is infinitely above every name that can be named. This non-existent Deity willed to create a world, though we are warned that the term 'willed' is a necessary accommodation to the imperfections of human language. In pursuance of this purpose He deposited a seed, also non-existent, but containing within it the promise and potency of all life. In opposition to the usual Gnostic doctrines, Basilides firmly rejected the conception of emanation from God, who was no spider spinning the world out of Himself. The seed was rather the creative word of which we read in Genesis. Thus, against the gross and material conception of emanation he sets the doctrine of Creation out of Nothing. Just as the seed contains within itself the tree, or the peacock's egg contains the bird with all its rich diversity of colour, so the world-seed holds within itself all that is subsequently to be developed into the manifold forms of being which the universe embraces.

Within this seed there was a threefold Sonship, one part pure and subtle, the second gross, the third needing purification. As soon as the seed was deposited, the pure Sonship burst forth, and by its unaided power rose with the swiftness of thought to the non-existent God. The gross Sonship strove to follow, but was unable to do so since his substance was not light in texture like that of the first. But he escaped from his detention within the seed by providing himself with a wing, identified by Basilides with the Holy Spirit. So helped in his infirmity by the Spirit and giving help to the Spirit in turn, he followed the First Sonship in his flight to the non-existent. But here the Holy Spirit was compelled to leave the Second Sonship; so he dwelt between the supra-cosmic space and the world, and became the firmament, since he had nothing in common with the non-existent God. Yet, as the perfume of an ointment still clings about a vessel even after the ointment has been taken from it, so the Holy Spirit was filled with the fragrance of the Second Sonship.* The Third Sonship, however, still remained in the confused mass of germs within the seed, giving and receiving kindness. Then there burst forth from the seed the Great Archon, better in every way than all beings in the world save the Third Sonship. His upward flight, however, was stayed when he reached the firmament, for this he thought to be the limit of space. And since he was ignorant of what lay beyond the firmament and knew of no power higher than himself, he imagined himself to be the supreme God. Then he formed from the seed a son far wiser than himself, and, wondering at his loveliness, bade him sit at his right hand in the Ogdoad. This son inspired the Archon to create the whole ethereal creation, downwards to the moon. A similar process was repeated with a second Archon, far inferior to the first, who rose to the region below the Ogdoad and dwelt in the Hebdomad. He, too, formed a son far wiser than himself, who inspired his father to form the creation below the Ogdoad. But as to what takes place in the world itself, that is determined by the nature implanted within it at the outset by the non-existent God. But still there remained the Third Sonship, whose true place was with the First and Second Sonships near the non-existent God. To him St. Paul's words refer, where he spoke of the creation groaning and travailing in pain together until now, waiting for the manifestation of the sons of God (Ro 8[19ff.]). And the sons of God are the spiritual, whose task it is to train the souls which are destined to abide within the world. The redemptive process began with the great Archon.

Basilides repudiated the common conception of a descent of a heavenly being from the highest region. He would not admit that the Pure Sonship left his place and came down through the heavens to the regions below. This would have been to contradict his fundamental principle that ascent and not descent is the law of the universe. Accordingly, he represented the son of the great Archon as catching illumination from the pure Sonship. He illustrated this by a reference to naphtha, which takes fire though the flame that kindles it is some distance from it. So the thoughts of the Archon's son aspired till they reached the Sonship, and then the intuition of the truth flashed upon him. Having thus learnt the truth, the great Archon's son revealed it to his father, who, when he learned that he was not, as he had imagined, the supreme God, was converted and filled with fear, as it is written, 'The fear of the Lord is the beginning of wisdom.' The truth was then revealed to all the creatures in the Ogdoad. Similarly, the son of the second Archon learnt the truth from the son of the great Archon, and communicated it to his father. Similarly, the 365 heavens in the Hebdomad, with their ruler Abrasax, learnt the truth.† Thus the Gospel had come down through the Ogdoad and Hebdomad, and now it was fitting that it should reach the seed. And so it came upon Jesus the Son of Mary, and through Him redemption was effected. For within the seed all grades of existence were tangled together in confusion, so that it was necessary not only that the truth should be revealed, but that the various orders of being should be sorted into their proper classes. This was effected by the death of Jesus. The accounts of Jesus in the Gospels were received by Basilides as historical, and he was far from believing that the body of Christ was unreal. So far from that, it was an essential condition of the redemption He achieved that all the grades of existence which had to be sorted should be combined in Him, and then, by their separation in His experience, a similar separation should be effected throughout the seed. Thus, by His death the material element was removed and reverted to formlessness. After His resurrection He ascended through the Hebdomad, leaving His psychical part there; then through the Ogdoad and the Holy Spirit, leaving with each those parts which belonged to them; and finally rose to the region where the blessed Sonship dwells. The Third Sonship followed Jesus and passed through a similar process of purification, and then, refined like the First Sonship, ascended to the non-existent God. The same experience is repeated in the case of spiritual men who ascend to the Father.

When the three Sonships have been thus re-united, and all the spiritual have achieved their task in the world and followed Jesus and the Sonships to the non-existent God, then God will be merciful to creation and bring on all the realms from the Ogdoad downwards the Great Ignorance, so that no rank of being shall know of any rank superior to itself. For it is the nature of all creatures to long for that which is above them, and be tormented because they cannot attain it. But they do not know that the satisfaction of their desire would be fatal to

(*Ketzergeschichte*, p. 197) proposes to strike out *mundus* as a marginal gloss on *Caulacau*, and to read *ejus* for *esse* after *nomen*. This gives a smooth text. Harvey in his note retranslates the Latin as follows: ὸν τρόπον καὶ τὸν Κόσμον ὄνομα εἶναι, ἐν ᾧ, κ.τ.λ. This he then emends: ὸν τρόπον καὶ τὸ ἄκοσμον ὄνομα, ἐν ᾧ, κ.τ.λ., 'as also that the barbarous name in which the Saviour, as they say, descended and ascended, is Caulacau.' Whether we accept this very ingenious suggestion or that of Hilgenfeld makes no difference to the main point, which is that the Saviour in His descent and ascent bore the name *Caulacau*; Irenæus cannot have meant that the world bore this name, since in the following sentence it is clear that the name was that of the Saviour. The term was not confined to the Basilidians, but is said to have been found among the Ophites and Nicolaitans. Epiphanius derives it from קַו־לָקָו, 'line upon line,' in Is 28[10]. This is corroborated by a statement of Hippolytus, in which the names *Saulasau* and *Zeesar* are added. These obviously go back to the Hebrew words in the same passage, meaning 'precept upon precept' and 'here a little.' Bousset hesitates between this, which is the usual explanation, and the view that the term may have been a Gnostic loan-word to which the explanation was subsequently attached.

* The Sethians spoke of the pure Spirit which was between light and darkness as not like a wind, but like an odour of ointment or an incense. It is a mistake to lay any stress on this parallel, as Stähelin does. The point of the metaphor in the two cases is entirely different (see Drummond, *Character and Authorship of the Fourth Gospel*, p. 317); and Bousset points out (*Hauptprobleme*, p. 120) that it is quite a common Persian idea that the heavenly worlds are sweet-smelling, but the world of Ahriman is malodorous.

† It has been suggested that this section on 365 heavens, with their ruler Abrasax, does not properly belong to the system (see Uhlhorn, *Das basilid. System*, p. 65 f., and Hort, art. 'Abrasax' in *DCB*).

them, for they can live only in the conditions in which they are placed, and could not breathe the rarer atmospheres of the higher spheres. If, then, they remain content in their place, they will have eternal existence; but if they escape from it, they become corruptible. And thus, with this allocation of all orders of existence to the place fitted for them, and the ignorance of any superior order, and universal contentment, there will come the restitution of all things.

The fundamental difference between this system and that of some other Gnostic leaders, notably Valentinus, lies in its emphatic rejection of the principle of emanation. For this rejection there were two reasons. One was that the theory of emanation is gross and repulsive in its conception of God. The other was that the natural tendency of all being is upwards, not downwards. Since, then, the world at present displays a scene of terrible confusion, we must assume that its development started from a condition of things even worse than that which now prevails; hence the doctrine of the seed, in which everything is huddled together, from the pure Sonship down to the grossest matter, the goal of history being the establishment of all things in their proper rank. Valentinus, on the contrary, starts with the principle that evolution is degeneration. Each pair of Æons is inferior to its parent. The process continues till the catastrophe is possible, and the plunge over the precipice follows. Spirit sinks to psychical forms of existence, thence to the material, and lastly the limit is found in the diabolical. The evolutionary process has then to become revolutionary; but, though the spiritual may return to the pleroma, the psychical and material must remain outside. Thus Basilides leaps the gulf between the infinite and the finite, whereas Valentinus bridges it. It is quite clear that there was a polemical element in Basilides' scheme, and that it was elaborated in conscious antithesis to the popular theory of emanation. It is quite possible, as some consider, that Basilides had the system of Valentinus in mind, since they were probably both teaching at the same time in Alexandria. It is not at all necessary, however, to take this view, since, although Valentinus was probably the junior, he was the more conservative of the two, and was not the first to put forward the theory of emanation.

The doctrine of the triple Sonship is difficult, and we could have wished for fuller information as to its significance. In spite of the fact that the First Sonship is regarded as refined and the Second as gross, they do not stand for different orders of being, for both of them pass to the highest realm of all, and are therefore essentially spiritual in character. And the same is true of the Third Sonship, the parts which he leaves behind him being accretions foreign to his essential nature. Probably Basilides has been influenced by the fondness for triplicity, which is so characteristic of such schemes. He has also been influenced by the first chapter of Genesis. The connexion between the Second Sonship and the Holy Spirit, who is identified with the firmament, reminds one of 'the waters above the firmament' in the story of Creation, in which case we may perhaps identify the First Sonship with the light, which was the first to be created, and in comparison with the fineness of which the waters would seem coarse. But how in plain language the author would have interpreted the waters above the firmament we do not know. The Third Sonship is apparently the spiritual principle which is at present combined with the material universe.

The Ogdoad and Hebdomad, which are astronomical in their origin, are conceptions familiar in other Gnostic schemes. The duplication of the Archons is interesting. It corresponds in a measure to the position of Achamoth and Demiourgos in the system of Valentinus, though there are marked differences in detail. Historically considered, they represent two stages in the world's history. The great Archon reigned from Adam till Moses, the second Archon from the time of Moses onwards, and it was he who revealed himself to Moses and inspired the Hebrew prophets. The kindly and compassionate spirit which pervades the system is very noteworthy. This comes out especially in the doctrine of the Great Ignorance, which is intended to save the creature from fatal aspirations towards a sphere which lies above it. But there are other illustrations of it. The Second Sonship and the Holy Spirit give and receive mutual kindness. The Third Sonship remains within the seed, giving and receiving benefit. The ascent of the spiritual to their true home is delayed by their duty of training those who have to remain within the seed. No evil principle is recognized. There is no hostility on the part of the Archons to the supreme God. They reverently acquiesce in the revelation of their inferiority.

(*c*) If we now inquire as to the relative originality of the system as presented by Irenæus and that given by Hippolytus, the advantage seems to lie on the side of the latter. In the first place, Hippolytus, who often follows Irenæus, and had almost certainly done so in his earlier work on heresies, which is no longer extant, here deliberately abandons Irenæus' account and gives one entirely different. He must have thought that in doing so he had access to better information, and it is hazardous to suppose that he took no precautions to ensure that the new information was superior. Basilides was a famous teacher, his works were extant at the time, and it would have been quite easy to satisfy oneself as to which account should have the preference by going to the fountainhead. In the next place, Irenæus shows himself badly informed in several particulars. Hilgenfeld himself admits this, and infers from the vagueness of Irenæus' language that he knew nothing of the sect or its founder at first hand, and depended simply on his source, which he believes (in harmony with Lipsius' earlier but not his later view) to have been Justin's lost *Syntagma*. Some of the mistakes of Irenæus have already been pointed out, and they must damage the credit of his whole account. Again, the system as presented by Irenæus goes on very conventional lines. It is quite a commonplace presentation of ordinary Gnostic beliefs, and it is not easy to understand why Basilides gained his immense reputation if he was capable of nothing better than this. On the other hand, the system as set forth by Hippolytus is characterized by extraordinary speculative power, to which we must not be blinded by the fantastic elements in the detailed working out. With the account of Hippolytus before us, we can understand the impression Basilides made on the Church, and the vitality of the sect in spite of the fact that, apart from his son Isidore, he seems to have had no distinguished followers, such as adorned the school of Valentinus. We have no right to condemn the system on the ground that it does not follow the ordinary lines. When, for example, C. Schmidt says that the emanation theory is the characteristic mark of all Gnostic systems, the cardinal dogma of all Gnostic teaching, and that the evolutionary theory is incompatible with the nature of Gnosticism, and that on this account the presentation in Hippolytus is utterly untenable (*Gnost. Schriften in kopt. Sprache*, 1892, p. 423), this is simply an illegitimate assumption. There is no reason in the nature of things why Basilides could not have followed the line which Hippolytus ascribes to him. If to do so is to forfeit one's title to be a Gnostic, that is, after all, a matter of

terminology. Questions of this kind cannot be settled by *a priori* considerations.*

(*d*) The evidence supplied by Clement of Alexandria has naturally been claimed both by those who favour the representation in Irenæus and by those who accept that of Hippolytus. Owing to the limitation of the evidence of the *Stromata* to the ethical parts of the system, the metaphysical doctrines of the school are but slightly touched upon, so that Clement is not engaged with the same side of the system as Hippolytus or the speculative portions of Irenæus' account. It must be urged, however, against the latter, that in several points Irenæus is convicted of misstatement by Clement's evidence, whereas there is no actual conflict between Clement and Hippolytus, though it is not easy to unite their representations into a single coherent scheme. There is, however, a very striking parallel in Clement's reference to the Archon's amazement when the glad tidings were announced to him. This amazement was called 'fear,' and Clement tells us that Basilides interpreted it of the passage, 'The fear of the Lord is the beginning of wisdom.' It is very noteworthy that precisely the same interpretation is given by Hippolytus with reference to the great Archon's reception of the Gospel. Clement also attests the view that things must be discriminated into their classes and the various intervals or stages which are to be found in the universe. His description of an original disorder and confusion forcibly reminds us of the doctrine of the seed, though *τάραχος* is not perhaps the expression we should have thought most appropriate to Hippolytus' description. The points of contact with Irenæus are slight and general, and they are also points of contact with Hippolytus, for both speak of an Ogdoad and of an Archon. Even if Hippolytus were left out of account altogether, it would be very difficult to reconcile Irenæus with Clement. And several modern writers who entirely reject the account of Hippolytus hold that Irenæus does not present us with the pure Basilidian doctrine. We are therefore probably justified in any case in treating Irenæus as a secondary authority who employed a source which described a degenerate development of the school, far removed alike in speculative power and ethical elevation from the founder.

(*e*) We should be warranted in accepting the account of Hippolytus without further hesitation if it were not for the difficulty of harmonizing it with the quotation in the *Acts of Archelaus*. Probably we should not be justified in denying that the quotation is really a genuine extract from Basilides' work. We cannot confidently attach much weight to the author's view of Basilides' doctrine, since the quotation, so far as we have it in the complete work of Hegemonius, does not commit Basilides himself to the dualism it describes. Basilides turns from vain inquiries, apparently into Western opinions, to the views entertained by the barbarians, *i.e.* presumably the Persians. Then he quotes the opinion of some of them to the effect that there were two original self-existent first principles—light and darkness—leading their own life in ignorance of each other. When, however, they came to mutual knowledge, the darkness was seized by desire for the light and sought to mingle with it. The light, however, received nothing from the darkness nor desired it, but was simply affected with the wish to behold it, and did so as in a mirror. All then that the darkness received was not the true light, but a reflexion and semblance of the light. Unfortunately, the text at this point is corrupt, but possibly the meaning may be that the light tried to recover what had been taken by the darkness. In any case, this intermingling accounts for the fact that there is no perfect good in the world, since the good that was received at the beginning was so slight. Nevertheless, in virtue of this slender appearance of light, the creatures have been able to form the creation which we see. It is regrettable that the author considered it unnecessary to quote any further, for we should perhaps have been in a better position to discover how far his accusation of dualism was borne out by Basilides' own expression of opinion on the views which he reports. It is quite possible that the approximately Manichæan theory which is here put forward was quoted by Basilides because it had points of contact with his own system. It would be no easy task to harmonize this dualistic doctrine with the monistic system of the *Philosophumena*. But possibly Basilides may have felt that it illustrated his own view of the original confusion of all things in the seed and the process of disentanglement that was consequently necessary. In spite of the monism that characterizes the system as described by Hippolytus, there is a dualistic strain within it, and Basilides may have recognized an affinity with Persian dualism, even though he constructed his own system along other lines. It is significant, as testifying to such affinity with Persia, that Isidore wrote an exposition of the prophet Parchor, and Basilides is said to have named as his prophets Barcabbas and Barcoph. It is generally agreed that Barcoph is the same as Parchor. Isidore is also said to have accused Pherecydes of borrowing from the prophecy of Ham, *i.e.* probably Zoroaster. The question is difficult to decide, but, in view of the uncertainty which hangs over the passage of Hegemonius, we may perhaps still accept the account of Hippolytus as substantially accurate, though we must allow for misunderstanding and unskilful abridgment where Hippolytus explained the system, not by quotations, but in his own words.

(*f*) It remains to touch upon some of the points that are referred to by *Clement of Alexandria* and *Origen*. Clement tells us that Basilides taught that, in virtue of the original disorder and confusion, the rational soul received as appendages certain passions which are really spirits, and then other natures became attached to these, including animal properties, as well as qualities of plants, and even inanimate objects. Thus man's actions may be to some extent traced to the foreign elements which have adhered to the rational soul, the passions of irrational animals accounting for his lusts, and such a quality as hardness being derived from steel. This doctrine of the parasitic elements which have attached themselves to the soul reminds one to a certain extent of the modern conception of multiple personality, though, of course, there are obvious differences between the two. Clement illustrates this conception of man by the Trojan horse which embraced in one body so considerable a host. Isidore wrote a separate treatise on the parasitic soul. In this treatise he found it necessary to repudiate the inference that a man could rightly lay the blame for his ill deeds upon these foreign appendages. He does not retract the doctrine itself, but asserts that the

* Bousset considers that the *Philosophumena* presents us with a monistic transformation of the original system of Basilides. Accordingly, his remarks on the general thesis that the doctrine of emanation is a specific characteristic of Gnosticism are, quite apart from their intrinsic importance, very pertinent here, since they are not inspired by any prejudice in favour of Hippolytus' version: 'One is usually inclined to regard this thought of emanation as specifically characteristic of the Gnosis. I cannot discover that this is correct. It is found only in a few systems, and in none so pure as in the Basilidian. Everywhere else the stress lies, not on the thought of a gradual emanation and deterioration of the Æons, but on the sudden fall of one of these Æons (Barbelo Gnosis, Valentinianism). Accordingly, the question as to the origin of the idea of emanation is fairly irrelevant for the comprehension of the Gnosis' (*Hauptprobleme*, p. 329).

rational soul ought to be supreme and govern the inferior creation within, and that a man should not excuse his misdeeds by the plea that he was at the mercy of these foreign passions. This doctrine was probably connected with Basilides' theory of transmigration which is attested by Origen. In his *Com. on Romans* (bk. v.), Origen tells us that Basilides explained Ro 7^9, 'I was alive apart from the law once,' to mean that before St. Paul came into the body in which he then lived he had inhabited a form of body which was not under the law, *i.e.* the body of a beast or a bird. We must assume then that, at the first, inferior spirits clustered about the rational soul, but that in the course of transmigration it brought with it elements from the various types of creation in which its successive incarnations had been realized.

Basilides also considered, as we learn from Clement, that suffering invariably presupposes sin, since to affirm the suffering of the righteous would be to indict the morality of God. Even in the case of the martyrs he believed that this held good. They were really suffering for sins which they had committed either in an earlier state or in their present life. But by the mercy of God their punishment was allowed to take the form of martyrdom, so that it might seem to be honourable rather than disgraceful. Even infants suffered on account of the sinfulness of their nature, for sin does not lie in the act so much as in the disposition which prompts it, inasmuch as frequently the difference between one who has committed a sin and one who has not committed it lies simply in the fact that the latter has had no opportunity. Naturally, from the orthodox side the criticism was made that the suffering of Christ would, on Basilides' theory, imply His sinfulness. Such a conclusion Basilides would not evade, though it was obviously distasteful to him. He will say: 'He has not sinned, but was like a child suffering'; but if he were pressed further, he would reply: 'The man you name is man, but God is righteous, for no one is pure from pollution.' To Clement the doctrine that martyrdom was punishment for sin was so repugnant, that he accuses Basilides of deifying the devil. It is a mistake to interpret this in a dualistic sense. He simply means that Basilides attributes to God the torments of the martyrs which were really inflicted by the devil. In any case, one must admire the principle which animated Basilides' whole treatment of this subject, expressed in his great saying, 'I will assert anything rather than call Providence evil.' It may be added that Basilides affirmed that only involuntary sins and sins in ignorance could be forgiven. Clement also criticizes the necessitarian character of Basilides' ethics. A man's destiny was determined by election, according to which each creature was assigned to his proper rank in the scale of being. The election, strictly so called, was regarded as a stranger in this world, since it was hypercosmic by nature. In other words, that portion of mankind which is chosen to rise to the highest sphere cannot properly belong to the world from which it is destined to escape. Faith was held in high esteem by the Basilidians; and in this they were distinguished from the Valentinians, who exalted knowledge in comparison with it. They did not regard it, however, as a grace to be exercised by a man's free will, but as one which he possesses by nature. It was interpreted as the faculty of spiritual insight which penetrates behind the phenomenal and gives assent to the unseen.

3. Formative influences.—The uncertainty which hangs over the system of Basilides in general extends also to its sources. Those who accept the account of the *Philosophumena* generally recognize a marked influence from *Greek Philosophy*, but they do not follow Hippolytus in treating the system as substantially Aristotelian. They are divided, nevertheless, on the question whether this influence was derived from Stoicism or Platonism. It is, however, only what we should expect, that at the present day the Oriental affinities of the system should be emphasized. The greatest stress is naturally laid on *Zoroastrianism*, but a few scholars are convinced that *Indian influence* must also be invoked. Pfleiderer, for example, considers that the Basilidian doctrine of the restitution of all things has such surprising resemblances to the Indian doctrine of redemption that we can hardly avoid thinking of direct influence from it. Similar is the case with the doctrine of transmigration; while the doctrine of the parasitic passions finds a parallel in Buddhist psychology. Moreover, the exposition of the so-called will of God, quoted by Clement (*Strom.* iv. 12), that one should love all since all have relation to the whole, that man should desire nothing and that he should hate nothing, what is this, Pfleiderer asks, but the quintessence of Buddhist ethics? Accordingly, he thinks that the later form of Basilides' doctrine, which we learn from Hippolytus, Clement, and Origen, is to be traced back still more to Indian than to Greek influence. He explicitly sets aside the derivation from Stoicism which has found favour with several modern writers. The question of Indian influence can, of course, hardly be settled apart from the wider problem of the diffusion of Indian thought in the nearer East, and on this subject it is safest at present to keep the judgment in suspense.* Perhaps it will be best to recognize that many sources contributed to the philosophy. Basilides was indebted to earlier Gnostic systems, not necessarily to Valentinianism (which would have a dubious claim to priority), but to theories which were subsequently incorporated in it. These stimulated him in the way of antagonism even more than of acceptance. He had been influenced by the NT, though his treatment of it was vitiated by the allegorical method. He appears to have compiled a Gospel which contained portions of Matthew, Luke, and John, and possibly of Mark. He had also been influenced by the Epistle to the Romans. He was naturally indebted to Alexandrian eclecticism. It is by no means improbable that he was influenced by Platonism, though Stoicism seems to have contributed even more important elements. Finally, it is practically certain, for reasons already given, that, whether he had ever been in Persia or not, he owed a good deal to Zoroastrianism.

Apart from his son Isidore, Basilides had no disciples of distinction. His abstruse speculations as to the non-existent God, the universal seed, and the threefold sonship, were too exalted for many of his followers; and the system quickly experienced a moral and speculative degradation, probably under the influence of Valentinianism. We have no evidence for the existence of the sect beyond Egypt, where Epiphanius (xxiv. 1) found it flourishing towards the close of the 4th century. The statement made by Jerome (*Ep.* 75. 3; *ad Vigilant.* 6), that there were Basilidians in Spain in his time, is incorrect. They were Manichæans with Gnostic elements in their doctrine (see C. Schmidt, *Gnost. Schriften*, 562).

LITERATURE.—Much of the literature has already been mentioned. Reference is made to the system of Basilides in the various Church Histories and Histories of Doctrine. It is naturally much more thoroughly discussed in works on Gnosticism and Heresy generally. Of the older literature, special praise is due to Beausobre's discussion in his *Histoire de Manichée et du*

* Cf. what Harnack says as to the blending of religions: 'It is still a moot point of controversy whether India had any share in this, and, if so, to what extent; some connexion with India, however, does seem probable' (*Mission and Expansion*[2], Eng. tr. vol. i. p. 28). The whole subject is discussed by Clemen in his *Religionsgesch. Erklärung*, 1909.

Manichéisme, 1734–39, ii. 1-68. Lardner's discussion in his *History of Heretics*, 1780, rests a good deal on Beausobre.

Of the later literature the following may be mentioned: Neander, *Genet. Entwickl. der vornehmst. gnost. Systeme*, 1818, and *Church History*, Eng. tr. 1850–58; Gieseler, in *Hall. Allg. Ltztg.* 1824, p. 825 ff., and *SK*, 1830, p. 395 ff.; Baur, *Christl. Gnosis*, 1835, *History*, Eng. tr. 1879; Lipsius, *Gnosticismus*, 1860; Möller, *Gesch. der Kosmologie*, 1860; Mansel, *The Gnostic Heresies*, 1875; Hilgenfeld, *Ketzergesch. des Urchristentums*, 1884; King, *The Gnostics and their Remains*, 1887; Mead, *Fragments of a Faith Forgotten*, 1900; de Faye, *Introd. à l'étude du Gnosticisme*, Eng. tr. 1903; Bousset, *Hauptprobleme der Gnosis*, 1907. The following special monographs have been devoted to the subject: Jacobi, *Basilidis Philosophi gnostici Sententias*, 1852; Uhlhorn, *Das Basilid. System*, 1855.

The controversy as to the trustworthiness of Hippolytus' account called forth a considerable number of publications, Hilgenfeld being specially active. We may mention among his discussions that in *Theol. Jahrbücher* (1856), his *Jüd. Apocalyptik* (1857), and articles in his *Ztschr. d. wissenschaftl. Theol.* for 1862 and 1878. His results are summed up in his *Ketzergeschichte*. On the other side may be mentioned Baur's discussion in the *Theol. Jahrbücher* for 1856, and the article by Jacobi, 'Das ursprüngl. Basilid. System,' in *Ztschr. f. Kirchengesch.*, 1877. Jacobi also contributed an article to *PRE*[2]. The article in *PRE*[3] by G. Krüger rules out the *Philosophumena*, and bases the account of the original system on Clement of Alexandria and the *Acts of Archelaus*. Irenæus being treated as secondary. Bousset takes the *Acts of Archelaus* as his main authority, and weaves in the fragmentary information we get from Clement of Alexandria. Pfleiderer's *Urchristentum*[2] (1902) recognizes two distinct stages in Basilides' theological development: the former, his Syrian stage, represented by Irenæus and Epiphanius; the latter, his Alexandrian stage, represented by Hippolytus, Clement, and Origen. This re-construction is extremely dubious, but it is at least interesting as showing that in Pfleiderer's judgment Clement of Alexandria supports the account of Hippolytus. The question of Indian origin is discussed by F. Kennedy in an article entitled 'Buddhist Gnosticisms: the System of Basilides' (*JRAS*, 1902). It should finally be added that English readers are fortunate in possessing the very valuable article by Hort in Smith-Wace's *DCB*, with which should be taken his articles on 'Abrasax' and 'Barcabbas and Barcoph' (*ib.*), and the chapter in J. Drummond's *Character and Authorship of the Fourth Gospel*, 1903. Works on the History of Philosophy usually contain some account of Basilides. A very interesting recent discussion may be seen in J. Watson's *Philosophical Basis of Religion*, 1907. A. S. PEAKE.

BASKET.—Two kinds of baskets must be considered as belonging to the service of the gods: the κανοῦν (κάνεον, κάναστρον, κάνιστρον, κανίσκιον, Lat. *canistrum*) and the κάλαθος. The κανοῦν is a flat broad basket, originally made of rush or cane (Aristoph. fr. 160 [Kock]; Pollux, vii. 176), and therefore to be derived from κάνα or κάννα (Lat. *canna*, cf. Koraïs in Heliod. *Æthiopica*, p. 114). At an early date the shape was imitated in metal: in bronze (Hom. *Il.* xi. 630) and in gold (Hom. *Od.* x. 355). The plaiting was clearly indicated in the metal (Athen. vi. 229[d]). Wooden κάνεα are recorded for his own time by Eustath. (*Od.* i. 141). This basket was used as a receptacle for bread and food to be served at meals (cf. Hom. *ll. cc.*). In the same vessel the meals were served to the gods; hence it was used for sacrifice. As an important passage describing a rite of archaic simplicity, compare Hom. *Od.* iv. 761, where Penelope pours οὐλοχύται, 'sacrificial barley' (cf. Ziehen, *Hermes*, xxxvii. 391 ff.; Stengel, *ib.* xxxviii. 38 ff.), into the basket for Athene before making a vow. A less important part is played by the κανοῦν with the οὐλαί in the sacrifice of a victim (Hom. *Od.* iii. 441 f.). On this occasion the sacrificial knife was placed for convenience (not as Ziehen supposes, *op. cit.* 398 f.) in the basket (Eur. *El.* 810 f., 1142; Aristoph. *Peace*, 948 + schol.). As the basket was a flat one, the expression 'to place the knife *on* the basket' was likewise used (Philostr. *Vita Apoll., init.*, cf. Stengel, *Herm.* xliii. 465, 1). The basket was adorned with sacred fillets (στέμματα, Aristoph. *l.c.*), and wreathed with sacred twigs (cf. Ov. *Met.* ii. 713, and, for the Attic Thargelia, Proclus on Hes. *Works and Days*, 767 [p. 419, Gaisford]; see also Dieterich, *ARW* viii. Usenerheft, p. 100, 1). Fillets and twigs are often visible on vase-paintings (cf. Hock, *Griech. Weihegebräuche*, p. 94). In Delphi, the sacrificial basket contained cake and incense (Æl. *Var. Hist.* xi. 5; Heliodor. *Æth.* iii. 2). The ritual of sacrifice was begun by the basket and the water for ablution, which closely belonged to it (Demosth. xxii. 78), being carried round the altar from left to right (Aristoph. *Peace*, 956 f.; Eur. *Her. Fur.* 926 f., cf. also Ziehen's opinion, *op. cit.* p. 400, 1). To get the sacrificial basket ready for the sacred action is expressed by ἐνάρχεσθαι κανοῦν (Eur. *El.* 1142, *Iph. Aul.* 1470; Æschin. *in Ctes.* 120; Menand. *Perik.* 346 f., *Sam.* 7; Poll. viii. 83). Stengel (*Herm.* xliii. 465) has misinterpreted the meaning of the expression by using the term 'to consecrate,' which does not suit here; the correct explanation is found in Abresch, *Animad. ad Æschyl.* i. 505 ff. (cf. also schol. Æschin. *l.c.*). That ἐνάρχεσθαι is not a sacred action is clearly shown in Menand. *Sam.* 7, where it is mentioned with house-cleaning and cake-baking, as preparation for the wedding. The use of more than one sacrificial basket is attested (Eur. *El.* 800). As a chief requisite at sacrifice (Aristoph. *Birds*, 43 + schol., 863; Pherecrates, fr. 137 [Kock]; Dittenberger, *Syll.*[2] 628, 23, from Eleusis), the κανοῦν is often found in temple-inventories. Cf. for the Parthenon, Michaelis, *Parthenon*, p. 259; and, *e.g.*, *IGA* i. p. 73, *a* 6, 10, etc. (two in gilt wood), ii. 668, 3 f. (in gilt bronze), 5 f. (*ib.*); 676, 45 f. (in bronze); 678, B 7 (1 large one, 20 'old' ones); 724, B 3 f. (in silver, dedicated to Asklepios) 5 ff. (silver, dedicated to Athene), ii. 5, 653, 15 (with wooden frame: ὑπόξυλον); 685, 2; 700*b*, B 32 (in bronze); κανᾶ χαλκᾶ πομπικά in the inventory of the Chalkotheke (Michaelis, *op. cit.* p. 307, 29; cf. *IGA* ii. 162, *ab.* 16). A basket dedicated to Demeter and Kore in Eleusis is mentioned in the statement of accounts of the ἐπιστάται Ἐλευσινόθεν of the year 329–8 (Dittenberger, *Syll.*[2] 587, 116; cf. *IGA* ii. 5, 767, *b* 62). A basket is spoken of in an inventory from Oropos (Amphiaraos) (*IGA* vii. 303, 55), from Thebes (*ib.* 2424, 13), from Ægina (Mnia and Auzesia), *IGA* iv. 1588, 5 f. (in bronze), 16 (9 rush-baskets, see above), 33 (small bronze basket), from Delos (Dittenberger, *Syll.*[2] 588, 93 (Apollo), 185 (in silver with silver handles dedicated to the Delian Apollo), 186 (a gilt one of upright shape [?]: ὀρθόν, with same dedication), 205 (the three latter out of the temple of Artemis), from Mitylene, *IGA* xii. 2, 13, 1 (κανῆια χρ[ύσια], golden baskets: 'inscriptionum templi Dianæ Thermiæ longe antiquissima'), from Didyma (Apollo) (*CIG*, 2855, 20). The shape of the sacrificial basket can be well observed in the very numerous sacrificial scenes; this, however, requires a special study. A handsome specimen is *Röm. Mitt.* v. 324; more examples are enumerated on p. 326, also in Michaelis, *Parthenon*, p. 259. It must be remarked here that the shape frequently designated as three-pointed is in fact four-pointed. In the present writer's opinion, Gisela Richter wrongly interprets the object held by a woman on a red-figured skyphos as being a sacrificial basket (*Amer. Journ. of Archæol.* xi. 423 ff.; *ib.* six similar examples); more probably the object depicted in *Arch. Zeit.* xxix., pl. 45 (cf. *Röm. Mitt. l.c.* p. 326 1) belongs to this class. An affinity seems to exist between the sacrificial basket and the object occurring on Mycenæan monuments, and known as 'horns of consecration' (cf. *e.g.* Evans, *Mycenæan Tree and Pillar Cult*, p. 3 (101), fig. 1; p. 44 (142), fig. 25; see Hub. Schmidt, *Berl. philol. Wochenschr.* 1898, p. 945; Hock, *Griech. Weihegebr.* p. 94, 3). A small Mycenæan clay basket with four rows of double axes (therefore sacred) has recently been found on the small island of Pseira near Crete (Pernier, *Ausonia*, i. 110; *Arch. Anz.* 1907, p. 109, cf. Bulle, 'Orchomenos,' *ABAW*, philos.-philol. Kl. xxiv. 2, p. 81, pl. xxviii. 15). The use of the basket during sacrifice led to its being

classed as a sacred thing. Hesych. (*s.v.* *λατριανίδες*) records that the Athenians covered their 'sacred baskets' (cf. *IGA* ii. 420, 10 f.). Perhaps Leacock (*de Pompis Græcis*, Harvard Stud. xi. 23) rightly connects the garment lying on the basket (*IGA* ii. 754, 29 f.) with this custom. As a sacred object the basket is touched by the Geraræ when they swear an oath to the Basilissa in front of the altar ([Demosth.] lix. 78, entirely misinterpreted by Gerhard, *Rhein. Mus.* xiii. 474* ff.).

If a solemn procession preceded the sacrifice, the basket was carried in it by a girl (*κανηφόρος*). Leacock's opinion (*loc. cit.* p. 12), that in private procession boys also carried the basket, finds no sufficient support in Aristoph. *Birds*, 850, 864. The *canephoros*, who was of good family (Philochorus *ap.* Harpocr. *s.v.*) and of virtuous demeanour (Aristoph. *Ach.* 253 f.; *CIG* 3602 f.; Ov. *Met.* ii. 711; Porphyr. *ad Hor. Serm.* i. 3, 10 f.), was rubbed over with flour (Aristoph. *Ekkl.* 732; Hermipp. fr. 26 [Kock]; Pfuhl, *de Athen. pompis sacris*, 22, 141) and richly adorned (Aristoph. *Ach.* 258, *Lys.* 1188 ff.; [Plut.] *X. Orat. vit.* p. 852^{b} + *IGA* ii. 162, *c* 10, with Kohler's remarks, cf. ii. 2, p. 98 ff.); behind her follows a *diphrophoros*, 'girl carrying a settle' (Aristoph. *Birds*, 1552, schol. 1551, *Ekkl.* 732 f.; Hesych. *s.v.*). Some of these reports may bear special reference to the Panathenæa (cf., for all, Pfuhl, *op. cit.* 20 ff.; Leacock, *loc. cit.* 9 ff.). As a preparation for the *pompe*, the *canephoros* took a cleansing bath in flowing water ([Plut.] *Amat. narr.* p. 771 f.). According to Menander's *Epitrep.* 221 ff., married women also participated as *canephoroi*, probably of Demeter (*τῆς θεοῦ*), after having abstained from cohabitation for three days (from Menander is derived Diogenianus, ii. 46; cf. Headlam, *Restorations of Menand.* p. 7). The simplest form of a procession with basket-bearing is shown by the Attic 'Dionysia in the Country' (Aristoph. *Ach.* 241 ff.). First comes the *canephoros*, then the *phallos*, and the rear is formed by Dicæopolis, at the same time the priest and the representative of the congregation (cf. *IGA* ii. 844, 15 ff.), while symbols of the gods seem to follow the basket (see Petersen, *Burgtempel d. Athenaia*, p. 81; there is a *canephoros* at the head of the procession on the black-figure vase-painting in Stengel, *Kultusalt.*^{2} pl. i. 4). Basket and *phallos* are found in the same order in the primitive form of the procession in the Great Dionysia, which were formed on the model of the Lesser Dionysia. In front of the basket were borne a jar of wine and a vine-twig, and a he-goat was led ([Plut.] *de Cupid. div.* p. 527^{d}, cf. Dioscorides, *Anth. Pal.* vii. 410, 3 f.)—the specifically Dionysian addition to the ancient phallic foundation. In the basket, which is carried by a man, there are figs; therefore, the present writer classes among references to the Great Dionysia the passage Aristoph. *Lys.* 646 f., where the basket-bearer wears a chain made of figs. This *canephoros* was more than ten years of age (*ib.* 643 ff.). Golden baskets with *ἀπαρχαὶ ἁπάντων* are recorded in schol. ad Aristoph. *Ach.* 242 = Suid. *s.v.* *κανοῦν*. The basket-bearers of the Great Dionysia were elected by the Archon Eponymos (*RA* xxv. 1873, 178; *IGA* ii. 420; for other basket-bearers of Dionysos, see *IGA* ii. 1388*b*, Add. p. 349; ii. 5, 318*b*, 32). At the Panathenæan festival a great number of basket-bearers participated. The orator Lycurgus procured amongst other things golden ornaments for 100 girls (*X. orat. v.* p. 852^{b}, cf. his speech *περὶ κανηφόρων*, Harpocrat. *s.v.*). On the frieze of the Parthenon numerous girls with and without implements are represented, who have rightly been recognized as basket-bearers (Pfuhl, *op. cit.* p. 20, 133); but it is not probable that the girls would carry the objects in their hands instead of in baskets on their heads for purely artistic reasons (Pfuhl, *op. cit.* p. 21, 137); we must give preference to Leacock's opinion (*loc. cit.* p. 14) that most of these girls were only basket-bearers *honoris causa*. The *κανοῦν* is held by the *hieropoios* (49, Michaelis), who has taken it over from the girl standing before him (the object seems to the present writer to be wrongly interpreted as a sacred chest by Frickenhaus, *Ath. Mitt.* xxxiii. 31, 1); the visible boring-holes seem to point to fillets (Michaelis, *op. cit.* p. 259); it is inadmissible to suppose the presence of other baskets (Robert, *GGA* clxi. 533 f.). Other references are the election of the basket-bearers by the Agonothetes (*IGA* ii. 5, 421*c d*, 51 f. [soon after B.C. 308]), and the inscription in honour of a Panathenaic *canephoros* (*IGA* ii. 1388). For the minor Panathenæa a number of basket-bearers is likewise recorded, who participated in the portions of sacrificial meat (Dittenberger, *Syll.*^{2} 634, 14 f.), and there are eleven statuettes of *canephoroi* (*κόραι ἀπὸ τῶν κανῶν*) in the inventory of the Parthenon (*IGA* ii. 678, B 45 f.). Moreover, basket-bearers are recorded in Athens for the following cults: three permanent *canephoroi* at the Palladion, inscribed on a seat of the Dionysos-theatre (*IGA* iii. 338); *canephoros* of Athene Soteira (?) (*IGA* ii. 1387); of the Pythian Apollo (*IGA* ii. 1388 [catalogues of basket-bearers, who participated in greater number in the Pythian State-embassy, on inscriptions, Colin, *Le Culte d'Apollon Pythien à Athènes*, Paris, 1905, p. 46, 87]); of the Eleusinia (*IGA* iii. 916 [a sunshade for this *pompe* is recorded, schol. Aristoph. *Birds*, 1508 = Suid. *s.v.* *σκιάδειον*]); of Asklepios (*IGA* iii. 921; cf. the *canephoros* of the Epidauria, *IGA* iii. 916); of Asklepios and Hygieia, used for dating, therefore annual (*IGA* ii. 1204); of the mother of the gods (*IGA* ii. 1388*b*, Add. p. 249); of Serapis (*Ephem. arch.* 1895, 102); of Isis (*IGA* ii. 1355); of Serapis and Isis (*IGA* iii. 923; cf. Rusch, *de Serapide et Iside in Græcia cultis*, p. 16). Basket-bearers of uncertain cults are found in *IGA* iii. 920, 922, 924; 920*a* (Add. p. 508). Basket-bearing of brides to Artemis is recorded in Theocrit. ii. 66 f. + schol., and a *canephoros* in the *pompe* of the Epaulia the day after the wedding, in *Arch. Jahrb.* xv. 151; cf. the *κανᾶ ν[υμφικά]*, *IGA* ii. 678 B, 9, ii. 5, 700*b* B, 25. There were basket-bearers in Bœotia (Lebadeia) of Zeus Basileus ([Plut.] *Amat. narr.* p. 771^{b}); at Delphi (Heliod. *Æth.* iii. 2); on Delos (cf. Schoeffer, 'de Deli insulæ rebus,' *Berliner Stud.* ix. 1, 240 f.) of Delia and Apollonia (cf. Nilsson, *Griech. Feste*, 145 f.; *BCH* iii. 379), of Apollo (Artemis and Leto) (*ib.* 380 f.), of Artemis (*BCH* xi. 262, 22), of Dionysos (*BCH* vi. 338, 41, 4, xxix. 239), of Serapis (Isis, Anubis, and Harpocrates) (*BCH* vii. 368, 18, 6), a basket-bearer of Isis used for dating (therefore annual, cf. Rusch, *op. cit.* p. 52) (*CIG* 2298), of the Egyptian gods (Rusch, *op. cit.* p. 51 n., 35, 2. 3, and the stones from the sanctuaries of these gods in Dittenberger, *Orientis Gr. Inscr.* 170, 8; *BCH* vi. 348, 74, 8), of the Syrian Aphrodite (and Apollo) (*BCH* vii. 368, 17 [the quotation, *BCH* vi. 346 added by Schoeffer, *op. cit.* p. 241, is not to be found]), of the same goddess used for dating (*Ἀθηναῖον*, iv. 462, 16); in the Troad of the Ilian Athene (*CIG* 3602 f.); in Pisidia (Termessos) of Artemis (*CIG* 4362); in Karia (Kasossos) of Zeus (*SWAW*, phil.-hist. Kl. cxxxii. 24, 4). Ptolemaios Philadelphos transferred the institution of the *canephoros* to the cult of Arsinoë Philadelphos (cf. Walter Otto, *Priester und Tempel im hellenistischen Aegypten*, ii. 266 f.). This *canephoros* is the oldest Alexandrian eponymous Ptolemaïc priestess, first recorded B.C. 267–6 (Otto, *op. cit.* i. 157, 3; a list of these basket-bearers, *ib.* 185 ff., ii. 324 f.). The same *canephoros* in Ptolemaïs is first recorded B.C. 183–2 (*ib.* i. 161 f., list, *ib.* 195, ii. 325 f.). Comedies entitled 'the cane

phoros' were written by Anaxandrides (Kock, ii. 143) and Menander (iii. 73). Two bronze statues of basket-bearers were made by Polykletos (Cic. *Verr.* iv. 5); a basket-bearer by Skopas (Plin. *HN* xxxvi. 25). Two basket-bearers are depicted on each side of a *thymiaterion* on a terra-cotta relief of the Collection Campana (Daremberg-Saglio, *s.v.* p. 877, fig. 1101, cf. Reinach, *Rép. de la stat.* i. 217, ii. 425 f.).

The *canistrum* (mostly of willow) was also plaited (cf. Isid. *Or.* xx. 9, 8; *Thesaur. l. l.* iii. 259), was broad and flat (Ov. *Fast.* ii. 650, *Met.* viii. 665), and was used as a receptacle for bread, food, fruit, flowers and liquids (specimens in silver, Serv. *Æn.* i. 706; Symm. *Ep.* ii. 81). The basket is rarely mentioned in Roman cult: at the Terminalia (Ov. *Fast.* ii. 650 [with fruit]), in private worship (Tibullus, i. 10, 27 [wreathed with myrtle-twigs, see above, p. 433ª])—both poetic passages perhaps under Greek influence. In scenes of sacrifice a kind of basket occasionally appears (Mau, *Pompeji*, p. 100). *Canistrariæ*, corresponding to *canephoroi*, are recorded only in Africa (*CIL* viii. 9321 [Cæsarea: of Ceres Aug. apparently] 9337, [*ib.*] 12919 [Carthage]); the *canistrariæ* of the *dea Cœlestis* in Rome likewise point to Africa (Dessau, *Inscr. Lat. Sel.* 4438). There are nine *canistrarii* of the same goddess (Cælestis Aug.) at Timgad (*Rev. arch.* x. 1907, 25). No connexion exists between the *canistrarii* and the *cannophori* (=*cannarum gestatores*) of the Great Mother in Milan, Ostia, Locri (cf. the *col*(*legium*) *canoforo*(*rum*) at Sæpinum, *CIL* ix. 2480); see Mommsen, *CIL* viii. p. 974 to n. 9337.

The *κάλαθος* (*καλαθίσκος*) originally served practical purposes as did the *κανοῦν*; it was used in the women's apartment (Aristoph. *Lys.* 579; Poll. x. 125) and as a receptacle for flowers and fruit (cf. *e.g.* Heliod. *Æth.* iii. 2; Eustath. *Od.* iv. 131; Reinach, *Répert. de la stat.* i. 76; Stephani, *Compt. rend. de S. Petersb.* 1865, 24, 1). Its form is that of a lily (Plin. *HN* xxi. 23). As a symbol of plenty the *calathos* is given as an attribute to Demeter and other goddesses in art (cf. Stephani, *l.c.* 25 f.; Daremberg-Saglio, *s.v.* p. 814). In the same capacity it figures in the cults of Demeter and Artemis. A *calathos* on a cart drawn by four white horses occurs in the Alexandrian Eleusis; the women taking part in the festival submitted to special regulations. It was forbidden to look inside the *calathos* (Callim. *h. Cer.* 1 ff., 120 ff.). This *calathos* is depicted on a bronze coin of Trajan (Daremberg-Saglio, i. p. 1071, fig. 1312). Usener (*Rhein. Mus.* l. 146) explained the procession, perhaps correctly, as a spring-festival, referring to Callim. *op. cit.* v. 121 ff., 136. The sheaf visible on the bronze coin is not necessarily a counter instance (Pringsheim, *Archæol. Beitr. zur Gesch. d. Eleusin. Kults*, p. 13 footnote). According to the schol. *ad loc.*, Ptolemaios Philadelphos took over the *pompe* from Attica. This is probably the case, for a *calathos*-festival of Demeter doubtless forms the basis of the confusion in schol. to Æsch. *in Ctes.* 120. That the *calathos* played a mystic part in the Eleusinian liturgy is shown in the formula cleverly interpreted by Dieterich (*Mithrasliturgie*, p. 125 f.). On the other hand, the basket of Kore must be regarded as a flower basket only (Rohde, *Kl. Schr.* ii. 361 f.). It is inadmissible to consider the seat of the Eleusinian image of Demeter as being a *calathos* in its origin (Nilsson, *Griech. Feste*, p. 350); we do not sit on open baskets. Nor is there any foundation for the derivation of the chest out of the *calathos* (*ib.*). A *calathos*-procession in honour of Demeter in Asia Minor is recorded on an inscription from the valley of the Kayster (*Ath. Mitt.* xx. 242), according to which a priest of Demeter presented a plaited *calathos*, and attended to the *ἀναφορά* of the *calathos*, which took place every year and was participated in by men chosen by lot. Eustath. (*Od.* ix. 247) records dancing *calathoi* for some festival of Demeter. This leads us to Artemis, for whose sanctuary on the Gygæan lake (not far from Sardis) the same record exists (Strabo, xiii. 626). The present writer considers Nilsson's supposition (*Gr. Feste*, p. 253) correct, that there were men inside the dancing *calathoi*, who thus imitated dæmonic *calathoi*. If really Helena was originally nothing but the mystic rush-basket of the Helenephoria (Poll. x. 191; Gruppe, *Griech. Mythol.* p. 163; his connecting the festival with the Brauronic cult [p. 56] is founded on a reading rejected by Kaibel, *Athen.* vi. 223ª), then here, too, we have a dæmonic basket. Possibly the sacred dance of the *calathoi* bears a distant affinity to the *calathiscos*-dance (Athen. xi. 267 f.; Poll. iv. 105; Hes. *s.v.*). Under the appellation *calathos* of Artemis (Bendis) a Bithynian spring-festival (Usener, *op. cit.* p. 145 f.) is recorded by Callinicus (*Vita Hypatii*, p. 96, ed. Bonn). For fifty days, while this festival lasted, no journey was undertaken. We must, therefore, suppose a procession of long duration, as in the cult of Liber of Lavinium (Augustine, *de Civ. Dei*, vii. 21). The Bithynian metrical inscription of the 1st cent. before or after Christ (*Ath. Mitt.* xxiv. p. 413, 13) is certainly closely connected with this procession. Here women are invited to follow the *calathos* in a special attire. The regulations for attire, whose existence this inscription indicates, point to an affinity to the cult of Demeter, but do not imply a dependence upon it (Nilsson, *op. cit.* p. 352); such regulations were common property (cf. Koerte, *Ath. Mitt. l.c.* 414 f.). The *calathos*-worship of Bithynia and Lydia is probably justly traced back by Nilsson (*op. cit.* p. 254 f.) to the Thraco-Phrygo-Bithynian cult of Bendis. About the Helena basket, which is related to the *calathos* of Artemis, see above. A basket in the worship of Dionysos must also be supposed to have had mystical significance (cf. Stat. *Theb.* iv. 378 and also the Pompeian painting in Daremberg-Saglio, i. 891, fig. 1124, where the basket is almost entirely covered, cf. above, p. 434ª). The *liknon* does not belong here (Gruppe, *Griech. Mythol.* p. 1172, footnote, erroneous, in the present writer's opinion). The figures bearing real *calathoi* on their heads are very difficult to class (cf. Stephani, *l.c.*, 1865, 27, 1). Significance in worship has thus far not been demonstrated (cf. Stephani, *l.c.* 26 f.). The connexion of the head-gear designated as *calathos* (first by Macrobius, i. 20, 13, and *passim*) with the real basket is equally uncertain. Primary forms can already be observed in the Mycenæan age (Thiersch, *Aegina*, p. 372). Demeter above all receives it as a symbol (also her servants; cf. Stephani, *l.c.* 21 ff., pl. i. 1, iii. 2. 3); then it is transferred to the chthonic deities, especially Serapis, and thence under Severus to the 'great god' of Odessos and the Thracian riding-god (Pick, *Arch. Jahrb.* xiii. 156, 165).

L. DEUBNER.

BASQUES.—The Basques, *Eskualdunac*,* are confined to the Provincias Vascongadas of Spain, part of Navarre, and a smaller section of the French Département des Basses Pyrénées. They number about 450,000 in Spain, and 150,000 in France—600,000 in all—*i.e.* less than the population of a second-rate capital. Thus we have only the fragment of a race, the *débris* of a language.

1. Language.—Of the vocabulary of the spoken Basque 70 per cent. is borrowed. The grammatical forms are so worn down that scarcely two grammarians agree in the analysis of them. The toponymy of ancient Spain shows that this race

* Leiçarraga (Pref. to NT, 1571) calls them *Heuscaldunac*, and their language *Heuscara*. Their name means 'Holders of Heuscara.'—[E. S. Dodgson.]

once covered the whole of the Peninsula as well as the Pyrenean slopes of Southern France.* This we consider proved, in spite of the objections of Prof. Vinson. Throughout this region we find inscriptions in characters still partly undeciphered, the so-called Celtiberian, or 'letras desconocidas' of Spain. They exhibit a difference of alphabet in different parts of Spain,† but are probably only dialects of one language spoken on both sides of the Pyrenees.‡ That this language is an earlier form of Basque is not yet thoroughly established, and would be denied by the above-mentioned writer.

2. Religion.—There is a like difficulty with regard to the religion of the ancient inhabitants of Spain. It is almost impossible to distinguish what belongs to each people or tribe. Strabo tells us that the morning star was worshipped under the strange title of 'lucem dubiam.'§ The Basque shepherds still call Venus at a certain time of the year *Art-izarra*,‖ 'the between star,' the star between night and day. Strabo also tells of dances in honour of an anonymous deity during the night of the full moon,¶ and of the immolation of goats, of captives, and of horses to Ares.** Silius Italicus speaks of a hatred of cremation, of corpses being left unburied in order to be eaten by birds and thus carried up to heaven, implying a belief in immortality of some kind.†† Iberian deities were assimilated and adopted into the Roman pantheon, like those of other peoples; the names of strange deities abound in the Latin inscriptions.‡‡ Some are certainly Celtic. The only ones that seem undoubtedly Basque are 'Deo Baicorix,' and 'Heraus-corrtsehe.'§§ Worship of nymphs, fountains, and trees appears to have been common in Basque-speaking countries. Classical authors mention the skill of the Iberians in augury.

3. Pre-historic remains.—The pre-historic remains and megalithic monuments of Spain and Southern France do not differ materially from those common to Western Europe. The exceptions are the so-called *Toros*, 'bulls,' of Guisando; though they are more often boars, sometimes calves, or horses. Some 3500 of them have been noted from fifty different localities. (There is only one of these in Basqueland, namely the pig at Durango, noted by Mr. Dodgson.) Several bear Latin sepulchral inscriptions of the Augustan age.* The synthesis of Oriental and Western religions began early in Spain. At Astorga we find the figure of an open hand, above, and on the palm Εις Ζευς Σεραπις Ιαω,† another in Portugal 'Serapi Pantheo.' The remains of the Cerro de los Santos in Murcia have a like character. Celtiberian, Greek, and Latin inscriptions are associated with coins of Constantine and Theodosius.‡

4. Name of God.—The name of God in modern Basque is *Jaungoiko*, *Jainko*, *Jeinko*, *Jinko*. The last three are considered to be dialectic contractions of the first. The meaning would be literally *Jaun*, 'the Lord *or* Master,' *goiko* 'of the Height.' *Jaun* is used in Basque like *Señor* in Spanish—applied to men as well as to God. But in the dialect of la Soule and Roncal *Gaiko* means 'the moon.' Here Basque scholars are again divided. Prince L. L. Bonaparte maintains that *Jaungoiko* is a contraction for *Jaungoikoa*, 'the Lord of the Moon.'§ Vinson holds that the 'Lord Moon' makes as good sense in mythology as 'the Lord of the Moon.' Both appeal to Strabo, the one to the phrases *ἀνωνύμῳ τινὶ θεῷ*, and *Ἔνιοι δὲ τοὺς Καλλαϊκοὺς ἀθέους φασί*, the other to *ταῖς πανσελήνοις νύκτωρ*.‖ The writings of the early Christian missionaries and Fathers and the *Acta Sanctorum* give us no help; they speak in a vague way of idolatry, but do not tell us what the idols were. Neither folklore, nor the popular drama, the Pastorales, nor the poetry helps us. The tales are all found elsewhere. The only peculiarity of the poetry is a fondness for allegory, which perhaps arises from thinking in a language which has few native abstract or collective terms, but expresses nearly everything in the concrete. We mentioned above the skill of the Iberians in augury. In the 16th and 17th centuries we have full accounts of a strange moral epidemic of witchcraft among the Basques; victims went to the stake confessing perfectly impossible crimes.¶

5. Religious dances and other customs.—Still the attitude of the Basques in ecclesiastical matters is very different from that of ordinary mediæval Christianity. Alone of Western Europeans they have preserved a whole series of manly dances from the time when dancing was an act of the highest ceremonial importance. We can notice only two of the series, the animal dances and the religious dances. The animal dances still preserved are: in la Soule, the *Hartz*, or bear dance, in which the

* Wilhelm von Humboldt, *Prüfung der Untersuchungen über Urbewohner Hispaniens vermittelst der vaskischen Sprache* (Berlin, 1821 [French tr. by A. Marrast, Paris, 1866]); Theodor Mommsen, *Röm. Gesch.*[4] vol. v. cap. ii. p. 72 (Berlin, 1894).

† Puyol y Campo, in *Boletin de la R. A. de la Historia*, vol. xvi. p. 321 (Madrid, 1890); Strabo, lib. iii. (cap. i. vol. i. p. 223, ed. Tauchnitz, 1829).

§ Lib. iii. cap. ii. p. 225 (*ἣν καλοῦσι Λουκεμδουβίαν*).

‖ *Art-izarra* means the 'morning-star' at any time of the year. It is translated by *lucero, estrella del Norte*, i.e. 'morning-star,' 'day-star,' 'star of the North' in the *Dictionary* of Don Pedro Novia de Salcedo (Tolosa, 1902); and by 'belle étoile qui paraît à l'horizon, à l'est, annonçant l'aurore' in that of M. Salaberry (Bayonne, 1857). The syllable *art* here has (probably) nothing to do with *arte* meaning 'middle,' 'between,' but would be derived from *argitu*, 'enlightened,' like *arthatse* (Ac 5[21]) in Leiçarraga's New Testament of 1571, republished, with alterations, by the Trinitarian Bible Society of London in 1903 and 1908. Here *hatse* means 'beginning' and *art* is a contraction of *argitu*, 'brightened,' 'lighted,' or, just possibly, of *argi*, 'light,' with a euphonic *t* interpolated, as in other composite words. Thus the word means 'dawn' or 'beginning-of-light.'—[E.S.D.]

lambs (*achouriac*) also appear; the *Zamalzain*, or horse dance, and the *Acheri*, or fox dance, in Guipúzcoa. These may suggest some early form of totem custom or worship.* The dance of the *seixes* at Seville is well known; but the habit of religious dancing was much more widely spread. In Aragon it survived till the end of the 19th century. It is still practised at Jaca, and existed till 1830 at Iholdy in the French Pays Basque.† Religious dances formed a prominent feature in the festivals which took place at Azpeitia on the canonization of Ignatius Loyola in 1622. They were objected to by some, but are warmly defended by the great Basque scholar and preacher, Manuel de Larramendi, who quotes largely from the OT and the Fathers in commendation of the practice.

Another custom which points back to some kind of offerings to or for the dead long survived among the Basques. Travellers in the 15th cent. were struck by the lighted tapers, and prayers said before tombs adorned with flowers.‡ Offerings to the priest at funerals formed the greater part of his income, and were almost incredible in amount. These were made at the tomb, after being offered to the priest in church. Wealthy people gave a pair of oxen, others one, or lambs and fowls. The oxen and sheep were led to the church porch, and there ransomed. The bread and the tapers were taken from the tomb and offered in the church at the reading of the Gospel. At length the civil authorities passed sumptuary laws to restrict these offerings, and they are gradually ceasing, although the Basques still carry candles to church and fix them in elaborate, and often very ancient, carved wooden taper-holders over the tombs of their parents who lie beneath the pavement of the church; the candles are lighted during mass.§ The lavishness of the Basques in offerings was noted by the Pilgrim of the 12th cent., who was otherwise most hostile to them:

'In decimis dandis legitimi, in oblationibus altarium assueti approbantur per unumquemque enim diem, dum ad ecclesiam Navarrus vadit, aut panis aut vini aut tritici aut alicujus substantiæ oblationem Deo facit.'‖

6. Civil laws.—In striking contrast with this generosity to the clergy in religious matters is the conduct of the Basques towards them in merely civil matters. The Basques are the most religious people in Spain.¶ The Englishman who knows their language best says: 'The Basques are fanatically Catholic, almost disagreeably religious, and detest Calvin as much as all loyal monarchists hate Oliver Cromwell, but with less cause.'** A writer not at all suspected of anti-clericalism remarks on this 'double caractère éminemment religieux et démocratique.'†† Bascle de Lagrèze, a decidedly clerical writer, points out that for a long time marriage was a purely civil act among the Basques: 'le For (*i.e.* el Fuero) n'exige aucune intervention du prêtre dans la célébration du mariage, qu'il considère comme un contrat civil.' Gradually the stipulation began to be made that the marriage should be solemnized 'segun el Fuero de la Iglesia' or 'segun la ley de Roma'; finally, marriage before the priest was alone valid.* It was the same with the administration of oaths, of judicial combats, and of ordeals.† The election of the clergy by the parishioners continued in some places down to the beginning of the 19th cent.‡ The rest of Church patronage was in the hands of the king, the nobles, and the municipalities. No bishop had a right to any part of the tithes in Guipúzcoa.§ But the peculiar attitude of the Basques towards the clergy is best seen in the elections to the *Juntas*, or local parliaments. No ecclesiastic could be a deputy, nor could he intervene in any civil or criminal case under any pretext whatever;‖ no priest, except those belonging to the place, might enter into the town where the *Junta* was sitting; in Tolosa any deputy seen talking to a priest before a session lost his vote for that day.¶ When, in 1477, Ferdinand the Catholic made a progress through Biscay, and tried to take with him the Bishop of Pamplona, he was obliged to send him back, and the Basques burnt the soil whereon the bishop had stood, and threw the ashes into the sea.** Later, in 1757, when Ferdinand VI., under the advice of the bishops, sent an order to the Cortes of Navarre to forbid the acting of plays, he was compelled to rescind it; the Cortes refused to obey the mandate of any bishops.†† This attitude towards the clergy in civil matters was persistently maintained down to the Revolution. The position of women was high among the Basques. Along with some other Pyrenean populations, they followed the rule of absolute primogeniture: the firstborn, whether male or female, inherited the ancestral property.‡‡ The marriage of the clergy lingered longer among the Basques than in other parts of Spain.§§ They alone have preserved the ancient order of deaconesses, the *Serorac*, with functions in some respects like those of elders in the Presbyterian Kirk of Scotland.‖‖ Yet, with all this jealousy of the ecclesiastical power in civil matters, it is from the Basques that Jesuitism, the most devoted militia of the Papal power, has sprung. Ignatius de Loyola and Francisco Xavier,¶¶ were typical Basques, the one a Guipúzcoan, the other a Navarrese; both retained some of their Basque habits and customs to the end of their lives, and the influence of these and Basque modes of thought can be traced in their writings. In this way this little people has influenced the course of religious history in the greater part of Europe since the 16th century.

BAṬESAR.—A town situated on the right bank of the river Jumnā, in the United Provinces of Agra and Oudh, in Northern India, lat. 26° 56′ 6″ N.; long. 78° 35′ 7″ E. It is important as the scene of a popular bathing and trading fair held on the last day of the month Kārttik (October–November). The place takes its name from the worship of Śiva in his form as Vaṭeśvaranātha, 'lord of the sacred banyan tree (*vaṭa*).' The present temple was built by one of the Rājās of Bhadāvar in A.D. 1646. In earlier times the place was known as Sūryapura, 'city of the sun'; the ruins of the old town are still visible near the present site.

LITERATURE.—Cunningham, *Archæological Reports*, iv. 221 ff., vii. 5 ff. W. CROOKE.

BATH, BATHING.—See PURIFICATION.

BĀWARIYA (probably derived from Hindī *bāṅvar*, Skr. *bhramara*, 'a creeper,' in the sense of a noose made originally from some vegetable fibre, and used in snaring and trapping animals).—A criminal and hunting tribe of Dravidian origin, found in Northern India to the number of 30,321, of whom the great majority inhabit the Panjāb. Here they worship the Mother-goddess under the title of Kālī-Bhavānī, and the local saint Gūgā under the name of Zāhir Dīvān (Crooke, *Popular Religion and Folk-lore*, i. 211 f.). Farther west they specially worship Dūlhā Deo, the bridegroom-god who is invoked at marriages (*ib.* i. 119 f.). A burnt-offering is made with butter, and water is poured on the floor of the house in his honour. They also worship a deified ascetic named Siṁha Bābā, a member of the Nānakshāhī Sikh sect of Faqīrs. It is possible that they may be a branch of the important Bauri caste, which, to the number of 735,937, is found chiefly in Bengal (Risley, *Tribes and Castes of Bengal*, i. 78 ff.). The connexion of this tribe with Hinduism is of the slightest kind. Their chief objects of worship are Manasā, the snake-goddess, Mānsingh, a local village-god, and Bar Pahārī, the mountain-deity, which is only another form of Marang Buru, the hill-god of the Santāls and other Dravidian tribes.

'Pigs, fowls, rice, sugar, and ghee are offered to Kudrasinī, on Saturdays and Sundays at the Akhrā or dancing-place of the village, through a Bauri priest, who abstains from flesh or fish on the day preceding the sacrifice. The priest gets as his fee the fowls that are offered and the head or leg of the pig; the worshippers eat the rest.' They do not employ Brāhmans, their religious duties being performed by a member of the tribe or by the headman. In some places they bury the dead face downwards, the object 'being to prevent the spirit from getting out and giving trouble to the living' (Risley, *ib.* i. 80 f.).

LITERATURE.—For the true Bāwariyas, J. Wilson, *Settlement Report of the Sirsa District*, 1886, p. 123; Crooke, *Tribes and Castes of the North-Western Provinces and Oudh*, 1896, i. 228 ff. W. CROOKE.

BAXTER.—

1. **Life.**—Richard Baxter was born on 12th November 1615. His father was Richard Baxter of Eaton-Constantine, in Shropshire; and his mother, Beatrice Adeney of Rowton, in the same county. The elder Baxter had been addicted to gambling, but by the time his son was born he had become a changed man, and it was to his father's instruction and example that Baxter was mainly indebted for his earliest religious impressions. His mother died in 1634, and his father married again.

Baxter's early education was entrusted to worthless and incompetent tutors. At length he was placed under the tuition of Mr. John Owen, master of the Free School of Wroxeter, who instructed him in classics and prepared him for the University. To the University, however, he was never sent. He was placed instead under a clergyman at Ludlow, from whom he profited little in learning, but with whom he had the run of a great library, and became a passionate reader of books. He came early under religious impressions. Other books touched his conscience, and awakened in him the sense of Divine things; but *The Bruised Reed*, by Dr. Richard Sibbes, seems first to have shown him, when a lad of fifteen, the greatness of the love of God and the freeness of the redemption of Christ. From his youth in his father's house he was deeply read in the Scriptures. It was within the Church of England that Baxter was baptized, confirmed, and ordained to the ministry. Though he was ejected with two thousand more in 1662, and cast in his lot with the Presbyterians, to the end he regarded his orders as derived from her, and to the very close of his life, like other moderate Presbyterians, he followed the practice of occasional Communion in her churches. What would have been for other men an insuperable barrier to either bodily or mental activity and to a career of usefulness in any calling, was the lack of physical stamina and even of ordinary health all through life. 'Never,' says Sir James Stephen, 'was the alliance of soul and body formed on terms of greater inequality than in Baxter's person. . . . The mournful list of his chronic diseases renders almost miraculous the mental vigour which bore him through exertions resembling those of a disembodied spirit' (*Essays in Ecclesiastical Biography*, p. 361). He nevertheless lived to the age of seventy-six, and his labours as a preacher, a pastor, and an author were herculean.

In 1638 Baxter was offered the headmastership of the Endowed School at Dudley, and took orders to qualify him to hold the appointment. In 1640 he was called to Kidderminster to occupy the place of an incompetent vicar, and with Kidderminster his name was henceforward to be associated as Samuel Rutherford's with Anwoth, or Thomas Boston's with Etārick. His ministry, however, was seriously interrupted by the Civil Wars, in which he took the side of the Parliament, though he had no sympathy with those who proceeded to put the King to death and to overturn the throne. He laboured incessantly for the good of the soldiers of Cromwell's army, and had interviews and discussions on religious and political questions with the Lord General himself. His labours, however, proved too much for his strength, and it was when suffering from one of his dangerous illnesses about this time that he conceived *The Saints' Everlasting Rest*. Before he had completed this, his first work, he was back to his pastorate in Kidderminster, where he remained till 1660.

His ministry here fell mostly within the period of the Commonwealth, when a state of anarchy prevailed in the Church of England. Cromwell's religious establishment did not deserve the name of a Church; it repudiated Prelacy without enforcing Presbyterianism or recognizing Congregationalism. One object of his government was the purification of the ministry. For this end he set up an Ecclesiastical Commission, called the Committee of Triers, including Presbyterians, Congregationalists, and Baptists, who examined presentees and sanctioned appointments to parishes. Baxter had no love for this body any more than he had for Cromwell, but he rejoiced in the growing spirituality of the ministry and the marked spread of vital religion amongst the people in the days of the Commonwealth.

On the death of Cromwell, Baxter joined with the Presbyterians on both sides of the Border in working for the overthrow of the Commonwealth and the restoration of the Monarchy. He had now taken farewell of Kidderminster, and was appointed one of the King's chaplains. The King even offered him through Clarendon, the Lord Chancellor, the See of Hereford, but he declined the honour. He would have been content to return to Kidderminster as a humble curate, but this was denied him, and when the Act of Uniformity, on 24th August (St. Bartholomew's Day) 1662, silenced over two thousand of the most earnest ministers, and deprived them of their livings, Baxter's formal ministry within the Church of England came to an end. He signalized the event by entering into the married state; and his wife, Margaret Charlton, proved a real helpmeet to him.

Meanwhile penal legislation against the Nonconformists became more exacting and severe. It became a crime to attend a dissenting place of worship. Those ministers who would not take the test were prohibited from coming within five miles of any town which was represented in Parliament, or any town where they had resided as ministers. Baxter got into trouble on both counts; and neither the favour of the King nor the friendship of Sir Matthew Hale, Lord Chief Justice, availed to save him from fine and imprisonment.

In 1681 Baxter lost by death both his wife and his stepmother, who had lived to the age of ninety-six, and troubles thickened around the desolate man. But, as he says, he 'never wanted less what man can give than when men had taken all away,' and so, preaching as often as he found liberty and opportunity, and producing theological treatises one after another without intermission, he survived to experience the dark days of James II. and the brighter days of the Revolution Settlement under William and Mary. In the former reign, when weighed down with age and infirmities, he was brought before the infamous Chief Justice Jeffreys, and under sentence by him would have lain in prison till death had not the King remitted his fine. In the Revolution of 1688 he was too feeble to take any part. At length death, with whose approaches he had been long familiar, came upon him in stern reality, and on 8th December 1691 he passed to the saints' everlasting rest.

2. **Works and influence.**—Baxter was a most prolific author, perhaps the most voluminous theological writer in the English language. From the time when he first discovered his powers and wrote *The Saints' Everlasting Rest*, scarcely a year passed without several works from his pen. Even at Kidderminster, with its many claims, he regarded his labours in the pulpit and congregation as a recreation, and threw his strength into his writings. The reading displayed in them, the

correspondence to which they frequently led, and the diversity of subjects which they embrace, illustrate the extraordinary versatility of the man and the indefatigable diligence with which he toiled. It has been suggested that he never recast a sentence, and never bestowed a thought on its rhythm and the balance of its parts; and his extraordinary productiveness as a writer as well as his own statements make it certain he did not. No fewer than one hundred and sixty-eight treatises came from his hand, many of them filling volumes. Most of them are now forgotten, but some of them are classics of evangelical religion which his countrymen would not willingly let die. When Boswell asked Dr. Samuel Johnson what works of Richard Baxter he should read, he received for answer, 'Read any of them, for they are all good.'

Mr. Orme, the editor of the standard edition of Baxter's works, classifies them under the following heads:—Works on the Evidences of Religion; on the Doctrines of Religion; on Conversion; on Christian Experience; on Christian Ethics; on Catholic Communion; on Nonconformity; on Popery; on Anti-Romanism; on the Baptist, Quaker, and Millenarian Controversies; Historical and Political Works; Devotional, Expository, and Poetical Works. The cast of Baxter's mind was eminently speculative and inquiring, and any question of the Schools which met him in the course of an argument had for him an irresistible fascination, and received instant and perhaps prolonged attention. But such was his satisfaction in the great truths of revealed religion and his conviction of their absolute certitude—won through experience as well as ratiocination—that he shirks no difficulty, shrinks from no combat, and grudges no pains, if only he can place his readers—even though it be through divisions and subdivisions of argument and proof—upon the same rock of assured conviction as himself. Of his numerous works there are at least three which are still in demand, and, after two centuries and a half, seem destined to live on. These are *The Saints' Everlasting Rest*, *The Call to the Unconverted*, and *The Reformed Pastor*.

The first of these, the first considerable work which he produced, is the masterpiece with which his name is associated. It was published in 1650, having been conceived and for the most part written towards the close of the Civil War. The title-page of the original edition bears that it was 'written by the author for his own use, in the time of his languishing, when God took him off from all public employment.' He was at the time the guest of Sir Thomas Rouse in Worcestershire, and away from his books. 'The marginal citations,' he explains, 'I put in after I came home to my books, but almost all the book itself was written when I had no book but a Bible and a Concordance; and I found that the transcript of the heart hath the greatest force on the hearts of others.' It is a work almost of inspiration, certainly of spontaneous birth, like *The Pilgrim's Progress*, or *The Imitation of Christ*; and though the two volumes, comprising in Orme's edition more than a thousand pages, are beyond the powers or the patience of most readers, the popular abridgments leave out much that gives reality and pathos in the complete work. In a volume of St. James's Lectures (1875, Lect. iv.) on *Companions of the Devout Life*, the late Archbishop Trench, a master both in literary taste and in theology, has given a remarkable appreciation of 'Baxter and The Saints' Rest.'

'There reigns in Baxter's writings, and not least in "The Saints' Rest," a robust and masculine eloquence; nor do these want from time to time rare and unsought felicities of language, which once heard can scarcely be forgotten. In regard, indeed, to the choice of words, the book might have been written yesterday. There is hardly one which has become obsolete; hardly one which has drifted away from the meaning which it has in his writings. This may not be a great matter; but it argues a rare insight, conscious or unconscious, into all that was truest, into all which was furthest removed from affectation and untruthfulness in the language that after more than two hundred years so it should be; and we may recognize here an element not to be overlooked, of the abiding popularity of the book' (*Companions of the Devout Life*, p. 88 f.).

In the work itself Baxter first dwells upon the excellence of the 'Rest,' and then characteristically sets himself to prove the infallibility and Divine origin of the Holy Scripture in which it is promised, thus contributing an able treatise on Christian evidences. The ground having been firmly established, he develops the uses of the Doctrine of Rest, and concludes with a directory for the getting and keeping of the heart in heaven. The work abounds in fervent appeals and felicitous phrases and striking similitudes.

The Call to the Unconverted appears to be the substance of a sermon which Baxter had preached from the well-known text in Ezk 33[11] 'Turn ye, turn ye from your evil ways; for why will ye die, O house of Israel?' Next to the *Saints' Rest* it was the most successful and most greatly used of all his publications. In his lifetime it had the distinction of being translated by John Eliot into the language of the Massachusetts Indians (1664), and it has passed through editions well-nigh innumerable, and been translated into most of the European languages. It has been compared in its character and influence with Law's *Serious Call* and Joseph Alleine's *Alarm*; but it is simpler in its teaching than the one, and more tender and kindly in spirit than the other. It breathes a spirit of intense earnestness, and, though its language would not now be used in its entirety in pulpit address, the fervour and force of its reasoned appeal to the understanding and the heart are as powerful as ever.

Gildas Salvianus: The Reformed Pastor is one of the classics of pastoral theology. Dr. Shedd, in his *Homiletics and Pastoral Theology*, recommends ministers to read it through once a year; and Principal Oswald Dykes (*The Christian Minister*, p. 49) describes it as one of the most searching and widely helpful books in English literature on its subject. The second chapter, and especially the pages devoted to pastoral oversight (vol. xiv. pp. 96–114), are replete with maxims and counsels of sanctified wisdom and practical good sense, the outcome of long and intimate acquaintance with the duties of the pastor's office. Both in its original and in its abridged forms *The Reformed Pastor* has had a very wide circulation.

No one can read Baxter's writings without perceiving that he has in him the soul of true poetry. His occasional quotations and references to George Herbert reveal sympathies in this direction. But he was too intensely in earnest and too absorbed in his various labours to master the technique of the poet's art, or to take pains with niceties and refinements of versification. A small volume of 'Poetical Fragments' is, however, included among his works, and at least one of his pieces, 'Lord, it belongs not to my care,' has found its way into hymnals for congregational praise.

The influence of Richard Baxter exerted from the pulpit, as well as by his works during his lifetime, must have been great. His power and fervour in the pulpit were unique in an age of great preachers, and he exemplified his own lines in a most literal sense, for

> 'He preached, as never sure to preach again,
> And as a dying man to dying men.'

In a time of ecclesiastical anxiety and strife, he strove to be a peacemaker. Schemes of a comprehensive union of all who truly loved the Lord and held fast by the essentials of Christian truth and experience, like those of John Durie and

Archbishop Ussher, had in him, in season and out of season, a steadfast supporter. If his combative turn of mind and his fondness for precise definition did not allow him to see much success in his unflagging efforts for union among Christians, he laboured long and patiently to earn the blessing of the peacemakers. In one important sphere, not recognized in that age of theological controversy as it is now, he was a pioneer. He was firmly convinced of the Christian obligation to evangelize the world. He was a warm supporter of John Eliot, the Apostle of the Indians, and it is to Baxter more than any other that the Society for the Propagation of the Gospel owes its charter. If we cannot trace the great Evangelical Revival at the close of the 18th cent. directly to Baxter, we know that his works influenced some of the most prominent members of the Clapham sect, and helped to sustain the fervour of many of the leaders of that movement.

LITERATURE.—There is an excellent edition of Baxter's practical works by William Orme in 23 vols., London, 1830, upon which Sir James Stephen's famous essay is based. There is an edition of the 'Poetical Fragments' by Pickering, London, 1829. In the notice in the *Dictionary of National Biography*, and in a volume of *Representative Nonconformists*, A. B. Grosart has dealt fully with Baxter's life and works. In the early chapters of Macaulay's *History of England* there are appreciative notices of Baxter, and also in J. Stoughton's *Religion in England*, 1878, ii. 180–186; see also F. J. Powicke, 'Baxter as a Catholic Christian,' in *Prim. Meth. Quart. Rev.*, April 1909. See also end of § 3. THOMAS NICOL.

3. Distinctive doctrine.—In Baxter's *Confession of Faith* he sets forth three parallel columns; on one side 'Antinomianism,' on the other the doctrine of 'Papists and others in the Contrary Extream,' and in the centre 'Truth,' 'that which I take to be both the Truth and the Doctrine of the Reformed Churches.' This table is significant. The key to Baxter's doctrinal position is to be found in the fact that he always endeavoured to avoid the falsehood of extremes, and to find truth and harmony in the golden mean. He wished to be a son of peace in theology no less than in ecclesiastical affairs. His *Catholic Theology* is entitled 'Plain, Pure, Peaceable, for Pacification of the Dogmatical Word Warriors,' and consists of three books: 'Pacifying Principles,' 'Dialogues,' and 'Disputations.' He waged war to restore peace. *Ex bello pax* was his motto; and even when he attacked opponents with the polemical acrimony of the time, in keen words for which he afterwards expressed regret, it was always with the aim of maintaining some central position which he firmly believed would reconcile the hostile parties. The immediate result was that he was fiercely assailed from both sides, and became 'a butt for every man to shoot at.' The Arminians rejected him as a Calvinist, while the Calvinists denounced him as an Arminian; he was called in turn a Papist, a Quaker, and even a Socinian. But he appealed to posterity for vindication 'when sad experience hath taught men to hate Theological Logical Wars, and to love, and seek, and call for Peace'; and the broader vision of the present age, which has learnt his love of unity and concord, will appreciate his anxiety to do justice to both sides. Dean Stanley ranked Baxter with Anselm as a great Christian thinker, and Dr. Benjamin Jowett in Westminster Abbey called him 'one of the greatest of Englishmen not only of his own time but of any time.' He always sought to draw forth the measure of truth which lay at the heart of an extreme or erroneous doctrine. He tried to harmonize Divine destiny with moral freedom; he granted that the Romanist was right in insisting on the necessity of good works, and the Quaker in maintaining the reality of the Inner Light, and the Socinian in upholding the claims of reason. His own general position was certainly that of a moderate and liberal Calvinist, for he gave unstinted praise to the Shorter Catechism ('the best catechism I ever saw yet'), and he assented to the decisions of the Synod of Dort, but his exact views on controverted questions are often difficult to define. His subtle intellect revelled in fine-spun distinctions; he modified, explained, and made concessions for the sake of conciliation; and his views expanded and mellowed with the advance of time. The following are, however, some of his most characteristic doctrines.

(*a*) On *the Atonement* he held in the main the modern Evangelical view:

'It is not God but man that lost his goodness; nor is it necessary to our reparation that a change be made on Him but on us. Christ came not into the world to make God better, but to make us better. Nor did He die to make God more disposed to do good, but to dispose us to receive it. . . . (Christ's) purpose was not actually to change the mind of God nor to incline Him to have mercy who before was disinclined, but to make the pardon of man's sin a thing convenient for the Righteous and Holy Governor to bestow, without any impeachment of the honour of His wisdom, holiness, and justice, yea, to the more eminent glorifying of them all.' 'Christ came not to possess God with any false opinion of us, nor is He such a physician as to perform but a supposed cure; He came not to persuade His Father to judge us well, because He is well. We must bear His own image and be holy as He is holy, before He can approve us or love us in complacency. This is the work of our blessed Redeemer to make man fit for God's approbation and delight.' 'Christ could not possibly take upon Himself the numerical guilt which lay on us, nor yet a guilt of the same sort' (*Confession of Faith*, Preface).

(*b*) *Extent of Redemption.*—'Christ died for all, but not for all alike or equally: this is, He intended good for all, but not an equal good' (*End of Controversies*). The sacrifice was for the sins of all in the sense that all should have a conditional promise or gift of life by the merits of it.

(*c*) *Justification.*—'Justifying faith is not the reception of the knowledge or sense of our former justification, but it is the true belief of the Gospel and the sincere acceptance of Christ' (*Conf. of Faith*). Baxter held that faith is what is imputed for righteousness, because faith contains the germ of sincere obedience to Christ. He seems to place regeneration in time before justification. 'He regenerates that He may pardon.' He lays the greatest stress on the necessity of repentance for justification, and, indeed, seems to aim at combining the Roman and Reformed doctrines.

(*d*) *Grace.*—Baxter believed in a common grace bestowed on all mankind, which, if improved, would lead on to sufficient and effectual grace, but even sufficient grace might be resisted and rendered ineffectual (Pref. to *Conf. of Faith*).

(*e*) *Election.*—He accepted election, but not reprobation, for God is the cause of grace but not of sin.

(*f*) *Immanence of God.*—Baxter's doctrine is profound and discriminating:

'As all being is originally from God, so there is continual Divine causation of creatures without which they would all cease, or be annihilated, which some call a continued creation, and some an emanation.' 'The beams do not more depend on the sun, or light or heat or motion on the sun; or the branches, fruit and leaves more depend on the tree, than the creation on God. But yet these are not parts of God as the fruit and leaves are of the tree, but they are creatures because God's emanation or causation is creation, causing the whole being of the effect.'

(*g*) *The Trinity.*—In his *Methodus Theologiæ*—his only Latin work—Baxter attempts to find a rational basis by showing the threefold nature of man and all things. Coleridge and others have followed somewhat similar lines, and though Baxter's reasoning is often fantastical, his philosophic power was highly estimated by Mansel.

(*h*) *Inspiration of Scripture.*—There is a passage in the *Saints' Rest*, omitted from some editions because it gave offence, which anticipates the attitude of many modern Christian scholars.

'They that take the Scriptures to be but the writings of godly, honest men, and so to be only a means of making known Christ, having a gradual precedency to the writings of other godly men, and do believe in Christ upon those strong grounds which

are drawn from the doctrine and miracles rather than upon the testimony of the writing as being purely infallible and Divine, may have saving faith. More much those that believe the whole writing to be of Divine inspiration when it handleth the substance, but doubt whether God infallibly guided in every circumstance.'

On this, as on many other questions, his views were far in advance of those of most of his contemporaries, and they often foreshadowed modern positions only slowly reached after two centuries.

In his last large work, *Reliquiæ Baxterianæ* (1696), Baxter wrote down 'the changes God had wrought since the unriper times of youth,' and one of them is that he now sees a gradation of certainty in truths:

'My certainty that I am a man is before my certainty that there is a God: my certainty that there is a God is greater than my certainty that He requireth love and holiness: my certainty of this is greater than my certainty of the life of reward and punishment hereafter: my certainty of the Deity is greater than my certainty of the Christian faith: my certainty of the Christian faith is greater than my certainty of the perfection and infallibility of Holy Scripture: my certainty of this is greater than of the canonicalness of some books.'

Baxter expressed warm admiration for the missionary efforts of John Eliot, the Apostle of the Indians, and yet he is 'not so much inclined to pass a peremptory sentence of damnation upon all who never heard of Christ, having some more reason than I knew of before to think that God's dealings with such are much unknown to us.'

Those who shared Baxter's spirit of broad catholicity were called, often in reproach, 'Baxterians.' They never formed a sect or even a school, but were men of independent minds who struck out paths for themselves, and in accordance with his principles distinguished between the essentials and non-essentials. 'In things necessary, unity; in things doubtful, liberty; in all things, charity.'

LITERATURE.—Baxter's principal doctrinal works are: *Aphorisms of Justification*, 1649; *Confession of Faith*, 1655; *Catholic Theology*, 1675; *Methodus Theologiæ Christianæ*, 1681; *An End of Doctrinal Controversies*, 1691; *Reliquiæ Baxterianæ*, 1696; cf. also Dean Boyle, *Richard Baxter*, 1883, chs. viii.–x.; J. Stalker, Lecture on 'Baxter' in *The Evangelical Succession*, 2nd series, 1883, p. 209 ff.; B. Jowett's *Biographical Sermons*, 1899; M'Adam Muir, *Religious Writers of England*, 1901. See also the Literature above, at end of § 2.

MARTIN LEWIS.

BEADLE, BEDELLUS.—The word 'beadle' was in Old English, *bydel, büdel, bidell*, from O.E. *beodan* (from which our word 'bid' is derived), 'to offer, announce, command'; in mediæval Latin, *bidellus* or *bedellus*; Old French, *bedel*, whence the Middle English *bedel*.

The primary meaning of the word appears to be 'herald,' 'one who announces or proclaims something.' So Ælfric (A.D. 1000), translating Ex 32^5; Ormulum 632 (A.D. 1200), where John the Baptist is 'Cristess bidell'; and Coverdale (A.D. 1535), when translating Dn 3^4. The secondary meaning is 'an executive officer who represents, and acts under, a higher authority.'

Apart from the metaphorical use of the term (*e.g.* in describing a bishop as 'Godes budel,' R. Morris, *O.E. Hom.* i. 117, A.D. 1175), it is applied to:

(1) The officer of a Court, in particular, of a Forest Court, who administers citations, etc. (Manwood, *Lawes of the Forest*, xxi., A.D. 1598).

(2) The agent of the Lord of a Manor (Coke, *Comm. upon Littleton*, 234, A.D. 1628).

(3) An official in Universities, to whom various duties, ceremonial and executive, pertain. In Oxford there is a bedel for each of the Faculties of Divinity, Law, Medicine, and Arts. The bedels, each bearing a mace, walk before the Chancellor or Vice-Chancellor in processions. The Arts bedel is in constant attendance on the Vice-Chancellor. In Cambridge there are two 'Esquire bedells,' Masters of Arts, who supervise academic ceremonials, and attend on the highest official present. In the University of Glasgow there is a 'bedellus' who is mace-bearer and also janitor. In the Laws of Yale College (1837) provision is made for a 'beadle who shall direct the procession and preserve order.'

(4) The officer of a Trades Gild, who acts as messenger of the Corporation (see *English Gilds*, pp. 35, 121, Early English Texts Society).

(5) A parish officer, whose duty is to attend meetings of the Vestry, to give notice of these meetings, and to execute its orders (Stephen, *Laws of England*, ii. 701). In the ancient Statutes of Scottish Burghs, 112 (quoted in Du Cange, *Glossarium, s.v.* 'Bedelli'), it is declared that 'any citation made without the bedellus is not valid.' Formerly the functions of the parish bedell or beadle included punishment of petty offences (cf. Shakespeare, *2 Henry VI.*, II. i. 140 ff., where the Mayor is represented as bidding an attendant 'fetch the beadle,' who, when he comes, whips the impostor).

(6) A church-officer, chiefly, although not exclusively, in Scotland. Du Cange quotes, from the *Concilia Hispan.* iv. 667, a reference to the bedellus as an official who in ecclesiastical processions precedes the Sacrist and the Acolytus; and in England the parish beadle has sometimes a certain status in the parish church. In Scotland, the church-beadle (Scoticé, *bederal, bedral, beddal, betheral*) has charge (under kirk-session and heritors) of the fabric of the church, and is responsible for its due preparation for Divine service. He is the minister's attendant in the church, and also, more or less, in the parish. He carries the Bible, Psalter, and Hymn-book up to the pulpit; and he is the messenger of the minister in parochial work. He acts, also, as the officer of the kirk-session at meetings, in citations, etc. With the office of beadle are often, but not necessarily, conjoined, especially in the country, the functions of gravedigger, bell-ringer, manse gardener, etc.

The Scottish beadle has always been regarded, and has regarded himself, as an important official. 'I'm half a minister mysel', now that I am bedel,' said the beadle in the *Bride of Lammermoor*. The present writer has heard a church-officer of long standing speak of the various ministers who had been '*with him*.' The pride of a beadle in his own kirk is notorious. A country official, whose church was of plain architecture, was taken to see and admire Glasgow Cathedral. 'It's sair fashed wi' thae pillars,' was his depreciatory comment. Sense of official responsibility, and in many cases long experience, render the beadle a keen and often shrewd critic of services and sermons. 'Gude coorse (coarse) country wark' was a city church-officer's estimate of a rural minister's pulpit performance: and young licentiates, on entering the vestry after service, have been known to quail before an old beadle's terse criticism or significant and 'dour' silence. 'I allus (always) liked that sermon' was the caustic response received by a minister who had preached an old sermon, and wishing to know if it had been recognized had given his church-officer the opportunity of 'remarking.' The old practice of the beadle being employed to carry some intimation to the entire body of parishioners, along with the notion, which within living memory prevailed widely, that to allow a caller to go on his way without 'tasting' was a breach of hospitality, led to the character of beadles as a class for sobriety being impugned. At the present day, however, when the special temptation just referred to has been removed, the temperance of the order is at least equal to that of other classes of society.

LITERATURE.—Murray, *Oxford English Dictionary*, vol. I. (from which the majority of the references in this article to old writers have been taken); Du Cange, *Glossarium, s.v.* 'Bedelli'; Hunter, *Encyclopædic Dict.* vol. II.; Wright, *English Dialect Dict.* vol. I.; Whitney, *Century Dict.*; Ramsay, *Reminiscences of Scottish Life and Character*[7], Edinburgh, 1860; R. Ford, *Thistledown*, 1891; art. on 'Church Officers' in *Scottish Review*, Sept. 3, 1908.

HENRY COWAN.

BEARD.—The permanence of the structure and colour of the hair makes it an important key to race-classification. As a characteristic of the face, it appears long and flowing as a beard chiefly among the Caucasian group; the Mongolians, Negroes, and American aborigines are usually beardless, exceptions occurring among the Australian natives and the Melanesians. So rare was the beardless face in an age when a race knew little of mankind outside its own borders, that

Herodotus (i. 105) explains how the Scythians 'who had plundered the temple of Aphrodite Urania at Ascalon, and their descendants for ever, were smitten by the divinity with a disease which made them women instead of men,' for women the ancient Greeks assumed them to be. The more rationalistic Hippocrates offers a different explanation. 'For my own part, I think these ailments are from God, and all the other ailments too; and no one of them more divine than another, or more human either, but all alike from God. Each of such things has a process of growth, and nothing comes into being without a process of growth' (J. L. Myres, in *Anthropology and the Classics*, p. 139 f., Oxford, 1908).

It is probably as a distinguishing sign of manhood that importance has been attached to the beard, there following from this many customs and superstitions, reference to which falls within the province of this article. It is still a mark of honour in the East; the well-bearded man is one 'who has never hungered' (Doughty, *Arabia Deserta*, i. 250). To pull it is to inflict an indignity; to have it forcibly cut off, or only mutilated, is a symbol of disgrace; to remove it voluntarily is a sign of mourning; to stroke it is the preface to uttering seeming words of weight. 'Let me stroake my beard thrice like a Germin, before I speak a wise word,' says an old writer Pappe W. Hatchet, 1589 (cf. *Oxford Dict. s.v.*), bearded age lending impressiveness to the thing uttered.

It is among Orientals, notably those of Semitic race, or under Semitic influence, that the beard has acquired sanctity. Its place in the old Hebrew ritual is shown in the command not to 'mar the corners of thy beard' (Lv 19^{27}); the degradation or contempt indicated by its mutilation is exemplified in the cutting off one half of the beards of David's servants by the Ammonites (2 S 10^{4}), and its neglect or removal as a symbol of mourning is referred to in Job 1^{20}, 2 S 19^{24}, Ezr 9^{3}, Is 15^{2}, Jer 41^{5}. The vagaries and vanities of custom marking its history find illustration in Herod. ii. 36: 'The priests of the gods in other lands wear long hair, but in Egypt they shave their heads; among other men the custom is that in mourning those whom the matter concerns most nearly have their hair cut short, but the Egyptians, when death occurs, let their hair grow long, both that on the head and that on the chin.' While the lower classes among the Egyptians appear as bearded [Joseph shaves himself before he enters the presence of Pharaoh, Gn 41^{14}], the priests and court officials kept the barbers busy. Sometimes artificial beards were worn as symbols of dignity at solemn festivals, the king's being cut square at the bottom. The beards on the statues of the gods were curled at the end. Among the Assyrians and Babylonians the lower castes were shaven, while kings and others, probably as members of the sacerdotal or military caste, wore beards, frizzled and anointed (cf. Lv 8^{12}). The example of Muhammad in keeping his beard unshorn was followed by the faithful, and it is by the beard of the Prophet and their own that they swear, as in the presence of Allāh. In Muslim custom, perhaps gradually becoming obsolete, there is zealous care of the hairs that fall from the beard, these being preserved by their owner for burial with him, or sometimes deposited in the grave during his lifetime. Tradition says that they were broken 'as a sort of stipulation with some angel who was supposed to be on the watch, and who would look to the safe passage of the consigners of the treasure to paradise' (*EBr*^{9}, *s. v.*). Such a practice is in keeping with the blurred conception of the barbaric mind as to the 'me' and 'not me,' wherein all that pertains to the individual, from the several parts of his body even to his name, is assumed to be integrally bound up with him, and to be media whereby sorcery may be worked upon him. The story goes that Selim I. (1512–20) was the first Khalīf to appear beardless, and when the Shaikh ul-Islām remonstrated, the monarch replied, 'I have cut off my beard, that the Vizier may have nothing to lead me by.' A more veracious history records that Alexander the Great commanded his soldiers to cut off their beards, so that the enemy could not lay hold of them. The presence or absence of the beard is one of the distinctive marks between the priests of the Greek and Latin Churches, although the bearded images on the coins of Popes of the 16th and 17th centuries prove that the clean-shaven face has not the antiquity of the tonsure. The Franciscans are at variance as to whether the founder of their order wore a beard, and on this ground are divided into the 'bearded' and the 'shaven.'

It is amusing to notice that James Ward (1769–1859), a painter of some renown, published a *Defence of the Beard* on Scriptural grounds, 'giving eighteen reasons why man was bound to grow a beard, unless he was indifferent as to offending the Creator and good taste,' while in 1860 one Theologos published a book entitled *Shaving a breach of the Sabbath and a hindrance to the spread of the Gospel*, arguing that the beard was a Divinely provided chest-protector, and adding, 'were it in any other position, its benefit and purpose might be doubted.' A more ancient contribution was made by the Emperor Julian in his *Misopogon*, or *Enemy of the Beard*, a satire on the effeminate manners of the citizens of Antioch, who had laughed at him for allowing his 'shaggy and populous beard' (the phrase is Gibbon's) to grow after the fashion of the Greek philosophers. Samuel Butler, in his *Characters and Passages* (ed. A. R. Waller, Cambridge, 1908), thus humorously describes the sage: 'Heretofore his Beard was the Badge of his Profession, and Length of that in all his Polemics was ever accounted the Length of his Weapon; but when the Trade fell, that fell too.' Monumental and other evidence shows that the Greeks wore beards until the time of Alexander the Great [readers of Herodotus will remember his reference to the great beard of the priestess of Athene (i. 175; viii. 104)], about which period the Romans submitted their chins to barbers from Sicily.

How the treatment of a natural feature of the human male was from time to time made a matter of dispute, even to the shedding of blood, finds illustration in the war between Persians and Tartars because the former would not cut off their beards, while the retention or removal of these became the symbol of the dominant or subject races. Among the West Goths and Burgundians the lower classes were beardless, in contrast to their rulers, and under Norman rule some of the English chose to exile themselves rather than lose their beards. But not long after the Conquest the Normans ceased to shave. The part that fashion and sycophancy have played in the history of the beard is not wholly removed from the domain of Ethics, in the changing standards of which 'custom,' as Pindar says (Herod. iii. 38), 'is king of all.' The Spaniards shaved off their beards because Philip V. could not grow one; and the French did the same because Louis XIII. was beardless; while the latter people, a century earlier, wore beards in imitation of Francis I., who grew one to hide the scar of a wound on his chin. It is said that 'three hairs from a French king's beard under the waxen seal stamped on the royal letter or charter

were supposed to add greater security for the fulfilment of all promises made in the document itself' (*EBr*[9], *s. v.*).

Turning to England, we find that, in the reign of Henry VIII., 'the authorities of Lincoln's Inn prohibited wearers of beards from sitting at the great table unless they paid double commons.' Then came (*temp.* Elizabeth) taxation of beards, assessed according to their age or to the social position of their wearers, beards of above a fortnight's growth being subject to a yearly tax of 3s. 4d. But the impost (which Peter the Great copied, under barbarous conditions, in Russia) failed in its object, perhaps finding a substitute in the duty on hair-powder, which was abolished in 1869. In his *Survey of London*, Stow records that in 1563 'Sir Thomas Lodge, being Mayor of London, wore a beard. He was the first that ever ventured thus to deforme his office, and hardly did the city support the shock.' The well-known Vandyke portraits of Charles I. and of the Cavaliers show what mode of trimming the beard was then in vogue, but by the time that Charles II. came to the throne all Europe shaved, only the moustache being worn. It is within the memory of the middle-aged that the wearing of beards rendered the individual liable to assault and insult, and that it met with opposition and prohibition from employers of labour and persons in authority, until such interference with individual liberty on so unimportant a matter was found to be as futile as has been proved in the case of all sumptuary laws.

EDWARD CLODD.

BEAST (Apocalyptic).—See ANTICHRIST.

BEATIFICATION.—1. Definition.—Beatification at the present day in the Church of Rome is a formal act by which the Church permits, under Papal authority, that a person who has died in the Catholic faith shall be honoured with a public veneration, and be formally styled *Beatus* or *Beata* ('blessed'). The cult, however, is limited. Veneration is not required or authorized throughout the whole Church; it is permitted in a particular diocese or country, or by a particular religious order or other associated body. Only with this restriction are the picture or relics of the person who has received beatification allowed to be exhibited, or is the recitation of his particular office or mass permitted. Beatification is thus a preparatory act, preliminary to the definitive *canonization* (*q.v.*) by which a servant of God is formally ranked among the saints of the Universal Church.

2. History.—The present custom dates from a Bull of Urban VIII. in 1634 (*Cœlestis Hierusalem cives*, July 5, 1634). It is fully described in the classic authority on the subject, the work of Pope Benedict XIV. (Lambertini), *de Servorum Dei Beatificatione et Beatorum Canonizatione*. It marks the conclusion of a long historical process, which must here be very briefly sketched. The distinction between beatification and canonization arose very gradually, and, even when the distinction was recognized as existing, the dividing line was not exactly drawn; *e.g.* it was long disputed whether the Emperor Charles the Great (Charlemagne) was to be regarded as canonized or only beatified (*de Servorum Dei*, etc., tom. i. cap. ix.). It is thus impossible to trace the history of the one process, from its origin, apart from that of the other.

Local veneration may be traced back to the earliest Christian ages, and, as in the case of Polycarp (Eusebius, *Hist. Eccl.* iv. 15), often grew into a wider recognition in the Church. At certain periods an association can be traced with the pagan custom of apotheosis, from which, however, it differs essentially in the fact that the Christian saints were never in any way ranked as Divine or semi-Divine, but merely as those whose virtues had been specially rewarded by God (cf. G. Boissier, 'Apothéose' in Daremberg-Saglio, *Dictionnaire des antiquités grecques et romaines*, t. i. pp. 323–327). But none the less many rites and symbols common to the Christian and pagan cults have been traced, and there was in the Christian hagiology occasional indebtedness to pagan sources as well as inevitable analogy and surviving superstition (cf. Hippolyte Delehaye, *Les Légendes hagiographiques*[2], Brussels, 1906). Bellarmine, on the other hand, traces the Christian custom to the Old Testament and the veneration of the Jewish Church for Enoch, Noah, Abraham, Isaac, etc. (*Controv.*, Paris, 1613, t. ii. col. 700). In the Christian Church it originated in the veneration of martyrs (*q.v.*), whose relics were regarded with reverence, and on whose tombs altars were set up (cf. Duchesne, *Origines du culte chrétien*, 1889, Eng. ed. 1904, pp. 283–284, etc.). But no public veneration was allowed except by authority of the bishop. Registers of those who were thus honoured were kept, and their names were recited at the Eucharist. 'From these diptychs came the kalendars, and from the kalendars in later days the martyrologies (W. H. Hutton, *The Influence of Christianity upon National Character, illustrated by the Lives and Legends of the English Saints*, Bampton Lectures, 1903, London, 1903, p. 21). But veneration was not long restricted to the martyrs; it was extended to 'confessors,' *i.e.* those in whom a peaceful death followed a life of heroic or conspicuous virtue; and it soon spread still more widely. In the recognition of saintliness different usages grew up and were developed, as at Rome (cf. Duchesne, *Liber Pontificalis*, tom. i. pp. c.–ci.) and in Africa (Optatus, *Hist. Donat.* in *PL* t. xi. col. 916–917). The rights of the episcopate to authorize the veneration of departed saints continued at least till the second half of the 12th century. In their own dioceses, and after a formal and semi-judicial process, the bishops exercised their power as part of their authority to regulate all that related to Divine service. There has been a tendency among Roman Catholics in recent years to distinguish thus between beatification and canonization, and to consider that the former alone lay within the power of the episcopate, the latter never having been declared except by the Roman Pontiff (so T. Ortolan, in *Dictionnaire de Théologie Catholique*, Paris, 1905, fasc. xv. col. 1632); but the late survival of the claim on behalf of local bishops, and its exercise (as still in the Eastern Church) by Councils, would seem to conflict with this view. [Thus the Council of Cloveshoo (747) fixed the veneration in England of St. Gregory and St. Augustine of Canterbury; and cf. vindication by St. Martin of Tours of his right in the matter of veneration, in his *Vita*, by Sulpicius Severus, c. xi.] A survival of the rights of the episcopate is still found in the preliminaries which now precede beatification. The bishop of a diocese in which a special reverence is felt for some departed Christian collects evidence by what is known as the 'Informative Process,' and transmits this to Rome. If it is regarded as sufficient, the Pope issues a decree by which the cause of 'the venerable servant of God' is introduced to the Congregation of Sacred Rites. From this moment the title of 'Venerable' is given, and the first step towards beatification is taken.

3. **Method.** — Beatification is of two kinds—formal and equipollent (or equivalent). The latter is due not to a positive declaration of the Church, but to a tacit acceptance. Veneration of a particular person has begun, and spread, without formal approbation, till an ancient cult and the testimony of historians are accepted as grounds for a general permission. To this class belong the cases of St. Romwald, St. Norbert, St. Margaret of Scotland, Pope Gregory VII., all eventually canonized saints (for comparatively modern evidence of how this grew up, cf. the case of St. Osmund, Malden, *Canonization of S. Osmund*, Wilts Records Society, 1901, pp. 108–110). Formal beatification is regarded by Benedict XIV. as far more weighty than equipollent beatification (*op. cit.* lib. i. cap. lii. n. 10), since the former is the result of a long and careful process of minute examination, whereas the latter originates in popular sympathy, which the Church has come to accept without any such definite testing. Though there has been dispute on the point (see CANONIZATION), it appears that the brief of Alexander IV., *De reliquiis et veneratione sanctorum*, 1170 (in *Corpus juris Canonici*, l. iii. tit. 45), was the first definite reservation of cases of beatification for the decision of the Roman See. From this time the power of beatification was withdrawn from prelates of whatever dignity, and from Councils, and it is now considered not to be within the rights even of General Councils during a vacancy in the Papal See.

For formal beatification, testimony not only of holiness of life but of miracles (which need not necessarily have been wrought during life) is required (cf. L. Ferrari, *Prompta Bibliotheca*, Rome, 1766, tom. vii. f. 276: 'duo copulative requiruntur, scilicet excellentia virtutum in gradu heroico, et miracula, ita ut nec excellentia virtutum sine miraculis nec miracula sine virtutibus sufficiant'). From the time of Alexander VII. the process of beatification has taken place at the Vatican (Benedict XIV., *op. cit.* lib. i. cap. xxiv.). The writings (if there are any), virtues, and miracles are strictly examined by the Sacred Congregation of Rites. 'Postulators' are appointed to plead in favour of the claim: a 'Promoter of the Faith' (popularly known as *Advocatus Diaboli*) has the duty of seeking for flaws in the case. If the claim is regarded as proved, a decree of Beatification is solemnly proclaimed in St. Peter's (a modern process, in the case of the 'English Martyrs,' is described in Camm, *Lives of the English Martyrs*, London, 1904, vol. i. p. 14 ff.). But the decision, though given by the Pope, is not regarded as infallible, because the ultimate decision of the Church is not reached until the process is completed by canonization (cf. Benedict XIV., *op. cit.* lib. i. cap. xlii. n. 10). Before this stage is reached a further examination is held, which may result in the name being struck off the list of *Beati*. The Pope is therefore not considered as infallible in pronouncing a decree of beatification. It is, however, regarded as extremely rash to dispute or criticize such a decree.

Beatification authorizes a cult limited to particular districts and to particular acts, which are defined in the terms of the particular decree or indult. If no special terms are laid down the cult is regulated by a general decree of the Congregation of Rites of September 27, 1659 (Gardellini, *Decreta Authentica*, Rome, 1898, t. i. pp. 231–232), which orders that (1) the name of the *Beatus* shall not be inscribed in Martyrologies, local calendars, or those of religious orders; (2) images, pictures, or statues of him may not be publicly exposed in churches without permission of the Holy See; (3) his relics are not to be carried in procession; (4) he may not be chosen as patron saint of a church; (5) the cult may not be extended from the place allowed to another without indult.

For the customs which regulate beatification in the Orthodox Eastern Church, where it is not distinguished from canonization, see article CANONIZATION.

LITERATURE.—Benedict XIV., *de Servorum Dei Beatificatione et Beatorum Canonizatione*, 1st ed., 4 vols., Bologna, 1734–1738, completed in *Benedicti XIV. Pont. Opt. Max. Opera Omnia*, Venice, 1767 (the edition used for the purpose of this article is that in 15 vols., Rome, 1787–1792); Ferrari, *Prompta Bibliotheca Canonica*, Rome, 1766, and Paris, 1884; Gardellini *Decreta Authentica Congregationis Sacrorum Rituum*, Rome, 1898–1901; Vacant and Mangenot, *Dictionnaire de Théologie Catholique*, fasc. xi., Paris, 1903; Beccari, in *Catholic Encyclopædia*, ii. 364–369, New York, 1908. BEATING AND STRIKING.—See STRIKING.

BEATITUDE.—See BLESSEDNESS.

BEAUTY.—It is impossible within the limits of this article to discuss all the theories that have been advanced on the conception of Beauty. No conception, indeed, has received more attention from philosophers. We shall select out of the general history of ideas the most outstanding theories of the Beautiful, with the special aim of tracing their relationship. The subject will be dealt with under the following heads: (i.) in Greek philosophy, (ii.) in the philosophy of the Church Fathers, (iii.) in the philosophy of the Middle Ages, (iv.) in modern philosophy, (v.) in contemporary philosophy, (vi.) conclusion, in which the author will endeavour to point out the principles that arise from this discussion, and the course which, according to him, should be pursued in order to arrive at a true conception of Beauty.

i. *IN GREEK PHILOSOPHY.*—The Greek is a born artist, and his education affords him plenty of scope for all the manifestations of the Beautiful. Nevertheless, the appearance of æsthetic theories comes very late in Greece. It is not until the time of Socrates. The reason is that nothing comes of the study of Beauty except in an integrally constituted philosophy, and before the age of Pericles Greek thought was unable to attain to true systematization.

One common feature, we believe, characterizes all the æsthetic theories of the Greeks: Beauty is considered as an *attribute of things*. If they think at all of the impression that it makes on one, they do so only in a secondary way, and not in order to see in the impression an *essential* element of Beauty. The result is that Greek speculations on Beauty are closely allied to metaphysics.

There are two principal theories which have successively held favour in the schools: (1) the Platonic-Aristotelian theory, and (2) the Plotinian or Neo-Platonic theory.

1. **Platonic-Aristotelian theory.**—We do not possess a special treatise on Beauty either from Plato or from Aristotle, their ideas on the subject being scattered throughout their different works. Plato's chief references to Beauty are in his *Symposium*, *First Hippias*, *Gorgias*, and a few books of the *Republic*. Aristotle informs us, at the end of his *Metaphysics*, that he will deal more fully with Beauty in a special treatise, which, if it was ever written, has not come down to us. In his *Poetics* some general principles are found, although tragedy alone is specially dealt with.

The intellectual relationship between Aristotle and Plato in æsthetics is so close that their doctrines may be summarized together, as follows:

(*a*) *Beauty resides in order*, and in the metaphysical elements included in order, namely, unity and multiplicity (harmony, symmetry, proportion). It is well known that the study of unity and

multiplicity forms one of the favourite problems of Greek speculation; the study of order is the æsthetic aspect of this problem. And Greek art, chiefly the architecture and sculpture of the time of Pericles, provides an eloquent and perfect commentary on the Platonic-Aristotelian formula. The masterpieces of Greek sculpture symbolize in stone and marble the theory of numbers and their attributes.

Measure and proportion, says Plato, are the elements of beauty and of perfection. 'I do not mean by beauty of form such beauty as that of animals or pictures, which the many would suppose to be my meaning; but . . . understand me to mean straight lines and circles, and the plane and solid figures which are formed out of them; . . . for these I affirm to be not only relatively beautiful, like other things, but they are eternally and absolutely beautiful' (*Philebus*, 51; Jowett's *Dialogues of Plato*[3], 1892, iv. 625). Aristotle likewise writes τὸ γὰρ καλὸν ἐν μεγέθει καὶ τάξει, 'Beauty consists of order united to magnitude' (*Poetics*, vii. 4). And Plato applies his theory to the elements of the universe—air, water, earth, fire. These he reduces to geometrical figures, which he thinks perfectly beautiful—in the same way as Aristotle applies his theory to the State.

In the case of a body, popular sentiment added to the element of order the charm of colour (*suavitas coloris*), as characteristic of the beautiful. Xenophon, the Stoics, Cicero, and others are upholders of this conception, and we shall see that Plotinus mentions it as a common way of representing beauty among his contemporaries and immediate predecessors.

(*b*) *The beautiful is the good.*—This identity applies chiefly to moral good, or virtue. (Conversely, vice is the deformity of the soul.) It is the philosophical translation of the word καλοκάγαθός. Is not Thersites, in Homer, both ill-favoured in body and evil in heart? 'Beautiful, too, as are both truth and knowledge, you will be right in esteeming this other nature [the idea of good] as more beautiful than either' (Plato, *Republic*, vi. 508; Jowett, *op. cit.* iii. 210). And when we remember that the central idea of Plato's metaphysics is the Good and not the True, we understand how defective is the saying, erroneously attributed to him, 'The Beautiful is the brightness of the True.' Aristotle tried to establish certain distinctions between the Beautiful and the Good, but these are superficial, and we conclude with Bénard: 'Quand on signale ici un grand progrès dans la science du beau, on se trompe' ('L'Esthétique d'Aristote,' in *Acad. Sc. mor. et polit.* 1887, p. 683).

This short account of the Platonic-Aristotelian doctrine requires a few further remarks. (1) Naturally the theories which have just been expounded are influenced by the differences of doctrine in metaphysics that separate these two great Greek minds. For Plato, reality (and, consequently, beauty, order, and harmony) is enthroned in a supra-sensual world, of which things perceived by our senses are only a fleeting shadow; for Aristotle, reality dwells on the earth, and the beautiful is immanent in well-ordered beings, where our intelligence perceives it, through the channel of the senses and its power of imagination. (2) Aristotle agrees with Plato in separating the beautiful from art, the latter having its whole *raison d'être* in the imitation (μίμησις) of nature, as such, without taking into account the æsthetic value of this imitation. And, inasmuch as it is an imitation of the actual, art is somewhat depreciated, the only value recognized in it being the help it gives to the production and diffusion of morality. (3) Plato and Aristotle (especially the latter) imply in certain texts that the beautiful *should make an impression*, and that it gives us pleasure; but neither of them analyzes the nature of this pleasure or the psychical activities that produce it. The *objective* and ontological point of view dominates their æsthetics.

2. Plotinian or Neo-Platonic theory.—In the 3rd cent. of the Christian era there arose in Alexandria, the centre then of civilization and culture, a new æsthetic formula, which was not long in spreading to other Greek centres. Plotinus (A.D. 204–270), the most brilliant representative of Neo-Platonism, explained these new ideas in a noble book, full of inspiration and mystical exaltation, the *Enneads*. The first chapter of Book VI is devoted to 'Beauty.' There are in his doctrine two distinct parts.

(*a*) First, there is a *critical* part, or a prosecuting speech against the Platonic-Aristotelian argument. 'Is it, as everybody holds, the relative proportion of each part to the other and to the whole, with the additional charm of colour, that constitutes beauty, when it addresses itself to sight? In this case, since the beauty of bodies in general consists of the symmetry and just proportion of their parts, it cannot be found in anything *simple*, it can appear only in composites. The whole alone is beautiful; the parts cannot of themselves possess any beauty. They are beautiful only in their relation to the whole. If, however, the whole is beautiful, it seems necessary that the parts also should be beautiful; beauty cannot result from a collection of ugly things' (*Enneads*, i. 6).

(*b*) Secondly, there is a *constructive* part. The new argument may be given thus: Beauty is a transcendental idea, that is, everything is beautiful in the measure of its own reality. 'Everything is beautiful in its own essential being' (*Enneads*, v. 8). It is well known that in the emanative philosophy of Plotinus the universe springs from the unalterable generating power of a primary being, called the One or the Good (Platonic influence), from whom, by a method of loss, is derived a series of principles, produced the one from the other, each less perfect than its predecessor: the intelligence, the soul of the world, and, lastly, matter and the sensible world. Like this descending scale of Being and the Good, there is a descending scale of Beauty, and, in order to make it clearly understood, Plotinus had recourse to a comparison with light and its spatial diffusion—an image borrowed from Plato's *Republic* (bk. vi.). Further, light becomes synonymous with Being, with Goodness, and with Beauty. 'Everything shines in the world of intelligence. . . . In the world of sense the most beautiful thing is fire' (*Enneads*, v. 8, § 10; cf. i. 6, § 3, and *passim*). It is of great importance to notice that the glory of light (ἀγλαία) has, according to Plotinus, a metaphysical value, and is correlative with the conception of being, and that it is not a question of the impression produced, or of a relation between the splendour of the thing and the capacity of the subject who contemplates it.

Another innovation of Plotinus is that art is not excluded from the domain of the Beautiful, his logical argument being as follows:—The artist realizes the Beautiful in the proportion in which his work is *real*. And that is why the artist should not slavishly copy Nature; but, with his eye fixed on the λόγοι, or archetypal ideas, he should endeavour to reach the very source from which all life springs, and in accordance with it correct the imperfections of sensible things.

ii. *In the Philosophy of the Church Fathers.*—Indebted to Neo-Platonism for a great number of their philosophical doctrines, the Church Fathers assumed and even accentuated its æsthetic optimism. They exalted Nature, they sang its beauty, and many (*e.g.* St. John Chrysostom) depreciated art, the work of man, in order to make the beauty of the world, the work of God, more glorious. There is nothing in the Church Fathers' conception of beauty that is not directly due to the Greeks. St. Augustine, the most representative, who, in his youth, wrote a treatise *de Pulchro*, inclines somewhat towards the Platonic-Aristotelian theories. 'Omnis corporis pulcritudo est

partium congruentia cum quadam coloris suavitate' (*de Civitate Dei*, xxii. 19). He has bequeathed to us a famous definition of the conception of *order*: 'Ordo est parium dispariumque rerum sua loca tribuens dispositio' (*ib.* xix. 3). On the other hand, St. Basil and pseudo-Dionysius the Areopagite adopt the Neo-Platonic theories. The latter exercised great influence on the æsthetics of the Middle Ages by means of his treatise *On Divine Names*, for it was the commentary on this treatise that drew forth all the dissertations of Scholasticism on the Beautiful.

iii. *IN THE PHILOSOPHY OF THE MIDDLE AGES.*—It was principally Scholastic philosophy that developed the ideas of Beauty in the Middle Ages. But these ideas did not appear in a systematic form until the 13th century. And even then no treatises or discussions were written on Beauty as at the beginning of the 18th century. We know only one short work, *de Pulcro*, belonging to this period. It is attributed to Thomas Aquinas, but probably belongs to one of his immediate disciples. Among the great Scholastics, ideas on æsthetics appear in an incidental way, intermingled with other subjects and nearly always in the form of commentaries on the text of pseudo-Dionysius. They form a systematic whole, however, if one takes the trouble to connect the texts; and a new thought is evident in them. The Beautiful no longer appears under purely objective aspects, as in the Greek schools, but as a complex notion, which belongs partly to the things and partly to the psychic subject who receives the impression of them: the Beautiful is the result of a close connexion between the two. We shall now sum up the fundamental doctrines of Thomas Aquinas, the prince of Scholastic philosophers.

(1) *Subjective aspect of the Beautiful.*—Æsthetic activity is an activity of perception: 'Pulcrum respicit vim cognoscitivam' (*Summa Theol.* i. quæst. 5, art. 4), or, more precisely, it is a disinterested contemplation by the eye, the ear, and the intelligence. This contemplation begets a specific enjoyment, the pleasure of the Beautiful: 'Unde pulcra dicuntur quæ visa placent' (*ib.*). (Here 'visa' refers not only to sight, but to other perceptive faculties of an æsthetic kind.) And now from this psychological point of view there appears a profound difference between the pleasure of the Beautiful and the pleasure of the Good: we enjoy the Good by taking possession of the object itself, and we enjoy the Beautiful by the simple perception of it. 'Et sic patet quod pulcrum addit supra bonum quemdam ordinem ad vim cognoscitivam; ita quod bonum dicatur id quod simpliciter complacet appetitui, pulcrum autem dicatur id cujus apprehensio placet' (*ib.* 1ª 2ᵃᵉ, quæst. 27, art. 1).

(2) *Objective aspect of the Beautiful.*—It is quite wrong to refer the Scholastic doctrines concerning what constitutes beauty in things to the influence of Neo-Platonism. The theory that was unanimously accepted was the Platonic-Aristotelian, broadened and brought into harmony with other metaphysical theories of Beauty. Order and its elements constitute the Beautiful; *ordo, magnitudo, integritas, debita proportio, æqualitas numerosa, commensuratio partium elegans*, etc. 'Unde pulcrum,' says St. Thomas, 'in debita proportione consistit' (*ib.* i. quæst. 5, art. 4). And æsthetic order is closely connected, on the one hand, with the form of beings (*forma*), that is to say, with the principles of their constitution and of their perfection ('pulcrum congregat omnia et hoc habet ex parte formæ'), and, on the other, with the finality of beings, which dominates the constitution of Scholastic metaphysics: 'Dispositio naturæ conveniens est pulcritudo' (*ib.* 1ª 2ᵃᵉ, quæst. 54, art. 1).

(3) *Relation of the object to the subject*, or the *claritas pulcri.*—The order of the Beautiful is not any order whatever, but such an order as is capable of giving to the subject that perceives it the natural and entire satisfaction which engenders æsthetic pleasure. Order must be bright, it must be luminous to the eyes. The more *form* strikes the spectator (and form is the principle of unity in a work of art or of nature), the more resplendent it is ('resplendentia,' 'supersplendens claritas'), and the more æsthetic will be the value that the impression experienced possesses. Although the Scholastics make use of the theories of pseudo-Dionysius regarding the *light* of the Beautiful, their doctrine rises above his formula, and, therefore, above Neo-Platonism, with which pseudo-Dionysius was inspired. While for Plotinus the theory of *light* has a metaphysical bearing, for Thomas Aquinas and the other great Scholastics it is a pyschological phenomenon, for it has to do with the mysterious connexion between the object and the subject which forms the basis of the complex phenomenon of Beauty. And from the historical point of view this is a noteworthy conquest on the part of the philosophy of the Middle Ages.

iv. *IN MODERN PHILOSOPHY.*—From the beginning of the 17th cent., which is usually regarded as the commencement of modern philosophy, the study of Beauty has steadily gained in importance and extent; and from the day on which Baumgarten, a disciple of Leibniz, detached it from the domain of philosophy and made it a separate branch of knowledge, the number of treatises devoted *ex professo* to æsthetics has continued to multiply. The great burst of artistic criticism after the Renaissance has often been assigned as the cause of this development. And indeed it is a factor whose incontestable influence we are bound to recognize. Artistic culture, greatly aided by archæological excavations and the analysis of statuary and ancient drama, had prepared the way for the discussion of the great problems of Beauty. But there seems to be a second reason: the progress of psychological research, which is one of the salient characteristics of modern philosophy, naturally stimulated the study of æsthetic phenomena; and this influence is clearly seen when it is remembered that in modern and contemporary philosophy Beauty is usually studied only under its *cognitive* and *emotive* aspect, *i.e.* as a *psychic fact*.

As the development of modern æsthetics has a course parallel to that of philosophy, we shall follow the great historical divisions generally agreed upon: (1) philosophy from Descartes to Kant (17th and 18th cents.), (2) Kantian philosophy (18th cent.), and (3) post-Kantian philosophy (19th cent.).

1. **From Descartes to Kant.**—Just as there are two lines of psychological systems, empiricism and rationalism, originating from Francis Bacon and Descartes respectively, so there are two lines of æsthetic systems.

(1) *Empiricism.*—The Empiricists, reducing all our conscient states to sensation, understand by Beauty an *agreeable sensation*. For Hume, the Beautiful exists only in us, not in things, and obeys the general laws of association. This principle was adopted and developed in England by Hutcheson (1694–1747), Home (1696–1782), and Burke (1730–1797); in France by Batteux (1713–1780) and Diderot (1713–1784); and in Holland by Hemsterhuys (1720–1790). Home gives the best expression of the leading ideas of the school in his *Elements of Criticism*, and Burke carries the

sensualistic idea that inspires him to its extreme limits in a work entitled *Inquiry into the Origin of the Sublime and the Beautiful*. Nearly all these philosophers admitted the existence of a special sense, the sense of artistic taste, which was afterwards called the sixth sense, and the object of which was enjoyment of things beautiful.

(2) *Rationalism.*—Among the intellectualists or rationalists (*ratio*, 'reason'), who establish a fundamental distinction between sensation, or the perception of sensible qualities, and the idea, or the general representation, it is in Leibniz and his immediate successors that we find the most noteworthy treatments of the Beautiful. It has been truly said that Leibniz is the father of modern æsthetics. It seems as if the intellectualists, inspired by Descartes, had reserved the character of Beauty for the most exalted psychic activities, *i.e.* for *clear and distinct ideas*, which play such a prominent part in the Cartesian doctrine. For some men, indeed, like Crousaz (*Traité du Beau*, 1715), the Beautiful is something that may be approved of just like a theory, and Boileau expresses this intellectualism when he writes in his *Art Poétique*: 'Mais nous que la raison à ses règles engage.' But Leibniz introduces into æsthetics a tendency contrary to this spirit. And while he relegates the clear perceptions of our psychic life to the domain of *science*, he consigns æsthetic knowledge of things to the dull and loss conscient regions of the soul. The æsthetic phenomenon, he says, is a *confused perception* of the order and the harmony of things, and by this doctrine he thought he was explaining that mysterious and indecomposable characteristic which constitutes the charm of Beauty.

In order to understand the whole meaning of this statement, we should have to give a full account of the philosophy of Leibniz, which cannot be undertaken here. It will be sufficient to recall the law of continuity and hierarchy, which arranges all the monads and the monadic activities in a grand order.

Each monad differs in perfection from that which precedes it, and from that immediately fohowing, by infinitely small differences; the activities or the representations of each monad—and, therefore, of the monad that we are—differ in degree by infinitely small differences, so that between our least conscient representations ('obscure ideas') and our most conscient ('distinct ideas') there is room for an indefinite number of stages corresponding to all the degrees of clearness. Now, Beauty is one of those activities which are inferior in quality to the clear and scientific knowledge of things; it is the *confused*, therefore indefinite, perception of all that constitutes order. Whereupon Lotze says that German æsthetics is brought into being by belittling its object.

Baumgarten, who arranges Leibniz's theories, and is the author of the first treatise on Beauty (*Æsthetica et Æstheticorum altera pars*), associates the sentiment of Beauty with obscurity of representation. In the Wolffian classification of the sciences, æsthetics becomes a kind of inferior logic. The same ideas are found in Eschenburg (1743–1820), Sulzer (1720–1779), and Mendelssohn (1729–1786). 'Beauty,' says Mendelssohn, 'vanishes away as soon as we try to analyze it.' And Meier, another disciple of Baumgarten (in § 23 of his *Anfangsgründe der schönen Wissenschaften*, 1748–1750) thus expresses himself: 'The cheeks of a beautiful woman are beautiful as long as they are seen with the naked eye. Look at them with a magnifying glass and their beauty departs.'

2. In Kantian philosophy.—The disciples of Leibniz and Baumgarten had considerably furthered the problem of the Beautiful, but all were eclipsed by the gigantic figure of Kant. Kant's æsthetics made as profound an impression as his theory of science and his ethics; and just as, in the *Kritik der reinen theoretischen Vernunft*, and the *Kritik der reinen praktischen Vernunft*, he had established human knowledge and human duty in the very *constitution* of our theoretical and practical reason, so he explains opinions on the Beautiful and the Sublime by calling for the *construction* of a third faculty, the source of contemplation and sentiment. This is the subject of a chapter of his third critique, *Kritik der Urtheilskraft*. The subjectivity of the Beautiful is no longer merely a *fact* (Hume), but a *law*. Beauty is an attribute, not of things, but of our representative states. It is the predicate of an æsthetic judgment which unites all men by reason of their nature (synthetic judgment *a priori*) to a subject when that subject calls disinterested contemplation into free play. The object of representation is intended to please me—subjective finality; but at the moment of enjoying it I am unconscious of this finality; to be conscious of it would be to break the charm. 'Schönheit ist Form der Zweckmässigkeit eines Gegenstandes, sofern sie ohne Vorstellung eines Zwecks an ihr wahrgenommen wird' (*Kritik d. Urtheilskraft*, I. i. bk. 1, § 15). Similarly the *sublime* is the result of our subjective powerlessness to grasp an object, mingled with a definite feeling of the superiority of our supra-sensible being. 'Erhaben ist was uns erhebt.'

3. In post-Kantian philosophy.—The chief currents of modern philosophy and æsthetics after Kant are:—

(1) *Post-Kantian criticism in Germany* (first half of 19th cent.).—Powerful in itself, the new theory proposed by Kant (assisted by the brilliant flight of Romanticism in Germany and the æsthetics of the philosophy of Königsberg, and accepted by such men as Schiller and Schelling—philosophers as well as *littérateurs*) dominates all modern criticism. It is true that a characteristic innovation was introduced into German criticism by those who are called idealistic critics as well as by the realistic critics: the Beautiful remains a creation of our mind (Kant), but this 'mind' becomes a monistic principle, the 'ego absolute' of Fichte, the 'absolute' of Schelling, the 'mind' of Hegel, the 'will' of Schopenhauer. Schiller (1759–1805) returns to the theory of *play*. To 'play' is to contemplate phenomena with an utter indifference as to their representative value. And just on this account does æsthetic activity become human activity *par excellence*: 'Man is truly man only when he plays.' It is intimacy with the Beautiful that produces the restfulness of life, that balance of all the faculties which Kantism tries to secure by the exercise of freewill ('Vom Erhabenen,' *Briefe über die ästhetische Erziehung des Menschengeschlechtes*, 1795). In 1800 and 1801, Schelling, in the second form of his philosophy, æsthetic idealism, revived this governing idea, and made æsthetic activity and 'play' the fundamental function of the mind, that which reconciles its opposite tendencies. The work of art is the only perfect production of the Ego. Thus Jena, where Schelling was a professor along with Fichte and then with Hegel, became the centre of the closely allied philosophic criticism and literary romanticism. Novalis identified the imagination of the poet with the productive imagination of the Ego; and von Schlegel, whose name is connected with the movement called *Ironism*, claimed for the poet the right of not troubling himself either about the contents of his work, or about its representative value, or about the public who make the unjust claim to judge it.

Then Hegel appeared (1770–1831), and ruled the German schools for half a century. For Hegel, art is placed at the highest point of the development of the mind. Art is the last step in the dialectic procession of the Logos. When the mind has traversed the numerous stages of its development sketched in the *Phänomenologie des Geistes* (1807), and when, in conformity with the threefold procession (thesis, antithesis, synthesis) that governs it, it becomes conscious of itself, this auto-contemplation is realized by Art, Religion, and Philosophy. Art,

and the Beautiful in which it is realized, are the 'perfect identity of the ideal and the real.'

Schopenhauer (1788–1860), who may be considered the last of this line of pantheists belonging to the first generation of Kantians, reserves for Art and for Beauty this high position in the cycle of psychic activity (*Die Welt als Wille und Vorstellung*, 1819). Although the thing exists in itself, science is doomed to recognize only its representation ('Vorstellung'). But, besides this knowledge of the phenomenal world, which is directed by the *a priori* constitution of our mind, we may have 'the immediate intuition' of the cosmic Ideas, or of the thing-in-itself, and this pure contemplation is the æsthetic contemplation. As such, it is freed from desire and withdrawn from the sufferings that accompany every voluntary action; and this is the secret of the penetrating charm of Beauty. By art, man makes the idea the ruling power—a symbol which nature never realizes in its absolute purity. Art becomes an intoxicating drink, causing the woes of existence to be momentarily forgotten.

(2) *The conflict between Hegelians and Herbartians in Germany* (middle of 19th cent.).—The pantheistic Germans whom we have just mentioned all agreed in making the Beautiful an impersonal manifestation of Being. The Hegelian theory, in spite of the ascendancy in official spheres enjoyed by its promoter, was not long in bringing on a reaction: there was a desire to remove Beauty from the sphere of metaphysical reverie to the ground of psychological observation. In the name of observation, Herbart made Beauty consist of the mere perception of *relations* and forms. The æsthetics of content ('Gehaltsästhetik') of the Hegelian school was now opposed by the æsthetics of form ('Formaästhetik'), and the conflict between the two tendencies lasted in Germany until the end of the 19th century. Hegelianism includes among its most zealous defenders Fr. Th. Vischer, who published some important works on the Beautiful (e.g. *Aesthetik oder Wissenschaft des Schönen*, 3 vols. 1846–57), while Zimmermann carried the reactionary doctrine to an extreme (*Allgemeine Aesthetik als Formwissenschaft*, 1865). The Hegelian party was not defeated in this strife, but we see several of their partisans departing from the rigour of their principles and giving a place to beauty of form. Among these moderates we may mention Moriz Carrière (*Aesthetik*, 1859), as well as Schasler and Ed. von Hartmann, both of whom are authors of works on the history of Æsthetics.

German idealism enjoyed some fame in Italy through Gioberti, who favoured Schelling, de Sanctis (Professor in the University of Naples after 1870), and Antonio Tari (Professor in the University of Naples from 1861 to 1884), who were all affected by the preponderating influence of Hegel.

(3) *Eclectic spiritualism.*—In France, during the first half of the 19th cent., Cousin (1792–1867), by his lectures in the Sorbonne, and then through his influential official positions, both academic and political, exercised a dictatorship similar to that enjoyed by Hegel in Germany. He popularized a philosophy, somewhat deficient in originality, which he himself called Eclecticism; and in a well-known book, *Du vrai, du beau et du bien* (1818), gave prominence to an æsthetic made up of fine phrases and pompous homage to the Ideal, which he identified with the Infinite or the perfection of God. While exalted in their aspiration, these thoughts on Beauty have the fault of being remote from reality. They are, moreover, derived from recollections of Hegel and the Scottish school of Reid. The same tendencies are to be seen in de Lamennais, although he followed another direction of thought-traditionalism (*De l'Art et du beau*, 1843). On the other hand, Th. Jouffroy (1796–1842), the most noteworthy of Cousin's disciples, wrote a *Cours d'esthétique* (1843), in which he insisted on the rights of the psychological method in the study of the Beautiful. And to the same metaphysical tendencies may be traced *La Science du beau* (1861), by Charles Lévêque, who returns to Plato in his treatment of the characteristics of Beauty. By the middle of the century only faint traces of Cousin's eclecticism were left in France.

(4) *The æsthetics of Positivism.*—Sensualism, represented at the beginning of the 19th cent. by Condillac in France and the Associationists in England, does not leave much room for æsthetic phenomena. But when it reappears with renewed vigour under the form of Positivism, which may be called a sensualism suited to contemporary minds, there is room for new conceptions of Beauty and of Art. These, however, did not appear either in Comte, the founder of the new doctrine, or in Stuart Mill, its most brilliant logician; but after the system seemed perfectly balanced, and systematized in all its parts, Herbert Spencer devoted a chapter of his *Principles of Psychology* to a study of the genesis of æsthetic phenomena, in conformity, however, with the governing ideas of his cosmic evolutionism. The sentiment of Beauty has its origin in 'play,' *i.e.* in the exercise of an excess of activity independent of any function useful to the being. Useful activity becomes beautiful as soon as it ceases to be useful. And as humanity evolves unceasingly 'from the unstable homogeneous to the stable heterogeneous,' art increases with the progress: the more perfect society becomes, the more time will its members have for 'play.'

Hippolyte Taine (1828–1893), in his noteworthy work, *Philosophie de l'art* (1865), studies art as a social fact, and he tries to reduce it, like all other social facts—such as literature and politics—to factors or primordial facts, which are three in number: race, circumstances, time. From this point of view, æsthetics becomes, in the author's words, 'a kind of botany, applied, not to plants, but to human works.' M. J. Guyau emphasizes, while exaggerating, the social side of art, and recognizes in it no function except that of developing sympathy and social life (*L'Art au point de vue sociologique*, 1889; *Problèmes de l'esthétique contemporaine*, 1884).

(5) *Psycho-æsthetics.*—The increasing progress of physiological sciences and of the application of psycho-physiology to the study of æsthetic states furnished a new element of research during the latter part of the 19th century. Helmholtz in Germany, and Grant Allen in England, tried to determine the physiological concomitants of certain phenomena of the Beautiful. Fechner (*Vorschule der Aesthetik*, 1876) carried on numerous experiments in the same direction.

v. *CONTEMPORARY TENDENCIES.*—During the last ten years the number of works treating of æsthetic questions has been multiplied in all countries. There is not one of our numerous periodical publications that does not devote some attention to them. Moreover, there has been appearing at Stuttgart since 1906 a *Zeitschrift für Aesthetik und allgemeine Kuntswissenschaft*, under the direction of Max Dessoir, which allows large space to philosophical problems of the Beautiful. Now all these writings, with a few exceptions, show this common characteristic: Beauty is considered only under its subjective aspect as a psychological phenomenon. The salient features of modern æsthetics reappear, exaggerated, in the æsthetics of our own time.

In the first place, Kantism, in this as in other

subjects, is again received into favour—not the idealistic and pantheistic criticism which had been established by the triumvirs of the University of Jena, but psychological Kantism in its primitive form. **Jonas Cohn** (*Allgemeine Aesthetik*, Leipzig, 1901) transfers the results obtained to transcendental ground ('ins Transcendentale umschreiben'). **Stephan Witasek** (*Grundzüge der allgemeinen Aesthetik*, Leipzig, 1904) shows the same tendencies; and a German critic, **A. Tumarkin**, in a criticism of a group of German works on æsthetics, is able to write: 'Jede wissenschaftlich begründete Aesthetik, von welchen Voraussetzungen sie auch ausgehen mag, führt immer auf Kant zurück' (*Archiv für Geschichte der Philosophie*, 1905, p. 360). On the other hand, psycho-æsthetic researches are being actively pursued in the psycho-physiological laboratories; pupils of **Wundt**, Ebbinghaus, and others have turned their attention to this side of the subject. Some also apply to æsthetics the historical and inductive method which has produced such excellent results in other departments. **E. Grosse** publishes a work on the origin of art (*Die Anfänge der Kunst*, Freiburg i. Breisgau, 1894); **J. Volkelt** (*System der Aesthetik*, Munich, 1903) makes æsthetics 'normative and experimental'; while, in another line of observation, we trace the development of the artistic sense in the child, especially in his first attempts at drawing.

The most noteworthy representative of the pure psychological tendency is **Theodore Lipps** (*Aesthetik*, Leipzig, 1903), whose opinion is that the only *raison d'être* of æsthetics is to analyze the sentiment of Beauty, and this in the final analysis rests on the *Einfühlung* ('innate feeling'). **Karl Groos** (*Der ästhetische Genuss*, Giessen, 1902), a disciple of the school of Lipps, follows the same tendency of dealing with the Beautiful only by internal analysis. The same may be said of **Véron's** treatise (*L'Esthétique*, Paris, 1878), and of the discriminating analyses of **Léchalas** (*Études esthétiques*, 1902). Even if these authors do not deny the objectivity of the Beautiful, they neglect it, and regard the phenomena of consciousness as the only object of their investigations. The Italian professor, **Benedetto Croce**, whose treatise on æsthetics (*Estetica come scienza dell' Espressione e Linguistica generale*, Milan, 1902) is translated into several languages, is true to this contemporary attitude of mind when he writes: 'Beauty does not belong to things; it is not a psychic fact, it belongs to man's activity, to spiritual energy'; and he holds that æsthetic activity is the imaginative and concrete intuition, as opposed to the logical and general conception. **Ruskin**, whose ideas are known in France through Robert de la Sizeranne (*Ruskin et la religion de la beauté*), occupies a place apart. It is impossible to assign this great and passionate admirer of Nature to any contemporary system of philosophy.

vi. *CONCLUSION.*—From this rapid survey of the evolution of æsthetical doctrines, we may gather a few principles.

By studying in the Beautiful the psychological impression and all that belongs to it, our contemporaries have established æsthetics on firm and fertile soil—that of observation. Let us observe the origin of art in the child, in primitive societies, as well as in the centres of advanced civilization; let us analyze the works to which we ascribe the character of beautiful, that we may understand the secrets of the enjoyment of art which they produce; let us study the physiological phenomena that accompany this delicious thrill of our conscient being when it perceives the Beautiful; let us, above all, determine by examination of our consciousness the psychical aspects of the Beautiful. Nothing more is required. Beauty resides in the *disinterested contemplation of a representative content* of consciousness, followed by an *enjoyment* or a pleasure which can be compared with no other in the scale of emotions.

But is it sufficient to regard merely the impression produced? Are we in the study of the Beautiful to lose all interest in the æsthetical factors springing from the object? Surely not. Contemporary philosophy is wrong in ostracizing metaphysics and adorning psychology with its spoils. On the question whether the Beautiful possesses an objective reality, we agree with the Greeks: Beauty is an attribute of things. But we complete the Greek point of view by adding the modern: Beauty is not an *absolute*, but a *relative*, conception. It exists neither as a physical fact nor as a psychic fact; it is the result of a close connexion between an object and a subject, for the attributes of the one form the appropriate origin of the perceptive enjoyment of the other. The objective attributes were demonstrated by Plato and Aristotle: Beauty resides in order, but, we add, in *expressed* order. That is to say, if the order realized in a work of nature or of art is to be æsthetic, it must *be manifest*, *evident* to the senses and the intelligence. The more evident and attractive an artist can make the dominant character or principle of the chosen order, the more complete and more penetrating will be the contemplation of the percipient mind: consequently the more beautiful will the work be.

LITERATURE.—C. Bénard, *L'Esthétique d'Aristote et de ses successeurs*, Paris, 1887; E. Vacherot, *Histoire critique de l'école d'Alexandrie*, Paris, 1846-51; M. de Wulf, *Études historiques sur l'esthétique de saint Thomas d'Aquin*, Louvain, 1896. Works on the modern period are very numerous. Only a few general histories of æsthetics can be mentioned: H. Lotze, *Geschichte der Aesthetik in Deutschland*, Munich, 1868; E. von Hartmann, *Die deutsche Aesthetik seit Kant*, Berlin, 1886; Max Schasler, *Kritische Geschichte der Aesthetik*, Berlin, 1872; Bernard Bosanquet, *History of Æsthetic*, Lond. and N.Y. 1892; B. Croce, *Estetica come scienza dell' Espressione e Linguistica generale*, Milan, 1902; W. Knight, *Philosophy of the Beautiful*, 2 vols., London, 1891-93.

MAURICE DE WULF.

BEḌIYĀ, BERIYĀ.—A generic name for a number of vagrant, gipsy-like groups, who at the Census of 1901 numbered 57,489, most of whom are found in Bengal and in the United Provinces. In Bengal they practise various disreputable occupations. Some are pedlars and mountebanks, who pretend to be Muhammadans, but exhibit pictures of Hindu gods; others tatu girls, sell simples and quack remedies, and pretend to extract worms from carious teeth; others, again, are acrobats, bird-snarers, or snake-charmers. The Beriyās of the United Provinces are pilferers and petty thieves, and make their living by various kinds of rascality. Their appearance indicates that they are members of the pure Indian gipsy race, allied to Ḍoms (wh. see) and other vagrants of the same kind. Risley makes no reference to their religious beliefs in Bengal; but Rājendralāla Mitra states that the Beḍiyā is a Hindu or a Musalmān according to the prevailing beliefs of the people among whom he dwells. Some are Deists, some Kabīr panthīs or Sikhs, while some are Pachpiriyas. It is extremely unlikely that people in this stage of culture can have really adopted the faith of Nānak or of Kabīr; but it is quite possible that they may sometimes adopt the Pachpiriyā (wh. see) cult. In the United Provinces, where they are in a much more degraded condition than in Bengal, they worship as their tribal deity the Mother-goddess in the form of Devī, Kālī, or Juālamukhī. Many of them worship a deity called Sayyid, who is probably a Muhammadan saint like him of Amroha, but is identified by the Beriyās with the Prophet Muhammad. They seem, however, to depend more upon the cultus of ancestors than on any other

form of belief, and rarely employ Brāhmans, and those only of the very lowest grade, for their domestic rites.

LITERATURE.—Rājendralāla Mitra, *Memoirs Anthropological Society*, iii. 122 ff.; Risley, *Tribes and Castes of Bengal*, 1891, i. 88; Crooke, *Tribes and Castes of the North-Western Provinces and Oudh*, 1896, i. 242 ff.

W. CROOKE.

BEELZEBOUL.—See BAALZEBUB.

BEGGARS, BEGGING.—See CHARITY.

BEHISTŪN.—1. Locality and name.—Behistūn is a mountainous elevation which rises somewhat abruptly from the surrounding country—presenting from one point of view a double aspect—about sixty miles from Hamadan, on the main caravan route between Baghdad and Teheran (the present capital of Persia). At its highest point it reaches about 3800 feet, but it is really the continuation of an otherwise low range of hills rather than an isolated eminence.

The name at present made use of by the neighbouring inhabitants is *Bīsitūn* or *Bīsutūn*, which is supposed to have been derived from that of a small village in the immediate vicinity. One is, however, tempted to reverse the relation, as the termination *-sitūn* suggests 'columns' (*sitūn* = Skr. *sthūṇā*), and the opening part may be *bazah* or the like (= Skr. *bahú*). Thus the name would mean 'high columns,' referring to the lofty, and often hewn, face of the rock. The name at present most in use among Westerns is *Behistūn*, or *Bahistūn*. This was handed down to us from the Arabic historian Yāqūt, by Sir H. Rawlinson. Diodorus Siculus (A.D. 1st cent.) seems to have made the earliest mention of the more ancient title as τὸ Βαγίστανον ὄρος.

2. Inscriptions.—The Inscriptions, which chiefly concern us here, render Behistūn famous, as they are perhaps the most important of their kind which have survived to us. They are chiselled upon its hewn surface at about 500 feet above the level of the plain, or about 200 feet above the base of the particular cliff. They occupy, all included, a space of about 60 feet in breadth and 20 in height.

3. The language in general.—The Inscriptions are written *in three languages*—Old Persian, Susian, and Babylonian—in letters a little over an inch in height, it having been found necessary to economize the space. The last two are more naturally to be regarded as translations of the first; but this is not strictly the fact, as there are several sections in the Persian whose equivalents are wanting in the Susian; while, on the other hand, the Babylonian contains some particulars omitted from the Persian. The Persian Inscription consists of five columns, about 12 feet in height and 6 feet broad, flanked on the left, as one views them, by the three columns of the Susian version. A ledge of narrow dimensions—about 2 feet—runs along the foot of them.

4. The sculptured figures and the position of the Inscriptions.—The sculptured figures of Darius and his captives appear immediately above. The nine figures are roped together in a row at the neck. The tenth, that of Gaumata, pseudo-Smerdes (-Smerdis), or Bardiya, is prostrate under the left foot of Darius, who stands 5 ft. 8 ins. in height, with two attendants behind, who are each 4 ft. 10 ins. tall. The height of each of the nine prisoners is only 3 ft. 10 ins., while Auramazda, under the shadow of whose wings the transactions transpire, flutters above, but 3 ft. 9 ins. by 4 ft. 2 ins. in dimensions. The ninth captive has an enormously tall Scythian cap, and occupies space taken from one of the supplementary texts. Under the first prostrate figure is written his name with his crime: 'This Gaumata, the Magian, lied, saying, "I am Smerdes (-dis), the son of Cyrus."' Similar inscriptions in the three languages appear over the other eight.

The Babylonian version stands over the Susian, on the left of the figures, as the observer regards them, on the right-hand side of the forms themselves. Supplementary, but now obliterated, texts appear also above the Persian, but more to the left of the sculptures, as they face us. The three languages were evidently made use of in order to render the Inscription intelligible to the inhabitants of the main divisions of the Empire. That they were copied in multiplied replicas hardly needed the proof which has actually come to light: for what appear to be really fragments from such a reproduction have been found by Koldewey (see *Bab. Miscellen*, pl. 9, p. 24 ff., quoted by King and Thompson, p. 179).

5. The Old Persian language.—The language in which the Inscriptions were written is, like the Avesta, quite Aryan in all its grammatical forms, though it is rather a younger sister than a direct daughter of the Avesta speech; and it is the direct mother of New Persian so far as it survives in its Aryan elements.*

We have recurring examples of a dialect common to the Avesta and the Dario. The pronoun *dim*, *dīm*, e.g., is Dario and Avestan, but not Vedic; the word *yānā*, 'a boon,' has no such application in the Veda, but it is familiar in this sense in both Avesta and inscription; such an expression as 'the right path' in its unmistakably figurative sense is very Gāthic; the proper name *Fravarti* also is Av. *Fravashi*, with no immediate Indian correspondent; and so with the pronoun *ava*, 'yon.' 'This earth and yon heaven' occurs in the Avesta as in the Inscription, while it only remotely lingers in the Sanskrit. So the Dario-inscriptional preserves some of the Avesta-Vedic peculiarities of Avesta, as against those of the *later* Sanskrit. Among the more striking of these is the termination of the nom. plu. masc. of the *a* declension in *-āha*, Av. *-āŋhō* (cf. the Vedic *-āsas*, as against the later Indian *-ās*; see also some of the infinitives). It would be an exaggeration to say that the inscriptional was at all at the same stage of 'preservation' or 'deterioration' as the language of the Avesta. Its distance, as a spoken dialect, from the Gāthic speech must have been about two hundred years. It can be easily restored in Avestan or in Sanskrit.

6. Religion of the inscriptions.—The personifications are best considered in their analogy with, and their differences from, those of the Avesta.

(*a*) *Auramazda* is, of course, Ahura Mazda, Vedic *Ásura* (*su-*)*Medhás* (or *Asura Mahádhās*). Notice the fall of the *h* in the inscriptional *Aura* for *Ahura*. Was not this owing here to the strong accent upon *á* in *áura* (cf. Vedic *Ásura*)?† The presence of a God-unity in the Inscriptions must not be denied because of the supremacy ascribed to Ahura in the words 'the greatest of the gods.' There can be but One 'greatest of the gods'—equivalent to the concept of a 'Supreme Being.' The 'other gods' referred to were inferior, ranking with our archangels. This is confirmed conclusively by the fact that the next chiefest of the gods were said to have been created by Ahura—this in the Avesta (these 'other gods' do not therefore negative the idea of One-God-ism)—whereas the *Amesha-spentas* were originally His *attributes*.

As Ahura was one of the most distinctive expressional manifestations of God-unity which the world had till then, or has since then, possessed, so the *name* is most effective; it is the 'Life-Spirit-Lord,' the 'Great-Creator,' or the 'Great-Wise-One'—infinitely more impressive than our English word 'God,' a term possibly of heathen origin.

(*b*) *Other so-called gods.*—Besides Áura there are *Mithra* and *Anāhita*, two of the noblest subdeities of Aryan literature, who seem to have stepped bodily out of the Avesta into the Inscriptions; but with them we appear to have reached our limit as regards analogies between personifications in the Avesta and the Inscriptions. For where are the *Amesha-spentas* upon the Inscrip-

* Take even a few words like *daušťar*, with which cf. the forms from Av. *zuš*, *zaoša*, Indian *juṣ*; see also *dast*, with which cf. Av. *zast*, Indian *hásta*, etc.

† We do not forget the normal disappearance of the expressed *h* throughout the Inscriptions, for the 'rough breathing' may have been left to be understood; and we may recall how very slight a mark expresses it in Greek.

tions (as has often been, perhaps, too thoughtlessly asked), and, above all, where is *Angra Mainyu*?

(*c*) The absence of the *Amesha-spentas* certainly shows that these personified attributes regarded as archangels were not at all prominent in the author's mind when he composed the sentences for the chisellers. Full references to them had long existed in the earlier Gāthas, or perhaps in the pre-Gāthic and other literature of North Iran. But any argument *e silentio* here verges close upon the fatuous, for there are whole masses of Avesta text itself without a trace of any one of them. That the personified attributes were not known in Middle Persia, and at the seat of Government, is out of the question. Ragha with its surrounding province was a very hot-bed of that form of Mazda-worship which revelled in the great names, and every post brought down despatches from the interesting place. Yet the *Amesha-spentas* appear upon the Inscriptions as attributes only, in expressive qualifying words, and in proper names (cf. *Arta-khshatra*, which may be *A(r)sha + khshathra; Vahuka*, which recalls *Vohu* of *Vohu-manah*; and possibly the mutilated name of *Haurvatāt* appears bodily in that of the province *Harauvatī*). The truth appears to be that Darius was lukewarm in the matter of recognizing those superbly personified ideas. Yet, among many sections of the Persians, the *Amesha-spentas* were, and had never ceased to be, grand abstract characteristics, for they actually retained their significance as reported to the Greeks (see the extraordinary citations by Plutarch from Theopompus [the latter only about two centuries after Darius], where the 'six gods' of the Persians retain all their meaning as ideas, so that Windischmann justly pronounces the passage 'unschätzbar'). Darius knew—as he must have known, when he cared to reflect upon it—that the so-called archangels had in reality much to do with those glorious principles of Truth which he was so continuously signalizing upon the tablets, as well as with Benevolence, Sovereign Authority, Energizing Power, Weal and Deathlessness. It is but a tribute to the greatness of his mind that he overlooked their status as mere archangels. Moreover, he may have been influenced by prejudice—a diseased passion which is also universal elsewhere. For it must not be forgotten that Darius was, above all, an anti-Magian,* and that the *Maga* (*Magha*) was probably originally a purely Gāthic concept closely interwoven with the conception of the archangels. Here, then, is an 'omission,' at once most easily accounted for.

(*d*) But how as regards *Angra Mainyu*? Surely, if ever there was occasion for the mention of such a Being, this was the proper place. But let us pause. That Angra Mainyu was a name only too well known in every sub-kingdom of the Empire may be assumed as extremely probable, for evil concepts readily become familiar. As a matter of fact, the main and central activity attributed to Angra Mainyu is constantly the subject of severe denunciation in the Inscriptions. 'He lied' occurs throughout; the *Draugha* is the Avesta *Draogha*, a variant of the *Druj*, 'she-Devil of the Lie,' first child of Angra Mainyu, though the latter is not actually named. Here we have another signal instance of the essential conception being present in the Inscriptions, although the language invests it only in plain words. Do the facts compel us here again to attribute to Darius such a depth and refinement of ideas as would lead him to overlook even the concept of a chief personal Evil Being? In view of the shrewdness and sagacity manifested by him throughout, it is hard, indeed, to resist this simple solution, although we should seldom relax our vigilance against 'seeing too much meaning' anywhere. Darius had beyond doubt heard the Great Devil's name, but he attached little importance to him, being occupied with more serious considerations.

(*e*) *Devá*.—Let us not fail to notice here another marked feature of a negative character pointing to the Daric Mazda-worship as a separate strain from that of Ragha. Strange to say—and, we might almost add, fortunately—the most sacred name *Devá* is not here perverted, as it was in Avestan Ragha, and as it unfortunately became at last universally in Iran. In Ragha it became permanently the designation of the evil Spiritual Hosts. *Baga* (*Bagha*) was the word made use of upon the Inscriptions for the Deity, and this with no evil connotation as regards the character of the being or beings believed in—in fact, 'goodness' is fully implied in the word. It is a strange historical fact that a glorious name should have been dethroned within one vast territory alone, while it has remained undisturbed over all India, Europe, and the European West—as *Devá*, *Deus*, *Zio*, *Dia*, *Dēws*. Yet, while the name became so sadly degraded before and after Darius, in (nearly) all the territory included within his Empire and even in that bordering upon his central province, it nowhere appears for good or ill upon his Inscriptions or upon those of his line. It would be daring to risk once more the hypothesis of 'intention' in such an omission. This would be to attribute to Darius too close a mental analysis as to the subjects involved, momentous though they were. It is more likely that the omission was purely accidental. The very form of Mazda-worship which prevailed at the Persian capital was more Vedic, and, shall we say, more original—judging from this negative respect for the Vedic word—than that which was developing with such strides in the northern province, and which was destined to become universal throughout Iran. This fact obtrudes itself, but it is very difficult to explain how an otherwise universal, nay, almost a supreme expression, came to be omitted, and that for either good or evil. The word soon differentiated the two branches of the Asiatic Aryan race as a chief name for 'God.' The highest word in the oldest half-world becomes the lowest in the new. This is a plain and most convincing proof that a Mazda-worship of a *quasi*-pre-Vedic type prevailed not only in Persia proper, but everywhere in Central Asia, at a very early period before any *other* form of worship now known there had appeared, and indeed before future *Rishis* ever invaded the southern peninsula.*

(*f*) *Dualism*.—Close upon this follows the still more vital question as to how far Darius, with his teachers, accepted *dualism*. That this relatively profound doctrine was brought into greater prominence through the animosities of that conflict which induced Zarathushtra, or his predecessors, to turn one of the very names for 'god' into their name for 'demon' seems probable. The fury of the reform movement must at times have become acute; and this all the more decided Zarathushtra to pronounce the one formula of all time for such a doctrine.† He saw, as most people—if dimly—

* As the Avesta has it, a *Moghuṭbish*, 'Magian-hater'; the *o* in *Moghu* taking the place of *a* in *Magha*. This is simply due to epenthesis, anticipating the final *u*, whereby *a + u = o*; while the final *u* in place of *a* is a mere shifting of the suffix. A great many roots exhibit a similar variety of forms. Some might dispute the validity of this comparison with the Gāthic *Maga*. but they will not question that with Av. *Moghu*.

* Attention should be called to the expression recorded of Cyrus in 2 Ch 36^{23}, as in Ezr 1^{2}, where he is cited as speaking of the Almighty as 'the God of heaven.' Was not this *Devá*, 'Heaven-god,' pure and simple? The expression seems undoubtedly exilic.

† See *Yasna* XXX.

saw and see, that the two forces in the Universe tending towards good and evil were the more distinctly severed, since the masses whom he most accused of infamy sang aloud their hymns to *devâs* (beings called their gods). But did Darius share this view?

All the elements of antagonism are more in evidence upon the Inscriptions than in most Iranian writings. Everywhere there is denunciation side by side with adoration (see above); and the question whether Darius had actually accepted the clearly defined formulas of Zarathushtra and his predecessors or not is hardly to be considered of secondary importance. It is simply a question—though a somewhat fine one—of fact. One able writer* speaks broadly and familiarly even of the excessive 'dualism' of the NT with its Satanic and demoniac manifestations, though a definite theoretical dualism is alone in question wherever the discussion reaches to ultimate, or rather primordial, origins. Whether, viewed in this light, some of the Jews of the OT were not actually dualists is also a serious question, which demands a word of attention here in view of the close connexion between it and the case of Darius.

A comparison between Jahweh Elohīm and the gods of the nations is often instituted in the OT, and this involves the *recognition of the existence* of those supposed supernatural beings. It remains for us simply to ask whether the Jews—leaders or laymen—ever really believed that the Supreme *Jahweh* was the responsible creator of those diabolical personal accretions or not. Can we suppose for a moment that they held to such a view, or even believed that these fell creatures unfolded themselves, through a degeneration, under the eye and hand of an Almighty Providence. It is quite clear that they never thought of such a problem; but if they held these evil beings to be of separate origin, this involves at once a theoretical dualism. They may not have held distinctly to the doctrine that there were Two First Spirits, but some of them must have come pretty near it. So also must the religious section of the countrymen of Darius, the priests of Old Persia proper; but where is the trace of a *definitely co-ordinated statement* of it in the Inscriptions?

(*g*) *Eschatology.*—Where, amid all their contents and allusions, is there a trace of any theological eschatology in the Inscriptions? The Avesta is one mass of eschatology, but we are startlingly reminded of pre-exilic Israel when we find upon the Inscriptions rewards held out *for this life only.* Where, as has so often been asked, is the doctrine of immortality to be found in the OT prior to the Exile, although the Avesta and post-exilic Pharisaism are quite full of it? Where is it in the Behistūn Inscriptions? Where is the Avestan and the exilic final judgment in our own pre-exilic theology? The latter conception is equally absent from these Persian panels, which, we should say, were the very place for it. Where is the Heaven of the Avesta, with its golden thrones, upon which sit Justice, Love, and Order, as archangels?† The notion of future reward in Heaven is as foreign to the Behistūn Inscriptions as it is to Moses. And where is there a trace of a *millennium*?

(*h*) *Soteriology.*—We should naturally expect also to find in the Inscriptions some allusion to a coming Restorer, like the one expected in the Avesta and in exilic Israel, all the more so because the texts in question breathe hope as they denounce offences—both on an almost unprecedented scale; but there is no trace of such a concept there any more than there is in the pre-exilic books of the OT. The composer's mind seems wholly possessed with the conviction that a supreme, all-powerful, and good God was watching over every circumstance within His immense dominions. Darius seems to have risen each day with the burden of a new civil war within some twenty-three nationalities, each with its kinglet. His faith, at times somewhat like a fixed idea, at times perhaps affected, convinced him that God's activity extended to a minute administration of compensatory justice, which was, however, to have its effect *now*, and *now only*, in this present life. Perhaps he felt that only a supernatural power could have made his past position possible for so long a time. He prays to Auramazda in terms largely stereotyped by his successors, although in the most striking of these prayers recorded he is not so closely imitated (see the passage cited below). But, fervent as are the prayers of Darius, and signal as is his testimony to the unity of God, and His creative energy and providential omnipotence, the eschatology of the Inscriptions is a blank. The writer seems to have been so full of God—or so engrossed with business—that he could not think of anything further that was supernatural. We may compare the OT book of Ecclesiastes, which urges in touching terms the 'remembrance of the Creator' (12^1, if the passage belong to the original and the tr. be correct), but cares little for objective futurity. Koheleth is not disturbed by the failure of retributive justice in this world; he sees little difference between the treatment of the evil and the good; yet he has no dream of a future judgment, or even of any life at all beyond the grave. The same appears to be the case with Darius. What is true of Behistūn holds also for Persepolis, Naksh-i-Rustam, and the other Inscriptions; for, as was said above, the expressions later become stereotyped. Hence they, too, must have had predecessors of a fixed type, all of which goes to prove that Darius was not the spokesman of an innovating creed. Though he was the first prominent prophet of his theology, that theology was thoroughly Old Persian and *sui generis.* It was in the *North* that detailed eschatology flourished. There it was a concentration of the original elements of the primeval doctrine, and was destined, as said above, to spread over all Iran; whereas in Persia proper (the present *Fārsistān*), which was more specifically Darius's home, the primeval lore of Veda and Avesta had, if anything, rather stagnated. Such are our conclusions from the obvious facts. The Behistūn columns are almost *the* document of the Divine unity, creative energy, and providential omnipotence, as they are also the exemplar of intense spiritual fervour, in view of these doctrines; but they are absolutely silent about the other life, whereas, at the very moment when they were being composed, the Avesta and some of the exilic and post-exilic books of the OT contained the standard records of those doctrines of futurity—a sort of *Christianity before Christ.**

As a valuable specimen of the intense religious fervour of the chief composer of the Inscriptions, we may cite a few lines from the sister inscription of Naksh-i-Rustam at the tomb of Darius, near Persepolis: 'A great God is Auramazda, who made this earth and yon heaven,† who made man and amenity (civilization) for men, who made Darius king—the one king of many, the one commander of many.‡ I am Darius, the great king, the King of Kings,§ the king of the lands of all tribes, the king of

* Erik Stave, *Über den Einfluss des Parsismus*, Haarlem, 1898.
† Cf. the twelve thrones of Mt 19^{28} ‖ Lk 22^{30} (cf. Rev 20^4).

* Common to the Avesta and post-exilic Pharisaism are, in addition to the three doctrines specified above, the doctrines of immortality, resurrection, final personal judgment, millennium, Heaven and Hell, while the Avesta has the prior claim to be termed the document of these views, owing to their long native growth in Iran, centuries before they became the elements of post-exilic Pharisaism.

† This expression occurs about a dozen times within the short Inscriptions; 'yon Heaven' is also very Avestan in its ring.

‡ His authority was effective.

§ Notice that this expression was Aryan, for Darius must have

this great earth for afar,* the son of Vishtāspa, the Achæmenid, a Persian, son of a Persian, an Aryan of Aryan race. Through the grace of Auramazda these are the lands which I captured beyond Persia. . . . I conquered them—beyond Persia. I brought them under my authority. They brought me tribute.† What I said to them that they did.† The law which was promulgated by me, which was mine, was maintained.† [Here follows a list of the provinces or sub-kingdoms]. . . . (Thus) saith Darius, As Auramazda saw this earth . . . in war . . . (?) he delivered it over to me :‡ he made me (its) king : I am king. Through the gracious will of Auramazda have I settled this earth through my throne § [or 'through my government,' or 'under my throne'; others render 'in place,' 'to rights': but see the same word 'throne' just under]. What I said, that was fulfilled as was my wish.† If thou thus thinkest "How manifold are the lands which Darius the King governed," then look upon this sculpture which bears my throne, that thou mayest know. Then it will be known to thee that the lance of the Persian hero has reached afar ; then wilt thou know that the Persian hero has fought battles far from Persia. (Thus) saith Darius, the king, What I have done, I have done all through the gracious will of Auramazda. Auramazda gave me aid ‖ till I had completed this work. May Auramazda protect me, and my clan, and this province against . . . hosts (?). For this I pray ¶ Auramazda—this may Auramazda afford me. O man, may what is the command of Auramazda be to thee acceptable, let that not be obsolete (or repulsive) to thee. Leave not the right way.** Sin not.' ††

(*i*) *Darius as a restorer of temples.*—As bearing upon 2 Ch 36[23] and Ezr 1[2ff.] and the marvellous assertions of Is 44 f., we have the valuable statement that Darius restored the *āyadana*, 'places of sacrifice'; so the Susian and Babylonian translations render the word. An activity in the construction, or re-construction, of temples in general is also perhaps later shown in regard to the *apadāna* in the inscription of Artaxerxes Mnemon found at Susa upon one of the ruined columns of an ancient hall. He seems to have re(?)-placed the images of the Daric-Avestan Anāhita and Mithra in the *apadāna*, which, if not actually and exclusively a temple, was obviously an edifice fitted for the reception of figures of those two most prominent Avestan sub-deities. If, then, Darius at once restored the places of worship [note that the *āyadana*, at least, were not necessarily actually 'temples'],‡‡ this recalls the restoration of the gods of Sumer and Akkad to their own homes by Cyrus immediately after his first conquest of Babylon, and shows all the more clearly the general policy of the Achæmenians as regards such acts of courtesy towards the religious feelings of their newly conquered subjects. This makes the decree of Cyrus for the restoration of the Jewish temple all the more credible.

7. Political and military history.—As to the importance of Daric Behistūn, with its companions and successors, for military and political history, little needs to be added here. As is known, Iranian history without the Achæmenian Inscriptions was for a long period a blank, and until they were deciphered by our own eminent Rawlinson, these now leading sources were ridiculously misunderstood and curiously misleading.* We are now assured of those vast political and military movements which took place in Central Asia, upon which the history of the Asiatic, and, indeed, of the whole world, so largely depended. But to us chief among them are those events under whose influence Israel became Persian for two centuries or more, and which determined what we must regard —even if we view them from an anti-Christian standpoint—as stupendous religious circumstances, which, however trivial they may have seemed to the Persian Government, and however relatively insignificant they may really have been in comparison with the other great facts which were then transpiring in province after province of the Achæmenian Empire, must yet force themselves upon us as crucial for all time. Had not Zion become Persian, she would have remained Babylonian, and might never have 'reared her head'; and the dawn of that day might have been hindered when Jesus, the Christ, was to preach within the porches of her temple, and expiate on Calvary the sins of both Jews and Gentiles.

8. The Parthian Inscription at the foot of Behistūn.—This bas-relief contains two distinct compositions. In one of them were sculptured colossal bearded figures, from 8 to 9 ft. in height. Only three of these, however, are still approximately complete. This relatively valuable relief has unfortunately suffered from the vanity and folly of a 'Persian overlord,' one Shaikh 'Alī Khān Zanganah, who, about a hundred years ago, had a large panel cut in the middle of the monument, in the hope of immortalizing (in Arabic) the memory of his own beneficence in building a caravanserai at Bīsitūn and supporting it from the tribute of two villages. This vandalizing abomination extends to 12 ft. in width, and rises to the top of the panel. In the other part of the composition, the figures are in lower relief and on a smaller scale ; and, though they are much mutilated, it is possible to make out some details. In the centre is a horseman, and above his head is a winged figure about to crown him with a wreath. He is unhorsing a second horseman. From the mutilated inscription† we learn that the victorious cavalier represents the Parthian king Gotarzes (A.D. 46–50) overcoming his opponent Meherdates, who was also a Parthian. Behind Gotarzes are the remains of another figure with lance in rest.

9. The extensive hewn panel-surface.—Near the middle of the base of the rock and almost opposite the village, a huge bare space attracts the eye. It measures nearly five hundred feet in breadth and over a hundred feet in height.‡ The tool-marks of the stone-cutters are in curved lines, and above the cutting the natural rock in some places projects several feet. In front of it is a terrace or platform, made of earth and rocks heaped up and extending forward for a distance of nearly 300 feet. At the end of this appear the remains of a massive wall. Some writers hold this space to have been prepared for the reception of

adopted it from remotely distant predecessors. A similar form seems to have been adopted in the Scriptures, where, however, it is seldom applied to a human monarch. Its original use in Iran doubtless preceded its occurrence in Ezk 26[7].

* This expression 'for afar' seems thrown in to modify his 'universal' statement. Notice that the terms were doubtless inherited from his ancestors, as was the original of the Scriptural terms cited at the end of 2 Ch. and at the beginning of Ezra as originating from Cyrus : 'All the kingdoms of the earth hath the Lord, the God of heaven (Deva ?), delivered over unto me.'

† Notice these emphatic assertions as regards the colossal successes ; they are by no means wasted words.

‡ He checked all interior conflicts, and established approximately complete 'guarantees of peace' between some twenty-three otherwise conflicting nationalities. See the note above on p. 451[b], referring to the passage from 2 Chronicles and from Ezra.

§ This is the present writer's suggestion ; see the word *gāthum* just below.

‖ This expression, with the most incisive evidence of *some kind* of personal faith in God, recurs about thirty times within the inscriptions, showing perhaps the highest intensity of such a fervour ever recorded, in view of the necessarily limited extent of the inscription when regarded as mere literature. It indicates a fervour surpassed only, if at all, by what we read in the Psalms.

¶ Note his actual prayer in the first person singular present.

** Note the absolute necessity of recognizing this exhortation in the moral sense ; and cf. the Gāthic passages where the same expression is used ('the straight paths in which Ahura lives . . . in the paths of the Good Mind [the good man] . . ., the straight paths of welfare . . .,' etc. [*Yasna* 33, 5 ; 34, 12 ; 53, 2]).

†† *Naksh-i-Rustam*, 1–22, 31–60.

‡‡ Recall Herodotus' remark (i. 131) that the 'Persians have no temples.'

* Recall among interpretations the truly quaint opinion of Ker Porter, that the nine (?) captive kings, whose names we now read so easily, were the representatives of the ten (?) lost tribes of Israel.

† For the discussion of the text, which, but for the name 'Gotarzes,' has now all but disappeared, see Justi, *ZIrP* ii. 504 f.

‡ See A. V. Williams Jackson (*Persia Past and Present*, p. 188), who says he made a special study of the rock-surface and 'paced off' its breadth.

an inscription, in spite of its enormous dimensions (so de Morgan, cited by Jackson). Others, judging from the large platform, suppose that it was meant to be the back-wall of a palace (so King and Thompson). Nothing is written upon it.

10. The site of an ancient building.—From the foot of the cliff the site of an ancient building is to be recognized, with the outlines of its walls. It is called by the natives *Gāh-i Kai Khosru*, 'the seat of Kai Khosru,' the Sasanian king (A.D. 531–578)—possibly with some reason, though there is nothing further to indicate the accuracy of such a tradition.

11. The monolith.—At a quarter of a mile from the mountain or rock, there lies a sort of huge boulder, about 20 ft. in circumference and 10 in height. It is carved on three sides with life-sized figures in low relief. The central figure is described as bearded, with moustache, and wearing a round cap, and a necklace at the throat, some rings of the necklace being still distinctly visible. It has a close-fitting, undecorated upper garment, girdled; the right hand is extended over a low column, which may be a fire-altar, and the left holds some object, possibly a cup. The legs are very thick, and apart as if in walking, while their lower parts are covered with leggings which look like 'those of a cricketer.' Jackson suggests a Magian priest. King and Thompson speak of a king; and a king might be a priest. The second figure is on the right-hand side of the boulder. It is smooth-faced—the effect suggesting the head of a woman or of a boy. There is a necklace about the throat, and a bracelet on the left arm. The third figure on the left side of the boulder is again bearded; the pose is life-like. Jackson thought the figures were Achæmenian, from the absence of flowing trousers and balloon-shaped hats; King and Thompson regard them as Sasanian, mentioning the 'streamers' on the central figure. No writing is recorded as having been discovered upon this monolith.*

LITERATURE.—For the history of the decipherment of the Persian cuneiform Inscriptions, etc., see H. Rawlinson, *JRAS* x. 3 ff.; Spiegel, *Die altpers. Keilinschriften*, Leipzig, 1881, p. 133 ff.; Fleming, *Beiträge zur Assyriologie*, vol. ii. 1894; Weissbach, in *GIrP*, vol. ii. 1896, etc. p. 64 ff.; King, *Assyrian Language*, 1901, p. 18 ff.; Booth, *Decipherment of the Trilingual Cuneiform Inscriptions*, 1902, p. 149 ff.; Williams Jackson, *Persia Past and Present*, 1906; Mills, *Zarathushtra, Philo, the Achæmenids, and Israel*, 1906, vol. ii. *passim*; Sayce, *The Archæology of Cuneiform Inscriptions*, 1907. BEHMEN.—See BOEHME.

BEING.—The term 'Being' indicates the subject-matter of Metaphysics in general, although it is usually discussed under the particular head of Ontology. As a problem, Being is discussed with the aim of discovering a criterion of reality which shall interpret the phenomena of nature and consciousness, whose objective and subjective data respectively are elaborated in the forms of Cosmology and Psychology.

1. History of the term.—The terminology of the fundamental metaphysical principle shows how Western thought is indebted to the Greeks and the Germans; from the one we receive the expression ὄν, from the other the term *Ding*. With the early Greek philosophers are found κόσμος (Parmenides, 92; Heraclitus, 20) and φύσις (Parm. 133; Herac. 2). Parmenides, who usually speaks of Being as ἔστιν εἶναι, also uses the more suggestive term ἐόν (59, 91); and, according to some authorities, Melissus uses περὶ ὄντος as the title to his work (Erdmann, *Hist. Philos.* § 38. 1). Plato selects οὐσία to indicate the subject of Being, and looks upon this as ἰδέα (*Rep.* vii. 533–534); at the same time, when he speaks of the reality of the Idea, he indicates it by ὄντως (*ib.* ix. 585). Aristotle popularizes οὐσία by placing it first among the categories (*Met.* vi. 1), and reduces Eleatic Being to τὸ ὄν. The weight of Greek philosophy was turned in favour of οὐσία as a concept, and of ὄν as a term.

From Latin writers come the terms *essentia* and *substantia*. Seneca uses *substantia* in *Ep.* 113. 4, but seems more inclined towards *essentia* (*Ep.* 58). Quintilian uses *substantia* (viii. 3. 33). Mediæval writers vacillate between these classic terms, but theological motives incline them to *essentia* as a more appropriate characterization of the Divine Being. Among these Augustine was the earliest and most influential, and it is significant that, as a Christian, he unites the idea of God with the antique οὐσία and *essentia*. 'Essentiam dico, quæ οὐσία Græce dicitur, quam usitatius substantiam vocamus' (*de Trin.* v. 9). When Anselm seeks the most general predicate of things, he follows Augustinian terminology and thus prefers *essentia* to *substantia* (Erdmann, § 156. 3). Aquinas employs both *essentia* and *substantia*. In the strife between Nominalist and Realist, there comes about a change in terminology when *realia* is put as the predicate of *universalia*. The defender of the orthodox, or Realistic, view was called a *realis* (Erdmann, § 158). Abelard introduces *realiter* into the discussion of the problem (Eucken, *Gesch. d. philos. Terminol.* p. 65), while, at a later period, Duns Scotus adds *realitas* (*ib.* p. 68). English thought, as in Locke, was inclined to adopt 'substance' and 'essence' as expressions of Being, while the Germans use the Greek ὄν and the Latin *res*. Meister Eckhart uses *Dink* (*Meister Eckhart u. s. Jünger*, ed. Jostes, pp. 66, 89, 90, etc.), as also *Ding* (*ib.* pp. 1, 80, etc.). Eckhart further employs *würklich* (*ib.* p. 86, etc.). Clauberg the Cartesian originated 'ontosophy' (*Metaphysica de ente quæ rectius Ontosophia*, 1660). Kant's preference for *Ding* is well known; Herbart uses *real*.

2. History of the subject.—The 7th cent. B.C. marks the beginning of ontological study. In China, Lao-tse, the founder of Taoism, advanced a metaphysical conception of Being under the head of *Tao*, or 'Nature.' Lao-tse gives the *Tao* a purely negative significance, and from it follows a nihilistic morality of 'doing nothing.' Like the emptiness of a clay vessel, the hollow of an axle, the open space of a door, the *Tao* consists of nothing (*Tao Teh King*, i. 11); yet from it were all things produced (*ib.* ii. 42). Among the ancient Hindus, the development of the philosophic Veda resulted in a more intellectualistic conception of Being. The Upaniṣads advance the idea of world-unity, and in their spiritual monism identify Nature with the Ego. As the juices of plants unite in honey, as rivers mingle in the sea, as salt pervades the ocean, so one element is found in all things. Thus teaches the Veda, whose philosophic formula is found in the following expression: 'That which is that subtle essence—in it all that exists has its self. It is the true. It is the self, and thou art it—*tat tvam asi*' (*Chhāndogya Upan.* vi. 8 ff.). This lofty conception of Being was unknown to the Greeks, for it did not receive recognition in Europe until 1801–1802, when Anquetil du Perron translated the Upaniṣads, whence it was taken up by Schopenhauer in 1819 and related to German philosophy.

Among the Greeks, the preparation for a genuine conception of Being was made by the primitive Ionian philosophers, or physicists, who sought to explain Nature in terms of such physical phenomena as water, air, ether. In a more worthy fashion,

* For other descriptions of this monolith see Oskar Mann, *Globus*, vol. lxxxiii. No. 21, June 1903, p. 328; Williams Jackson *Persia Past and Present*, New York, 1906, p. 210 ff.

Parmenides develops a static monism which is directed against the ideas of both not-Being and Becoming; at the same time, it is sufficiently intellectualistic to identify Thought and Thing. In this spirit, he declares that Thinking and Being are the same—*τὸ γὰρ αὐτὸ νοεῖν ἐστίν τε καὶ εἶναι* (40). It is Being that is truly existent and not not-Being—*ἔστι γὰρ εἶναι, μηδὲν δ' οὐκ εἶναι* (43–44). This rather pointless utterance seems to indicate that, while Being exists as something permanent in thought, not-Being is an appearance which exists only in perception—*δόξα*. In opposition to this static view, Heraclitus urges that Becoming is the highest principle, and points out that, since all things change—*πάντα ῥεῖ*—there is no principle of permanence to be found (see 90–91). Plato's speculative philosophy tends to reconcile the opposed views of Parmenides, who taught him to seek the unchanging as the real, and Heraclitus, from whom he learned that substance could not be found in ever-changing phenomena. Plato's own conception of Being reposes in his theory of Ideas, which latter represent realities in the midst of changing phenomena. The Idea, or Concept, not only includes various things under it, but exercises a certain ontological function among them, giving them of its own reality. On the practical side, the Idea is the perfect type, of which the individual thing is an inferior imitation. This plastic conception of Ideas leads Plato to ascribe objective reality to them. The ground of this profound view seems to be found in the principle of permanence. The Idea possesses Being because it is permanent, while the individual thing is unreal because it constantly changes. In the myth of the *Phædrus* (247), the Idea is looked upon as the 'colourless, formless, and intangible essence,' which becomes visible to the mind as the latter rises to the celestial regions. In the *Parmenides* dialogue, the unity and permanence of the objective Idea are pointed out. In contrast to Plato, Aristotle emphasizes the *dynamic* phase of reality, and develops a view which, with appropriate intellectualistic qualifications, is energistic. In the Aristotelian metaphysics, the principle of Form takes the place of the Platonic Idea. This Form is contrasted with Matter, and both are regarded as causes, in addition to which are two others—Efficient and Final. These four principles constitute the foundation of Aristotle's notion of Being (*Met.* i. 3). Aristotle thus inclines towards a causal conception of Being, where Plato had introduced a substantial one. In general, the results of Greek philosophy were idealistic and static; they inculcated a spirit which was plastic and formal.

While Christianity, which had its root in practical Semitic traditions, had no systematic philosophy to offer, it furnished subsequent speculation with ideas of the soul, the world-whole, and God. At the same time, there resulted a new metaphysics which was marked by the methods of *inwardness* and *transcendentalism*. With Plotinus, the classic conception of Reality was superseded by 'that nature which is beyond Being' (*Enneads*, xiv.). And that which is *ultra esse* is also *ultra percipi*, so that it is known only by means of ecstatic contemplation. Augustine is less mystical in his deduction of *sensus interior*, for it is in a more psychological manner that he seeks to prove the existence of the self. His method, which a thousand years later was made famous by Descartes, is the sceptical one, in accordance with which the *dubito* implies a *cogito* (*Beata Vita*, § 7; *Solil.* ii. § 1; *de Trin.* x. § 14). According to the same method, the Being of God is deduced (*Confess.* x. 40). In Scholastic philosophy, the doctrine of Being connects itself with the idea of God and the nature of the Catholic Church. Anselm, following Augustine, endeavours to deduce the Being of God from the idea which we have of Him: for the Being of God which is both *in intellectu et in re* is more perfect as an idea than that which is *in intellectu solo* (*Proslog.* ii.). There is a second way in which the idealism of Plato was united in Scholastic fashion with the Christian religion; that is, in the opposition between Nominalism and Realism, which led to the conflicting metaphysical mottoes 'universalia sunt nomina,' 'universalia sunt realia.' The resulting conception of Being was something more than the plastic one of Plato; it was both internal and universal. For modern thinking, the way was still further prepared by the conflict over the supremacy of intellect (Thomas Aquinas) and will (Duns Scotus). Intellectualistic Thomism re-appeared in Cudworth's *Intellectual System* and Clarke's *Demonstration of the Being and Attributes of God*. The voluntarism of Scotus ('Quaestiones in secundum librum sententiarum,' Distinc. xlii. [Op. xiii. p. 443]) was unconsciously imitated by Kant and Schopenhauer, and by them related to the modern psychology of the will.

Modernism (which is not quite independent of a mediævalism which, in the instance of Cassiodorus, used the term *modernus* in the 6th cent.) witnessed a continuation of Christian views of Being in Descartes's scepticism. Like Augustine, Descartes connects *cogito* with *dubito*, and to the *cogito* adds *ergo sum*. Doubting is thinking, and thinking is existing. In this fashion, the Cartesian '*Cogito, ergo sum*' (*Medit.* ii.) evinces the *inness* of the Christian conception of Being, while his Anselmic ontology rehabilitates the ideal of *transcendence*. Descartes, whose psychology lacks sufficient content, states the modern problem of Being, and prepares the way for Spinoza, whose mediæval forerunner was Averroës. Spinoza revises Descartes's view of mind and matter by regarding them, not as *res cogitans* and *res extensa*, but as the attributes—*cogitatio* and *extensio*—of the one substance. The result of his teaching is a rationalistic monism which identifies Being with Nature, and sets up a parallelism between mind and body. Leibniz, who makes possible the transition to Kant, takes a pluralistic view of Being, and regards the world as made up of an indefinite number of monads, which still admit of unity in the world-whole, since they, being reflexions of the same world, represent reality in different grades of perception (*Monadology*, § 14) and participate in the one world-plan by means of 'pre-established harmony' (*New System*, 1695).

From dogmatism, Kant led modern metaphysics into criticism. Not only does he oppose his modern forerunners, but he defies the whole Indo-Germanic tendency which in Vedānta, Platonism, and Spinozism had united Being with Thinking. In a certain sense, it was a sort of Semitism which led Kant to affirm the supremacy of practical reason, and to put ethics in the place of logic. Kant creates a dualism between Reason and Reality, between Thinking and Being, and thus declares that we cannot know things-in-themselves. First in order, in the *Critique of Pure Reason*, which leads to this conception, is the idealization of Time and Space ('Trans. Æsthetic'), both of which Kant regards, not as objective things, but as purely subjective and yet permanent forms of sense. Kant's motive for making Space and Time intuitive does not appear in the 'Æsthetic,' but is confessed later on in the discussion of the 'Antinomies of Cosmology.' Here, in commenting upon the inevitable contradictions of reason, in connexion with which one may with equal cogency argue for the finitude or the infinitude of the world in time and space, Kant points out that these forms of sense are purely subjective, so that our attempt

to find the beginning of the world in time and its limits in space is a regressus of representations, but not ontological progress (*Kritik*, pp. 505–507). Therefore, God as the creator of the world, the soul as eternal, the world as a whole—can never be known by the human mind. The categories of Quantity and Quality, Causality and Substance are deduced transcendentally from the understanding itself (*ib.* p. 77 ff.), but the application of these is determined by the conditions of a possible experience (*ib.* p. 115), and thus relates to the world of phenomena, not to that of noumena (*ib.* p. 236). Mathematics and physics are made possible by a transcendental method which forbids all metaphysical and theological reasoning. Kant's constructive theory of Being appears in the *Critique of Practical Reason* and the *Metaphysic of Morals*, where he seeks to show how God, Freedom, and Immortality, which are not premisses of the speculative understanding, are still involved as 'postulates' of practical reason.

Romantic philosophy in Germany accepted Kant's transcendental *method* of deducing knowledge from the understanding itself, but did not find it necessary to adopt the restrictive *results* of his investigation. Fichte found Being to consist in the self-positing '*Ich*, whose fate it is to oppose itself to the *nicht-Ich* for the sake of achieving moral destiny' (*Wissenschaftslehre*). Schelling's notion of Being recalls the monism of Spinoza; yet, when Schelling seeks in his *Identitätsphilosophie* to reconcile Being and Thinking as opposites, he employs an *œsthetical* method. Hegel accomplishes this same reconciliation by means of the *logical* evolution of Being, through stages of *Sein*, *Dasein*, *Fürsichsein*, which correspond to the familiar metaphysical divisions of Ontology, Cosmology, and Psychology. Realistic philosophy in Germany found expression, first of all, in Herbart, who notes Kant's distinction between phenomena and noumena, and yet believes that appearance is a sure indication of reality—*Wie viel Schein so viel Hindeutung auf Sein* (*Allgemeine Met.* § 307). With this assumption of modern Realism before him, Herbart constructs a static pluralism which seems to unite Parmenides with Leibniz; at the same time, and, after the manner of Aquinas and Descartes, he elaborates an intellectualistic view of the soul as the function of representation. Schopenhauer accepts Kant's doctrine of Time, Space, and Causality, and relates these to the 'world as idea' (*Vorstellung*). Reality is found in the will, which is the true thing-in-itself, known immediately to the mind (*Welt als Wille und Vorstellung*, § 1). To be is thus to will, and the various kinds of Being—mineral, vegetable, animal, human—are so many grades of objectification of the will-to-live (*ib.* §§ 21, 23). As another realist, Lotze heeds Kant's warning against the empty thing-in-itself and seeks Being in connexion with its qualities. The origin of Being he puts down as unknowable (*Met.* 5), and turns away from the idea of 'pure Being' as something fictitious (*ib.* §§ 8, 9). Lotze follows Herbart in making Being consist of relation, and formulates the expression, 'A thing is the realized individual law of its behaviour' (*ib.* § 36).

3. The philosophy of Being.—The history thus presents some general principles, and indicates certain points by way of thought and terminology which speculation may fitly use. In contrast with the ancient setting of the problem, which consisted in a conflict between Being and not-Being, modern metaphysics involves the more decisive antithesis between the real and the phenomenal, between thing and appearance. The modern conception is further enriched by a psychological content which enables the thinker to re-cast formal distinctions concerning Being in general upon the basis of consciousness.

From the standpoint of methodology, two considerations seem to guide all metaphysical speculations: on the one side, thought is based upon the principle of *Substance*, on the other it is swayed by that of *Causality*. Behind this distinction between the substantial and the causal categories lies the difference between the laws of the mind—*principium identitatis, principium rationis sufficientis*. The Principle of Identity, which asserts that everything is what it is, persuades speculation to premise an immutable Being which ever maintains its identity in the midst of change. In another way, the Principle of Sufficient Reason, which affirms that everything that happens has a cause, makes possible a second method of speculation which is as anxious to account for *change* as the first one was to elucidate Being. As a result, philosophy has witnessed the development of a *static* conception of Being, which, with Parmenides, Plato, and Spinoza, has exalted Substance to the highest station. Parallel to this, a *dynamic* conception of the problem led to a more active formulation of the world-course, and, with Heraclitus, Aristotle, and Leibniz, it tended to raise Causality to a similar eminence. In keeping with this broad and far-reaching distinction, modern philosophy has re-cast this difference between the substantial and the causal so that it assumes the contrast of *intellect* and *will*. The static Principle of Identity led metaphysics to postulate a Substance as the true expression of Being, and it was urged accordingly that a thing cannot *possess* qualities unless it exist as something superior to them; while the dynamic principle felt itself confronted by a series of changes for which a Sufficient Cause must be furnished. Substantial *intellectualism*, as defended by Aquinas, Descartes, Herbart, and Lotze, sought to show how a thing must exist before it can act; while, in opposition to this dogmatic view, the causal *voluntarism* of Scotus, Kant, Schopenhauer, and Wundt found the Being of things to consist in the active principle which ruled their several states of change. Where the substantial view prevailed, it was 'No causality without substance'; the causalist retorted, '*Keine Substantialität ohne Causalität*' (Wundt, *Syst. d. Philos.* p. 312). Of these two schools, the static, substantial, intellectual one is the more orthodox; the dynamic, causal, voluntaristic one is more advanced and critical. The perpetual conflict between the two may be seen in Aristotle's criticism of Plato; Scotus's opposition to Aquinas; and Kant's critique of Leibniz's dogmatism. On the purely formal side only two views of Being would thus seem possible.

On behalf of the *substantial view*, it is pointed out that Being has a certain affinity for Substance, and is equally inclined towards the idea of permanence. For this reason the advocate of the substantial view has not found it necessary to defend a notion which consisted in the mere assertion of what seemed obvious. If anything *is*, it must be substantial, and that which is in a state of constant change cannot be real. The inherent weakness of this view of Being became manifest when the metaphysics of substantialism endeavoured to relate the world of concepts to the world of percepts. Plato's all-sufficient idealism is at variance with the notion of creation developed in the *Timæus*. Mediævalism, with its idea of Being as *essentia*, could hardly advance beyond a negative view of reality. Spinoza regards Substance as self-conceived and self-dependent, but cannot justify the attributes which, with the modifications, represent the actual world of minds and

bodies. Kant, who saw the emptiness of the thing as Substance, placed reality beyond the realm of knowledge. The substantial view has the weakness that its 'Being' never reveals its own properties, and is incapable of explaining the existence of things in human experience. On the psychological side, the substantial view looks upon the mind as something intellectual. Since the path to the mind was originally through *cogito*, as with Augustine and Descartes, it was to be expected that the soul should be looked upon as something intellectual—*res cogitans*. Moreover, consciousness seems ever to have a cognitive form, while mentality itself seems hardly separable from thought. With regard to the conscious content, the richness and manifoldness of the cognitive process seem calculated to express the range of mentality, while there appears to be no recess of the mind which is not accessible to self-conscious thinking. This Cartesian confidence has led philosophy to believe that every act of mind is an operation of thought. Where, as a second process, feeling enters in, its determining feature, as Herbart pointed out, is something which by way of arrest happens to the idea; so that feeling is a consciousness, or a cognition, of our mental state. In the same way, volition is explained away as a *cogitatio volitionis* (Descartes), while the whole mind is surveyed in the light of the supremacy or sufficiency of the intellect.

The *causal view* of Being is critical where the substantial one is constructive and dogmatic. Accordingly, it is claimed that the mere existence of Being explains nothing, inasmuch as it does not account for action which takes place in the world. Where the Law of Identity seems to satisfy the mind that a thing is what it is, as 'Gold is gold,' the Law of Sufficient Reason must further enter in to show how a thing relates to its own qualities, as gold and its colour, its fusibility, its solubility, its value, etc. Hence, in Logic, it is said, 'Gold is yellow in the light, fusible in the fire, soluble in *aqua regia*, valuable in the market,' etc. The Principle of Causality is as efficient in relating a thing to its qualities as the notion of Substance is in adjusting it to itself, and metaphysics since Kant has tried to find not so much the thing-in-itself as the thing in its qualities. Iron does not exist apart from hardness, ductility, and other metallic properties; colour is nothing in independence of qualities, from red to violet; mind does not exist except as thinking, feeling, willing. That which unites these several states in so many distinct groups is the Thing, and in the inviolable connexion among metallic, chromatic, and conscious states is found the Being of metal, of colour, of mind. The causal view of Being relates a thing immanently to its qualities and not transcendentally to its self, and thus it is in a position to explain the manifest fact of change which to substantialism is a paradox. Since Being does not consist in one substance which can never abandon its ontological place, but is the causal principle which relates the various states of Being to one another, it is conceivable that, within the circle of its own qualities, a thing may change from one state to another, just as colour may be red or blue, consciousness may be thought or volition, man may be child or adult. In this spirit Lotze, who departs from the substantial view without accepting the causal one, declares that it is the Thing that changes, not its qualities (*Met.* §§ 21, 24). The causal view, which pays attention to a thing's qualities and its changing states, hopes to find the real as the result of causality.

On the psychological side, the causal view of Being is furthered by voluntarism. This school involves a larger view of mind than that of self-conscious thought, just as it extends its borders beyond the human to the animal mind. The origin of mind seems more intelligible when interpreted voluntaristically, for life begins in action rather than in thought (cf. Paulsen, *Introd. to Philos.* bk. i. ch. i.) Further, the goal of life appears to be set by practical interests rather than by speculative ideals, and life is realized in action rather than in thought. Like Fichte, Faust describes the root of life in the will, and begins his translation of St. John by saying, '*Im Anfang war die That.*' In addition to these popular considerations, voluntarism is entitled to some ontological respect when it is observed how simple and self-evident volition really is. Schopenhauer, who has advanced this view most vigorously, affirmed, 'The will is groundless' (*Welt als Wille und Vorstellung*, § 20), for which reason he reduced all reality to it. In this way, the simplicity of the will seems to satisfy the philosophical demand for unity as the essence of reality and mentality. On the psychological side, Höffding has declared, 'As Eros was made one of the oldest and at the same time one of the youngest of the gods (as also the child of poverty and wealth), so the will may, according to the point of view, be represented as the most primitive or as the most complex and derivative of mental products' (*Psych.* ch. vii. § 1). Such considerations seem to indicate that the will, while not so characteristic as cognition, is possessed of as much ontological significance. The substantial view is a survival of an antiquity which reposed in the ideas of the plastic and intellectual; causal voluntarism is the typical modern view of those who are Kantians rather than Platonists. The causal view has the advantage of explaining the world of phenomena as seen in modern science, just as it is in harmony with the modern life-ideal of energism.

A more restricted view of Being is discussed in connexion with *monism* and *dualism* (*qq.v.*). These theories are one remove from the central problem of the real, for they concern themselves with the idea of Being in its forms of the mental and material; nevertheless, modern philosophy has laid upon them a certain amount of metaphysical responsibility. In the larger sense, classic speculation was monistic, while Christianity, with its distinction between the natural and the spiritual, emphasized dualism. But in connexion with philosophy, the issue was not raised until the dawn of modernism, when Descartes separated *mens* from *corpus*, and distinguished *res cogitans* from *res extensa*. At a later date, Wolff distinguished 'monist' from 'dualist,' although at an earlier period Thomas Hyde had employed 'dualism' to describe the religion of Zoroaster. These two theories do not attempt to solve the problem of Being, but confine their attention to the relation existing between its two phases, mind and matter. Of the two, dualism has the advantage on the side of *statement*, when it declares that we are confronted by a twofold series of things, between which there is a causal connexion. But, from the standpoint of *solution*, monism seems to be in the ascendancy, inasmuch as it is better calculated to avoid certain metaphysical pitfalls. The devices of dualism appear at once when Descartes, unable to justify the causal connexion between mind and matter, attributes the interaction to the intervention of the Deity. This precipitated Occasionalism, which looked upon the *motive* which arouses bodily motion, as well as on the *stimulus* which produces sensation, as occasional, but not efficient, causes of the interaction. Man is innocent of it, as we know from the lack of causal consciousness, argues

Geulincx; for, just as Descartes had evinced Being by his *Cogito, ergo sum*, so the want of causal efficiency appears in a *Nescio, ergo non facio* (K. Fischer, *Descartes and his School*, tr. Gordy, p. 532 note). Malebranche accounted for the connexion between stimulus and sensation by declaring, 'Nous voyons toutes choses en Dieu' (*Recherches de la vérité*, p. 378). Leibniz sought to explain apparent interaction by means of a pre-established harmony, in accordance with which the phases of mind and body corresponded, like the dials of two mutually adjusted, but disconnected, clocks (*New System*, 1695)—an analogy which Geulincx before him had employed (*Ethica*, p. 124 note). That which stands in the way of dualistic interaction between the mental and corporeal phases of Being is, first, *causality* which, as a category, seems to be limited to the physical world. At the same time, the scepticism of Hume, the criticism of Kant, and the realism of Lotze tend to make all interaction between things impossible, just as they leave the way open to a view of *causa immanens*, as a result of which all things, material and mental alike, interact by virtue of their participation in the one real Being who is the World-Ground. A second difficulty appears in the form of the *conservation of energy* which, as a physical theory, can suffer no addition to or subtraction from the given amount of energy in nature. Certain curious devices to surmount this difficulty are summed up by Naville (*La Liberté et le déterminisme*, 1890).

Monism, which advances a theory of psycho-physical parallelism between the mental and material phases of Being, tends to do away with the sharp difference between mind and body. Spinoza, who founded monism, makes interaction unnecessary by assuming, 'ordo et connexio rerum idem est atque ordo et connexio idearum' (*Ethica*, lib. ii. prop. vii.). The whole problem, which lapsed for a century between Leibniz and the new psychology, is taken up in a Spinozistic fashion by Höffding, who declares that 'both the parallelism and the proportionality between the activity of consciousness and cerebral activity point to an identity at bottom. The difference which remains in spite of points of agreement compels us to suppose that one and the same principle has found expression in a double form' (*Psych.* ii. 8). But the monist of to-day, who hesitates to characterize this tertiary principle which embraces mind and body, lapses from the pantheism of Spinoza into an agnosticism of his own. The statement of monism is unsatisfactory in still other ways. On the *logical* side, the Law of Identity prevents our saying 'Mens est corpus,' and it is towards such an identification that the monist constantly tends. Secondly, monism is confronted by an *empirical* challenge, when it seeks to treat mind and body as though they were not dissimilar. Both monism and dualism are shortsighted in regarding mind and body as though they were parallel phases of Being which meet upon the same plane; a more satisfactory view escapes the dilemmas of the problem by relegating the body to a place lower than the ontological position of the mind, as is done by Hegel and Schopenhauer.

The result of this survey of Being as an ontological problem has been to show how a static, substantial, and monistic conception of Being was elaborated by the intellectualism of antiquity; while a dynamic, causal, and dualistic notion was the product of voluntaristic modernity. In general, it appears that Being, which does not consist of any particular thing, is best understood in connexion with the idea of *order*, which with the ancients was *κόσμος*, with moderns *natura*. *To be* thus means to have position in the one world-order, so that a thing receives reality, not by partaking of a certain imaginary world-stuff, but by participating in the world-order. A critical doctrine of Being will not find it necessary to assume a negative attitude towards phenomena which were prized by the ancients because of their æsthetic fitness, by moderns on account of their scientific significance. At the same time, it is unwise to repose all faith in noumena, as though the world were one of mere things and contained no persons. In the totality of the world of Being, phenomena, noumena, and pneumata have their place, and a theory of reality is compelled to examine the phenomena of inner as well as of outer experience. A total view of Being thus includes humanity and nature, just as it is made up of the world of persons and the world of things.

CHARLES GRAY SHAW.

BEL.—See BAAL.

BELIAL, BELIAR.—These two names, as will be shown below, are but different forms of the same word. Belial is the older; Beliar is a modification of it.

1. **Belial.** — In the AV Belial was usually rendered as a proper name, as, *e.g.*, 'daughter of Belial' (1 S 1^{16}); but RV usually translates such phrases as though Belial were an adjective. Thus 'daughter of Belial' becomes in RVm 'wicked woman.'

Belial occurs in the earliest strata of the narratives of Judges and Samuel, in writing that is coeval with the J document, if not a part of it. From this time on, the word is used in prose narratives and late poetry as a genitive descriptive of certain classes of people. Thus we find 'man (or men) of Belial' (1 S 25^{25} 30^{22}, 2 S 16^7 20^1, Pr 6^{12}); 'son (or sons) of Belial' (Dt 13^{13}, Jg 19^{22} 20^{13}, 1 S 2^{12} 10^{27} 25^{17}, 2 S 23^6, 1 K $21^{10.\ 13}$, 2 Ch 13^7); 'daughter of Belial' (1 S 1^{16}); 'person of Belial' (Pr 6^{12}); 'witness of Belial' (Pr 19^{28}); 'counsellor of Belial' (Nah 1^{11} [AV, 'a wicked counsellor']); 'thing of Belial' (Dt 15^9 [RV 'base thought'], Ps $41^{9\ (8)}$ [RV 'an evil disease'] 101^3 [RV, 'base thing']). In but two instances in the OT is it used differently: in Ps $18^{5.\ 6\ (4.\ 5)}$ (=2 S 22^5) the 'wadys of Belial' (נחלי בליעל) are made synonymous with the 'cords of death,' 'cords of Sheol,' and 'snares of death,' as though Belial, like Sheol, were a proper name for the under world. Again, in Nah 2^1 (1^{15}) Belial is used as a name for a great evil power. RV translates it here 'the wicked one.'

There are, then, three uses of the word in the OT: (1) as a genitive, designating a worthless, wicked, or disagreeable person or thing; (2) the under world; and (3) a great wicked power.* Of these uses, the first is by far the most common, there being but one example each of the second and third.

The etymology of Belial has long puzzled interpreters. It is explained in the Talmud (*Sanhedrin*, 111*b*) as from בלי (='without') and עול (='yoke')—an explanation which Rashi echoes (see Rashi on Dt 13^{14}). Cheyne (*loc. cit.*) regards it as from בלי יעלה (='one may not ascend'). He compares the Babylonian *matu la tarat*, the 'land without return,' and believes the word to designate 'the depth which lets no man return,' and so 'the watery abyss.' These two are not quite synonymous in Semitic thought. The 'land without return'

* Cheyne, *Expositor*, 1895, 435–439, held the three uses to mean: (1) 'subterranean waters'; (2) 'hopeless ruin'; and (3) 'worthless scoundrel'; but this classification does not seem so accurate.

would suit the meaning in Ps 18[5] (=2 S 22[5]) only. Garvie (Hastings' *DB*, *s.v.*) thinks בל may be for בעל, and יעל philologically changed from יער, the whole meaning 'lord of the forest'—an etymology which, so far as the present writer can see, has nothing to commend it. Hommel (*ExpT* viii. 472) regards it as a transliteration of the Babylonian Belili, with which Cheyne had previously compared it—a deity worshipped in early times who afterwards made a journey to the lower world (cf. Jastrow, *Rel. of Bab. and Ass.* pp. 417, 575, 588, 589, and 593). Baudissin (*ExpT* ix. 40 ff.) and *Oxford Heb. Lexicon* (p. 116*a*) hold to the etymology יעל, בלי = 'without worth.' יעל is a good Hebrew root used only in the Hiph. in the sense of 'avail' 'profit.' This etymology suits the great majority of OT passages. Baudissin regards the meaning 'wickedness' as late. Moore remarks ('Judges' [19[22]] in *Inter. Crit. Com.*) that the etymology is dubious.

This must be said of the comparison of Belial with Belili: Belial is clearly a designation of Sheol in Ps 18[5], while at the end of the Babylonian poem called 'Ishtar's Descent,' Belili is a sister of Tammuz, whose lover Ishtar rescued him from the under world. If Ps 18 contains an early substratum, or if we may look to poetry, even when late, to preserve archaic usage, we might regard Belial as originally a name for Sheol. Since the shades were unsubstantial beings, Belial as a qualitative genitive might easily come to signify 'worthless,' 'disagreeable,' then 'wicked.' Its application to the arch-enemy in Nahum would also be natural. Briggs ('Psalms,' in *ICC*. i. 142, 152) regards 'worthless' as the original meaning, and the application to Sheol as the derived significance. Its real origin is, however, still obscure.

2. Beliar.—Beliar is a later form of Belial, the final liquid *l* having been changed into its kindred liquid *r* in accordance with a phonetic law common to many languages. The earliest occurrence of this form of the name is in the *Sibylline Oracles*, ii. 167 and iii. 63 and 72.* In the former of these passages Beliar is the great evil power of the world, or Antichrist; in the latter, he is represented as an emissary proceeding from Rome. In the *Ascension of Isaiah*, Beliar † is mentioned in the following passages: 1[8. 9] 2[4] 3[11. 13] 4[2. 4. 16. 18] 5[1. 4. 15]. He is invariably regarded as the Antichrist, or great king of this world who has ruled it since it came into being. In this character he practically takes the place of Satan; king Manasseh is, for example, said (2[4]) to have 'turned in his heart to serve Beliar.' In the *Testament of the Twelve Patriarchs* considerable light is shed on the conceptions of Beliar then current. He is the source of impurity; he sends evil spirits against men; but he cannot overcome a chaste man (Reuben, 2, 4, and 6). His works are to God's law as darkness to light, but the Messiah will bind him (Levi, 18 and 19). He is the source of lying, but he flees from the man who avoids wrath and lies, and the Messiah will wrest from him his captives (Daniel, 5).

The conception of Beliar in this apocryphal literature is identical with that of 2 Co 6[15], where, according to the best attested reading, Paul asks: 'What concord hath Christ with Beliar?'—Beliar being evidently equivalent to Satan, or Antichrist.

The character of Beliar as Antichrist is a natural outgrowth of the personification of Belial in Nah 1[15] (2[1]).

GEORGE A. BARTON.

BELIEF.—1. Definition.—'Belief' is the mental state of assurance or conviction, the attitude of a mind towards its own experiences in which it accepts and endorses them as referring to reality, as having real significance or value. In taking over the term from popular terminology, Psychology has had to encounter the difficulties usually involved in such transference. The vagueness and consequent ambiguity of a term as popularly employed tend to cling to it when it passes into the hands of the scientist, and it is only after considerable controversy that its connotation settles down into the definite and stable form necessary for scientific purposes. This has been the case with the term 'belief.' By certain writers, *e.g.* Sir W. Hamilton, 'belief' has been employed to denote a state of mind specifically differing from that to which the name 'knowledge' is given, namely, that state in which we accept as true a proposition for which rational grounds are not forthcoming. According to Hamilton, we *believe* first principles or axioms, we *know* whatever is logically deduced from such. James Mill, on the other hand, assigns the name to every species of assurance and conviction, the assurance of what is before our eyes as of that which we only remember or expect; of what we know by direct perception, as well as of what we accept on the evidence of testimony or of reasoning. To this Bain and others have objected that, in the case of a present reality, belief has no place; it can be introduced only by a fiction or figure. The believing state relates to representative not to presentative experiences. The judgment 'I see the sun' is full fruition, the judgment 'I can see the sun by going out of doors' affords scope for belief or disbelief. All these differing views could no doubt be supported and illustrated by reference to popular usage. But, as J. S. Mill properly pointed out, the strife between philosophers 'is not likely to terminate until they perceive that the real question is, not what the distinction is, but what it shall be; what one among several differences already known and recognized the word shall be employed to denote' (*Examination of Sir William Hamilton's Philosophy*, 1872, p. 78 n.). The contribution of Brentano has assisted materially towards this desired end. By his analysis of judgment (*Urtheil*) he has been largely instrumental in giving to the concept of belief definiteness and fixity of meaning—logical connotation in short. 'Judgment,' as regarded by Brentano (*Psychologie*, p. 266 ff.), is the attitude of mind assumed towards suggested fact, either by affirmation or denial. It is to be distinguished from the mere thinking of, the simple awareness of, the suggestion; inasmuch as in the act of judgment there goes with the presented suggestion acceptance or rejection on the part of the subject. Stout calls this state 'the Yes-No consciousness,' and proposes to use the two terms 'judgment' and 'belief' as equivalent. There are methodological objections to this, but the suggestion is nevertheless significant. It is more accurate to say, as Baldwin does, that belief is the subjective side of judgment. This statement represents what may be called the prevalent view among present-day psychologists. In the act of belief, then, the individual conscious subject orientates himself towards reality in one of two ways. Either he accepts the suggestion as applying to, as qualifying, reality; or he refuses it, puts it away from him. This latter aspect of the act it is customary to call 'disbelief.' But, as is now generally recognized, disbelief is a kind of belief which, with reference to the particular suggestion, takes a negative form. It, as much as the affirmative form, entails a given attitude on the part of the subject towards the real. The opposite of belief is not disbelief but doubt.

(1) *Psychological character.*—When we directly inspect or introspect this state of consciousness, we find that it possesses a character akin to that

* The variant Belias arose from the naturalizing of the word as a Greek noun.

† The Ethiopic form, Berial, is a corruption.

of an emotional experience. There is a pleasurable sense or feeling of repose, of inward stability, such as comes from the resolution of difficulties, the demolition of obstacles, the harmonizing of conflicting elements. Bagehot has called belief the emotion of conviction. From this point of view, belief may be regarded as a primary psychical experience, a state which cannot be reduced to factors more fundamental than itself. It is contributed to and determined by various psychical factors, but in itself it is distinctive, unique, and unmistakable. It is easily distinguishable from doubt, which, in itself and apart from supporting beliefs, is a disagreeable experience, involving a sense of suspense and strain, of instability and bafflement—a state which the subject normally strives to transcend.

(2) *Belief and the feeling of reality.*—Belief ought to be, but is not always, distinguished from another modification of consciousness, namely, the feeling of reality, or 'reality feeling,' as it is termed by Baldwin, to whom the distinction is due. This is also a primitive and unanalyzable mode of conscious experience. It accompanies simple sense-presentations—a colour, a tone, a smell, etc.; these are 'just there,' coming to us with a vividness and indubitability which put all considerations of accepting or rejecting out of the question. There is no thought of competing or conflicting alternatives; each experience exists, so to speak, absolutely in its own moment and in its own right. To give this state the name of primitive credulity, as Bain does, is to identify different experiences. The 'reality feeling' state, no doubt, furnishes the stuff out of which judgments are formed, but as such it has not arrived at that stage. Judgment involves selection, the definite choice of 'this' from 'other' irrelevant or conflicting so-called facts; and belief, in this regard as the subjective side of judgment, may be called a state of resolved doubt. Now, in the 'reality feeling' state doubt cannot appear.

(3) *Belief and apprehension.*—It is worth while also to insist further on the distinction mentioned above between belief and the mere presence of an idea or complex of ideas, or, as Brentano would say, between 'judgment' and 'apprehension.' The distinction is between thinking of something and accepting that thought as applying to reality. It is possible to entertain an idea, to give it for a time mental hospitality, without coming to the point of definitely assenting to it or definitely refusing to assent to it. We may think, *e.g.*, of Macbeth or Bluebeard, without necessarily involving ourselves, at the time of thinking, in the affirmation or denial of the existence of these personages. The non-scientific person may receive statements as to the speed of light or the distance of the moon from the earth, and feel no obligation to pass a judgment on their truth or falsity. It is no doubt true, as Stout has pointed out, that 'the existence of an object means for us that . . . it forms a determination or qualification of reality in general. Unless the thought of this reality, however vague it may be, is at the same time an affirmation of it, no specific thought of a specific object is possible' (*Analytic Psychology*, i. 112). But this remark affects the case only in the event of the distinction between mere apprehension and belief being drawn so that the latter falls out of cognitive consciousness entirely. It is a relative distinction, in the sense that both members of it must be regarded as aspects of the cognitive act. But, as Stout himself allows, it is ultimate from the point of view of analysis, and is a distinction well worthy of being borne in mind.

(4) *Belief and knowledge.*—It is customary to distinguish 'belief' from 'knowledge,' and some philosophical writers, as we have seen, have drawn a sharp line of demarcation between them. There is, on epistemological grounds, undoubtedly warrant for the distinction. But this must not lead to the conclusion that knowledge is intrinsically different from belief when these two are considered psychologically. From this point of view we may rather say that knowledge is belief at its highest power.

'To know' is to have the completest assurance, to recognize that which is 'known' as definitely and firmly fixed within a system of fact. We can assign the ground for it, *i.e.*, we can show how it is related to and consists with the other elements of the system. We hold it fast. The high degree of assurance here leads to wrong distinctions as in 'I do not believe, I know.' The correct, if pedantic, statement in such a case would be, 'I know and therefore I believe.' 'Knowledge' refers to the objective grounds on which the subjective assurance (belief) rests. It is clear, however, at the same time that the two states are not conterminous. While it is impossible to refer to a knowledge-state which is not also a belief-state, it is, of course, manifest that not every case of belief is a case of knowledge. Thus, truly enough, knowledge is sometimes referred to as a species of the genus belief. Beliefs are judged to be either true or false. This in itself indicates the wider denotation of the term as compared with 'knowledge.' Here it may not be unprofitable to remark that the passing of such judgments involves reference to criteria which are beyond the purview of psychology. Beliefs, 'false' as well as 'true,' are facts of mental experience, and from the psychologist's point of view both are of equal interest and worth. The question for him is not how they come to be valued as true or false, but how they come to be beliefs—this special kind of mental existent. The justification or condemnation of a belief is a logical or epistemological task. The explanation of this belief is another matter. Belief does not inevitably wait upon knowledge; it is not always ratification of a clear insight into the truth of things. On the contrary, belief as a rule is antecedent to knowledge; proof is an afterthought. It is not, therefore, sufficient to refer to the rational grounds of a belief, in the attempt to explain it; the causes which bring it about, the sources from which it derives its vitality, are to be sought not merely in the region of the logical understanding.

2. Factors in Belief.—(1) *The cognitive factor.*—Undoubtedly belief must be in relation to some mode of cognitive consciousness: a sense-percept, a memory-image, an idea or train or complex of ideas. These furnish the immediate points of reference for any belief. The question remains as to how far they may be regarded as the effective causes, the important and central determining factors, in any given case of belief. To put it otherwise, are we to consider the development of belief to be governed by purely cognitive or intellectual conditions?

James Mill, following Hume, may be taken as an example of those who have a bias towards an affirmative answer to this question. H. Spencer and Bain (in the amended version of his view on this subject) follow suit. Hume, who speaks (*Inquiry concerning Human Understanding*, § v. pt. ii. 1) of belief as a more vivid, lively, forcible, firm, steady conception of an object than that which the imagination alone is ever likely to attain, seeks to show that the superiority of belief in these regards arises from a customary conjunction of the object with something present to the memory or sense. James Mill devotes his elaborate and suggestive chapter on 'Belief' in his *Analysis of the Phenomena*

of the Human Mind to the working out of Hume's hint and to attempting to trace all forms of belief to the 'grand comprehensive law of association.' No instance can be adduced, he boldly says (*op. cit.* p. 367), in which anything besides an indissoluble association can be shown in belief. Thus, for example, the belief that we see extension and figure as well as colour, is referred to the almost invariable and constant conjunction of our visual, tactile, and muscular sensations. So that, when we have the sensation of colour, we cannot avoid having the ideas of extension and figure along with it. There is a certain inner incoherence in this doctrine, as has, indeed, been pointed out by J. S. Mill. The elder Mill, in introducing the illustrations here quoted, states that in these cases it is generally admitted that we receive no sensation but that of modification of light. This at once brings the doctrine of indissoluble association into question, because we have here a case (one of many) in which such an association does not lead to belief. For, those who are interested in these matters, and who follow in Mill's track, do not believe that they see extension and figure, or they declare that they entertain this belief only at times when they are off their guard. There are thus two conflicting attitudes possible with regard to the same fact, and there clearly must be in at least one of the two cases a determining factor other than association. Association cannot be made the key-word with regard to belief any more than it can with regard to knowledge. It should, nevertheless, be recognized here that the operation of association has undoubtedly an influence on many beliefs. It appears, however, that association is effective not so much as a factor in setting up the belief as in conserving and supporting it once it is set up. This is hinted at by Hume (*op. cit.* § v. pt. ii.). When H. Spencer tries to show that association is the central principle, the ultimate mental uniformity here, he is not successful. It is true, as he says, that if certain states of consciousness absolutely cohere in certain ways, we are obliged to think them in those ways. But this proves nothing; it would be equally true and equally unedifying to state that, if we are obliged to think certain facts in certain ways, then they must absolutely cohere in consciousness in these ways. We cannot solve the problem of belief by the mechanical formula 'indissoluble connexion.' To complain, as J. S. Mill has done, that it leaves no distinction between the belief of the wise and the belief of fools, is beside the mark, because it introduces an epistemological point. But the complaint indicates a point worthy of note in this connexion, namely, that a belief rooted in and supported by an association and widely held may be refused and contradicted by a few who have 'thought more' about the facts in question. And, as more and more people are induced to think with or after the pioneers, the new belief begins to overtop the old and finally almost, if not altogether, obscures it. The familiar case of the belief that the sun moves round the earth illustrates this point. To say that the new belief that the earth moves round the sun is due to a counter-association is to play with words. It is due to the fact that this relation has come to be seen as a necessary part of a whole system of ideas with reference to the physical universe. And it is here that we come upon the most important condition of belief so far as cognitive factors are concerned. The perception of a given element of experience as fitting into and harmonizing with the rest of experience, in so far as this has been thought by us, gives it an irresistible claim upon our acceptance. The requirement of system, of ordered connexion, is the profoundest need of the intellect, and according as this need is met will belief be induced. Belief determined on such grounds is equivalent to knowledge, and the further discussion of the conditions here would lead us into the heart of the problems of the theory of knowledge. See EPISTEMOLOGY.

(2) *The emotional factor.*—It is manifest, however, that, as has already been pointed out, human beliefs do not always rest upon such grounds. It is not unusual to find belief determined by other considerations than reference to systematic connexion. It has been widely recognized that emotional elements appear as factors in the incitement and sustenance of beliefs. It has been noted that the state of belief has in itself a certain emotional colouring. Thus Hume says that 'the difference between fiction and belief lies in some sentiment or feeling which is annexed to the latter, not to the former' (*op. cit.* § v. pt. ii.). But it is not as an aspect of the resultant that feeling is here to be considered, but rather as a determinant of the process leading to that result. The prevailing emotional disposition, the mood of an hour or of an epoch in life, will materially influence the beliefs of the individual. Such influences act mediately. Religious fervour, social enthusiasm, love, anger, *e.g.*, predispose the subject to select and to accept those ideas which harmonize with and nourish the disposition or mood. In the most general aspect of this consideration it is to be noted that in the sanguine, youthful period of life, when vitality is high, belief as a rule flourishes more abundantly than in the colder and more discriminating period of advanced years. Again, as James has pointed out, theories of a pessimistic type, which tend to darken and chill the life of feeling, are not readily or widely believed, even though they may appear satisfactory to the understanding. They meet with an inarticulate, but none the less stubborn, opposition in the region of the emotions. They run counter to the average mood of humanity. On the one hand, the harmony of a particular belief with the emotional mood intensifies and enriches the feeling with which the idea is suffused; on the other hand, with the decay of a particular mood, related beliefs suffer proportionally. With the dwindling of religious enthusiasm, when 'love grows cold,' belief in the objects round which these feelings cluster becomes more feeble, a tendency to criticism, undreamt of in the intenser emotional hours, makes its appearance, and the beliefs readily disintegrate. Bain, in suggesting that the saying of Jeremy Taylor, 'Believe and you shall love,' should more fitly read, 'Love and you shall believe,' has, at any rate, recognized the efficiency of the emotional factor in belief. We believe with the heart as well as with the head. The search for truth itself is supported by its emotional coefficient—love of truth—which, as has been wittily said, is often utilized in order to prove that that which we love is true.

(3) *The conative factor.*—In the volitional or active aspect of conscious experience we find an even more important determinant of belief. This is not correctly separable from the foregoing. The various factors will be found together, in varying measure, in any act of belief; but, for purposes of clear exposition, the conative factor can be treated as though it were separate. At first sight volition seems to have little, if anything, to do with belief. It has been widely recognized since Hume that there is a certain coerciveness in belief; it 'depends,' he says, 'not on the will, nor can be commanded at pleasure' (*op. cit.* § v. pt. ii.). The experience of being 'compelled to assent' to a proposition is familiar to most people. It is certain that belief cannot be commanded at pleasure, that it cannot be brought forth by a simple fiat of will, in that abstract sense of will. It is nevertheless

true that will plays a leading rôle in the constitution of our belief. So impressed by this was Bain, that in his main treatment of this phenomenon (*Emotions and Will*[3], p. 371 ff.) he maintains that belief is a growth or development of the will—a phase of our active nature. He does not rule out the cognitive factor, he recognizes it in what he terms the intellectual Association of our Experiences; nor does he deny the influence of feeling, but he argues that these are subsidiary to the volitional or conative factor, and maintains that belief is most vitally related to activity or the will. He bases this judgment principally upon the fact that what we believe we act upon. Action is the test of belief. Thus, if a politician declares Free Trade to be good and yet will not allow it to be acted on (there being no extraneous barriers in the way), people say he does not believe his own assertion. To maintain his thesis, Bain is sometimes driven to somewhat extreme measures. He recognizes that there are cases where the connexion between belief and activity is not obvious, and alludes to them as 'apparent exceptions' where, though not obviously, the connexion still exists. 'Many men that will never cross the Sahara desert believe what is told of its surface, of its burning days and chilling nights.' But the connexion with activity here is, he holds, present, for their attitude may be expressed by saying that, *if* they went to Africa, they would do certain things in consequence of this information. This, as has been suggested (Stout, *Analytic Psychology*, ii. 257), is beside the mark; for where we believe without actual reference to practice, the mental attitude of believing must be actually distinct from the practical attitude. Bain does not show that action is a condition of belief; he only shows that action is an empirical test of belief, and even so he weakens and embroils his position by unnecessarily limiting activity to forms of bodily movement. Granting all that Bain puts forward, we have still to ask with Brentano (*Psychologie*, p. 268) why it is that one idea has an influence upon action and another has not. In short, he shows that action depends upon belief, and not that belief depends upon action. Bain afterwards (*op. cit.*, Appendix, p. 100) briefly recanted this view in favour of a more intellectualistic treatment of belief on associationist lines. In so far as his first position involved the doctrine that belief is wholly volitional in its nature, the recantation was justified. At the same time Bain's discussion did excellent service to the psychology of this subject, in drawing attention to a vital constituent of belief; and his contribution from that point of view has permanent value. It leads us close to the centre of the matter. A brief inspection of the facts of the case brings us to perceive that without beliefs of some kind man cannot maintain himself in the universe at all, and that the fullness of life and the fullness of belief are in a direct ratio. This does not contradict the truth that beliefs are shed as experience advances. They are replaced by deeper and more comprehensive beliefs. We discover certain needs, and in the measure of our satisfaction of them is the measure of our life. This satisfaction is obtained through the establishment of some *rapport* between the subject and the objective world or worlds in which it seeks to maintain itself. Those things which are found to satisfy the need, to fulfil desire, are accepted and clung to. They are, in fact, believed in. Without such belief one would be endeavouring to operate in a vacuum. This is vigorously and rightly insisted upon by the Pragmatists. The question of the organization within a scheme of values of these needs, vitally important though it be, is not one which concerns us here. It may be said in a parenthesis, however, that it is one to which Pragmatists have not as yet in their metaphysical and epistemological discussions devoted sufficient attention. It is enough to point out in this place that there are needs of various kinds—physical, logical, æsthetic, and religious—and that in the experience of finding satisfaction for them we find belief. The belief emerges at that point where the desire which is the expression of the need finds the means of its adequate fulfilment. This applies, *e.g.*, in the sphere of science, where we seek for a continuous and coherent system of objective fact, as in the sphere of religion, where we seek for an adequate support for our moral and spiritual needs (cf. Royce, *Religious Aspect of Philosophy*, p. 330 f.). We orientate ourselves in this direction or in that, according to the pressure of the need, by means of the power of attention (*q.v.*), which involves selection, self-determination In brief, and in a somewhat misunderstood phrase, we 'will to believe.' This, of course, does not involve unchartered freedom or the introduction of sheer caprice. Our needs are not created by whims. They are the expressions of a nature striving to realize itself, and we but recognize their appearance. It is true that they may be regarded as the needs of a particular subject, and that the ends which they adumbrate are posited by that subject. But that does not necessarily involve us in indeterminism. Here, however, we are breaking ground upon the problem of Freedom. Keeping to our proper theme, we have further to observe that, though the end is posited by the subject and without prejudice to what is thereby implied, there is a certain objective limitation in the media through which it is to be realized. The nature of the process by which the end is attained is, so to speak, fixed independently of the subject. The subject finds it and accepts it as leading up to his end. The urgency of the need will no doubt often lead to the over-hasty and uncritical acceptance of means as real which further tests condemn, but the central element in these tests is just the need referred to; that which has been proved fictitious did not really meet the need. What is here said connects itself with the statement regarding the emotional factor, for the emotions are intimately connected with the furtherance or the obstruction of our conative tendencies.

(4) *Belief and personality.*—The stream of belief then is fed from various springs. We cannot truly say that it is a cognitive, an emotional, or a conative state, in the sense that it depends solely on any one of these forms of the conscious life. We believe with the whole, many-sided self. Belief expresses the definite attitude of the personality towards its experience. In Baldwin's definition of belief as the 'consciousness of the personal endorsement of reality' the adjective bears unusual fullness of meaning. 'Nulle manifestation de notre personnalité n'exprime plus adéquatement celle-ci que la croyance,' says Jules Payot (*La Croyance*, p. 173), and we may sum up this portion of our statement with his emphatic pronouncement: 'Nous croyons avec tout ce que nous sommes' (*ib.* p. 174).

(5) *The social factor.*—This reference to belief and personality introduces the mention of a factor in the constitution of belief which is of a different order from the above-mentioned, but which deserves special notice because of its import. This may be called the social factor. One of the most vital parts of that environment to which a man must make adjustments, in order to maintain and realize himself, is what we call the social environment, the *milieu* of personalities and their products in which we all find ourselves planted. Our equation to that is one of our great life-tasks. An important part of that environment is the body of

beliefs—including what are called superstitions, traditions, and prejudices—in which the communal life expresses itself. These we acquire for the most part unconsciously, as a portion of inherited experience, through our necessary participation in this life in its various forms—the family, the school, the Church—and in the common interchange of social talk. If and when we arrive at the self-conscious and reflective stage, these may be criticized and modified or abandoned. Their abandonment, even when a substitution is made, is as a rule achieved only after considerable effort. For on the abandonment follows a sense of the loss of something of that solidarity, of participation in the life of our society which is so necessary and precious to us. A barrier is placed between the 'unbeliever' or the 'doubter' and his fellows. Only the very strong or the very headstrong man will dare to erect it. And he will do so only on the assumption that the barrier is a temporary one. The fervour with which a novel idea or doctrine is promulgated is due largely to a desire to regain that sense of social support which for the time being has been lost through departing from generally accepted belief. Even so, the heretics and reformers must be a small minority in any society; to the great majority of its members the social sanction of a belief is so strong as to be practically invincible. The social need is imperative, and orthodoxy appears to them to be a necessary means to its satisfaction. The unfriendly attitude of the community or society towards the heterodox is in this regard intelligible. The insurgence of a small part against the whole threatens, or appears to threaten, the integrity of the whole; and this is, so far rightly, something to be thwarted and put down. In certain extreme cases the community places the heterodox and insurgents under constraint, by committing them to a prison or a lunatic asylum. Society, in any form, is then a great conservator of beliefs; and the social factor is one which cannot be neglected in tracing out the causes of belief.

(6) *Religious belief.*—The detailed discussion of various forms and stages of belief—the beliefs of primitive peoples, the superstitions of civilized man, belief in an objective world, in Nature as uniform and under law, belief in the objects and ideals of æsthetics, morals, and religion—would be a long and an arduous undertaking, and it would add nothing but illustrative material to the general discussion. One of these forms, however, calls for special remark for a special reason. Religious belief has sometimes, particularly, though not exclusively, by Catholic theologians, had a claim to uniqueness put forward on its behalf. It is suggested that it is not determined or built up in the same way as other modes of belief. Thus we find Newman, quoting Dmouski and others in support (*Grammar of Assent*, pp. 186–7), laying it down that there is a marked distinction between human or natural faith and Divine or supernatural faith—the latter being defined by him as 'the assent which follows on a Divine announcement, and is vivified by Divine grace.' This form of belief, it is maintained, differs from 'human' belief not merely in degree but in kind, being intrinsically superior to it. This superiority, it is further somewhat obscurely stated, is not a matter of experience, but is above experience. The distinction is one which depends on a metaphysical theory as to the ultimate source of belief. Dealing with the phenomena by the psychological method, we cannot say that religious belief reveals differences of such a kind as to compel us to isolate it completely from other forms. It undoubtedly differs in content, and this again no doubt affects the intensity or quantitative character of the state, but in a psychological regard there is no deep-lying or fundamental qualitative distinction revealed. In this form of belief the reality referred to and endorsed is of a wider and more comprehensive character than that elsewhere dealt with. The issues involved are of a more tremendous and far-reaching kind. Life, in the light of religious belief, is no more the brief drama of an isolated self acted out against the shifting background of the world of time and space; it becomes part of an all-comprising reality, subsumed in the life of God. The narrow limits of the self are transcended; the personality is enriched and dignified by the sense of this; it acquires a fuller and more permanent value. It is intelligible how with the emergence of belief of this kind there comes the sense that salvation has been found. It is also intelligible how it should come about that such a belief is regarded as given to the subject, not formed by him. For the subject is not always clearly aware of all that is here set forth as contained in it. It does not, as a rule, come as the result of a clearly reasoned process, it usually arises out of a more or less inarticulate sense of great need, and in the measure of the need is the measure of the emotion accompanying the satisfaction of it; it is so powerful that it comes with a certain invasive character, it rushes in upon the subject. The believer has an overwhelming feeling of the reality of his experience. The investigation of the grounds of the belief is a matter for later reflexion; it is the business of the theologian and philosopher, who come in after the act of belief. Indeed, the individual believer may feel averse from any such reflexion or examination, on the ground that it tends to trouble and obscure the purity of the emotional state. Without prejudice to the question as to the rationality of religious belief, and dealing with it simply as it presents itself as a psychological phenomenon, we may say that here the emotional and volitional factors are markedly present, the intellectual factor playing apparently a minor rôle. The volitional factor has already been hinted at. The believer arrives at his belief by seeking, by turning himself in a certain direction, putting himself in a certain mental attitude. This, it may be, does not take place through the formation of a deliberately conceived and clearly conscious resolve, but it is nevertheless volitional. The believer finds because he seeks. There is nothing more constantly urged in the literature of religious belief than this, that the subject must act, he must turn his face in the right direction for the light to fall upon it. There is marked insistence also on the point that it is not by appealing to the reason directly, but in acting upon the will and the emotions, that religious belief is implanted and fostered. This is corroborated by psychological knowledge. It does not follow that this means an appeal to the irrational rather than to the rational in man. And when James speaks (*Varieties of Religious Experience*, p. 73) of 'the inferiority of the rationalistic level in founding belief,' he is presumably referring to the articulately rational. As to the specific forms which religious belief may take, this obviously depends largely on the social factor, on the influence of the institutions, the forms of instruction, and the like, through which the society in which one lives expresses its religious consciousness, and realizes and satisfies its religious need. See also FAITH.

A. MAIR.

BELIEF (logical).—Belief, as the mere subjective correlate to reality in general, does not give rise to problems of logical method, though it may not be a 'sapless abstraction' within a system of epistemology, as Hegel considered it to be. Other contexts, however, raise questions as to the validity and tests of belief as compared with knowledge. Our cognitions are to some extent beyond test or challenge, being inevitable under the laws of sense intuition and understanding, or through the conscious sequences of experience; to some extent they can be tested in detail by appeal in each case to the unchallenged part of the cognitive system itself; and to some extent by appeal only to aspects of our complete nature which are over and above cognition itself. It would be convenient in logical discussion to use the term 'belief,' as distinguished from 'knowledge,' only for those cognitions which can be tested by the latter method. In this sense it would follow in general a distinction traceable from Kant, through Beneke, Ulrici, Adamson, James, Ormond (*Foundations of Knowledge*, pt. 3, ch. 1) and others, between objective and subjective 'grounds' of cognition. Belief so defined shares with knowledge the function of 'presenting to us realities, and thus influencing the passions and imagination'; and it may present them as primary or as inferences, and as certain or probable, whether sensible or super-sensible.

Laws of thought regarded as structural forms in the system of our cognitions are absolutely primal. It is only when thought includes expectation as to concrete matters of fact that any challenge is possible. Kant offered as a basis for expectation certain 'Principles of the Understanding'—the permanence of substance, the universality of law, and the inter-connexion of the world. If these Principles could be shown from the structural forms of cognition, they also would be beyond question. But subsequent developments of the Kantian epistemology admit that they cannot.

'We might have the right to say that the laws of space . . . must of necessity hold good of all objects of our experience, for nothing will ever make its way into experience without having been already moulded in that form of space through which alone it becomes an object for us at all. But we cannot attempt to prove in the same way that, unless there was a connection according to law in the real world, the experience which we possess would be impossible' (Lotze, *Logic*, § 349).

Empirical epistemology has come to the same final issue. Mill's attempt to justify logically the principle of the Uniformity of Nature, by appeal to accepted inductions of lower grade, has been repudiated by recent Empirical Logic (Mill, *Logic*, Bk. iii.; Venn, *Emp. Logic*, ch. 5). Expectation, therefore, is grounded in our complete nature, and its most general postulates are primary beliefs.

'A reign of law embracing all reality . . . is only an assumption with which every enlargement of experience is accompanied . . . an immediate confidence or faith . . . as is also the universal tendency of thought to turn the observed facts of co-existence into coherent connection' (Lotze, *Logic*, § 349).

Super-sensible realities also, so far as the plan of our complete nature requires that they shall 'be made present to us . . . and influence the passions and imagination,' are certified in belief. How far they are primary in relation to other contents of belief, how far they can be logically elaborated, and how far corroborated by the independent process of strict knowledge, must be considered in their own special literature. As primary, they are in line with the postulates of scientific expectation.

'We assume, on the one hand, that our perceptions submit to the claims of thought in so far as to allow of their being arranged in a conceptual system and in orderly connection; on the other hand, that all our actions can be subordinated to a single end. These assumptions are postulates, and our acceptance rests in the last instance upon our will' (Sigwart, *Logic*, § 62).

'If we require that the conception of the Universe be that of a whole and an essentially complete unit, and at the same time that it should comprehend all individuals, we follow in this and other requirements . . . the inspiration of a *reason appreciative of worth*' (Lotze, *Microcosmus*, ii. 5, § 2).

'If no better ground for accepting as fact a material world more or less in correspondence with our ordinary judgments of sense perceptions can be alleged than the practical need for doing so, there is nothing irrational in postulating a like harmony between the Universe and other Elements in our nature of a later, a more uncertain, but no ignobler growth' (Balfour, *Foundations of Belief*[8], p. 391 f.).

'That there is no ultimate test of truth besides the testimony borne to the truth by the mind itself . . . is a normal but inevitable characteristic of the mental constitution of a being like man on a stage like the world' (Newman, *Grammar of Assent*, ch. ix. § 1).

Such quotations as these are not intended to appeal to an obtrusive 'wish' that becomes 'father to the thought,' or to a purposeful 'ignorance' that may be chosen as 'bliss,' but to a final trend of our spiritual development and to methodical analysis of the complete structure and function implied in it. Historic instances of such analysis are Butler's, for the purpose of 'showing moral obligation,' and Kant's, for establishing, through the primacy of Practical Reason, our judgments as to Freedom, God, and Immortality.

The topic 'belief' comes to be a doctrine of uncertainties, as in Locke, Beneke, Fechner, Ulrici, and James, when, instead of presenting a primary postulate or reality, it supplements knowledge in dealing with some detailed problem of science or life. Sometimes our complete nature guides the interest or interprets the final outcome of scientific inquiry; as in such conceptions as force, organic function, creation (Ulrici), or such principles as indestructibility of matter and conservation of energy (Jevons, *Principles of Science*, ch. 31). Sometimes it sustains scientific methods that are of themselves inconclusive; as in the analogy which attributes consciousness to other organisms than our own, or even to larger systems of Nature (Fechner). Sometimes it decides an option between alternative judgments which otherwise might remain always in problematic form, as between fatalism and personal responsibility (James, *The Will to Believe*). Sometimes it introduces inference to an otherwise alien region of fact, by supplying some mediating principle; as when history and prediction become possible through the postulate of the persistence of natural collocations and the recurrence of causes (Hugl as, *Theory of Inference*, chs. 8–11; Sigwart, § 99). Sometimes it

opens empirical facts to explanation by reference to super-sensible realities; as in historical Free-choice or Miracles or Incarnation (Lotze, *Logic*, § 349, *Philos. of Rel.* § 62; Balfour, pt. 4, ch. 3).

Belief, like knowledge, may vary in certainty and influence and take special titles accordingly, without ceasing to be valid for human nature as such.

'In the empirical branches of knowledge,' Kant remarks, 'physics, psychology, and the like . . . we may have "Opinion," an assent which is consciously held as neither objectively nor subjectively adequate' . . . while 'of many cognitions we are conscious only in such a manner as not to be able to judge whether the grounds of our assent are objective or subjective . . . and this is "Persuasion." Both fall short of Conviction, whether logical Conviction, that is, Knowledge, or practical, that is, Belief; because they are not "necessary"' (*Introduction to Logic*).

But belief, unlike knowledge, may be valid for rational nature as such, without being valid for all persons. The individual mind realizes its development under conditions much more special than those for the racial or collective mind, and admits details not admitted into the cognitive system common to all. Among the examples are the following: (1) Our common cognition assumes that objects of thought are not altered by the mere event of their being thought of (Venn, *Empirical Logic*, ch. 2); yet for the individual mind this postulate may be suspended in favour of maxims of expectation that lead to their own fulfilment. Such are the mutual confidence of social co-operation, self-reliance in personal enterprise, hope during illness (James); and, on a higher level, our assumption of moral sufficiency for an occasion, or of personal acceptance with the Divine Being. (2) The option of uncertainties must often be closed for the individual, though remaining still open for science or for common belief. Inferences that are 'informal,' and under the sanction of an 'illative sense' like the insight or 'tact' of an expert, must be substituted for explicit thought. In practical discretion, taste, conscientious scruple, and personal faith we must thus interpret our own personal nature (Newman, chs. 8 and 9; Germar, *Glauben oder Wissen*, 1856). (3) External authority must be accepted in default of personal inference; the spirit of our time, the dogmas of specialists in science, testimony for historical events, moral conventions, creeds of the Churches (Balfour).

As possible principles for constructing a scale of certainty in belief, have been suggested: (*a*) the narrowness of the void in our scheme of reality which is left by strict knowledge; (*b*) the finality, in value for development, of the subjective need which attempts to fill it; (*c*) the intrinsic inaccessibility of the void to knowledge itself (Beneke).

BELLS.—See GONGS AND BELLS.

BENARES.—1. Name and history.—Benares (Banāras), the largest city in the United Provinces of Agra and Oudh except Lucknow, is situated in the Benares District (lat. 25° 18′ N., long. 83° 3′ E.), on the left bank of the Ganges, which flows past the city for a distance of nearly 3½ miles. The river bends to the N.E., so that the city stands for the most part on the N.W. bank, which is in places 100 feet high. A census taken in 1803, which gave the population as 582,000, was vitiated by the assumption that twenty persons should be assigned to each house. The true population (1901) is returned as 209,331, comprising: Hindus, 153,821; Musalmāns, 53,566; Christians, about 1200, chiefly in the cantonment, civil station, and mission grounds; with a few adherents of other religions.

At the present day Hindus speak of the city, which is acknowledged to be the religious capital of Hinduism ('the general school of the Gentiles, the Athens of India,' to use Bernier's words), indifferently as either *Kāśī* or *Banāras*, but the latter name, anglicized as *Benares*, is that commonly used by people of other nationalities and in literature.

The name *Kāśi* (*Kāśī*, in Pāli *Kāsī*) was originally the name of a tribe or nation inhabiting the country between the Ganges and Ghāghrā (Gogra), and at times apparently extending its authority over territory to the north of the Ghāghrā and the south of the Ganges. Legends of Kāśi Rājā are current in the Gorakhpur District, north of the Ghāghrā, and the small town of Rūdarpur in that district is said to bear the alternative name of Kāśī (Martin, *Eastern India*, ii. 338). To the south of the Ganges, the Karamnāsā river, now forming part of the boundary between the Mirzāpur and Shāhābād Districts, was recognized traditionally as the frontier between the kingdom of the Kāśis (Benares) and that of the Magadhas (S. Bihār). The waters of that river are regarded by high-caste Hindus from other regions as impure and polluting. We shall presently quote another legend in proof of the aversion felt by orthodox Hindus towards the non-Aryan, Buddhist kingdom of Māgadha. The Rāmāyana (*Uttarakāṇḍa*, lix. 18, 19) describes the 'excellent town' of Pratiṣṭhāna, that is to say Jhūsi opposite Allahābād, as being situated in the 'Kāśi kingdom.' Putting all indications together, we may conclude that the realm of the Kāśis was equivalent to the modern Districts of Benares, Ghāzīpur, Balliā, Azamgarh, and Jaunpur, together with portions of the Mirzāpur, Gorakhpur, Allāhābād, Partābgarh, Sultānpur, and Fyzābād Districts, all of which are now included in the United Provinces of Agra and Oudh. The Kāśi people are mentioned by Pāṇini and other authors in both Sanskrit and Pāli prior to the Christian era. Gradually the name was transferred from the people to their capital city, and the transition is marked in the *Bṛhat Saṁhitā*, an early work, which applies the name *Kāśi* to both people and city. The Kāśis lost their independence at an early date, their kingdom being absorbed by Northern Kosala (Oudh) before the time of Buddha. An ancient Kosalan king, named Kaṁsa, of uncertain date, is described as 'the conqueror of Kāśi.' Nevertheless, the older Buddhist books include Kāsī in the list of the sixteen principal States of India, although it was never independent in historical times. Gradually the name *Kāśi* or *Kāśi* (Pāli *Kāsī*) was transferred from the tribe to the city. The form *Kāśikā* also occurs.

The alternative name *Varāṇasī* (also *Vārāṇasī*, *Varaṇasī*) appears to be more ancient than *Kāśi* as the designation of the city, and to be really its proper name. The Buddhist Jātakas and early Sanskrit books describe the city of Varāṇasī as being situated in the Kāśi country. Fa-hien, the Chinese pilgrim (A.D. 400), writes the name as *Po-lo-nai*, which seems to correspond with a spoken form *Bārānas*. Hiuen Tsiang (Yuan Chwang, A.D. 637) writes *Po-lo-na-se* (= *Vārānasī* or *Bārānasī*). Popular etymology derives the name *Baṇārns* (by metathesis of *Barānas*), either from an imaginary Rājā *Banār* or from a combination of the names of the rivers *Varaṇā* (*Barnā*) and *Asi* or *Aśī*, but neither derivation can be accepted. In the Purāṇas the name *Avimukta* is given to the city, which is mentioned in the Buddhist Jātakas under various fanciful names, *Sudassana*, *Pupphavatī*, etc.

Local tradition restricts the name of *Banāras* to the northern and apparently most ancient part of the city, the central block, also ancient, being

called *Kāś*, and the south-western section, the most recent, being known as *Kedār*. The attempt made by Muhammad Shāh, Emperor of Delhi (1719–48), to give his own name to the city, which he called *Muhammadābād*, failed so far as general usage is concerned, but on his coins the name frequently occurs as that of a mint, and sometimes is written as *Muhammadābād-Banāras*.

Hindu legend associates the foundation of the city with Rājā Divodāsa, who is the subject of wild mythological stories, and the Buddhist tales constantly mention Rājā Brahmadatta as having been king of Benares 'once upon a time,' but it is impossible to discover any basis of fact for either the names or the stories. Benares, with its surrounding territory, was absorbed, as already stated, by the greater kingdom of Kosala, about B.C. 600, or earlier, and when Kosala in its turn was forced to bow to the growing power of Magadha (wh. see), Benares passed under the rule of the Śaiśunāga lords of that province about B.C. 500. It was included in succession in the dominions of the Maurya, Śunga, and Gupta dynasties. In the 7th cent. the city passed under the rule of Harsha-vardhana, the powerful Vaiśya king of Kanauj, and in the 9th cent. it was included in the dominions of the Parihār kings of Kanauj. In the 12th cent. it was held by the Gaharwārs of Kanauj, of whom the last, Rājā Jaychand (Jayachchand), was killed in A.D. 1193 (A.H. 589) in battle with Muhammad of Ghor (Shihāb-ud-dīn, Muhammad ibn Sām). From that time Benares remained under Musalmān domination until 1775, when it was ceded to the government of Warren Hastings by the Nawāb Vazīr of Oudh. Since that date it has been British territory.

Abū-l-Fazl (*Āīn-i-Akbari*, ii. 28 [Gladwin's tr.]) seems to have been misinformed in stating that Benares was visited twice by Sultan Mahmūd of Ghaznī in A.H. 410 (A.D. 1019–20) and A.H. 413 (A.D. 1022–23). The contemporary author of the *Tārīkh-i-Sabuktigīn* expressly states that no Musalmān army had ever visited Benares until Ahmad Niāltigīn made a hurried raid on the city for a few hours one day in A.D. 1033 (424–25 A.H.). The raiders were not in force sufficient to enable them to do more than plunder the richer shops. Muhammadan influence was not felt seriously by Benares until the city was taken by Muhammad of Ghor in A.D. 1193. The considerable effect of the long Muhammadan occupation for six centuries is shown by the fact that at the last census in 1901 Musalmāns formed 28 per cent. of the population of this intensely Hindu city. The Madanpura quarter is almost exclusively occupied by Muhammadans, who are largely engaged in weaving the rich brocades (*kīnkhwāb*, vulgo 'kincob') for which the city is famous.

Benares suffered severely from the persecuting policy of Aurangzīb, who went so far as to order 'the governors of provinces to destroy with a willing hand the schools and temples of the infidels; and they were strictly enjoined to put an entire stop to the teaching and practising of idolatrous forms of worship' (W. Hunter, *Aurangzīb*, 1896, p. 135). Complete general execution of such orders was impossible, but in Benares much was done, and multitudes of temples were destroyed. Very few of the existing buildings are earlier than the time of Aurangzīb. The temple beside which stood the Aśoka pillar seen by Hiuen Tsiang was converted into a mosque, although the massive pillar was allowed to remain until 1809, when it was broken to pieces by a furious Muhammadan mob in the course of a fierce riot between the adherents of the rival religions. This riot was still fresh in men's minds when Bishop Heber visited the city in 1824. The pillar, the stump of which is known as *Lāṭ Bhairo*, and considered to be an object of great sanctity, is correctly described by the Chinese pilgrim in A.D. 637 as standing to the N.E. of the city and west of the Barnā river, whose course is due north and south for about a mile. Bernier mentions that the chief of the Benares pundits had been granted by Shahjahān a pension of two thousand rupees, which was withdrawn by Aurangzīb immediately after his accession.

The most conspicuous evidence of Aurangzīb's bigotry is the mosque above Panchgangā Ghāt, the minarets of which (147 ft. 2 in. high) are by far the most imposing edifices in Benares. The mosque occupies the site of a large ancient temple dedicated to Śiva under the name of Bisheshar (Viśveśvara), and is largely composed of the materials of the Hindu shrine. The modern temple of Bisheshar, generally called the 'Golden Temple,' close by is small, but notable for its dome and tower covered with plates of gilt copper, the gift of Mahārājā Ranjit Singh, the 'Lion of the Panjāb.' It is the most holy temple in Benares, Bisheshar being regarded as the actual ruler of the city.

2. Sacred places.—During the predominance of the Marāthās in the 18th cent., and still more after the establishment of the British power, temple-building, which had been either forbidden or discouraged by the Muhammadan rulers, received a great impetus, and hundreds of new shrines have been constructed. Sherring estimates that out of 600 temples along the Panch-kosī, or pilgrims' road, round the city, no fewer than 500 date from the British period, and very few are 250 years old. This vigorous modern development of temple-building is the outward and visible sign of the marked revival of Hinduism under British protection, which is still in progress and daily growing in strength. Most of the unrest at present (1909) agitating India is closely connected with the Hindu revival. Forty years ago the number of Hindu temples in Benares, excluding petty niches and shrines, was estimated as 1454, and now it must be considerably greater.

But, as already observed, Musalmāns form 28 per cent. of the population, and they were credited by Sherring with 272 mosques. Notwithstanding the considerable success of the Muslim propaganda indicated by these figures, Benares has always continued to be the most Hindu of cities, and few visitors find occasion to take note of the large Muhammadan population. The mosques, although numerous, are not remarkable for architectural merit, and even the mosque of Aurangzīb offers little worthy of notice beyond the noble minarets which tower above the city.

The most striking feature of Benares, best viewed from the river, is the long series of *ghāṭs*, or stairs leading to the water, which line the bank of the Ganges. They number about forty, and vary much in sanctity and popularity. The five principal ones, visited by all pilgrims, are, as reckoned from the south, Asi Saṅgam (the junction of the Asi rivulet with the Ganges), Daśāśamedh (Daśāśvamedha), Maṇikarṇikā, Panchgangā, and Barnā Saṅgam (the junction of the Barnā river with the Ganges). Hindus always regard the junctions of streams with peculiar reverence. A visit to the five *ghāṭs* named above is in itself a complete course of pilgrimage, and the merit of bathing at Daśāśamedh Ghāt is equal to that of a pilgrimage to Prayāg (Allāhābād), where the Jumna unites its waters with those of the Ganges. The legends invented to explain the sanctity of the Daśāśamedh and Maṇikarṇikā Ghāṭs are too long for quotation, but we may note that five rivers, four being invisible to mortal eyes, are

supposed to meet at Panchgangā ('five-river') Ghāṭ. Their names are given as Dhūtapāpā, Sarasvatī, Kiraṇā, Jarṇa (*alias* Yamunā = Jumna), and Gangā (Ganges). The belief in invisible subterranean streams is common among Hindus in many localities.

A considerable area round Benares shares in the sanctity of the city and rivers, and is circumambulated by pilgrims travelling along the Panchkosī Road, which does not seem to be ancient in its existing form.

'The Panch-kosī is regarded as an exceedingly sacred road. While even a foot or an inch beyond its precincts is devoid of any special virtue, every inch of soil within the boundary is, in the Hindu's imagination, hallowed. It would seem, too, that every object, animate and inanimate, existing within the enclosed space, participates in the general and all-pervading sanctity. The entire area is called Benares; and the religious privileges of the city are extended to every part of it. Whoever dies in any spot of this enclosure is, the natives think, sure of happiness after death; and so wide is the application of this privilege, that it embraces, they say, even Europeans and Muhammadans, even Pariahs and other outcasts, even liars, murderers, and thieves. That no soul can perish in Benares is thus the charitable superstition of the Hindus' (Sherring, *The Sacred City of the Hindus*).

The road is designed to describe the arc of a radius of five *kōs*, or ten miles, with the Maṇikarṇikā well as a centre, and is therefore called the 'five-kōs road.'

The votary starts from the Maṇikarṇikā Ghāṭ to Asi Saṅgam, and thence to the village of Kandhawa, where he stays for the night. The second day he marches ten miles to Dhūpchandī; on the third day he has a long walk of fourteen miles to Rāmeśvar; on the fourth day he goes to Sheopur (Śivapur); and on the fifth day he advances to Kapildhārā; the sixth and last stage being from Kapildhārā to Barnā Saṅgam, and so back to the starting-place at Maṇikarṇikā Ghāṭ. The whole journey is nearly fifty miles in length, and at each stage worship has to be performed and Brāhmans must be paid. Liberal payments to Brāhmans are an indispensable element in the programme of a Hindu pilgrimage, and the Benares Brāhmans know how to use their opportunities. The Gangaputras ('sons of the Ganges'), who attend on pilgrims at the *ghāṭs*, have a sinister reputation for unscrupulous greed.

It is impossible within the limits of an article to give a detailed account of even the principal temples at Benares and of the fantastic mythology associated with them by exuberant Hindu imagination, but some slight notice of a few of the most favoured holy places and their legends is indispensable. We shall take Sherring as our guide.

The *Trilochan temple and ghāṭ* dedicated to 'three-eyed' Śiva have the special merit of securing everlasting happiness to the worshipper there if he should die elsewhere. If a devotee spends a whole day and night in the month of Baisākh (April-May), without sleeping, and uninterruptedly engaged in religious exercises at this temple, he is promised final liberation (*mokṣa*) from the miseries of existence. Kāśī-devī, the tutelary goddess of the city, is housed in a temple in Mahalla (ward) Kāśīpura, which is believed to be the centre of the city.

A shrine close by, called *Vyāseśvar*, is dedicated to Vyāsa, the reputed compiler of the Vedas, who is also honoured at a temple in the palace of the Mahārāja at Rāmnagar on the other side of the river, which is associated with a quaint myth. People who die on the Rāmnagar side are believed to incur imminent danger of being re-born as asses—an unpleasant fate which may be averted by a pilgrimage to the shrine of Vyāsa (*Veda Vyās*) there during the month of Māgh (Jan.-Feb.). Multitudes of people from Benares as well as from Rāmnagar make their pilgrimage during that month, and so doubly assure immunity from re-birth as a despised ass. The Hindus of Patna share the fears of the Rāmnagar people, and for the same reason are cremated on the northern side of the river. The explanation given is that Magadha or S. Bihār, a non-Aryan and Buddhist land, is considered so unholy that if a man die and is burnt within its limits he is sure to be reborn as an ass (*NINQ*, vol. v. [1896], par. 533).

A visit to the very holy tank called *Piśāchmochan*, or 'deliverance from devils,' situated on the western side of the city, is compulsory on all pilgrims, who find its waters a valuable prophylactic against evil spirits and bad dreams. Pilgrims to Gayā are required to certify that they have bathed in Piśāch-mochan, but if for any reason the essential ceremony has been omitted, the fault may be repaired by ablution in a duplicate tank at Gayā. Sun-worship is practised at the *Sūraj-kuṇḍ*, or 'sun-pool,' in the south-western quarter, and a temple in the same region is devoted to *Dhruveśvar*, the personified Pole-star. Another temple is dedicated to the moon-god. *Chaukī Ghāṭ* and *Nāg Kuā* are devoted to serpent-worship. The existence of such shrines illustrates the immense variety of the elements constituting popular Hinduism. Hindu interest in astronomy and its sister lore of astrology is testified by the *Mān-mandir*, the famous observatory with gigantic instruments of masonry constructed by Rājā Jay Singh of Amber or Jaipur in A.D. 1693.

The *Daśāśamedh* (*Daśāśvamedha*) *Ghāṭ*, the reputed scene of the celebration of ten horse-sacrifices (*aśvamedha*) by the god Brahmā, is one of the five principal places of pilgrimage on the bank of the Ganges. The large colony of Bengālīs, including many pensioners who retire to end their days in the holy city, occupies a separate ward, and is perhaps even more devoted to its gods than are the less educated sections of the population. The principal Bengālī temple is dedicated to Śiva as Kedāreśvar, 'the lord of Kedār,' a renowned shrine in the Himālayas.

The holy wells occupy prominent places in the pilgrim's circular tour. One of the most noted is the *Gyān Kūp*, or 'well of knowledge,' situated between the temple of Bisheshar and Aurangzīb's mosque. The god Śiva, who supports Benares on the point of his trident, is believed to reside in this well. The most sacred of all the wells is *Maṇikarṇikā*, supposed to be filled with the sweat of Viṣṇu. No pilgrim fails to smear his head and body with the stinking water.

The *temple of Annpūrnā*, the goddess who is credited with the responsibility of feeding the citizens under the orders of Bisheshar, the divine lord of the city, is much frequented, and is the scene of indiscriminate almsgiving to crowds of beggars. It is known to Europeans as the 'cow temple,' and is the dirtiest in the city. It was built by the Peshwā, Bājī Rao, about 1721. At a little distance stands a temple dedicated to the minor deity, *Gaṇeśa* or *Vināyakapāla*, under the title of Sakhī, 'the witness.' 'Pilgrims, on completing their journey of the Panchkosī Road, must pay a visit to this shrine in order that the fact of their pilgrimage may be verified. Should they neglect to do this, all their pilgrimage would be without merit or profit' (Sherring, *op. cit.*).

Bisheshar, or Śiva, with the title of Viśveśvara, 'Lord of all,' is held to be, as already observed, the divine ruler of Benares, charged with the duty of controlling all the other innumerable gods and goddesses and keeping the city free from demons. The sacred boundary of the Panch-kosī Road is guarded by the deities of six hundred shrines, and the only demon allowed within the holy precinct is the one who dwells in the Piśāch-mochan tank. Bisheshar's vicegerent, the divine Kotwāl, or

chief of police, is Bhaironāth, whose shrine is situated more than a mile to the north of that of his sovereign, under whose orders he exercises authority over both gods and men. He is bound to keep the city free from all malignant spirits and evil persons, and, should he find any such within its precincts, to expel them forthwith. Bhaironāth is supposed to exercise his authority by means of a huge stone truncheon, *Daṇḍpāṇ*, which has a temple to itself. The stone, about 4 feet in height, is sometimes capped by a silver mask, and is specially worshipped on Sunday and Tuesday. Bhaironāth is believed to ride on a dog, a figure of that animal being painted beside the entrance to his temple, which dogs are permitted to enter. This is but one of many traces of dog-worship—one of the innumerable incongruous factors combined in popular Hinduism. The existing temple is modern. (For dog-worship see Crooke, *PR* ii. 218–221).

So much may suffice to give the reader some notion of the multitude of temples which crowd the narrow streets of Benares. Almost all the holy places which were open to Sherring forty years ago are now closed to Europeans, and it is not now possible for a European writer to give exact descriptions of the Benares shrines from personal knowledge. Every visitor is struck by the swarms of sacred bulls blocking the lanes, and the bands of mischievous monkeys which have licence to pilfer eatables and damage tiled roofs to their hearts' content. These animals are specially numerous around the shrine of Durgā, known to European visitors as the 'monkey temple.'

3. Various religious elements.—No man can tell how the notion of the supreme sanctity of Benares originated, but there is no doubt that the city dates from remote antiquity, and that as far back as tradition can reach the site was always the holy of holies. The fact that about B.C. 500 Buddha selected the neighbourhood of Benares as the scene of his earliest public preaching, the place where he first turned the 'wheel of the Law,' and set it rolling over the world, is good evidence that in his days the city already enjoyed a reputation for pre-eminent sanctity, and was the most suitable place in which to proclaim a new creed.

Buddhism was still a strong force at Sārnāth (wh. see) at the time of Hiuen Tsiang's visit in A.D. 637, and no doubt continued to enjoy a large share of favour under the Pāla kings of Bengal, whose dominions certainly included Benares, at times, at all events. The religion of Gautama probably held its own until the Muhammadan conquest of 1193, when the multitude of images crowding the Buddhist shrines must have excited the fury of the warriors of Islām, as happened in other places. The buildings at Sārnāth bear clear traces of destruction by fire, which may be safely attributed to the date mentioned.

But even while Buddhism enjoyed the patronage of kings, the religion of the Brāhman was always predominant, and Benares proper would seem to have been throughout the ages a Hindu Brāhmanical city rather than a Buddhist one. In Hiuen Tsiang's days the followers of Śiva, the great local deity, far outnumbered the adherents of Buddha, and Śiva, in many forms and under many names, is still the deity whose worship characterizes Benares. Of course other deities have their votaries there, but all are regarded as subordinate to Śiva, the 'Lord of all.' Some Hindus believe that the fifth, or dwarf, incarnation of Viṣṇu was born at Benares (*IA* xxxv. 243), and one of the many *melās*, or religious fairs, is held in honour of that incarnation at Barnā Saṅgam in the month of Bhādon (Aug.–Sept.).

Benares is sacred to the Jains as the reputed birthplace of Supārśvanāth, the seventh Tīrthaṅkara, but at the present day the Jain cult is not very prominent in the city. Bishop Heber (*Narrative*, ch. xii.) gives an interesting account of his visit to a Jain temple which few Europeans have been permitted to see. Several Jain temples stand along the bank of the river between Bachraj Ghāṭ and the Asi confluence, and from regard to Jain feeling the shooting of birds and the capture of fish are forbidden in this section of the stream. The Jains under the name of Nirgranthas are noticed by Hiuen Tsiang. All lists of the Hindu sacred cities, which slightly vary, include Benares. The traditional enumeration quoted by Sherring specifies seven such cities, namely, (1) Kāśī, (2) Kāntī, (3) Māyā (=Hardwār), (4) Ayodhyā, (5) Dvāravatī (=Dvārakā), (6) Mathurā, and (7) Avantikā (=Ujjain).

A 12th cent. grant places Kāśi at the head of a list of four famous places for bathing pilgrimages, the others being Kuśika (prob. =Kanauj), Uttarakosalā (=Ayodhyā), and Indrapura (prob. =Indraprastha near Delhi) (*IA* xviii. 13).

A minor religion largely favoured by the lower classes of Hindus in Benares is the cult of the Pānch (Panj) Pīr, or Five Saints, who are variously enumerated in different lists, but always headed by Ghāzī Miyān, the deified son of the sister of Sultan Maḥmūd of Ghaznī. The cult is a degraded adaptation of the Shī'ah Muhammadans' reverence for the five great saints of Islām, namely, the prophet Muhammad, his son-in-law 'Alī, his daughter Fatima, and Ḥasan and Ḥusain, the sons of 'Alī and Fatima. The subject was investigated exhaustively by R. Greeven, who collected the legends and popular songs of the cult. The ceremonies are invariably performed by Musalmān drummers (*dafālī*), and the Muhammadan origin of the worship is fully recognized by its Hindu votaries. Most probably it originated in the inveterate Hindu habit of venerating any manifestation of power. Ghāzī Miyān, the 'prince of martyrs,' was a specially fierce fanatic, and so made his mark upon the popular imagination. Many examples might be cited of the indiscriminate mixture of the rites of Islām and Hinduism by the common people in various parts of India.

4. A seat of learning.—From time immemorial Benares has been a seat of Hindu learning as well as of worship, and has been the resort of the most famous teachers. The city still holds the highest rank as the centre of the intellectual life of India, and its pundits succeed, although not without difficulty, in keeping alight the torch of the wisdom of their ancestors.

Bernier, writing in 1667, accurately described the Indian method of study. 'The town,' he writes, 'contains no colleges or regular classes, as in our universities, but rather resembles the schools of the ancients, the masters being dispersed over different parts of the town in private houses, and principally in the gardens of the suburbs, which the rich merchants permit them to occupy. Some of these masters have four disciples, others six or seven, and the most eminent may have twelve or fifteen; but this is the largest number. It is usual for the pupils to remain ten or twelve years under their respective preceptors, during which the work of instruction proceeds but slowly,' etc. (*Travels in the Mogul Empire*, ed. Constable, p. 334).

In 1817, the year in which the Marāthā power was broken, Ward obtained the names of the men who taught the *śāstras*, or Hindu scriptures, in Benares. Forty-eight teachers then instructed 893 pupils in the Vedas only, while seventeen initiated 218 disciples in the mysteries of Pāṇini's grammar. The other sections of the scriptures, including law, were little favoured. The Benares school of law—one of the five recognized schools—follows in its main lines the system of Vijñāneśvara, the author

of the *Mitākṣarā*, who lived at Kalyāna in the Deccan in the 12th century.

At the present day the competition of European learning must have reduced the attendance at the Sanskrit schools, and the number of pupils must be far less than it was a century ago, when Marāthā patronage was available. It is an established rule that a teacher of the scriptures should not be paid wages for his work, and must be content to trust to the voluntary benevolence of his patrons. This rule caused the failure of the Sanskrit College established in 1791, which could not easily secure the services of the local savants. The building erected for that college is now the mission house of the Baptists. The Queen's College, dating from 1853, which has been worked on other lines under the direction of eminent European principals and professors, has done much to promote the scientific study of Sanskrit. The Central Hindu College, founded by Mrs. Besant in 1898, with the object of bringing up young men on the best Hindu principles, while giving them free access to European learning, is an interesting experiment, which may or may not survive its founder.

5. Religious teachers, etc.—A full account of all the distinguished religious reformers who have dwelt or sojourned in Benares from the time of Buddha, twenty-four centuries ago, to the present day would almost amount to a history of Indian religions, and particularly of Hinduism (wh. see). The connexion of *Buddha* with Benares will be dealt with in the art. SĀRNĀTH, and it will be sufficient here merely to give the names of some of the leaders of Indian thought who have been more or less closely associated with the sacred city; they will be dealt with in separate articles.

The earliest of such leaders about whom we know anything definite is the renowned *Śaṅkarāchārya*, the Brāhman of Malabar, who lived for a considerable time at Benares, surrounded by a large circle of disciples. The weaver-poet *Kabīr*, founder of the Kabīr Panthī sect, a disciple of Rāmānand, was a native of Benares, and lived there from about 1380 to 1420. *Chaitanya*, the revered Vaiṣṇava apostle of Bengal (1485–1533), resided at Benares for some years. *Vallabhāchārya* (1478–1530), who established the Rādhāballabhī sect, died in the holy city. No name sheds more glory upon Benares than that of *Tulsī Dās* (1532–1624), author of the *Rām-charit-mānas*, the Hindī equivalent of the Rāmāyaṇa, the favourite book and justly loved treasure of the people of Northern India. He spent the greater part of his long life at Benares, and a manuscript of his chief work, written about twenty-four years after his death, is in the possession of the Mahārājā, who is the owner of a fine library and an interesting collection of old Indian paintings. The monastery (*maṭh*) where the poet lived and the ruinous *ghāṭ* called after his name are near the Asi confluence. During the 18th and 19th centuries many Hindu authors of more or less note, whose names have been laboriously collected by Grierson, resided at Benares, the most notable, perhaps, being *Gokul Nāth*, whose Hindī version of the *Mahābhārata* was published at Calcutta in 1829, and *Hariśchandra* (1850–85), the poet, critic, and journalist. Ward notices the remarkable case of Hatī Vidyālaṅkarā, a learned Bengālī lady, who taught the *śāstras* at Benares a few years prior to 1817. The Sanskrit College issues a periodical called *The Pandit*, which deals with Sanskrit texts.

The pundits of the sacred city probably are still the most learned in India, but they are so intensely conservative that most of them will have nothing to do with modern notions, and so are losing influence over the young men of these days, who cannot shut their eyes and ears to the signs of the times. Mrs. Besant's College, already mentioned, has been organized to teach a modernized Hinduism of a broad and liberal kind. In connexion with it there is a Girls' School attended by about 120 high-caste girls.

6. Missions.—The long-continued labours of the European missionaries settled at Benares for nearly a century deserve notice. The Church of England Mission was established in 1817, and in the same year the Baptists of Serampore formed a branch of their organization under charge of an Eurasian agent. The work of the London Missionary Society began four years later. The Wesleyans established a mission about 1880. The chief missionary institutions are in the suburb of Sigra. The college founded in the 17th cent. by Rājā Jay Singh, who established the observatory, has passed into the hands of the Church Missionary Society. The missionaries have done much good service in the cause of secular education, especially during the years prior to the foundation of universities in 1857. Since that date their institutions have been overshadowed by those immediately under the Department of Public Instruction. The direct outcome of missionary effort in the way of conversions of adults appears to be very small, and it is obvious that Benares must always present special difficulties to the preacher of Christian doctrines.

VINCENT A. SMITH.

BENE-ISRAEL (more correctly *B'nei-Israel* = בני־ישראל, *i.e.* 'Children of Israel').—By this name is designated a body of Jews inhabiting the Bombay Presidency of India. The community is important in its numbers, amounting to some ten thousand souls, and remarkable in its character. A number of peculiar religious usages among them reward careful attention.

1. Origin and history.—No historical records of their past are possessed by the Bene-Israel. The legend preserved by them as to their arrival in India is to the effect that in long bygone times seven men and seven women were cast by a shipwreck on the Indian coast at a point some thirty miles south of the island of Bombay. Many of the less fortunate of their company were drowned in the disaster, and their bodies when washed ashore were buried by their comrades in two *tumuli*—those of the men in one, and those of the women in the other. These mounds the Bene-Israel still show in the village of Naugaon (or 'New Village'), near the Collectorate town of Alībāg. The fourteen survivors, as they increased in numbers, are said to have spread themselves throughout the villages of the Konkan, in the neighbourhood of their first Indian home. In these places they practised chiefly the trade of

oil-pressing; and this avocation, coupled with their habit of observing Saturday and giving their oxen rest from the oil-mills on that day, gained for them among their Hindu neighbours the name of *Shanvār Teli*, or 'Saturday Oil-men,' whereby they distinguished them from their own Hindu oil-men, who rested their bullocks on Mondays, and were therefore called *Somvār Teli*. This name is in use to the present day.

It is worthy of note that, in the immediate neighbourhood of the spot which the Bene-Israel claim as the place of their first landing in India, there used to exist an important seaport and emporium of trade, which was frequented by the ancient navigation hailing from the Egyptian, Arabian, Persian, and other ports. It was known by the name of 'Chemul' * (pronounced 'Tsemvul'), and was almost certainly the 'Simulla' or 'Timoula' of Ptolemy the geographer (A.D. 150) and others.† In Buddhist inscriptions it appears in the form 'Chemula.' Chinese travellers have called it 'Tchi-Mo-Lo'; Arabic writers, 'Ṣaimur' and 'Jaimur.' It is represented by the present insignificant village and port of Revadanda, dating from the time of the Portuguese, and situated some two miles from the older site, the sea having receded owing to the silting up of the creek. The caprices of local misrule at one period closed this ancient port to foreign trade, and this perhaps may have been the means of cutting off the Bene-Israel from further opportunities of contact with their people elsewhere; for they present the appearance of a community who, having up to a certain point preserved intercourse with the main body of their nation, were at some stage in their history separated from the same, and left to develop in their own independent way. They differ greatly even from the better known Indian remnant of their people inhabiting the Malabar coast. For example, the latter, owing doubtless to their having preserved the means of communication with their brethren in other parts of the world, have retained their knowledge of Hebrew, whereas the Bene-Israel had, till lately, lost all knowledge of their ancient tongue.

Though ranking among the fairest of the people of the country, the Bene-Israel, as to complexion, share the colour of the inhabitants of India. In most of their habits and modes of life and dress they have also accommodated themselves to the ways of the land they live in, and they speak the Marāthī vernacular. Till lately they have wholly rejected the name of 'Jew,' even to the degree of regarding the title as a stigma if applied to them, and have insisted instead on the appellation 'Bene-Israel.' Some would account for this by supposing that at some time or other the adoption of the latter title may have served to screen them from persecution by Muhammadans; but it is, on the whole, more probable that the origin of the name is to be sought in some more positive source. One's eyes naturally turn to the lands which first received the deportations of the Israelites of both captivities, and which continued for many centuries to be the centre of the life of Israelites both of the ten tribes and of the two tribes last taken captive. J. Brühl ‡ relates that in Persia he found the Jews almost invariably calling themselves 'Israel' instead of 'Yahūdī,' and he believes it very probable that many of the Jews of Persia and of Kurdistan (which is partly under Persian and partly under Turkish rule), as well as numbers of the Nestorian Christians, § are descendants of the ten tribes. There are several cogent reasons for connecting the early Jews of India with those of Persia as to origin. Early navigation made the transit between Persia and India easy. Again, in South India the Jews of Malabar are found located side by side with an historic body of Christians, no less unique in character than themselves, known as the Christians of St. Thomé, and these, if not actually derived originally from Persia, as some would have us believe,* were at any rate in their early history most intimately associated with that country, as is witnessed by the discovery of three ancient Persian stone crosses,† and also by the well-known fact that this community long drew its presiding bishops direct from Persia itself.‡ There is therefore no difficulty in believing that Persia, the depositing ground of the Israelites of both exiles, and the place in which they were long massed together in the greatest numbers, and where, also, in later times they were not infrequently subjected to severe persecutions,§ may have been the country which furnished Indian shores with many a contingent of Israelite immigrants. These would probably have been, after all, but the successors of many earlier Hebrew pioneers who had passed to and fro along the well-known trade routes to India, for purposes of merchandise. It is, however, at the same time right to mention that some have believed the Bene-Israel to be an offshoot of the Jews of Yemen (Arabia Felix).‖ Against this not impossible, or, indeed, altogether unlikely view, may be set the fact that no marks of intimacy or tradition of any common origin survive to the present day; nor is there traceable much that is common to the Yemenite Jews and the Bene-Israel in their distinctive observances.¶ To the unbiased observer the Bene-Israel suggest themselves as the descendants of Hebrews who at their first introduction into India must have made somewhat free alliances with the women of the land (as, according to ancient pre-Talmudic Hebrew practice, there was hardly a bar to their doing **), and thus an infiltration of Indian blood into their community would have taken place at an early stage of their sojourn in India. This was doubtless soon succeeded by a rigid practice of allowing marriage only with members of their own body—a rule which the example and influence of the Hindu caste system around them would have tended to encourage, and to which they have doubtless ever since most strictly adhered.

At the present time no Hindu caste could be more exclusive in regard to this custom of allowing racial intermixture than the Bene-Israel. They outban and stigmatize at once as *Kālā Israel*, or 'Black Israel,' all offspring of mixed unions. Such are not allowed at communal feasts to sit in close proximity to the rest of the community, or to

‡ The Jews of China, whose early connexions were with Persia, entered China by sea, *via* India, if tradition be correct.

§ As in the year A.D. 468, under Firuz (or Peroz), 'The Wicked.'

‖ Wilson, *The Bene-Israel of Bombay: an Appeal*, also *Lands of the Bible*, ii. 668. Rabbi J. Saphir, like Dr. Wilson, considers that the physiognomy of the Bene-Israel resembles that of the Jews of Arabia (see *Eben Saphir*, p. 43).

¶ The Bene-Israel possess a tradition that they came to India from 'the northern provinces.' This, Mr. Haeem S. Kehimkar would interpret of the Galilæan northern parts of Palestine, and he thinks that the Bene-Israel may have come direct to India by way of Ezion-geber and the Red Sea, for Jews settled in Galilee just before the Christian era. See Wyse, *History of the Hebrews' Second Commonwealth*.

** See Dt 21^{10-14}; also Smith's *DB*, *s.v.* 'Marriage.' From Dt 23^{3-8} may be inferred what might be done in regard to foreigners *other* than the Ammonite or Moabite.

intermarry with any except their own class. An analogy would seem to exist between the Bene-Israel and some other more or less unique Jewish communities, such as the Falashas of Abyssinia, the Jews of K'ai-feng-fu in China, the Jews of Yemen, and some among the so-called 'Black Jews' of Malabar, all of whom, while they manifest unmistakably the presence of the Hebrew stamina, reveal no less clearly traces of some intermixture with the people among whom they have sojourned. In the case of the Bene-Israel there is a characteristic type pervading the whole community which bespeaks the genuine Hebrew stock from which they have undoubtedly sprung.*

2. Religious customs.—It would be expected beforehand that a people with the antecedents we have described would exhibit much that was peculiar and interesting in their religious customs, when they again came into notice; and this is certainly the case with the Bene-Israel.

Three characteristic Hebrew observances which never died out among them first claim notice. These are (1) the practice of circumcision, (2) the keeping of the Sabbath, and (3) the retention in memory of at least part of the great Jewish formula, the *Shema' Yisrael* (commencing, 'Hear, O Israel, the Lord our God is One Lord!'). For want of a liturgy they were accustomed to use, in their ignorance, the words of the latter formula on every occasion of their religious gatherings, repeating the sentence several times over. We have noted their acquirement of the title *Shanvār Teli* ('Saturday Oil-men'), on account of their unyoking their oxen on Saturdays in observance of the Jewish Sabbath. A further distinctive habit which has clung to them, though some are dropping it now, is the custom of wearing side-locks of hair (פְּאוֹת), in reference to Lv 19^{27} 21^{5}. To this custom the fashion commonly adopted of shaving most or all of the rest of the head is wont to give a peculiarly exaggerated appearance.

(*a*) *Fasts and festivals.*—A regular sequence of religious seasons, fasts, and festivals has been in vogue among the Bene-Israel, and these when examined are found to coincide remarkably with the usual festivals and fasts of the Jews. They were preserved, however, wholly under Indian names, the latter being often connected with some special kind of food partaken of, or abstained from, on the occasion of, or being given on account of the festivity or fast bearing some resemblance to, or coinciding in point of time with, some Hindu or Muhammadan observance. Thus, the Feast of Tabernacles (kept, however, a fortnight out of time) was known as the 'Feast of partaking of Khir,'† a kind of confection made of new rice, sugar, scraped coco-nut, and spices. The Day of Atonement was termed 'Fast of Door-closing,'‡ because on this day all rigidly shut themselves up in their houses, wearing white clothing even to their very caps, and avoiding converse or contact with others. Purim was called 'Feast of Holi,'§ because the time of keeping it coincided with a Hindu festival of the same name (one of rowdy and debased character), observed at the same time. Passover was known as the 'Festival of Jar-closing,'‖ the jar being one containing a sour mixture or sauce, to which conceivably a suspicion of fermentation or leaven may have been held to attach.* The Fast of Ab (for the destruction of the first Temple) was characterized as 'Fast of [partaking of] Birdya,'† the latter being a sort of pulse put into the curry on this day, a vegetable diet having been adhered to during the eight days previous. The Feast of Weeks had somehow dropped out of use.‡

The festivals and fasts so far mentioned appear to form a class of their own among the Bene-Israel. They are all alike designated by the word *san* (pronounced to rhyme with 'turn'), which is a Marāthī word of Sanskritic origin (a word which can denote both 'fast' and 'festival'). It will be observed that the seasons of observance already described relate uniformly to the chief and oldest Jewish festivals and fasts. There is a further set of festivals and fasts, also in vogue among the Bene-Israel, which have every appearance of being a class by themselves, and which have probably been superinduced in later times upon their older observances, presumably at the instigation of comparatively recent Jewish visitors and reformers from without.§ The festivals and fasts now alluded to, while relating almost entirely to Jewish holidays of later institution, are known among the Bene-Israel by names derived from the Hindustani language only, such as *roza*, of Persian origin, and *'urs*, of Arabic origin. To the latter class belong the ten days of expiation observed by Jews preceding the Day of Atonement, on which special penitential prayers called *selihoth* are used, and which, because of their bearing some resemblance to the long fast of the Muhammadans, were called by the Bene-Israel *Ramzan*.‖ A day after the keeping of *Navyāchā San*, or 'New Year's Festival,' occurs the *Navyāchā Rozā*, or 'Fast of the New [Year].' It corresponds probably to the Fast of Gedaliah, kept by Jews on the 23rd of Tishri; but if so, precedes it by twenty days. Two fasts occurring at two different seasons of the year are observed under the one name of *Sabābi Rozā*, the one fast apparently corresponding to the Fast of the 10th of Tebeth, commemorating the beginning of the siege of Jerusalem, and the other to the Fast of the 17th of Tammuz, kept in remembrance of the breach made in the wall of Jerusalem. The meaning of the word *Sabābi* is obscure. According to its Hindustani meaning of 'meritorious,' it might denote that the keeping of these additional fasts was considered a work of special merit; or, if referred to the Hebrew root סָבַב (=to surround), an allusion to the investment of the city would be obvious.¶

* A thoroughly good idea of the appearance of the Bene-Israel may be gained from the excellent portraits from photographs given in the *JE* under heading 'Beni-Israel.' Two out of the three synagogues shown there, however, do not belong to the Bene-Israel.

† *Khiricha San.*

‡ *Dārfalnicha San.* Rabbi J. Saphir (*Eben Saphir*, p. 45) says that he was puzzled to account for this name till he bethought himself of a prayer entitled תְּפִלַּת נְעִילַת שְׁעָרִים ('prayer of the shutting of the gates'), forming part of the concluding section of the Service of the Day of Atonement in the Modern Jewish Prayer Book.

§ *Holicha San.* ‖ *Anasi Dākhāchā San.*

* The rice-bread almost exclusively used by the Bene-Israel is at all times an unleavened bread.

† *Birdyāchā San.*

‡ The modern Jewish habit of doubling the first and last days of many festivals was not known to the Bene-Israel.

§ Such a reformer may have been David Rahabi, who is said by the Bene-Israel to have visited them long ago, and to have instituted this reform. He may have come from Cochin, where the surname 'Rahabi' (signifying 'Egyptian') still exists in the form of 'Roby.' Such an one would have doubtless communicated with the Bene-Israel through the medium of the Hindustani dialect, only in that case he must have visited them subsequently to about A.D. 1400, before which date Hindustani (or Urdu) was not a spoken language—not, as the Bene-Israel think, 900 years ago.

‖ The Bene-Israel add to these days a special fast during the preceding month of Elul (cf. Leo Modena [Rabbi of Venice, 1637], *History of the Rites, Customs, and Manner of Life of the Present Jews throughout the World* [tr. London, 1650]: 'Therefore do they begin on the first day of Elul, which is the moneth immediately going before, to think of Acts of *Penance*; and in some places, they rise before day, and say Prayers, make Confession of their sins, and rehearse the *Penelentiall Psalms*. And there are many amongst them, that Indict themselves *Fasts*, do *Penance*, and give alms to the Poor, continuing on this course, till the Day of Pardon comes; that is to say, for the space of Fourty daies').

¶ These are the explanations suggested as possible by Mr. Haeem S. Kehimkar. The writer of this article would take the

A very extraordinary festival, and one now hardly observed, was that known as *Eliyah hanabichā 'urs*, or 'the Fair of Elijah the Prophet.' To keep it the Bene-Israel resorted annually to a village-spot in the Konkan, named Khandalla, where, according to a legend, Elijah the prophet had once appeared to them, and thence had ascended to heaven. In date this festival corresponds to a Jewish one known as the 'New Year of the Trees' (ראש השנה לאלנות), in reference to Lv 19^{23-25}. The observance of such a festival as this seems indicative of a very prolonged sojourn of the Bene-Israel in India; for such a mixture of knowledge and ignorance in regard to the prophet Elijah, and its incrustation into such a practice as that mentioned, can hardly have sprung up and taken fixed form in a short time.* Hindus are accustomed to keep *melas*, or 'religious fairs,' in honour of their temples, and the Indian Muhammadans have also similar fairs, called by them *'urs*, in honour of the tombs of their *pirs*, or departed saints; and the Bene-Israel, in the strange custom that we have mentioned, must have been adopting the habits of the country.

(*b*) *Nazirite vow.*—Besides these rites and holidays of Judaism in general, the Bene-Israel have several interesting customs not so generally in use among Jews elsewhere, one of which is an apparent survival of the Nazirite vow. A boy in infancy is made the subject of a vow on the part of his parents.† The cause may perhaps be that for long they had no male offspring, or that former children had died. From the time when the vow is made till the time of its redemption no razor is permitted to pass over the head of the child. In consequence, a lad comparatively grown up may often be seen with long hair tressed up behind his head after the manner of a woman. When the time arrives that his parents feel able to redeem their vow, the hair is shaved off and weighed in the scales against gold or silver, or whatever else the parents may have before decided to give, and the equivalent so obtained is devoted to religious purposes. The shaved-off hair, instead of being burnt (Nu 6^{18}), is thrown into some tank or river, probably in keeping with the customs of Hindus and Indian Muhammadans, who are much given to letting their religious ceremonies culminate in the immersing of something in the water, the custom probably having its roots in Hindu veneration for the river Ganges, which is commonly credited with the power of re-appearing in all sorts of impossible places.

(*c*) *Burning of frankincense.*—A custom hardly less interesting than the foregoing, and one which prevailed till quite lately among the Bene-Israel, was the burning of frankincense on a number of religious occasions. Quite recently they have been dissuaded from its use by their Jewish co-religionists of other lands, who have represented to them that the practice was a superstitious one, copied from surrounding idolatry. It is by no means certain, however, that this custom had not its own ancient and independent Hebrew origin. It is significant that the Jews in China had a provision for burning incense in their synagogue at K'ai-feng-fu, it being a mark of Imperial favour that the incense for the purpose was provided free of cost by the Emperor himself. As already mentioned, the tradition was that the Jews had entered China by sea, *via* India, in the first instance.*

An indispensable concomitant in a number of the religious ceremonies of the Bene-Israel is a sweet-smelling herb named *sabzā*. Botanically it is the *Ocymum pilosum vel basilicum*, and somewhat resembles mint. It is much used, also, in religious rites by the Indian Muhammadans. A smaller species of the same herb is the *Ocymum sanctum*, or 'holy basil,' the well-known sacred plant of the Hindus, called by them the *tulsī*. The important place which the *sabzā* twig occupies in numerous ceremonies of the Bene-Israel suggests the possible idea of its being used as a substitute for the hyssop of Mosaic ordinances.

(*d*) *Offerings.*—Certain religious offerings are made by the Bene-Israel which invite careful attention. A singular feature in them is the offering of goats' liver or of the gizzards of fowls (whichever animals may have been slain on the occasion). These portions, after being cooked, are brought and offered to the ministrant of a religious ceremony, the rest of the flesh of the animals slain being eaten by the host and guests assembled. It should be observed here that the Bene-Israel rarely, if ever, partake of any other flesh than that of goats (including occasionally sheep) and fowls. Again, a certain confection known as *malīdā* (a Persian word), a kind of cake or pudding, is used ceremonially by them. The impression irresistibly conveyed to the observer by all this is that these are survivals in this community of the ancient meat-offerings of Mosaic times, if not also vestiges of ancient sacrifices themselves. As a typical example of the way in which the various articles mentioned above, including frankincense, *sabzā*, and *malīdā*, were employed by the Bene-Israel in various ceremonies connected with festivals, vows, marriage, burial, etc., we may quote the following description of the ceremony performed at the fulfilment of a vow, as given by Haeem S. Kehimkar, in his *Sketch of the History of the Bene-Israel*:—

'A feast was given in the evening in the following manner:—After the invited party came in, a clean white towel or clean white sheet was spread on the floor, whereon a dish containing *malīdā*, five pieces of unleavened bread made of rice-flour besmeared with sweets, twigs of *sabzā*, and five pieces of the cooked liver of a goat, was placed. Another dish containing cakes of wheaten flour fried in oil, and wafers of unleavened bread also fried in oil, and livers and gizzards of as many fowls as may have been killed on the occasion, was also placed there. The dish also contained a glass of wine or other liquor as a drink-offering; and several other plates filled with all sorts of fruits were placed upon the sheet, over which they said the *Kiriyath Shema* about a dozen times. . . . After the ceremony was over, a handful of *malīdā*, together with a twig of *sabzā* and a piece of each of the articles placed in the dish and in the plates, were taken by the man who officiated as priest in his own hands, and before presenting these to the lady who had made the vow, he asked her what had caused her to make the vow. On her giving the reason, she was told that she was free from her vow, and the *malīdā* was given to her. The articles in the dish and plates were distributed among the party, except the pieces of liver and gizzard, as well as the five pieces of cakes and wafers, which were kept by the officiating priest for himself, while the guests were served with the feast.'

(*e*) *Dietary rules.*—With regard to dietary rules, it was customary with the Bene-Israel either to remove the sinew in the leg, in accordance with Gn 32^{32}, or, if skill sufficient for this somewhat intricate operation did not exist, to reject as food

* See *JE*, *s.v.* 'China.' Note also what is said there as to certain customs in use among Chinese Jews pointing to a pre-Talmudic origin.

opportunity of stating here his very great indebtedness to this gentleman's writings for much information embodied in this article. Mr. Haeem's unpretending pamphlet, *A Sketch of the History of the Bene-Israel*, has thrown a flood of light on many an unknown custom among his people. Especially is what is here written as to festivals and fasts largely due to his pamphlet.

* See in *JE*, *s.v.* 'China' the arguments advanced for a very early date of the Jewish settlement in China. It is significant that the tradition was that the earliest introduction of the Jews into China was from the West, by crossing the sea, from India. It is no less worthy of notice that the MSS of the Jews of China show a connexion with the Jews of Persia.

† Or the vow may have been made before birth, contingent upon a son being given. The rite is not confined to lads. The writer was himself present when the subject of it was a girl, whose hair was shaved off as described above. If this be held to show that the vow-ceremony among the Bene-Israel is derived from Hindus (among whom such a practice does exist), it surely only removes the question of the origin of such vows in Eastern lands a stage further back.

the hindquarters of the animal altogether.* Blood, fat, animals strangled or maimed by beasts of prey, the Bene-Israel shunned altogether as food. In regard to fish, they would eat only those which had both fins and scales.

(*f*) *Kiss of peace.*—In common with the Jews of Cochin, the Bene-Israel preserve the custom of parting at their religious gatherings with the Kiss of Peace. The custom likewise prevails among the Christians of St. Thomé in Malabar, and is found, again, amongst the East Syrian Christians of Kurdistan.† This may be taken as one more indication of the probable link of connexion between the Jews of India and those of Persia in ancient times, especially when it is remembered, as we have already mentioned (see above, p. 470), that the Nestorian Christians of Kurdistan have a tradition of having been originally converts from Judaism. In performing the salutation among the Bene-Israel, the chief minister first bestows it on the most important persons present near to him, by receiving the fingers of the outstretched hand (the palms held vertically) between his own hands, after which the hands of both are simultaneously released, and the tips of the fingers of each person passed to his own lips and kissed. Those already saluted turn to bestow the salutation on others, the younger usually seeking it from the older, and inferiors from their superiors, till all have saluted each other. The procedure continues for some two or three minutes, during which an audible sound of the lips is heard throughout the synagogue.

(*g*) *Cup of blessing.*—At the close of some services in their newly-revived synagogues a ceremony takes place which has been termed by Christians who have observed it, 'the Cup of Blessing.'‡ A cup, containing a juice pressed from raisins for the purpose, is put into the hands of the minister, who, after first pronouncing a blessing over it, partakes of a portion of it. The remainder is then poured by the attendants into a large vessel containing much more of the same mixture. The *shamāsh*, or sexton, then passing round the assembly, with one or more assistants, distributes the contents of the vessel to each member of the assembly by means of pairs of little silver cups, one of which is being filled while the other is being emptied. As to the antiquity of this custom it is difficult to pronounce. In the opinion of some it is merely the performance of the usual Jewish ceremony of the *Habdālāh* (חבדלה)§ in the synagogue instead of in the home; and if so, it may be of comparatively recent introduction among the Bene-Israel.

3. **Use of Hebrew names.**—The Bene-Israel have mostly retained the use of Biblical names, but the latter have commonly assumed an Indianized form, as *Banaji* for Benjamin, *'Abaji* for Abraham, and the like.‖ Similarly the names of the women receive the Indian affix *bai* (corresponding to our Mrs. and Miss) appended to them, as, for example, *Sarahbai*, *Miriambai*, and the like. Where the names of men and women of the Bene-Israel are purely Indian, they do not appear to be in any case compounded with the name of any Hindu deity, as is largely the case among Hindus. Surnames (which the Bene-Israel are gradually discarding) were formed by the addition of the syllable *kar* (pronounced to rhyme with 'stir,' and equivalent in meaning to 'inhabitant of') to the name of the village with which a man's family had become identified in the earlier days of Israelite settlement, such as *Kihimkar*='resident in [the village of] Kihim.' Dr. Wilson has remarked that at the time when he made his investigations the name 'Reuben' was the most common amongst men, and that the favourite Jewish names of *Jehudah* and *Esther* were not found. Both names have come into use among the Bene-Israel now.

4. **Hindu customs.**—Though preserving their characteristics and religion remarkably in the midst of an unfavourable environment, the Bene-Israel have not survived their long isolation altogether uninfected by the surrounding idolatry. Certain domestic customs and usages, too numerous and intricate to detail at any length, still linger among them, more particularly in rural parts, and specially among the women of the community. These owe their origin purely to Hinduism, though not all of them are of an idolatrous or superstitious character. Such customs are found plentifully connected with marriage ceremonies; also with occasions of birth, puberty, betrothal, sickness, and death.* On an occurrence of smallpox, or even during a performance of vaccination, the goddess of small-pox, *Shītalvādī* by name, is sought to be propitiated by some, and the furtive keeping of Hindu idols has not been unknown. As to the use of charms, and superstitious usages at childbirth, many parallels of a no less debased kind could be drawn from Kabbalistic practices under the sanction of modern rabbinical Judaism (see BIRTH [Jewish]). Rabbi Solomon in his *Travels* mentions that in the year 1846 he saw at Belgaum (a town in the south of the Bombay Presidency) the wives of [Israelite] men in the army stretching forth the fingers of their hands to the fire and kissing them as they lit the lamps.† It is right to say that a great effort has been made in recent years by the Bene-Israel as a body to throw off all this, and that a great change has taken place already.

5. **Organization.**—As to communal organization, the Bene-Israel, under the older order of things, recognized the authority of a headman, called a *muqaddam*, over each village community where sufficient in numbers, whose powers were considerable. He would assemble the community when necessary, preside over their deliberations, and act as their executive in matters relating to caste-discipline or organization generally. Besides this officer, there was another (not, however, found in every village) named the *qāzī*, meaning properly 'judge.' To him pertained the religious duties of ministrations at religious ceremonies, the performance of circumcision, marriage, rites of burial, and frequently the slaughtering of animals. With the *muqaddam* and *qāzī* were associated certain

* In regard to China, it is observable that this practice, even more than the keeping of Saturday as the Sabbath, attracted the notice of the Chinese, so that the Jews were accorded the title of *Tiao Kiu-Kiao*, 'the sect which extracts the sinew.' The writer of the article on 'China' in *JE* iv. 33 deduces from this appellation a further argument for the great antiquity of the arrival of the Jews in China, for he says, 'Rabbinical Judaism would have suggested more distinctive peculiarities of the Jews to the Chinese.' If so in China, how much more may we suppose great antiquity for the arrival of Israelites in India?

† Note the following from Maclean and Browne, *The Catholicos of the East and His People* (S.P.C.K., London, 1892), p. 255: 'One [deacon] goes to the Bema and says a litany; another gives the Kiss of Peace to the people, somewhat as at the daily services, except that the celebrant first kisses the altar and the deacon takes his hands between his own and kisses them, and then goes to the sanctuary door and gives the peace to the person of highest rank, and then to the next, and so on.'

‡ Wilson, *Lands of the Bible*, ii. 672.

§ A ceremony for placing a distinction or line of demarcation between times secular and sacred, as, for example, between week-day and Sabbath.

‖ A good example is the name of the retired commandant who built the first synagogue of the Bene-Israel in Bombay in 1796. His name was *Samaji* (=Samuel) *Hassaji* (=Haskel, *i.e.* Ezekiel) *Divekar* (=resident of the village of Dive).

* Many of these practices will be found described in *BG* (Bombay, 1885) xviii. i. 515–535.

† *Travels of Solomon* (מסעות שלמה), p. 100: בעיני ראיתי בשנת 1846 כאשר הייתי בעיר בלגים את נשות אנשי הצבא אשר שם כאשר הדליקו את הנרות שלחו את אצבעות ידיהן אל האש ותנשקנה אותם.

chaugale, or 'elders' (properly four in number) who assisted them as counsellors. At communal meetings all adult members had a voice.*

6. Modern conditions.—It is only in quite recent times that the Bene-Israel have emerged into the light of history. It is through the observations and researches of Christians that they have become known, and in fact have been raised to some degree of education and advancement, and provided with their Scriptures and fresh beginnings of a knowledge of Hebrew.

(*a*) *State of transition.*—The long centuries during which they had previously remained hidden from notice can, it may safely be surmised, never have their story told. We now see the Bene-Israel at the parting of the ways, just as they are reaching out towards modern modes of life and culture. Their present tendency and aim is to forsake the ancient landmarks of the past, which it has been the object of this article to try to search out and describe. Their present effort is to conform themselves in all respects to the ways of modern Judaism, choosing as their standard the easier and more liberal principles of the Reformed School of Judaism rather than the more rigid ones of strict Talmudic Judaism, which, indeed, their present ignorance of Hebrew would ill fit them to follow. While they are in this transition state, it is now and then difficult to determine what has been of ancient usage among them and what has been of late, or of comparatively late, introduction. The study is further complicated by the probable occasional engrafting that has taken place, upon their original observances, of some of later date by occasional visitors and reformers at long intervals, in the way we have described. Previously the home of the Bene-Israel was exclusively among the villages of the mainland, extending over a tract running parallel with, and southwards for some fifty miles of, the island of Bombay. But since the establishment of British rule in India the Bene-Israel have commenced to migrate largely into the city of Bombay, where over four thousand of them now reside.

(*b*) *Occupations.*—Formerly, besides following their hereditary occupation of oil-pressing, many became also owners of land, cartmen, carpenters, stone-cutters, and cultivators. Now, in addition to these and similar occupations, they are pressing forward into positions as office-clerks and mechanics, and into the services of government, railways, and the municipalities; and some into the learned professions also. In ancient times they displayed great prowess as soldiers, and under the East India Company rarely failed to rise to the position of non-commissioned and commissioned officers. They proved loyal to a man to the British at the time of the Mutiny. The new system of 'promotion by caste returns,' by which the numerical strength of a particular caste is required, as well as intrinsic merit, to secure advancement, has served greatly to deter a minority like the Bene-Israel from now entering to any large extent on a military profession. Not many are possessed of wealth at present, and it is a regrettable fact that some who at one time were well off have squandered their patrimony and become poor.

(*c*) *Synagogues and worship.*—Originally the Bene-Israel had no synagogues or houses of prayer. The oldest of their synagogues in Bombay (which is also the oldest Jewish synagogue in Western India) bears the date A.D. 1796. In Bombay they have erected, mostly within the last hundred years, four or five synagogues of their own, two of which are of a permanent character, specially built as synagogues, and outside of Bombay eight or nine in different townships. In all of these worship is conducted in the modern Jewish manner,* and they possess the usual staff of synagogue officers, namely, the *ḥazzān*, or reader, the *gubbai*, or treasurer, the *shamāsh*, or sexton, etc.; and use the modern Jewish Prayer-Book of the *Sephardim*. They have now procured rolls of the Law, and read from them in the usual way. They have, however, no *kohanim* (supposed Levitical priests); and therefore the few functions assigned to such in the usual Jewish ritual have to go unperformed. They hardly now maintain their old character for the keeping of the Sabbath, for in Bombay and other centres of trade they attend offices, factories, and workshops in large numbers on that day. Though domiciled for a long course of centuries in India, they have done nothing to convert their Indian neighbours to the faith of the God of Abraham. In this respect their influence appears to have been *nil*.

(*d*) *Chief characteristics.*—The Bene-Israel are as yet but a feeble folk. Nevertheless they possess many sterling qualities, which might readily place them in advance of many around them. Though too ready to be quarrelsome, and displaying too great a fondness for liquor on festive occasions, especially on the part of the rising generation living amongst the temptations of large cities, they have always borne a good character for morality; and for courtesy and hospitality they are unsurpassed. Their women show considerable aptitude as teachers and nurses, when properly trained. In regard to religious inquiry, great indolence and want of earnestness prevail. Keenness as to material progress—and indifference to almost everything else—seems at present a ruling characteristic. A great future in India may be in store for such a people as this, if they will live fully up to their opportunities.

J. HENRY LORD.

BENEVOLENCE.—I. *AS A QUALITY OF HUMAN CHARACTER.*—1. The New Testament usage.—The NT writers are concerned mainly with practical morality. They make no attempt to frame a system of ethics. In studying one of the NT virtues, accordingly, we need hardly try to reach a scientific definition of it. We ought rather to note the working in it of the ultimate principle of NT morality, viz. love, and to trace

* The most modern religious revival amongst the Bene-Israel is connected with the names of a group of Jews from Cochin in the early part of the last century. Prominent amongst these stands out the name of Hacham Shellomo (Solomon) Salem Shurabbi, who died in 1856, after twenty years spent in endeavours for the religious resuscitation of the Bene-Israel (see Haeem S. Kehimkar, *Sketch*, p. 22).

* Their services are in Hebrew, a language which many can now read, but hardly any can understand. Some creditable efforts have been made of late years to provide service-books having the Hebrew interleaved with Marāthi. The daily service-book thus treated is a handsome volume, produced at some expense.

the phases of character and conduct in which its presence is marked.

In considering the operation of the supreme principle of love, we find one broad distinction. The object of love is man in his twofold aspect as a possessor of sacred rights and as a creature of manifold needs. On the one hand, accordingly, love requires the fulfilment of justice. A man must be protected in all the rights of his humanity, inasmuch as he is no mere thing or chattel, but a being made in the Divine image, and meant for the Divine fellowship. On the other hand, with equal emphasis the NT declares the obligation of benevolence. Our fellow-men are sacred not merely in their rights, but in their needs; and we are bound by the principle of love not merely to defend the former, but to meet and relieve the latter. The needs of men are meant to evoke the virtue which we designate by the term 'benevolence,' and by the other cognate words which in various aspects develop its meaning.

In the NT the following aspects of benevolence are the most clearly marked:—

(1) *χρηστότης.*—This beautiful term may be rendered by our word 'benevolence,' giving us the idea of a disposition in which there is nothing harsh or bitter, because the love of self has been swallowed up in a love larger and more compelling. In such a disposition there is a fountain of goodwill which flows forth freely and spontaneously in emotions of loving-kindness and deeds of helpfulness. Closely parallel is the term 'benignity,' by which, indeed, *χρηστότης* is rendered in the Rheims version of Gal 5[22]. It suggests a character large in charity, tolerant in judgment, gentle in speech, of ripe wisdom in the affairs of the soul, finding its delight and its reward in the comfort with which it relieves distress. Our familiar word 'kindness,' however, brings us nearest the heart of this very lovely phase of character. It is the very hall-mark of love (1 Co 13[4]). It has close affinities with forbearance and long-suffering (Ro 2[4], 2 Co 6[6]). It is its very nature to be patient and hopeful, and not to be turned aside by the frowardness and thanklessness of those whom it would help. Its conspicuous contrast is 'severity' (Ro 11[22]). Not, indeed, as though severity were reprehensible; but only that under the limitations of human insight, kindness ought to prevail, while severity must be kept within the restraints of love. Kindness in thought, word, and deed is the homely yet hard requirement of the NT law of love.

(2) *ἀγαθωσύνη.*—This may best be rendered 'goodness' (Ro 15[14], Gal 5[22], Eph 5[9], 2 Th 1[11]), in the sense of active goodness or 'beneficence' (*bonitas*). It emphasizes conduct, while *χρηστότης* emphasizes disposition. '*χρηστότης* is potential *ἀγαθωσύνη*; *ἀγαθωσύνη* is energizing *χρηστότης*' (Lightfoot on Gal 5[22]). Kindness issues in goodness, and is a characteristic of it. It has often been remarked that *ἀγαθωσύνη* does not occur in classical Greek, and that the virtue it expresses is not to be found in the Greek ideal of character. It has no place, for instance, in Aristotle's famous account of the 'high-minded' man. The *μεγαλόψυχος* will, indeed, confer benefits. He will do so, however, not from the love of man as such, but from a sense of what is suited to the artistic completeness of his character. In the NT, man is looked at under the light of the Divine love, and duty is construed from the point of view of the Divine purpose. The God-like man, accordingly, is the good man, in whom love manifests itself as a ceaseless beneficence, which is a finite reproduction of the infinite goodness of God. The good man, unlike the *μεγαλόψυχος*, thinks not of himself in his beneficence, save as the recipient and the steward of the Divine bountifulness.

(3) *εὐδοκία* and *εὔνοια.*—The former describes the gracious will, which is the source of the benevolent deed (Eph 1[5, 9], Ro 10[1], Ph 1[15] 2[13]). The latter is applied to the inner spring of conduct, which, viewed from without, might seem mechanical or compulsory. Even slaves may redeem their enforced labour from the taint of servility by performing it with goodwill to their masters as part of a Divine service (Eph 6[7]).

(4) *φιλανθρωπία.*—Benevolence has for its object every sentient creature, and thus includes kindness to animals. Its proper object is, however, man, whose greatness, as a being made in the image of God, is combined with the frailties of the 'fleshly' side of his nature; and in this connexion it is described as 'philanthropy.' With singular felicity the NT speaks of the 'philanthropy of God' (Tit 3[4]). Ordinarily, the term is applied to the love which man owes to his fellows (Ac 27[3] 28[2]). These references show that philanthropy has a less distinctively Christian note than goodness. It is exhibited by those who have not known the love of God in Christ. In this virtue Christianity has not made an absolutely new discovery. It has rather recovered and reinforced a native energy of human nature, which, amid terrible defacement of the Divine image, has not lost all trace of its original and prototype.

(5) *ἁπλότης.*—'It is not exactly liberality . . . it is the quality of a mind which has no *arrière-pensée* in what it does; when it gives, it does so because it sees and feels the need, and for no other reason; this is the sort of mind which *is* liberal, and God assigns a man the function of *μεταδιδόναι* when He bestows this mind on him by His Spirit' (Denney in *Expos. Gr. Test.* on Ro 12[8]). Liberality describes benevolence in its absorption in the need which it relieves. It has a finer quality than the corresponding virtue described by Aristotle (*Nic. Eth.* bk. iv. ch. i.). A parallel to our Lord's word, 'It is more blessed to give than to receive,' may, indeed, be found in Aristotle's sentence, 'It is more distinctive of virtue to do good to others than to have good done to you.' Yet there is a significant difference. In the one, liberality is a product of a Divine grace, and awakens a Divine gladness. In the other, it is an artistic achievement, and awakens an æsthetic delight. In Aristotle's whole account we do not find 'a word about benevolence, or love to others, as prompting acts of liberality. We find no other motive but the splendour (*καλόν*) of the acts themselves' (Sir A. Grant, *Aristotle's Ethics*, ii. 60).

In the teaching of Jesus benevolence is not discussed, but it is depicted with consummate skill in His parable of the Good Samaritan, in whose action kindness and goodness, goodwill, philanthropy, and liberality are exquisitely blended. In the character of Jesus no aspect of benevolence is wanting. *χρηστότης* is seen in His bearing towards those who were excluded from the respect of men. *ἀγαθωσύνη* is illustrated in the whole ministry of Him who 'went about doing good.' *εὐδοκία* characterizes His attitude towards all men, even those who rejected Him. His *φιλανθρωπία* breaks through all barriers of race or creed or artificial conventionality. His *ἁπλότης* pours forth endless benefits, physical and spiritual; He bestows not merely life, but abundance. This virtue, which Jesus thus portrayed and exemplified, He laid upon His disciples as a sacred obligation. There must be no limit to their liberality (Mt 10[8]). Only by ceaseless beneficence can they realize the privilege of sonship toward God, for He is 'kind unto the unthankful and to the evil' (Mt 5[45, 46], Lk 6[35]).

2. Its place in the history of ethics.—Benevolence is not an isolated ethical unit. It is an element in the organism of virtue, and gives tone and quality

to the complex of virtues which constitute the character as a whole. The value of an ethical system, like that of an individual character, may be estimated by the place which benevolence occupies in it. To trace the varying recognition of this virtue in the history of ethics would be to write the moral history of man. A few steps in the great development may here be indicated.

(1) *Greek ethic.*—We have seen that benevolence does not appear in those systems which reflect the life of citizenship in the independent and intensely aristocratic free cities of the Hellenic world. The reason is that man as man has not yet arisen on the view of the Greek moralist. He is thinking of life within the limits of a Greek city. The intellectual and æsthetic interests prevail. There is room for patriotism. Self-interest must yield to the claims of the State. But goodwill to man, the obligation of helpfulness to all the children of need, and the 'enthusiasm of humanity,' have scarcely dawned on the Greek mind in its quest for ethical completeness. When the independent city falls, and the barrier of its walls is levelled, men are able to look abroad, and to discern more clearly the bonds that connect them with their fellows. The age of the great individualistic philosophies marks the entrance of benevolence into the circle of the virtues. Epicureanism (*q.v.*), indeed, might seem to be selfish and destitute of sympathy. It may be urged, however, that its primary impulse was humanitarian, and that its true purpose was to deliver men from the spiritual bondage in which their souls were sunk. Its gospel of *ἀταραξία* was proclaimed to a despairing world by men who, like Epicurus and Lucretius, were full of sympathy for their fellow-sufferers (see Masson, *Lucretius*, 307, 321). Yet it is in Stoicism (*q.v.*) that we find the first explicit recognition of benevolence. The high ethical rank of Stoicism has been universally recognized. Its description of humanity as an organism,—often in Seneca and Epictetus with striking verbal resemblance to the language of St. Paul,—its ample assertion of the value of man as man, its emphasis on the duty of boundless helpfulness, its beneficent influence on social reform and Roman jurisprudence, indicate a great advance in the moral history of man.

At the same time, the failure of Stoicism is as evident as its triumph. (*a*) Its ideal is empty and unrealizable. Stoic cosmopolitanism is no more than a formal unity of men as beings possessed of reason.

'What is meant by a *φιλανθρωπία* that is not fertile in special affections to individual human beings, affections which adapt themselves to their special character and the special relations into which they are brought? And what is meant by an organic unity of mankind in a *πολιτεία τοῦ κόσμου*, if the reason that is to bind them together be taken merely as a common element in the nature of each, which connects them in spite of their differences in other respects?' (Caird, *Evolution of Theology in the Greek Philosophers*, ii. 126).

(*b*) It failed to exemplify in the details of life the very virtue which it was the first to introduce into the ethical ideal. It proclaims a universal bond and a world-wide sympathy. It too often exhibits a revolting hardness and inhumanity.

'The framework or theory of benevolence might be there, but the animating spirit was absent. Men who taught that the husband or the father should look with perfect indifference on the death of his wife or his child, and that the philosopher, though he may shed tears of pretended sympathy in order to console his suffering friend, must suffer no real emotion to penetrate his breast, could never found a true or lasting religion of benevolence' (Lecky, *European Morals*, i. 191 f.).

(2) *Christian ethic.*—The requirement of a 'religion of benevolence' is satisfied in Christianity. (*a*) Christianity was the fulfilment of the OT religion, which was marked by an intensely social spirit. No doubt, the limits of this social impulse were fixed by the Jewish nationality. At the same time, the great prophetic ideas of the righteousness and grace of God, and of the supreme worth of morality as compared with ritual, were seed sown in the soil of humanity which could not fail of fruit. They found their glorious harvest in the 'new commandment' of love, set forth by Jesus as the law of the Christian fellowship. (*b*) Christianity is fundamentally the life of Christ. His character made one deep and ineffaceable impression upon His followers. They felt that He loved men. They worshipped Him; and they believed that they could truly honour Him only when they poured forth on others the love of which they had been the recipients. Benevolence in the Christian religion is more than the precept of a teacher, more even than a lovely example. It is the very Spirit of Jesus, breathing upon those who adore Him, and quickening them to a life like His. (*c*) Christianity is the consciousness of redemption. God is in Christ reconciling the world to Himself. The Christian is a citizen in the Israel of God, which includes Gentile as well as Jew. He is a member of the household of which God is Father, and which therefore has room for all the children of men. To accept Jesus as Saviour and Lord is to recognize all men as the objects of the Divine benevolence, and to be pledged to its service in the interests of humanity. The NT abounds in exhortations to benevolence (1 Co 13, Eph 5^2, Col 3^{14}, Gal 5^{14} 6^2, 1 Jn 3^{11} 4^{7-9}). The everyday life of the Christian lies within the concentric circles of *φιλαδελφία* and *φιλανθρωπία*. The Christian character presents a new type of virtue; and in it benevolence shines resplendent. The failure of Stoic cosmopolitanism is met by the triumph of Christian benevolence. Instead of being abstract and unreal, Christianity is practical and concrete. Instead of being cold and hard, Christianity has sanctified the emotional side of human nature, and has made love (*ἀγάπη* not *ἔρως*) a virtue, nay, the sum of virtue, and the dynamic of all the virtues.

Christianity proved more effective than Stoicism in suppressing or mitigating great social evils, *e.g.* the exposure of infants, the gladiatorial combats, slavery. Above all, Christianity has established the paramount claims of love. In spite of many sins committed by Christians against the spirit of love, the religion of Jesus has succeeded in binding the obligation of benevolence upon the conscience of the race.

After Christianity lost the fervour and freshness of the Apostolic age, it was invaded by the parallel influences of Stoicism and Judaism, and became dominated by a legal spirit. With the entrance of legalism, the virtues tended to lose their character as elements in a living, spiritual whole, and were subjected to a process of definition and classification. Love ceases to be the sum of virtue. It takes its place as one of the three theological virtues; and to these are added the four virtues of the old Greek lists, revised with more or less success by theologians like Origen, Ambrose, and Augustine.

These lists were elaborated throughout the mediæval period not without real ethical insight, and in them benevolence was amply recognized. From the emblazoned ceilings and walls of churches, from the carved pillars and porticoes of palaces and market-places, from the pages of poets like Dante and divines like Aquinas, the appeal for practical goodness went forth. These exhortations were far from ineffective. 'Nothing shows how the Church of the 13th and 14th centuries had instilled the mind of Jesus into the peoples of Europe like the zeal with which they tried to do their duty by the poor, the sick, and the helpless' (Lindsay, *History of the Reformation*, i. 141). It was a grave defect, however, to substitute lists of duties and virtues for the organization of virtue through one controlling principle. There was also the danger of

over-emphasizing one isolated virtue, till it should become a curse rather than a blessing.

In this way benevolence drew to itself an exaggerated devotion, which had the effect of filling Europe with mendicants and sturdy idlers.

The Reformation was a reaction from legalism. It was a return to primitive Christianity, which was not an ecclesiastical system, but a life in fellowship with Christ. Christianity made a new beginning in its Divine task of educating and regenerating humanity. It is not, however, in one crisis that mankind is brought to its goal. The principle of the Reformation—the spiritual fellowship of man with God—had to be applied in all the fields of man's moral activity; and this implied a process of centuries. The recognition of the fact that virtue, as a spiritual reality, cannot be dismembered and articulated into a code makes its practice far harder than under a legal system. This is specially true of such a virtue as benevolence, when it is no longer defined and limited by a series of outward actions, but has regained its place as an organic outcome of love, boundless in scope and infinitely varied in exercise.

The very success of the Reformation, moreover, in breaking the formal unity of mediæval Catholicism and emphasizing the narrower unities of family and society, as well as the sacredness of the individual, made the problem of benevolence the harder. To maintain it against the perennial selfishness of man, and to apply it amid the increasing complexities of modern civilization, remain the tasks of the moralist and the social reformer.

(3) *The ethic of the 18th century.*—It was inevitable that the abandonment of the principle of outward authority should raise in the most acute form the question as to the sanctions of morality. If moral precepts do not rest on the authority of the Church, from what do they derive their obligatory character? Why, in particular, should men be required to surrender their individual preference to further the advantage of others? The moral problem, accordingly, for a hundred years of post-Reformation thought, during which individualism held the field in psychology and ethics, turned mainly upon the question of benevolence. Is it a radical instinct of human nature? If not, how has it come to occupy the place which common opinion assigns it? The controversy was waged, mainly, in England. *Hobbes* states the question. He finds man's primary condition to be that of appetite and desire. All man's natural tendencies are 'self-regarding.' The *jus naturale* 'is the liberty each man hath to use his own power as he will himself for the preservation of his own nature' (*Leviathan*, ed. 1839, ch. xiv.). A vivid picture is drawn of the evils to which the exercise of this natural right would expose humanity; and a strong appeal is made for the surrender of individual independence to the rule of the sovereign.

Such a cynical estimate of human nature could not but provoke reply. *Shaftesbury* distinguishes two classes of natural tendency, some being directed to the good of others, and some to that of self. Virtue lies in the due proportion of these two sets of natural instincts, a proportion discerned by the special faculty of the moral sense. *Hutcheson* even more forcibly vindicates the reality of benevolence, and resolves all virtue into it. *Butler*, in like manner, argues for the disinterested character of benevolence, and regards it as 'the sum of virtue.' All these thinkers are under the control of individualism; and, from the point of view of 18th cent. individualism, the only possible question was: 'Is benevolence one among the tendencies and impulses which are found in the individual human being?' To this question, the answer could only be a simple 'yes' or 'no.' When, however, individualism began to give way, and an organic view of society to take its place, a fresh study of human nature, and of the 'good' corresponding to it, had to be made. The psychology which enumerates faculties, instincts, etc., has been abandoned. Man is no longer viewed as a mass of tendencies, among which benevolence may be enumerated. He is a living being, a true organism, or 'unity in differences.' His moral nature has been formed by a long process of education and discipline. This historic development has disclosed the deepest fact regarding man's moral nature, viz., that, when man is most 'self-regarding,' he is least himself; that he reaches his true being only when he abandons the point of view of the isolated individual, and goes out to his fellows in self-forgetfulness, and so enriches his own personality through sharing their experience.

Benevolence, therefore, is not an instinct about which it may be disputed whether we do or do not possess it. It is the very energy of the soul, according to its highest excellence, in a perfect life. We come back, accordingly, by another path to the dictum of Hutcheson and Butler that benevolence is 'the sum of virtue,' or rather to the position of the NT that 'love is the fulfilling of the law.' The 20th cent. has begun by accepting the organic principle, and has addressed itself with deep seriousness to the task of its practical application. Amid schemes of social amelioration, however, we need constantly to remember that benevolence cannot be made to order. It is begotten of the sense of membership in a society, which cannot be constructed by any sociological machinery, however ingenious. The message of Christianity is that this society exists. It has descended out of heaven from God. It consists in the fellowship of those who have surrendered themselves to the Divine love in Christ, and are impelled and quickened by a debt whose magnitude grows the more loyally they discharge it. Benevolence, as a social energy, cannot live unless it be revived at the springs of the Divine philanthropy. As the inspiration of the individual life, it must be derived from, indeed it consists in, the constraint of the love of Christ.

II. *AS A DIVINE ATTRIBUTE.*—1. **Its place in the character of God.**—Consideration of the moral attributes of God can be fruitful only if two principles are borne in mind. (*a*) The attributes are not 'things' or 'forces.' It is a profound mistake first to isolate them, and then to endeavour to relate them to one another logically or mechanically. They exist in the unity of the Divine character, and are partial manifestations of its inexhaustible wealth. (*b*) They are not to be viewed as given, in their truth and fullness, in man, and then applied to the Divine character as copies or reflexions of what they are in human nature. The moral attributes of God are to be learned, primarily, from the revelation which Christ has given, in His own person, of the Being whom He, alone among men, perfectly knew. The God whom we know in Christ is love. This is the absolute truth of His nature, in the light of which every aspect of his character is to be viewed. His love is scarcely to be classed among His attributes. It is rather the central principle in which they all meet, the spiritual power from which each derives efficiency.

'Wisdom is its intelligence; might its productivity; the entire natural creation and the entire revelation of righteousness in history are the means by which it attains its teleological aims (Martensen, *Dogmatics*, 99).

In pursuing its teleological aim, which may be defined as the Kingdom of God, the Divine love follows two great lines of action. In the first place, it requires the vindication of righteousness. The

'rights' of every creature must be maintained; that is to say, every creature must be preserved in the fulfilment of its special vocation, and guarded in its realization of its own proper nature. These rights are sacred. The violation of them must be marked, in the administration of the universe, by definite retribution. The harmonious development of the vast and delicate order of the universe, by the subjection of every part to the living Will which animates the whole, is an essential interest of the Divine love. In the second place, the love of God manifests itself as goodness, or benevolence. It is pledged to the task of furthering the good of every creature. God has brought the universe into being as the means of His self-revelation; and it is only by His revelation of Himself to it that it reaches its perfection. His love takes shape in ceaseless goodness, pouring forth benefits in proportion to need; and, in this constant communication, its own glory and blessedness are eternally increased. 'It is the nature of goodness to possess its own fullness only in communication, to have only as it gives' (Martensen, *op. cit.* 98). It is important thus to connect the Divine benevolence with the aim of the Divine love. The Divine benevolence is part of the operation of the Divine love, which, from the beginning of creation, has been preparing a world in and to which God could fully reveal Himself. It signifies His goodwill toward all the creatures of His power, His determination to bless them according to their utmost capacity, and to bring them to the highest perfection of their nature. His love is not altered by the fact that man, the head of the lower creation, has rebelled against Him. Rather it has become stronger and deeper, in view of the unspeakable tragedy of human sin. The goodness, which is marked in all creation and providence, has become the mercy whose crowning manifestation is the Cross of Christ.

The Biblical usage confirms this view of the relation between the benevolence of God and the highest aim of His love. The OT believers are profoundly convinced of the goodness of Jahweh. But they do not mean by the Divine goodness such a sentiment as a pantheistic æstheticism might attribute to God. By goodness they mean a quality of the Divine character which comes into operation as God pursues His great aim of redeeming and blessing His people. Even when physical nature is summoned as evidence of the Divine goodness, it is viewed as the sphere wherein God carries on His redemptive work; and the goodness of God manifest therein is an argument for confiding in His faithfulness to His saving purpose and in His ability to carry it to completion. More commonly, the goodness of God is manifest in the lives of those whom He is preparing for Himself. Often the Divine goodness has high spiritual qualities, and is expressly referred to as an element in redeeming grace (*e.g.* Ps 23^6 25^7 65^4). Verbal references to the goodness of God are much less frequent in the NT. Its main theme is the love manifest in Christ. The goodness of God is an aspect of that gracious working whereby He leads men to the knowledge of His Son (Ro 2^4 11^{22}).

2. Its operation in creation and providence.—Christian apologetic is not bound to construct a complete theodicy. It must make the love of God, proved in Christ, its presupposition and its starting-point. Thence it must review the life of nature and of man, and seek to exhibit the evidence it finds therein of God's wise and benevolent working. If it can show that, in creation and providence, God's goodness has been operative, preparing the way for the triumph of His love, its task is sufficiently performed, even though it cannot produce an intellectual solution of every mystery in the Divine dealing with men. The evidences of the Divine goodness are such as these:—

(1) *The adaptation of the physical universe to the development of man.*—By its resistance to human effort, quite as much as by its fertility, it furthers the physical, intellectual, and moral well-being of man. By its beauty and its wonder, as well as by its pathos and decay, it quickens man's sense of the unseen, deepens his capacity for worship, and gives him intimations of his immortality.

(2) *The competence of human nature for a Divine vocation.*—The powers which man possesses fit him for the service of God, and the blessedness of fellowship with Him. While being, in one aspect, himself a part of physical nature, man is able to live above natural conditions, to penetrate to the significance of the world, and make it the home and the instrument of his spirit. His dependence upon his fellows prepares him for a social good, wider and richer than could be attained by any merely individual achievement. There are traces, growing ever clearer with the progress of humanity, that man is capable of a higher fellowship and a nobler blessedness than that which can be obtained in the most cultured human society.

(3) *The organization of human life for ideal needs.*—The history of the growth of the various forms of organized human life exhibits the powers and destiny of man. In the Family, he learns to be human, and finds in love, trust, reverence, and self-denial the very glory of humanity. In the State, he is called and enabled to serve his fellow-men, and to save his life by losing it. In the Church, he breathes the atmosphere of the love of God, and enters upon the blessedness of a Divine Sonship.

(4) *The direction of human history towards the goal of the Kingdom of God.*—The goodness of God is seen in His education of the race by the long teaching of experience, and by the moral discipline of ages. The slowness of the process may not be wholly explicable; but, at least, it is not inconsistent with the goodness of God, who is not slack, as some men count slackness. The cosmic movement of the great Divine design must, in any case, be slow.

(5) *The training of individual character.*—The necessity of connecting the idea of the Divine benevolence with that of the saving purpose of the Divine love is specially urgent here. The benevolence of God is seen not in a promiscuous bestowal of good things, but in the steadfast pursuit of His gracious purpose, which seeks, by common beneficences of every day, and by significant dealings in judgment and mercy, to bring men into the Kingdom.

Christian experience has learned, in communion with Christ, that God is love. Under the illumination of this thought, it surveys the whole field of nature and of human history, and discovers therein unfailing tokens of the presence and operation of the Divine goodness.

3. Its vindication in view of objections.—Three great facts traverse the argument for the goodness of God: pain and death and sin. Many who do not doubt the Being of God are brought by these terrible realities into grave perplexity and profound spiritual distress. It ought to be admitted that a complete intellectual solution of the problems thus raised is impossible under the conditions of our present experience. In view of them, we ought to occupy the true ground of Christian theology, as that is given in Christian experience. Deeper than the deepest analysis of pessimism, Christianity pierces to the need of man, and finds that need met in Christ. God is love because, in Christ, He saves and perfects men. Here is a fact of experience, which outweighs the facts that seem to impugn the goodness of God. Living in this experience, the mind is able to maintain its con

fidence in God, even under the strain of ignorance and doubt. Pain and death and sin come within the scope of the Divine purpose, and we have warrant to believe, though no human calculus can adjust every detail, that they subserve the Divine end.

Pain is a terrible reality. It has, however, such noble uses that we can well understand how a good God might include it in the scope of His working. When, moreover, it is not merely borne as an infliction, but taken up as a ministry, the last shadow of inconsistency with the Divine goodwill is removed. 'It not only passes into the category of good things, but it becomes emphatically *the good*' (Hinton, *The Mystery of Pain*, 11 f.).

Death fills the world with sorrow. Yet two facts counterbalance its desolation. In the first place, the ultimate source of its terror, viz. the separation from God, of which, to the sinner, it is the sign and seal, has been removed. For those who have accepted the reconciliation the terror of death no longer exists. In the second place, death, like pain, becomes no longer in any sense an evil, when it is accepted as a service. Interpreted by the death of Christ, death becomes the crowning service of the living, for the deepening and expansion of the life of others. The principle of vicarious suffering runs through the whole universe, and reaches its highest application in the life of man.

Such considerations are not available to heal entirely the hurt of the human heart. Enough of mystery remains to foster a deep humility and a tender and catholic sympathy. In thus binding human beings in the bonds of mutual compassion, Death fulfils one of its most precious functions.

Sin is the most awful fact, the most terrible mystery of the world. To the question, how a benevolent Supreme Being could permit the entrance of Sin into His world, there can be given no complete answer. The fact of sin can be met only by the fact of redemption. Christianity does not solve the speculative question, but it meets the spiritual need with the message that God was in Christ, reconciling the world to Himself. To enter into the experience of reconciliation is not to be put in possession of a theoretic proof of the consistency of the existence of sin with the Divine benevolence. It is, however, to be enabled to wrest from sin, which seemed utterly incompatible with the existence of goodness in God, the profoundest testimony to the presence and supremacy of love in the Divine character. Without sin, we could not have known the depth of our need, and the uttermost of our dependence upon God. Without sin, we could not have known the exceeding greatness of His love, and the uttermost of His capacity for sacrifice. Without sin, as a fact in the experience of men, we could not come so close to them in sympathy, and could not become partakers of Christ's sufferings.

From all survey of the operations of the Divine goodness, we return to the experience of redemption. The Being who spared not His own Son, but delivered Him up for us all, is good, of unerring wisdom and untainted holiness. From the character of God, as it is known in Christ, we pass to a judgment upon the whole universe, and declare, with unclouded assurance, that it confirms the conviction of faith that God is good.

T. B. KILPATRICK.

BENGAL.—1. General description.—The Province of Bengal, or, as it is sometimes designated, Lower Bengal, is that portion of the Indian Empire comprising the lower valleys of the Ganges and the Brahmaputra. In its original form the Province occupied the region lying between 19° 18′ and 28° 15′ north latitude, and between 82° and 97° east longitude. Since the British occupation the boundaries have been several times re-arranged. In 1874 Assam (wh. see) was constituted a separate administration; in 1905 the boundaries of Bengal, Assam, and the Central Provinces were re-constructed, the eastern portion of the old province of Bengal, containing the Dacca and Chittagong divisions with the Districts of Rājshāhī, Dināj̄pur, Jalpaigurī, Rangpur, Bogrā, Pābnā, and Māldā being, with Assam, constituted a new province under the name of Eastern Bengal. The present province of Bengal proper is bounded on the north by Nepāl and Sikkim; on the west by the United and Central Provinces; on the south by the Bay of Bengal and portions of the Madras Presidency; on the east by the new Eastern Bengal-Assam province, from which it is divided by the rivers Ganges and Madhumatī; on the east by Burma and hilly country occupied by independent tribes; on the south by the Bay of Bengal.

The following table shows the area and population of the new provinces as at present constituted:—

Name of Province.	Area in Square Miles.	Population.	Religions.		
			Hindus.	Muhammadans.	Others.
Bengal Proper	110,054	50,723,318	39,267,801	9,027,069	2,428,948
Eastern Bengal with Assam	101,147	30,788,184	11,519,574	17,823,129	1,445,481

This rearrangement of boundaries came into effect after the completion of the Census of 1901; and as it is now impossible to rearrange the details of the religious statistics to correspond with the present position, it is more convenient to treat the province as it was constituted prior to the partition in 1905. The physical conditions of the region are much diversified. It consists of the alluvial plains forming the valleys of the two great rivers; of the crystalline plateau of Chotā Nāgpur, and the hills extending from the south-east towards the Ganges at Rājmahāl; the narrow strip of alluvium forming the commissionership of Orissa; and, lastly, a portion of sub-Himālayan region including the sanatorium of Dārjīling, and the rough hilly country on the Burma frontier.

2. Name and historical geography.—The name of Bengal, derived from the Skr. *Vaṅga*, does not appear in Muhammadan or Western literature before the latter part of the 13th cent., when it took the place of the earlier title, Lakhnāotī (Yule, *Anglo-Indian Gloss. s.v.*). The name Vaṅga was in early times strictly applied to the country stretching south-east from Bhāgalpur to the sea, in other words, to the Delta formed by the lower reaches of the Ganges and the Brahmaputra. The Province is usually divided into four sub-provinces—(*a*) Bihār to the west, including the ancient kingdom of Magadha, which is now represented by the Districts of Patna, Gayā, and Shāhābād, with its capital at Rājagriha, some thirty miles north-east of the present city of Gayā. North of the Ganges was Videha or Mithilā, now included in the Districts of Darbhanga, Sāran, Champāran, and North Muzaffarpur. The south portion of the last-named District constituted the small kingdom of Vaiśālī. To the east lay Aṅga, including the modern Districts of Monghyr, Bhāgalpur, and Puraniya (Purnea). From the religious point of view Bihār is important as the place of origin of both the Buddhist and the Jaina faith. (*b*) Bengal Proper, which occupies the deltaic region. In the time of the *Mahābhārata*, North and East Bengal, with Assam, formed the kingdom of Prāgjyotisha, or, as it was called later, Kāmarūpa. East of Bengal Proper lay Vaṅga, which gave its name to the province, its population living principally in boats, and represented by the modern Chaṇḍāls. (*c*)

Orissa, the old name of which was Kaliṅga, stretching from the mouth of the Ganges to that of the Krishna. In later times the name Kaliṅga was applied only to the Delta of the Godāvari, while that of the Mahānadī became known as Utkala or Odra, whence the modern name of the sub-province was derived. (*d*) Chotā Nāgpur and the Tributary States of Orissa, a region of hill jungle inhabited by tribes of non-Aryan origin, parts of which were known to Muhammadan writers as Jhārkhand, 'the jungle region,' which the lords of Northern India never attempted to occupy.

3. Modern geography.—The Province may be described generally as consisting for the most part of the lower valleys of the great rivers, the Ganges which enters it on the west frontier and passes through it diagonally, and the Brahmaputra which, after forcing its way through a break in the Himālayan chain, flows through Assam and the eastern portion of the Province. These alluvial tracts are flanked by a series of highlands—to the north the outlying lower range of the Himālaya; to the south-west the hilly region of Chotā Nāgpur and Orissa; to the east the hilly tract of Tippera, which is the boundary between the Province and Burma.

4. The plain country.—The Province thus displays great diversities of aspect and climate, which have affected the ethnology, social character, and beliefs of the people. Beginning from the west, where the Province marches with the United Provinces of Agra and Oudh, we have the sub-province of Bihār, divided into two portions by the Ganges. To the extreme north is the submontane strip, part of which constitutes the Tarāī, or region of fen and forest beneath the lower slopes of the Himālaya; south of this is the Gangetic zone, a country with an ancient civilization, large towns, and a well-developed system of agriculture. This is the finest and most healthy part of the Province, a country producing wheat, sugar, and the other staples characteristic of the upper valley of the Ganges, and supporting a number of indigo factories managed by Europeans, whose industry has in recent years suffered grievously through competition with the artificial dye prepared in Germany. The people here are a fine, manly, sturdy race, many of whom used to enlist in the old sepoy army, but now find occupation as porters and messengers in Calcutta. Bihār south of the Ganges is a less fertile country, which, except in the neighbourhood of Gayā, has only recently come within the influence of Aryan civilization. The physical appearance and beliefs of the people indicate intermixture with the non-Aryan races occupying the adjoining plateau of Chotā Nāgpur. Passing eastward along the valley of the Ganges, we gradually reach the dank steamy Delta, the product of the great rivers which here enter the sea. The compact mud villages of Bihār here give place to little thatched hamlets, each hidden within a plantain clump or grove of shady trees. Rice is the staple crop and the universal food, instead of the wheat, barley, and millet which support the peasant of Bihār. The people, though their intelligence is sharper, have little of the manly vigour and independence of the Bihārīs. They belong, in fact, to different race-types (see below, § 6). Where the Delta advances into the Bay of Bengal is the great forest swamp of the Sundarbans, a network of rivers and estuaries enclosing numerous islands, which are often half swamp. This region has hardly any permanent population save a few fishermen, hunters, and woodcutters, who brave the malaria and wild beasts which its jungles contain. The Orissa Delta farther south is the work of three rivers, the Mahānadī, Brāhmanī, and Baitaranī (which see). These rivers, as they approach the sea, deposit masses of silt which raise their beds above the level of the surrounding country, with the result that it becomes a water-logged swamp, a network of creeks and muddy channels, forming a district pregnant with malaria.

5. The hill tracts.—To the student of ethnology and primitive religion the most interesting portions of the Province are the plateau of Chotā Nāgpur, the hill tracts which rise above the Orissa Delta, and the tangled region of hills which separates the Province from Burma. Chotā or Chūtia Nāgpur consists of a confused mass of hills, plateaux, and ravines interspersed with jungle, which forms the most easterly extension of the hill country of Central India and of the Central Provinces abutting on the Gangetic valley near Bhāgalpur. This and the hill tracts of Orissa to the south-west form the last refuge of the Dravidian and Mundā races, and are occupied by non-Aryan tribes like the Santāls, Hos, Orāons, and Kandhs, who still preserve their original languages and beliefs comparatively unaffected by the Aryan immigrants from the west who colonized the plain country beneath them. Similarly, the Chittagong hill tracts on the eastern frontier are inhabited by Maghs, Chakmās, Tipārās, and Kūkīs, races of Mongoloid stock, who 'build their houses on bamboo platforms raised ten feet from the ground, and cultivate on the *jhūm* system; that is to say, they make clearances in the jungle, and, when the trees and undergrowth which they have cut down become sufficiently dry, they burn them; then, after the ground has been softened by rain, they dibble in seeds of rice, cotton, maize, melons, and yams, all mixed together' (Gait, *Census Rep.* 1901, i. 81). In the Tarāī at the base of the lower Himālaya we find a malarious tract occupied by primitive tribes like the Thārus (wh. see), or immigrants from Nepāl or the hill country.

6. Ethnological character of the people and their languages.—The races inhabiting the Delta of the Ganges and its tributaries from the confines of Bihār to the Bay of Bengal have been included by Risley in the Mongolo-Dravidian or Bengālī division, one of the most distinctive types in India, characterized as regards its Mongoloid element by a high cephalic index, in other words, included within the brachycephalic class, while the breadth of the nose suggests an infusion of Dravidian blood. In Western Bengal the Dravidian element, as might be expected from the fact of this part of the Province abutting on the Dravidian stronghold on the Chotā Nāgpur plateau, is predominant; while to the east the form is modified owing to closer contact with the Mongolian race which probably entered Bengal down the valley of the Brahmaputra. To the west, again, in Bihār, the type assimilates to that of the Aryo-Dravidian prevailing in the upper Gangetic valley. This is characterized by a longer form of head and a narrower and finer moulded nose. In the hill tracts to the south the Dravidian type is predominant, that of a race distinguished by short stature, long form of head, plentiful hair, with the nose very broad and depressed at the root. From the point of view of ethnology, therefore, the population is of very mixed origin. The Dravidian type, which was probably that of the earliest inhabitants of the country, has been overlaid and modified in various degrees by the Aryan type, which worked its way from the west down the valley of the Ganges, and by the Mongoloid races who advanced down that of the Brahmaputra. There is no ethnical frontier, such as impassable rivers or mountain ranges, serving to control the movement of the population

from one end of the Province to another. The Ganges, and in a lesser degree the Karatoyā, the old sacred river which divided Bihār from the rest of Bengal, did in some degree effect this purpose (O'Donnell, *Census Report*, 1891, i. 38); but the divisions thus formed did not remain permanently distinct. The same may be said of the languages, one dialect merging gradually and almost imperceptibly into the next. The vast majority of the people (94 per cent.) now speak one or other of the tongues of the Aryan family, of which the most important are Bengālī to the east, Hindī to the west, and the Oriyā of Orissa to the south. The second group of tongues is that known as the Mundā, spoken by the Santāls, Hos, and cognate tribes. These represent only 3·54 of the total population. Still less numerically important are the languages of the Dravidian group, of which the most numerous speakers belong to the Orāons (wh. see) and allied tribes; and the small Tibeto-Burman element used by tribes on the northern frontier towards Nepāl or eastward in the direction of Burma.

7. **Statistics of religion.**—The diverse ethnical characteristics of the people are reflected in the variety of the religions which they follow. The population recorded at the last Census is distributed among the chief religious denominations as follows:—

Hindus .	49,687,362,	being 63·3	% of total.
Muhammadans	25,495,416	,, 32·48	,,
Christians .	278,366	,, ·36	,,
Animists .	2,780,468	,, 3·54	,,
Buddhists .	237,893	,, ·30	,,
Others . .	13,905	,, ·02	,,

8. **Animism.**—It will be convenient to deal first with Animism, the most primitive form of the religion of Bengal, and the basis of the beliefs which are held by the majority of the people. But, as it appears in the Census returns, the term is used in a sense different from that usually accepted by writers on primitive religion. This form of belief is founded on the conception adopted by primitive man, 'that every object which had activity enough to affect him in any way was animated by a life and will like his own.' It was, however, found impossible to obtain correct returns of an indefinite, amorphous religion like this, for which those who hold it have no special name, and which merges so directly into Hinduism and into Islām in its most debased form that the line dividing it from either of these faiths is uncertain. Hence, in the returns of those who are represented as professing Animism only those persons were included who followed a tribal religion, or worshipped tribal gods quite distinct from those of the orthodox Hindu pantheon. On the other hand, the great majority of the lower classes, whose religion is to a great extent of an animistic type, and even those members of the purely animistic tribes who lived at a distance from their tribal headquarters, were recorded as Hindus. Hence the Animists of the Census really represent only the well-organized non-Aryan or Dravidian or Mongoloid tribes, such as Santāls, Mundās, or Orāons who inhabit the hilly tracts to the south-east or east of the Province; and the lower castes of the plain country, whose beliefs are of an analogous type, appear in the Census returns as Hindus. The returns show Animists, as thus defined, to be most numerous in the Districts of Rānchī and Singhbhūm, where they represent nearly half the total population, and in a smaller proportion in the Santāl Parganas and the other hilly tracts of Chotā Nāgpur and Orissa.

The characteristics of Animism in Bengal, which does not differ to any important extent from that found in other parts of Northern India (see DRAVIDIANS), have been thus summarized by Gait (*Census Report*, 1901, i. 152):

> 'There is a vague but very general belief in some one omnipotent being, who is well-disposed towards men, and whom, therefore, it is unnecessary to propitiate. Then come a number of evil spirits, who are ill-disposed towards human beings, and to whose malevolent influence are ascribed all the woes which afflict mankind. To them, therefore, sacrifices must be offered. These malevolent spirits are sylvan deities, spirits of the trees, the rocks, and the streams, and sometimes also of the tribal ancestors. There is no regular priesthood, but some persons are supposed to be better endowed with the powers of divination than others. When a calamity occurs, one of these diviners, *shamans*, or soothsayers, is called on to ascertain the particular demon who is offended and who requires to be pacified by a sacrifice. This is done, either by devil-dancing, when the diviner works himself into a paroxysm of drunkenness and excitement, and then holds converse with the unseen spirits around him, or by the examination of omens—eggs, grains of rice, or the entrails of a fowl. There is a profound belief in omens of all sorts; no journey is undertaken unless it is ascertained that the fates are propitious, while persons who have started on a journey will turn back should adverse omens be met with on the way.'

It would perhaps be impossible to find in Bengal a single tribe which is in the purely animistic stage. Most of the people have come more or less under the influence of Hindu missionaries, who have introduced among them the nominal worship and some of the ritual of the orthodox gods, while at the same time the basis of their beliefs is some form of Animism. Thus, in the case of the Tipārās (Gait, *op. cit.* i. 186 f.) we have an instance of a secluded jungle tribe, some of whose deities are of a distinctively primitive type—the *numina* of the forest, which would naturally be regarded as objects of dread by people exposed to the myriad accidents and diseases which accompany the work of clearing the jungle. Thus, Burāsā is their forest-god, who is old, carries a mace, and has his home in the woods. But even here we see some signs of Hindu influence when we find that his son, the god of death, is coming to be identified with the Hindu Yama. Again, among the same tribe we find Maimungmā, the goddess of paddy fields, who, like many of these agricultural deities, has a male consort, Thunāī, and Khulungmā, the goddess of cotton. Deities like these represent a much higher stage of culture, when the community has cleared the forest and settled down to a life of agriculture. In another class of animistic deities these Tipārās worship the *numina* of the powers of Nature—Tuimā, a river-goddess, who is now coming to be identified with the Gangā, or Ganges, of the dwellers in the plains; and Lāmprā or Khabdī, who rules sky and ocean; and Sāngrama, the deity who presides over the Himālaya. Again, by a natural course of evolution, the agricultural goddesses, who are primarily regarded as beneficent, develop on their chthonic or malignant side into seven goddesses who preside over witchcraft.

But this assignment of special functions to a number of distinct deities is not the most primitive form of belief. The earlier conception is rather the belief in a host of ill-defined spirits, mostly malevolent, to whom no departments in the control of human affairs have been assigned. Such is practically the religion of the Mundās and Orāons (wh. see). The Gulguliās, a wandering non-Aryan tribe, worship 'a host of spiritual powers, whose attributes are ill-defined, and who are not conceived as wearing any bodily form. This at least may be inferred from the fact that they make no images, and that Baktāwar, the tutelary deity of the Patnā Gulguliās, is represented by a small mound of hardened clay set up in an earthen plate' (Risley, *Tribes and Castes*, i. 302). The Bhuiyās, again, worship a number of communal ghosts with 'ill-defined functions and general capacity for mischief and malevolence'; and 'the vague shapes of ghosts or demons who haunt the jungle and the rock are the real powers

to whom the average Kurmī looks for the ordering of his moral and physical welfare' (*ib.* i. 115, 534).

9. **Worship of forest-spirits and tree-spirits.**—Beginning, then, from what is probably the earliest stage, the worship by a tribe of colonists of the vague spirits which people the jungle, we find among the Juāngs, a very primitive tribe, who have only quite recently abandoned the wearing of a dress of leaves, that Barām, a forest-deity, stands at the head of their system and is regarded with great veneration, while, just as might have been expected, in subordination to him are Thānpatī, the patron of the village, and Basumatī, Mother Earth, whose worship marks the adoption of a settled village and agricultural life. At this stage we also naturally find the worship of trees, or rather of the spirits immanent in them, which prevails widely among the non-Aryan tribes, and is well established in the lower grades of Hinduism. Thus, the Cheros and Kharwārs sacrifice every three years a buffalo and other animals in the Sarnā, or sacred grove; each village of the Kisāns has two or more Sā, or sacred groves; the Bhuiyās preserve Deotā Sarā, or sacred groves, which are dedicated to four deities; in the sacred grove of the Mundās, 'if a tree be destroyed, the gods evince their displeasure by withholding seasonable rain'; and 'every village has in its vicinity a grove reputed to be the remains of the primitive forest left intact for the local gods when the clearing was made' (Dalton, *Descriptive Ethnology*, 129, 132, 141, 186, 188). Besides the fear that the total destruction of the jungle may rouse the anger of the tree-gods in case a suitable asylum is not provided for them, there is the general belief that all tree-cutting is offensive to them. Of the Maghs of Eastern Bengal we learn that

'nothing but positive orders and the presence of Europeans would induce them to trespass on many of the hilltops, which were inhabited, they said, by these demons. With the Europeans, however, they would advance fearlessly, and did not hesitate to fell the trees, the blame of such sacrilege being laid upon their visitors. On felling any very large tree one of the party at work upon it was always ready prepared with a green twig, which he ran and placed in the centre of the stump the instant the tree fell, as a propitiation to the spirit which had been displaced so roughly, pleading at the same time the orders of the strangers for the work. In clearing one spot an orderly had to take the *dāh* (felling-knife) and fell the first tree himself before a Magh would make a stroke, and was considered to bear all the odium of the work with the dispossessed spirits, till the arrival of the Europeans relieved him of his burden' (*Calcutta Review*, xxvi. 512).

We may compare with this superstition the early Brāhmanical rule, based on primitive animistic belief, according to which, when the priest cuts a tree for the preparation of the sacrificial post, he places a blade of the sacred *darbha* grass between the axe and the tree, and says, 'O plant, shield it! O axe, hurt it not!' (*Śatapatha Brāhmaṇa*, tr. Eggeling, *SBE* xxvi. 164). The woodcutters in the Sundarbans never enter the jungle without sending their *faqīr* in advance, who takes upon himself the wrath of the woodland spirits (Wise, *Notes*, 13). The same writer remarks (*ib.* 137) that 'it is a curious fact that one of the latest outgrowths of the corrupt Vaishnavism is the veneration of trees. The Dervish *faqīr* will not permit a leaf or twig to be plucked from the trees growing within the *akhārās* ("convents"), although flowers are the ordinary offering at the tomb of a *mahant* ("abbot").'

The non-Aryan tribes have special tree-feasts of their own. Such is the Sarhūl feast of the Orāons (wh. see), when flowers of the Sāl (*shorea robusta*) are collected by the *pahān*, or local priest, from a remnant of the old forest, which is the home of Sarnā Būrhī, 'the old woman of the grove,' who corresponds to the Jāhir Erā and Desaulī of the Mundās (Dalton, *op. cit.* 261). The Orāons have a similar feast, the Karamā, in which a branch of this sacred tree is cut, and planted in the village assembly-ground, and the youth of both sexes dance round it (*ib.* 259). The same dance and feast in connexion with this tree prevail among the Kharwārs, Mānjhīs, and other allied non-Aryan tribes of the western Vindhyan and Kaimūr ranges (Crooke, *PR* ii. 94 ff.).

Besides this there is the cult of special trees, which marks an advance in the development of popular belief. In some cases it is associated with totemism, the tree being specially worshipped by the tribe or giving a name to some of its sections. The Pīpal (*Ficus religiosa*) is held particularly sacred. Its trunk is the habitation of Brahmā, its twigs of Vishṇu, its leaves of the other gods. The tree is deified under the name of Vasudeva, and water is poured on its roots by pious people after the morning bath, especially in the month of Baisākh (April–May), and when people are in trouble; the Bel (*Ægle marmelos*) is sacred to Śiva, its leaves are used in his worship and in that of the Śaktis, or female powers, and as it is the abode of Śiva none except Brāhmans may use its wood for fuel; but pious Hindus of the Vaishnava sect will not so much as mention its name. The Tulasī (*Ocymum sanctum*) stands in the same relation to Vishṇu as the Bel does to Śiva, and the plant is grown in the courtyards of all who specially make him their object of worship.

'It is watered after the daily bath, and in Baisākh a pot filled with water, which drips through a hole in the bottom, is suspended over the plant. In the evening a lamp is lit at its foot. Hari [Vishṇu] is believed to be present in it. Its leaves are essential for the proper worship of Vishṇu. They are believed to have a certain medicinal effect in the case of malarial affections, and are much used by native practitioners' (Gait, *op. cit.* i. 191).

The non-Aryan emigrants to Bogra pay similar veneration to the plantain tree after reaping the rice crop. Goats and pigs are sacrificed to it; it is worshipped before weddings, and after the ceremony the bridal garland is thrown into a bamboo clump. The practice of marrying brides to trees before the regular service is performed is common. It appears to be done either with the intention of transferring to the tree any possible dangers which may result from the marriage; or it is a form of sympathetic, mimetic, or homœopathic magic by which the fertilizing powers of the spirit which animates the tree and revives it after its winter rest are communicated to the girl (*PR* ii. 115 ff.).

10. **Mountain-worship.**—The worship of the mountain springs from conceptions analogous to those which suggest the cult of trees. The hill, with its thick jungle, its mysterious caves which seem to be entrances to the lower world, the danger of accident from a fall from a precipice, an avalanche or a falling boulder, the risk of attack from wild animals which shelter themselves in its recesses—all promote the idea that it is infested by malignant spirits. Again, as we might expect, hills are favourite sites for the worship of the sun or other heavenly objects. This was the case in Greece, where many of the old hill-shrines of the sun have now been taken over by his successor, St. Elias (Frazer, *Pausanias*, iii. 364). Mountain-worship is naturally uncommon in the plains, except in those places from which a view of the mighty chain of the Himālayas can be obtained. But it prevails widely among the non-Aryan hill tribes, like the Mundās, Santāls, and other races occupying the plateau of Chotā Nāgpur, who worship a mountain-god known as Marang Burū or Bar Pahār, 'the great mountain,' to whom the tribal priest offers a sacrifice of buffaloes or other animals (Dalton, *op. cit.* 135, 187 f., 199, 210, 214, 220 f., 257, 321). In the same way the Kisāns recognize various sacred heights (*pāt*) as devoted to their gods (*ib.* 132). Of the same type is Sārū Pennū, the mountain-god of the Kandhs.

'He is a jealous god, and does not like people to trespass on his domain, and the chief object of the worship which is performed in his honour in April and May is to induce him to protect from the attacks of wild animals people whose business takes them among the forest-clad hills of the Kandhmals, and also to secure a full yield of the jungle products which the Kandhs, like most similar tribes, use so largely for food. The priests of Sārū Pennū are called *dehurī*, and the appropriate offerings are a goat and a fowl with rice and strong drink' (Risley, *op. cit.* i. 403).

11. **Worship of water-spirits.**—The agency which causes water to flow is regarded as that of an indwelling spirit. Hence comes the worship of rivers, rapids, cataracts, wells, and streams. Chief of all, among the people of the plains, is Gangā Mā, or Mother Ganges, who is a beneficent deity. Though in origin an animistic goddess, she is now recognized by many Hindus as the wife of Śiva.

'Low caste Hindus,' writes Gait (*op. cit.* i. 190), 'throw offerings of fruits and sweets into the river when bathing, and its water is believed to be so sacred that to touch it will purify any one. It has special virtue on the occurrence of certain *yogas*, or auspicious conjunctions of the planets, when large crowds assemble on its banks in order to wash and be clean. Goats are sacrificed on these occasions, and in some parts they are thrown alive into the water, whence they are taken and eaten by the Mallāhs. Other offerings are the perquisite of a special class of degraded Brāhmans known as Gangāputra. Sometimes the goddess is represented by a simple earthen jug filled with water and surmounted by a mango twig, and sometimes as a female figure with four hands, riding on a *makar*, or fabulous marine monster like a shark. In this form she is worshipped by the fishing castes of Bengal Proper, who sacrifice white goats to her before starting on a fishing expedition, and also on some special occasion, the date of which varies. Pilgrims at Gayā offer their first *piṇḍa* (rice-cake) to her in the name of their deceased ancestors. In the Sonthāl Parganas a woman worships her on the sixth and twelfth days after giving birth to a child. She goes to a river or pond and pours oil on a slab of stone, on which she then draws five perpendicular lines, and prays for entire restoration to health. Certain ascetics perform a special penance in her honour called *jalsāīn*, which consists in spending every night in the month of Māgh [January-February] seated stark naked on a small platform erected over the river, engaged in such prayer and meditation as their sufferings from the cold will allow. The town of Tribenī in Hooghly is held to be specially holy because three sacred streams,—the Ganges, the Jamunā, and the Saraswatī,—which meet at Allahābād, here once more separate from each other.'

In Eastern Bengal the observances are of a similar character (Wise, *op. cit.* 138 f.). The Brahmaputra, 'son of Brahmā,' is less sacred, having only a single feast-day on which people assemble to bathe on its banks.

This form of worship seems to have been independently adopted by the non-Aryan tribes, who have sacred rivers of their own, the cult of which is not derived from Hindu influence. Thus the Kharriās of Singhbhūm venerate the river Koil, and the Santāl depends on the piety of his descendants that his ashes will be finally committed to the sacred river, the Damudā, 'to be borne on its swift current into the bosom of the mighty ocean, whence the race first had its being, and where, returning, it fittingly seeks its final rest' (Dalton, *op. cit.* 159; Bradley-Birt, *Story of an Indian Upland*, 285). In these cases the river is little more than a vague personality; but in many cases this spirit is personified, and we thus arrive at the host of water-gods who are specially revered among the large fishing and boating population of the Delta. Thus the deity of the river Tīstā is supposed to be an old woman, Būṛhī Ṭhakurānī ('the Old Lady'), and 'is one of the common objects of worship (*Grāmdevatā*) among the simple pagans of the vicinity' (Buchanan, in Martin, *Eastern India*, iii. 361).

'Not satisfied,' writes Wise (*op. cit.* 139), 'with attributing a divine character to the rivers of their native land, the Hindus have peopled the waters themselves with animistic beings, who protect or destroy the unguarded boatmen.'

Such is Zindah Ghāzī, 'the living destroyer of the infidel,' now a Muhammadan saint, but evidently a promoted animistic spirit (*ib.* 13 f.). Like him is Pīr Bhadr, whose home is at Chittagong. According to one legend, he is a deified Portuguese sailor who long ago reached the shore by clinging to a fragment of a wreck. His *dargāh*, or cenotaph, is regarded as the palladium of the city; here lamps are lighted at night, and pilgrims from all parts of Bengal resort to his shrine in obedience to a vow, or to obtain the favour and intercession of the saint; while Hindu fishermen regard him with as much awe as do the Muhammadans (*ib.* 14 f.). The Mallāh boatmen worship a water-god, Koilā Bābā, 'Father Charcoal,' described as an old grey-bearded personage, who as the 'navvy of the Ganges' (*Gangāji kā Beldār*) saps and swallows up whatever opposes the sacred stream.

'Before casting a new net, or starting on a commercial venture, offerings of molasses and seven kinds of grain kneaded into balls, are offered to him; and at the end of the ceremony one of the balls is placed on the edge of the water, another on the bow of the boat' (*ib.* 347).

The Paṭnī boatmen never enter on the work of a ferry without sacrificing a white goat to the river-goddess, Gangājī (*ib.* 358). Another water-goddess is Khālā Kumārī, 'the Creek Maiden,' to whom fishermen offer the first-fruits of their labour (*ib.* 393). The most mysterious of these water-deities of Bengal is Khwājah Khizr, who by one legend is identified with Zu'l-qarnain, 'he of the two horns,' or Alexander the Great, as described in the Qur'ān, *Sūra* xviii. Others connect him with the prophet Elias or Elijah. Whatever may be the real origin of his cultus, Khwājah Khizr is supposed to reside in the Indian rivers and seas, protecting mariners from shipwreck, and visible only to those who perform a forty days' vigil on the river bank. In his honour a raft (*beṛā*) made of paper, ornamented with tinsel, the prow resembling a female face, with the crest and breast of a peacock, is set afloat at sunset on a support made of plantain stems, when its flickering lights give a picturesque aspect to the dark, flooded stream. The person launching the raft deposits on the bank some ginger, rice, and plantains, which are usually appropriated by some wretched beggar (*ib.* 12 f.). The basis of the rite, of which Frazer (*GB*[2] iii. 87) has collected numerous examples, is possibly the expulsion of the spirits of evil by launching a raft or boat in a river or in the sea.

12. **Worship of the powers of nature.**—The personification and adoration of the powers of nature are probably later in origin than the animistic beliefs which have up to this point been considered. The most primitive objects of worship seem to be in Bengal purely local—the spirits of hill or rock, of the animals which attack the wood-cutter, of spring and stream, of all connected with man's immediate wants or occupation. It is only at a later stage that he seems to be able to generalize and direct his attention to more distant powers and energies like those of the planetary bodies.

(*a*) *Sun-worship.*—Among the orthodox Hindus the sun (Sūrya or Grāharājā, 'King of the planets') has fallen from the high estate which he secured in Vedic times, and has now become a mere godling or minor god. He is, however, still worshipped, especially in Bihār and among the non-Aryan tribes of the southern hills. Temples have been erected in his honour, the most important of which are those at Kanārak, near Puri in Orissa, and at Gayā.

'The Gāyatrī, or sacred verse, which each Brāhman must recite daily, is dedicated to him. Sunday is sacred to him, and on that day many abstain from eating fish or flesh; in some districts salt also is abstained from. The Sundays in the month of Kārttik [October-November] are specially set aside for his worship in Bihār and parts of Bengal. The great festival in his honour, known as the Chhaṭ Pūjā, is held on the 6th day of the light half of Kārttik, when the people gather at a river or pool and offer libations to the setting sun, and repeat the ceremony on the following morning. They also make offerings of white flowers, sandal paste, betel-nut, rice, milk, plantains, etc. Brāhman priests are not employed, but an elderly member of the family, usually a female, conducts the worship' (Gait, *op. cit.* i. 188). Even Muhammadans join in these ceremonies.

Sun-worship prevails widely among the non

Aryan tribes. The Orāons (wh. see) identify him with Dharmesh, their supreme deity, as do the Muṇḍās, Bhūmij, and Hos, who worship him with offerings of fowls and spirits, and swear by his name. The Hārīs of Bīrbhūm sacrifice a goat to him on some Sunday in spring, and, strictly in accordance with the animistic conception, he is, in Rājshāhī, provided with a female consort, Chhaṭmātā, 'the mother of the sixth day rite'; that is to say, his festal day, when women make offerings at his shrine.

(*b*) *Moon-worship.*—Though all Hindu ceremonies are regulated by the rising or setting, the waxing or waning of the moon, its worship is much less general than that of the sun. Soma in Bengal is represented by a figure of a white man sitting on a water-lily and drawn by ten horses. With his right hand he gives a blessing, and in the other he holds a club (Ward, *Hindoos*, ii. 72). His cult is common among the non-Aryan tribes. For instance, the Kharriās offer to him a black cock under the name of Jyolo Dubo; the Binjhiās worship him as Nind Bongā; the Muṇḍās as Chando Omal. The Muṇḍā legend tells how on one occasion the moon deceived the sun, her husband, and in his anger he cut her in two; but he afterwards repented of his wrath, and allows her at times to shine forth in full beauty amidst her daughters, the stars (Risley, *op. cit.* i. 468, 136; Dalton, *op. cit.* 186). The curious rite of expulsion of evil by flinging brickbats at the house of the person afflicted by it is in Bihār connected with moon-worship. But it is probable that this is merely a suggestion of periodicity in the observance, and it is rather to be compared with the numerous cases in India and elsewhere, when railing at women, stone-throwing, and mock fights, especially in connexion with spring customs, are regarded as modes of promoting the fertility of the crops by the expulsion of the influences which cause injury to them (Frazer, *Pausanias*, iii. 266 f.). As in many other places, the moon is regarded as the deity who presides over crops, heals wounds, and cures diseases, especially those of the eye (Gait, *op. cit.* i. 189; Frazer, *GB*[2] ii. 154 ff.). It is a favourite object of worship with women, but in Bengal no fixed dates are appointed for these observances.

(*c*) *Planet-worship.*—Of the planets the most regarded is Śani, or Saturn.

'He is much dreaded and is carefully propitiated, either on Saturdays or on particular occasions when astrological calculations indicate that a visitation from him is to be specially feared. He has no image, but is represented by an earthen pot filled with water. A seat is placed in front of it, and on it are laid five fruits and five flowers. A Brāhman priest officiates at the ceremony, and the *prasād*, or offering, which consists of a sort of pudding made of flour, plantains, sugar, and milk, must be eaten on the spot by the devotees, who must wash their mouths carefully before leaving. If any casual visitor should arrive while the ceremony is in progress, he must wait till it is concluded, and eat a share of the *prasād*, otherwise he will incur the godling's displeasure' (Gait, *op. cit.* i. 189 f.).

The rule that the sacrifice is to be consumed at once in the presence, as it were, of the deity, is probably based on the fear that the sacred food might be profaned if it were carried outside the sanctuary (W. R. Smith, 282; Frazer, *Pausanias*, iii. 240). Every one present is required to share in consuming the offering, In other words, he must seek communion with the deity by eating part of the sacred meal.

Rāhu, 'the looser,' or 'the seizer,' is the demon who causes eclipses by devouring the moon for a time. He must be scared by music or noise, or by bathing at a holy place during the eclipse. Rāhu has now become the special deity of two menial tribes, the Dosādhs and the Ḍhāngars, who worship him by walking through a pit filled with hot cinders. One of the tribal priests, becoming possessed by the god walks through the fire, and, it is said, escapes injury. Connected with this is another function, in which a ladder is made of wood, the rungs shaped in the form of a sword-blade, up which the priest has to climb, and decapitate a white cock tied to the summit of the ladder. A fowl of this colour is the appropriate offering to the sun-god. The object of the rite appears to be, by a form of symbolic or sympathetic magic, to propitiate the deities who control the rain and the harvests (*PR* i. 19 f.).

13. Earth-worship.—(*a*) *The benign mother.*—The earth-deity, impersonated as a goddess, has a twofold aspect—on the one hand benignant, on the other malignant. On her benevolent side she is regarded as the mother of all living things and the giver of food. In this province she is known as Bhūdevī, 'earth-goddess'; Dhartī Māī, 'Mother Earth'; or Basundharā, 'wealth-bearer'; Ambabāchī, and Basumatī Ṭhakurāṇi. Pious Hindus say a prayer to her on waking in the early morning; the dying man and the mother in parturition are laid upon her breast; when a calf is born the herdsman lets the first drop of milk from the cow's udder fall on the ground.

'On the first day of the month Āsāṛh (June–July) she is supposed to menstruate, and there is an entire cessation of all ploughing, sowing, and other agricultural operations, and widows refrain from eating cooked rice. On the fourth day the bathing ceremony is performed, in accordance with the Hindu idea that a woman who menstruates is unclean until she bathes on the fourth day. A stone, taken to represent the goddess, is placed erect on the ground, and the top of it is painted with vermilion. The housewife bathes it with turmeric water, and a betel-nut is placed on a piece of wood close by. The stone is then bedecked with flowers, and offerings of milk, plantains, etc., are made' (Gait, *op. cit.* i. 189). The smearing of the stone with vermilion indicates a reminiscence of an older rite of blood-sacrifice.

As will be shown in connexion with the Dravidian religion, the popular idea regarding the Earth is that her fertility periodically diminishes, and must be restored by various methods, the most common of which is blood-sacrifice. Among the Kandhs (wh. see) the victim was a human being, and fragments of the flesh of the victim were scattered or buried in the fields to renew the strength of the earth-spirit. In other places it is supposed that the same result will be attained by the annual symbolic marriage of the earth-goddess, and she is accordingly provided with a male consort, who is often the head of the *grāma-devatā*, or guardian gods of the village. In Western Bengal this god is usually known as Khetṛpāl, 'earth-guardian,' or Bhūmiya, 'earth-deity' (see DRAVIDIANS).

(*b*) *The earth-goddess in her malignant form.*—But though the earth-goddess is usually regarded as benevolent, she has a chthonic or malignant side to her character. While she is regarded as the village guardian, and protects the folk and their cattle from disease, yet, with the curious inconsistency which characterizes cults of this amorphous kind, she is believed to be the causer of epidemics, especially those of a sudden, unexpected, or unaccountable kind, such as cholera or smallpox. In this malignant manifestation the universal earth-mother is the prototype, and probably the primitive form of the destructive goddess in her manifold forms—Kālī, Devī, Durgā, and numberless others of the same kind. Her functions, again, as the causer and at the same time the averter of disease, have become divided into departments, and special maladies have been placed in charge of one or other of her various manifestations. We thus reach the beginnings of a pantheon, when each department of human activity is superintended by a special deity. This result may have been reached in Bengal by one of two ways: either the local earth-goddess of a particular locality gains a reputation by remarkable cures being worked at her shrine, and she is accordingly en-

trusted with the healing of a special class of maladies; or it may mark the aggregation of several septs to form a tribe, when, for the sake of convenience, the functions of the deities, once separate but now revered in common, are discriminated.

(*c*) *The small-pox goddess.*—The small-pox deity, Śītalā, 'she that loves coolness,' so called euphemistically in relation to the fever which accompanies the malady, is also known as Basantī Būṛhī ('the old lady of spring'), or Basantī Chaṇḍī ('the cruel spring-goddess'), probably because epidemics are most usual at this season. She, by a further differentiation of function, is now one of seven sisters, the enumeration of whom differs in various parts of the Province. Of those usually named, Kankar Mātā is the most dreaded, but happily her attacks are rare; Phūlmātā and Pānsāhī Mātā attack children under the age of seven, Badī Mātā those between seven and fifteen, Gulsaliā Mātā those of any age. Śītalā and her six sisters are often represented by seven balls of clay placed in a line in a shed erected outside the village site, where sweetmeats and flowers are offered. In times of emergency the higher castes sacrifice goats or pigeons, and the menials pigs.* In cases of severe epidemics even the higher castes offer swine to the seven sisters; but the worshippers, who are usually women, employ men of some low caste to perform the actual sacrifice.

The collective worship of the sisters is usually subordinated to that of Śītalā, their leader, who is often represented as a naked woman, painted red and mounted on an ass, with a bundle of broomsticks in one hand with which she sweeps away the disease, an earthen pot under her left arm, and a winnowing fan upon her head. But her image sometimes assumes more grotesque forms.

'Sometimes the image is a piece of wood or stone with a human face carved on it, besmeared with oil and vermilion and studded with spots or nails of gold, silver, or brass, in imitation of the pustules of the disease. In Jessore and Noākhāli she takes the form assigned to her in the *Purāṇas* of a white figure in a state of perfect nudity, while in Orissa and Champāran she is represented by an earthen pot. In Khulnā she is regarded by the Pods, not merely as the goddess of small-pox, but as their main deity; and if a person is carried off by a tiger, or his crops are destroyed by wild animals, it is thought it is because he has incurred the displeasure of the goddess' (Gait, *op. cit.* i. 192).

This appears to show that the limitation of the goddess to superintend disease is a later conception. Elsewhere she is worshipped only when epidemics of small-pox, measles, or cholera break out, or when children are inoculated or vaccinated. Sometimes the image is kept in a temple; sometimes it is in charge of priests drawn from the lowest castes. But when the higher castes worship her they perform the service with the aid of a Brāhman (Gait, *op. cit.* i. 192). Her priest is very often selected from the Mālī, or gardener caste, and his treatment of the disease, which consists in fanning the patient with a branch of the sacred *nīm* tree (*azadirachta indica*), bathing the image of the goddess to alleviate the fever, and mumbling spells of various kinds, has been fully described by Wise (*op. cit.* 343 f.).

(*d*) *The cholera-goddess.*—Akin to Śītalā is the goddess of cholera, Olā Bībī, 'lady of the flux,' or Olā Chaṇḍī, 'the cruel one.' She is, according to Gait (*op. cit.* i. 193), sometimes represented as wearing a gown and mounted on a horse, but usually her emblem is an earthen pot placed under a *nīm* tree. Her priest is generally drawn from the lower castes, and her favourite offering is a goat.

(*e*) *Other deities of disease.*—Besides the deities of disease already enumerated, there are many others, which illustrate the development of Indian polytheism from an animistic substratum. Like the earth-goddess, they are sometimes provided with a male consort. Śītalā herself is attended by her male counterpart, Ghaṇṭākaraṇā, 'he who has ears as broad as a bell,' or 'he who wears bells in his ears.' In the Himālayas he is supposed to possess great personal attractions, is worshipped under the emblem of a water-jar as the healer of cutaneous disease, and is a gatekeeper, or, in other words, a minor god on his promotion to a seat in the orthodox pantheon (*PR* i. 131). Fever is provided with a special godling, Jwārā Nārāyan, and the cholera-goddess, Olā-Bībī, has kindred deities of the same kind, the Joginī of Orissa, and Dīdī Ṭhakurāṇī of Bardwān. The Rājbansī caste have in Chitan Ṭhakrūn a special deity who removes barrenness in women. Kālī, again, 'the destroyer,' develops in her benignant aspect into Rakshyā Kālī, 'the protectrix,' who, while she brings disease, also repels it.

14. **Animal-worship.**—It is difficult to determine how far animal-worship in Bengal is connected with totemism, of which there is some evidence (see below, § 28), and how far it is merely a development of Animism. Here it is practically identical with the cult as it prevails throughout Northern India.

(*a*) *Worship of the cow.*—In Eastern Bengal the cow receives divine honours at least twice a year, on the first day of Baisākh (April–May), and on the second day of the moon in Jyeshṭhā (May–June). The custom is similar to that of the Baisākh Bihū, or cattle-feast of Assam, in which on the first day the cattle are rubbed with oil and turmeric, and bathed in rivers and tanks; on the second day the owners prepare a feast, invite their neighbours and friends, and wear new clothes. The remaining five days of the festival, which since the Vaishṇava reformation has become associated with the cult of Kṛṣna, are spent by men and women in dancing, beating of drums, and the singing of amorous and wanton songs (*Calcutta Review*, xxi. 413). The animal, of course, is everywhere protected by a most efficient tabu; and serious penance, such as marching up one bank of the Ganges from the ocean as far as Hardwār, where the river leaves the hills, and returning eastward along the opposite bank, is imposed on any one who slays the sacred beast even by misadventure. But this respect for cows does not prevent neglect, starvation, and wanton cruelty. Among Aryans the regard for the cow is comparatively modern. In the Vedas we find instances of cow-sacrifice and beef-eating (Rājendralāla Mitra, *Indo-Aryans*, i. 354 ff.). It does not extend to the non-Aryan tribes, and it seems to have arisen at a stage of culture higher than that to which most of them have attained, when permanent cultivation finally takes the place of the rude methods of periodically burning down patches of jungle, and sowing the seeds, which is the habit still pursued by the less advanced tribes. Among the half-Hinduized Gonds the sacrifice of a cow is part of the funeral rites, being probably connected with the death-feast which the departed soul is believed to share with the survivors. After the cremation of the corpse the ashes are buried and covered with a large slab of stone, and the tail of the victim is attached to this as a sign that the obsequies of the deceased have been decently performed. The prejudice against the use of milk, which is regarded as a foul secretion, is characteristic of the Indo-Chinese races; but it is also found among the Kols and the Kandhs of Ganjām (Dalton, *op. cit.* 283; Maltby-Leman, *Manual of Ganjam*, 69).

(*b*) *Other sacred animals.*—The monkey is a

* With this pig-sacrifice may be compared the pig of purification at the Greek Thesmophoria (Frazer, *Pausanias*, iii. 296; J. E. Harrison, *Prolegomena to Greek Rel.* 152 f.). Women in Greece and elsewhere were often specially selected to offer sacrifice (Frazer, *op. cit.* iii. 593, iv. 187).

sacred beast, particularly that variety known as the Langūr (*Semnopithecus entellus*), which is identified with the monkey-god, Hanumān. The common Hindu theory that the beast is worshipped as the representative of the demigod or hero who assisted Rāma in his wars with Rāvaṇa to recover his ravished wife, Sītā, is obviously a late invention. The worship of the human-like animal was more primitive than the legend by which it is now explained, and may have been independently adopted by the Aryan as well as by the non-Aryan races. Among the latter the aboriginal Savaras of Shāhābād make images of him which differ from the orthodox Hindu type; and the Bhuiyās of Keonjhar revere him under the title of Bīr, that is, Vīra or Mahāvīra, 'great hero' (Buchanan, *op. cit.* i. 467; Dalton, *op. cit.* 140, 147). In Western Bengal the first duty of the founder of a hamlet is to erect an image of Hanumān, which is kept duly decorated with daubs of vermilion. He is regarded as typifying the virile element, and thus, as the protector of crops and cattle, is conceived to stand to the Earth-Mother in the relation of consort. Even the *Macacus*, the common monkey, is protected though he is exceedingly mischievous. It is believed that no one can live where a monkey has met his death, and his bones are so unlucky that a special class of exorcists in Bihār find their occupation in ascertaining that such bones do not pollute the ground on which a new house is about to be erected (Buchanan, *op. cit.* ii. 141 f.). According to one tradition, the monkey is known as *Pavan kā pūt*, 'son of the wind,' a belief accepted by the Bhuiyās of Singhbhūm, who revere him and call themselves Pavanbans, 'the wind children,' to the present day. The same belief prevails among the fisher castes of Eastern Bengal, who invoke him in a calm, instead of whistling as the British tar does (Wise, *op. cit.* 137).

The tiger among the forest tribes is naturally supposed to represent the evil spirit of the woods, and the fear which he causes leads to reverence and propitiation. As Banrājā, 'lord of the jungle,' he is the chief object of worship among the Kisāns and Santāls. The former will not kill him, and believe that in return for their devotion he will spare a tribesman (Dalton, *op. cit.* 132). The Santāls, especially those who have suffered loss from his attacks, adore him. When a Santāl is carried off by the beast, the head of the family deems it necessary to propitiate the Bāgh Bhūt, or 'tiger devil.' Samuells gives a curious account of a shamanistic rite among the Gonds, in which two men possessed of the spirit of Bāghīśvar, 'the tiger lord,' fell ravenously upon a bleating kid, and tore it with their teeth till it expired (Dalton, *op. cit.* 280). The *baghaut*, or shrine erected on the spot where a tiger has killed a man, is regarded as a place where offerings of propitiation should be made. Every passer-by adds a stone to the cairn, and wood-cutters light a lamp or make an oblation to appease the angry *bhūt*, or spirit of the man who was slain.

15. **The patron deities of the village.**—The deities who have been enumerated are those connected with the clearing of the forest and the beginnings of an agricultural life. When the village has been founded and farming becomes well established, another form of worship to a large extent replaces beliefs of this kind. This is the cult of the Grāma-devatā or Grāmya-devatā, the tutelary deities of the village, who preside over the welfare of the community. These deities differ from the jungle godlings inasmuch as, for the most part, they are purely local and attached to a single village. Those whose range is wider than the village boundaries seem usually to be akin to the jungle spirits. Thus, one of this class, Dholāī Chand, inhabits a sacred grove where rags are tied to the branches to secure the birth of children, and people make obeisance whenever they pass her abode. Another, Banā Durgā, in Mymensingh, is worshipped on behalf of children; sacrifices of pigeons or goats are made to her, and the flesh is eaten by people of low caste (Gait, *op. cit.* i. 200). Again, it sometimes happens that one of these village-deities acquires a reputation for curing disease or procuring other benefits for its worshippers. It thus becomes known beyond its own special area; a cult is started; a temple is built; and, finally, the place becomes the resort of pilgrims. This was probably the origin of famous shrines, like that of Kālī at Kālighāṭ, near Calcutta,—the Kalkattēwālī Kālī, as she is called,—a well-known deity throughout Northern India; or, again, the village may develop into a town or city, and the Grāma-devatā becomes its guardian, as has been the case with Patanadevī or Patanīśvarī, the protecting goddess of the city of Patna. The Brāhmans who have taken up her cult no longer recognize her as a Grāma-devatā, and assert that she is one form of the spouse of Śiva (Buchanan, *op. cit.* i. 191).

16. **The village shrine.**—The shrine of these village-gods is rarely of more pretensions than a pile of stones set up under the village tree, which is often one of the species regarded as sacred. Sometimes there is no visible representation of the deity beyond a stone or mound. Occasionally a bell is provided which the worshipper rings to announce his presence to the god, who may be sleeping or on a journey. In Hooghly an earthen pot filled with water, with a mango twig placed on the top, the whole covered with a piece of white cloth, represents the deity. In some cases the common worship on behalf of the village is done by the headman; sometimes the priest is drawn from one of the lowest castes; and, even in those villages in which persons of high caste reside, the business of controlling and propitiating the local spirits is left in charge of a hedge priest, because he, being regarded as one of the aboriginal inhabitants, is supposed to understand the ways of the village-gods better than any newcomer. For the same reason, the uncanny duty of watching the fields at night is entrusted to the menial castes, who are supposed to understand how to control the spirits which walk in the darkness. The offerings at the village shrine consist usually of the fruits of the earth, milk or spirituous liquor, food cooked or uncooked; but in cases of special emergency, goats or pigeons or pigs are sacrificed. The offerings are generally taken and consumed by the worshipper and his family, except the head, which was probably the god's share, and is appropriated by the officiant after he has let a few drops of blood from it fall upon the altar.

17. **Titles of the Grāma-devatā.**—Among the jungle tribes, where the cult is in its most primitive phase, the term *Grāma-devatā* has, as we might expect, an uncertain connotation. It is not limited to the actual village-deities, but is extended to the tribal gods of forest or mountain, like Marang Burū of the Santāls, Thānpatī of the Savarās, Juāngs, Baurīs, and Bāgdīs, Sarnā Būṛhī of the Orāons, and Duār Pahār or Durā of the Cheros (Gait, *op. cit.* i. 200). As settled life progresses, these deities gradually merge in the village pantheon. In the plain country the titles of the Grāma-devatā are legion. Buchanan (*op. cit.* ii. 131) gives a long list of those worshipped in the District of Bhāgalpur; but he illustrates the uncertain character of the cult by classing Śiva and Kālī as Grāma-devatās. This, no doubt, was the primitive conception; but these have now become national gods, of much higher rank than the

local village-godlings. In Bhāgalpur, Buchanan states, one of the most common of these deities is Bishaharī, who controls snakes; Siddheśvarī, Chandī, and Mahāmāyā are not very common, while he saw no shrine in honour of Śītalā. He mentions also that a very common village-god was Dūbēbhayharan, the ghost of a Brāhman who, to revenge a wrong which he had sustained, committed suicide (see below, § 25). Wise (*op. cit.* 133 ff.), among the most popular of the Grāma-devatā worshipped in Eastern Bengal, names Būṛhā-Būṛhī, the androgynous form of the Earth-deity; Panchanandā, who preserves children from sickness; Araṇyā or Jamāī Sashṭhī, the favourite goddess of Bengali women, who ensures the health of children, and cures barrenness; Siddheśvarī and Vriddheśvarī, who are now regarded by Brāhmans as 'parts' (*aṁśa*) of Durgā; in other words, these have now taken their place among the greater gods.

18. Promotion of the Grāma-devatā to higher rank.—The mode by which these deities are promoted will be considered in connexion with the Dravidians (wh. see). But a few instances of the fact may be given from Bengal. Ṭhakurāṇī Māī, whom Dalton (*op. cit.* 147, 149) calls 'the bloodthirsty goddess' of the Bhuiyās, has now become a form of Durgā or Kālī, and in Singhbhūm and Lohārdagā is served by a Bhuiyā priest with sacrifices of goats and sheep, the flesh of which he shares with the worshippers. The Birhors now call the piece of wood which they worship Mahāmāyā, who is supposed to be the daughter of the Hindu Devī; and a trident painted red is worshipped as the monkey-god, Hanumān, who is believed to be an officer of Devī (*ib.* 220). The Kādars of Bhāgalpur and the Santāl Parganas worship animistic gods, but,

> if questioned about their religion, will reply that they are Hindus, and will talk vaguely about Parameśwar, Mahādeo, and Vishṇu, as if they lived in the very odour of orthodoxy instead of being, as in fact they are, wholly outside of the Brāhmanical system. To talk about the Hindu gods is usually the first step towards that insensible adoption of the externals of Hinduism which takes the place of the formal and open conversion which sterner and less adaptive creeds demand. The next thing is to set up Brāhmans whose influence, furthered by a variety of social forces, gradually deposes the tribal gods, transforms them into orthodox shapes, and gives them places in the regular Pantheon as local manifestations of this or that well-known principle, or relegates them to a decent and inoffensive obscurity as household or village deities. Last of all, if the tribe is an influential one, and its leading men hold land, they give themselves brevet rank as Rājputs' (Risley, *op. cit.* i. 369)

19. Development of Animism into Hinduism.—In Bengal, perhaps more clearly than in any other part of Northern India, it is possible to trace the stages by which people in the animistic stage of belief are promoted, if this phrase accurately expresses the fact, into Hinduism. It is very difficult, as we have seen, to find a purely animistic tribe in the plains. The degraded Śūdras of Orissa seem to recognize none of the regular Hindu gods. They worship an animistic goddess of their own, Pañcha-khandā, 'she of the five swords,' with offerings of he-goats, fowls, and rice, which are consumed by the performers of the sacrifice. The headman officiates at all acts of public worship; they have no Brāhmans, and perform no *śrāddha*, or mind-rite, for the dead (Risley, *op. cit.* ii. 267 f.). But even the Ḍoms (wh. see), the lowest menials of the plains, worship, at least in name, the regular Hindu deities, such as Rādhā, Kṛṣṇa, Kālī, and Nārāyan (*ib.* i. 246), the explanation being that they have been for ages helots in the service of Hindu masters, whose religion they naturally imitate. Sometimes, again, it is found that, while one part of a tribe has to some indefinite extent adopted the Hindu religion, another division remains animistic. Among the Bhūmij, while the well-to-do tenants employ Brāhmans as their family priests and worship the Mother-goddess under the forms of Kālī or Mahāmāyā, the mass of the tribe reveres the Sun as Sing-bongā or Dharamā, and worships a host of minor gods of the animistic class (Risley, *op. cit.* i. 124). The same is the case with the Binjhiās, Birhors, and Cheros (*ib.* i. 136, 138, 202). The Koirī and Kurmī tribes furnish examples of people whose religion obviously depends upon their environment. That portion of these tribes which still occupies the animistic area of Chotā Nāgpur continues the worship of the non-Aryan deities, while those who have migrated to the plains in Bihār have come almost completely under Hindu influence (*ib.* i. 503, 534).

20. Development of the tribal priesthood.—This process of evolution is clearly shown by the character of the priesthood. The Korwās, according to Dalton (*op. cit.* 229), have no priests, because, as he asserts, they have no gods, their worship being entirely confined to that of the *manes* of their ancestors—a rite which must necessarily be performed by the head of the family. Elsewhere, however, they employ *baigās*, or tribal priests. The same is the case with the Māl Pahāṛias, among whom the head of the household performs all religious and ceremonial observances. These people are, however, on the road to promotion, because they hold Brāhmans in some degree of honour, and presents are given to them on festal occasions (Risley, *op. cit.* ii. 71). The Baurīs of Western Bengal appoint as their priests men of their own caste, termed *lavā* or *dehariā*, some of whom hold patches of land rent-free or at a nominal rent as remuneration for their services; but the tribe in Eastern Bengal employs a low class of Brāhmans (*ib.* i. 81). One section of the Ḍoms appoints the son of the dead man's sister or of his female cousin to perform the obsequial rites, and to recite the appropriate sacred verses (*mantra*) at the funeral. For these services he receives a fee when the inheritance comes to be divided. This has been supposed to be a survival of the primitive rule by which kinship is traced through the female. No other indications of an extinct custom of female kinship are now traceable among these people, and the fact that in Western Bengal the eldest son on the division of the inheritance gets an extra share seems to show that kinship through males must have been in force for a long period (*ib.* i. 245). This custom, however, seems to have been at one time widely spread among many of the North Indian tribes. The Khāsīs and Gāros of Assam still trace succession through the female; so do the Hāṛis, Pāsīs, and Tāntīs of Bihār; forest tribes in the United Provinces, like the Bhuiyārs and the Kols, and even, according to Wise, the Mithilā and Sarvariā groups of Brāhmans, who recognize the sister's son as family priest (Risley, *Census of India Rep.* 1901, i. 448; Wise, *op. cit.* 127; Crooke, *Tribes and Castes*, ii. 95, iii. 309; Dalton, *op. cit.* 63).

The next stage is reached among those tribes which employ Brāhmans only for special functions, and perform their ordinary religious rites through the agency of their own kinsmen. The Bhandārī, or barber caste of Orissa, perform the service of the orthodox gods through Brāhmans, who are received on equal terms by other members of the sacred order; but the worship of the village goddess, Grām-devatī, is done by the head of the household (Risley, *Tribes*, i. 93 f.). In the same way the Binds and Cheros of Bihār, who have copied with more or less accuracy the external observances of Brāhmanism, employ Brāhmans in the worship of the higher gods, while the household worship of the local deities is done by the men of the family, or by a *baigā*, or hedge priest,

drawn from one of the non-Aryan tribes (*ib.* i. 132, 202). Even a caste like the Kāndūs, or grain-parchers of Bihār and Bengal, who pretend to a high standard of orthodoxy, worship the godling Goraiyā in a fashion which is hardly in keeping with their high social position.

'A lump of clay is set up outside the house to represent the deity, a Dosādh (wh. see) officiates as priest, and the victim is a pig which is bought for a price from the Dosādh, slain by him at the instance of the Kāndū worshippers, and then eaten by the family of the priest' (*ib.* i. 416).

Finally, some tribes who do employ Brāhmans for all religious services and family ceremonies are unable to secure the services of the highest groups of the priestly order, and are forced to content themselves with those of lower rank. Sometimes, as in the case of the Bhakat Orāons,—a branch of the great non-Aryan tribe which is now gradually adopting the Hindu religion and its rites,—Brāhmans deign to offer their services as *gurus*, or spiritual guides, but refuse to officiate as their priests. The sacrifice is accordingly done by any influential member of the tribe who happens to be acquainted with the ritual. In their marriages they try to imitate the Hindu ceremony; the priest, however, is not a Brāhman, but a tribesman (*ib.* i. 91). The Koirīs, a cultivating tribe of Bihār and Chotā Nāgpur, profess to be orthodox Hindus; but their orthodoxy, as we have already seen (above, § 19), seems to vary with locality, and may be estimated by the degree of consideration accorded to their Brāhmans and by the nature of their local gods. In Chotā Nāgpur those Brāhmans who serve them as priests are not received on equal terms by other Brāhmans; and among their minor gods we find non-Aryan deities, like Marang Burū and Baṛ Pahāṛī, side by side with Hindu gods, or rather perhaps aboriginal gods invested with Hindu titles, like Parameśvarī and Hanumān. Mounds of dried clay representing these are found in every house; and there is often a larger mound under a sacred tree which is dedicated to the entire group of deities (Dalton, *op. cit.* 321; Risley, *op. cit.* i. 503).

21. Bhūta-worship.—Another form of worship which illustrates the transition from Animism to Brāhmanism is that of Bhūtas, which prevails more or less among all classes of the population of Bengal, from the non-Aryan tribes up to those who have accepted the beliefs of Hinduism. The term *bhūt*, or *bhūta*, meaning in Sanskrit 'formed' or 'created,' is in the earlier sacred literature applied to the powers of Nature, and even to deities. Śiva himself is called Bhūtīśvara, or 'Lord of spirits.' But the name is now popularly applied to a malignant evil spirit, properly the ghost of a man who has died a violent death, either by accident, suicide, or capital punishment. The malignancy of such a spirit is increased if he has been denied proper funeral rites. In Bengal, according to Wise (*op. cit.* 131 f.), such spirits are most numerous in forest tracts where lofty trees afford shade and silence, or in the sombre valleys of hilly districts, where the original clearers of the jungle were exposed to many forms of violent death. Some, again, dwell in ancient trees, others in cities, in ruined temples, graveyards, cremation grounds, or dry wells.

'They are met with on the arid treeless plain, the flooded river, and the lonely forest glade. The timid recognize their cry in the hooting of the owl, the howling of the jackal, the yelp of the village cur, and the whistle of the plover. One kind of demon, sedentary in its habits, attaches itself to a village, another to a household; some inflict plagues, others blight the opening bud, or convulse the newborn babe. The Bengālī sees in every accident the work of evil spirits, and his longing desire is to obtain some means of counteracting their influence. The women are naturally the chief adherents of this superstition, and while engaged in the most commonplace work are ever watchful against the entrance of a devil' (Wise, *op. cit.* 131).

If the rice be mildewed, if wild rice or weeds appear in the paddy fields, or murrain among the herds, if hail strikes the green crops, or the weevil spoils the mangoes—all these are the work of those malignant spirits. Many means are adopted to overcome their dangerous influence. Some Brāhmans, not those of the highest class, supply magical formulæ (*mantra*); Musalmān teachers prepare copper amulets, each containing a sentence from the Qur'ān; the wandering Bairāgī furnishes charms, such as a bone, tooth, or scale of a fish, a seed, or a fragment of wood.

22. The evil eye.—Closely allied to beliefs of this class is the evil eye superstition. To avert this danger the field or garden is protected by a black pot painted with a white cross or the mystic symbol, the *swastika*. See EVIL EYE.

23. Disease exorcism.—Disease, in particular, is seldom supposed to be the result of natural causes; it is almost invariably ascribed to *bhūtas*, or evil spirits.

'Even an educated gentleman, acting under female dictation, calls in the aid of magicians to cast out the devil haunting his house, or tormenting his child. Infants and pregnant women are especially subject to the malign influence of a Bhūta; but all convulsive diseases, the delirium of fever, and raving madness, are referred to possession by an evil spirit' (Wise, *op. cit.* 132).

In such cases, the *ojhā*, or exorcist, takes the place of the *kabirāj*, or physician, and magic the place of medicine. Beliefs of this kind are common throughout the Dravidian area. One form of this belief to which there is no exact parallel in other parts of India—the propitiation of Ghenṭū, the spirit which presides over itch—may be given as an example. A broken earthenware pot, its bottom blackened by constant use in cooking, daubed white with lime interspersed with a few streaks of turmeric, a branch or two of the *ghenṭū* plant (*Clerodendron infortunatum*) used as a febrifuge and anthelmintic, and, last though not least, a broomstick of palmyra or coco-nut tree, represent the evil spirit. The mistress of the family in whose house the malady appears acts as priestess. A few doggerel verses are recited, the pot is broken into fragments, and these are collected by the children, who sing songs about the itch-god. This rite is believed to be effective in removing the disease (*Calcutta Review*, xviii. 68).

24. Shamanism.—Rites like these, with the object of expelling disease or other evils caused by malignant spirits, are often accompanied by a form of shamanism, in which the officiant becomes possessed by the deity which he has invoked, and, letting his hair loose, falls into a frenzy of religious excitement, in the course of which he pours forth incoherent cries which are believed to be oracular. This form of frenzy often appears among non-Aryan races like the Santāls. Their *baigā*, or priest, assembles the people to assist him in the invocation.

'Musical instruments are produced, dancing commences, and the invocation to the spirits is chanted until one or more of the performers manifest possession by wild rolling of the eyes and involuntary spasmodic action of the muscles. The affection appears contagious, and old women and others who have not been dancing become influenced by it in a manner that is horrible to contemplate. Captain Samuells, who frequently witnessed the incantation, is confident that no deception whatever is practised. . . . "The affection," says Captain Samuells, "comes on like a fit of ague, lasting sometimes for a quarter of an hour, the patient or possessed person writhing and trembling with intense violence, especially at the commencement of the paroxysm. Then he is seen to spring from the ground into the air, and a succession of leaps follows, all executed as though he were shot at by unseen agency. During this stage of the seizure he is supposed to be quite unconscious, and rolls into the fire, if there be one, or under the feet of the dancers, without sustaining injury from the heat or the pressure. This lasts for a few minutes only, and is followed by the spasmodic stage. With hands and knees on the ground and hair loosened, the body is convulsed, and the head shakes violently, while from the mouth issues a hissing or gurgling noise. The patient next evincing an inclination to stand on his legs, the bystanders assist him and place a stick in his hands, with the aid of which he hops about, the spas-

modic action of the body still continuing, and the head performing by jerks a fatiguing circular movement." The Baigā is then supposed to identify the spirit which has possessed the patient. He implores it to desist, and by degrees, after being anointed with butter, the patient becomes calm and conscious, and when restored to his normal state is said to feel no fatigue or other ill effects from the attack' (Dalton, *op. cit.* 232 f.).

In Eastern Bengal the shaman prepares for the performance by fasting * for a whole day, drinking or smoking intoxicating preparations of the hemp-plant, and quaffing the freshly-drawn blood of a goat or other animal sacrificed on the occasion. Practices such as these are found among both Hindus and Muhammadans in that part of the Province (Wise, *op. cit.* 128).

25. Worship of individual bhūtas. — Besides the general worship of evil spirits, some members of this class are worshipped, or rather propitiated, because they are specially feared. Such spirits are usually malignant on account of the tragical circumstances of their death.

(*a*) *Deified Brāhmans.*—Many of this kind of evil spirits are deified Brāhmans. Such is Harśū Pāṇḍē, or Harśū Bābā, the local godling of Chayanpur, near Sasarām, in the Shāhābād district. He is of the class known as Brahm, Barham, or Brāhman ghosts. He was, according to the current legend, one of the Kanaujiyā division of Brāhmans, and family priest of Rājā Sālivāhanā, the ruler of that country. The Rānī disliked the Brāhman, and induced her husband to believe that the priest was conspiring to deprive him of his kingdom. Accordingly the Rājā caused the house of the Brāhman to be demolished, and resumed the lands which he had previously conferred upon him. The enraged Brāhman did *dharṇā*, in other words, fasted till he died of starvation at the gate of the palace. So he became a Brahm, and is now worshipped with the fire-sacrifice (*haoma*) and offerings of Brāhmanical cords. If any one obtains his desire through Harśū's intercession, he makes an offering of a golden cord, and feeds Brāhmans in his honour. Harśū's speciality is, if rightly approached, to cure disease by expelling the evil spirits to which it is due. His worship is rapidly spreading beyond Bengal westward into the adjoining districts of the United Provinces (*PR* i. 191 f.). Deified spirits of this class are very common. They are sometimes represented by a headless trunk, with an eye staring from the breast; they inhabit large trees on the banks of rivers or in some lonely place, whence they throw stones at belated travellers, and lead them astray on dark nights. Woe betide the unfortunate person who gives one of them cause of offence, as, for instance, by unwittingly felling the tree in which the Brahm has taken up his abode, or who has been in any way responsible for his death.

'He can escape the evil consequences only by making the Barham his family deity, and worshipping him regularly. In Bihār he often becomes the *dihwār*, or tutelary deity of the whole village. The worship is usually performed under the tree, usually a banyan, which he is supposed to frequent. The trunk is painted vermilion, and a mound of earth is erected, on which are placed clay figures of horses or elephants, and offerings are made of flowers, betel-nuts, and the like. The worship is conducted by a special priest called the *bhaktā*, who is not necessarily a Brāhman, and occasionally he is inspired by the spirit and utters prophecies, which are implicitly believed in by the devotees' (Gait, *op. cit.* i. 198 f.).

The same writer gives a catalogue of numerous deified Brāhmans. In many cases they are ghosts of members of the priestly order who have committed suicide on account of some insult or the deprivation of some privilege (*PR* i. 191 ff.). In one Bengal case a Rājput having no offspring consulted his family priest.

'The latter told him to stand next morning at a certain cross road and to behead the first person whom he might meet. To his horror and surprise, Mahi [the priest] himself appeared. He would have drawn back, but the Brāhman told him not to hesitate to carry out his advice, and merely stipulated that he should be installed as his family god. The Rājput then killed him, and he has ever since been worshipped by the clan' (Gait, *op. cit.* i. 199).

(*b*) *Low-caste bhūtas.*—The lower castes have many deified spirits of this kind. The malignant ghost of a sweeper is specially feared, and in many places the higher castes insist that a member of that caste shall be buried face downwards, or that the grave shall be filled with thorns, to prevent the ghost from 'walking.'

26. The Churel.—Another class of evil spirit widely feared is the Churel, or Kichin, the spirit of a woman who dies in childbirth or in a state of ceremonial impurity. She is regarded as specially malignant, because fate has snatched her from this world just at the time when she was about to attain the happiness of becoming a mother, or in a state of impurity which would cling to her in the other world.

This belief is widely spread. We find it in China (*FL* i. 360 f.), in Japan (*ib.* xiii. 276), among the Malays (Skeat, *Malay Magic*, 318, 327), in New Caledonia (*FL* xiv. 258), New Britain (*JAI* xvii. 292), Papuan Gulf (*ib.* xxxii. 423), Borneo (Roth, *Natives of Sarawak*, i. 100, 140, 167, 219), Fiji (*JAI* x. 145). In Central America the spirits of women who died in their first childbirth were supposed to dwell with the dead warriors in the house of the Sun. At certain times they descended to earth, wandering through the pueblos and bringing deadly disease to those women and children who crossed their path (Payne, *Hist. of New World*, ii. 334). If the child lives it is generally believed that the mother returns to seek it. Hence in West Africa when a woman dies in childbirth her child is buried with her (Ellis, *Tshi-Speaking Peoples*, 234). In Melanesia it is supposed that a woman who has died in childbirth cannot go to Panoi, or Deadland, if her child lives, because she cannot leave it behind. They therefore deceive her ghost by packing up a piece of banana trunk in leaves, and laying it on her breast when she is buried. Then, as she departs, she imagines that she is carrying her child with her (Codrington, *Melanesians*, 275). For other instances of the belief in India, see *PR* i. 269 ff. It prevails in Burma (*Report 9th Oriental Congress*, i. 185), in Manipur (*JAI* xvi. 355), among the Nāgas (*ib.* xxvi. 200), and among the Vellalars of Madras Pres. (Thurston, *Bulletin Madras Museum*, II. ii. 165).

The Churel usually appears as a woman who has no mouth, who haunts filthy places, and whose feet are turned backwards. This last is a characteristic of demons in many parts of the world (Tylor, i. 307). Again, she often assumes the form of a beautiful young woman, and at night seduces youths, especially those who are good-looking. She carries them off to a kingdom of her own, where she kills them by a slow process of emaciation, or keeps them until they lose all their manly vigour, and then sends them back to the world in the shape of grey-haired old men, who find all their friends long dead. The Churel superstition is probably derived from the demonolatry of the non-Aryan races. It is found fully developed among the Orāons, who imagine the Churel to be a woman clad in robes of white, her face fair and lovely, her back black as charcoal, and her feet inverted (*FL* xvii. 131 ff.). She hovers over gravestones, lays hold of passers-by, wrestles with them or tickles them, and he who is thus caught is lucky if he escapes injury. Often he is found next morning senseless, with his neck twisted, and the services of a sorcerer or medicine-man are necessary to set him right again (Dalton, *op. cit.* 258). The methods of getting rid of such a spirit are twofold—either by propitiation or by exorcism. The Bhuiyās of Keonjhar, if a woman should die before delivery, extract the embryo from the corpse and burn the bodies at opposite sides of a hill stream. As no spirit can cross water, and the mother cannot become a witch unless united to her child, this precaution is believed to render her harmless (Gait, *op. cit.* i. 199).

* For fasting and other means of producing ecstasy and other forms of morbid exaltation for religious ends, see Tylor, ii. 410 ff. It prevails widely in modern Lāmaism, which owes much to the Tantrik cultus (Waddell, *Buddhism of Tibet*, 34), and in South India (Burnell, 'Devil Worship of the Tulavas,' *IA*, 1894; Caldwell, *Dravidian Grammar*[3], 579 ff.).

27. Animism the basis of modern Hinduism.—The Hinduism, and much of the Muhammadanism, of modern Bengal is thus in a large measure the result of the fusion of these non-Aryan animistic beliefs with the foreign faiths—first, the Brāhmanism of North-Western India, which gradually worked its way from the Holy Land of the Hindus in the eastern Panjāb, down the valley of the Ganges; and second, Islām, which advanced by the same route at a much later period. These animistic beliefs are to such a large extent the foundation of modern Hinduism in Bengal that it is impossible to draw a line of demarcation between the two, or to say where one ends and the other begins. Hinduism, in fact, is such a vague term as not to admit of definition.

'The term in its modern acceptation denotes neither a creed nor a race, neither a church nor a people, but is a general expression devoid of precision, and embracing alike the most punctilious disciple of pure Vedantism, the Agnostic youth who is the product of Western education, and the semi-barbarous hillman, who eats without scruple anything that he can procure, and is as ignorant of the Hindu theology as the stone which he worships in times of danger or sickness' (Bourdillon, *Census Rep. Bengal*, 1881, i. 71).

28. Totemism.—Totemism, which in other countries seems to have produced important results in moulding the national faith, appears in Bengal rather as a social than as a religious force. Here we find it chiefly in connexion with the exogamous septs of the non-Aryan tribes, each of which bears the name of some animal, tree, plant, or material object, natural or artificial, which the members of that sept are prohibited from killing, eating, cutting, burning, carrying, using, etc. Thus, among the Orāons, we find septs designated by names meaning 'young mice,' 'tortoise,' 'hyæna,' 'eel,' 'squirrel,' 'rat'; and among the Santāls 'wild goose,' 'hawk,' 'betel-palm,' 'conch-shell,' etc. One curious fact about these Orāon 'totems' is that they are not whole animals, but parts of animals, as the head of a tortoise, the stomach of a pig, which special parts the tribesmen are forbidden to eat (Risley, *op. cit.* i., Introd. 43; Dalton, *op. cit.* 189, 254).

The respect for the totem is shown in various ways. The Bāorī totem is the heron, and they are forbidden to eat its flesh (Dalton, *op. cit.* 327). The Kumhārs of Orissa abstain from eating, and go so far as to worship, the *sāl* fish, because the rings on its scales resemble the wheel which is the symbol of their craft. The Khattyā branch of the same tribe have only one section, Kaśyapā, which in Skr. means 'tortoise,' and is also the name of a famous *rishi*, or saint, with whom they claim connexion. But as they venerate the tortoise, Risley suggests (*op. cit.* i., Introd. 48) that the name of the saint has been substituted for the original totemistic name derived from the animal. The Parheyās of Palamāu have a tradition that their tribe formerly held sheep and deer sacred, and used the dung of these animals to plaster the floors of their huts, as they now use cow-dung; the Kharriās do not eat the flesh of sheep, and may not use a woollen rug—tabus the observance of which is now becoming relaxed (Dalton, *op. cit.* 131; Ball, *Jungle Life*, 89; Risley, *op. cit.* i. 466). Some Kandhs refused to carry a basket containing the skin of a young leopard which Ball had shot, because, as far as he could ascertain, 'the animal was the totem, or sacred beast of the tribe' (*op. cit.* 600). Many instances of similar belief have been collected by Dalton and Risley. The Asurās have thirteen totemistic sections; a man may not marry a woman belonging to the same section as himself, nor may he eat, cut, or injure the plant or animal whose name his section bears (Risley, *op. cit.* i. 25). The Koirīs have as sections the *nāga*, or snake, and the *kaśyapā*, or tortoise, and will not molest either animal. The Kaśyapā branch carry their reverence for the tortoise to such an extent that, if one be caught, they smear its shell with oil and vermilion, and put it back into the water (*ib.* i. 501). The Mahilī Muṇḍās regard the pig as their totem, and will not eat pork (*ib.* ii. 40). The Pāns have a host of totems, including among animals the tiger, buffalo, monkey, tortoise, cobra, mongoose, owl, king-crow, peacock, centipede, and among plants the wild fig, wild plum, and many others (*ib.* ii. 156).

Many of the non-Aryan tribes, again, claim descent from animals. The Cheros say that they are descended from the *nāga*, or dragon (Dalton, *op. cit.* 126, 162, 165 f.); the Santāls have as one of their totems the wild goose, from the eggs of which they assert that their ancestors were created (*ib.* 209); the Ho creation-legend seems to connect the various tribes—Kols, Bhūmij, Brāhmans, Kṣatriyas, Śūdras, Bhuiyās—and even the English with animals selected by each after their creation by Otē Borām and Sing Bongā, who were self-created.

Another proof of the existence of totemism in Bengal has been traced in the reluctance to mention animals by their real names, and the preference for a descriptive epithet (Frazer, *Totemism*, 15). Thus, the Kharwārs call the hare 'the four-footed one'; and the Paṭāris call the bear 'the hairy creature,' and the elephant 'he with the tusks' (Crooke, *Tribes and Castes*, iii. 249; *PR* ii. 54, 142). But in his later examination of tabus of this kind Frazer seems to have abandoned the idea that they can be traced to totemism.

The evidence for the existence of totemism as a force affecting religious beliefs is thus very dubious, and many of the examples given above can be explained by animal- or plant-worship.

29. Hinduism.—Nearly two-thirds of the present population of the Province are Hindus, and rather less than one-third Muhammadans, the followers of other creeds being in small numbers. The diagrams prepared by Gait (*op. cit.* i. 154, 156) show clearly the geographical distribution of these, the two main religions of the Province. What may be called the most conservative parts of the country, those which were settled at the earliest period, continued to be the seats of an historic civilization, and what were centres of Buddhism are now districts in which Hinduism is predominant. These are the sub-provinces of Bihār and Orissa, and the line of districts along the eastern edge of the Chotā Nāgpur plateau and the western fringe of Bengal Proper, which link these two tracts together. The south-western hill region, the home of the Muṇḍā or Dravidian tribes, is the domain of pure Animism, which in the plain region is overlaid by Hinduism or Islām. Muhammadanism, again, is predominant to the east, in that portion of the Province which has now been formed into a separate Administration.

30. The sects of Hindus.—No attempt was made at the last Census to obtain a record of the multitudinous sects of Hindus. Of these the two most important are the Śāktas, or followers of the Mother-goddesses, and the Vaishṇavas, or worshippers of Vishṇu.

In Bihār the distinctions of sect are ill-defined, and the more ignorant classes would find it difficult to say to which of the conventional divisions of Hinduism they belong. But in Bengal and Orissa, owing to the great Vaishṇava movement inaugurated by Chaitanyā, the case is otherwise, and there would be but little difficulty in obtaining a fairly accurate record of the sectarian distribution of the population (cf. Gait, *op. cit.* i. 181).

Speaking generally, we may say that the sectarian divisions of the people are not clearly defined. As in other parts of the Indian Empire, the membership of or nominal adherence to the principles of a sect often depends on the question of food; to be a Śākta is very often merely to

be an eater of meat and a drinker of spirituous liquor, both being permitted luxuries; while inclusion in the Vaishṇava sect implies vegetarianism. Hinduism, again, is perhaps more eclectic than most of the great world-religions, freely admitting into its fold the followers of many different sects provided they submit to the social rules of the body in which they accept membership. They are allowed perfect freedom to worship any or all of the sectarian gods, though to suit his own inclinations a man may devote special honour to one of the many forms of the Mother-goddess, to Śiva, or to Vishṇu in one or other of his many incarnations. His private chapel may contain an image of Devī or Durgā side by side with the *śālagrāma*, or ammonite, representing Vishṇu, or the phallic symbol of Śiva. When he visits a holy place he will be careful to pay respect to all the principal shrines, and to worship all the gods or goddesses who are represented by images. He does this because his deities are jealous gods, easily offended if they be neglected, and prone to punish any one who fails to honour them (Jogendra Nath Bhattacharya, *Hindu Castes and Sects*, 364).

Hence, among individual castes we find a remarkable mixture of sectarian beliefs. Thus, among the Bābhans, yeomen of Bihār, representatives of all sects are found in much the same proportion as in the population at large. Vaishṇavism is said to have been only recently introduced among them, and in north Bihār most of them are worshippers of either Śiva or the Śakti. In this, as in many other castes of the same social status, no social consequences result from professing the tenets of any of the regular sects, and intermarriage between their members goes on freely within the limits of the caste (Risley, *op. cit.* i. 33). Passing to castes of a much lower grade, we find that the Bāgdī, cultivators, fishermen, and menials of Central and West Bengal, worship, under the guidance of degraded Brāhmans, Śiva, Vishṇu, and the Śakti, as well as Yama or Dharmarājā, god of Dead-land, and the myriad names of the modern pantheon, besides animistic deities like Guṣāin Erā, the goddess, and Bar Pahār, the mountain-god of the Santāls; but their favourite object of worship is Manasā, the snake-goddess. The Barui, cultivators of *pān* (*Piper betel*), are mostly Śāktas, and only a few are Vaishṇavas, but with the worship of these great gods they combine the cult of Ushas of the Veda, the Eos or Aurora of the West. The Dhobī, or washerman caste, worship Śiva, Vishṇu, Kārttikeya, god of war, or the Śakti, very much as the personal taste of the worshipper may dictate, and they venerate, besides these, non-Aryan gods such as Bhuiyā, the earth-god, and Barham Ghāsī, the deified ghost of a Brāhman. The Pods, a mixed tribe in the Delta, include Śaivas, Śāktas, and Vaishṇavas, as well as Sauras, or Sun-worshippers, and Ganapatyas, or followers of Gaṇapati or Gaṇeśa, god of wisdom and remover of obstacles, the two last sects being very sparingly represented among the higher classes of Hindus (*ib.* i. 41, 72, 235, ii. 177).

We find, again, instances of beliefs held in common by both Hindus and Musalmāns. In Rangpur, Buchanan (*op. cit.* iii. 512) found Hindus worshipping a spirit known as Satya-nārāyan, 'the true Lord,' whom Musalmāns venerated under the title of Satya-pīr, 'the true saint.' Hymns to him were sung by both Brāhmans and Śūdras; and while the Musalmāns used different hymns, the worship was identical.

In Bihār, the same writer remarks (i. 186) that 'when an Hindu is said to belong to such and such a sect, it does not in genera absolutely imply that he worships only such and such a god; but that such or such is his family-god (*kula-devatā*) or favourite god (*iśhṭa-devatā*). In some parts of India strict men will pray to no god but their favourite and his connexions, such as his spouse, sons, and servants; but in this district it is not usual to be so wedded; and though the daily prayers of the pious Hindu are offered to some one god, he without scruple has recourse to any other of whom he thinks he may be in need; and never approaches any image or holy place without some mark of respect.' The *gurus*, or sages, he adds, who instruct both Śaivas and Śāktas, are identical, and many Hindus are so careless or ignorant 'that they never have taken the trouble to inquire from their instructor whether the secret prayer is addressed to Śiva or Śakti, and they do not understand a word of it.'

It must, therefore, be understood that the Hindu sects of this Province are not in any sense analogous to the divisions found in other religions, as, for example, those of Christianity. Certain classes of the people may be generally described as Śāktas, Vaishṇavas, or Śaivas; but the fact of nominal adherence to one of these sects does not exclude the possibility of the worshipper paying reverence to gods other than those which his sect specially honours. It is in Bihār particularly, as we have seen, that the line between Vaishṇavas and Śāktas is not clearly defined. This is not the case in Bengal proper. Here a strict Vaishṇava will not even mention the names of goddesses like Kālī or Durgā, or the Bel tree (*Ægle marmelos*) the leaves of which are used in the worship of the Śakti. The reasons for this peculiarity, Gait suggests, are 'that Bihār was never so deeply infected as Bengal with the worst forms of Śākta worship, and that the Vaishṇava revival of Chaitanya which represented a revulsion from Śāktism never spread thither' (*op. cit.* i. 188).

31. The Śāktas.—Śāktism * was probably a development of the animistic belief in the Mother-goddesses which, as we have seen (above, § 13), is widely spread among the non-Aryan tribes. In the more highly developed form of the cult the functions of the primitive goddess 'of all work' have become divided into departments, and the various forces of Nature are personified under separate personalities, known as the Divine Mothers (*mātrigān*). These female energies are conceived as the Śakti of the primeval male, Puruśa or Śiva, who is the counterpart of non-Aryan gods like Bhūmiya or Khetrapāla, the male consort of the Earth-Mother, by union with whom her fertility is periodically renewed (see § 13).

The Śākta cult is supposed to have originated in East Bengal or Assam about the 5th cent. A.D., and the headquarters of Tāntrik worship are believed to have been Kāmākhya in the latter Province, whence it was introduced into Tibet, Nepāl, and Gujarāt. The cult in this Province takes many forms.

(*a*) *General worship of the Śakti.*—We have, first, the Mātrikā pūjā, the general worship of the Mothers of the universe personified as the wives of the gods, that is to say, Śakti in all her various forms, usually eight in number, and co-ordinated with the different gods—Vaishṇavī and Lakshmī with Vishṇu; Brahmā or Brahmānī with Brahmā; Kārttikeyī with Kārttikeya, god of war; Indrānī with Indra; Yamī with Yama, god of death; Vārāhī with Vārāha, the boar incarnation of Vishṇu; Devī or Īśānī with Śiva.

(*b*) *Kālī.*—Secondly, there is the worship of Kālī, which, according to Buchanan (*op. cit.* ii. 374, 477), was in his time of comparatively recent introduction into Bihār, 'since the English took possession, some of the wise men of the East having told the wiseacres that she is the deity of the English, to whose favour they entirely owe their great success.' Until the deity was introduced, he

* For a sketch of the development of Śāktism see Gait, *Assam Census Report*, 1891, i. 80 ff.; Jogendra Nath Bhattacharya, *Hindu Castes and Sects*, 407 ff.; Hopkins, *Religions of India*, 489 ff.; Barth, *Religions of India*, Eng. tr. 199 ff. The course of the development of Greek belief is supposed to have been on similar lines, the earliest conception being that of the Mother and the Maid, which may reflect primitive matriarchal customs (J. E. Harrison, *Prolegomena*, 260 ff.).

goes on to say, it was not common to call the female power by any particular name. She was commonly spoken of and worshipped as Devī or Bhavānī, two appellations implying merely 'the goddess,' 'although by the latter term Sītalā is commonly understood.' The original female power, in short, is thus seen undergoing the process of development, a number of special entities being created to whom each department of human action is assigned. The cult of Kālī appears in one of its lowest forms among the Tipārās of the State of Tippera and the Chittagong hill tracts to the east of the Province. This tribe offers to Kālī black goats (her name meaning 'the black one'), rice, plantains, and other fruits of the earth. The goddess has no image; she is represented for sacrificial purposes by a round lump of clay, the edges of which are drawn out into four points or legs, so that the whole, seen from above, bears a rough resemblance to a sea-urchin with four arms (Risley, *op. cit.* ii. 325).

In her temples Kālī is represented as a 'very black female, with four arms, having in one hand a scymitar, and in another the head of a giant which she holds by the hair; another hand is spread open bestowing a blessing; and with the other she is forbidding fear. She wears two dead bodies for earrings, and a necklace of skulls, and her tongue hangs down to her chin. The hands of several giants are hung as a girdle round her loins, and her tresses fall down to her heels. Having drunk the blood of the giants she has slain in combat, her eyebrows are bloody, and the blood is falling in a stream down her breast; her eyes are red like those of a drunkard. She stands with one leg on the breast of her husband Shiva, and rests the other on his thigh' (Ward, *op. cit.* ii. 117 f.).

At the present time, pigeons, goats, and more rarely buffaloes, are the victims usually offered. The ceremony commences with the adoration of the sacrificial axe. Various spells (*mantra*) are recited, and the animal is decapitated at one stroke. As soon as the head falls to the ground the votaries rush forward and smear their foreheads with the blood. These sacrifices are specially performed during the three days of the Durgā Pūjā (Gait, *op. cit.* i. 182).

Rites such as these represent the goddess in her malevolent aspect. But she is also Rākhyā or Bhadrā Kālī, the guardian of every Bengali village, to whom prayers and sacrifices are offered on the outbreak of pestilence. Wise remarks that, when cholera broke out at the great Vārunī fair in 1874, a subscription was collected for the performance of a special worship of Kālī. Her image was paraded through the fair, after which an operatic entertainment was given, at which crowds of people assembled. 'The cholera, which had been only sporadic, ceased, and the stoppage was attributed to the beneficent Kālī' (*op. cit.* 135 f.).

(*c*) *Devī.*—The cult of Devī is similar to that of Kālī. It sometimes represents her as benignant, but more often in her chthonic or malignant aspect. It is, in fact, practically impossible to distinguish the double manifestation of the goddess. Speaking generally, when kindly she is Umā, 'light,' Gaurī, 'the yellow or brilliant one,' Pārvatī or Haimavatī, 'she that has her birth in the Himālaya,' Jaganmātā, 'mother of the world,' and Bhavānī; while in her terrible form she is called Durgā, 'the inaccessible,' Kālī or Śyāmā, 'the dark one,' Chandī or Chandikā, 'the fierce,' Bhairavī, 'the terrible.' But in the popular conception these functions so completely merge and interchange that more precise definition is impossible. In Bihār during the Naurātrī or 'nine nights'' feast of the goddess, held during the fortnight of the waxing moon in the month of Chaitra (March), the rite of infusing by means of spells (*mantra*) the spirit of the goddess into an earthenware jar is performed. A space within the temple is purified by plastering the surface with mud and cow-dung. The jar is filled with water and covered with shoots of the mango tree, and over it is placed an earthenware saucer containing barley and rice, which is covered with a yellow cloth. The priest recites verses, and, sprinkling water on the jar and its contents with a few blades of the sacred *kuśa* grass, he invites the goddess to enter it. As a sign that she has occupied it, the outside of the jar is sprinkled with red powder. During the period occupied in the rite the priest practises abstinence, eating only roots and fruits. The service concludes with a fire-sacrifice (*haoma*), in which barley, sugar, butter, and sesamum are burned before the jar which holds the goddess. The ashes of the sacrifice and portions of the red powder with which the jar was smeared are brought to the houses of his clients by the priest, who smears their foreheads with these substances, thus bringing them into communion with the deity. Here we find fetish rites in their crudest form (*North Indian Notes and Queries*, iv. 19 f.).

(*d*) *Divisions of the Śāktas.*—The Śākta sect is divided into three main sections—first, the Dakshināchārī or Dakshinamārgī, 'the right-hand' section, who are comparatively free from sensuality, and do not offer spirits or flesh to the deity. They follow the Purānas as their Veda, and are devoted to either Śiva or Vishnu in his androgynous character, at once male and female. Besides these there are two bodies of extremists—the Vāmachārī or Vāmamārgī, 'the left-hand' sect, who follow the teaching of the Tāntrik literature, and the Kaulas or Kaulikas, following the Kaula Upaniṣad, whence they take their name, whose practices are even more grossly licentious. Their object of veneration is the great Śakti, or power of Nature. Jaganmātā or Jagadambā, 'the mighty mysterious force, whose function is to direct and control two quite distinct operations: namely, first, the working of the natural appetites and passions, whether for the support of the body by eating and drinking or for the propagation of living organisms through sexual cohabitation; secondly, the acquisition of supernatural faculties (*siddhi*), whether for a man's own individual exaltation or for the annihilation of his opponents' (Monier Williams, *Brāhmanism and Hindūism*[4], 185 f.). The foul orgies which accompany such celebrations have been described by Jogendra Nath Bhattacharya (*Hindu Castes and Sects*, 411 f.), Ward (*Hindoos*, ii. 295 ff.), and others, and need not be further discussed here. The animistic side of the cultus appears in the Panjāb worship of young girls as Devī, apparently a form of sympathetic magic to induce fertility (Rose, *Census Rep.* 1901, i. 126).

32. **The Vaishṇavas.**—The revolt against this gross and debasing cultus was led by the reformer Chaitanya,* a Vaidik Brāhman who was born at Nabadwīp, in Bengal, A.D. 1484.

'He preached mainly in Central Bengal and Orissa, and his doctrines found ready acceptance amongst large numbers of the people, especially amongst those who were still, or had only recently been, Buddhists. This was due mainly to the fact that he ignored caste and drew his followers from all sources, so much so that even Muhammadans followed him. He preached vehemently against the immolation of animals in sacrifice and the use of animal food and stimulants, and taught that the true road to salvation lay in *bhakti*, or fervent devotion to God. He recommended Rādhā worship, and taught that the love felt by her for Krishna was the best form of devotion. The acceptable offerings were flowers, money, and the like; but the great form of worship was that of the *saṅkirtan*, or procession of worshippers playing and singing. A peculiarity of Chaitanya's cult is that the post of spiritual guide, or Gosāin, is not confined to Brāhmans, and several of those best known belong to the Baidyā caste, who practise medicine in Bengal Proper. They are all of them descended from the leading men of Chaitanya's immediate entourage. The holy places of the cult are Nabadvīp [or Nadīya], Chaitanya's birthplace, and in a still greater degree, Brindaban [wh. see], the scene of Krishna's sports with the milk-maids, which Chaitanya and his disciples reclaimed from jungle, and where he personally identified the various sacred spots, on which great shrines have now been erected' (Gait, *op. cit.* i. 182).

* His life and the principles of his sect are fully described by Jogendra Nath Bhattacharya (*Hindu Castes and Sects*, 459 ff.).

Chaitanya, after spending six years in pilgrimage between Mathurā and Jagannāth, finally settled in the latter place, where in A.D. 1527, at the age of forty-three, he disappeared from the world. There is reason to believe that he was drowned in the sea, into which he had walked in an ecstasy, mistaking it for the shallow waters of the Jumna, where he saw in a vision Kṛṣṇa sporting with his Gopīs (Growse, *Mathurā*[3], 1883, 197). After his death his followers split up into two bodies: those who retained, and those who rejected caste. The latter are known as Jāt Baishtam or Bairāgī (*q.v.*), are recruited from all castes, and profess to intermarry freely amongst themselves; but caste distinctions are not entirely obliterated, and the recruits from the higher hold aloof from those drawn from the lower castes.

'Except for the fact that outsiders are still admitted, they form a community very similar to the ordinary Hindu caste. Its reputation at the present day is tarnished by the fact that most of its new recruits have joined owing to love intrigues, or because they have been turned out of their own caste, or for some other sordid motive' (Gait, *op. cit.* i. 182).

The other division, those who have retained the system of caste, is in no way connected with the Jāt Baishtams. They practise a cultus much purer than that of the Śāktas, and the stricter members of the body are vegetarians, and abhor the Śākta beliefs. But among those of the lower castes some freely eat animal food, and even join in processions in honour of Durgā, but will not be present when blood sacrifices are offered. The various subdivisions of the Bengal Vaishṇavas have been fully described by Wise (*op. cit.* 147 ff.) and by Risley (*op. cit.* ii. 339 ff.).

The Vaishṇavism of Bengal is thus strongly opposed to Śākta beliefs, and is probably to a large extent derived from the traditions of Buddhism.

'Apart from metaphysical subtleties, which naturally have but little hold on the minds of the populace, the social tenet of the Bengali Vaishṇavas is the all-sufficiency of faith in the divine Kṛishṇa; such faith being adequately expressed by the mere repetition of his name, without any added prayer or concomitant feeling of genuine devotion. Thus roughly stated, the doctrine appears absurd; and possibly its true bearing is as little regarded by many of the more ignorant of the Vaishṇavas themselves as it is by the majority of superficial outside observers. It is, however, a legitimate deduction from sound principles; for it may be presumed that the formal act of devotion would never have been commenced had it not been prompted at the outset by a devotional intention, which intention is virtually continued so long as the act is in performance' (Growse, *Mathurā*[3], 197).

As a parallel case, Growse, himself a member of the Roman Catholic Church, quotes from one of its manuals the rule: 'It is not necessary that the intention should be actual throughout; it is sufficient if we pray in a human manner, and for this only a virtual intention is required; that is to say, an intention which has been actual and is supposed to continue, although, through inadvertence or distraction, we may have lost sight of it.'

(*a*) *Prevalence of Vaishṇavism.*—The Vaishṇava cultus is one of the most important among the beliefs of the Province. Ward in 1815 stated that six out of ten of the whole Hindu population were worshippers of Kṛṣṇa (*Hindoos*, ii. 158); in 1828 Wilson (*Religious Sects*, i. 152) calculated them at one-fifth; and in 1872 Hunter (*Orissa*, i. 144) at from one-fifth to one-third of the whole number of Hindus. Wise (*op. cit.* 147), from a catalogue of the temples in the Dacca District, found that 74 per cent. belonged to Kṛṣṇa in one or other of his numerous forms, and only 21 per cent. to Kālī, Durgā, and Śiva. The predominance of Kṛṣṇa-worship is largely due to the *Bhāgavata Purāṇa* assigned by Wilson (*Vishṇu Purāṇa*, xxxi.) to the 12th cent. of our era. It has, however, been recently established that the Purānic literature goes back to the 6th or 8th cent., and thus the movement which led to the rise of Neo-Brāhmanism must be assigned to an earlier date than that fixed by the older authorities. The *Bhāgavata Purāṇa* is now regarded as the chief book among the Vaishṇava scriptures.

'Since his death in 1528, Chaitanya has been identified with Krishṇa, and this deification has been ratified by the *Chaitāmṛta*, written thirty years after his death. The moral and tolerant doctrines of this national teacher penetrated the hearts of the people, and roused an enthusiastic spirit that has, unfortunately, driven many into strange and perilous wanderings. Among the pure Śūdras there is less deviation from the original creed than among the lower mixed classes, who have been always neglected. The religious sentiments of the latter, instead of being properly guided, have been left to develop as fancy or bias disposed them. Whether this be a satisfactory explanation or not, it is certain that the corrupt, often immoral, sects now existing are chiefly patronized by the lower and most ignorant classes of the community. The equality of all men, a doctrine preached by Chaitanya, but repudiated by the Gosāins, has been restored by most of the later offshoots of Vaishṇavism, and with them no distinction conferred by birth, wealth, or prescription is ever recognized' (Wise, *op. cit.* 147).

(*b*) *The erotic Vaishṇavism.*—The development of Vaishṇavism on the erotic side marks the degradation of the cultus. The original doctrine of *bhakti*, or loving faith, was afterwards conceived to appear in five stages, the higher of which, as in the case of the Ṣūfī mystics, could be attained only by a few privileged persons, after prolonged austerities and mortifications: (1) *śānti*, or quietism, 'in which the Vaishṇava enjoys perfect contentment and peace of mind, ever dwelling on the happiness of his lot, and grateful to Hari for his mercy'; (2) *dāsya*, the relation between a master and his purchased slave, of which the keynote is self-denial, the dedication of all the believer's energy and thought to the service of the god; (3) *sakhya*, or friendship, at which stage 'the disciple worships Chaitanya as his bosom friend, and regards his own soul as an emanation from and a particle of the *paramātman*, or supreme spirit'; (4) *vātsalya*, 'affection towards offspring,' in which the deity is regarded 'not as a common Father of all men, but as the parent of the worshipper'; and (5) *mādhurya*, 'sweetness,' 'the efflorescence of *bhakti*,' as it has been called. 'In this, the highest and most exquisite condition, the disciple glows with the same uncontrollable desire that Krishṇa felt for the absent Rādhā' (Wise, *op. cit.* 155). This last development of erotic Vaishṇavism finds its most complete and degrading exposition in the practices of the sect of the Vallabhāchāryas, according to whom body, soul, and property (*tan, man, dhan*) are to be made over to the Mahārājās, or successors and vicars of Kṛṣṇa upon earth, by the rite of self-devotion (*samarpaṇa*); and women are taught that their highest bliss results from the caresses of the representative of the god (Monier Williams, *op. cit.*[4] 134 ff.; Growse, *Mathurā*[3], 199 ff.; [Karsandas Mulji,] *Hist. of the Sect of the Maharajas or Vallabhacharyas of West. India*, 1865).

33. **The cult of Śiva.**—The cult of Śiva is of less importance than that of either the Śakti or Vishṇu. In Eastern Bengal the Śaiva fraternities, those of the Kanphaṭās, or 'ear-pierced' Yogīs, and the Brahmachārīs, never gained popularity, and their conventual establishments, which are few, would have disappeared long since, but for the charitable endowments of former ages. The Śaiva mendicants or cenobites are, according to Wise (*op. cit.* 174 f.), notorious for their licentious lives and dissipated habits; but, notwithstanding the scandal which they cause, their *ākhāras*, or convents, are thronged by crowds of devotees, chiefly women. In Bengal proper, according to Ward (*op. cit.* ii., Introd. xxi.), few Hindus adopt Śiva as their guardian deity. His temples generally represent him in the form of the *liṅgam*, or as Pañchānana, the figure of the deity with five faces. Further west, in Bihār, the worship of Śiva is more common, and prevails widely among Brāhmans. Here village temples in honour of the deity, with images of the *liṅgam* and of Nandi, the bull 'vehicle' of the god, are common, and the worship is adopted in preference to that of

Vishnu in one or other of his many forms, because the ritual and offerings made to him are much less elaborate and expensive. The Śaiva cultus thus suits the thrifty habits of the yeomen among whom it chiefly prevails.

Among the castes who are specially devoted to this form of belief may be mentioned the Yugīs or Yogīs, now a weaving caste in Eastern Bengal, of whom the great majority worship Śiva or Mahādeva, especially at the Śivarātri or 'night feast' of Śiva, held in the month of Māgh (January–February). The chief religious centres of the Māsya Yugīs are Brindāban, Mathurā, and Gokul, all in the United Provinces; but their chief places of pilgrimage are Benares, Gayā, and Sītākund in Chittagong (Risley, *op. cit.* i. 358). These Yogīs, as they prefer to be called, are supposed by Gait (*op. cit.* i. 381) to be descended from a religious community, not necessarily from the regular Yogī or Jogī ascetics, but possibly from some Buddhist Order. The same writer supposes that their present degraded condition is due to their having remained in the Buddhist faith after the general population had reverted to Hinduism. They call their priests, who belong to their own communion, *Mahātmas* or *Paṇḍits*, both of which terms were formerly in use among Buddhists; they bury their dead in a sitting posture, with the legs crossed in the conventional attitude of Buddha, and with the feet turned to the north-west. The Yogī sects of Northern India freely admit outsiders to their body; and their present occupation in Bengal, weaving, is one often practised by decayed religious communities. Their devotion to Śiva is possibly connected with his manifestation as the typical ascetic and self-mortifier—a conception which perhaps owed much to the influence of Buddhism. The Śaiva mendicants are popularly divided into ten classes, known collectively as the Daśnāmīs, or 'ten names.' Besides that of the more respectable Order, the Sannyāsīs, the cult gives shelter to loathsome ascetics, like the Aghorīs (wh. see), the Urdhvabāhus, who contort their limbs, and the Ākāśamukhins, who keep their necks bent back in a fixed gaze on the sky until the muscles become withered.

34. **Buddhism.**—Buddhism, which had its origin in the western part of the Province, and finally became one of the great religions of the world, is now represented in Bengal by only 237,893 adherents. In so far as they follow the orthodox standard of belief, they are included in the Mahāyāna, or Great Vehicle, which is the basis of Tibetan Lāmaism, and also of the Buddhism of Bengal. The Buddhists of this Province may be divided into at least four groups.

(*a*) *Chinese Buddhists.*—First comes the small body of immigrant Chinese in Calcutta, where they follow many occupations, such as carpentry and shoemaking, boil down pigs' fat into lard, and deal in opium and hemp drugs. Their temples seem to be usually seats of Buddhist as well as of Shinto worship, that at Calcutta being dedicated to Kwan-te, generally called the 'god of war.' In the courtyard is the god's horse, comfortably stabled. Climbing a flight of stairs, one reaches chapels and rooms for attendants, in which animals intended in the first instance as food for the god, and which are afterwards consumed by the worshippers, are being cooked (*Calcutta Review*, xxxi. 368 ff.).

(*b*) *Himālayan Buddhists.*—Secondly come the Buddhists of North Bengal, who are either natives of the Himālayan State of Sikkim, or immigrants from Bhutān, Tibet, and Nepāl. By race they are mostly Tibetans, Lepchas, and Murmīs. In Nepāl itself Buddhism is steadily losing ground under the attacks of the militant form of Hinduism professed by the rulers of that kingdom, who, like all recent converts, are more ardent supporters of the new faith than even their more orthodox brethren in the plains. Nothing, again, has contributed so much to the decline of Buddhism in Nepāl as the adoption of caste by the Buddhist Newārs, and the consequent decay of monastic institutions (Oldfield, *Sketches*, ii. 131 ff.). Besides this, the heterodox Buddhists constitute a large majority of the Buddhist population. They avowedly combine the worship of Śiva and of the other Hindu deities with that of Buddha; they publicly attend the religious services of Hindu temples, and at the more important domestic ceremonies, such as those of marriage and death, they conjoin Hindu forms with those of the Buddhist church, and employ a Brāhman priest to assist their own Buddhist Vajra Āchārya, or 'thunderbolt teacher,' in the performance of his sacred duties.

These classes of Newārs are 'Buddhist only in name; for although they profess to esteem Buddha before all other deities, yet their practices belie their professions, and prove that they are steadily abandoning that faith to which they still nominally belong, and are rapidly adopting the more corrupt and more attractive religion of the Hindus' (Oldfield, *op. cit.* ii. 147).

The same is the case with those Himālayan Buddhists who have migrated into British territory. Thus, among the Lepchas of Sikkim and the adjoining region, Buddhistic usage forms only a thin veil over their primitive shamanistic Animism. Their religion consists mainly in the propitiation of the spirits of forest, hill, or stream which are considered malignant.

'The snow-clad giant Kinchinjanga, chief among the elemental deities of the Lepchas, who vexes men with storm and hail and sends down avalanches and torrents to wreck their fields and sweep away their homes, has been translated to the milder system of Buddhism, where he figures as the tutor of Śakya Muni himself' (Risley, *op. cit.* ii. 10).

Similarly the Limbūs of Dārjīling adapt their religion to their surroundings. Where their environment is Hindu, they call themselves Śaivas, and profess to worship Mahādeva and his consort Gaurī, the favourite deities of the Nepālese.

'In a Buddhist neighbourhood the yoke of conformity is still more easy to bear; the Limbū has only to mutter the pious formula, *Om maṇi padme om* [or, as Waddell transcribes and translates it, '*Om* ! The Jewel in the Lotus ! *Hūṃ*'—*Om-maṇi pad-me Hūṃ*, the first and last word bearing a mystic meaning (*Buddhism of Tibet*, 148)], and to pay respect and moderate tribute to the Lāmas, in order to be accepted as an average Buddhist. Beneath this veneer of conformity with whatever faith happens to have gained local acceptation, the vague shapes of their original Pantheon have survived in the form of household or forest gods, much in the same way as Dionysus and other of the Greek gods may be traced in the names and attributes of the saints who preside over the vintage, the harvest, and rural festivals of various kinds in remote parts of Greece at the present day' (Risley, *op. cit.* ii. 17).

The degraded condition of the popular Buddhism of the Lower Himālayas is shown by the adoption of rites of blood sacrifice, a relic of the old devil-worship of the country, but absolutely repugnant to the rules of the orthodox faith (Waddell, *Among the Himalayas*, 74).

(*c*) *Buddhists of East Bengal.*—The third group of Bengal Buddhists—that of Chittagong and the hill tracts of Chittagong — consists mainly of Chakmās and Maghs, the latter divided into two classes: first, descendants of Arakanese immigrants who entered the country when Arakan was conquered by the Burmese in A.D. 1785; and, secondly, the mixed race descended from Magh women by Bengali fathers, who are known as Rājbansī or Baruā Maghs, and are less numerous than the first branch. There are also some Tipārās in the hill tracts who described themselves at the last census as Buddhists.

'In the Tippera State the Tipārās now call themselves Hindus; but this country was formerly a great Buddhist centre, and some sacred shrines there were visited by the Tibetan traveller, Buddha Gupta Nāth, who travelled in India in the seventh century A.D.' (Gait, *op. cit.* i. 158).

The Chakmās profess to be Buddhists, but their religious practices have been much corrupted by

the gross Hinduism of Eastern Bengal. This change was brought about by the influence of the local Rājā, Dharm Bakhsh Khān, who was a bigoted Hindu, patronized the cult of Kālī, and pretended to be a descendant of the ancient Kṣatriyas. Much of the more primitive Animism still survives under the upper layer of Buddhism (Risley, *op. cit.* i. 172 f.). The same fusion of beliefs appears among the Maghs of Chittagong, who profess to be Buddhists of the Southern school, and regard the followers of the faith in Tibet as unorthodox. The worship of Śiva and Durgā has here been added to the Buddhist observances. While their priests are Buddhist, *phungyis* or *raolis*, Brāhmans are much respected, and are employed to determine auspicious days for particular actions, and to assist in the worship of the Hindu gods (*ib.* ii. 33).

(*d*) *Survivals of Buddhism and Hinduism.*—The last and most interesting group of so-called Buddhists in Bengal is found among the caste known as Sarāks, resident in the Baramba State in Orissa, whose beliefs have been fully investigated by Gait (*op. cit.* i. 427 ff.). Their name appears to be derived from the Skr. *śrāvaka*, 'a hearer,' a term applied among the Jains to indicate the lay brethren affiliated to the community, as distinguished from the Yatis, monks, and ascetics; it still survives in the name Sarāogi or Sarāvagi, applied to a merchant community of Jains which is rapidly becoming a regular caste of the usual type. The centre of the Baramba Sarāk worship is at the celebrated cave-temple of Khandagirī, where they assemble once a year to do homage to the idols there and to confer on religious matters. They worship, under the name of Chaturbhuja, 'the four-armed one,' an idol which usually has only two arms, and is undoubtedly a representation of Buddha. This worship is performed on what is supposed to be the anniversary of Buddha's wedding, a fact which may with some probability be considered to connect the cult with the primitive animistic conception of the union of the male consort with the primeval Mother (see above, § 13). The family rites of the caste are performed by one of their own members, who calls himself Āchārya, or 'teacher,' and Brāhmans are employed only to perform the rites of the *haoma*, or fire sacrifice, at marriage, after which the Āchārya concludes the proceedings by calling upon Buddha to bless the young couple.

The evidence, so far as it has been collected, seems to indicate that the Sarāks have retained many beliefs and practices which have descended to them from the Buddhism which was the creed of a large number of the people of Orissa. Here its place was taken by Brāhmanism, and it is now difficult to say how many of the beliefs of the Sarāks are due to direct inheritance of the Buddhist tradition, and how many have been transmitted to them with a leaven of Vaishnavism. Too much stress must not be laid upon the worship of images of Buddha by the people of our time. All through Northern India are to be found statues or pillars disinterred from the ruins of *stūpas* or *vihāras*, which have been adopted as images of the village gods, and even of the orthodox Hindu deities. Thus Buchanan (*op. cit.* i. 73) found in a Bihār temple of Tārā Devī (the female power in her most destructive form) an image of the goddess, which was really one of Buddha himself.

Another survival of Buddhism has been traced in the worship of Dharmarāj or Dharma by low-caste tribes like the Pods, Yogīs, Ḍoms, and Bāgdīs. By some he is identified with Yama, by others with the sun; by others, again, he is regarded as a snake-god; or, finally, as an incarnation of Śiva or Viṣṇu.

'He is usually worshipped by a low caste priest, a Pod, a Yogi, a Dom, or a Bāgdi. In a few places he has temples, but, as a rule, he is represented by a shapeless stone daubed with vermilion and placed under a tree. In a village in the Arāmbāgh subdivision he is worshipped in the form of a tortoise. His shrines are common all over West Bengal, and also in Dināj̄pur, Murshidābād, and the Twenty-four Parganas. He is frequently believed to possess certain curative powers, and his priests administer medicines as specifics for various diseases. Hogs, fowls, and ducks are sacrificed before him, and offerings are made of rice, flowers, milk, and *pachwāi* ['rice-beer'], but never of cooked food. The worship takes place in the months of Baisākh, Jaishṭa, and Āsārh, on the day of the full moon, and in some places on the last day of Bhādra. All castes, even Brāhmans, make offerings through the medium of the officiating priest' (Gait, *op. cit.* i. 201).

The worship of this animistic deity has been adduced as a survival of Buddhism by Mahāmahopādhyāya Hara Prasād Śāstri (*JRASBe*, 1895), and in a further statement given by Gait (i. 201) the writer supplements this by inferring that because Dharma is worshipped in meditation as void (*śūnya-mūrti*) the cult represents the philosophical conception of *śūnyatā*—'concerning which neither existence nor non-existence nor a combination of the two can be predicated. It is zero.' Again, the ceremonies and fasts in honour of Dharma all take place on the full-moon day of Baisākh, the birthday of Buddha, and his worshippers are aware that Dharma is respected in Ceylon, that he is not an inferior deity, but superior to Vishṇu or Śiva. Finally, he is represented in many places as a tortoise, which is a Buddhist emblem (Waddell, *Buddhism of Tibet*, 395). It is possible that some traditions of the worship of Buddha may survive in that of Dharma; but if so, very little of the original conception remains.

35. Jainism.—Jainism, like Buddhism, had its birthplace in Bihār. The origin of this form of belief and its relation to Hinduism and Buddhism will be considered in another article (see JAINISM). Here it is sufficient to say that recent research by Jacobi, Hoernle, and others (Hoernle, 'Presidential Address,' *JRASBe*, 1898; Bühler-Burgess, *The Indian Sect of the Jainas*) has established that Jainism, so far from being an offshoot of Buddhism, was the result of an independent and contemporaneous religious movement under a Kṣatriya prince named Vardhamāna or Mahāvīra, who was born in the neighbourhood of Patna about B.C. 599, and died about B.C. 527. The dates of Buddha's career are still to some extent uncertain; but the most recent investigations place the period of his life between B.C. 588 and 508. It is thus possible that the founders of these two sects, who were both of Kṣatriya descent, may have met in the course of their preaching tours through Western Bengal. Neither sect is a religion in the true sense of the word; both are rather monastic organizations of a type very common in the age when they were founded. Both arose from the circumstance that the Brāhmans were then claiming the monopoly of admission to the monastic Orders. As a protest against this action, many non-Brāhmanical Orders were founded. They were gradually led to discontinue the use of the Vedic ritual, with the natural result that they came to be excluded from the pale of Brāhmanism. Jainism differs from Buddhism in rejecting the doctrine of *nirvāṇa*, and in asserting instead that, when the soul has gained freedom from the trammels of the successive series of existences, it passes into a state of blessedness which is vague and ill-defined. Those saintly men who have attained the rest of the blessed are known as Tīrthaṅkara; those 'who have created a passage through the circuit of life,' form the body of saints who are worshipped by Jains. From the chief of these, Parśvanātha, the hill of Pārasnāth (wh. see), the centre of Jain pilgrimage in Bengal, takes its name. Jainism, by its more democratic constitution, freely admitting

lay adherents to communion, adopting a less active missionary career than Buddhism, and preferring as its chief centres of worship more secluded sites, like Parasnāth, was able to resist more successfully the stress of the Brāhmanical revival and Muhammadan persecution, under which the Buddhism of Bengal collapsed.

The Bengal Jains, who have their headquarters at Murshīdābād, are found also in Calcutta and the chief towns of the Patna Division. But though they are permanently settled there, they are rarely accompanied by their women-folk. Most of them are temporary visitors from Western and Central India. After making money by shopkeeping in Bengal, the heads of their firms often return to their original homes, their places being taken by younger men. Many of them are Mārwārīs from Mārwār in Central India, and belong to the Agarwāla and Oswāl sub-castes of Baniyās, the former being of the Digambara or 'naked,' and the latter of the Śvetāmbara or 'white-clad' section. These distinctions, as far as questions of dress are concerned, are now obsolete; but the titles represent the contrast between the more primitive naked ascetics of Southern India and those from the North and West. Of these merchant families some follow the Hindu and some the Jain rule; but this does not operate as a bar to intermarriage, because even when some Baniyās adopt the Śaiva or Śākta sect, in deference to the prejudices of the majority of their brethren they do not sacrifice animals or partake of meat and spirits. A large proportion of the Hindu merchant class belongs to the Vaishnava sect, and these are as strict in their regard for animal life as the Jains themselves. When husband and wife belong to different sects, the wife is formally adopted into the sect of her husband, but continues to practise her original religious rites. When, however, she visits the home of her parents, she must have her food cooked separately and eat apart from the other members of her family (Risley, *op. cit.* i. 7, ii. 151).

36. Sikhs and Kabīrpanthīs.—Like the Jains, Sikhs profess to be Hindus, and at each successive enumeration it would seem that their numbers have been underrated, as they have been included in some Hindu sect. They are, as a rule, temporary residents, and their strength depends largely upon the number of Panjābi regiments which happen to be serving in the Province. The only place with which they have any permanent connexion is Patna, where the Har Mandir is said to mark the place where their tenth *guru*, Govind Singh (A.D. 1675–1708), is believed to have been born while his mother halted there during a pilgrimage. In Eastern Bengal the Sikh sects best known are the Suthrashāhī and the Nanakshāhī. Wise (*op. cit.* 181 f.) describes the members of the former sect at Dacca as disreputable, generally drunkards and smokers of hemp drugs. They are often Brāhmans who do not discard the sacred cord on joining the Sikh communion, and continue to eat with Brāhmans of their own tribe, and not with all grades of Sikhs. No Sikh, however, will refuse to partake of the consecrated food (*prasād*) when offered by them. They observe all the great Hindu festivals, and pay special adoration to the *śālagrāma*, or ammonite, which represents Vishnu. The account given of this sect by Maclagan (*Panjāb Census*, 1891, i. 154) is not more favourable. He describes them as importunate beggars whose profligacy is notorious, most of them being spendthrifts who have lost their wealth in gambling, and spend their lives in roving mendicancy. Nānakpanthī is a term of less definite meaning, as it is often applied to Sikhs in general, who are all followers of their *guru*, Nānak (A.D. 1469–1538). They have some connexion with Dacca, which is said to have been visited by Nānak Shāh; but their *ākhāra*, or convent, in that city possesses no endowment, and depends largely on the charity of Armenian or Muhammadan residents (Wise, *op. cit.* 182 ff.).

Kabīr was closely connected with Nānak. The chief note of his teaching was the endeavour to link Hinduism to Islām. 'Alī and Rāma, he said, are only different names for the same god. His teaching seems to be rapidly gaining adherents in Western Bengal and the United Provinces. Differences in rank and religion are all, he taught, but *māyā*, or illusion. Emancipation and peace are to be gained only by recognizing the Divine Spirit under these manifold illusions. The way to union with the Divine is not by means of formula or sacrifice, but by fervent faith (*bhakti*) and meditation on the Godhead. The use of spirituous liquor and the worship of idols were prohibited by the founder of the sect; but, as often happens, in process of time practice lags behind precept, and the successors of the teacher fail to maintain the ideal which he set before them. In the case of the Kabīrpanthīs it is said that there is now a tendency to revert to idolatry, while at the same time they pretend to maintain the teaching of Kabīr.

37. Deistic sects.—(*a*) *The Brahmo Samāj.*—Of the Hindu deistic sects the best known is the Brahmo Samāj, though its numbers are small, and show no tendency to rapid increase. In Bengal it is divided into three sections: the Ādi, or 'original'; the Nababidhān, or 'new dispensation'; and the Sādhāran, or 'common.' All alike believe in the unity of the Godhead, the brotherhood of man, and direct communion with God in spirit without the intervention of any mediator.

'The differences which exist are ritualistic and social rather than religious. The Adi Samāj, or oldest section, is also the most conservative. While discarding all idolatrous forms, it follows as closely as possible the rites of Hinduism, and draws its inspiration solely from the religious books of the Hindus, especially the Upanishads, and not from the Bible or Qur'ān. It has only once allowed a non-Brāhman to officiate as its minister. Inter-caste marriages are not allowed, and a considerable agitation was raised when one of its Brāhman members recently married the daughter of the Mahārājā of Kūch Bihār. In other respects the restrictions of the caste system sit lightly on the members of the Samāj, but they are particular to style themselves Hindus, and before the Census of 1891 they submitted a memorial intimating their desire to be entered as Theistic Hindus, and not as Brāhmos' (Gait, *op. cit.* i. 159).

The second section, known as the Nababidhān Samāj, or Church of the New Dispensation, was founded by the well-known Keshab Chandra Sen. It is more eclectic than the Ādi Samāj in its tendencies, and has assimilated what it considers right not only in the sacred books of Hinduism, but also in the religious teaching of Christianity, Buddhism, and Islām.

The most advanced of these Churches is the Sādhāran, or 'common' Samāj. It rejects all the essentials of what is commonly regarded as Hinduism; disapproves of ritual and set forms of worship; absolutely rejects caste; disapproves of the custom of secluding women, gives them a liberal education, and allows them equal voice in Church government. It freely permits marriage between persons of different castes.

'They are thus,' as Gait remarks, 'gradually becoming a separate caste, recruited from a variety of different sources, but mainly from the ranks of the Brāhmans, Baidyas, and Kāyasths. . . . Most Indian gentlemen who have received an European education join this community, not so much perhaps on account of religious conviction as because of the freedom which it allows to them from the irksome trammels of caste and from the necessity of undergoing a ceremony of purification' (*op. cit.* i. 159 f.).

(*b*) *The Śivanārāyaṇīs.*—The Śivanārāyaṇī or Śrīnārāyaṇī is an interesting sect, founded about two centuries ago by a Rājput named Śiva Nārāyan from Ghāzipur in the United Provinces. It was first described by Buchanan in Patna and Bhāgal-

pur (*op. cit.* i. 214, ii. 137), who notices its adherents under the name of Santā, or 'pious.'

'They believe in one formless (*nirākār*) God, forbid idolatry, and venerate their original Guru, whom they regard as an incarnation of the Almighty. The eating of flesh and drinking of wine were forbidden by the founder of the sect, but this rule has now been relaxed. *Mantras* ['spells'] were composed by the founder, to be uttered from time to time during the day, *e.g.* when bathing. The sacred book of the sect is known as the *Sabda-Sant* or *Guru Granth*. It contains moral precepts, and declares that salvation is to be attained only by unswerving faith in God, control over the passions, and implicit obedience to the teaching of the Guru. The Guru is said to be held in such respect that all his leavings are most scrupulously partaken of by his disciples. Their great annual festival is on the fifth night after the new moon of Māgh [January–February], when they assemble in the house of one of their fraternity, and sing songs and read extracts from the *Guru Granth*. When a man wishes to become a Seo Nārāyaṇi, he selects one of the sect, belonging to a caste not inferior to his own, who imparts to him the *mantra* ['formula'] of initiation. He is then enjoined to have faith in God (*Bhagabān*) and the original Guru, and is given a certificate of admission. This is done in the presence of several members of the sect, whose names and addresses are noted in the certificate. All castes are admitted, but most of the disciples come from the lower grades of society, such as the Tatwā, Chamār, and Dosādh castes. The cult was formerly more popular than it is now, and higher castes are said to have supplied it with recruits. The Seo Nārāyaṇis bury their dead, and one of the great inducements to join the fraternity is said to be the knowledge that they will give a decent burial to their comrades when they die, and will not allow their bodies to be touched by sweepers. Their funeral processions are conducted with some pomp, and are accompanied by songs and music. The ordinary caste restrictions are observed, save only in the case of the extremists who adopt an ascetic life' (Gait, *op. cit.* i. 185; *cf.* Crooke, *Tribes and Castes*, ii. 185 ff.).

This sect is only one of many which have recently grown up in Northern India, founded on a revolt against idolatry, and the pretensions of the Brāhmanical Order. They have adopted many of the principles of the reformed Vaishnava communities. Movements of this kind in India tend to degenerate, and once the enthusiasm which animated the founder has ceased to inspire later generations of disciples, the new community, having shaken itself free from the restrictions of caste and the control of the tribal council, often surrenders itself to licence. This has been the fate of this sect at Dacca, where the meetings, which occupied several nights in succession, degenerated into drunken orgies.

'The lower Hindu castes, ever willing to repudiate Brāhmanical interference, and assert spiritual independence, have always been notorious for profligacy and intemperate habits. Intoxication is with them an irresistible passion, and no threats or corrections have the slightest effect in weaning them from the vice. Faithful servants, kind parents, and affectionate husbands, they have no conception of a moral religion; and their untutored minds can neither understand nor comply with a faith inculcating morality and the mortification of all worldly lusts and passions' (Wise, *op. cit.* 181).*

38. The Pañchpiriyas.—The important sect of the Pañchpiriyas or Pachpiriyas forms the subject of a special article (wh. see).

39. Muhammadans.—The map prepared by Gait (*op. cit.* i. 156) clearly shows the distribution of Muhammadans in the Province. Prior to the Census of 1872 it was generally believed that they were most numerous in Bihār. That Census established, on the contrary, that the chief seat of Musalmān influence was in Eastern Bengal and to the north, where respectively two-thirds and nearly three-fifths of the people were found to be followers of the Prophet. On the other hand, in North Bihār less than a sixth, and in South Bihār less than a tenth, of the population accept his authority. Orissa, the most backward division, except the hill districts, and the most conservative in matters of religion, is the region where the Muhammadan element is weakest. The area of Musalmān predominance consists of a compact territory lying north of Calcutta and stretching westward from the frontier of Assam, including the Districts of Mymensingh, Pābna, Bogra, and Rājshāhi, and a second tract lying south and west of this and east of Calcutta, including the Districts of Noākhāli, Chittagong, and Backergunge. In these two regions the proportion of Muhammadans to the total population ranges from 82 per cent in Bogra to 71 per cent in Chittagong.

The extraordinary increase in the numbers of the followers of Islām in Bengal, and particularly in its eastern region, is the most remarkable fact in the recent religious history of the Indian Empire. The following table shows in a compact form the relative positions of Hinduism and Islām during the period for which fairly trustworthy statistics of religious belief become available:

Year of Census.	Hindus.	Per cent of Total Population.	Muhammadans.	Per cent of Total Population.
1872	39,996,575	63·76	19,559,252	31·19
1881	45,452,806	65·36	21,704,724	31·21
1891	47,821,468	64·07	23,658,347	31·70
1901	49,687,362	63·30	25,495,416	32·48

It is obvious from these figures that, while during the period of thirty years the proportion of Hindus in the total population has slightly decreased, the increase of Muhammadans has been steady and considerable.

The second remarkable fact in connexion with the spread of Islām is that it has occurred not in those parts of the Province which were centres of Musalmān influence and where their great cities were established. Dacca, for instance, for long the seat of Musalmān government in Eastern Bengal, though it contains 62 per cent of Muhammadans, presents an average much lower than that of the rural districts in its vicinity. Mālda, which contained the great capital city of Gaur, and Murshīdābād, an important seat of government, show no startling increase of Musalmāns; Bihār, Bhāgalpur, and Monghyr were important Muhammadan cities; but in spite of this the Musalmāns furnish barely one-tenth of the total population of the districts in which they are situated. The conclusion to be drawn from these facts is that the increase of Islām was largely due to causes independent of the action of the native government.

40. Origin of the present Muhammadan population.—It was, of course, ultimately due to the occupation of the Province by the Muhammadans that their faith began to spread among the Hindus and Animists whom they found in occupation of the country. The rule of the Muhammadan government lasted from the invasion of Bakhtiyār Khilji in A.D. 1203 until the British acquired the Divānī, or control of the revenue administration, in 1765—a period of more than five and a half centuries. During this time the ruling power occupied the country with a foreign army, and many soldiers after retirement from the service remained as colonists. Grants of land were made to grandees and officers of the empire, as well as to men of learning and piety whom the government encouraged to take up their permanent residence in the land. Bengal also became a place of refuge for many families driven from North-Western India by war and revolution. On these grounds various recent Musalmān writers, in their desire to enhance the social position of their co-religionists, have endeavoured to prove that they are in the main of foreign extraction. This question has been examined at length by Gait (*op. cit.* i. 165 ff.). While not denying that there are certain aristocratic families, like that of the Nawāb of Murshīdābād, who, originally of foreign descent, have

* For the Śivanārāyaṇis see also Risley (*op. cit.* i. 178, ii. 334). The ritual code of the sect is described and some of the songs quoted in *North Indian Notes and Queries*, v. 58 *f.*

preserved the purity of their blood by refraining from intermarriage with persons of more doubtful ancestry, and also that many families of foreign origin have, owing to the rules of the Muhammadan law of inheritance, gradually lost their estates and become merged in the general mass of the population, he regards it as impossible to suppose that the whole or even a great majority of the Musalmān population can be the descendants of immigrants from North-Western India. Such a theory does not account for the present distribution of the Musalmān population. If they were really descendants of foreign immigrants, they would now be found in occupation of the more healthy tracts in the neighbourhood of the ancient capitals, not in the rice-swamps of Noākhāli, Bogra, and Backergunge. Anthropometry, again, so far as statistics are available, shows that the foreign element among the Muhammadans of Eastern Bengal is inconsiderable, and that physically they are akin to the aboriginal or non-Aryan races whom the first Musalmān invaders found in occupation. On the whole, Gait (*op. cit.* i. 169) comes to the conclusion that the foreign element in the Muhammadan population cannot exceed four millions, or one-sixth of the total number of those professing the faith of Islām.

41. Causes of the spread of Islām.—(*a*) *Conversions.*—When we come to consider the causes which led to the spread of Islām, we find that while the Mughals were generally tolerant in matters of religion, the Afghāns who preceded them were often fanatical; local traditions, supplemented by the scanty historical evidence of the character of their rule, describe numerous cases of forcible conversions of Hindus and Animists, while the ranks of the true believers were recruited by slaves and criminals who on conversion were pardoned.

'In spite, however, of the fact that cases of forcible conversion were by no means rare, it seems probable that very many of the ancestors of the Bengal Muhammadans voluntarily gave in their adhesion to Islām. The advantages which that religion offered to persons held in low esteem by the Hindus have already been pointed out, and under Muslim rule there was no lack of pious Pīrs and Fakīrs (holy men and religious mendicants) who devoted their lives to gaining converts to the faith. There were special reasons which, during the early years of the Muhammadan supremacy, made conversion comparatively easy. Although the days when Buddhism was a glowing faith had long since passed, the people of Bengal were still to a great extent Buddhistic, and when Bakhtiyār Khiljī conquered Bihār and massacred the Buddhist monks assembled at Odantapuri, the common people, who were already lukewarm, deprived of their priests and teachers, were easily attracted from their old form of belief, some to Hinduism and others to the creed of Muhammad. The higher castes probably found their way back to Hinduism, while the non-Aryan tribes, who had, in all probability, never been Hindus, preferred the greater attractions of Islām' (Gait, *op. cit.* i. 171).

(*b*) *Physical causes of the increase of Muhammadanism.*—The faith thus started progressed rapidly, owing to causes which were not so much moral or religious as physical, and due to the environment of the people. These have been carefully examined by O'Donnell and Gait (*Census Report*, 1891, i. 146 f.; 1901, i. 172). It has been established from these investigations that the main explanation of the spread of Islām in Eastern Bengal must be the greater fecundity of its adherents. In the first place, we find among Muhammadans a much larger number of potential mothers than among Hindus. While the higher caste Hindus throughout the Province, and in Bengal proper many of the castes of less importance, rigorously prohibit widow-remarriage, the Muhammadan widow usually finds a second husband. Statistics show that of every 100 Hindu women between the ages of 15 and 40 more than 16 are widows prohibited to re-marry; among Muhammadans the percentage is only 12. O'Donnell, again, remarks that ill-assorted marriages are far more common among Hindus—men well advanced in years being united to girl wives, who in the natural course of human life are left widows, debarred from further maternity, at a comparatively early age. On the other hand, Musalmāns, particularly in Eastern Bengal, are polygamists whenever they have the means to support a second wife, generally a widow, 'married as often as a convenient unpaid domestic drudge as for the sake of the children she usually bears her master.' Lastly, in Eastern Bengal the Musalmān is generally more prosperous and better fed than the Hindu in other parts of the Province. Bihār and Orissa, the headquarters of Hinduism, are fully developed, congested regions, where a large proportion of the people live in a condition of permanent depression. Eastern Bengal, on the contrary, is a land of promise, enriched by a large trade in rice and jute. It is improbable that the enterprise of the Hindu wedded to his hamlet and his local gods would have been sufficient to bring its fertile alluvial soil under the plough. But the Muhammadan has no prejudice against leaving his birthplace, and gladly migrates in search of remunerative work. While the Hindu is very often a vegetarian, and, if he eats meat, does so only when he makes a sacrifice, the Musalmān with his more varied and nutritious dietary is more vigorous and fertile. The conditions thus described sufficiently account for the fact that, while Hinduism barely holds its ground, Islām prospers and increases the number of its adherents.

42. Characteristics of Muhammadanism in Bengal.—Islām throughout Northern India falls far short of the standard of faith laid down by the Prophet and his immediate successors. As might have been expected, this degeneration is specially apparent in Eastern Bengal, where its followers have been to a large extent recruited from an Animistic population. Thus, the Pañchpiriya sect (wh. see) shows obvious signs of the fusion of Musalmān traditions with Animistic beliefs. The Wahhābī movement (see below, § 43) has in some measure checked the corruption of the faith, but before the recent crusade against idolatry it was common for low-class Muhammadans to join in the Durgā Pūjā and other Hindu festivals.

'Although,' writes Gait (*op. cit.* i. 176), 'they have been purged of many superstitions, many still remain. In particular, they are very careful about omens and auspicious days. Dates for weddings are often fixed after consulting a Hindu astrologer; bamboos are not cut, nor the building of new houses commenced, on certain days of the week, and journeys are often undertaken only after referring to the Hindu almanac to see if the proposed day is auspicious. When disease is prevalent, Sītalā and Rākshyā Kālī (see above, § 13) are worshipped. Dharmarāj, Mānasā, and Bishahrī (see above, § 30) are also venerated by many ignorant Muhammadans, who make over goats to Hindus in order that they may perform the sacrifice on their account. Sasthī is worshipped when a child is born. Even now in some parts of Bengal they observe the Durgā Pūjā, and buy new clothes for the festival like the Hindus. In Bihār they join in the worship of the Sun, and when a child is born they light a fire and place cactus and a sword at the door to prevent the demon Jawān from entering and killing the infant. At marriage the bridegroom often follows the Hindu practice of smearing the bride's forehead with vermilion or sandal-wood paste. In the Sonthāl Parganas Muhammadans are often seen to carry sacred water to the shrine of Baidyanāth, and, as they may not enter the shrine, pour it as a libation on the outside verandah. Offerings are made to the Grāmyā-devatā (see above, § 15) before sowing or transplanting rice seedlings, and exorcism is resorted to in case of sickness. Ghosts are propitiated by offerings of black fowls and pigeons before a figure drawn in vermilion on a plantain leaf. These practices are gradually disappearing, but they die hard, and amulets containing a text from the Qur'ān are commonly worn, even by the Mullahs who inveigh against these survivals of Hindu beliefs' (Gait, *op. cit.* i. 176).

As is the case throughout Northern India, customs like these are practised especially by women, who are much more conservative in their religious beliefs.

Worship of pīrs and deified men.—In the same category of corruptions of the primitive faith may be placed the adoration of *pīrs*, or saints, and other

deified men, a practice for which no authority can be found in the Qur'ān or in the older commentaries on it. The *pīr* after death is supposed to be present in spirit, and to offer daily prayers of propitiation at Mecca or Medīna. Hence a *dargāh*, or tomb, covers his ashes and becomes a place of pilgrimage, to which people resort for the cure of disease, or the exorcism of evil spirits, to obtain the fulfilment of some cherished wish, such as the birth of a child, or success in pending litigation. Gait (*op. cit.* i. 177) and Wise (*op. cit.* 10 ff.) have given full catalogues of the more famous saints (see SAINTS, [Hindu]). The educated Musalmān denies that he worships the *pir*, he merely prays that he will intercede for him with the Almighty; 'but amongst the lower classes it is very doubtful if this distinction is clearly recognized, even if it actually exists.'

43. **Sects of Islām.**—The familiar division of Muhammadans into the two sects of Sunni and Shī'a is of less importance in Bengal than that which classes them as 'reformed' or 'unreformed.' The former is the title applied to those who are connected with the movement which resulted in the formation of the Wahhābī sect (wh. see). The sectarian movement in Islām usually follows one of two lines: it is either puritanical or pietistic. The Wahhābī sect is an example of the former, Ṣūfiism of the latter. The Wahhābī movement was started in India by Saiyid Ahmad Shāh, of Rāē Bareli in Oudh, who in 1826 proclaimed a holy war (*jihād*) against the Sikhs. He and his followers finally made Patna their headquarters, whence a propaganda was spread through Northern India. The principles of the sect, as announced by another Bengal teacher, Hājī Shariatu'llah of Farīdpur, prohibited all association with Hindu rites and ceremonies, the preparation of models (*ta'ziya*) of the martyrs Ḥasan and Ḥusain (see Pelly, *Miracle Play of Hasan and Husain*), and the offering of prayers to saints or martyrs. He also announced the principle which brought the sect under the notice of the Indian Government, that India was a 'land of warfare' (*dāru'l-ḥarb*), where the observance of the Friday service is unlawful and resistance to the infidel a religious duty. These principles were to some extent modified by another teacher, Maulāna Karāmat 'Alī of Jaunpur, who made two important alterations in the tenets of the sect. First, he declined to reject altogether, as other teachers had done, the authority of the glosses on the *Ḥadīth*, or traditions, which were assumed to represent the teaching of the Prophet; secondly, he withdrew the doctrine that India was *dāru'l-ḥarb*, and thus removed the chief cause which brought the sect into collision with the British Government. These two sects of reformers are known collectively as Farāḍī (Arab. *farīḍa*, pl. *farā'id*, 'the obligatory ordinances of law and religion,' those which are believed to have been established by God Himself, as distinguished from those which are founded on the precept or practice of the Prophet, and called *sunna*). Other titles used are Namāz-i-hāfiḍ, 'those who know the prayers by rote'; Shāre', 'followers of the *shar'*, or divine way of religion,' as opposed to the Sābiqī, 'those who follow the old rule,' 'the conservative party.' The distinctive name of the followers of Karāmat 'Alī and his successors is Ta'aiyunī, 'those who appoint,' from their practice of appointing as their leader a member of their own body, who decides religious questions, and takes the place of a *qāḍī*, thereby making the practice of Friday prayer lawful for true believers. The followers of Dudhu Miyān are known as Wahhābī, from the founder of the sect, Muhammad ibn Abdu'l-Wahhāb; but this name is now held in bad odour, and they prefer to be called Muhammadī, 'followers of the Prophet'; Ahl-i-ḥadīth, 'persons of the tradition'; or Rafi'yādain, the last with reference to their custom of raising their hands to their ears when praying, in opposition to the practice of the Sunnis, who fold their arms in front, and of the Shī'as, who allow them to hang by their sides. Other titles for them are Amīnī, because they pronounce the 'Amen' formula in a loud voice; and Lāmaẕhabī, 'without doctrine,' because they reject all doctrines except those contained in the Qur'ān.

The information regarding the tendency of this reform movement in Islām, so far as it is based on the scanty facts which the Government has permitted to appear in official publications, is insufficient to enable us to appreciate fully its religious and political importance. Risley is of opinion that 'at the present day the fanatical element of the Wahhābī movement seems in many parts to have died out; and the efforts of the reformers are directed mainly to the eradication of superstitious practices not sanctioned by the Qur'ān, and to the inculcation of the true principles of the religion' (*Census Report*, India, 1901, i. 373). At the same time it would be idle to assert that the principle upon which the sect largely depends—that India is a 'land of war'—has quite disappeared; and a movement which, as is the case with the Wāhhābī movement in Bihār, draws its adherents from the lowest and most ignorant classes of the Muhammadans, must always be regarded with watchful suspicion by the ruling power.*

44. **Christianity.**—The following figures illustrate the remarkable progress of Christianity in the Province during the last thirty years:

Year of Census.	Number of Christians.
1872	91,063
1881	128,134
1891	192,484
1901	278,366

The scope for missionary effort in the future may be estimated by the fact that at present only 36 in 10,000 of the total population belong to the Christian faith. Of the total number of Christians enumerated at the Census of 1901, 27,489 (including 1081 Armenians) or 9·9 per cent belong to European races; 23,114 or 8·3 per cent are Eurasians; and 227,763 or 81·8 per cent are native converts.

'More than three-fifths of the European Christians belong to the Anglican communion, and about one-fifth are Roman Catholics. According to the returns, the Presbyterians number less than one-tenth, but it is believed that the real number is greater, and that some of those who described themselves as belonging to the Church of England were brought up as Presbyterians. Of the Eurasians, more than half are Roman Catholics, and nearly two-fifths belong to the Anglican communion. . . . The proportion of Roman Catholics is swollen by the inclusion of 2221 Feringis, of whom all but 194 belong to this persuasion' (Gait, *op. cit.* i. 161).

These Feringis (Pers. *Farangī*, *Firangī*, 'Frank') are a degraded mixed race, largely found in the Backergunge District.

'In the southern quarter [of the Backerganj district] there still exist several original Portuguese colonies, of probably two centuries' duration, which exhibit a melancholy example to what an extreme degree it is possible for Europeans to degenerate. They are a meagre, puny, imbecile race, blacker than the natives, who hold them in the utmost contempt, and designate them by the appellation of Caula Ferenghies (Hind. Beng. *kāla*, 'black') or "black Europeans"' (Hamilton, *Description of Hindostan*, 1820, i. 133).

* This account of the Wahhābī movement in Bengal is largely based on Gait's summary (*Census Report*, 1901, i. 173 ff.), which, again, is founded on Wise, 'Muhammadans of Eastern Bengal' in *JRASBe*, 1894. Also see his account in *Notes on the Races, Castes, and Trades of E. Bengal*, 21 ff. The question has been discussed by Hunter, *The Indian Musalmans; are they bound in conscience to rebel?* and the reply by Saiyid Ahmad Khan; Ibbetson, *Punjab Ethnography*, 147 f.; Maclagan, *Census Report Punjab*, 1891, i. 189 f. For the Wahhābīs of Arabia see Palgrave, *Central and Eastern Arabia*; Lady Ann Blunt, *Pilgrimage to Nejd*; Badger, *Imams and Seyyids of 'Oman*; Blunt, *Future of Islam*.

In recent times there has been little improvement in their industrial, social, or moral condition (Beveridge, *The District of Bakarganj*, 1876, p. 110).

(*a*) *Sectarial divisions of Christians.*—The ignorance of the native converts and the inability of the Census enumerators to understand the European names of the various denominations of Christians have made it very difficult to collect information regarding the sectarial divisions of the native converts.

'So far as the returns go, about two-fifths of the native Christians are members of the Roman Catholic Church; nearly one-third are Lutherans; rather more than a seventh belong to the Anglican communion, and nearly one-eleventh are Baptists. The other denominations combined account for only about one in every nineteen native Christians' (Gait, *op. cit.* i. 162).

(*b*) *Roman Catholics.*—The total number of Roman Catholics has increased from 78,000 in 1891 to 90,000 in 1901. Their chief sphere of missionary work is in the Rānchi District of Chotā Nāgpur, where the converts exceed 54,000, or form about three-fifths of the total number in the Province. Their work in this District is shared among the non-Aryan Mundās and Orāons by Anglican and Lutheran missions. Christianity has here made more rapid strides than in any other part of N. India, with the result that the total number of Christians affiliated to the three missions now amounts to 124,958, as compared with 36,263 at the previous decennial enumeration. The Roman Catholics have also important communities at Dacca in Eastern Bengal, Calcutta, the Twenty-four Parganas, Nadiyā, and Champāran.

'Although small in point of numbers, the Roman Catholic Mission in Champāran has an interesting history. There are two main centres, at Bettiah and Chuhri. The former was established about 1740 by Father Joseph Mary, an Italian missionary of the Capuchin Order, who was passing near Bettiah on his way to Nepāl, when he was summoned by Rājā Dhruva Shāh of Bettiah to attend his daughter, who was dangerously ill. He succeeded in curing her, and the grateful Rājā invited him to stay at Bettiah, and gave him a house and about ninety acres of land. The Chuhri Mission owes its origin to some missionaries who left Italy in 1707 for Tibet. Two reached Lhassa, and were followed by others. They built a mission-house and chapel; but as soon as the number of their converts began to increase, they incurred the ill-will of the Grand Lāma and were forced to leave. They then settled in Nepāl (in 1713) and established missions at Khātmāndū, Pātan, and Bhatgāon. They received grants of land from the Newār kings, and prospered considerably till 1769, when the Newār dynasty was overthrown by the Gorkhas, who were instigated by their priests to exterminate the Christians. Being warned in time, the missionaries, with sixteen families of their converts, fled to Bettiah and were given a small land-grant at Chuhri. Many of the present Christians in Chuhri are the descendants of the original fugitives from Nepāl and still speak their old language, but they have intermarried to a considerable extent with the native Christians of Bettiah' (Gait, *op. cit.* i. 162; for these Nepāl Missions see Oldfield, *Sketches from Nepal*, i. 189 *f.*; Hamilton, *Account of the Kingdom of Nepal*, 1819, p. 38).

(*c*) *Lutherans.*—The converts of the Lutheran Mission have increased from 23,000 in 1891 to rather more than 69,000 in 1901. Their operations extend to the non-Aryan tribes of Chotā Nāgpur, in Rānchi, the Santāl Parganas, Singhbhūm, and Manbhūm. The Rānchi Mission, known as that of Gossner, was founded by six German missionaries in 1846; but twenty-three years later an unfortunate disagreement occurred, and the Mission was split into two sections, one enrolling itself under the Society for the Propagation of the Gospel, and the other retaining the name of Gossner's Mission.

'The progress made during the decade in the Rānchi District has been phenomenal. Ten years ago the number of converts was less than 19,000, and it is now three times as great. Some years ago the Mundās were greatly agitated by disputes with their landlords; their cause was espoused by the missionaries, and it is thought by some that political reasons may have artificially augmented the number of professed Christians. Unlike the Hindus, the Mundās receive apostates from Christianity back into their community, and it is said that cases of backsliding are by no means rare. We must, therefore, wait for the next Census before we can pronounce how far the wonderful progress made in the past decade is genuine and permanent' (Gait, *op. cit.* i. 162 *f.*).

On the other hand, Bradley-Birt, writing of the Mission to the Hos of Singhbhūm, remarks that the barrier of exclusiveness which the race has always maintained affects the Christian missions established in the District.

'Though without the caste prejudices of the Hindus, they have no mercy on any one who disobeys the traditions of their race. No Ho would take water or food from one of another race; and as such a Christian is practically considered, being outside the pale of the Ho community, and not participating in the rites and festivals of his family. Converts thus fare badly among the Hos, and few adults have broken through the rigid customs of a lifetime and embraced Christianity. It is to the children that the missionaries chiefly turn their attention' (Bradley-Birt, *Chota Nagpore*, 104).

The same writer, when treating of the Santāls and Pahārias, remarks that it is only among people who have not yet come under the spell of Hinduism that missionary efforts have met with success.

'But hopeful as is the progress of Christianity among them, it has exercised as yet no influence beyond a certain radius from the Mission Stations, and it is even now of too recent a growth in their midst to influence whole races, as Hinduism has done, and is still doing, to embrace its tenets and beliefs. Everything to-day points to Hinduism—even the Hinduism that has lost its first faith and is fighting its own battle of doubt and scepticism—as the absorbing force of the future among the aborigines of Bengal' (*Story of an Indian Upland*, 20 *f.*).

On this question the views of Dalton, one of the best authorities on these races, deserve quotation.

'If we analyze the views of most of the Oraon converts to Christianity, we shall, I think, be able to discern the influence of their pagan doctrines and superstitions in the motives which first led them to become catechumens. The Supreme Being who does not protect them from the spite of malevolent spirits has, they are assured, the Christians under His special care. They consider that, in consequence of this guardianship, the witches and *bhūts* have no power over Christians, and it is therefore good for them to join that body. They are taught that for the salvation of Christians one great sacrifice has been made, and they see that those who are baptized do not in fact reduce their live-stock to propitiate the evil spirits. They grasp at this notion, and long afterwards, when they understand it better, the atonement, the mystical washing away of sin by the blood of Christ, is the doctrine on which their simple minds most dwell' (Dalton, *op. cit.* 257).

(*d*) *Baptist and other Missions.*—Farther east the Baptist Mission is at work in the swamps of Backergunge and Farīdpur, where from the menial castes of Chandāls and Nāmasūdras they have made 19,000 converts. The only other important Mission is that of the Church of Scotland, which is engaged in parts of the Dārjīling and Jalpaigurī Districts. The total number of their converts is about 2000.

(*e*) *Classes among whom Christianity progresses.*—The classes most receptive of Christianity are those outside the Hindu system, as in Chotā Nāgpur and the depressed communities of Backergunge and Farīdpur. It is thus summed up by Gait (*op. cit.* i. 164):

'The influence of Christian teaching is no doubt far-reaching, and there are many whose acts and opinions have been greatly modified thereby, but amongst the higher castes the number who at the present time are moved to make a public profession of their faith in Christ is very small. At one time there seemed a prospect of numerous converts being gained from the ranks of the educated Hindus, but the efforts of Keshab Chandra Sen and other eloquent Brāhmo preachers turned their thoughts and aspirations into another channel.'

LITERATURE.—The best recent authorities are the last three Census Reports—by J. A. Bourdillon, 1881; C. J. O'Donnell, 1891; E. A. Gait, 1901, the last being the most complete and valuable. To it this article is very largely indebted. Among the older authorities may be named: Ward, *A View of the History, Literature, and Mythology of the Hindoos*[2], 1815; Francis Buchanan, afterwards Hamilton, *The History, Antiquities, Topography, and Statistics of Eastern India*, edited in 1838 from the author's MSS by Montgomery Martin, who does not name the original author on his title-page; J. Campbell, *A Personal Narrative of Thirteen Years' Service among the Wild Tribes of Kondistan, for the Suppression of Human Sacrifice*, 1864; S. C. Macpherson, *Memorials of Service in India*, 1865; E. G. Man, *Sonthalia and the Sonthals*, 1867; Sir W. W. Hunter, *The Annals of Rural Bengal*, 1868, *Orissa*, 1872, *Statistical Account of Bengal*, v.d.; T. H. Lewin, *The Hill Tracts of Chittagong*, 1869, *The Wild Races of South-east India*, 1870; E. T. Dalton, *Descriptive Ethnology of*

Bengal, 1872; J. Wise, *Notes on the Races, Castes, and Trades of Eastern Bengal*, 1883; H. H. Risley, *The Tribes and Castes of Bengal*, 1891; J. F. Hewitt, *The Ruling Races of Prehistoric Times in India, South-west Asia, and South Europe*, 1894–5; M. A. Sherring, *Hindu Tribes and Castes*, 1872–81; L. A. Waddell, *The Buddhism of Tibet*, 1895, *Among the Himalayas*, 1899; Jogendra Nath Bhattacharya, *Hindu Castes and Sects*, 1896; F. B. Bradley-Birt, *Chota Nagpore, a little-known Province of the Empire*, 1903, *The Story of an Indian Upland*, 1905. For the folk-lore and popular beliefs, Lal Behari Day, *Folk-tales of Bengal*, 1883, *Govinda Samanta, or History of a Bengal Raiyat*, 1874, re-published as *Bengal Peasant Life*, 1880; G. A. Grierson, *Bihar Peasant Life*, 1885, *An Introduction to the Maithili Language of North Bihar*, 1882; A. Campbell, *Santal Folk-tales*, 1891.

W. CROOKE.

BEOTHUKS.—The Beothuks were the aboriginal inhabitants of Newfoundland, and the sole representatives, so far as is known, of the Beothukan stock. The race is now extinct, and its history is wrapped in obscurity, although the attention of early voyagers to Newfoundland (or Baccalaos, as it was called from the native name of the codfish caught along its shores) was quickly attracted by the Beothuks who then inhabited the island. Though the allusions of these first explorers regarding this vanished race are scanty and frequently contradictory, they are of special interest as being almost the only sources for a knowledge of one of the most primitive of all North American Indian stocks.

1. **Early accounts and culture.**—The first allusion to the Beothuks is found in an 'addition' in Stephens' edition of the *Chronicon* of Eusebius (Paris, 1512, f. 172; quoted by Harrisse, *Découverte et évolution cartographique de Terre-Neuve*, London, 1900, p. 162), and is as follows:

'Septem homines sylvestres ex ea insula (quæ terra nova dicitur) Rothomagum [Rouen] adducti sunt cum vestimentis et armis eorum. Fuliginei sunt coloris, grossis labris, stigmata in facie gerentes ab aure ad medium mentum, instar lividæ venulæ per maxillas deducta. Crine nigro et grosso ut equæ iuba. Barba per totam vitam nulla, neque pubes neque ullus in toto corpore pillus præter capillos et supercilia. Baltheum gerunt in quo est bursula quædam ad tegenda verenda. Idioma labis formatur, religio nulla, cymba eorum corticea, quam homo una manu evehat in humeros. Arma eorum arcus lati, chordæ ex intestinis aut nervis animalium; sagittæ, cannæ saxo, aut ossæ piscis accuminatæ. Cibus eorum carnes tostæ. Potus aqua. Panis et vini et pecuniarum nullus omnino usus. Nudi incedunt aut vestiti pellibus animalium ursorum, cervorum, vitulorum marinorum et similium.'

Of the personal adornment of the Beothuks, Jacques Cartier, in 1534, gives the following account (quoted by Harrisse, *op. cit.* p. 163):

'Il y a des gens à la dite terre qui sont assez de belle corpulance, mais ilz sont gens effarables et sauuaiges. Ilz ont leurs cheueulz liez sur leurs testes en fazon d'vne pougnye de fain teurcze et vng clou passé par my ou aultre chosse et y lient aulcunes plumes des ouaiseaulx. Ilz se voistent de peaulx de bestes, tant hommes que femmes; mais les femmes sont plus closes et serrées en leurs dites peaux et sçaintes par le corps. Ilz se paingnent de certaines couleurs tannées. Ilz ont des barques en quoy ilz vont par la mer, qui sont faletes d'escorche de bouays de boul, o quoy ilz peschent force loups marins.'

To the list of Beothuk weapons Cabot (in 1542) adds lances, darts, clubs, and slings (Harrisse, *op. cit.* p. 164). The wearing of skins and loincloths ('a small payre of breeches') by both sexes, and the use of leggings and moccasins, are alluded to, in addition to their mode of dressing the hair, by Jehan Alfonse (? in 1543; while the Siennese Mattioli (1547) states that the Beothuks went naked in summer, but were clad in skins in winter. Unlike Stephens, who described the Beothuks as 'sooty,' Alfonse and Mattioli term them 'white' ('très blanche,' 'gente bianca'). According to the former, moreover, the Beothuks were nomadic, while 'touching their victuals, they eate good meate, but all unsalted, but they drye it, and afterward they broyle it, as well fish as flesh. . . . They drinke seale oyle, but this is at their great feasts.' Mattioli, however, affirmed that they ate both fish and flesh raw, and added that 'some of them eat human flesh, yet secretly, that their "caciqui" may not know it.' The latter author also adds a scanty note on the Beothuk religion: 'Sono idolatri, chi adora il sole, e chi la luna, e molte altre sorti de idoli' (see Harrisse, p. 164 ff.; cf. Bonnycastle, *Newfoundland in 1842*, London, 1842, i. 25 f.).

Whitbourne, the first historian of Newfoundland, describes the aborigines in the following terms (Purchas, *His Pilgrimes*, London, 1625, IV. x. 1884):

'The naturall Inhabitants of the Countrie, as they are but few in number, so are they something rude and sauage people. . . . In their habits, customs, and manners they resemble the *Indians* of the Continent . . . they liue altogether in the North and West part of the Country, which is seldome frequented by the English: But the French and Biscaines . . . report them to be an ingenious and tractable people . . . (being well vsed) they are ready to assist them with great labour and patience . . . without expectation of other reward, than a little Bread, or some such small hire.'

In a letter written July 29, 1612, John Guy thus describes the Beothuks at length (Purchas, IV. x. 1881):

'They are of a reasonable stature, of an ordinary middle sise, they goe bare-headed, wearing their haire somewhat long, but round; they haue no Beards; behind they haue a great locke of haire platted with feathers, like a Hawkes Lure, with a feather in it standing vpright by the crowne of the head, and a small locke platted before: a short Gown made of Stags skins, the Furre innermost, that ranne downe to the middle of their legges, with sleeues to the middle of their arme, and a Beuer skin about their necke, was all their apparell, saue that one of them had shooes and Mittens, so that all went bare-legged, and most bare-foote. They are full eyed, of a blacke colour; the colour of their haire was diuers, some blacke, some browne, and some yellow, and their faces something flat and broad, red with Oker, as all their apparell is, and the rest of their body: they are broad brested, and bould, and stand very vpright.'

Like Hayes, the second in command under Sir Humphrey Gilbert (Hakluyt, *Voyages*, London, 1600, iii. 153), Guy found the Beothuks friendly, although inclined to be thievish. He describes their houses as 'nothing but Poles set in round forme meeting altogether aloft, which they couer with Deere skins, they are about ten foote broad, and in the middle they make their fires.' Another variety of dwelling was 'made in a square forme with a small roofe.' Their adornments included 'shell chains' (doubtless wampum), 'chains of leather full of small Periwinckle shels,' and a 'spitting knife.' They likewise possessed spruce bark boiling-baskets, and had hats 'sewed handsomely with narrow bands about them, set round with fine white shels' (Whitbourne, in Purchas, IV. x. 1887). It is also tolerably certain that they used gaming discs of bone similar to those of the Micmacs (Culin, *24 RBEW* p. 97).

The highest art of the Beothuks was evidently attained in their ochre-stained canoes, to which Cartier alludes. These were usually built to hold four persons, and are thus described by de Laet (*Novus orbis*, Leyden, 1633, p. 34):

'Cymbæ ipsis ex corticibus arborum compositæ, viginti ut plurimum pedes longæ, quinque aut circiter latæ et semilunæ in modum, ad proram atque puppim erectæ atque incurvæ, quinque ad summum vectorum capaces; illis utpote levissimis undas summa velocitate secant, easdemque cum opus fuerit humeris gestant.'

The last authentic record of this vanished stock is contained in John Cartwright's *Remarks on the Situation of the Aborigines of Newfoundland*, written in 1788 (printed in his daughter's *Life and Correspondence of Major Cartwright*, London, 1826, ii. 307 ff.). This, however, adds little new, except that the square type of building already noted was relatively rare, and that its roof was a pyramid rising to a hoop tied to the rafters, thus forming a chimney. His most interesting information concerns the canoes, which ran straight from keel to gunwale, being kept apart at the top by a 'spreader,' the removal of which rendered it possible to fold the canoe up like a cocked hat.

The Beothuks lived chiefly by the chase and

by fishing. Their canoes have already received mention, and for their hunting they enclosed large areas with deer fences, 8 to 10 ft. high, made by felling trees in line. These fences, which often extended for miles into the interior, served to bring the deer down to water, where they were taken by the hunters (cf. Jukes, *Excursions in and about Newfoundland*, London, 1842, ii. 132–133). A distinct racial characteristic of the Beothuks, if we may judge from the account of Bonnycastle (*op. cit.* ii. 267 f.), was that they dug within their wigwams small cavities which they lined with moss or the soft twigs of trees, thus forming their beds. Their winter wigwams, moreover, had small store-pits, about four feet deep and usually lined with birch bark; while each village possessed a wigwam for vapour baths. It is also interesting to note that their wigwams of skin are said by Peyton to have been raised on wooden platforms (Jukes, *op. cit.* ii. 126).

The Beothuks also received the name of '*Red* Indians' (a term often applied erroneously to North American Indians in general) from their custom, to which repeated allusion is made from the time of Guy, of painting themselves, as well as their bows, arrows, and canoes, with red ochre. Physically they were of a finer type than the Micmacs, whose bitter enemies they were. The last member of the race, Shawnandithit, a woman who died at St. John's in 1829, is described as having a round face with prominent cheek bones, somewhat sunken eyes, small nose, and black hair (Lloyd, *JAI*, 1875, p. 31; cf. the portrait of the Beothuk woman Demasduit or Waunathoake ['Mary March'], reproduced from Lady Hamilton's drawing, in Prowse, *Hist. of Newfoundland*, London, 1895, p. 384). The Beothuks were monogamous, and the women were chaste (Lloyd, *JAI*, 1876, p. 228).

2. History.—The history of the Beothuks finds its wretched parallel only too readily. The brutal excesses of the English in Tasmania and Australia, of American frontiersmen and cowboys, of the Spaniards in the Antilles, and of the Belgians in the Congo—it is all the same dreary story. It is evident that, when Newfoundland was first discovered, its inhabitants were peaceful, and they long remained on friendly terms with the French and Basque fishermen. With the inability of primitive peoples to recognize property rights of others than their own tribes, however, they, in their excursions to the seacoast in summer for cod and salmon, appropriated European nets, iron, or whatever else they could lay their hands on. The Europeans sought revenge, and, as Cartwright says, 'they were harassed from post to post, from island to island, so that neither sea nor land could afford them shelter.' By the time of the English settlements the Beothuks had fled to the north and north-west of Newfoundland. Thence they carried on such depredations against the whites that by the middle of the 18th cent. the French offered rewards for their heads. To add to their distress, Micmacs emigrated from Nova Scotia in considerable numbers during the 18th cent., and bitter war broke out between the two stocks, culminating in a battle at the eastern end of Grand Pond about 1770. With the Naskapi, or Algonquian Montagnais of Labrador, on the other hand, they remained on terms of friendship, though they despised the Eskimos for their uncleanly habits (Jukes, *op. cit.* ii. 131); and it was even supposed by Bonnycastle (*op. cit.* ii. 251 f.) that the few remnants of the Beothuks migrated in a body to Labrador, since in the Bay of Seven Islands there suddenly appeared a party of Indians who were neither Eskimos nor Montagnais. Though the actual fate of the stock is not certainly known, they probably perished gradually from the hostility of whites and Micmacs, complicated by famine and disease. Their number seems never to have been large. John Mason, writing between 1618 and 1619, records 'few savages in the north, none in the south' (Prowse, *op. cit.* p. 107); Cartwright (1798) estimated them at 450; but about 1825, Shawnandithit said that only fourteen of her tribe were alive (Lloyd, *JAI*, 1876, p. 228). The last Beothuks, except three women, one of whom (Shawnandithit) was brought to St. John's, were seen on the ice in New Bay in the winter of 1823 (Bonnycastle, *op. cit.* ii. 263 f.). In 1827 the Beothic Institution was founded for the civilization of the Beothuks; but the expedition of Cormack, undertaken under its auspices, utterly failed to find even a single member of the tribe, though there was evidence that Beothuks had fled just before his approach (Bonnycastle, *op. cit.* ii. 265–276).

3. Relics.—The relics of the Beothukan stock, of which the Public Museum of St. John's contains important specimens, include mortar-shaped vessels, spear-heads, arrow-heads, gouges, and axes, all of stone. Bone ornaments, used for adorning the hair or dress, and decorated with right-angled triangles, have also been found, as well as carvings on ivory and on the tusks or bones of walrus, seals, and deer, all these objects being dyed a deep sienna. On the skeleton of a man found near Comfort Head in 1888 was a medicine bag containing several charms of carved bone, strips of wampum, a brilliant piece of iron pyrites, and a number of bird skulls, some of these objects obviously being religious in character (Macdougall, in *Trans. Canadian Inst.* ii. 101 f.). In this connexion it should be noted that the Beothuks kindled their fires from the down of the *cyanocitta cristata* (Lloyd, *JAI*, 1876, p. 225). The stock seems, however, to have had no knowledge of pottery, though they possibly made soapstone vessels (*ib.* p. 29), unless these were of Eskimo origin (cf. Prowse, *op. cit.* p. 591), especially as the Eskimos in Labrador manufactured soapstone lamps (Hough, in *Report of U. S. Nat. Museum*, 1896, p. 1041 f.). What is still more extraordinary, they remained ignorant throughout their history of the use not only of firearms, but even of the dog (Bonnycastle, *op. cit.* ii. 259, 277). A point of more than usual interest is the fact that the Beothuks apparently did not practise scalping, but the more primitive American Indian custom of cutting off the head (cf. Friederici, *Skalpieren und ähnliche Kriegsgebräuche in Amerika*, Brunswick, 1906, *passim*). Thus when, in 1810, the Beothuks killed two of the marines of Lieutenant Buchan, the heads of the victims were cut off and carried away (Prowse, *op. cit.* p. 385).

4. Language.—Our knowledge of the Beothuk language, which bears no known relation to any other American Indian tongue, rests on two vocabularies (not altogether free from Micmac loan-words) obtained from the women Shawnandithit and Demasduit ('Mary March'), and containing about 330 words. These are only lexicographical in value, giving no hint of morphology or syntax.

5. Religious beliefs.—Naturally data concerning the religion of the Beothuks are extremely scanty, and must in part be re-constructed cautiously from rather vague implications. According to Broughton (quoted by Anspach, *Hist. of the Island of Newfoundland*, London, 1819, p. 457), 'they had some knowledge of a Supreme Being,' and they believed that men and women were originally created from a certain number of 'arrows stuck fast in the ground, and that the dead went into a far country,

there to make merry with their friends.' The implication of a hostile Micmac, that the Beothuks possessed no religion, is without value, especially as he expressly declared that no Micmac understood the Beothukan dialect (Chappell, *Voyage of H.M.S. Rosamond to Newfoundland*, London, 1818, p. 71). That they had a very keen sense of the future life is shown by their care in the disposal of the dead, and by the objects found interred with them. There were four types of graves. One class of burial-place resembled a hut 10 ft. long, 8–9 ft. broad, and 4–5 ft. high in the centre, with a floor of square poles and a roof covered with bark, the whole being well protected against the weather and the intrusions of wild beasts (cf. the description of the grave of Demasduit [' Mary March '] given by Lloyd, *JAI*, 1875, p. 32). In the second mode of burial the body was wrapped in birch bark, and, with the property of the deceased, was placed on a sort of scaffold about 4½ ft. from the ground. This scaffold was made of four posts, about 7 ft. high, fixed perpendicularly in the ground so as to sustain a kind of crib 5½ ft. long by 4 ft. broad, with a floor, made of small squared beams laid close together horizontally, on which the corpse and its belongings rested. A third method was by bending the body together, wrapping it in birch bark, and enclosing it in a kind of box. This receptacle, which was made of small squared sticks laid on each other horizontally and notched at the corners to fit closely, was laid on the ground. It was about 4 ft. long, 3 ft. broad, and 2½ ft. deep, and was lined with birch bark for protection against the weather. The body usually lay on the right side, though the skeleton of a boy found in 1886 (Macdougall, *op. cit.* ii. 102) had been placed on the left. A fourth, and more common, mode of Beothuk burial was to wrap the body in birch bark, and to lay it, covered with a heap of stones, on the surface of the ground in some retired spot. Occasionally in this last form of burial, the body, thus wrapped up, was put a foot or two underground, the grave then being covered with stones. If, however, the soil was sandy, graves were dug, and no stones were placed above them. The Beothuk cemeteries were located at definite places, to which the dead were brought from long distances (Lloyd, *loc. cit.*).

The Beothukan belief in a future life receives additional testimony from their custom of laying beside or on the grave, bows, arrows, and other implements of warfare. The grave of Demasduit (' Mary March ') and her husband, moreover, contained small models of a male and female child and of canoes, in addition to cooking utensils of birch bark; while with the body of the boy already alluded to were buried food (salmon and trout), two pairs of moccasins, and other things. The interment of religious objects with a corpse near Comfort Head has been noted above (§ 3; cf. also Lloyd and Macdougall, *loc. cit.*).

WILLIAM PILOT and LOUIS H. GRAY.

BERĀR.—1. Position.—Berār, otherwise known as the Hyderābād Assigned Districts, is a province of India, lying between 19° 35′ and 21° 47′ north latitude, and 75° 59′ and 79° 11′ east longitude. It is bounded on the north by the Sātpurā range and the river Tāptī, which separate it from the Central Provinces; on the east its boundary is the river Wardhā, on the south the Pengangā; on the west lie portions of the Nizām's Dominions and of the Presidency of Bombay. Its total area is 17,710 square miles; and it is divided into three regions: the Melghāṭ, or hilly tract to the north, the Pāyānghāṭ, or central plain, and the Bālāghāṭ, or upland to the south.

2. History.—The history of the Province is so far relevant to its religion that it illustrates the mixture of races and the disturbing influence of the successive governments.

In the Epic period it formed part of the kingdom of Vidarbha, the first settled Aryan country south of the Vindhyan range (*BG* i. i. 135). Its name survives in that of Bīdar in the Hyderābād State, and has been doubtfully connected with that of Berār, the derivation of which is uncertain. Authentic history begins with the occupation by the Āndhra dynasty (B.C. 220–A.D. 236). They were followed by various non-Aryan chieftains, who gave way to the Chālukya, Rāshṭrakūṭa, Hoysala Ballāla, and Yādava dynasties in succession. In A.D. 1294 the Muhammadans appeared on the scene, when Alā-ud-dīn captured the stronghold of Deogirī or Daulatābād—a raid which was repeated by Malik Kāfūr in A.D. 1309. The country subsequently fell to the Bahmanī kings of the Deccan and to those of Ahmadnagar. It was conquered by the Mughals under Akbar in 1596, and remained under them until the fall of the Empire, when, desolated by constant war in the 18th cent., it passed to the Nizām of Hyderābād in 1804. In 1853 the Nizām leased it to the British, and in 1902 a fresh treaty confirming this cession was concluded. In the following year it ceased to be an independent administration, and was incorporated with the Central Provinces.

3. Population.—At the Census of 1901 the population amounted to 2,754,016. In the more fertile parts the predominant caste is the Kunbī, which forms the chief element in the Marāthā people. They are classed by Risley (*Census India*, 1901, i. 503) as Scytho-Dravidian; but there is no evidence that the Śaka or Scythian tribes ever penetrated this region, and the Kunbī are of non-Aryan origin, possibly leavened by some intruding strain from the eastern or western coast. Next in numerical importance are the Mhār and Māng, almost pure non-Aryans, regarded by orthodox Hindus as foul out-castes. The forest tribes principally occupy the Gāwīlgarh hills in the Melghāṭ to the north, those of the greatest numerical importance being the Gond (74,280), Āndh (39,679), Korkū (28,393), and Bhīl (5,704). In the population as a whole the Aryan element is scanty. There is a notable absence of important cities or towns, and the population is largely rural. Naturally their religion is of a primitive type, little influenced by the movements which in the more advanced provinces have so profoundly affected belief.

4. Religious statistics.—According to the Census of 1901, Hindus numbered 2,388,016 (86·7 per cent of the total); Animists, 129,964 (4·7 per cent); Muhammadans, 212,040 (7·6 per cent); Christians, 2,375 (0·08 per cent). Hinduism is thus the chief religion, and here, as is the case in other provinces, it is impossible to draw a clear line of distinction between Hindus and Animists.

5. The higher Hinduism.—(*a*) *Śaivism.*—The beliefs of the higher classes do not materially differ from those prevailing in other provinces. The creed most popular with Brāhmans is that known as Smārta (Skr. *smṛti*, 'authoritative tradition') preached by Śaṅkarāchārya in the beginning of the 8th cent. A.D. It is the highest form of Vedāntic pantheism. From the point of view of sect most Brāhmans rank as Śaivas, the simplicity of the cult of Śiva recommending it in preference to that of the other greater gods. But, as is the case in other parts of India, the mass of the population is

ignorant or careless of the restrictions of sect, and they worship all or any of the recognized deities. Next to the Smārta the most important Śaiva sects are the Lingāyat and the Nāth. The former is described in a special article; the latter are connected with the Gosāīn or Gosāvī of other parts of the country. Most of the Nāth adopt a secular life and are known as Sanyogī, the ascetic minority being called Yogī. The latter are now very rare, and the majority of the Order live by weaving, fortune-telling, and charming, such as making magical passes over the sick with a bunch of peacocks' feathers; others are simple mendicants, leading about a little performing bull, known as *nandi*, the 'vehicle' of Śiva. The regular Gosāvī Order is chiefly made up of youths dedicated by their parents to the god. They act as spiritual advisers (*guru*) to the lower castes, by whom they are found more accommodating than Brāhmans, as they permit the use of meat and spirituous liquor (Kitts, 65). Most of the Śaivas, however, prefer to worship the local manifestations of the deity, such as Khaṇḍobā and Bhairobā or Bhairava, the great guardian-deities of the Deccan. A dog is tied at the shrine of the former when sacrifice is done before his image, and the Haṭkar, a pastoral tribe, flog each other severely at the temples of the latter (Lyall, *Gazetteer*, 190).

(*b*) *Vaiṣṇavism.*—The Vaiṣṇavas of Berār include a few followers of Rāmānuja and of Rāmānand; but many are disciples of Madhavāchārya, some of Vallabhāchārya, and others of the Bengal school of Chaitanya. Their increase in modern times is largely due to immigration from N. and W. India (Kitts, 61). Their favourite deity is Bālājī, the infant Kṛṣṇa, who is regarded as the god of wealth and prosperity, and at Bāsim he has the finest modern temple in the province.

The most interesting modern Vaiṣṇava sect is that of the Mānbhāv (Skr. *mahānubhāva*, 'dignified,' 'virtuous'). It was founded by Chakradhara, a Karhāda Brāhman, who is regarded as an incarnation of their deity Dattātreya, and was propagated by his disciple Nāgabhaṭa, who is called the Last Preceptor (A.D. 1236–1302) under the Yādava princes of Mahārāshṭra (R. G. Bhandarkar, *Times of India*, 15th Nov. 1907). They are divided into a celibate section (*Bairāgī*) and one of married householders (*Gharvāsī*). The former include both monks and nuns; the latter are divided into the nominal adherents (*Bholā*), who accept the principles of the Order so far as they do not conflict with the rules of caste, and those who ignore caste distinctions. The celibate monks shave the whole head and face, while the nuns have their hair removed by a male barber. They either live in monasteries or wander from place to place; they eat no meat and drink no water in the presence of an idol; both sexes wear black clothes and ear-rings and rosaries of the black basil wood (*tulasī*) sacred to Viṣṇu-Kṛṣṇa. They are a quiet, thrifty, orderly people; one of their chief rules is never to take life, and they are careful not to visit or eat at a place where a murder or an accidental death may have occurred. Their gods are Dattātreya, a deified saint worshipped as an incarnation of the triad—Brahmā, Viṣṇu, and Śiva—or more especially of Viṣṇu and Kṛṣṇa. Their scripture is the *Bhāgavad-gītā*, and they follow the teaching of a pontiff, known as the Kārañjkar Mahant, whose seat is at Ridhpur in Berār. Their rejection of the manifold saints and orthodox gods has brought them into conflict with Brāhmans; but they are held in much respect by lower caste Hindus. They have no belief in the agency of spirits, holding that the diseases usually attributed to them are the result of sins committed in this or in a former life. The initiation formula is communicated to the female branch by a senior nun. Each sex contains five grades of greater or inferior dignity. The dead are buried, not cremated. When a Mahant, or pontiff, dies, his corpse is washed, placed in a raised seat, worshipped, tied in a litter in a sitting posture, and carried to burial, not in one of the ordinary cemeteries, but in a clean place selected by the brethren, where the grave is spread with salt, the corpse laid on its left side facing the east, and a coconut is broken on the skull as a commutation of a sacrifice (*PR* ii. 106). After burial all traces of the grave are obliterated, and no tomb is raised—to avoid the possibility of the growth of a cult of the dead man. Like many Vaiṣṇava sects, they have been accused of immorality; in former times it is said that marriage between a monk and a nun was symbolized by the pair laying their wallets close together—a practice now denied by the members. Their numbers are decreasing, but this is perhaps due to the fact that in the present day fewer join the celibate section. In 1901 they numbered 2,566 in Berār (Kitts, 62 ff.; *BG* xix. 120 ff. xvii. 181 ff.).

6. **Popular Hinduism.**—The popular faith of the province has been fully described by Sir A. Lyall, whose classification (*Asiatic Studies*[3], i. 9 ff.) is here followed. (1) The worship of mere stocks and stones, and of local configurations, which are unusual or grotesque in size, shape, or position. This includes not only the worship of natural objects connected by legend with some deity or saint, but extends to 'the phallic rites, to the Sāligrām, or fossil, in which Vishnu is manifest, and to all that class of notions which entirely separate the outward image from the power really worshipped. So that at last we emerge into pure symbolism, as when anything appears to be selected arbitrarily to serve as a visible point for spiritual adoration.' (2) The worship of things inanimate, which are gifted with mysterious motion, such as water, fire, the sun, and trees. For instance, in an eddy of the Tāptī, wood, when floated down, sometimes disappears in a subterranean passage, to avoid which the Gonds propitiate the river-deity with the sacrifice of a goat; Mahishobā (Skr. *mahisha*, 'a buffalo') is a buffalo-god which lives under water and demands propitiation. The worship of fire in the form of the Vedic Agni has disappeared, but it is reverenced at the Brāhman fire-sacrifice (*haoma*). The sun is the tribal deity of the wild Korkū of the northern hills, and he is also worshipped by all Hindus under different conceptions and doctrines regarding his personality. By the jungle-dweller the tree is feared as possessing sentient existence and mysterious potency, proved by its waving branches and the weird sounds which occasionally proceed from it. At a later stage trees which are fruitful or toxic are honoured, or a certain species is appropriated by one god, or a spirit seems to dwell in a great solitary trunk or in a gloomy grove. In the last case such places are laid under tabu, and no one dares to cut a tree or even to use the fallen branches as firewood. The custom of tying rags on trees, in order to bring the worshipper into communion with the indwelling spirit, is common, and one class of such trees is known as Chindiyā Deo, 'the deity of tatters,' where, if one present a rag in season, one may chance to get good clothes (Lyall, *Gazetteer*, 191; Kitts, 47 f.). (3) The worship of animals which are feared. This is illustrated by the cult of Wāgh Deo (Skr. *vyāghra*, 'tiger'), who is propitiated by those who frequent the jungle; and by the refusal of gardeners to inform sportsmen when a tiger or a leopard has taken up its quarters in their plantations, as they believe that the garden ceases to produce fruit when one of these animals is killed there (Lyall, *Gazetteer*, 61 f., 190 f.). In the same class is the cult of the snake, which is everywhere feared and reverenced, and of the monkey, which has now been appropriated by the Vaiṣṇavas in the form of the monkey-god, Hanumān. (4) The worship of visible things, animate or inanimate, which are directly or indirectly useful and profitable, or which possess any incomprehensible function or property. Such is the reverence paid to oxen, and the worship of implements, such as the fisherman's net, the scribe's pen, the banker's account-books (*PR* ii. 185 ff.; cf. MacCulloch, *Childhood of Fiction*, 200 ff.). (5) The worship of a spirit (*deo*), a thing without form and void—the vague impersonation of the uneasy sensations which come upon people in the dark, in forests, or deserts. The site of the manifestation of such spirits is marked by a pile of stones, to which every passer-by contributes, or by rags or charms tied to a cliff or tree; or such beings are supposed to haunt an old banyan-tree or a ruined temple. (6) The worship of dead relatives, and other deceased persons known in life to the worshipper. Such are the worship of ancestors, and the attempt to recall

the spirit in a stone picked up at the grave, which is reverently worshipped for a time and then decently disposed of. (7) The worship at shrines of persons who had a great reputation during life, or who died in some strange or mysterious way. In the worship of Chānd Khān at almost every fort in Berār we have perhaps a survival of the foundation-sacrifice (Tylor, *Primitive Culture*[3], i. 104 ff.; MacCulloch, *Childhood of Fiction*, 427). The Banjārā (*q.v.*) tribe worship a notorious bandit, and M. Raymond, the French commander, has been canonized. Besides these there is a host of saints and worthies whose shrines are found in all parts of the Province. (8) In some cases persons of this class rise to the rank of demi-gods or subordinate deities, and are worshipped in temples —a phase of the local beliefs fully illustrated by Lyall (*Asiatic Studies*[3], i. 30 ff.), who has, however, extended too far the ancestor-cult as an assumed origin of the theogony (see ANCESTOR-WORSHIP). The remaining forms of the local beliefs illustrated by the same writer—the worship of manifold local incarnations of the elder deities; of departmental deities; of the supreme gods of Hinduism and of their ancient incarnations and personifications, as recorded in the Brāhmanical scriptures—form part of the general official Hinduism, which is not peculiar to Berār.

7. **Animism.**—The general types of Animism current in the province have been described in the last paragraph. That of the forest-dwellers closely agrees with the beliefs of the cognate tribes (see DRAVIDIANS, BHĪLS, GONDS). The religion of the Korkūs, Gonds, and Āndhs has been described by Kitts (p. 77 f.) and C. A. Elliott (*Settlement Rep. Hoshangabad*, 1867, p. 250 ff.). The special class of sorcerers who are believed to control hailstorms and exercise wide influence over the peasantry is noteworthy. At the Dasahra feast the sorcerer (*gārpagārī*) mixes up samples of all kinds of grain grown in the village, and over them sprinkles the blood of the victim offered to Durgā. The grain is then shaken up and divided among a number of small pots, each of which is assigned to a certain period of the season during which hail may be expected. Over these, secret charms are recited. The pots are inspected daily, and, if there be danger of hail during the period represented by any pot, the grain in it is believed to bubble up, in which event Durgā must be propitiated with a victim, whose blood is allowed to drip into the pot—after which the ominous bubbling ceases. Māruti, the monkey-god and village-protector, must also be propitiated; but this is simply done by blowing a horn at his shrine or in some other part of the village (Lyall, *Gazetteer*, 208; Kitts, 60).

Totemism is indicated by the institution of guardians (*devak*), also common to the Deccan and the west Districts of the Bombay Presidency. The guardian is usually some animal or tree; but sometimes natural objects are included, such as one of their trade implements among artisans. Whatever the guardian may be, it is treated with respect. If it be an animal, its flesh is tabu; if it be a material object, it is worshipped at marriage and at the attainment of puberty. The Prabhū caste, when a youth is initiated into the privileges of caste by the binding of the sacred cord, mark their guardian-pot with coloured paint, place various offerings in it, close the lid and tie a string round it, and finally light a stone lamp before it (Campbell, *Notes on the Spirit Basis of Belief and Custom*, 1885, p. 8 ff.). The guardian is regarded as the head of the family, and persons possessing a common guardian cannot intermarry. Totemism is thus at present largely a social institution, and is closely analogous to the customs in Bengal (see BENGAL, p. 490; Frazer, *Totemism*, 58 ff.).

The spirits of the dead are supposed to bring disease upon children. The *mūnjā*, or ghost of a boy invested with the sacred thread who has died before marriage, is believed to be envious of the good fortune of others, and specially malignant. To avoid his ill-will, the child is called by an opprobrious name (see Crooke, *PR* ii. 4); or his father gives a feast at a banyan-tree to the unmarried males of the village; or he employs an exorcist, who propitiates the unmarried male dead of the household, sprinkles water over which sacred texts have been recited over the mouth and eyes of the child, and calls on the evil spirit to state who he is and how he gained entry. Finally, the spirit, by a tap of the wand of the exorcist, is persuaded to depart, whereupon the child takes an old shoe—an article which repels spirits—to a sacred fig-tree, at the foot of which he is supposed to fall senseless, and thus to become freed from the incubus. A nail is then driven into the tree to confine the spirit, or it is induced to enter a bottle which is buried deep underground (*ib.* i. 162, ii. 14). Rites of a similar kind are performed to repel or propitiate the ghost of a married woman (*manwin*) who is specially hostile to her own sex, and that of a child (*jhoting*) who has died before investiture with the sacred thread (Kitts, 53 f.).

The belief in sorcery and witchcraft affecting man and beast is wide-spread. The witch is feared rather than respected, but her power is believed to cease when her teeth fall out. The more Hinduized peasantry worship Gaṇpati or Gaṇeśa, god of luck, before starting on a journey or other enterprise; but the common people trust more to meeting omens. If a ring-dove enters the house, it is abandoned for three days, and purified by leading a cow inside, and giving food and alms to Brāhmans (*ib.* 49).

8. **Sikhs and Jains.**—Besides the orthodox Sikhs —immigrants from the Panjāb—some members of the Banjārā (*q.v.*) tribe recorded themselves as Sikhs at the last Census. Sikhs generally are most numerous on the Hyderābād frontier in the neighbourhood of the tomb of their Guru Govind at Nānder (Chinoy, 57 f.). The early influence of the Jains is shown by numerous temples, such as those at Sirpur, Muktagirī, and Kāranja. The present Jains consist largely of immigrants from Bombay, Rājputāna, and Central India, who are attracted by trade. The cave-temples at Pātūr Shaikh Bābā—a site which, as its name shows, has been since occupied by a Musalmān saint—seem to be Brāhmanical (Fergusson-Burgess, *Cave Temples*, 428).

9. **Muhammadans.**—Islām is increasing its numbers not so much from proselytism as by the greater fecundity of its members, the facts of which have been fully illustrated in the case of Bengal (see BENGAL, § 41). The faith has been much corrupted by the local Animism, as is shown by the prevalence of the cult of hermits and martyrs, to whose shrines, for the sake of their offerings, even Hindus are admitted. Some Muhammadans secretly engage Brāhmans to worship the local gods, retain their Hindu surnames, and employ the village astrologer to select an auspicious day for marriages (Lyall, *Gazetteer*, 194; Chinoy, i. 55 f.).

10. **Christians.**—Christians, now numbering 2375, have increased owing to missionary efforts during recent famines. The vast majority of them are native converts attached to the fourteen mission stations established in the Province. Enumerated by denominations, the largest congregations belong, in order, to the Roman Catholic, Anglican, Methodist, and Presbyterian Churches.

J. Kitts, 1882, W. Hastings, 1892, A. D. Chinoy, 1902, of which the first is the most valuable. For the history: V. A. Smith, *Early History of India*[2], 1908; J. Grant Duff, *History of the Mahrattas*[3], 1873; articles in the *Provincial Gazetteer* and *Imperial Gazetteer*.

W. CROOKE.

BERBERS AND N. AFRICA.

[RENÉ BASSET.]

1. *PAGANISM.*—Whatever opinion may be held regarding the complex origin of the races which, under the general name of Berbers, inhabited, and still inhabit, all the north of North Africa, from the Mediterranean to the Sudan and from the Atlantic to Egypt, they form a linguistic unity; and it is only by starting from this point of view that we can hope to re-construct their ancient religion. But, at the very outset, we find ourselves faced with a difficulty which is almost insoluble. Although there was unity in their language, this was by no means the case in their religion, *i.e.* their pagan religion. Moreover, the uncertainty which still exists concerning the deciphering of the Libyan inscriptions deprives us of their help, and obliges us to have recourse to the scanty information supplied by foreigners, who have not always distinguished the native from the borrowed elements in the beliefs and ceremonies of which they have handed down accounts.

1. **Mountain-worship.**—It seems that irregularities of the ground—mountains, caves, and rocks—were regarded by the Berbers, if not as deities, at least as seats of divine beings. Therefore, at least in the west, Mount Atlas—'the pillar of Heaven,' as it was called by the people of the country in the time of Herodotus (*Hist.* iv. 184)—must have been the object of their worship. Pliny the Elder (*HN* v. i. 6) writes as follows:

'In the very middle of the sands Mount Atlas rears its head to the skies, rugged and bare on the side facing the ocean to which it gives its name; but, on the side which faces Africa, very shady, covered with woods and watered by gushing springs; fertile in fruits of all kinds, which grow of their own accord . . . and are sufficient to satisfy all desire. During the day not a single inhabitant is seen; everything preserves a deep silence, like the awful silence of the desert. As men approach the mountain, a religious fear seizes their hearts, especially at the sight of the summit raised above the clouds and apparently close to the circle of the moon.'

This information is confirmed by Maximus of Tyre (*Dissertationes*, viii. 57):

'The Western Libyans inhabit a long narrow strip of land surrounded by the sea. The extremity of this peninsula the ocean envelopes with heavy waves and currents. This they regard as the sanctuary and the image of Atlas. Now, Atlas is a hollow mountain, very lofty, opening out towards the sea as a theatre towards the sky. The space which stretches to the middle of the mountain is a narrow fertile valley covered with trees on which fruits are seen. Looking from the summit is like looking into the depths of a well. It is impossible to go down into it because of the steepness of the slope; besides, it is not allowed. The wonderful thing about this place is that, at high tide, the ocean covers the banks and spreads all over the fields; the waves rise up towards Atlas, and the water can be seen standing up against it like a wall, without flowing into the hollow part or falling to the ground; but between the mountain and the water there is a great deal of air and a hollow wood. *For the Libyans it is both a temple and a god*, the object by which they swear, and a statue.'

The Atlas of which he is speaking is evidently the Atlas of Morocco. Its native name, Dyris or Addiris (cf. in the Guanch dialect of Teneriffe, *adar*, 'cliff'; in Awelimmiden Tuareg, *adar*, 'mountain'), has been preserved by Pliny the Elder (*HN* v. i. 13) and Solinus (*Polyhistor*, § 29). But the Greek and Manichæan conception of Atlas supporting the world might be found in the name which, according to Galindo, the Guanches of Teneriffe gave to God, viz. *Atguayhcefunataman*,* 'he who supports the Heavens.' It would naturally have been applied to Mount Teyde in Teneriffe. Guanch mythology, however, assigned another rôle to this mountain. It must be taken for granted that the present Bul Qornin (the ancient Balcaranensis), who rules Tunis, and whose name re-appears in the deity worshipped there (Saturnus Balcaranensis), was venerated in primitive times by the Berbers, before the Phœnicians had installed their Ba'al† there, on whom Saturn was superimposed, sometimes represented as mounted on a lion (*CIL* viii. 20437, 20448) or accompanied by the epithet Sobare(n)sis at Henchir Bu Beker (*ib.* 12390, 12392). The Ba'al Ḳarnaim, who was worshipped there by the Phœnicians, and, undoubtedly in imitation of them, by the natives, was a purely Semitic deity, like the Ba'al of Hermon or the Ba'al of Lebanon,† whose *paredros* was Tanit Pené Ba'al, mentioned in a Punic inscription of Borj Jedid. Probably the same thing happened with the cult of Ba'al Hamān at Dugga.‡ Dedications to Saturn are, however, very frequent in the Latin inscriptions of Africa, and the name of Saturnius is often mentioned. We may cite at Ain Zana (Diana) a dedication, 'Deo frugum Saturno frugifero Augusto' (*CIL* viii. 4581), and at Fontaine-Chaude an inscription, 'Deo Sancto frugifero' (*ib.* 17720). A Latin inscription, found at some distance from Aumale, is addressed to the genius of the mountain, Pastoria(nen)sis, who gives shelter from the violence of the wind (*ib.* 9180); there is also one at Chemtu in Tunisia to the genius of the mountain (*ib.* 14588). Even in our day certain mountains excite among the Tuaregs a religious fear which they cannot overcome. But it is not the terrifying appearance of the mountains that inspires the fear; it is the genii who dwell in them. This belief existed even from the time of Pliny the Elder. Reproducing a passage from the *Periplus* of Hanno, he places in Atlas the Ægipanes and the Satyrs, whom the Carthaginian traveller locates much further south (*Periplus*, § 14); the same passage is also quoted by Solinus (*Polyhistor*, § 29). In the 12th cent. of our era an anonymous Arabian writer mentioned similar beings in a mountain of the Sahara, but his story bears the clear stamp of Musalmān beliefs.§ It tells of the mountain of Felfel, which holds within it the remains of numerous towns abandoned because of the genii; during the night people see their fires there and hear their whistling and singing. Among the Azger Tuaregs the grove of Idinen, 30 kilometres to the north of Ghāt, is the object of a superstitious terror, and no one would dare to penetrate it. Barth, who explored it, almost died of thirst without, however, having found any of the ruins which were said to be there.‖ Among the Ahaggar, Mount Udan is regarded in the same way, and the name given to the mysterious beings who inhabit it, *alhīnan* (from Arab. *al-jinn*), shows clearly that an Arab belief has come to be added to a superstition of Berber origin.¶ The Kudiat, to the north of Temanghaset and to the east of Ilaman, is likewise the object of fears of this kind.** In the Canary Islands, Mount Teyde,

* In this extraordinary and evidently corrupted name, it is impossible to decipher, even approximately, more than the last part *ataman*, which is an erroneous form of *achaman*, 'god.'

where hell (*echeyde*) was supposed to be, was inhabited by a demon of the name of *Guayota* or *Huayota*. The demon of Palma was called *Iruene*.*

2. Rock-worship.—Rock-worship is naturally joined with mountain-worship. Pliny the Elder (*HN* II. ii. 44) and Pomponius Mela (*de Situ Orbis* i. 8) tell of a rock in Cyrenaica consecrated to the South Wind: 'if it is touched by the hand of man, immediately the wind rises violently, tossing the sand like waves, and rages as it does over the billows.' In the Canary Islands, near the crater of Caldera in Palma, there was a rock, formed like an obelisk, which was called Idafe. To prevent it from falling, the people of the tribe of Tananse, who were settled in the neighbourhood, used to make offerings to it, with processions and singing; they sacrificed entrails, and then ate the animals, and sometimes whole victims were cast down from the heights of the neighbouring mountains.† In the Great Canary Island there were two rocks: the one called Tismar, in the district of Galdar, the other Vimenya, in Telde. In times of distress the inhabitants, accompanied by priests called *magadas* (Viana, p. 22, calls them *harimaguadas*), used to make pilgrimages to these two rocks, carrying in their hands palm-branches and vases filled with milk and butter. This they poured on the rocks, dancing round about them and singing lugubrious airs like funeral chants, which the Spaniards called *endechas*. They then proceeded to the seashore, and beat the waves vigorously with their rods, shouting all the time at the pitch of their voices.‡ It is evident that here we have to do with a kind of worship. Besides, if we can believe to the letter what the Spanish writers have handed down, the Guanches, differing from the other Berbers, seem to have had a settled religion. In any case, we are tempted to connect with this institution of sacrifices the use made of a stone situated near Guertufa, between Tiaret and Relizane, and known by the name of *Ḥajar Gaïd*.

'In one place a recess in the rock leaves a mound between it and the road, and it looks like a huge stone, apparently fallen from the summit and caught on the other rocks. It measures 4 metres at its highest part and 1 m. 70 at its lowest; its upper surface is 10 m. long and at least 6 m. broad at its broadest part. . . . After climbing up this rock, perfectly irregular, but possessing a sort of platform, inclined at 30 degrees, one sees a sort of cascade, formed by three basins of unequal size and depth, into which it is evident that quantities of liquid have poured. To the right are two little round holes; to the left, two little square holes, all being from 10 to 15 cms. wide. There is no doubt that there was a primitive altar there, a table for sacrifices.'§

We may quote the conclusion of this description: 'The *Ḥajar Gaïd* was a splendidly-chosen place for a bloody religion. The sacrificer, raised up 8 or 10 metres above the crowd, let the blood of the victim flow from one basin into the other. The sacrifice was performed before a vast horizon; all the races of the plain saw it, and the fire that was lit was *undoubtedly* seen from the far-off heights of the mountain of Lalla Krua.'‖

But this is merely a hypothesis. There still exist, however, in the Canary Islands places where libations of milk were made—holes and trenches hollowed out in the hard rock for the purpose of receiving the liquid. There were also sacrifice-trenches—simple cavities surrounded by carefully-arranged heaps of stones.¶ In the *qṣar* of Tamentit in Tuat, there is an aerolite which, even to this day, is the object of general veneration. Legend tells that, when it fell from the sky, near Nun en-Nas, it was gold, but God changed it into silver, and then into iron, to prevent covetousness.* Connected with natural rocks, and rocks wrought by the hands of men, are dolmens, but as these are really tombs, it is unnecessary to speak of them here.† See art. STONES.

3. Cave-worship.—Caverns seem also to have been worshipped among the ancient Berbers, in agreement with the testimony of Seneca (*ad Lucilium Ep.* xli.): 'Et si quis specus saxis penitus exesis montem suspenderit, non manu factus, sed naturalibus causis in tantam laxitatem excavatus; animum tuum quadam religionis suspicione percutiet.' But nothing has been found as yet to prove the existence of the god of caverns, Ifru or Ifri, affirmed by Masqueray.‡ The most celebrated deity who is mentioned is the god Bacax, whose grotto near Annuna (Thibilis) has been discovered and explored. In this cavern 'the apartments are not all situated in one horizontal plane, nor are they connected simply by narrow passages; they are often placed one above the other, and have communication with each other by natural stairs, sometimes even by actual wells. The difference in level between the entry-passage and the bottom of the cavern cannot be less than three or four hundred metres.'§ The name of the god Bacax, mentioned in a certain number of Latin inscriptions, *CIL* viii. 5504 (18828), 5505 (18829), 5517 (18847), 5518 (18850), 18831, 18838, has as yet defied all attempts at interpretation. It was in front of the entrance to the cave that sacrifices were offered. Perhaps it is to a cult of this kind that we should attribute the Libyan inscriptions which are found in great numbers in the grotto of Ifri n delal. There is still another cave-deity whose name must be recognized in the enigmatical GDAS, with which a certain number of inscriptions begin—the inscriptions found in the cave known as R' ar Zemma, situated on a spur of Jebel Chettaba, in the neighbourhood of Constantine. Opposed though it is by G. Mercier,‖ who has given a minute description of the cave, the proposal of Mgr. Toulotte and M. Héron de Villefosse to connect the present name Chettaba with the mountain of Giddaba mentioned by St. Augustine is tempting; and GDAS would stand for 'Giddabæ deo augusto sacrum.'¶ In the Great Canary Island, two leagues from Teyde, at the top of a volcanic mountain, there is a large cave in the rock, entered by four openings fourteen feet high, whence arises the popular name, 'Mountain of the four doors.' The openings are separated by pillars varying in diameter from seven to nine feet. In front of each pillar, on a level part cut out of the rock, and serving as a peristyle to the cave, there are several niches, some round and others square. These seem to have been intended to hold the objects of the cult. The niches are more than five feet from the ground.** In the Isle of Fer in the Canaries, the cave of Asteheyta, in the district of Tacuitunta, served as a refuge for the man who, in times of

drought, went to implore the goddess. She appeared to him and gave him a pig, which he presented to the assembly as a token that his prayers were answered.*

4. Air-worship.—We do not know if the Berbers worshipped the air or the wind, but if they did, it was undoubtedly under foreign influence. We have an inscription in Latin verse, found at Naraggara (Sidi Yusuf), in which the air is invoked under the name of Juno (*CIL* viii. 4635); and it is perhaps to a cult of this order that we must attribute an inscription of Ain Mtirchu (*ib.* 17763). These should be compared with a passage of Firmicus Maternus (*de Errоribus Profanarum Religionum*, § 111), according to which the Assyrians and *some of the inhabitants of Africa* placed air in a sort of authority over the other elements. But, as he adds that they consecrated it under the name of Juno or of the virgin Venus, it is clear that we are here dealing with a Punic cult.

5. River-deities.—Rivers, or at least the sources of rivers, were consecrated to a particular deity. The only extant inscriptions which mention them give us, as the title of the special deity, the word 'genius,' probably due to Roman influence (*genius*). Thus near the Sig was found a dedication to the genius of the river ('genio fluminis,' *CIL* viii. 9749); at the source of the Bu Merzug, near ancient Sila, an inscription was excavated which mentions the genius of the Amsaga, the former name of the river (*ib.* 5884).† There is one in existence to the deity of the river Alexandriana (*ib.* 2662), to the deity of the waters (*ib.* 2663), to the genius of the fountain ('genio fontis') associated with Juppiter, and to the Fountain of Caïd, near Batna (*ib.* 4291).

6. Town-deities.—The application of the name 'genius' to towns, frequently found in the inscriptions, seems to be the result of an imitation of the customs of the Romans, who personified towns in some special genius, when it was not actually the work of Roman settlers rather than of the native populations. Thus the genius of a village in Lambessa ('genio vici,' *CIL* viii. 2604 f.); the genius of Lambessa ('genio Lambæsis,' *ib.* 2528, 2596, 2598 f.); the genius of Rusicada ('genio coloniæ Veneriæ Rusicadæ augusto,' *ib.* 7959 f.); the genius of Henchir Masfuna ('genio Lamasbæ augusto'); the genius of a market-town in Sur Juab ('genio pagi augusto,' *ib.* 9196); the genius of the Cirtæan colonies (*ib.* 5693, 10866); the genius of the colony of Milah (*ib.* 7960, 8202 [=19980]); the genius of Mactar (*ib.* 6352); the genius of Subzavar (*ib.* 6001); the genius of Phua (*ib.* 6267–91); the genius of the municipality of Testur (*ib.* 1353 [14891]); the genius of the municipality of Sataf (Ain Kebir, *ib.* 8389); the genius of the 'civitas Celtianensium' among the Beni-Welban (*ib.* 19688); the genius 'populi Cuiculitani' at Jamila (*ib.* 20144); the genius of the colony at Henchir Sidi Alibelqāsem (*ib.* 14687); the genius of the 'oppidum Lamsortense' at Henchir Maf'ūna (*ib.* 18596); the genius of the 'colonia Julia Veneria Chirtæ Novæ' at Henchir Jezza (*ib.* 16367); the genius of the market-town ('genio vici augusto') at Marcūna (*ib.* 424); the genius of Thibar at Henchir Amamet (*ib.* 154345); the genius of the people at Ain Zana (*ib.* 4575), at Constantine (*ib.* 6947 f.); the genius of Novar among the Beni Fūda (*ib.* 20429 f.); and the genius of Gadimefala ([?] *ib.* 18752). We may add to these the invincible deity of Gurai (Qsar Gurai, near Tebessa, *ib.* 1843), and the deity who is mentioned in an inscription of Borj Hamza, 'Auzio deo genio' (*ib.* 9014). The genius is usually a Latin or Punico-Latin deity, as at Qsar al-Ahmar, in the region of Ain Beida. In a dedication to Saturn of the 3rd cent., this god is qualified as 'genius saltus Sorothensis';* in another addressed to Juppiter, at Uzali, there is 'genius arcae frumentariae' (*ib.* 6639).

7. Sun-worship.—Besides mountains, rocks, caves, and rivers, the Berbers worshipped the stars, and, primarily, the sun. This cult existed among the nomadic Berbers between Egypt and Lake Tritonis (Herod. *Hist.* iv. 188), and among the Berbers in general.† We read in the *Life* of St. Samuel of Qalamon that the Berber who had reduced him to slavery wished to make him worship the sun.‡ There are also some Latin inscriptions dedicated to it: 'Soli deo invicto,' in the plain of Batna (*CIL* viii. 2675); 'Soli deo augusto,' at Zarai (*ib.* 4513); 'Soli invicto,' at Suk-Ahras (*ib.* 5143), at Sluguia (*ib.* 1329), at Cherchel (*ib.* 9331), at Affreville (*ib.* 9629); to the sun and the moon, near Sidi Alibelqāsem in Tunisia (*ib.* 14688 f.); but it is doubtful whether it is the ancient Berber deity that is involved when we find the sun assimilated with Mithra at el-Gan (*ib.* 18025) as well as at Ain Tukria (*ib.* 21523). On the other hand, it seems to be the Berber god that is referred to in a Latin inscription at Aumale, of the year 207 of the era of the province, in which there is mention of ceremonies in honour of Tonant, the wearer of horns, and of a Pantheia who was connected with him, was worshipped on the Libyan and Moorish borders, and had her seat between Juppiter Ammon and Dis (*ib.* 9018).

The Guanches of Palma also worshipped the sun, and gave it the name of *Mayec*,§ as well as the name *Amen*, which seems to have meant 'Lord'; in Awelimmiden Tuareg, *Amanai* has the meaning of 'God.' According to Macrobius (*Sat. conviv.* i. 21), the Libyans worshipped the setting sun, which was impersonated by Ammon (Amen). He was represented with ram's horns, in which resided his chief power, as that of the sun in its rays.‖ In the speech of Athanasius against the Gentiles (§ 14) it is said that among the Libyans the sheep was called *amen*, and that it was worshipped as a deity. The opinion, however, has been suggested, with every appearance of reason, that Ammon (Hammon, Amen) was a god of Berber origin. We may compare with this the carving on the rock found at Bu Alem in South Oranais, representing rams with their heads surmounted by an ornamentation in the form of a solar disc, surrounded with a uræus.¶ It would be a mistake, however, to see here the prototype of the Egyptian Amen; the present writer believes, with Gsell, that it is a more or less successful copy of the Egyptian representation, as probably are the rock-drawings discovered by Barth at Telissau, west of Fezzan,** and the bas-relief found in the foundations of the Borj Tasko at Ghadames.††

But there is still another proof of the worship of a ram representing the sun, and one in which we do not see an Egyptian imitation. It is found in a monument, discovered in 1851 at Old Arzeu, representing 'a roughly sculptured head with a very slightly sharpened nose, two little round holes for the eyes and for the ears, and the mouth

represented by a hollowed line; its horns are curved back, the points to the ground, and the arms are fixed to the body with the hands coming and joining above the navel. The under part of the body ends in a terminal.'* It is also an idol of this kind that was found at Tuat, and is designated 'getule idol' (?).† This may be identified with *Gurzil*, whose priest was Terna. He was the son of Juppiter Ammon (Corippus, *Johannidos*, ii. 109 f., v. 494 f., vi. 116) by a heifer (*ib.* ii. 111). This Gurzil is regarded as an Apollo; he was represented by an image of a bull being carried to fight (*ib.* iv. 666–673, v. 22–29). The cult of this deity was maintained for a long time, for in the 11th cent. of our era al-Bakrī mentions a stone idol in Tripoli, set up on a hill and named Gorza, to which the tribes round about—the Howara amongst others—offered sacrifices and addressed prayers in order to recover their riches.‡ Al-Bakrī, unfortunately, gives no information about the shape of this idol. Probably it was also a Berber idol of this kind that the same author calls 'Maghmades' (perhaps the *Macomades* of the ancients), and describes as being set up on the seashore between Egypt and the Maghrib, and surrounded by several others.§ The name 'Gorza' seems to recur as an element of the names of the locality in a town placed by Polybius (*Hist.* i. 74) near Utica, and in a *tessera* of hospitality and patronage in the reign of L. Domitius Ahenobarbus (*CIL* viii. 68): 'Senatus populusque civitatium stipendiariarum Pago Gurzenses hospitium fecerunt . . . Faciundum coeraverunt Ammicar Milchatonis f. Cynasyn Boncar Azzrubalis f. *Æthogurzensis* Muthunbal f. . . .' The Punic names of the donors will be noticed.‖ Another brass plate mentions the 'civitas Gurzensis' (*CIL* viii. 69), and perhaps we must recognize *Gurza* in the *Gurra* of the *Peutinger Tables*. In the 11th cent., also, al-Bakrī mentions in Atlas, near the B. Lamās, between Aghmāt and the Sūs, a tribe of idolatrous Berbers who worshipped a ram. Not one of them would dare to come into the markets of the neighbouring tribes except in disguise (*Description de l'Afrique*, p. 161). In this cult of the sun, one single tribe, the Atlantes (or *Atarantes*), was an exception; they had no individual names to distinguish them, and they watched the rising and the setting sun, uttering terrible imprecations all the time, as though against a planet deadly to them and to their fields; they had no dreams like other men. This is what is recorded by Herodotus (*Hist.* iv. 184) and Pliny the Elder (*HN* v. 8). The only imprecations mentioned by Nicolaus of Damascus (frag. 140, ed. Müller) are against the rising sun.

8. Moon-worship. — The moon was also worshipped by the nomadic Berbers between Lake Tritonis and Egypt (Herod. iv. 188), by other Berbers in the West (ibn Khaldūn, *Kitāb al-'Ibar*, vi. 89), and by the Guanches. The latter observed all its phases with great accuracy, especially the new moon and the full moon.¶ Had the Berbers assimilated it to the celestial goddess of Dugga and Carthage, the latter title being borne, according to tradition, by Dido, called by the Phœnicians Astro Arkhe, and transported to Rome by Caracalla (Herodian, *Historia Romana*, v. vi. 4)? As is seen from a passage in *Historiae Augustae*, the predictions coming from the temple of Cœlestis in Carthage caused a great number of seditions in Africa—seditions in which the Berbers probably took part, and which Pertinax had to repress during his proconsulship of Africa (Capitolinus, *Vita Pertinacis*, ch. iv.). We find the crescent moon at the top of a great number of inscriptions (cf. *CIL*, *passim*), one of which, among the Beni-Ukden, is in Libyan and Phœnician characters (*CIL* viii. 20186); but it is very probable that this sign, which in primitive times had signified a lunar cult, had become a meaningless ornamentation. There is no occasion for the theory, formed from inaccurate etymology and assimilations, that Tanit, the great Punic goddess, was of Berber provenance.* For, since the name of the moon in Berber is masculine, *Aiur* or *Aggur*, it could not have been represented as a goddess. There is far more probability in the hypothesis of G. Mercier,† which tends to find *Aiur* in the enigmatical *Teru*, mentioned along with the epithet 'augustus' in an inscription discovered on the Guechgach, sixteen kilometres from Constantine (*CIL* viii. 5673).

9. Worship of other planets.—It is very probable that the other celestial bodies were worshipped by the Berbers, although we have no proofs except for a few of them. Alvise de Ca' Da Mosto asserts this for the Guanches of Teneriffe (*Relation*, p. 34). The planet Venus is called *Lemr'er* at the present day in Zuawa. Among the Awelimmiden, when it is an evening star, it has the name of *tatari*, and when a morning star, that of *amawen n ehad* or *amawen achimmelech*. Among the Ahaggar, it is called *Tatrit ta n tufat*, which can be exactly translated by 'morning-star.' Following the example of other peoples, the Ahaggar have located a certain number of tales in the sky. We cannot, however, decide whether they correspond to a religious sentiment. Thus the Pleiades are the 'Daughters of Night' (*Chēt Ahadh*). Six of the stars of this constellation have each a name; the seventh is a boy's eye which had been taken out and flew up to the sky. This story is given in the following verses:

'The daughters of the night are seven in number:
Māterejre and Errejāot,
Māteseksek and Esseksāot,
Mātelaghlagh and Elleghāot;
The seventh is the eye of a boy which flew up to Heaven.'‡

We can see that the six stars reduce to three pairs whose names are derived from the same root. The Awelimmiden give them also the name of *Chettahet* (= *Chēt Ahadh*).

Orion (in Tuareg, *Amanar*) has two interpretations. According to the one, he comes out of a muddy well; and Rigel (*Adar Nelaku*, 'the Foot in the Mud') is the foot he brings out of the mud last, *i.e.* the last star when the constellation is rising in the East. According to the other, he is a hunter, with his belt on (in Ahaggar and Awelimmiden *Tajebest en Amanar*, 'Belt of Orion'), who is followed by a dog (*Eidi*, Sirius) and preceded by gazelles (*Ihenkadh*, 'constellation of the Hare').§

The Great Bear and the Little Bear represent a camel and her young one (*Talemet de roris*); the Pole Star is a negress called *Lemkechen* (*i.e.* 'hold') because she has to hold the young camel (*Aura*) to let its mother be milked. But the stars ψ, λ, μ, ν, ξ represent an assembly which deliberates whether the negress is to be killed. She (the Pole Star) stands motionless with fear.‖ According to a legend contaminated by the Musalmān religion, the Great Bear is a camel which belonged to Noah. It was slain by seven nobles, one of them a Tuareg; he was changed into an 'ourane' (*ar'ata*, a kind of large lizard), the others into a jackal, a

§ *Id.* p. 424. ‖ *Id.* p. 424.

chameleon, etc. The camel was transported to the sky. Since then, the Tuaregs have never eaten the 'ourane,' which they regard as their maternal uncle.*

The Scorpion is sometimes called *Tagherdamt* ('scorpion'), sometimes *Tazzeit* ('palm-tree'). A young man, *Amrot* (*Antaris*) is going to climb the palm-tree; but when half-way up the tree he notices some pretty girls (*tibaradin*), clothed in red *haulis*, coming from the lake (*Tesahak*); he stops half-way up to watch them.†

Other constellations have names, but no legend attaches to them. In Bougie the Milky Way is called *Ajgu n tignau*, 'beam of the sky,' and among the Tuaregs *Mahellau*. The stars ϵ, δ, η of the Great Dog are called *Ifarakraken*, 'noise of a fan or of a bird,' and β, *Auhem*, 'the young of the gazelle.' θ and o of the Boat are 'Riches' (*Tenafalet*) and 'Poverty' (*Tözzert*). Aldebaran is called *Kökoyyodh* and Canope *Wadit*.‡ In ancient times the Africans (Afri) were considered very skilled in the science of horoscopes, and particularly so was Septimius Severus—as may be seen from a saying attributed to him. Speaking of his son Geta to Juvenal, prefect of the pretorians, he said: 'It is astonishing that my son Geta is to be deified; his constellation had nothing imperial in it to my eyes' (Spartianus, 'Vita Getae,' § 2 in *Historiae Augustae*.)

The name of the rainbow, among certain Berber tribes, has preserved the trace of a myth. Although at Wad Rir' it is called *abechchi* and in Harakta *abeggas* ('girdle'), in Zuawa it is called *thislith b wanzar*, among the Bot'iwa of Rif *thislith n unzar*, among the B. Iznacen *thaslit n unzar*, which means 'bride of the rain,' and among the Beni Menacer *taslith n ujenna*, 'bride of the sky.' The rain (*Anzar*) is then considered a male being. In Jurjura, the Kabyle children, in times of drought, go from house to house singing:

'Anzar! Anzar!
O Lord, water us to the roots.' §

At Mzab, the children sing while transplanting grain:

'Give us, O Lord, the water of Anzar.' ‖

In a popular tale of Wargla, Amzar (=Anzar) is personified.¶ The rainbow is consequently regarded as the bride of the rain. This myth is not without parallel in the way in which certain Berber and Arab peoples of the Maghrib provoke rain. At Ain Sefra, at Tlemsen, and at Mazuna, they take a wooden spoon (in Kabyle *aghenja*) and dress it in bits of cloth, so as to make it a sort of doll representing a bride, called *Ghonja*; they take this in solemn procession to the tombs of the local priests, singing couplets which vary according to the locality. For example:

'Ghonja! Ghonja has uncovered her head.
O Lord, thou wilt water her ear-drops,
Her ear is thirsty;
Give her drink, O our Master!' **

At Tit, in the oasis of Tuat, during drought, the people go out of the *qsar*—men, women, boys, and girls. They take a wooden spoon and dress it in female garments. A young girl carries it, and the people keep saying: 'O spoon! O meadow! (*ar'enja—ia merja*) Lord, remove the time of heat! Lord! in the name of the Prophets!' Tertullian (*Apol.* xxiii.) gives the Virgo Cœlestis the title of 'Pluviarum Pollicitatrix.' Among the Guanches the main part of the ceremony for bringing rain was to make men and animals fast, and, in Teneriffe, even the young animals, which were separated from their mothers, and whose cries were expected to move the heavens.* Rain-making was also a gift of certain magicians. An ancient historian tells how among the Berbers a Roman army under the command of Hosidius Geta, successor of Suetonius Paulinus, almost died of thirst in the desert when in pursuit of the rebels and their chief Subulus. A native ally persuaded the general to have recourse to incantations and magic, affirming that often great quantities of water had been got by these means. This time again the process was successful, but we do not know in what it consisted (Dio Cassius, *Hist. Rom.* ix. 9).

10. Native deities.—To these deities we must add those which are made known to us by Latin epigraphy, though we are not sure about their nature and attributes. Thus we have dedications to the Moorish gods at various places in North Africa: at Cherchel (*CIL* viii. 9327), near Wed Marcūna (*ib.* 2639), near Wed Tezzulet (*ib.* 2640); at Lamoricière (*ib.* 21720), at Henchir Ramdan in Tunisia (*ib.* 1442); to the Moorish saviour-gods and to the genius of Satafis at Ain Kebira (*ib.* 20251). Possibly these Moorish gods are the deified kings of whom we are to speak below (pp. 511–512), but there is nothing to prove it. Thus Autaman, associated with Mercury in an inscription at Lambessa (*ib.* 2650), and compared with the Mastiman of Corippus (*Johannidos*, viii. 306 f.), some people used to take for the god of war.† Other Moors saw in him Jupiter Tænarius (which it has been proposed to correct to Jupiter Tartarius, corresponding to Dis Severus in the Latin inscription, *CIL* viii. 9018),‡ to whom human victims were sacrificed in times of plague (*Johannidos*, viii. 307–309). We may compare this passage with the statement of Pliny the Elder (*HN* v. 8) that the Augilæ worshipped none but the infernal gods, or, according to Pomponius Mela, the *manes* (*de Situ Orbis*, i. 8). Aulisva was worshipped in the region of Tlemsen, as is shown by two inscriptions found in Agadir (*CIL* viii. 9906 f.), and one at Ain Khial (*ib.* 21704). It is not necessary to insist on Kantus Pates—a reading which is quite sure in an inscription of Khenchela—any more than on Kaub, mentioned in the Chettaba. An inscription in Henchir Matkidas (*ib.* 16749) seems to point to five gods of the village of Magifa: it is dedicated to Masidenis, Thikikvæ, Sugganis, and Iesdanis, of whom there were statues. Another inscription, at Sidi Yusuf (*ib.* 18809), mentions an Iocolo (*Iocoloni deo patrio*). This epithet, *Deus patrius*, is given to Baliddir or Baldir in the inscriptions that mention his name: at Guela 'at Bu-Sba, between Bōna and Guelma (*ib.* 5279), and at Sigus (*ib.* 19121–19123). Is this the same as the *Genius patrius*, a priest of whom was buried at Zettara (Kef Beziua)? Another *Deus patrius*, who had priests, is located at Henchir el-Bez (*ib.* 12003). Is this name Baliddir, or at least its second part, *iddir*, a Berber word, as G. Mercier§ maintains, translating it by 'the living God'? The chief objection would come from the fact that this would be a hybrid word, compounded of Punic and Berber. It has also been identified (but this is a very improbable theory) with the name of Abbadiri Sancto,‖ mentioned in

an inscription of Miliana (*ib.* 21481), and counted among the Punic deities by St. Augustine (*Ep.* xvii. 2). Priscian (vii. 313) gave the name of Abbadir to the baetyl swallowed by Saturn.

But whatever be the sense given to Iddir, it seems impossible to make him a supreme god of North Africa. Perhaps he was produced under the influence and in imitation of the Romans—a movement which set apart one of the local gods and placed him over the others, at least in Mauretania. This seems to be the indication of two inscriptions, one of which at Bougie is dedicated 'Numini Mauretaniae et Genio Thermarum' (*CIL* viii. 8926), and the other at Ain Kebira, 'Numini Maur. aug.' (*ib.* 20252). Halévy believed that this supreme god is to be found in the Iolaos who is mentioned, he says, in the treaty between Carthage and the Roman Senate, and whom he claims to have found again in a Libyan inscription.* The reading of these latter inscriptions is too uncertain, and, besides, Iol is a Punic god. If we trust the accounts of the Spaniards, the Guanches must have had a supreme god at the time of the conquest of the Canary Islands. Viana† relates that they worshipped one God, infinite, omnipotent, just and merciful, called in their language *Hucanech, Guayaxarax* (named by Viera *Achguoyaxiraxi*, 'saviour of the world'), *Acucanae* (named by Galindo *Achucana*), *Menceito, Acoron, Acaman, Acuhurajan* (called *Achahurahan* and *Achxurahan* by Viera, *Achahuaban* by Galindo)—epithets meaning 'omnipotent,' 'protector and creator of all beings,' 'without beginning and without end,' 'cause of causes.' The sense of these words is not found in Berber, except in *Acoron* and *Acaman*, which mean 'the great' and 'the sky.' The Guanch names handed down by the Spaniards are very much corrupted; this is due to errors in writing and to the authors' ignorance of the language spoken in the Canaries. Thus *Achaman*, given by Viera with the meaning of 'supreme god,' is more correct than *Acaman*, and seems akin to the Awelimmiden Tuareg *aochina*, 'the sky' (cf. the Teneriffe Guanch *achano*, 'year'); it is connected with the root *GN*, which gives in Zuawa *thignuth*, 'cloud,' and *igenni*, 'sky,' and in other dialects *ajenna* and *ijenni* with the same meaning. But we cannot place absolute confidence in Viana, who shows a tendency to see among the Guanches a religion resembling Christianity with a supreme god and a devil. He goes the length of saying that they never believed in or worshipped any idols, and that they worshipped only one God. Chil y Naranjo restricts this assertion to the natives of Lanzarote.‡ The same author has cut out several inexact data of this kind,§ and, besides, the assertion is refuted by the discovery of idols, in the 14th cent., in the Great Canary Island,‖ and the worship of one representing a nude woman in a building called Tirma.¶

According to Viera, the god of men was called *Eraoranhan* (*Eraorangan* according to Galindo) in the Island of Fer; he had his seat with Moreyba, the goddess of women, on the two rocks of Bentayga, called to this day *Santi llos de los antiguos*. After their conversion to Christianity, the natives of Fer worshipped Christ and Mary under the names of Eraoranhan and Moreyba.** The supreme god, Espinosa says, created man from earth and water—an equal number of men and women. Flocks were given them for nourishment. Afterwards he created more men, but did not give them more flocks. When they asked for more, he replied: 'Tend these others and they will give you nourishment.' This last class of beings to be created consisted of *achicaxac*, 'peasants,' while the first class comprised *achimencei*, 'nobles,' and *cichiciquitzo*,* 'knights.'

11. Deities assimilated by the Greeks and Romans.—This list of deities could be lengthened, if we had the native names of those deities mentioned by the Greeks and Romans; the latter have assimilated them to their own names, and sometimes have gone even further, the assimilation becoming simple borrowing on their part. In any case, it seems futile to linger over the mythological romance founded in all its parts on the Amazons, the Atlantes and their kings, Ammon, etc., which finishes the third book of the *Bibliothecae Historicae* of Diodorus Siculus. It has absolutely nothing in common with the religious traditions and customs of the Berbers. Herodotus (*Hist.* ii. 50) tells us that it was the Libyans who revealed Poseidon, whom no one before them had called by name, and whom they had always worshipped as a god. Ampelius (*Liber Memorialis*, ch. ix.) speaks of a fifth Apollo, born in Libya (Gurzil?). But the most celebrated of all these divinities is Athene Tritogenis, born, according to Herodotus (*Hist.* iv. 180), Pomponius Mela (*de Situ Orbis*, i. 7), and Pausanias (*Graeciae Descriptio*, i. 4), from Poseidon and the nymph of Lake Tritonis. It is beyond the scope of this article to study the personage of Triton as represented by Greek monuments,† but Herodotus (iv. 180) mentions customary rites which the maidens of the Auseans performed in honour of a native, and therefore Berber, goddess, who was no other than the goddess called Athene by the Greeks:

ὀρτῇ δὲ ἐνιαυσίῃ Ἀθηναίης αἱ παρθένοι αὐτῶν δίχα διαστᾶσαι μάχονται πρὸς ἀλλήλας λίθοισί τε καὶ ξύλοισι, . . . τὰς δὲ ἀποθνησκούσας τῶν παρθένων ἐκ τῶν τρωμάτων ψευδοπαρθένους καλέουσι· πρὶν δ' ἀνείναι αὐτὰς μάχεσθαι τάδε ποιεῦσι· κοινῇ παρθένον τὴν καλλιστεύουσαν ἑκάστοτε κοσμήσαντες κυνέῃ τε Κορινθίῃ καὶ πανοπλίῃ Ἑλληνικῇ, καὶ ἐπ' ἅρμα ἀναβιβάσαντες, περιάγουσι τὴν λίμνην κύκλῳ.

The Greeks explain this custom as a souvenir of the struggle which took place between Athene, who was brought up by Triton, and Pallas, Triton's daughter, in which Pallas was slain (Apollodorus, *Bibliothecae*, iii. 12). This custom must still have existed in the time of Pomponius Mela, unless he simply copied Herodotus. Herodotus thinks that, before the Greek helmet and shield, the maidens used to carry Egyptian arms (*Hist.* iv. 180).‡

A Latin inscription found at Ain Gulea in Tunisia (*CIL* viii. 15247) and another at Henchir el-Matria (*ib.* 15378) mention a dedication to a dragon ('Draconi augusto'). Perhaps this divinity is connected with the serpent of bronze with gilt head, which the pagans worshipped at Tipasa, on the Hill of Temples, and which, in the 5th cent., St. Salsa threw into the sea, and so earned her torture. It is not certain whether this is a relic of the worship of Eshmun§ and the summary of the sufferings of St. Salsa.‖ There is nothing anywhere to show that the cult of the serpent was ever native to the Berbers.

12. Deification of kings.—The pantheon has been enriched, on the other hand, by the apotheosis of the kings, at least during the time of independence.

The phrase of Minucius Felix is well known: 'Et Juba, Mauris volentibus, Deus est' (*Octavius*, ch. xxiii.). A Latin inscription (*CIL* viii. 17159) is distinctly consecrated to Juba and the genius Vanisnensis at Tassammert.* Tertullian for his part said: 'Unicuique etiam provinciae et civitati deus est . . . et Mauretaniae reguli sui' (*Apol.* ch. xxiv.). There has been found at Bougie a fragment of an inscription dedicated to king Ptolemy, son of Juba (*CIL* viii. 9127), one at Algiers (*ib.* 9257), and another at Cherchel, to the genius of king Ptolemy (*ib.* 9342). Perhaps it was a retrospective worship that caused the inhabitants of Thubursicum Numidarum (Khamissa) to sanctify Hiempsal, son of Gauda, as a god (*ib.* 7* [17159])—a fact which explains the homage rendered to Gulussa, king of Numidia, son of Masinissa (*ib.* 3*), according to two inscriptions. These inscriptions were with extreme levity treated as false by Mommsen, who afterwards had to face the evidence and confess his mistake.† But it is probable that Africa followed the example given by Rome of deifying the Emperors. This may be seen from the comparison made by Lactantius: 'Hac scilicet ratione Romani Caesares suos consecraverunt et Mauri reges suos' . . . and further on: 'Singuli populi . . . summa veneratione coluerunt ut Aegyptii Isidem, Mauri Jubam' (Migne, *PL* vi. col. 194). Pomponius Mela (*de Situ Orbis*, i. 8) had established the fact:

'Orae [Africae] sic habitantur, *ad nostrum maxime ritum moratis cultoribus*, nisi quod quidam linguis differunt, et cultu Deûm, quos patrios servant, ac patrio more venerantur.'

This remark of Pomponius Mela is confirmed by ibn Khaldūn: 'It befell the Berbers from time to time to profess the religion of their conquerors, for powerful nations brought them into subjection' (*Kitāb al-'Ibar*, vi. 106). We must add that Septimius Severus, an African by birth, was regarded as a god by the Africans (*Historiae Augustae*, ch. xiii. 'Vita Septimi Severi'). This explains the large number of inscriptions in honour of deities adopted, without even assimilation, by the Berbers, who took the gods of Rome after those of Carthage: Juppiter, Juno, Pluto, Pallas, Venus, Apollo, Diana, the Nymphs, Neptune, Mercury, Silvanus, Bellona, Ceres, Hercules, Minerva, Mars, Æsculapius, the Dioscuri, Tellus, Hygiea, etc., and even the Eastern deities like Mithra, Malagbel, Mater Magna, Juppiter Dolichenus, Juppiter Heliopolitanus, Isis, Serapis. Bacchus-Liber must also be added, for it was a mistake, a false reading, that gave rise to the belief that the name of Bacchus appeared in the name of *Yakush*, which is of Berber origin, and is the translation of an Arabic epithet which has no connexion with Dionysus. The existence of vines in Africa does not justify in any way the hypotheses into which Lefébure‡ and, after him, Bertholon§ ventured. But it is almost impossible to make a separation among the worshippers, Roman colonists and soldiers, foreign soldiers, inhabitants of Punic origin, mixtures of Berbers and Phœnicians or Romans, and, lastly, pure Berbers.

13. Demi-gods, mythical beings, etc.—Perhaps we may attribute to the Berbers, alongside of the worship of their kings, the worship of beings analogous to the demi-gods of antiquity, whose giant birth and stature form the subject of various legends. The gist of them is that the sister of Ya'la ibn Muhammad al-Ifranī gave birth to a son without having intercourse with man. She was bathing in a warm spring where the wild beasts used to go to drink, and conceived by the effect of a lion's foam. The child was called *Kelmām ibn al-Asad* ('son of the lion'), and extraordinary qualities are attributed to him in stories. Ibn Khaldūn adds that the Berbers tell such a great number of stories of this kind, that if they were put in writing they would fill several volumes.* It is to similar beliefs, adapted from Greek or Jewish traditions, that we must attach the legend of the discovery of the body of Antæus, which measured at least sixty cubits (as, according to Gabinius, Sertorius declared in his *Hist. Rom.*), when the tomb of this giant was opened near Lynx in Mauretania. Juba claimed to be descended from Antæus by his son Sophax (Strabo, *Geographica*, XVII. iii. 8; Plutarch, *Sertorii Vita*, ch. ix.). Perhaps a souvenir of this kind is to be found in Prudentius, *Peristephanon*, hymn viii., where he says that Tingis contains the funeral monuments of the Massilian kings.† At the present day, the inhabitants of Arzilla in Morocco show on a rock the footprint of a gigantic foot—the trace of their ancestor.‡ Another giant, whom the Jewish and Musalmān traditions have appropriated under the name of Sidi Usha' (Joshua), is buried by the sea-shore, in the territory of the Beni Sha'būn, in the region of Nedromah. A row of stones marks the length of the body, which goes beyond the wall of the *qubba* where the grave is, and ends in a sort of *h'awita*.§

Among the mythical beings whose cult was maintained for some time after the conversion to Islām, there must be mentioned a category of genii whom we know only under the Arabic name of *Chamārikh*. In the 11th cent. of our era, among the Benu Ursifan,

'when they wished to undertake a war, they sacrificed a black cow to the Chamārikh who are their devils, and they said: "Behold a sacrifice for the Chamārikh." When they come to the fight in the morning, they watch till they see a whirlwind of dust, and say: "The Chamārikh, your friends, are coming to your aid." Then they charge confident of success. They pretend that this has never failed them, and the majority of them believe in it openly. When offering hospitality to a guest, they put food aside for the Chamārikh, and maintain that the latter eat what is reserved for them. In all this they avoid mentioning the name of God.'‖

The Arab historians have preserved an account of the familiar genii of the Kāhinah, Dihya, daughter of Tābet (?) of the tribe of the Jerawas, who made a long and successful stand against the Musalmāns, and even drove them from Ifriqyah. It was these familiar demons who foretold to this tribe the final victory of the Moors, and caused it to send its sons to launch against them before the final battle where it succumbed.¶ This prophetic faculty is again spoken of by Procopius (*de Bello Vandalico*, ii. 8). After the expedition of Belisarius against the Vandals, the Moors, afraid that some harm would result to them, had recourse to the prophecies of the women. After a few ceremonies, they foretold the future like the ancient oracles. In the middle of the 10th cent. of our era, among the Ghūmara of Morocco, Tangrit, the aunt of Ha-Mim, and Dajju, his sister, who, as we shall

see below, founded a special religion, were renowned soothsayers, and belief in the former was part of the Qur'ān of her nephew.* Procopius does not describe the preliminary ceremonies employed by the Moorish women for vaticination, but the following practice takes place among the Tuaregs at el-Esnam, near Ghadames:

'During the absence of the men, the women, dressed in all their finery, go and take their stand near the tombs of the *Zabbār* (from Arabic *Jabbār*, "giant"), whom they [the Tuaregs] believe to be of a race previous to their own, and they invoke the genius who is to give them information. His name is *Idebni* (the tomb itself is called *Adebni*). He appears to them in the shape of a giant, with eyes like a camel, and gives the required information. For this consultation the women must avoid wearing anything whatever of iron or steel about them, even a needle.' †

The same ceremony takes place at Air, but during the night.‡

'On the sides of a ghūr which commands Wed Wujidit, in the North of the Sahara, are found great tombs corresponding to those on the rocky slopes of the Tabelbalet. They are elliptical in shape, with major axis, inclined East and West, varying from 20 to 45 metres. They are surrounded by heaps of moderately-sized stones. The Azger Tuaregs attribute these tombs to a former race. If a woman who has a friend, a relative, or a lover far away for any cause goes to sleep at the middle of the day in one of these enclosures of stones, she is sure to have visions, to meet spirits there, and get news of the absent one. The Tuaregs also claim that there is hidden treasure in these tombs.' §

But, in spite of what Procopius‖ says, the gift of prophecy was accorded to men as well as to women among the Berbers. To quote only two examples: among the Kotama, at the time of their civil wars, the soothsayer Failaq foretold that they would see real war when the man of the East came to them mounted on a white mule. This prediction was recalled by a schoolmaster on the arrival of the *dā'ī* 'Abd Allāh, the Fāṭimid missionary, mounted on a white mule (Ibn 'Aẓārī, i. 120). Similarly, the soothsayers in a tribe of the Maghrib had declared that, when the two superior planets met, a king would rise who would change the form of money. Malik ibn Wahib persuaded the amir of Lemtuna, 'Alī ibn Yūsuf, that it was to Mahdi ibn Tūmert that this prediction referred, as also the popular lines:

'Put fetters on his feet,
Or he will make you hear the drum'
(Ibn Khaldūn, vi. 238).

14. Ogres.—There still remains to be mentioned the belief in ogres, who play an important part in the popular tales of the Berbers. But we must keep in mind the ease with which tales travel, and take care to strip off all that is due to borrowing. Traces of originality may, however, be found in some of these stories. Among the Fadhilah and the Benu-'Aqidān—Berber tribes in the West of Egypt—it was said that often a new-born girl changed form, becoming an ogre (*ghūl*) or a *si'la*, and threw herself on people until she was bound and pinioned (al-Bakrī, p. 4). The Arab author even mentions an eye-witness of such an occurrence. It is given by a modern tale current at Wargla, *Story of a Father and his Daughter the Ogress*,¶ and is the foundation of an accusation brought against the Uled Settut ('the sons of the Megæra'), a tribe of the Rif noted for its *penchant* for brigandage.

'At first, Settut their mother used to be seen running about with her three children in a piece of land which is desert to this day, devouring the people and feeding her children on human flesh. No one knew where she came from; she was known of no male, ogre or human, and this afterwards occasioned the saying that the Uled Settut had no father. After devastating the country for many long years, she suddenly disappeared and was never seen again. But her children remained in the desert of Garet, and were the stock of the present Uled Settut.'**

The names by which the ogres are designated are, for the most part, of Berber origin. Although we find some that have come from Arabic, like *ghūl* or *zellūma*, yet among the Rif of Morocco and the K'sūr at Wargla, we find *amza*; among the Beni-Menacer *amza*, with feminine *thamzat* or *tamzat*, which is derived from the root MZ, 'seize,' 'take'; among the Zuawas *awaghzenis*. The ogress has also the name of *taghauzant* in the Chelh'a of Tazerwalt, of *tseriel* in Zuawa. But, in the tales, there is a mixture of names from stories relating to the ancient inhabitants of the country, pagans or Christians, designated also by the name of *Juhala* (Arabic for 'ignorant people'), and from stories circling around the ogres, confused to such an extent that these classes of stories are often mistaken for each other.

15. The ceremonies of worship.—Here we are reduced to conjectures, so far, at least, as the purely Berber gods are concerned. Wherever there were borrowing and assimilation, the ceremonies were those of the Phœnicians and Romans, and probably, in some parts, of the Greeks. Protected by their isolation, the Guanches were able to have a religion of their own. The way in which they practised the preservation of the mummies, for example, which was entrusted to a special caste, proves an original development among them, alongside of common traits, even before they had arrived at the idea of the immortality of the soul or of future rewards and punishments.† Viana mentions a female religious caste called *Harimaguadas* (or *Harimaguas*, *Magaas*) who lived in common, vowed virginity for a time, educated the children, and, as has been seen above, took part in certain ceremonies to get rain; the men were forbidden in that case to look at them.‡ The house where they lived was called *tamogantin acoran*, 'house of god' (in Berber, *tigimmi tin amoqran* [?]). In connexion with ceremonies, we may mention consultation by sleep.§ Examples of this have been cited above. We shall add another: in ancient times, the Augiles (of the oasis of Aujila) used to go to sleep on tombstones and take as answers the dreams they had during their sleep (Pomponius Mela, i. 8). This was also the custom of the Nasamonians (Herodotus, *Hist.* iv. 172). Al-Bakrī cites a case where this method of divination had no connexion with tombs or the dead. It was in the Rif, on the borders of Wed Lau (see, further, art. INCUBATION).

16. Feasts.—We must also speak of the feasts, which have been with reason called *saisonnières*, and which have continued among the majority of Berbers to mark the chief changes of the year. There is good ground for seeing in them the traces of a nature-worship with which may be associated some remains of agrarian rites. The feasts seem all the more ancient by being performed without the intervention of special ministrants, by being celebrated, not in the mosques, but near the tombs of popular priests, and by being addressed to invisible powers and not to consecrated persons. The principal feasts are those of *Ennair*, fixed for the whole year; the feast of *'ansera*, which may be called the water-festival; the feast of *'achūra*, etc. But it must be observed that the peculiarities characterizing these feasts, as death or re-birth of

§ Cf. Doutté, *op. cit.* pp. 410–416, and the authors quoted.

vegetation, or purification by fire and water, are not confined to the Berbers, but have been found among the most widely-differing peoples. It will be enough, therefore, to mention them.*

17. Traditions, etc.—It would be difficult to say whether the following tales, although current in Africa, are of Berber origin. Pliny the Elder tells that in this country 'no one begins any undertaking without first uttering the word "Africa," while in other countries affairs are begun by asking the favour of the gods' (*HN* XXVIII. v. 2). Isigonus and Nymphodorus, mentioned by the same author (*HN* VII. ii. 2, reproduced by Aulus Gellius, *Noctes Atticae*, ix. 4), tell that there were in Africa families of sorcerers, 'who, by means of spells, cause flocks to perish, trees to wither up, and children to die.'†

But we are clearly dealing with Berbers in the following examples. In Tamernā, in the desert, between Sabāb and the mountains of Targhīn, a locality inhabited by the Beni-Geldīn and the Fuzānah, when a theft has been committed, the inhabitants trace some writing which they communicate to each other. The thief is immediately seized with a trembling, which does not stop until he has confessed his guilt and restored what he has stolen. He does not recover his calm until the writing is rubbed out (al-Bakrī, *op. cit.* p. 10). In one of the mountains of the Mejeksa of the Rif there lived a magician called Ibn Kosyah. This name, which means 'the son (man) with the little cloak,' was evidently a nickname borrowed from his way of acting. No one dared to contradict him or to disobey his wishes. If any one did, he turned the cloak in which he was wrapped, and then some malady attacked that person or his cattle instantly. No matter how numerous his opponents were, the malady fell on all the same as on one. He even made them believe that a light burned under his clothing. His sons and descendants inherited the same power (al-Bakrī, *op. cit.* p. 101). Similarly in the Rif, among the Ghūmara, a Beni-Shaddād tribe, part of the U-Halawāt, there lived a man who always carried a bag filled with animals' heads, and a cord strung with the teeth of land- and sea-animals. He used this as a chaplet. He passed it round the neck of the person who was consulting him, then shook it and tugged it violently. Next he began to smell each of the pieces separately until his hand stopped on one of them. Then he answered any questions that were put to him, and unerringly foretold illness, death, gain, loss, prosperity, disappointment, etc. (al-Bakrī, *op. cit.* p. 101). Mūsa, son of Sālih, was also a Ghūmara. He is said to have lived before the Hijra; but even in the 14th cent. there still remained his 'prophetic sayings, in the language of the country, containing a great number of predictions relating to the control which the Zenatas were going to exercise in the Maghrib. There is quoted, in proof of the accuracy of his prophecies, the fulfilment of the one that foretold the destruction of Tlemsen. The houses of this town were to become a field tilled by a negro with a one-eyed black bull. This is said to have taken place after the destruction of Tlemsen by the Merinides, between A.H. 760 [A.D. 1358] and 770 [A.D. 1368]. But if some people considered him a prophet, others took him for a magician. In any case all credited him with a supernatural power (ibn Khaldūn, *op. cit.* vi. 106, 276, vii. 51). Further mention will be found among Arab writers of persons who practised magic, such as Muhammad al-Kutamī, or 'Omar and his son 'Abd Allāh, chief of the Seksiwa; but this expression must refer to magic as understood by the Musalmāns—an imported science, not of native origin. The fame of the Berber women as sorceresses was already established in antiquity, as is shown by Virgil's anachronism when he makes a Massilian priestess be consulted by Dido, in order to keep Æneas by her magical arts (*Æneid*, iv. 483–498, 504–521). Even in our day the women of Jurjura practise incantations, for which they use certain plants. We have evidence of this in a popular song which begins thus:

'Greeting to thee, hawthorn (*id'nim*);
Men have called thee hawthorn;
For me, I call thee the *qaïd* which commands;
Transform this husband of mine into an ass,*
And I shall have straw brought him.'

The other plants mentioned are the roots of the dwarf-palm (*thagūnsa*), the wild jujube (*thazuggarth*), the fruit of the coniferæ—pine, cedar or fir (*azinba*)—and the green oak (*kerrush*).†

ii. *JUDAISM.*—It has been observed that the Jews of the North of Africa, with the exception of those who at well-known times were driven from Europe by persecution, do not belong to the race of Israel; and they have rightly been regarded as the descendants of Berbers converted to Judaism during the Roman era. In the time of Augustus we find Jewish colonies prospering in Cyrenaica and Libya, and the barbarian insurrection which broke out under Trajan at Cyprus, in Babylonia, Egypt, and Cyrenaica simultaneously, and which was repressed with great harshness, did not hinder the development of the Jewish communities. This may be seen from an inscription in a synagogue discovered at Hamman el-Enf (*CIL* viii. 12457). These communities acquired such importance that the Catholic Church took precautions to prevent relations between Christians and Jews, which soon became rigorous measures under the Christian Emperors, were suspended only by the triumph of the Vandals, and were revived with the victory of Belisarius and the Byzantines. Proselytism was naturally exercised among the lower classes of the population and even among rich Berber tribes. But we do not know what kind of proselytism it was, or to what extent the practices of the cult and the observance of the prescriptions of the Jewish Law were imposed, and we cannot give credence to a late romance with no more authority than, *e.g.*, the *Fath' Ifriqya*. The Arab writers mention several tribes which were Jewish when the Musalmāns came. But their statements are contradictory. Thus, in one place, ibn Khaldūn mentions among the Jewish tribes the Jerawas who lived in Aurās; the Nefūsa, the Fendelawa, the Mediūna, the Bahlūla, the Ghiatha, and the Fazaz in the Maghrib al-Aqsa (*Kitāb al-'Ibar*, vi. 107). But we have seen that according to tradition, the Kāhinah—a name foreign to the Arabs—had familiar genii. Al-Bakrī (*op. cit.* p. 9 f.) and ibn 'Azārī (*op. cit.* i. 3), both earlier than ibn Khaldūn, mention the Nefūsa as Christians; and traces of churches which have preserved their name in Jebel Nefūsa prove them right. But ibn Khaldūn himself in another place (*op. cit.* iv. 12) says that the tribes of the Fendelawa, the Bahlūla, the Mediūna, and the people of the territory of Fazaz professed, some magic (paganism), some Judaism, and some Christianity. The place where the town of Fas grew up was inhabited by two Zenata tribes: the Zuagha (Benu'l Khair) and the Benu Yarghosh. Some professed Islāmism, others Judaism, and others paganism. These last even had a temple at Shibuba, where later arose

* Cf. for full details on these feasts, Doutté, *op. cit.* pp. 541–584; and among the sources cited, Destaing, *L'Ennaïr chez les Beni-Snous*, Algiers, 1905, *Les fêtes saisonnières chez les Beni Snous*, Algiers, 1907; Said Bulifa, *Textes berbères en dialecte de l'Atlas marocain*, Paris, 1909, pp. 146–167.

† On the evil eye in most recent beliefs, cf. Doutté, *op. cit.* pp. 317–328, and the authors there quoted.

* The popular Berber tales include numerous examples of metamorphosis, but they are borrowed.

† Hanoteau, *Poésies populaires de la Kabylie du Jurjura*, Paris, 1867, pp. 306–312.

the Andalusian quarters. Ibn Abi Zar', who has preserved this detail (*Rauḍ al-Qarṭās*, i. 15), designates the pagans by the name of *majus* (magi), and he naturally calls their temple a house of fire. This passage has been reproduced by ibn Khaldūn (*op. cit.* iv. 13).

In the same era, the country of Temsna (the modern Shawia) and the towns of Chella and Tadla were peopled partly by Jews and partly by Christians, who submitted to accepting Islām after the conquest of that region under Idris I. It is not safe, therefore, to try to specify that such and such a tribe was exclusively Jewish or Christian. It seems nearer the truth to say that each tribe included families, or perhaps clans, of Jews, sufficient in number to be able to remain independent, at least in the Maghrib, until the end of the 2nd cent. A.H.—a long time after the conquests of 'Oqba and Mūsa. But the Judaism which is spread at the present day by the descendants of converted Berbers has nothing to distinguish it from the Judaism practised in the other regions of the civilized world; and as regards local superstitions, they are common to Jews and Musalmāns.*

iii. *CHRISTIANITY.*—We do not know how Christianity was brought to the Berbers, but probably we should look for its starting-point in the large towns, and for its first seats, as at Rome, in the Jewish communities. The separation was not long in taking place, and the Church of Africa soon became prosperous. But its history belongs rather to the history of Christianity, and it is impossible to cull from its developments and vicissitudes what refers specially to the Berbers. We may admit, however, that it was from among the latter, at least in the places under the direct control of Rome, that the Donatists were recruited—a sect which was more schismatic than heretical—and the Circumcelliones, whose movement, in spite of its religious colour, was social rather than national. The list of African bishoprics (Proconsular, Byzacene, Numidian, Mauretanian—Sitifian, Cæsarian, and Tingitan—and Tripolitan) contains a host of names of which the great majority are Berber; but it is difficult to identify them all, these names being often simply those of little villages, for the bishop's sphere of control was a very narrow one. Epigraphical evidences have enabled us to recognize some of them, and it seems very likely that the mass of the population, omitting Roman colonists and some foreigners, was composed of Berbers, or at least of a mixed race in which the Berber element was predominant. As for the half-subject or independent tribes among whom Christianity spread, we may suppose that conversion took place, as in so many other parts of the uncivilized world, by means of captives taken in incursions. The domination of the Arian Vandals made no alteration in this state of affairs further than that Catholicism, after having been the persecutor, became in its turn (except at very occasional intervals) the persecuted, and triumphed only by the success of the Byzantines.† We must mention, moreover, as having to do with the history of Christianity among the Berbers of the West of Algeria, the existence of a native dynasty at the beginning of the 5th cent., after the fall of the Vandals and before the Arab invasion. Some distance from Frenda the tombs of these princes are seen. Two names may be recognized: Mephanias, and Massonas, who seems to have been the same man as the Masema, 'rex gentium Maurorum ac Romanorum,' mentioned in a Latin inscription of Hajar el-Rūm (Lamoricière, *CIL* viii. 9835). It was a Christian Berber dynasty, as is shown by the emblems and remains of paintings which have been excavated on the tombstones known by the name of *jedar*, and already mentioned by the Arab historians. These princes probably disappeared with Christianity itself, at the first victories of the Musalmāns.*

In the other places, however, Christianity still survived for a long time: in Tripoli, among the Nefūsa, whose territory still contains a number of ruined churches; in Aurās, among the Beranes; and in the Rif, among the Ghūmara and the Sanhaja. We have seen that at the time of Idris, *i.e.* more than a century after the appearance of Islām in this country, there still existed in the Maghrib al-Aqsa, Christian tribes or parts of tribes. Wherever a treaty was concluded between the invaders and the native population, the latter, conforming to the Musalmān legislation, were able to keep their religion, but isolation and internal division hastened its fall. In the 10th cent. there were still forty bishops; in 1054, under Leo IX., only five remained, and of these two were disputing the presidency. In 1076, we see from the letters of Gregory VII. that there were only two left: Cyriacus, primate of Carthage, and Servandus, in the see of Hippo. There was still a bishop at the Qala'a of the Beni-Hammād; he had the Arabic title of *Khalīf*, and he certainly emigrated with his flock to Bougie under an-Nasīr.† A Christian community existed at the same time in Tlemsen, but we do not know whether it was under the authority of a bishop. In 1068, al-Bakrī‡ mentions a church in this town which was frequented by the remains of a Christian population surviving till that time. But everything was carried away by the current of the Almohads. No trace of Christianity remained, alongside of vague legends, except a few words, among others *Tafaski* (the Passover = Πασχα)—the name given to the fourth month of the year by the Taitaq, to the second by the Ahaggar. *Afasko* and *Tifisko* mean 'spring' among the Awelimmiden, and this word has penetrated even to the Dyolofs of Senegal, *Tabaski dya* corresponding to 'December.'

iv. *MUHAMMADANISM.*—1. History.—We have no exact information, nothing beyond the sometimes fanciful accounts of the conquest, about the way in which Islām spread in the North-West of Africa, but it is certain that it met with a lively resistance there. The first expeditions were only cavalry raids, with pillage as their main object, in which the Arabs avoided the strongholds where the natives and the descendants of the Roman colonists were taking refuge. The coast-line itself was respected, guarded as it was by the mountains and the ports which remained in Greek possession. The foundation of Kairwan by 'Oqba gave a character of stability and permanence to the spread of Islāmism, but in no decisive way. The Musalmāns were more than once driven right back to Tripoli; accordingly it is not wrong to suppose that the conversions they had succeeded in making did not last. The Arab historians themselves declare that the Berbers recanted from Islāmism twelve times; and it is probable that, if they had found an ally in a strong and well-organized neighbouring power, they themselves, instead of

‡ *Op. cit.* p. 76.

the Byzantine Empire or the kingdom of the Goths, would have triumphantly repelled the Musalmān invasions. But their divisions and isolation, especially after the conquest of Spain by Mūsa, ended in securing the victory for Islām—a victory which was not absolute and decisive until the 12th century.

But if, during the earlier periods at least, they were converted more by force than by persuasion, they did not fail to retain in their new religion the independence and party-spirit which they had already shown in Christianity, by adopting schisms rather than orthodoxy. The history of the Musalmān Berbers is simple to unfold. Originally they were Sunnites, but soon they enthusiastically welcomed the most levelling ideas of Islām, and declared themselves for the various Kharijite sects. On account of a similar feeling—hostility towards the distant Khalīfate of Baghdad, or the nearer Khalīfate of Cordova—they took the side of the Alids, the opposite extreme from Islām, and became the source from which Idris ibn 'Abd Allāh and later 'Ubaid Allāh derived recruits to found their dynasties. Idris founded his in the present-day Morocco—a dynasty hostile to the Umayyads of Spain, and to the Abbāsids of Baghdad. That of 'Ubaid was at Mahadia—a dynasty which drove out the last representatives of the Abbāsids in Ifriqyah, almost succumbed to an offensive retaliation from the Kharijites, but was victorious at the last moment, and once more became mistress of North Africa and conquered Egypt. Then came a Sunnite re-action, taken part in by the Berbers of the South Sahara, the recently-converted Lemtuna—a tribe whose fortune was as brilliant as it was ephemeral. Other Berbers, the Masmūda of Atlas, whose chiefs were struggling against the gross anthropomorphism of the Almoravids (Lemtuna), founded a rival Khalīfate to the Khalīfate of Baghdad (the Khalīfate of Cordova was no longer in existence, and that of Cairo was about to disappear); but, clinging to orthodoxy, they destroyed the last remains of Christianity and all that had survived of Alid Shī'ism, while dealing a blow at the same time at Kharijism, already weakened by its struggle with the Fāṭimids—a blow from which it never recovered, so far, at least, as to be independent.

After this the North of Africa, *i.e.* the Berbers and Arabized Berbers, remained Sunnite except for some stubborn industrial communities which held out in Mzab, Jebel Nefūsa, and Jerba.

2. Sects.—(*a*) *Kharijites.*—To fill in the sketch just traced would be to give a complete history of North Africa, and would exceed the limits of this article. We shall therefore pass over the orthodox Islāmism of the Berbers and refer only to that part of their Islāmism which was characteristic, viz. the Kharijite doctrines (which, however, they were not alone in spreading), and to the attempts to found a religion which should be to Islām what Islām was to Christianity and Judaism. It must be understood that, apart from these attempts, the Berber revolts, under the name of religious sects, were essentially social; they were not due to differences of opinion or interpretation concerning dogma. As a matter of fact, the Berbers had controversialist theologians, but no great champions of orthodoxy or heterodoxy. They often attached themselves to the strictest parts of the Qur'ān text; the Lemtuna even accepted to the letter all the figurative expressions and became anthropomorphists. Thus, out of the four orthodox sects, the Berbers adopted the narrowest, the most restricted, the one which (after the Ḥanbalites) was most slavish to the letter, viz., that of Mālik ibn Anas.

Hunted down in the East, after the fall of Nahrawan and the victories of Hajjaj, which had saved the Khalīfate of Damascus and driven out the Iraq Arabi Kharijites, the latter, divided into two sects, Zubairites and Abadites, emigrated to the West. They found no difficulty in spreading their doctrine among the Berbers, the victims of the greedy Musalmān governors. In the interests of the public and also of their own private treasury, these governors did not exempt converts to Islām from the tax of a fifth—the tax paid by non-Musalmāns. The *Zubairites*, who took their name from 'Abd Allāh ibn Zubair of the Benu Tamim, were furthest advanced in the doctrine of Kharijism: they refused the name of Musalmān to any man guilty of even a venial sin, and even made it lawful to kill him and seize his goods. This doctrine was developed particularly in the north of what is now called Morocco, above all, among the Matghara and the Miknāsa. Led by an old water-carrier of Tangiers, Maisara, who took the title of Khalīf, more than 200,000 Berbers, with shaven heads and carrying the Qur'ān in front of them fastened to their spear-points, annihilated the Khalīf's armies and took possession of Tangiers and Sūs (A.H. 122 = A.D. 739–40). After an indecisive battle, they killed their chief Maisara, and put Khālid ibn Ḥamīd az-Zanātī in his place. In the following year, he destroyed two fresh Arab armies, and thus brought a general alleviation in central Maghrib. The two victories, of el-Qarn and el-Asnam, checked, but did not destroy, the Zubairite Berbers in the West; and their chief, Abu Qorrah, founded a State in the region of the Moluyya. The Idrisids destroyed this centre of strict Kharijism, concerning which we have only scanty information furnished by the orthodox writers. Nothing remained of it but a small State founded at Sijilmasa in the Tafilet. It disappeared in the great Fāṭimid struggle.*

Another group was formed in Jebel Nefūsa, South-East of Tripoli, and it was not long in spreading as far as the oases of Wargla and Wad Righ. This group is better known, because it left historical and religious records. These Kharijites were *Abadites*, dating their rise from 'Abd Allāh ibn 'Abād who lived in the 1st cent. A.H. This sect showed itself relatively more tolerant than the Zubairites, and its founder seems to have had relations with the Umayyad Khalīf Abd al-Malik. Its teaching was brought to the Maghrib by Salma ibn Sa'd, and later by 'Omar ibn Imkaten, Ismā'īl ibn Darrar, Asim as-Sadrati, etc. The most famous of its chiefs, Abu'l Khatt'āb, took the title of *imām*, and founded a centre, which was reduced to a province by his fall and death in A.H. 155 [A.D. 771], but which, nevertheless, has remained down to the present day one of the principal Abadite centres.† One of its officers, a man of Persian birth, 'Abd ar-Rahmān ibn Rustam, succeeded in founding a religious kingdom at Tahert (modern Tagdemt), which at one time comprised all the South of the modern region of Algeria, part of the region of Oran, the oases of the Constantine region, South Tunisia, and a part of the vilayet of Tripoli. But this kingdom was soon involved in divisions, as usually happened among the Berbers. Schisms arose: the Nukkarites, separated by personal questions, ending in reviving the uncompromising doctrines of the Zubairites;

* Cf. the summary of these events in Dozy, *Histoire des Musulmans d'Espagne*, Leyden, 1861, i. 141–156, 192–207, 238–250; Fournel, *Les Berbers*, i., Paris, 1875, 285–301, and the sources given; for the East specially, Wellhausen, *Das arabische Reich und sein Sturz*, Berlin, 1902, pp. 47–125.

† Cf. on the Abadites of Jebel Nefūsa, ash-Shamākhi, *Kitab as-Siar*, Cairo, n. d.; de Motylinski, *Les Livres de la secte abadhite*, Algiers, 1885, pp. 6–20, 28–35, 37–61, *Le Djebel Nefousa*, Paris, 1898–99; R. Basset, *Les Sanctuaires du Djebel Nefousa*, Paris, 1897.

and the Wasilites, with doctrines tending to Mu'tazilitism (liberalism). These dissensions greatly favoured the work of destruction accomplished later by the Fāṭimids.*

(*b*) *Alids.* — Although, on the one hand, the Berbers adopted and intensified the levelling characteristic of Islām, and the Zubairites and Nukkarites succeeded the Circumcelliones among them, on the other hand, some of them adopted an entirely opposite doctrine. These, instead of making the *imām* a chief freely elected by the community and, when necessary, deposed by it, saw in their *imām* not merely the descendant of the Prophet, but the incarnation of all the Prophets and even of the Deity. The Alid doctrine penetrated into the Maghrib, and was adopted twice as a protest against the orthodox Khalīfate. The first time, it was a descendant of 'Alī, Idris ibn Abd Allāh (who had escaped his family's disaster), that founded the dynasty of the Idrisids, and Fas afterwards became their capital. But it seems that the Shī'ite doctrine, professed at this time by the Berbers, meant simply adherence to this dynasty. It even contributed to the consolidation of Islām by converting the few Christians still surviving, and by destroying the Nukkarites settled in Tlemsen. This dynasty is of no importance in the religious history of the country. We need only observe that it had a firm ally in one Berber tribe, namely, the tribe of the Auraba.†

(*c*) *Ismā'ilians.*—The Ismā'ilian doctrine, on the other hand, made great modifications on Islām by reviving, under the mask of Shī'ism, the ancient doctrines of Persia—mixtures of Manichæism and Greek philosophy. It is hardly necessary to remark that the mass of the Berbers who rallied to this teaching always remained in the ranks lower than initiation. Those of the central Maghrib, in modern Great and Little Kabylia, became the chief adherents of the Fāṭimid prophet (*dā'ī*) 'Abd Allāh, and he recruited from them the army that was to destroy the remains of the Abbāsid government in Ifriqyah, the Zubairite-Kharijite kingdom of Sijilmasa, the Abadite-Kharijite kingdom of Tahert, and the ghost of a State which had taken the place of the Idrisid dynasty in Fas. The fall of Tahert scattered the Kharijites who were settled in it. Some of them were brought to Jerba, where one of their communities still exists; the others fled to Wargla, Sedrata, and the region of Wad Righ. Their life there was peaceful, and their prosperity increased steadily until the ravages of ibn Ghanya, and especially the expeditions of the Almohads, which brought the levelling influence of Musalmān orthodoxy over N. Africa, came to drive them from their refuge. Determined to keep their faith, they proceeded to settle in a hilly stretch, called in Arabic *chebka* ('thread'), where the Beni-Mzab-Wasilian nomads, whose name they took, used to wander about. Sheltered in this solitary place, where they made rich oases, the emigrants, like the Mormons on the shores of Great Salt Lake, prospered under the shadow of outside wars, and founded a community, a sort of ecclesiastical State. This community grew rich by commerce and agriculture; but, as usual among the Berbers, it was torn by dissensions, not only between towns (there were seven towns), but even between districts of towns. It required the authority of France, in 1882, to restore peace.

Another group of Nukkarites had remained independent in the Aurās. Abū Yazid, nicknamed 'the Man on the Ass,' brought up by an old schoolmaster who was born in the Sudan and preached the Kharijite doctrines in their utmost strictness, imperilled the existence of the Fāṭimid dynasty under its second prince. The dynasty was at this time reduced to within the walls of its capital, Mahdya. But a supreme effort saved it. The Berbers were first driven back, then utterly crushed, and the Empire of the Ismā'ilians regained all its power, which was increased later by the conquest of Egypt.* It was probably at this time that Kharijism disappeared in the central Maghrib (except in Wargla, Jebel Nefūsa, and Mzab).

As for the dynasties which followed, they were all helped by the Berber tribes from whom they were sprung, the Almoravids by the Lemtuna, the Almohads by the Masmūda, and the Kūmia by the Beni-Merin, the Beni-Zyān and the Beni-Wemannu, who ruled simultaneously. Their religious history, accordingly, offers no characteristic interest. And it is the same with the dynasties which were established in the central Maghrib and Ifriqyah before and after the great Hilālian invasion (in the eleventh century of our era).

3. **Present-day Islāmism.**—At the present day, orthodox Islāmism reigns alone (associated, of course, with local superstitions) all over North Africa, except, as has already been said, in Mzab, Jerba, and Jebel Nefūsa, where the modified Kharijism of the Abadites holds sway. It is especially in Mzab—the centre of theological studies, —that the traditions are kept up. The *iāzzaben* ('doctors') have retained an influence there which has a control over the conscience in spite of contact with Europeans. But Kharijism has lost its power of spreading, and more converts are being made by the Musalmāns.† We may form an idea of the doctrine at present in vogue from the summary given in an '*Aqidah* reduced to the Berber language, and then translated by a Nefūsi, Abu H'afs 'Omar ibn Jamia, who lived probably in the 11th cent. A.H. Several commentaries‡ have been made on it, and it forms the basis of the *Kitāb Ma'ālim* of Shaikh 'Abd al-Aziz of the Beni-Sgen, author of a treatise no less famous, the *Kitāb an-Nīl*. It is this latter that is now followed in Mzab and Jerba, while at Jebel Nefūsa it is the treatise of Shaikh Abu Tāher Ismā'īl al-Jaitāli, who died at Jerba A.H. 750 (A.D. 1349–1350). From the point of view of dogma, so far as the fundamental principles of Islām are concerned, this doctrine does not differ from orthodoxy. The only difference lies in some points of discipline: the *walāia*, the law imposing friendliness between Musalmāns of the same group, and its opposite, the *beraa* (in Mzab, *tebria*, 'punishment,' 'excommunication'); and, among the 'ways' of religion, besides the 'manifest way'—that of the first Khalīfs—the mention of the 'forbidden way,' the 'way of sacrifice,' and the 'secret way,' which, founded as they are on orthodox example, have justified the

‡ The commentary and Arabic glosses of 'Omar ath-Tholathi and Daud ath-Tholathi were published at Constantine in A.H. 1323 [A.D. 1905] by M. de Motylinski, to whom also we owe an ed. of the text with a French tr., *L' 'Aqida populaire des Abadhites algériens*, Algiers, 1905. The *Kitāb an-Nīl* was published at Cairo in A.H. 1305 [A.D. 1887].

conduct of the Kharijites ever since their appearance.

4. Attempts to form new religions.—(*a*) *Ha-Mim.*—It remains now to speak of only two attempts to form a religion that should be the complement of Islāmism, as Islāmism claims to be of Judaism and Christianity. The first attempt took place among the Ghūmara of the Rif, in the neighbourhood of Tetūan, in the territory of Mejeksa among the Beni-Ujefūl. There is disagreement concerning the exact date of the appearance of this religion; opinions vary, from A.H. 313 to 325. In any case, it was at the beginning of the fourth century A.H., the tenth century of our era.

A certain Ha-Mim, son of Mann Allāh ('Grace of God'), son of Hariz, son of 'Amr, son of U-Jefūl, son of U-Zerūal, appeared in this tribe and preached a new religion. He cut out three of the canonical prayers, leaving only two—one for sunrise, the other for sunset. In offering these prayers, his followers had to prostrate themselves so as to touch the ground with the palms of both hands. He also dispensed with the Ramaḍān fast, except for the last three days, or, according to others, for ten days; but he established a fast till mid-day every Wednesday, and for the whole day every Thursday, as well as two days in Shauwāl. Whoever failed to keep these had to pay a fine of five or three oxen. He abolished pilgrimage, purification, and total ablution, allowed the use of pork, but forbade fish that had not had their throats cut (or been gutted), all animals' heads, and the eggs of all kinds of birds. Even to this day, a tribe in the neighbourhood of Tipasa and the Tuaregs abstain from hens' eggs. He composed a Qur'ān in Berber for the use of his partisans; the Arab writers at least call it a Qur'ān. Some fragments have been preserved. One of these began with the formula of the unity of God, then continued: 'Deliver me from my sins, O Thou who hast let Thy gaze rest upon the earth; withdraw me from my sins, as Thou didst withdraw Jonah from the whale's belly and Moses from the waters.' All prostrated themselves and repeated: 'I believe in Tanguit (or Talyah, Teba'ih), aunt of Ha-Mim.' This Tanguit was a sorceress like Dajjū, the sister of the new prophet. Ha-Mim, nicknamed *al-Muftārī* ('the forger'), made numerous converts right on till his death (A.H. 315 according to some, 325 according to others). He fell in a combat against the Masmūda in the territory of Tangiers. His sect did not disappear with him. Later on, a certain 'Asim ibn Jamil offered himself as a new prophet in this tribe.*

(*b*) *Ṣāliḥ.*—Another attempt was of more importance. In the West of the Maghrib, in Temesna (the modern Shawia, which includes Casablanca, Rabat, and Chella), the Berghūata were settled. One of their chiefs, Tarif, who seems to have been of Jewish origin (son of Simeon, son of Jacob, son of Isaac), had, along with his people, embraced the Zubairi-Kharijite doctrines and struggled against Maisara. After the fall of the Berbers, he retired to Temesna and lived there in independence. He remained faithful to the doctrines of Islām; but his son, distinguished for his learning and virtues, who had also fought in the ranks of the Zubairites, offered himself as Prophet and composed a Berber Qur'ān. But he did not spread his doctrine; he entrusted it to his son Elias, and set out for the East, declaring that he would return when the seventh king of his dynasty was on the throne. The new religion remained in seclusion until the reign of Yūnos, who proclaimed it abroad and compelled the people to adopt it whether they would or not. The doctrine of Ṣāliḥ, who presented himself as the *Ṣāliḥ al-Mu'minīn* mentioned in the Qur'ān (lxvi. 4), was as follows: to recognize the Divine purpose of all the prophets and of Ṣāliḥ himself, to fast during the month of Rajab instead of Ramaḍān, and also on a certain day of the week and the same day the following weeks; to pray five times a day and five times every night; to celebrate the feast of sacrifices on the eleventh of Muḥarram (and not on the twelfth of Dhul-ḥijja).

The manner of performing ablutions was equally definite. There was no invocation (*adān*) or introduction to prayers (*iqāma*). Sometimes prayers were offered with prostration, sometimes without; in the first case, the congregation raised their foreheads and hands half a handbreadth from the ground. In proclamation of the greatness of God (*tākbīr*), they placed one hand on the other and said: *A esm en Iakosh* ('to the name of God'), then *Mokkor Iakosh* ('God is great'). The Orientalists are wrong who have thought to recognize the name of Bacchus in this word or in its variant Bakosh, and have drawn such extraordinary conclusions about the extent of Bacchus' worship and mysteries. M. de Motylinski has shown that this name Iakosh is derived from the Berber root UKSH, which means 'to give.' It is an epithet corresponding to the Arab *al-Wahhāb*, 'the generous,' one of the epithets of God.*

Public prayer took place on Thursdays very early in the morning. When making profession of faith, they held their hands open and leaning on the ground; they repeated half (?) of their Qur'ān standing and the rest prostrate. At the end of the prayer they pronounced this formula in their own language: 'God is above us; nothing that is on the earth or in the sky is hid from Him.' Then they repeated in Berber: *Mokkor Iakosh* ('God is great'); or, as often, *Ihan* (*Ian*) *Iakosh* ('God is one') and *Ur d'am Iakosh* ('There is none like God'). The alms required by law were half of all their grain. As in the religion of Ha-Mim, it was forbidden to eat eggs, the head of any animal, or fish that had not had their throats cut. Cock's flesh was forbidden, the cock announcing prayer by its crow. Hens' flesh was allowed only in cases of dire necessity. Liars were driven from the country; thieves, when convicted by evidence or by their own confession, were put to death; fornication was punished by stoning. The blood-price was fixed at a hundred head of beasts. Any man could marry as many wives as his means allowed (cousins to the third degree being forbidden), and repudiate them and take them again as often as he pleased. But the faithful were forbidden to marry Musalmān wives, or to give their daughters to Musalmāns. The saliva of their Prophet brought Divine blessings with it, and was regarded as an infallible remedy; this kind of belief still exists among certain Musalmāns of Algeria with regard to their marabouts.

Lastly, it should be said that they were very far advanced in astronomy and highly skilled in judicial astrology. The Qur'ān which Ṣāliḥ composed in Berber contained eighty *sūras*, most of them having a prophet's name for title. The first was called *Ayyūb* (Job, cf. Qur'ān xxi. 83), the last *Yūnos* (Jonah, the title of *sūra* x. of the Qur'ān). The names show clearly that it is an imitation of the Qur'ān. There were the *sūras*

* Cf. al-Bakri, *Kitāb al-Masālik*, p. 100 f.; ibn Abi Zar', *Rauḍ al-Qarṭās*, ed. Tornberg, i. 62 f.; anonymous, *Kitāb al-Istibṣār*, ed. Kremer, p. 80; ibn 'Aẓāri, *Kitāb al-Bayān*, i. 198; ibn Khaldūn, *op. cit.* vi. 216; an-Nuairi, Appendix to *Histoire des Berbères* tr. de Slane, ii. 492 f.

* de Motylinski, *Le nom berbère de Dieu chez les Abadhites*, Algiers, 1905; R. Basset, *Le nom berbère de Dieu chez les Abadhites*, Susa, 1906.

of *Fir'aun* (Pharaoh, cf. Qur'ān xliii. 45–55); of *Qārūn* (Korah, Qur'ān xxviii. 79); of *Hāmān* (Aman, cf. Qur'ān xxviii.); of *Yājūj and Mājūj* (Gog and Magog, Qur'ān xviii. 93, xxi. 96); of *ad-Dajjāl* (Antichrist, Qur'ān xxvii. 84); of *al-'Ijl* (the Calf of Gold, cf. Qur'ān ii.); of *Hārūt and Mārūt* (cf. Qur'ān ii. 96); of *Ṭālūt* (Saul, cf. Qur'ān ii. 245 f.); of *Nimrod*; of the *Cock*, the *Partridge*, the *Grasshopper*, the *Camel*, the *Eight-footed Serpent*, and of the *Marvels of the World* which contained the most lofty knowledge. A fragment of the *sūra* of Job has been preserved in an Arab translation: 'In the name of God! He by whom God has sent his Book to men is also he by whom He has told forth His tidings. They say: Iblis has knowledge of destiny. God forbid! Iblis cannot have the knowledge of God. What can triumph over tongues in discourse? God alone can by His decree. By the tongue by which God has sent His truth to men, that truth is established. Look at Mamet [in Berber, *imūni Mamet*, i.e. Muhammad]. During his life, and right on to his death, his followers conducted themselves aright. Then his people grew corrupt. He has lied who said that truth survives where there is no messenger from God.'

The Berghūata offered a long and successful resistance to the various dynasties which followed each other in the Maghrib, and it was only to the Almohads that their sect finally succumbed.*

Must we consider as the provenance of one of these sects or of a sect analogous to them the beliefs of the Zekkara, who live in Morocco not far from the Algerian frontier, between the Beni-Iznacen, the Beni-Bū Zeggū, and the Beni-Ya'la? We have not only been informed (though it would be wise to check the information) of their absolute antagonism to the Musalmāns and their dogmas, but have even got hints of a complete indifference to every kind of belief. Some have even gone the length of regarding them as Positivists, although they claim to believe in the doctrine of the celebrated marabout buried at Miliana, Sidi Aḥmad ibn Yūsuf.† The most daring systems have found acceptance; even Druses have been seen there. Before risking any opinion on this question, we should wait until a seriously conducted inquiry is made. When this has been done, it will probably be found that this is a tribe which, on account of its isolation, has remained in the state in which the greater part of North Africa was during the anarchy of the 15th and 16th centuries, when the Musalmān missionaries succeeded in resuscitating Islāmism from a vague shadowy memory.

LITERATURE.—The literature has been given fully throughout the article. In addition to the works there mentioned, the following may also be consulted:—H. Leclercq, *L'Afrique chrétienne*, 2 vols., Paris, 1904, vol. i. for paganism, and *passim* for Christianity; M. Slouschz, *Hebræo-phéniciens et Judéo-berbères*, Paris, 1908. RENÉ BASSET.

BEREANS.—The Bereans were a religious sect, originating in Edinburgh in the year 1773, who took their name from the Bereans mentioned in Ac $17^{10.11}$ ('who received the word with all readiness of mind, and searched the Scriptures daily, whether these things were so').

1. **Life of founder.**—John Barclay, their founder, was the son of a farmer, Ludovic Barclay, in the parish of Muthill. Early designed by his father for the Church, he received a good education, and was sent to the University of St. Andrews. In his theological course he came under the influence of Dr. Archibald Campbell, professor of Church History, author of an *Enquiry into the Original of Moral Virtue*, and *The Necessity of Revelation*. Campbell's views attracted considerable attention in his time, and were deemed sufficiently heretical to bring him to the bar of the General Assembly, though the case was dismissed. The first of four charges was that he held that 'man was unable by the use of his rational powers to find out the Being of a God.' This thesis Barclay was afterwards to take up and amplify.

Meantime Barclay was licensed on 27th September 1759 by the Presbytery of Auchterarder, and shortly afterwards was appointed assistant to the Rev. James Jobson of Errol. From the first he attracted attention by his preaching. He was a man of strong convictions, of great fervency of utterance, with a command of rhetorical language which readily passed into violent invective against those who opposed what he conceived to be the truth. Jobson belonged to the Evangelical party in the Church. He was a 'Marrow man,' with clear views of his own, and it is not surprising to find that after some controversial passages, culminating in a statement from the pulpit of their respective positions, he and Barclay were obliged to part. In 1763, Barclay went to Fettercairn to be assistant to the Rev. Anthony Dow, whose failing health prevented him from fulfilling the duties of his pastorate. Here he found himself in a more congenial atmosphere, as Dow's son, who was minister of Dron, had sat on the same bench with him at college, and sympathized with his opinions. Barclay's ministrations were warmly received by the people. He preached to crowded congregations, many flocking from the surrounding parishes attracted by his eloquence. He was most assiduous in his visitation and catechizing, and exercised a strong moral influence over the people. Barclay had a considerable gift of verse, though his productions scarcely rise into the region of poetry. Many of his verses were afterwards collected into a hymnary which was used in his own church.

In 1766, Barclay came into collision with the Presbytery through the publication of a book entitled *Rejoice Evermore, or Christ All in All*. The book was condemned as heretical, and Barclay received a formal censure. A list of his heresies was also drawn up and read from the pulpit of Fettercairn Church. This, however, only increased his popularity in the parish. When Barclay's connexion with the parish ceased, he asked for the usual Presbyterial certificate, which was refused, nominally on the ground that he was obstructing the peaceable settlement of the presentee. Barclay appealed from this refusal to the Synod and Assembly, but the appeal was dismissed.

On the occurrence of the vacancy at Fettercairn a petition was sent to the Crown (in whose gift the patronage lay) by the whole body of the parishioners, asking for the appointment of Barclay as their minister. The petition was refused, and the Rev. Robert Foote was presented to the living, though only three communicants could be found to sign the call. An appeal to Synod and Assembly met the usual fate. Thereupon the whole body of the congregation, to the number of over a thousand, hived off and built a church at Sauchieburn, in the neighbouring parish of Marykirk.

Meantime Barclay, by appeal in the matter of his certificate, had had an opportunity of stating his views in the General Assembly and also of preaching in various churches in Edinburgh. In the capital he gained a number of adherents, who resolved to secede from the Church, and who presented him with a formal call to be their minister. The church at Sauchieburn also wished to secure his services, but Barclay preferred to stay in Edinburgh, though his adherents there were very few (the call contains sixty signatures), and could

do very little for him. It is a characteristic of Scottish dissent which is frequently overlooked that a peculiar High Church tradition has invariably run through it. The call of the people, while indispensable to a valid ministry, has never been deemed sufficient. The minister must be ordained by his brethren in the ministry, who alone can judge of his qualification, and through whom alone can come the necessary authority to administer the ordinances of religion and to dispense the sacraments. Barclay's congregation could not find any presbytery in Scotland that would furnish him with the necessary status, and so he was sent to England with a general letter addressed 'to whatever Presbytery or class of dissenting Brethren this shall be presented.' Armed with this epistle and accompanied by two commissioners from his own congregation, Barclay proceeded to Newcastle, where he was regularly ordained on 12th October 1773. The certificate of ordination is signed by John Blyth, moderator, minister at Thirsley; Robert Green, clerk; and three others. On his return to Edinburgh, the new Church was constituted as the 'Berean Assembly,' so called from 'those noble Bereans who professed to search the Scriptures for the whole counsel of God, and to have a conversation becoming the gospel of Christ.' The church at Fettercairn had meantime found a minister in Mr. James Macrae, and another congregation had been formed at Crieff which, through its proximity to Muthill, had been touched by Barclay's influence.

The internal economy of the Church in Edinburgh was troubled from the first. The congregation was very poor, and Barclay had never more than £18 a year for his services. He was more concerned, however, about the publication of his views than about the straitened means of his domestic life, and the unwillingness of the outlying congregations of Fettercairn and Crieff to subscribe to a complete edition of his works was the occasion of much searching of heart. An epistle, signed by all the managers and overseers of the Church in Edinburgh, was sent to these provincial centres, pointing out the serious detriment it was to the Berean cause, 'which is the only Christian cause on the face of the earth,' that at a time when the Truth of God was being hopelessly perverted, its defence should fail through their negligence to purchase a book containing 'an express and undeniable confutation of all the heresies of men in the power of the devil.' The arguments used by some of Barclay's followers for giving him no encouragement to publish was an inference from his own central thesis. 'Since we know nothing of God and Divine things save from the Bible,' they urged, 'what is the use of publishing theological treatises?' In 1776, however, all difficulties seem to have been got over, and there appeared *The Psalms, paraphrased according to the New Testament Interpretation*, prefaced by a long dissertation in which Barclay expounds his peculiar ideas of Scripture. This is very much a reproduction and expansion of his earlier work, *Rejoice Evermore*. His previous productions had been *Without Faith, without God, or an appeal to God concerning His own Existence*, and a *Tractate on the Eternal Generation of the Son*, called forth by a phase of the Glassite controversy in 1769, *On the Assurance of Faith, On the Observation of the Lord's Supper*, and *A Letter on Prayer*, in 1774. In 1778 these were re-published along with a *Treatise on the Sin against the Holy Ghost*. In 1783 appeared *The Epistle to the Hebrews paraphrased*, and later, *A Close Examination into the Truth of several received Publications*. A new edition of part of his works was published in 1852, with funds left for the purpose by Mr. James Carsewell, for many years a deacon of the Berean Church in Glasgow.

Barclay had the zeal of an apostle. Towards the close of 1776 he went to London on the invitation of some friends who had read his books and sympathized with his views. He meant to stay only a few weeks, but he was so warmly received and attracted such crowds of admiring hearers that he was forced to remain in order to consolidate the movement. Meanwhile he was sorely distressed by the importunities of the little flock in Edinburgh, who needed his personal influence to hold them together. He sent, as his substitute, William Nelson, a surgeon, who, before his departure, was ordained to the ministry. Nelson was a man of some gifts. He had been educated for the Church of England, but had embraced the doctrines of Whitefield, and had joined the Calvinistic Methodists. While in England, Barclay visited Bristol, where a Berean Church was founded. There is an interesting passage in the *Autobiography* of Dr. Somerville of Jedburgh which shows conclusively that Barclay made a considerable impression in London. Writing of the year 1785, he says (p. 219):

'Upon the dismission of this little congregation we were met by such an immense crowd pressing at the entrances to the chapel that we could not make an escape without a struggle; and when I enquired who came next, I was answered by one of the female sex which seemed to predominate in this new assemblage, "The Bereans, if you please." The Rev. Dr. Horsely, a few days before, had mentioned the sect (the Bereans) to me, of which I had not heard before. He said it had lately sprung up in the west of Scotland, and he seemed to speak of it as an interesting event and likely to make a figure in the Christian Church. I confess I was rather ashamed to be found ignorant of an event occurring at my own door which seemed to him so important.'

The fact that an intellect so acute as that of Horsely, the great champion of orthodoxy against Socinianism, saw possibilities in Barclay's views is sufficient evidence that they were worthy of more attention than they have since received.

Barclay returned from London in 1778, leaving the church there in charge of two ordained presbyters, James Donaldson and Samuel Bishop. He resumed his ministry in Edinburgh, and Nelson was sent throughout the provinces to strengthen the Berean churches that had sprung up in various places. There is a record of congregations in Glasgow, Crieff, Kirkcaldy, Dundee, Arbroath, Montrose, Brechin, and Fettercairn. Barclay himself took a keen interest in all these churches. His means were narrow. His stipend from his own church was trifling, and, though he had a small income from property belonging to his first wife, it was spent mainly in publishing his books. His apostolic journeys, therefore, were on foot, and were confined to Scotland—which was one reason why the cause in England languished. His exertions gradually impaired his health. He died suddenly, while on his way to church, in a friend's house, on 29th July 1798, and was buried in Calton cemetery, where a monument is erected to his memory. His work was carried on in Edinburgh by Donaldson, one of the London pastors, who had some time previously been transferred to the pastorate at Dundee. Under his charge the church for twenty-five years met with a fair measure of success, but after his death it was split up by internal dissensions and gradually melted away. The Berean churches throughout the country in course of time lost their identity and were merged in the Congregationalists.

2. Doctrine.—John Barclay's theological position is extremely interesting, and ought not to be dismissed with the scant courtesy with which it has hitherto been treated. In this obscure founder of a dead sect we see a man struggling with a theological environment that was inadequate to contain his thought, and endeavouring to express in the theological terminology of his day ideas that in our time have created their own terminology. His leading tenet is that we derive all our knowledge of God from direct revelation—the revelation given us in God's word. Now this is just the position of Ritschl, and Barclay reached it by a process of thought similar to that of the German theologian. Ritschl had Kant to fall back upon in order to find a metaphysical sanction for his system. John Barclay had to create his own metaphysics on a hint supplied to him by Dr. Archibald Campbell. His central thesis he states thus: 'We do not come to the knowledge of God by any foregoing train of reasonings to introduce it, but merely by a sovereign act of God's own power, revealing Himself in our hearts.' In short, reason is totally inadequate to reach the idea of God.

Barclay thus consciously breaks with the Scholastic distinction, held in his day by every section of the Christian Church, between Natural and Revealed Religion. The Scholastic position is that our belief in God is an inference crowning a logical process. Reason convinces us of the existence of God, but all that reason can tell us of God is the bare fact of His existence. We need revelation to supplement reason, to unfold to us the nature of God, to explain His attributes, and to teach us His relation to man. To believe otherwise is to land ourselves in a logical dilemma. To say that we believe in God because we believe the revelation of Himself He has given us in Scripture, and that we believe the Scripture revelation to be true because it comes from God, is simply reasoning in a vicious circle. We must have an antecedent belief in God before revelation becomes even a rational conception. Now John Barclay in Scotland saw as clearly as Kant did in Germany, and rather before him than after, that there is a deeper fallacy than appears underlying this method. In the first place, suppose reason could prove the bare existence of God, all that reason gives us is a mere abstraction—a mere *caput mortuum*. We cannot know God apart from His attributes any more than we can know substance apart from its qualities. The variety of ethnic ideas concerning God shows that there is no unanimity regarding any one of His attributes, or even regarding the moral or immoral consistency of His character. It was admitted by all Christian schools that the attributes of God can be known to us only through revelation. If this be so, then the God of Nature, a Being without attributes, is an impossible conception.

(1) But what of the theistic arguments themselves? Barclay criticizes them with an acumen worthy of Kant. He takes up the *a priori* proof of Dr. Samuel Clarke, which then held the field, stating it thus: 'No being can produce another being or thing before itself exists. But the world exists; therefore the world behoved to be produced by some other being which must have existed before the world, and what can that being which must have existed before the world in order to produce it be but God?' Barclay points out that the original position holds here with regard to God. On this learned divine's own showing there must be something antecedent to God in order to produce Him. In short, you cannot reason from contingency to absolute being. You can but recede through secondary causes till imagination calls a halt, and then arbitrarily posit a self-existent cause. But this is not reasoning, and the result of it is not God. And the same holds true of the argument from design: 'If you were to see a beautiful, convenient, and well-contrived house, would you not conjecture that there behoved to be some artist for the builder, and that he were eminent in his way too; you would not imagine that it came by chance.' Again, Barclay with rare acumen and a truly modern ring says: 'There is no argument here. We know men, and we know houses are their works, from experience and observation; but we have no access for experience or observation in the framing of worlds.' Moreover, he goes on to say, we cannot tell the character of the workman directly from his works, which may be fashioned for either a good or an evil purpose. It is our antecedent knowledge of that character that determines the judgment we form of his works.

No doubt there is much in this reasoning that reminds us of Hume as well as Kant, but it is doubtful whether Barclay was familiar with Hume. He was evidently a good classical scholar and well read in the theology of his day, but the present writer can find no direct reference to Hume in his works, though the analogy of his reasoning with that of the sceptical philosopher was early pointed out by the Rev. D. Thom of Liverpool, one of his disciples. Barclay's interests were purely religious and theological. He did not trouble himself with the problems of epistemology. But undoubtedly his main position is exactly that of Hume, viz., that we cannot carry our ideas of causation beyond the field of experience and observation, that we cannot argue from the finite to the infinite, and that so transcendental a fact as a Divine revelation cannot be reached by argument or established by human testimony. It was rather from Dr. Archibald Campbell that Barclay drew his inspiration. And yet the two men were of essentially different natures, and even their central tenets were by no means identical. Campbell's polemic is directed against the Deists, and all he seeks to prove is that as a matter of fact and history men never have arrived at a true conception of God by means of reason or the light of nature. He does not assert that reason is incapable of discovering God, but only that reason never has discovered God without the aid of revelation. The knowledge of God, therefore, may still be the logical prius of revelation, though it never has been the actual antecedent. Barclay's intellect, on the other hand, is metaphysical. His argument is essentially a criticism of the reasoning faculty. There is something in its very nature that prevents reason from grasping the transcendental.

(2) But what is revealed truth, and on what testimony is it to be received? To this the answer is that the objective content of revelation is to be found in the Bible, and the Bible is to be received on the testimony of the Holy Ghost. 'God, who commanded the light to shine out of darkness, hath shined in our hearts, to give the light of the knowledge of the glory of God in the face of Jesus Christ' (2 Co 4[6]). The illumination that enables the soul to see God in the Bible is a direct act of His grace, administered by the Holy Spirit. But the Holy Ghost gives only the illumination. The knowledge of God comes from without. It is seen in the face of Jesus Christ, of whom the whole Scripture testifies. This assent to the truth of the revelation of God given in Scripture is 'faith.' Faith is not a subjective emotion or personal appropriation of Christ. It is an intellectual act. It is belief in the Bible in its totality as the word of God, on *the testimony of the Holy Ghost*, i.e. through the light thrown upon it by the Holy Ghost illumining the soul of the believer, 'without any kind of collateral support, or any other evidence or testimony whatever.' There is no mysterious meaning in the theological term 'belief.' 'Belief is our holding of a thing for truth which is told us by another person, merely on account of that person's credibility or authority.' We believe earthly things on human testimony, heavenly things on Divine. Barclay is here doing what all the great theologians have done. He is simply interpreting his own experience. He saw that all the arguments for the being of God were untenable and inconclusive. And yet he knew that this fact, instead of shaking his faith, seemed only to confirm it. His faith, therefore, came from a deeper source than logical reasoning. It was inevitable. It was the illumination of the Holy Ghost. And if he held by the intellectual nature of faith, and made it grasp an objective reality outside of the soul itself, it was because he also saw the extreme danger of allowing his faith to be merged into a mere subjective emotion which might lure him into all the vagaries of mysticism. He refused to separate between the practical and the pure reason, as Kant did. He held rather, with the later idealists, that the postulates of experience were as much intellectually apprehended and had as genuine an objective validity as the inferences of syllogistic reasoning.

(3) And this conception of the nature of faith led to the distinctive tenet which brought him into most direct collision with the theology of his time, and was the cause of his being repelled as a heretic even from the most evangelical Churches—the assurance of salvation. It was his insistence upon this point as of the very essence of faith that was the cause of the charge of antinomianism to which he was continually subjected. To understand his point of view, we must place ourselves in the theological atmosphere of his day. The 'Moderates' were ex-

treme Calvinists in theory, but moralists in their practical teaching. The distinctive doctrines of Christianity formed simply the background of their prelections, and had little vital relation with the ethical life. The 'Evangelicals,' again, were moderate in their Calvinism, insisting strongly on the universality of Christ's atonement, but they made faith a mystic quality which was inwrought with the very texture of their religious practice. The atonement was sufficient for the whole race of humanity, but the elect alone were saved; for the atonement meant simply a free offer of the gospel, which became efficacious in the soul of the believer only by an 'appropriating act' of which they could give no clear account. When a sinner became awakened to a consciousness of sin, his great endeavour was to obtain 'an interest in Christ.' This he reached through a soul-struggle in which he passed from despair, through doubts and fears and fervent prayers, to a modified assurance which was chequered, even in the case of the greatest saint, with strange misgivings lest after all he was not in a state of grace. The practical test as to whether he was in a state of grace was his good works; for good works, though powerless to secure salvation, yet necessarily flowed from the 'appropriation' of Christ.

Now Barclay opposed both of these parties with a vehemence rendered impressive by his large command of the language of invective. The Moderates, in their eloquent laudations of the beauty of virtue, had no need of faith. But the Evangelicals were even worse, for they made God a liar and blasphemed against the Holy Ghost. To believe was to be saved, and belief meant simply faith in the Scriptural record. This faith was, indeed, a gift of God. It was the illumination of the Holy Ghost making the record luminous, and commending it to the believer's heart and conscience. It came unbidden, and was not to be prayed for, nay, could not be prayed for; for only the prayer of faith was efficacious, and without faith the sinner knew neither what to pray for nor to whom to address his prayer. Barclay repudiated the religion of doubts and fears and misgivings as of the devil. For a believer to doubt of his own salvation was simply to doubt the veracity of the Holy Ghost, and proved that he was no believer. 'Whosoever believeth that Jesus is the Christ is born of God' (1 Jn 5^1). If a man is born of God, then he is spiritually alive, and life is its own evidence. 'He that believeth hath the witness in himself, as he hath consciousness in himself of life and being, while he is alive and awake.' And again, 'Shall I then doubt or deny that I certainly see and exactly distinguish colours and objects with my own eyes, because another man is unhappy enough to be blind, or must needs be so perverse as to shut his eyes and then affirm that he cannot see the objects which I see and confess I do see? Is his blindness or perverseness any argument against my sight and my pleasure therein? I would indeed gladly open the windows of his chamber to let in light. I would set before him all the agreeable objects I myself perceive; but, alas! I cannot open the eyes of the blind or convert the perverse.'

It is plain that Barclay is not taking the word 'belief' in a mere conventional sense. It is not the general belief we give to matters we have never thought over, but accept simply as part of our environment. It is the belief which comes from personal conviction of a truth that enforces a rule of conduct, such as our belief in causation or the uniformity of natural law. And this belief comes only through the supernatural action of the Holy Ghost. It differs from the 'faith' of the Evangelicals in being more an intellectual act than a subjective emotion; for the 'appropriation' of Christ, which to them alone secures salvation, is essentially subjective in its nature. The difference between the two parties is a very real one, and Barclay is much nearer the modern standpoint than they were. In fact, Barclay is here, with Ritschl, making a 'value judgment.' Jesus Christ has to him the value of God, and simply to realize this is salvation. It is to be within the Kingdom. Barclay realizes it, not through any historical evidence as to the truth of the record, nor through any metaphysical reasoning as to the personality of the Son, but because life becomes luminous to him when he accepts it, because the Holy Ghost testifies to his soul and conscience that the fact is so. There is here no room for doubt. He is simply treading the solid rock of experience. He is trusting his own consciousness, and he cannot do otherwise. His assurance is perfect, and it is synonymous with his faith.

(4) And from this position resulted certain other tenets that ran counter to the religious ideas of his age. The sin of unbelief was the blasphemy against the Holy Ghost, which could not be forgiven either under the old dispensation or under the new. For to doubt the testimony of the Holy Ghost, *i.e.* to obscure the inner illumination, was to be in a state of perdition. So long as that state lasted salvation was impossible, because light was impossible. This was evidently the meaning of his teaching, though Barclay takes the old theological words in the old theological sense. Further, it was impossible for a sinner to pray for his own conversion. Barclay knew that for him the light was shining while others were in darkness. He could account for the fact only on the old lines of predestination. The sinner could but wait and be passive till God of His free grace opened his eyes. Prayer was one of the privileges of the believer, who was to pray for greater sanctity, because that entrance into the Kingdom which was salvation was but the first step in his spiritual progress. Moreover, the Lord's Supper was not a renewal of the covenant with God—a solemn, mystic rite to be approached with fear and trembling, because Christ was present at a Communion Table as He was present nowhere else. Believers were always to be holy, and required no more special preparation to commemorate the death of Christ at a Communion Table than to commemorate His resurrection on the Lord's Day. Barclay held that the idea of covenant-renewal at the Lord's Table, with the mystic sense of a Real Presence hovering around it, led logically to the Romish doctrine of the Sacrifice of the Mass. His views were those associated with the name of Zwingli.

(5) Barclay's conception of Scripture, in which to his opponents he seemed merely to be setting himself up as the only infallible interpreter of Holy Writ, must be taken in the light of his whole system, and will be found to be an inevitable deduction from his central tenet. To Barclay the testimony of the Holy Ghost is to Jesus Christ as the only Revealer of God. 'God . . . hath shined in our hearts, to give the light of the knowledge of the glory of God in the face of Jesus Christ' (2 Co 4^6). But the knowledge of God through Jesus Christ came to him from the word of God. And the word of God was the Holy Scripture. Here, again, the position is exactly like that of Ritschl, but there is this difference: Ritschl approaches a Bible that has been critically examined, dissected, re-constructed. He can no longer maintain the old theory of inspiration, but he is satisfied that the spiritual process which Scripture records remains unimpaired. That process can be read and understood only through Jesus Christ, who is the One Revealer of God, a knowledge of whom is life eternal. Barclay, from the circumstances of his time, had

to accept the Bible uncritically. The Bible was a book dictated by God to inspired penmen, who wrote exactly what God told them, whether they understood it or not. This was the general idea of the age, and Barclay differs from his contemporaries only in holding it more clearly and consistently than they did. The subject of the Bible is Jesus Christ and His salvation, and in a book practically written by God there must be no irrelevancies. The Bible invites a close and prayerful study. There are some parts of it which, to the soul illumined by the Holy Ghost, are clear as crystal. There are others that are dark and obscure. The true principle of interpretation, therefore, is holding fast by Jesus Christ, the main thesis, to interpret the obscure by the clear. The Holy Ghost Himself supplies a clue to the right interpretation in the references made in the Gospels to the fulfilment of prophecy in the Messiah. Many of these passages are from the Psalms, and it was to the Psalms that Barclay specially devoted his remarkable powers of exegesis. It seemed to him that the Evangelists regarded the Psalms as simply prophetic biographies of the coming Messiah, and this idea fell in exactly with his theory of Holy Writ. The Psalms in no wise express the emotions of the penmen. If they did, it is clear that their religion must have been dangerously similar to that religion of doubts and fears which he repudiates. They are the expression either of the sufferings of the Messiah when the whole weight of the world's sin pressed upon Him, or of the sufferings and triumphs of the Church of Christ. There is no verse in the Psalter that is not a reference either to Christ Himself or to His Church. Barclay has his canons of criticism, which are too long to be detailed here, but which show a careful study of the Psalms, and a singular appreciation of those points which, in other hands, have yielded different conclusions. He notices, *e.g.*, that the last two verses of Psalm 51 have not the personal note of what precedes, and uses them to give a Messianic interpretation to the whole. He points out, too, how his method of exegesis gets over the difficulty of the cursing Psalms. It is inconceivable that any of the saints of God could have uttered such curses upon their personal enemies. But when we know that the speaker is He who said, 'Vengeance is mine,' and that those whom He is cursing are the enemies of the gospel, the difficulty disappears. Barclay translated the Psalms into English verse, bringing out in each what he conceived to be its Messianic meaning. The book was intended to be used as a book of praise in the Berean Church, but it is notable that, in 1826, the edition published for this purpose, while it contains his dissertation, falls back upon the familiar version common to all Presbyterian Churches.

Barclay's religious system has fallen into complete oblivion. Of the churches he founded not a single trace remains. He lacked the spiritual magnetism necessary to be a great religious leader, and his theological position is deficient in that mystic element which touches the heart and excites enthusiasm. He was a metaphysician rather than a prophet, an acute reasoner rather than an inspired visionary, though neither was his knowledge of philosophy sufficiently wide nor his mental grasp sufficiently strong to enable him to break from his environments and find his proper sphere. He was intensely assertive in holding his tenets, and his powers of vituperation were extraordinary, necessarily repelling instead of conciliating opponents. But, at the same time, he has his own distinctive place in the history of the development of religious thought, and his ideas have enough permanent vitality in them to entitle them to a better fate than they have received.

LITERATURE.—The account of Barclay's life has been taken from the records of the Presbytery of Fordoun, extracts relating to his case having been made by the Rev. J. Brown of Berwie, presbytery-clerk, and also from the *Memorials of the Berean Assembly*, the official record of the Church in Edinburgh, in the possession of the writer. There is a life of Barclay in Chambers's *Biographies of Eminent Scotsmen*, 1835, and the *Dictionary of National Biography*, and short accounts in *Lives* prefixed to various editions of his works. A brief exposition of his doctrines is given in a preface to an edition of *Without Faith, without God*, by D. Thom of Liverpool in 1836. See also Archibald Campbell, *Necessity of Revelation*, 1739; *Autobiography of Dr. Somerville of Jedburgh*, 1861; Cameron, *History of Fettercairn*, 1899.

A. MILLER.

BERENGAR.—Berengar (Bérenger) was born at Tours about 1000 A.D. He was educated at Chartres, and was a pupil of Fulbert, the Bishop of Chartres. In 1031 he became Director of the Cathedral School at Tours. About 1040 he was appointed Archdeacon of Angers, though he continued to live at Tours. Some eight years later it was widely reported that he was advocating an opinion that the consecrated elements in the Holy Eucharist are only figures and likenesses of the body and blood of Christ, and not the body and blood themselves. He does not appear to have made any answer to remonstrances which were addressed to him by his friends, Adelman of Liège and Hugh of Langres. In 1050 he wrote to Lanfranc, the Prior of Bec, who was afterwards Archbishop of Canterbury, that he agreed with John the Scot about the Eucharist, probably meaning by 'John the Scot' the treatise of Ratramn, *On the Body and Blood of the Lord*, under the belief that this was the work of John Scotus Erigena. In a Council held at Rome in 1050 under Pope Leo IX. this letter was read, and Berengar was excommunicated. At a Council held at Brionne, near Bec, a little later, he is said to have made some kind of retractation. King Henry I. of France imprisoned him; and in September 1050, while he was in prison, his opinions were condemned at a Council held at Vercelli. A month later there was another condemnation in a Council held at Paris. In 1054 at a Council meeting at Tours under the presidency of Hildebrand, afterwards Pope Gregory VII., as Papal legate, Berengar denied the charges brought against him, and declared that after consecration the bread and wine are really the body and blood of Christ. Five years later, at a Council held at Rome, when Nicholas II. was Pope, Berengar burnt his writings, and either actually signed, or gave some kind of assent to, a paper drawn up by Cardinal Humbert in the following terms:

'I, Berengar, an unworthy deacon of the Church of St. Maurice of Angers, acknowledging the true Catholic and Apostolic faith, anathematize every heresy, especially that concerning which I have hitherto been in ill repute, which attempts to affirm that the bread and wine which are placed on the altar are, after consecration, only a sacrament and not the real body and blood of our Lord Jesus Christ, and that these cannot be held or broken by the hands of the priests or crushed by the teeth of the faithful with the senses but only by way of sacrament. And I assent to the Holy Roman and Apostolic See, and with mouth and heart I profess that concerning the sacrament of the Lord's Table I hold the faith which the Lord and venerable Pope Nicholas and this Holy Synod have by Evangelical and Apostolical authority delivered to be held and have confirmed to me, namely, that the bread and wine which are placed on the altar are, after consecration, not only a sacrament, but also the real body and blood of our Lord Jesus Christ, and that with the senses, not only by way of sacrament but in reality, these are held and broken by the hands of the priests and are crushed by the teeth of the faithful.'*

For some time after this Council any controversy in this matter was confined to theological discussion by means of writings. Further condemnations

* The wording of this document is capable of two interpretations. It is usually thought to be the expression of a wholly natural and carnal view of the Eucharistic presence. On the other hand, it was explained by the mediæval theologians to be a loose way of stating that the consecrated sacrament held in the hand and eaten in the mouth is the body of Christ. It is not unlikely that in a panic such expression as that in the document might be given to this belief.

were passed on the teaching of Berengar at Councils held at Poitiers in 1075, and at Saint Maixent in 1076. In 1078 a Council was held at Rome under Pope Gregory VII., whose policy both before and after he became Pope was aimed at protecting Berengar by endeavouring to find a form of words, in accordance with the ordinary belief, which he could accept. At this Council Berengar assented to a statement of much more general character than that which had been required at Rome in 1059. It was in these terms:

'I profess that the bread of the altar is, after consecration, the real body of Christ, which was born of the Virgin, which suffered on the cross, which sitteth on the right hand of the Father; and that the wine of the altar, after it has been consecrated, is the real blood which flowed from the side of Christ.'

In 1079 another Council was held at Rome, and at this Berengar, after some struggles, subscribed a statement which was more explicit than that of the previous year, but without the special kind of language which had marked the declaration of 1059. This statement was as follows:

'I, Berengar, believe with my heart and confess with my mouth that the bread and wine which are placed on the altar are, by the mystery of the holy prayer and the words of our Redeemer, substantially converted into the real, and true, and life-giving flesh and blood of our Lord Jesus Christ, and are, after the consecration, the real body of Christ, which was born of the Virgin, and which was offered and hung on the cross for the salvation of the world, and which sitteth on the right hand of the Father; and the real blood of Christ, which was shed from His side, not only by way of sign and sacramental power, but in peculiarity of nature and reality of substance.'

In 1080 a Council was held at Bordeaux, at which Berengar made a statement as to his belief, which appears to have been accepted by the Council as satisfactory. He died in 1088 at St. Cosme, an island in the Loire near Tours.

There is considerable difficulty in forming a judgment as to what the opinions of Berengar really were. There is no doubt of his vacillations under persecution; and it is probable that his mind changed to some extent from time to time. Of contemporary authorities who wrote against him, Lanfranc and Durand of Troarn say that he regarded the consecrated elements as being merely figures of the body and blood of Christ; while Witmund of Aversa records a view that he held an opinion that the body and blood of Christ are united with the elements so that, without the bread and wine being changed, the body and blood are present in the consecrated sacrament. In his own treatise, *On the Holy Supper*, it is quite clear that he denies any destruction or material change or conversion of the bread and wine, and any idea of a carnal or natural presence of the body of Christ; but as to the further question whether he meant that the consecrated elements are the body and blood of Christ in actual spiritual reality or that they are so only figuratively or virtually, there are passages which tell in both directions. It is not impossible that this difficulty in interpreting his language reflects some degree of uncertainty in his own mind; and such uncertainty may afford part of the explanation of his failure to meet opposition and persecution in any steadfast and consistent way. There appear to have been two schools among his followers, one of which maintained that the consecrated elements are merely figures of the body and blood of Christ, while the other asserted a presence of the body and blood united, through the consecration, with the bread and wine, without any change in the bread and wine themselves.

BERIYĀ.—See BEḌIYĀ.

BERKELEY.—

1. **Life.**—George Berkeley, bishop and philosopher, was born on 12th March 1685 at Dysert in the county of Kilkenny, Ireland. At the age of 11 he was sent to Kilkenny school, and four years later, in 1700, left for Trinity College, Dublin, where in the various capacities of undergraduate, graduate, fellow, and tutor he remained for the next twelve years. The latter half of this residence at Trinity College is, so far as his philosophy is concerned, the most important period of his life. For it was then that he thought out his leading philosophical ideas and published his chief philosophical works. His later life did not lack opportunities apparently no less favourable for philosophical reflexion; but his interests had by that time been largely diverted to practical work, and, even as regards philosophy itself, his first constructive impulse seems to have yielded to the receptive mood of the meditative scholar.

The next period of Berkeley's life is divided between foreign travel and residence in London, where he speedily became intimate with, and greatly esteemed by, the cultured society of the time, including literary men such as Steele, Addison, Swift, and Pope. At the end of 1713 he went abroad as chaplain to the brilliant but eccentric Lord Peterborough, and spent nearly a year in travel in France and Italy. After an interval of two years, regarding which little is known, we find him again in Italy, this time as travelling tutor; and of this tour, prolonged over some four years, and covering a considerable part of Italy and Sicily, a partial record has survived in the shape of a private *Journal*, which copiously illustrates his impartial curiosity and close observation.

The period of his life which begins with his return to London, at the end of 1720, is marked out by the conception, attempted realization, and enforced abandonment, of his singular project for founding a missionary college at Bermuda. In 1724 he was made Dean of Derry. In the previous year he had received a totally unexpected legacy from a lady to whom, as one of his letters tells us, he was a perfect stranger—Hester Vanhomrigh, better known in connexion with the life of his friend Swift. This improvement in his fortunes enabled Berkeley to devote himself seriously to the realization of his Bermuda scheme. At length his efforts to arouse interest in it were rewarded. He obtained a Parliamentary vote of £20,000. The money, however, was never forthcoming; and in 1728, anxious to convince people that he was in earnest, Berkeley set sail with his wife, whom he had but lately married, and some friends, not directly for Bermuda, but for Rhode Island, where he was to await payment of the grant. After some three years' waiting it became clear, from a broad hint given by the minister Walpole himself, that there was little or no hope that the official assurances of payment would ever be carried out, and Berkeley set sail once more for England.

Some two years after his return he was made Bishop of Cloyne, and, in this retired spot in the county of Cork, Berkeley, whose health was now somewhat broken, spent the next eighteen years of his life, occupied partly with practical work, partly with scholarly study and meditation. In 1752 he left Cloyne to reside at Oxford, where one of his sons was going to be educated; but he did not long survive the change. His death took place on 14th January 1753.

2. **Works.**—As was said above, Berkeley's most important philosophical works were written in early life. The works referred to are the *Essay towards a new Theory of Vision* (1709), *Treatise concerning the Principles of Human Knowledge* (1710), and *Three Dialogues between Hylas and Philonous* (1713). These works will be dealt with below. To this period belongs also a discourse on *Passive Obedience* (1712), which is important as containing a brief statement of his views on the fundamental principles of ethical and political obligation. The content of social and political duty is defined, according to Berkeley, by universal and immutable laws of nature, by which he means rules of action whose constant observance is plainly seen to be necessary to the general well-being of mankind. The sanction of duty lies in the Divine government of the world, and the motive of duty in that reasonable regard for our eternal happiness, which should induce us to obey laws of nature so

sanctioned. In the discourse Berkeley is more particularly concerned to show (against, *e.g.*, Locke) that unlimited passive obedience to the civil ruler is a law of nature.

Upon this early period of productive activity a long interval of almost twenty years ensued, broken only by the publication in 1721 of a Latin treatise, *de Motu*, in which motion and causation are discussed from a philosophical point of view. Continental travel, London society, and his Bermuda project occupied his interests, and, when at length the quieter years of waiting at Rhode Island enabled him to produce a considerable work, he comes before us less as a philosopher than as an apologist of morality and Christian religion. *Alciphron, or the Minute Philosopher* (1732), the longest of Berkeley's writings, consists of a series of seven dialogues directed 'against those who are called Free-Thinkers.' Under the somewhat vague designation of 'Free-Thinking,' Berkeley includes practically any tendency of thought which he thinks hostile to the best interests of morality and Christian religion. And the rather undiscriminating zeal which leads him, not merely to condemn the levity of Mandeville, but to assail with somewhat inadequate criticism the genuine convictions of Shaftesbury, must be allowed to deserve the censure of being 'not without a tincture of clerical party spirit.'

The earlier dialogues are admirable examples of that literary form, and are extremely well managed for Berkeley's purpose. Two types of free-thinker are depicted for us. Alciphron, as confident in his philosophical pretensions as he is devoid of real thoroughness, is capable of taking part in reasonable discussion, but can never anticipate the effects of his own admissions, and succumbs helplessly to criticism. His constant recourse to new arguments renders only the more apparent his superficiality of mind. In Lysicles, on the other hand, free-thinking means little more than an absence of moral principle. He is ready to spout the extremest cynical views, but will not trouble himself with sustained argument, and remains quite unaffected by criticisms which he cannot answer. The later dialogues, in which Berkeley defends Christianity with the weapons of a now antiquated apologetics, are undeniably tedious. Considerations of literary art are too often forgotten, and the natural interchange of argument and answer gives place to instruction and learned disquisition.

In 1733 Berkeley was induced by the misconceptions of an anonymous critic to return, with a tract on *The Theory of Vision or Visual Language, Vindicated and Explained*, to the argument of his earliest work, which he had used for apologetic purposes in *Alciphron*. The next two years saw him involved in a mathematical controversy provoked by his attempt to show that mathematicians have no right to enlarge upon the obscurity and defective foundations of religious doctrine, since their own science is in such respects by no means beyond reproach. Berkeley's next published work, *The Querist*, which appeared in three parts (1735–1737), consists of a long series of brief and pointed questions, designed to call his fellow-countrymen's attention to the social and economic condition of Ireland and the means of improving that condition. The queries give ample evidence, not merely of the very genuine and practical character of Berkeley's philanthropy and patriotism, but also, when we consider the time at which he wrote, of a very remarkable grasp of economic truth as to the true sources of real wealth, as to money, credit, and banking, and as to the interaction of moral and economic causes. Finally, in 1744 there appeared an extraordinary work entitled *Philosophical Reflexions and Inquiries concerning the Virtues of Tar-Water*, better known by the title of *Siris*, which was prefixed to the second edition. The work was produced primarily to communicate to the world Berkeley's own conviction and experience of the medicinal value of tar-water. But the chain of reflexions which is hung on this medical peg proceeds to connect

'tar with the highest thoughts about things, by links which involve botanical, chemical, physiological, and metaphysical speculations that are subtle and mystical. . . . Its successive links of ascending science are connected by a gradual evolution, first, with ancient and modern literature concerning Fire; and, next, with the meditations of the greatest of the ancients about the substantial and causal dependence of the universe upon active Mind' (Fraser's Preface in *Works*[2], vol. iii. p. 118).

The book is to be regarded rather as an illustration of the learned studies which occupied the leisure of Berkeley's later life than as a document of his own philosophy. The 'hoary maxims' of antiquity 'scattered in this Essay,' he tells us, 'are not proposed as principles, but barely as hints to awaken and exercise the inquisitive reader' (§ 350).

3. Philosophy.—For a statement of Berkeley's substantive philosophy, then, we must depend on the earlier works of 1709–1713, together with the important *Commonplace Book* (first published in Fraser's *Life and Letters of Berkeley*), which was kept by Berkeley in the immediately preceding years of his residence at Trinity College, and in which his philosophy is seen in the making. The three main doctrines set forth in these works are those of Nominalism, Immaterialism, and Acquired Visual Perception, and all three furnish real and important contributions to philosophical thought. 'Among all philosophers, ancient or modern,' says Ferrier (Essay on Berkeley in Ferrier's *Philos. Remains*, 1866, vol. ii.), there is 'none who presents fewer vulnerable points than Bishop Berkeley.' And this is probably true if we are content to criticize Berkeley in respect of the things which he actually said, not in respect of those which he left unsaid. Ferrier goes on to point out the reason of Berkeley's success:

'The peculiar endowment by which Berkeley was distinguished, far beyond his predecessors and contemporaries, and far beyond almost every philosopher who has succeeded him, was the eye he had for *facts*, and the singular pertinacity with which he refused to be dislodged from his hold upon them.' And again, 'he was a speculator in the truest sense of the word; for speculation . . . is the power of seeing true facts, and of *unseeing* false ones.' 'No man ever delighted less to expatiate in the regions of the abstract, the impalpable, the fanciful, and the unknown. His heart and soul clung with inseparable tenacity to the concrete realities of the universe.'

(1) *Nominalism.*—It is this dislike of unreal abstractions, this desire to see concrete facts and to see them as they are, that inspires Berkeley's attack on 'abstract general ideas' in the Introduction to the *Principles of Human Knowledge*. He fastens upon a well-meaning, but not altogether happy, passage in Locke's *Essay*, in which that candid inquirer asks:

'Does it not require some pains and skill to form the general idea of a triangle . . . for it must be neither oblique nor rectangle, neither equilateral, equicrural, nor scalenon, but all and none of these at once? In effect, it is something imperfect that cannot exist, an idea wherein some parts of several different and inconsistent ideas are put together.'

Berkeley makes short work of this passage:

'Mr. Locke acknowledgeth,' he says (in a later work, *Defence of Free-Thinking in Mathematics*, § 46, where he is referring back to the *Principles*), 'it doth require pains and skill to form his general idea of a triangle. He farther expressly saith it must be neither oblique nor rectangular, neither equilateral nor scalenum; but all and none of these at once. He also saith it is an idea wherein some parts of several different and inconsistent ideas are put together. All this looks very like a contradiction. But, to put the matter past dispute, it must be noted that he affirms it to be somewhat imperfect *that cannot exist*; consequently, the idea thereof is impossible or inconsistent.'

And Berkeley makes his well-known appeal to the reader 'to look a little into his own thoughts, and there try whether he has or can attain to have' such an idea as Locke describes (Introd. to *Principles*, § 13). Now Berkeley's main contention in this attack is perfectly sound, viz. that a general idea is something *toto cœlo* different from a confused image. He does not, it must be observed, deny that there are general ideas, but only that there are *abstract* general ideas, *i.e.* ideas which can be *imaged apart in their generality*. His own

example of generalized thinking makes this point perfectly clear:

'Suppose a geometrician is demonstrating the method of cutting a line in two equal parts. He draws, for instance, a black line of an inch in length: this, which in itself is a particular line, is nevertheless with regard to its signification general, since, as it is there used, it represents all particular lines whatsoever; so that what is demonstrated of it is demonstrated of all lines, or, in other words, of a line in general' (Introd. to *Principles*, § 12).

That is to say, a percept or image may in itself be quite definite and particular, and yet be the vehicle of a general meaning. Berkeley's contention, then, could be expressed by saying that we must distinguish sharply between an image and a meaning, and must place true generality not in images but in meanings. (The recognition by modern psychology of the *generic* image does not affect the question of principle.) Now, the symbols we use to express general meanings are words, and, unfortunately, in his eagerness to avoid unreal abstractions, Berkeley tends to say that generality is simply a matter of the application of names. In the rough draft (first published by Fraser) which Berkeley made of the Introduction to the *Principles* he states this view in a very uncompromising way:

'If a man may be allowed to know his own meaning, I do declare that in my thoughts the word "animal" is neither supposed to stand for an universal nature, nor yet for an abstract idea, which to me is at least as absurd and incomprehensible as the other. Nor does it indeed [in the proposition that Melampus is an animal] stand for any idea at all. All that I intend to signify thereby being only this—that the particular thing I call Melampus has a right to be called by the name "animal"' (*Works*[2], iii. 374).

That this view cannot be maintained is certain. For it is evident (1) that the 'right to be called by the name animal' must be based on certain properties which Melampus possesses in common with other animals; and (2) that these common properties may be made an object of thought. That is to say, there must exist a 'universal nature' (though not an *abstract* universal nature, or platonic *εἶδος*), and we must be able to think that universal nature by means of a general idea (though not an *abstract* general idea or *general image*).

It is to this same tendency to let the *meaning* fall out between the image and the word, that we must trace Berkeley's algebraic theory of general discourse:

'In reading and discoursing, names [are] for the most part used as letters are in Algebra, in which, though a particular quantity be marked by each letter, yet to proceed right it is not requisite that in every step each letter suggest to your thoughts that particular quantity it was appointed to stand for' (Introd. to *Principles*, § 19).

The fatal defect of this theory is, that, whereas in Algebra we attend to the symbols themselves, in reading and discoursing we attend, not to the words as such, but to their meanings (cf. Stout's *Analytic Psychology*, vol. i. p. 88).

(2) *Metaphysics of Immaterialism.*—There were two general ideas more especially, in respect of which men seemed to Berkeley to have become the victims of their own unreal abstractions—the ideas of Matter and Existence. Ignoring or forgetting the concrete applications on which the meaning and value of these general ideas depend, men had come to confer in thought *on the mere abstractions* another, and actually more fundamental, sort of reality than that possessed by the concrete experiences from which the abstractions are illegitimately derived. ''Tis on the discovering of the nature and meaning and import of existence that I chiefly insist,' says Berkeley in the *Commonplace Book* (*Works*[2], i. 17). Now, if we are to discover this real meaning of Existence, we must keep continually before our view the actual conditions under which alone this general idea can find particular application. We must not begin, for instance, by making the perfectly gratuitous assumption that there is a real or absolute existence of things, totally distinct from their being perceived or known. By doing so we should obviously be setting up a general idea which is abstract in the bad sense, because in the very nature of the case it can never have any application in experience. Yet this is precisely the assumption which the free and uncritical use of abstract general ideas like Matter and Existence leads men of science and philosophers to make. They wish to assert the reality of things, especially of external or material things, against sceptical doubts. But they choose the very worst possible way of doing so. For they put the real nature of things quite outside perception or knowledge, and thereby remove the only reason we have for asserting their existence or reality at all, viz. that we have actually experienced it. And thus, as a consequence of the misuse of abstractions, we land ourselves in the most absurd contradiction—the supposed real or absolute nature of things is nothing but 'the fiction of our own brain,' and yet we have made it 'inaccessible to all our faculties' (Preface to *Dialogues between Hylas and Philonous*). We have by our own act delivered ourselves over bound hand and foot to the sceptic. When we are pressed as to what we mean by the absolute existence of things, we have to admit that we have no knowledge of it at all. 'Methought I had some dilute and airy notion of Pure Entity in abstract; but, upon closer attention, it hath quite vanished out of sight.' Pure being is a '*something in general*, which being interpreted proves *nothing*' (*Dialogues* [*Works*[2], i. 437]).

We must return, therefore, Berkeley argues in effect, from these empty and mischievous abstractions to observe the actual conditions under which we predicate existence. And we observe, in the first place, that the things we affirm to exist are things which we know, *i.e.* objects of knowledge—in the case of the material world, objects of perception—and that the existence we affirm of them is their known or perceived existence. We affirm them to exist in that manner in which we know or perceive them as existing. Take first the case of material or sensible things. When we speak of the existence of material things, we mean their existence as we perceive them. Their *esse*, as Berkeley puts it, is *percipi*. Of an existence on their part different in kind from that which they have as objects of perception we know, and in the nature of the case can know, nothing. 'If there were external bodies [so existing], it is impossible we should ever come to know it; and if there were not, we might have the very same reasons to think there were that we have now' (*Principles*, § 20).

To express the fact that the only kind of existence which we can intelligibly attribute to material things is that kind of existence which they have for perception, Berkeley describes them as *ideas*, i.e. objects before the mind. In view of Locke's use of the term 'idea,' this mode of expression was the natural one for Berkeley to adopt, but it has exposed him to much misunderstanding. To it, no doubt, is mainly due the constantly repeated, but largely unjust, accusation of subjective idealism. Berkeley was quite aware of the danger of what we may call the *popular* misunderstanding of his terminology. 'It sounds very harsh,' he supposes an objector to urge, 'to say we eat and drink ideas, and are clothed with ideas' (see his answer and explanation regarding the use of the term 'idea' in *Principles*, §§ 38, 39). He was also aware of the danger of a more subtle or *philosophical* misunderstanding, viz. that of attributing to ideas some other kind of relation to the mind than that simply of being objects

before it. 'It may perhaps be objected that, if extension and figure exist only in the mind, it follows that the mind is extended and figured.' His answer is that 'those qualities are in the mind only as they are perceived by it—that is, not by way of *mode* or *attribute*, but only by way of idea' (*Principles*, § 49, and cf. the important passage in *Dialogues* [*Works*², i. 470]). But the question may be raised whether Berkeley himself was really able to keep himself free from the subtle confusion which he is here trying to obviate. Does not the habit of describing things as ideas tend to make him regard external things as simply modifications, or private possessions, of the individual mind that perceives them? His critics assume as a matter of course that he did so regard them. And certainly he makes statements which can easily be understood in that sense. For instance, 'What are [material things] but the things we perceive by sense? and what do we perceive besides our own ideas or sensations?' (*Principles*, § 4). Or again, 'Did men but consider that the sun, moon, and stars, and every other object of the senses, are *only* so many sensations in their minds, which have no other existence but barely being perceived, doubtless they would never [as idolaters do] fall down and worship their own *ideas*' (*Principles*, § 94). In passages like these he seems to enunciate subjective idealism in its extremest form. But it must be remembered that everything depends on the prepossessions with which we read these emphatic statements. When the critic, who reads them in the light of his ready-made distinction *between ideas and things*, sees that things are said to be nothing but ideas, he straightway infers that all reality and objectivity are taken out of them. But Berkeley, who entirely denies the distinction *in the sense in which the critic intends it*, infers no such conclusion. On the contrary, he conceives himself, as we have seen, to be vindicating for our perceptions the reality which has been denied to them in order to be attributed to empty abstractions. As he himself protests, he is 'not for changing things into ideas, but rather ideas into things' (*Dialogues* [*Works*², i. 463]). 'Those immediate objects of perception,' says Philonous to Hylas, 'which, according to you, are only appearances of things, I take to be the real things themselves' (*ib.*). From this point of view, then, it is much nearer the truth to speak, with Professor Fraser, of Berkeley's Immediate Sense-Realism (*Life and Letters of Berkeley*, p. 386, where see also the illuminating footnote with its well-known illustration of the two concentric circles). What Berkeley's critics, of course, object to is that things and ideas should be identified at all. But unless the distinction between ideas and things is to be asserted in that absolute fashion, which leads, as Berkeley himself pointed out, directly to scepticism, the objection is really irrelevant. For any less extreme distinction between ideas and things is, and must be, from Berkeley's point of view, a distinction *within ideas themselves in his sense of the term.*

For it must be observed that, when we say that, according to Berkeley, the *esse* of material things is *percipi*, we are by no means giving a complete statement of his doctrine as to their reality. He affirms that all material things are ideas, but he does not affirm that all ideas are material things. The remainder of his doctrine, however, is less characteristic, and may be stated quite briefly. The important question is how those ideas or objects which we regard as real are distinguished from those which are *mere* ideas or products of the imagination. The distinction rests, according to Berkeley, on these grounds: (1) that real objects of sense are independent of our will, (2) that they are much stronger and more distinct than ideas of the imagination, (3) that they are connected together according to fixed laws (*Principles*, §§ 29, 30). That fixed connexions of some sort should obtain among our ideas of sense is the condition upon which alone we can 'regulate our actions for the benefit of life; and without this we should be eternally at a loss' (*Principles*, § 31). But why the particular laws of connexion which do obtain should be just those and not others we cannot say; so far as our insight goes, the laws of nature are contingent or, as Berkeley is fond of saying, arbitrary.

So far we have been dealing with the reality of *material* things. But the doctrine of the nature of *their* reality plainly points *beyond them* to realities of another order. To say that material things are ideas is to say that they are objects for mind, and we have therefore to develop our doctrine of existence in reference to mind. Berkeley does not, however, develop his doctrine of existence very far under this head, and we can again afford to be brief. It remains true, of course, here as in the case of material things, that the only kind of existence we can attribute to mind in general is that which we find actual particular minds to possess. In what way, then, do we know minds as existing? In other words, what manner of existence do we experience in ourselves? The answer is that we know ourselves as busied about ideas or objects, viz. (*a*) as perceiving them or thinking about them, (*b*) as willing or acting in reference to them. In both respects the existence of mind is directly contrasted in character with that of ideas. Mind is percipient, ideas are perceived; mind is active, ideas or objects are passive. To exist, then, in the case of mind, *means* to be active, whether in the way of perception or in that of volition: the *esse* of mind is *percipere*, *velle*, *agere*. From this contrast of mind and ideas two consequences follow: (1) that we have, strictly speaking, no *idea* of mind. We do, of course, have knowledge about mind, but to describe this knowledge we must use some other term than 'idea.' Berkeley himself, in the second edition of the *Principles*, suggested the term 'notion' (§§ 27, 89, 142). But the new term does not imply any alteration in his doctrine of mind. Even in the *Commonplace Book* we find him insisting again and again that 'to ask, Have we an idea of will or volition, is nonsense. An idea can resemble nothing but an idea. . . . Thought itself, or thinking, is no idea. 'Tis an act' (*Works*², i. 35, 51). (2) Since agency is known to us only as a characteristic of mind or spirit, it follows that any changes which ideas or objects undergo must ultimately be referred to the agency of mind. All that we can observe in ideas is the bare fact of motion or change. For the causal explanation of such motion or change we must invoke the agency of mind or will.

While the foregoing doctrine as to the reality of mind has necessarily been developed in the light of our knowledge of our own finite minds, it cannot stop short at the recognition of finite minds. For (1) we assume the existence of many things, which we do not perceive, or have reason to suppose any other finite mind perceives, and (2) we observe many changes, which we do not produce, or have reason to suppose any other finite mind produces. The only way, then, in which we can render intelligible such existence of things which are not perceived by any finite mind, and such change in things as is not produced by any finite agency, is to assume an Infinite Mind on whose intelligence and agency the whole order of Nature depends. And so obvious does

this assumption appear to Berkeley, that he argues that

'God is known as certainly and immediately as any other mind or spirit whatsoever distinct from ourselves. We may even assert that the existence of God is far more evidently perceived than the existence of men; because the effects of Nature are infinitely more numerous and considerable than those ascribed to human agents.'

And among these effects of Nature are the signs by which finite spirits communicate with each other. So that 'He alone it is who, "upholding all things by the word of his power," maintains that intercourse between spirits whereby they are able to perceive the existence of each other' (*Principles*, § 147).

Both in the *Principles* and in the supplementary *Dialogues* Berkeley was at great pains to anticipate and reply to such objections as seemed likely to be brought against his Immaterialism. It is hardly necessary to refer to these in detail, because it is evident *a priori* that any function that can be fulfilled by a perfectly unknown 'Matter' can be equally well fulfilled by Berkeley's intelligent Deity. And, on the other hand, as Berkeley himself points out (*Dialogues* [*Works*[2], i. 468]), it is no use to bring against Immaterialism objections that apply equally against 'Materialism' itself, such as that no two minds, on Berkeley's theory, perceive the same things. For, if this objection holds against Berkeley (a point on which he does not express himself very clearly, *ib.* pp. 466–468), it holds even more obviously against those whose 'same things' are *not* 'ideas,' *i.e.* are not perceived at all.

Subsequent criticism of Berkeley has been inclined to take the line that he has no right to assume the existence of that intelligent Deity which he substitutes for 'Matter,' or even the existence of fellow-men, since logically he is shut up in the circle of his own 'ideas.' The view we take of this criticism will depend, of course, on the view we take of the accusation of subjective idealism. It is a criticism which may be said to come from reading Berkeley too much in the light of Hume's scepticism—a kind of injustice from which Locke too has notoriously suffered. After the manner of Reid—who was frightened out of his original Berkeleyanism by a study of Hume's *Treatise*—the critics construct a logical evolution of thought from Locke (or Descartes) to Hume, in which Berkeley's philosophy must take its appropriate place, however much distortion it undergoes in the process.

The real difficulties of Berkeley's philosophy begin at the point where he himself left off, viz. his inadequately developed doctrines of active mind and of God. Some of the most interesting notes in the *Commonplace Book* are those which show him struggling with the problem of Will. The problem is not followed up in his published works, and yet it is of the utmost importance for his philosophy on its more constructive side, since with him Will, Activity, and Mind coincide. Reflexion soon shows that the eternal volition by which God 'upholds all things' cannot be exercised, as man's finite will is, upon a material given to it from without; and in like manner God's eternal perception of the world is not a perception to which objects are given from without. We have therefore to face this difficulty, By what right do we distinguish God's eternal perception and will from the Order of Nature at all? Berkeley protests (*Principles*, § 150) against Nature being taken for 'some being distinct from God.' He does not realize that, conversely, there is, so far as our mere knowledge of Nature goes, an equal difficulty in taking God as a being distinct from Nature. His blindness to this difficulty is no doubt due to the apparent sharpness of the contrast in finite mind between active thought or will and the ideas upon which these operate. But, even as regards the finite mind, the abstract separation of the activity of thinking and volition from the ideas which alone make thought and will concrete is one which Berkeley could hardly have retained if he had ever come to develop his doctrine of mind for its own sake.

It is noteworthy that Berkeley's negative philosophy or Immaterialism proper is represented in our own day both in science and in philosophy—in science by thinkers like Mach, in philosophy by the Immanent Philosophy of Schuppe and others, which rejects the Kantian thing-in-itself as Berkeley rejected the Lockian substratum or unknown 'Matter,' and adopts a similar identification of things with ideas. Like Berkeley, the Immanent Philosophy is, of course, accused of subjective idealism (see, *e.g.*, the criticism of both in Volkelt's *Erfahrung u. Denken*, 1886, p. 121 ff.). If we take Berkeleyanism in a broad sense as representing some kind of identification of existence with consciousness or experience, the list of recent thinkers who show more or less strong Berkeleyan sympathies might be widely extended.

(3) *Psychological Theory of Visual Perception.*—Berkeley's *New Theory of Vision* is in some ways, perhaps, the most brilliant of all his writings, and is quite unquestionably one of the most brilliant monographs ever written on a psychological subject. It is, moreover, at least as remarkable for its scientific method as for its philosophical power. The general aim of the Essay is to discriminate clearly from each other the specific data of sight and touch, and to show how visual data have acquired a tactual significance. Just as a printed page means far less to an illiterate person than to one who has learned to read, so the patches of colour which are the proper data of sight must have meant far less to us, before experience established a connexion between them and the data of our other senses (especially those of touch and movement), than they do now when that connexion has become firmly fixed. When we look at a picture of a landscape, what is actually before our eyes is a small flat-coloured surface, but this arrangement of colour is significant to us of a great expanse of country. So completely established is this significant character of colour arrangements that it is difficult for any one but a trained artist to eliminate the significance and perceive the mere colour arrangements as such. And in like manner it took the genius of a Berkeley to dissolve that established connexion of visual and tactual data, upon which our adult perception of the actual world depends, and to discover the kind of way in which the connexion must originally have been established. The first problem he deals with is that of the visual perception of distance. He takes it for granted that distance out from the eye is not directly perceived, and that our estimates of *remote* distance are plainly dependent on experience. The part of the problem of which no proper account had as yet been given was the perception of *near* distances; for the mode of treatment adopted in geometrical optics was, as Berkeley showed, quite inappropriate in psychology. The question to be answered was, By what experience is the connexion between near distance as measured by movement and near distance as signified to the eye established? What are the signs of near distance which have brought about the *acquired visual* perception of it? Berkeley discovers three such signs: those which are now known as sensations of convergence and divergence, sensations of accommodation, and diffusion circles. And he shows how, in virtue of the regular connexion of these sensations, on the one hand, with distinct or indistinct vision, and, on the other, with distances as measured by movement, the visual object whose perception brings these sensations is perceived as being at the distance which the sensations signify. *E.g.* if, in order to perceive an

object distinctly, I have to make my eyes converge, I perceive this object as nearer than that at which I was previously looking; if, next, I have also to strain my eyes to keep it distinct, I perceive it as nearer again; and if, finally, it nevertheless becomes blurred, I perceive it as quite close to the eyes. So firmly is the connexion between the specific visual perception of patches of colour and the acquired visual perception of distance now established, that we find the greatest difficulty in discriminating between them; while the sensations whose work it is to establish and maintain the connexion are hardly ever noticed, because our attention is so wholly given to what the sensations mean—viz. differences of distance—that we have none left to bestow on the sensations themselves. Berkeley illustrates his argument from our experience of understanding spoken words:

'No sooner do we hear the words of a familiar language pronounced in our ears but the ideas corresponding thereto present themselves to our minds: in the very same instant the sound and the meaning enter the understanding: so closely are they united that it is not in our power to keep out the one except we exclude the other also. We even act in all respects as if we heard the very thoughts themselves. So likewise the secondary objects, or those which are only suggested by sight, do often more strongly affect us, and are more regarded, than the proper objects of that sense; along with which they enter into the mind, and with which they have a far more strict connexion than ideas have with words' (*New Theory*, § 51).

After dealing with our acquired visual perception of Distance, Berkeley proceeds to investigate in like manner, first, our acquired visual perception of true or tactual (as distinguished from apparent or visual) Magnitude; and, next, our acquired visual perception of Situation. In the latter part of the Essay he urges, in all its breadth, the doctrine, already exemplified in dealing with Distance, Magnitude, and Situation, that the true data of vision and of touch, respectively, are radically distinct, and shows how helpless pure vision would have been if it had been wholly deprived of the aid of touch. The developed sense of vision is extremely rich, but its development depends on what it borrows from touch. It is the experienced connexion of purely visual data with tactual data that makes developed vision what it is. And, according to Berkeley, this experienced connexion is essentially an arbitrary one. *E.g.* it is a fact of experience that, as an object recedes in tactual space, the corresponding visual appearance grows smaller; but the relation might just as well have been precisely reversed, and in that case we should have interpreted decreasing visual magnitude as a sign of approach instead of the opposite. Of course, whichever relation holds must hold consistently. If vision and touch are to correspond at all, their correspondence must be consistent throughout. But that they should correspond at all, and in what manner, is, so far as we can see, an arbitrary or contingent fact (see, *e.g.*, § 143). Throughout the whole Essay, Berkeley develops the logical consequences of his general view with great acuteness and thoroughness. But he does not fail, on the other hand, to use such means of verifying his theory as offer themselves. He applies it, for instance, to solve problems in optics, and also such well-known problems as those raised by the larger appearance of the moon at the horizon, and by the inversion of retinal images.

Berkeley's theory has been both developed and criticized. It left room for development, partly, of course, because it was only a theory of the one sense of vision, whereas modern psychology gives a generalized theory of space-perception; but partly, also, because it assumed (in accordance with the current philosophy) the atomic distinctness of sensations, and therefore treated the problem of perception as a problem simply of the combination or integration of sensations, whereas in a modern psychology such as Ward's, which has learned from biology to regard mind from the point of view of development, the problem of perception is seen to be one of differentiation as well as of integration. And perception, of course, develops as a whole: we do not, as Berkeley's treatment might suggest, have tactual perception present in its completeness before any connexion with visual perception begins.

Criticism (not unaccompanied by misunderstanding) of Berkeley's theory has fastened mainly upon his account of our acquired visual perception of distance. It has been sought to show that the perception of distance is native to vision itself. But no genetic psychology can really afford to dispense with the experiences of movement of the body and limbs in accounting for the perception of space. We must not forget that, if we consider only adult or fully-developed visual perception, we are begging the question so far as Berkeley is concerned. He fully admits that *acquired* visual perception of distance is, in point of *time*, immediate enough. The look and ocular feel, so to speak, of distance in objects is now so familiar to us that we are, within limits, as immediately aware of distance as of colour itself. A table looks to be at a certain distance just as it looks hard, though mere or uneducated vision could no more inform us of distance than of hardness. Recent experimental physiology has shown, however, that, as regards adult visual perception, the primary factor in the (binocular) perception of the *relative* distances of *near* objects is one of which Berkeley was not aware, viz. (in physiological terminology) the mechanism of corresponding points in the two retinæ. And it has been shown that the perception of relative distance by means of this mechanism precedes, and probably sets up, movements of convergence and divergence, not conversely. The question, what answers *psychologically* to the physiological mechanism, *i.e.* Berkeley's question of the *psychological* signs of distance, is one with which physiology is less concerned. Finally, it should be observed that physiological inheritance of nervous co-ordinations may greatly shorten the process of the education of vision.

For the historical antecedents and reception of Berkeley's theory of vision see Fraser's Editorial Preface; on the history of the theory of visual perception generally, Sully's *Human Mind*, 1892, vol. ii. App. B, where reference is also made to the medical evidence; for a full statement of current psychological views, James's *Principles of Psychology*, 1891, ch. xx. in vol. ii.; for the physiology of vision, chap. on 'Vision,' by Rivers, in vol. ii. of *Text-book of Physiology*, ed. Schäfer, 1900. On the more philosophical questions of the 'arbitrariness' of visual signs, and the relative importance of vision and touch in our perception of the external world, there are some illuminating remarks in the chapter on the Theory of Vision, bk. i. ch. xii., in Grote's *Exploratio Philosophica*, pt. ii., 1900.

LITERATURE.—Fraser's *Complete Works of Berkeley* is now in its second edition (4 vols., Oxford, 1901); his *Life and Letters of Berkeley* (Oxford, 1871) contains also an important chapter on the Philosophy of Berkeley; it is supplemented by a smaller biography, *Berkeley*[2], 1899, in Philos. Classics, based in part on new materials.

As regards Berkeley's metaphysics, the criticisms of Reid, *Intellectual Powers* (in vol. i. of Hamilton's ed. of his works), Essay ii. chs. x. xi., are classical in their way; Green, in the General Introd. to his ed. of Hume (reprinted in Green's *Works*, vol. i., 1885), § 158 ff., treats Berkeley only as preparing the way for Hume's completer empiricism; J. S. Mill's essay in *Dissertations*, vol. iv., 1875, and the chapters on the 'Psychological Theory of the Belief in Matter,' in his *Exam. of Sir W. Hamilton's Philos.* (third, 1867, and later editions), chs. xi. xii. and Appendix, are interesting for their points of difference from, as well as of identity with, Berkeley's theory; a brief review of the English psychology of external perception in Croom-Robertson's *Elements of General Philosophy* (1896), pp. 154–180, is useful; in addition to the histories of philosophy see Lyon's *L'Idéalisme en Angleterre au xviiie siècle* (Paris, 1888), and Adamson's *Development of Modern Philosophy* (1903), vol. i. pp. 124–132 and 250 f.; for other literature see *DPhP*, vol. iii. pt. i. (1905) pp. 120–122, or Ueberweg-Heinze's *Gesch. d. Philos.*[10] iii. (1907) p. 172 f.; Ueberweg's own German tr. of the *Principles* is useful for the running criticism given in the notes.

H. BARKER.

BERNARD OF CLAIRVAUX.—1. **Life.**—Bernard was born at Fontaines, two miles from Dijon, in 1090 (not 1091; see Vacandard, *Vie de S. Bernard*, i. 1). His father, Tescelin († Apr. 1117, at Clairvaux), was a knight of experience, gentle but brave, of high birth; his mother, Alith or Alice of Montbard, was of saintly character (for Bernard's noble descent see the 'diatribe' by P. F. Chifflet, 1660, *PL* clxxxv. 1383–1542). Such was Bernard's commanding will that, when (1112) at the age of 22 he determined to become a monk, he persuaded thirty young noblemen, including his brothers, to enter with him the most austere monastery of Europe, the famous Citeaux (*PL* clxxxv. 237), founded 15 years previously by Robert of Molesme († May 1110), and governed, after Robert had been forced to return to his original monastery (1099), by the real founder, Stephen Harding of Sherborne in Dorset († 28th March 1134; for his life see *DNB*, xxiv. 333). In 1115, as Citeaux had grown too big, Bernard was selected by Stephen as the leader, or abbot, of a third colony of twelve sent out from Citeaux to found a new home. Bernard struck out for the plateau of Langres in Champagne, and there (25th June 1115), in a wild valley called Wormwood, watered by the Aube, he built a rude wooden structure, with chapel, dormitory, and refectory under one roof, long afterwards preserved by the veneration of Cistercians (see Joseph Meglinger's description of a visit to it in May 1667; Meglinger, *Itin. Cist.* in *PL* clxxxv. 1608). To this rude structure Bernard gave the name of Clairvaux (i.e. *Clara Vallis*, 'Brightdale,' *vice* Wormwood, *Vallis Absinthialis*, *PL* clxxxv. 241). Here the discipline and asceticism was of the strictest, and for a time Bernard's health was impaired. But the abbey speedily grew in numbers, so that in 1118 it sent out its first colony to Trois Fontaines near Chalons.

In 1119 Bernard began his correspondence, his first efforts showing abundant vigour but little of the later skill. His activity was indefatigable, and his fame and influence rapidly grew. Miracles were assigned to him, especially the gift of prophecy (for the contemporary evidence on this matter see *PL* clxxxv. 252–7, 262, 333–50; and, above all, the astonishing diary of Hermann, bp. of Constance in 1446, in *PL* clxxxv. 374 ff.). At the Synod of Troyes (Jan. 1128) his powerful advocacy gave the Knights Templars their real start, though the Rule of the Templars, commonly assigned to him (Bouquet, *Recueil*, xiv. 232), is by a later hand, at any rate in parts (Labbé, *Conc.* xxi. 360; Mabillon, *Op. Bern.* ii. 543, in *PL* clxxxii. 919). His *de Laude novæ militiæ ad milites Templi* was written about five years later, between 1132 and 1136. Though short, it is rhetorical and somewhat weak (in *PL* clxxxii. 922 ff.). At the same Synod of Troyes he procured the deposition of the bp. of Verdun. For this he was denounced to Rome as a meddler, and received a bitter letter of rebuke from the Roman chancellor, Cardinal Haimerich (*Ep.* 48).

With the death of Honorius II. (14th Feb. 1130) Bernard's European fame began. In the schism which followed, Bernard's voice at the Council of Etampes (1130; for the date see Vacandard, *op. cit.* i. 291 n.) secured for Innocent II., whose hurried election, though prior to that of his rival the Jewish Pierleoni (Anacletus II.), had been most irregular, the support of the French clergy (Labbé, *Conc.* xxi. 441–4); and a few months later, at Chartres (Jan. 1131; see Vacandard, *op. cit.* i. 303), the allegiance of Henry I. of England, in spite of the fact that the English clergy were leaning to the anti-pope Anacletus (*PL* clxxxv. 271). In consequence, Innocent showered immunities on the Cistercians, to the disgust of Clugny, and on his return to Italy in 1132 (from which he had fled almost immediately after his election) took with him Bernard, to whose exertions and letters (Bern. *Epp.* 128 ff.) he owed no small part of his growing recognition. In 1135 Bernard returned to Clairvaux and set about the re-building of the abbey in a more convenient place (*PL* clxxxv. 283–5). In this year we date also the preaching of the first 23 *Sermones in Cantica* (Bern. *Epp.* 153–4; Vacandard, *op. cit.* i. 471). In 1137, as the schism in Italy, under the lead of the Norman Roger, whom Anacletus had crowned as the first king of Sicily, was still disturbing the Church, Bernard once more journeyed there. The death of Anacletus (25th Jan. 1138), and Innocent's recognition in Rome, left Bernard the virtual pope of Christendom, though not without opposition from the cardinals (see below, *re* Gilbert de la Porrée); and with the election of Eugenius III. (15th Feb. 1145), a Cistercian monk and pupil of Bernard, the ideas of Clairvaux became supreme.

In 1145 Bernard was called upon by Eugenius III. to preach the second Crusade at Vézelay (Easter, 31st March 1146). He was afterwards deputed to preach the same in Germany; and as a result of his meeting with the Emperor Conrad III. at Speyer, the reluctant monarch, overcome by Bernard's eloquence, took the cross (27th Dec. 1146). On the failure of the first expedition, Bernard and Suger planned a second, and at a Council at Chartres (7th May 1150; for the date of this Council, which Mabillon, Baronius, Morison, and others put in 1146, see Vacandard, *op. cit.* ii. 428–33) Bernard was actually elected commander-in-chief—an office which he refused (Bern. *Ep.* 256). In his last years Bernard suffered much pain and disappointment. The misfortunes of the second Crusade were laid at his door. He was saddened by the death of his friend, the abbot Suger (13th Jan. 1152). He died five weeks after Eugenius, on 20th Aug. 1153, and was buried at Clairvaux. He was canonized by Alexander III., 15th Jan. 1174 (*PL* clxxxv. 622), while Dante's references (*Par.* xxxi.) show the regard in which he was universally held. When in 1793 Clairvaux was turned into a glass factory and the tombs broken up, Bernard's bones were distributed as relics to surrounding churches (*PL* clxxxv. 1697).

2. **Character and place in history.**—The character of St. Bernard has already been sketched in vol. i. p. 16 (*s.v.* ABELARD). His marvellous energy, in spite of bodily weakness (see the list of his journeys in Vacandard, *op. cit.* ii. App. D), and his power as a ruler of men will be apparent from the preceding outlines of his life. His personal magnetism, as we see from the *Life* written by William of St. Thierry (c. 12 in *PL* clxxxv. 258), was extraordinary, and no doubt, in part, gave rise to the innumerable tales of his miraculous gifts (see above). Equally important was his fearlessness. In his personal humility amid all exaltation he proved himself a true saint, as also in the passion and depth of his piety.

The importance of St. Bernard as the virtual pope of his age cannot be exaggerated. For a few years the centre of Christendom was transferred from Rome to Clairvaux. His influence was generally on the side of the angels, though deduction must be made for his passion as a heresy-hunter (see below), and for a certain impatience of contradiction, which leads him at times into arrogant writing and action (*e.g.* his dispute with the gentle Peter the Venerable of Clugny with reference to the bishopric of Langres [Bernard, *Epp.* 166–87, with which cf. Peter of Clugny, *Ep.* i. 29], which resulted in the election of a prior of Clairvaux, a kinsman of Bernard). At times his restless vigilance shows a tendency to lead him into meddling with matters that did not concern him, probably, as in the case of William

Fitzherbert, archbp. of York, through the appeal to him of Cistercians looking to Clairvaux as their head.

St. Bernard was the last great founder of the older forms of monasticism. Through his influence the Cistercian order spread into every land. Within his lifetime no fewer than 160 Cistercian monasteries were founded, chiefly through his prestige and influence; of these 68 were filiations of Clairvaux (see lists in Janauschek, *Orig. Cist.* vol. i., Vienna, 1877; Vacandard, *op. cit.* ii. App. C). In England especially, the influence of the Cistercians was very great. Introduced at Waverley in Surrey in 1128, they soon established their homes in every part of the country, especially in the wilder parts of Yorkshire (*Eng. Hist. Rev.* [1893] pp. 625–76: 'The Settlement of the Cistercians in England,' by Miss Cooke; see also article MONASTICISM for the distinguishing features of the Cistercians).

3. St. Bernard's theological disputes.—The influence of Bernard as a theologian was always thrown against all change or progress. He was the last of the Fathers, as Abelard was the first of the Schoolmen. In his antagonism to all that Abelard represented (on which see ABELARD, vol. i. p. 16; to the authorities there cited add, for R.C. views, Vacandard, *Abélard, sa lutte avec S. Bernard*, Paris, 1881) Bernard was the refuge of a reactionary school destined to be swept away by the rise of Scholasticism. In later years his hatred of heresy became almost a monomania. As his contemporary, Otto of Freising, tells us:

'Bernard was, from the fervour of his Christian religion, as jealous as from his habitual meekness he was in some measure credulous; so that he held in abhorrence those who trusted in the wisdom of this world and were too much attached to human reasonings; and if anything alien to the Christian faith were said to him in reference to them he readily gave ear to it' ('de Gest. Friderici,' i. 47, in Pertz, *MGH* xx. 376).

Hence a want of fairness in dealing not only with Abelard—this perhaps was natural, for the two men were diametrically opposed—but also with Gilbert de la Porrée.

The struggle of Gilbert and Bernard has been told us on Bernard's side by his secretary, Geoffrey of Auxerre in his *Libellus contra Gilbert. Porret.* (*PL* clxxxv. 595 ff.), and in his *Epistola de Condemnatione*, written forty years later to Henry (not 'Albinus,' as Mabillon, Migne, and other editors; see *Hist. Litt. de la France*, xiv. 339 n.), cardinal bp. of Albano. This *Ep.* is in *PL* clxxxv. 587 ff. It is this version that is followed in the *Acta Sanctorum* (Aug. iv. c. 41) by R.C. writers in general, and by Cotter Morison, *op. cit.* But the publication of the *Historia Pontificalis* (written in 1163, first published in 1868 by W. Arndt in *MGH* xx. 517–45) of John of Salisbury († Oct. 1180, for whom see *DNB* xxix. 439), who was present during the trial, has shown us the inaccuracy and bias of Geoffrey. A more impartial statement is given us by Otto of Freising (*de Gest. Friderici*, i. cc. 55–7).

Gilbert, who was born at Poitiers about 1075, was trained under Bernard of Chartres and Anselm of Laon. After lecturing on theology at Paris, he retired, as bishop, to Poitiers (1141), possibly as the result of Abelard's condemnation at Sens (see vol. i. p. 16). He died in 1154. His *de Sex Principiis*, a supplement to the *Categories* of Aristotle (ed. Venice, 1489), was the recognized mediæval text-book on which Albert the Great and other schoolmen wrote extensive commentaries. By his continuation of Anselm of Laon's continuation of Walafrid Strabo's *Glossa Ordinaria* he became a joint-author of the current mediæval notes on the Bible (R. L. Poole, *Illustrations of Hist. of Med. Thought*, 1884, p. 135 n.; for Gilbert's philosophical position, see Ueberweg, i. 399).

Gilbert, who, according to John of Salisbury, 'was a monk of the clearest intellect and of the widest reading, in literary culture surpassed by none' (*Historia Pont.* viii. 522), had published a commentary on the *de Trinitate* (a collection of treatises first printed at Basel in 1570, currently assigned to Boëthius, but proved spurious by F. Nitzsch, *Das System des Boëthius*, Berlin, 1860). In this *Commentar. in Boëth.*, Gilbert, by distinguishing 'God' from 'Deity,' in which last he found the universal that his realism demanded, had laid such stress on the absolute unity of the Trinity as almost to exclude the existence within it of a Trinity, except as external, non-essential, and merely formal (see Poole, *op. cit.* 179 ff.; or, more fully, Lipsius in Ersch and Gruber's *Allgemeine Encyk.* [1858] lxvii. 209 ff.). His obscure statements led his archdeacons to lodge charges with Eugenius III., and to the attack of Bernard, first in a Synod at Paris (1147), then in an adjourned Council at Rheims (March 1148), where among the advocates for the prosecution we find Theobald, archbp. of Canterbury, and Thomas Becket. On the other side we find the sympathies of the cardinals; the struggle, in fact, in one of its aspects, was a conflict between the prelates of England and France and the cardinals, 'with the object of forcing the Apostolic See to follow Bernard' (John of Salisbury, *op. cit.* ix. 523 ff.; on the complicated politics which led the English to this support of Bernard see K. Norgate, *Angevin Kings*, i. 363 ff.). The issue was a complete failure for Bernard. When Eugenius proposed that Gilbert's commentary should be handed over to him that he might erase whatever was needful, Gilbert claimed that it was his own duty to erase what was amiss—a declaration received with loud applause by the cardinals. The Council ended with the Pope's mysterious ruling 'that the essence of God should not be predicated in the sense of the ablative case only, but also of the nominative' (Otto Freis. *op. cit.* i. 56 f.), and Gilbert returned 'with his honour unabated to his own diocese'; for Geoffrey's statement of Gilbert's recantation (*PL* clxxxv. 597) is, as John of Salisbury shows (*Hist. Pont.* xi. xii. 525 ff.), an exaggeration.

Bernard's other theological controversies may be briefly dismissed. In his attack upon Abelard at Sens (1141, not 1140; see Deutsch, *Die Synode v. Sens*, Berlin, 1880) he came into conflict with Abelard's pupil—'Goliath's armour-bearer,' as Bernard calls him—Arnold of Brescia (see 'Arnoldists,' *s.v.* SECTS [Christian]). But, beyond writing vehement letters demanding his expulsion from Zürich, Bernard had little to do with this twelfth-century Mazzini (Bern. *Epp.* 195 f., 243 f.; Vacandard, *Revue des Quest. Histor.* 1884, 52–114).

St. Bernard also came into conflict with the Henricians, so called from a monk, Henry of Lausanne, of whom we first hear as preaching at Le Mans in 1116. With many of Henry's ascetic and disciplinary views Bernard would, probably, have agreed, but in the South of France the people welcomed the doctrines as an excuse for spoiling the Church. At the instance of the Papal legate Alberic, Bernard (June 1145; for date see Vacandard, *Vie de S. Bern.* ii. 217 n., 223 n.) preached at Albi, the centre of the disorder, with some success, which became complete when his opponent Henry refused St. Bernard's challenge to a disputation. The discredited Henry was captured and brought in chains before his bishop (1146), and, probably, died in prison (Vacandard, *op. cit.* ii. 233 n.).

[For St. Bernard and the Henricians see Bern. *Ep.* 241, also *Vitae* in *PL* clxxxv. 311, 427; 'Acta Hildeberti Cenoman.' in Bouquet, *Recueil*, xii. 547–51, 554.]

On the side of tolerance, we must note Bernard's defence of the Jews of the Rhineland in 1146 against the murderous attacks of the priest Rudolph (Bern. *Ep.* 365; Otto Freis. *op. cit.* i. 37; and, for a Jewish contemporary account, the *Chronicle of Joseph ben Meir* [tr. by C. H. F. Bialloblotzky, London, 1835]). His tolerance in this matter is in notable opposition to his contemporaries, *e.g.* Peter the Venerable, *Epp.* iv. 36 (*PL* clxxxix. 366).

4. Writings and place as a thinker and theologian.—Bernard's writings may be classified as follows:—

(i.) *EPISTLES.*—Bernard's *Letters*, of which about 450 appear to be genuine (in *PL* clxxxii.), reveal the width of his influence and the range of his activities. They deal with all the affairs of the times, from the most spiritual matters through all

the tangled diplomacy of Church and State down to a theft of pigs. In their constant interest in current events they are a great contrast to the letters of Anselm (see vol. i. p. 558), and reveal the fundamental differences of the two authors. The eloquence of the letters is, at times, of a very high order, and they are of considerable value for the history of the period, as is his *Vita Malachiæ*, written in 1149 for contemporary Ireland.

(ii.) *DEVOTIONAL AND HORTATORY.*—Of these the most important are :—

(*a*) The *de Consideratione*, in 5 books (*PL* clxxxii. 727 ff.), composed by Bernard in the leisure moments of many years, but published at intervals (book ii. in 1150, book iii. in 1152 ; see the references in iii. c. 5, § 20) in the evil days which followed the return of the second Crusade (*de Consid.* ii. c. 1). The book is dedicated to Pope Eugenius III. 'Consideration' was treated by Bernard under four heads : (1) concerning oneself, (2) concerning the things which are under one, (3) concerning the things around one, (4) concerning the things above. In this last we see his Mysticism. But the work, though full of shrewd moral reflexions, owes its chief interest to its discursive treatment of other topics, especially the matter of Papal appeals (*de Consid.* iii. c. 2) and other abuses. Bernard held that the reformation of the Church must begin with the sanctity of its head. Its plain speaking has made the work a favourite weapon with Protestant controversialists, *e.g.* E. Brown, *Fasciculus rerum Expetendarum et Fugiendarum* (1690). But, in spite of its anti-ultramontanism (cf. iii. 1, 2), it has also formed a manual for Popes. Pius V. had it read aloud to him daily.

(*b*) The *de Moribus et Officio Episcoporum*, written about 1126 to Archbp. Henry of Sens, and the *Sermo de Conversione ad Clericos* (both in *PL* clxxxii.) contain much plain speaking on the vices of the clergy and the need of reform.

(*c*) The *Sermones de tempore* (*PL* clxxxiii. 35–360), *de Sanctis* (*ib.* 359–536), and *de Diversis* (*ib.* 537–748). The oratory of St. Bernard, though not perhaps of the highest order (see a criticism in Vacandard, *op. cit.* i. ch. 16), was remarkable for its effects (*e.g.* crusades), and in its 'converting' power, especially using 'conversion' in the technical monastic sense. [A remarkable instance of this is given in the *Exordium mag. Cisterciense*, ii. 13, in *PL* clxxxv. 423 ; other instances in Cæsar Heisterbach, *Dial. Miraculorum* (ed. Cologne, 1851), bk. i.]

(*d*) The *de Gratia et Libero Arbitrio* (*PL* clxxxii. 1001 ff., written before 1128, see *Ep.* 52). Bernard's recognition of prevenient grace as the source of all the good in man had appeared to an auditor to be an eulogium of grace at the expense of human merit and activity. Bernard therefore drew up an account of the relation of grace and freewill. He claims for man after his Fall formal freedom as his distinguishing feature, without which there could be no imputation of guilt, and which must consent to the grace which awakens it. But 'the beginning of our salvation comes from God, neither through us nor with us,' in a constraining influence stimulating voluntary consent. In the union of the two lies 'merit.' But his hard Augustinian doctrine of original sin leads him into the usual difficulties, not lessened by his strong evangelical stress upon God's mercy as our sole 'merit' (*e.g. Serm. in fest. omn. Sanct.* i. 11, *PL* clxxxiii. 459 : 'Sed quid potest esse omnis justitia nostra coram Deo ?' etc., or *in Cantica*, xxii. 11, in *PL*, *ib.* 883), being combined with the usual mediæval and monastic conceptions.

(iii.) *MYSTICAL.*—The most important of Bernard's mystical writings are his Homilies on the Song of Solomon (*Sermones in Cantica Canticorum*, *PL* clxxxiii. 780 ff.). To this we must add the later sections of the *de Consideratione*. Of this series, begun in 1135, 86 had been finished before his death. They were actually preached to the monks of Clairvaux, and still bear the signs of interruptions and other local circumstances (cf. Nos. 26 and 47, § 8). *Cant.* iii. 1, where Bernard left off, was thus a favourite starting-place for later imitators. [The continuation by the Cistercian abbot Gilbert († before 1202) of Swineshead Abbey, Lincolnshire, is in Migne, *PL* clxxxiv. cols. 1–251.]

'The great importance of Bernard in the history of Mysticism does not lie in the speculative side of his teaching, in which he depends almost entirely upon Augustine. His great achievement was to recall devout and loving contemplation to the image of the crucified Christ, and to found that worship of our Saviour as the "Bridegroom of the Soul," which in the next centuries inspired so much fervid devotion and lyrical sacred poetry' (W. R. Inge, *Christian Mysticism* [1899], 140 n.).

Bernard thus gave to the romantic, not to say erotic, side of Mysticism a great stimulus. It is true that he always speaks of the Church and not the individual as the bride of Christ, but the enforced celibacy of monasticism soon led to the transference to the individual of the luscious language of the *Canticles* (Inge, *op. cit.* App. D). The symbolism and allegorism of Bernard's methods of Scripture interpretation was, of course, no new thing, and in the Christian Church was chiefly due to the influence of Origen (see vol. i. p. 315). In his *Sermones de Diversis*, No. 92 (in *PL* clxxxiii. 714), Bernard gives a threefold interpretation of Scripture—historical, moral or figurative, and mystical. This is further expanded in his *Serm. in Cantica*, No. 23 (*PL*, *ib.* 884 ff.), with a special panegyric of the vision of God which the mystical interpretation gives (*op. cit.* 893). The mysticism of Bernard is really not systematic, but the outcome of his persuasion that faith receives all truth 'wrapped up' (*involutum*). All that reason can do is to add clearness, a certain strictly limited measure of unwrapping ; for the highest knowledge is that which comes neither by *intellectus* nor by *opinio*, but by intuition or spiritual vision. Of this there are three stages—*consideratio dispensativa*, *æstimativa*, and *speculativa*, in which last *consideratio* becomes identical with *contemplatio* (*de Consid.* v. 1–4 ; *Serm. in Cant.* v. 4, lii. 4, 5).

We see the same mystical principles in his *de Diligendo Deo* (*PL* clxxxii. 974 ff.). God is the ground and cause of a love in which there are four stages (*op. cit.* cc. 8, 15). The first stage is carnal love, in which the man loves himself. The second is a love of God which is selfish, inasmuch as it is due to suffering and experience. In the third stage he loves God for God's own sake. In the fourth stage the spirit, 'intoxicated by the Divine love, wholly forgets itself, becoming nothing in itself, and becoming one spirit with Him.' To be thus affected is to be deified ('sic affici deificari est,' *op. cit.* § 28, and cf. *Ep.* 107, 5 [the expression is a favourite with later mystics])—the annihilation of self 'in the immense sea of a luminous eternity' (§ 30).

(iv.) *POETICAL.*—Much doubt has been cast upon the authorship of the hymns usually assigned to Bernard, but by none more than by Mabillon, who pointed out (*Op. Bern.* v. 891) that the Cistercians 'denied themselves the use of metrical forms' (see the statement of Nicholas de Clairvaux, *Ep.* 15, in *Bib. Max. Pat.* xxi.) ; nor is the ascription to Bernard of very early date. That Bernard composed some hymns and had some distinction as a plain chantist is acknowledged, but he tells us himself that he 'neglected metre that he might pay more attention to sense' [Bern. *Ep.* 398, 3 ; the *Tonale* (*PL* clxxxii. 1151 ff.) owes more to his disciples than to himself (Vacandard, *op. cit.* ii. 101–5)]. The arguments of Trench and others, that 'if Bernard did not write them, it is not easy to guess who could,' are therefore of little value, more

especially as Trench owns the 'general ascription to Bernard of any poems of merit, belonging to that period, whereof the authorship was uncertain.' The *Salve, mundi salutare*, an address in 350 lines to the various limbs of Christ on the cross, shows the influence of his erotic mysticism (see above, p. 532[b]). The section *ad faciem*, 'O sacred head once wounded' (*Salve, caput cruentatum*), is in all hymn-books. The *Jubilus rhythmicus de nomine Jesu*, originally in 42 stanzas (earliest MS, 12th cent., in Bodleian; the other stanzas in printed edd. have not been traced earlier than 15th cent.; see J. Mearns, in Julian, *Dict. Hymn.* 586), is beautiful throughout, in spite of a certain lack of progress in the thought. The translations of the 1st, 2nd, 3rd, and 5th stanzas [*Jesu, dulcis memoria*; E. Caswall († 1828), 'Jesu, the very thought of Thee'; for other versions see Julian, *s.v.*] are in all hymn-books. It is interesting to note that this hymn was specially arranged by the mystic Henry Suso († 1365) as an office for the daily use of the Friends of God. The author, who was probably not St. Bernard, but one of his school, had certainly adopted his style and thought (see Bern. *Serm. de Div.* iv. § 1, 'Bonus es, domine, animæ quærenti te,' etc.).

LITERATURE.—1. *LIFE OF ST. BERNARD.*—(*a*) *Sources.*—We gain our best knowledge of Bernard from a study of his voluminous *Letters* [*supra* § 4 (i.)]. A critical edition of their order is much needed. Contemporary biographies of value were written by (i) William of St. Thierry about 1145 (in *PL* clxxxv. 226 ff.), and continued after William's death by Arnold of Bonneval († *c.* 1156), near Chartres (*PL ib.* 267 ff.), to whom Bernard had written from his death-bed (*Ep.* 310); (ii) his secretary Geoffrey, who succeeded him as abbot of Clairvaux (*PL* clxxxv. 302 ff.); (iii) Alain († 1182), bp. of Auxerre (*PL* clxxxv. 470 ff.). To the above we must add (iv) *Liber Miraculorum* (in *PL* clxxxv. 1273 ff.) of the Spanish monk Herbert of Clairvaux, much of which is legendary; as is also (v) the *Vita Bernardi* of John the Hermit (in *PL* clxxxv. 533. John the Hermit is unknown, unless he be identical, as Vacandard, *op. cit.* i. xliv, suggests, with the prior of Clairvaux, *c.* 1180); (vi) the *Exordium Magnum Ordinis Cisterciensis* (in *PL* clxxxv. 996 ff.), written between 1206 and 1221 adds little of value.

(*b*) *Modern Lives.*—Of these we may mention the Life in the *Acta Sanctorum* (Aug. iv. d. 20); the general preface by Mabillon to his editions (see *infra*); Aug. Neander, *Der heilige Bernhard*, 1813, 1848, 1868, also 2 vols. ed. S. M. Deutsch, Gotha, 1889, Eng. tr. by M. Wrench, 1843 [Neander has also given a full treatment of the theology in his *Church History*]; G. Hüffer, *Der heilige B. von Clairvaux*, Münster, 1886, and 'Die Anfänge des zweiten Kreuzzugs,' in *Hist. Jahrb.* 1887; M. T. Ratisbonne, *Hist. de S. Bernard et son siècle*, 1848 (many later edd.). This last uncritical work has been largely used by the somewhat rhetorical but sympathetic R. S. Storrs, *Bernard of Clairvaux*, 1892. Probably the best life in English, though full allowance must be made for its angle of vision, is J. C. Morison, *St. Bernard*, 1868 (many later edd.). The fullest and best life, apart from its ultramontane standpoint, is E. Vacandard, *Vie de S. Bernard*, Paris, 1895. To this add his early studies, *S. Bernard Orateur*, Rouen, 1877, and *Abélard, sa lutte avec S. Bernard*, Paris, 1881. Kugler, *Analekten z. Gesch. des zweit. Kreuzzugs*, Tübingen, 1878 and 1882, and *Neue Analekten*, 1885, should not be overlooked. For a complete bibliography of Bernard, see L. Janauschek, *Bibliographia Bernardina*, Vienna, 1891.

ii. *THEOLOGY.*—To the well-known works of Harnack, Loofs, Seeberg, and W. R. Inge (*Christian Mysticism*, 1899), add Dieckhoff, *Justin, Augustin, Bernhard und Luther*, Leipzig, 1882.

iii. *EDITIONS.*—MSS of Bernard abound (see Potthast, *s.v.*), and testify to his hold on the Middle Ages. Some of his *Sermons* were printed at Strassburg as early as 1472; and his *Epistles* at Brussels, by the Brothers of the Common Life, in 1481. The first fairly complete ed. of his works is by Andrew Bocard, Paris, 1508. This was followed by the more complete Lyons ed. of 1520 and many others (*e.g.* 1515, 1547, 1566, 1572, 1586, 1601, 1609). These were superseded by the able ed. of J. M. Horst, 1641, 1667, on which J. Mabillon based his standard ed. (2 vols., 1667, 1690, 1719, 1839). The ed. of 1719 is that reprinted in Migne, *PL* vols. clxxxii.–v. A new critical ed. of many of the *Sermons* was brought out by Janauschek, *Xenia Bernardina*, Vienna, 1891. A more critical ed. of *Letters* and *Works* is much needed. A complete tr. into French by A. Ravelet, 1865, is in progress; also by Charpentier, Paris, 1873, in 8 vols. Many of the works and all the *Epistles* have been translated into Eng. by S. J. Eales, 4 vols., 1889–96 (with Introduction and Life). Add also M. C. and C. Patmore, *On the Love of God*, 1881. The *de Consideratione* is in Goldast, *Monarchia Rom. Imperii*, Hanover, 1612, ii. 68 ff.

H. B. WORKMAN.

BEROSUS (or BEROSSOS).—A Chaldæan priest in the temple of Bel (Marduk) at Babylon, who is said by Eusebius (*Chronicon*, 5. 8) and Tatian (*Oratio ad Græcos*) to have been a contemporary of Alexander the Great, and to have lived into the reign of Antiochus Soter. He compiled in Greek a *History of Babylonia*, which, unfortunately, like the corresponding work of Manetho in Egypt, has perished, and is known to us only by fragmentary quotations from Alexander Polyhistor and Apollodorus, preserved by Eusebius and George the Syncellus. Josephus (*c. Apion.* i. 19 f.) seems to have been acquainted with the original work of Berosus.

According to Alexander Polyhistor (see Cory, *Ancient Fragments*, 1832), he wrote the historical account of fifteen myriads of years, the history of the heavens and of the sea, of kings and their memorable actions, and of the generations of mankind and their civil polity. His *History* professed to begin with creation, and was carried down to his own time. It first described a state of chaos, presided over by the female monster Tiâmat, who was encountered and slain by the god Marduk, and whose overthrow was succeeded by the creation of the heavens and the earth. Berosus then gives a chronology of the Babylonian kingdom. Only a part of this has come down to us, and that in a condition which makes it in parts almost unintelligible. The difficulty of re-constructing his system is increased by the fact that the lists which he copied from the cuneiform originals have been mutilated by his abbreviators, and have suffered still further at the hands of those who copied the abbreviated lists. The most probable reconstruction is that of A. von Gutschmid, which is here given.

10 kings before the Flood, 432,000 years.

Ist Dynasty :	86 Chaldæans . .	34,091 years.		B.C.	2450–2226
IInd „	8 Medes . . .	224 years.			
IIIrd „	11 Chaldæans . .	248	„ „		2225–1977
IVth „	49 Chaldæans . .	458	„ „		1977–1519
Vth „	9 Arabians . . .	245	„ „		1518–1273
VIth „	45 Chaldæans . .	526	„ „		1273– 747
VIIth „	8 Assyrians . .	121	„ „		746– 625
VIIIth „	6 Chaldæans . .	87	„ „		625– 538

It has been pointed out by Brandis (*Rerum Assyriarum tempora emendata*, p. 17) and Gutschmid (*op. cit. infra*) that the post-diluvian period of 36,000 years has been adjusted to coincide with an astrological period during which the gods had granted glory and independence to the Chaldæans, and which terminated with the capture of Babylon by Cyrus.

The latter part of Berosus's historical statement has not survived except in detached fragments which have been preserved by Josephus, Eusebius, and the Syncellus. One fragment concerning Nabonassar (B.C. 747 ?) states that the Chaldæans were acquainted with astronomy only from his time onwards, because he destroyed all previous records. There are also fragments concerning the reigns of Nabopolassar and Nebuchadrezzar—the death of Nabopolassar, the succession of Nebuchadrezzar and his adornment of Babylon—and about the succession of Chaldæan kings after Nebuchadrezzar, ending with the capture of Nabonidus by Cyrus.

In comparing his work with the Babylonian and Assyrian inscriptions, it is somewhat difficult to arrive at any definite result on account of the deficiency of exact dates on both sides. In the absence of more satisfactory information, the list of Berosus must be taken as a provisional framework for Babylonian chronology, as the lists of Manetho are taken in Egyptian chronology, but with less confidence in the case of Berosus. Recent discoveries indicate, on the whole, his trustworthiness so far as regards the fact that his work actually represents the sources from which it professes to have been drawn; *e.g.* his account of

the Deluge agrees even in details with the cuneiform text. No confidence, however, can be reposed in the numbers allotted to his dynasties. In his antediluvian dynasty one or two names can be recognized with some difficulty as being possible variants of some of those which occur in the inscriptions, *e.g.* the last two kings—the name of the first of whom, Otiartes, has been suggested by Lenormant to be a corruption of Obartes, who appears in the inscriptions as Ubaratutu; while the name of the second, Xisuthros, may be Khasisatra, or Atrakhasis, the Sîtnapišti of the Gilgamesh legend. His third dynasty, consisting of eleven kings, seems to correspond with that traced by G. Smith, and suspected by Sayce to be of Arabian origin. The most prominent king in it is the famous Ḫammurabi (B.C. 2130). His Arabian dynasty, according to Sayce, appears to be the Kassite dynasty of the inscriptions; and if so, both the title and the figures of 9 kings and 245 years must be corrupt, since 36 Kassite kings are known, covering a period of 576 years. Minor dynasties seem to have been either run together or omitted altogether from Berosus's lists, as a broken tablet which once contained a complete list of Babylonian monarchs arranged in dynasties introduces a number of very short ones. This arrangement or omission may have been the work of Polyhistor or his copyists.

Apart from the chronological value of his work, the main interest of Berosus's *History* lies in the fragments of the ancient cosmogonic myths of Babylon which he has preserved. The chief of these are the legend of Tiâmat and Marduk (Bel and the Dragon); that of the giving of letters and civilization to mankind by Oannes (*Êâ-ghan*—Êâ the fish?), a composite being, partly fish and partly man (cf. the giving of letters to Egypt by the composite deity Tehuti); the legend of the great tower and the confusion of tongues; and that of Xisuthros and the Deluge. From the actually existing cuneiform records it is apparent that Berosus's account of these legends practically represents the ancient Chaldæan tradition. In particular, his story of Xisuthros and the Deluge has been found to be a fragment of the great Gilgamesh epic.

LITERATURE.—Maspero, *Histoire ancienne*, Paris, 1886, vol. i. 'Les Origines'; Lenormant, *Essai de commentaire de fragments cosmogoniques de Bérose*, Paris, 1872; Cory's 'Ancient Fragments' (*Texts and Translations*), 1832; G. Smith, *TSBA* vol. iii., and art. 'Berosus' in *EBr*; Sayce, *Ancient Empires of the East*, Lond. 1884, also *Religions of Ancient Egypt and Babylonia*, Lond. 1902, and *Hib. Lect.* on 'Babylonian Religion,' Lond. 1887; A. von Gutschmid, 'Zu den Fragmenten des Berosos und Ktesias,' in *Rheinisches Museum*, viii. 256 (1853).

JAMES BAIKIE.

BESTIALITY.—Bestiality, *i.e.* the possession or exhibition of the qualities or nature of a beast, may manifest itself in human life, and so touch the religion or ethics of a people, in three ways: in eating and drinking, in sexual matters, and in the manifestation of wanton cruelty. Apparently among all primitive peoples bestiality is in some degree exhibited. It is eradicated only after a considerable intellectual and moral development. The peculiar conditions of Arabia and North Africa, the primitive Semitic and Hamitic homes, although they compelled an advance, if life was to be maintained at all, to a relatively high degree of barbarism, made the development of a high civilization impossible. Human ingenuity was compelled to extract from the oases the greatest possible nourishment; this urged the races forward; but the hard deserts which intervened between the scattered oases bound the struggling peoples in the fetters of barbarism (see Barton, *Semitic Origins*, ch. ii.). The constant influx of large numbers of immigrants from these desert conditions into the various Semitic countries through the whole course of history tended to keep alive within them all primitive bestial elements.

1. Bestiality in eating and drinking was probably exhibited whenever an opportunity was afforded for the underfed men of the desert to obtain a plentiful supply of meat. The ordinary diet was milk and dates, supplemented occasionally by a little game (see Doughty, *Arabia Deserta*[2], 1888, i. 156 ff.; Palgrave, *Central and Eastern Arabia*, 1865, i. 60; and Barton, *op. cit.* 75 and 77 ff.). The population was always underfed and afflicted with a gnawing hunger. These facts sufficiently explain the origin of the method of sacrificing a camel among the Arabs, described by Nilus, *c.* 400 A.D. While the last words of a chant were still upon the lips of the worshippers, the leader inflicted a wound on the camel and hastily drank his blood. The whole company then fell upon the victim with their swords, hacking off pieces of the quivering flesh and devouring them raw, with such wild haste that in the short interval between the rise of the day-star, at the appearance of which the service began, and the disappearance of its rays before those of the rising sun, the entire camel, body and bones, skin, blood, and entrails, was wholly devoured (cf. W. R. Smith, *Rel. of the Semites*[1], 338 ff.). Even if some allowance is made for exaggeration on the part of Nilus, the method of consuming this sacrifice is not unlike the tearing asunder of a carcass by dogs or wolves. As religious customs preserve ancient ways longer than they survive elsewhere, we have here an exhibition of the bestiality of the primitive Semite in eating.

Some passages in the OT indicate that at the religious festivals excessive eating, or more properly drinking, occurred. Thus Eli (1 S 1^{13}) naturally thought that Hannah had become drunk at the feast which was just concluded. Again, La 2^{7} compares the turmoil in the temple, when Nebuchadrezzar sacked Jerusalem, to the noise 'in the day of a solemn assembly.' This noise could hardly have been all due to the wailing, which originally attended the death of a victim, but must in part at least have been due to revelry. Private feasts were accompanied by music and wine (Is 5^{12}), and were occasions of hilarity (Am 8^{10}); and the same was probably true of all religious feasts down to the Exile.

As the Semites moved into agricultural lands and began to cultivate the vine, their excessive drinking led naturally to some drunkenness. A classic instance of this is embodied in the tradition of Noah's drunkenness in Gn $9^{20ff.}$. That drunkenness existed in all periods of Israel's history is proved by 1 S 25^{36}, Dt 21^{20}, and Pr $23^{21ff.}$. Herodotus (ii. 60) vouches for the fact that large quantities of wine were also consumed at certain Egyptian festivals, where, no doubt, it produced similar results. Apparently, however, drunkenness among the ancients was never so flagrant a vice as it is in modern Anglo-Saxon countries.

2. Among the ancient Semites, as among other peoples at a similar stage of culture, the sexual appetite was strong. The physical conditions, which held them so long in a state of barbarism in their cradle-land, led to the crystallizing of their religious customs about sexual ideas of a primitive character; and as religion perpetuated these customs, certain primitive features bordering on the bestial appear more prominently among the Semites than other peoples of antiquity, though they can be traced to some extent also among the Egyptians, who appear to have originated under similar conditions.

In early times sexual bestiality seems also to have led occasionally to actual connexion with animals. In the Gilgamesh epic, Eabani, the

primitive man, is represented as living a wild life with the animals, and as satisfying his passion with them. He was induced to leave them only after having experienced the superior charms of a woman (cf. *KB* vi. 125–127). Jastrow (*AJSL* xv. 207 ff.) holds that this was the primitive Semitic idea of the relations of men and animals, and that the original form of the second chapter of Genesis contained a similar story. Certain it is that such relations continued to exist sporadically until comparatively late times, for such prohibitions as that in Lv $20^{15f.}$ would never have been made had there been no such practice to eradicate.*

Among the primitive Semites the marriage relations consisted of various forms of polyandry, of which Nair polyandry was the most ancient (cf. W. R. Smith, *Kinship and Marriage in Early Arabia*, and Barton, *op. cit.* ch. ii.). This type of polyandry was, in reality, the loosest kind of marriage, and was accompanied by a good deal of promiscuity. After settlement in agricultural lands this type of marriage gave way to polygamy. Women who adhered to the older type of marriage lost caste, except where connexion with a temple gave them a certain standing. In Israel they maintained themselves down to the reform of Josiah in the year B.C. 621 (cf. Dt $23^{17.\ 18}$, 2 K 23^{7}). In Babylonia similar conditions existed. The code of Ḥammurabi shows that a class of unmarried women were connected sacredly with the temple. They might have children, who apparently were frequently adopted by other people (see *Code*, §§ 192, 193). In many parts of the Semitic world, male prostitutes, called technically 'dogs,' were also connected with the temples (Barton, *op. cit.* 188 and 251 n. 2). This is the meaning of the term in Dt 23^{18}. In Egypt similar ideas seem to have been kept alive by the ithyphallic god Min, whose festal procession is pictured on the walls of the temple of Deir el-Bahri and elsewhere, and by the god whom Herodotus (ii. 48, 49) identifies with Dionysos. At feasts in Babylonia (Herod. i. 199), in Egypt (*ib.* ii. 64), and in Israel, loose sexual practices were kept alive, protected by the sacred name of religion. This, no doubt, tended to perpetuate low and bestial ideals. The bestial influence of these practices can best be appreciated by those who have seen the objects exhumed at the Ashtart temple of ancient Gezer, but naturally not yet published. Many of these objects are the grossest sexual emblems. They reveal how great were the odds against which the ethical religion of the Hebrew prophets had to contend.

Apart from religion, bestial sexual practices were sometimes indulged in. For example, the treatment accorded by the men of Gibeon to a young woman (Jg 19) was unmitigated bestiality. Similar crimes, however, occur in modern times, especially in countries where, as in the United States, there is a considerable number of backward coloured people.

* [This crime, which still occurs sporadically, so that modern criminal codes provide penalties for its suppression, seems to have prevailed among the Greeks and Romans of the later period, as is proved by an extremely unsavoury adventure described in the *Metamorphoses* of Apuleius, so that the '*Abodā Zārā* forbids the stabling of cows in Gentile stalls (*JE* v. 621). Equal degeneracy is recounted in the *Arabian Nights* (tr. Payne, London, 1882–84, iv. 137–143), and in the Hindu Aśvamedha (*q.v.*) there was even a ritual bestiality with the *membrum virile* of the sacrificed sacred horse. In mythology, however, the majority of the amours between human beings and animals, with which every student of the classics and comparative religion is familiar, receive their explanation from totemism, so that, as MacCulloch observes, 'as man's religious conceptions advance, his worshipful spirits and gods assume more and more a human form, but preserve traces of their animal form, and from this such tales take their origin' (cf. his admirable chapter on 'Beast-Marriages,' *CF* pp. 253-278, and the literature there cited).—Louis H. Gray.]

3. Bestiality was also exhibited by some of the ancient Semites in their *warlike practices*. Thus we are told that the Ammonites ripped up women with child (Am 1^{13}). Assyrian kings seem to have practised the greatest cruelty upon their captives taken in war. Thus they boast that they flayed their prisoners alive and spread their skins on city walls (*KB* ii. 165), bored out the eyes of their prisoners (*ib.* i. 113; cf. 2 K 25^{7}), and tore out their tongues (*ib.* ii. 257), and also they impaled their victims on stakes (cf. *ib.* i. 113, ii. 165). Perhaps to future generations the warfare of the present will seem as bestial as these cruelties do to us. See, further, CRIMES.

BETTING.—See GAMBLING.

BHAGAVAD-GĪTĀ (the 'Song of the Blessed') is the name of the celebrated religious and philosophical poem of India, which is inserted as an episode in the sixth book of the Mahābhārata.

The two nearly related but hostile clans of the Kauravas and Pāṇḍavas, after disputes extending over many years, make ready for open combat, and advance against one another with the forces and allies on either side to the plain of the Kurus, in the neighbourhood of the modern Delhi. The two families, being nearly related, have equal claim to the name of Kurus or Kauravas; but the title is usually limited to that side which was arrayed under the leadership of the blind king Dhṛtarāṣṭra. To him the course of the battle is narrated by his charioteer Sañjaya, who has been endowed by Vyāsa, the reputed author of the Mahābhārata, with supernatural power to discern all the incidents of the fight. Almost the first place in this narrative of Sañjaya is taken by the dialogue between Kṛṣṇa and Arjuna, the full title of which is *Bhagavadgītopaniṣad*, 'the secret doctrine proclaimed by the Blessed One,' usually abbreviated into *Bhagavad-Gītā*, or simply *Gītā*.

At the sight of his near relatives in the hostile army, Arjuna, the famed archer of the race of the Pāṇḍavas, hesitates to begin the fight; and is recalled to a sense of his duty by Kṛṣṇa, who in human form stands by his side as his charioteer. The admonitions and instructions of Kṛṣṇa adopt a more serious and elevated tone as he proceeds, and in the eleventh book he reveals himself to Arjuna as the one only God, the Lord of all worlds, who has assumed the form of the hero of the Yādava race.

This is not the place in which to enter into the full details of the historical development of Kṛṣṇa, who in the Mahābhārata appears at one time as a human hero, at another as semi-divine (a phenomenal form of Viṣṇu), or again as the one only God, and who finally is identified with Brahman, the All-Soul. The judgment which the author of this article has formed with regard to the lines which this development has followed may be learned from the Introduction to his translation of the Bhagavad-Gītā, ch. ii. (Leipzig, 1905). The following brief statement must suffice for a due appreciation of the contents of the Gītā.

It may be assumed as probable that Kṛṣṇa was originally the leader of a warrior and pastoral tribe of non-Brāhman race, and that he lived long before the Buddha. He became the eponymous hero of his people, not only because of his prowess in war, but also probably because he was the founder of the religion of his race—a religion independent of the Vedic tradition and monotheistic, in which a special stress was laid on *ethical* requirements. The adherents of this religion were called 'Bhāgavatas,' adopting other names later on. As the form of Kṛṣṇa within the race to which he belonged was advanced from the position of a demi-god to that of a god (identified especially with the god of the Bhāgavatas), Brāhmanism claimed as its own this popular and powerful representation of the Deity, and transformed it into an incarnation of Viṣṇu. In this way Brāhmanism

succeeded in gaining over the entire religious community of the Bhāgavatas, and the latter (a still existing sect [see BHAKTI-MARGA]) were merged in Brāhmanism. The Bhagavad-Gītā was originally a text-book of this sect, and in the course of time has won a position of such significance for the whole of Brāhman India that in recent years educated Hindus have put it forward as a rival to the New Testament. No other product of Indian religious literature is worthy to hold a place by the side of the Bhagavad-Gītā, in view of the beauty and elevated character of the thought and expression in many passages. On a metaphysical basis there has been raised in it a structure of lofty ethical teaching, which we miss in the orthodox systems of Indian philosophy.

It has long been known that we do not possess the Bhagavad-Gītā in its original form, but in a form which is the result of essential modifications. The doctrines, which are here put into the mouth of Kṛṣṇa, present a remarkable combination of pantheistic and monotheistic ideas, of philosophical thoughts, and of pure and deeply religious faith in God.

A personal God, Kṛṣṇa, manifests himself in the form of a human hero, propounds his doctrines, and demands of his hearer not only the exact fulfilment of duty, but before everything else faith and love and resignation, of which he is himself to be the object. By a special act of grace he then reveals himself in his superhuman but still bodily form, and promises to the faithful, as reward for his love to God, admission after death to His presence, and the prize of fellowship with Him. By the side, however, of this deity, thus conceived in as *personal* a manner as possible, who dominates the entire poem, there is introduced several times as the supreme first principle the neuter *impersonal* Brahman, the Absolute. At one time Kṛṣṇa says of himself that he is the one sole supreme God, the creator and ruler of the universe and of all things therein; at another he sets forth the Vedāntic doctrine of the Brahman and of *māyā*, the cosmical illusion, and proclaims that the supreme end of man is to transcend this cosmical illusion and become one with Brahman.

These two doctrines, the theistic and the pantheistic, are interwoven with one another, sometimes following one another closely and without a break, sometimes more loosely connected. Yet the one is not announced as the lower exoteric doctrine, and the other as the higher esoteric; nor is it in any way taught that theism is a grade preliminary to knowledge, or a type of the truth, and the pantheism of the Vedānta the truth itself (see art. VEDĀNTA). But the two forms of belief are throughout treated entirely as though there were no distinction at all between them, whether as regards contents or value.

The attempt has been made to explain away the contradictions of the Bhagavad-Gītā, on the theory that no definite system is here intended; that the whole is the work of a poet, who gives utterance and shape to his thoughts as they occur to him, without heeding the anomalies which are involved in detail.

The fundamental contradiction, however, which permeates the Bhagavad-Gītā cannot be set aside by an appeal to its poetical character. It can be explained only on the hypothesis that one or other of the heterogeneous doctrines propounded by Kṛṣṇa must be a later addition. Adolf Holtzmann therefore maintained the view that the Bhagavad-Gītā was originally a poem of a purely pantheistic nature, which was later modified and adapted in the interests of the Viṣṇu-Kṛṣṇa cult, and had thus impressed upon it its present form. This theory also, however, is mistaken; precisely the reverse seems to be the fact. The entire character of the poem in design and execution is so overwhelmingly theistic, that we must suppose it to have been from the very beginning of a purely theistic character, and to have been adapted later in a pantheistic sense from the standpoint of the Vedānta philosophy. In the ancient poem Kṛṣṇa speaks of himself, and Arjuna of Kṛṣṇa, as of an individual, a person, a conscious deity. In the recension the neuter Brahman appears in the added portions as the final and loftiest conception, and is occasionally identified with Kṛṣṇa. Briefly stated, then, the real facts are that in the ancient poem *a Kṛṣṇaism based upon the Sāṅkhya-Yoga philosophy is set forth; in the additions of the recension the Vedānta philosophy is taught* (see artt. SĀṄKHYA, YOGA, VEDĀNTA). It has long been known, indeed, that the doctrines of the Sāṅkhya-Yoga formed, on the whole, the basis of the philosophical speculations of the Bhagavad-Gītā, and that, as compared with them, the Vedānta holds a quite secondary position. Acting on this conviction, the author of the present article has attempted, in his translation of the Gītā, to determine the original form of the poem, and to separate the additions of the Vedāntic recension.

The doctrines of the true original Bhagavad-Gītā are briefly as follows. They may be defined as the faith of the Bhāgavatas, considerably modified by the introduction of elements from the Sāṅkhya-Yoga. In the following account it is not proposed to adhere to the line of thought of the poem, which wanders from one to the other, and especially in its practical demands constantly intermingles the different recognized standpoints of religion and philosophy.

We begin with the *systematic* part, and in the first place with the person of God. God is a conscious, eternal, and almighty Being, the 'great Lord of the universe, who is without beginning' (x. 3). He is distinct not only from the perishable world, but also from the imperishable soul of existing beings (xv. 17–19). He is therefore soul in another and higher sense than the souls of all creatures. When it is asserted in vii. 4–6 that God has two natures, one a higher spiritual nature, by which the universe is sustained, and a second, a lower and material nature, consisting of all that, according to the Sāṅkhya, belongs to *prakṛti* or matter, this statement is not to be construed in the sense that a half of the Divine essence is composed of matter; the meaning is rather that matter is not itself independent, following its own blind impulses, but that its evolution is under the control of God; in other words, that God works in matter, and acts through it. This is clearly expressed in other passages of the Bhagavad-Gītā. God deposits in matter the germ from which development takes place (xiv. 3, 4). He is therefore the father of all creatures, while matter may be compared to the mother's womb (xiv. 4). God superintends the rise, development, and decay of the universe (ix. 7, 8, 10), and in this sense He is termed the origin and end of the whole world (vii. 6, x. 8), and is identified with death (xi. 32). The creatures in all their doings and conditions of life have their origin from Him (x. 4, 5); He determines their fate, *i.e.* recompenses them according to their deeds, and in the cycle of life makes the creatures 'revolve like figures in a puppet-show' (xviii. 61). All His acts are solely for the sake of the universe, for He Himself has no wish to fulfil, no end to attain (iii. 22, 24). 'Whenever justice declines and injustice increases,' God, who is yet eternal and imperishable, re-creates Himself, *i.e.* assumes new phenomenal forms 'for the protection of the good and the destruction of the evil, in order to establish the right' (iv. 6–8). Because the action of God is due to the matter of which He is the ruler, and is never due to a selfish motive, He is not fettered by His action (iv. 13, 14, ix. 9), and can never, therefore, be entangled in worldly existence. The imaginary picture of God in Book xii. is a dramatic embellishment, which is intended to touch the fancy, but is of slight importance for the real teaching of the Gītā.

The relation of God to the world of mankind is determined not solely by the stern law of retribution, but by love to those who know Him and are whole-heartedly devoted to Him (vii. 17, xii. 14–20, xviii. 64, 65, 69), and He delivers from all sin those who take refuge in Him alone (xviii. 66). In this passage already, therefore (and also in xviii. 56, 58, 62, 73), is set forth that confidence in the Divine

grace (*prasāda*) which we meet with in some Upaniṣads of the middle period (see art. UPANIṢADS), and which in consequence holds so important a place in the Indian sects.

Although it is God who guides the processes of the world, yet, as we saw above, all acts are to be ascribed to *matter* (iii. 27, v. 14, xiii. 20, 29). Out of primitive matter the universe is evolved, and it returns back again into it (viii. 18, 19). This conception of evolution and re-absorption, like the theory of the world-periods, is therefore derived from the Sāṅkhya system; and in general all the views of the Bhagavad-Gītā with regard to matter agree with the doctrine of the Sāṅkhya. The three *guṇas* play here the same part as in that system (see art. GUṆAS); by their influences the soul is enchained (xiv. 5 ff.), and the consequences of their activity make themselves felt throughout the entire life, as is described in detail in Books xvii. and xviii. Even the physiological conceptions with regard to the inner organs and the senses are those of the Sāṅkhya system (iii. 40, 42, xiii. 5). None of these correspondences, however, is of such importance for the doctrines of the Gītā as the fundamental conception of the nature of matter, derived from the Sāṅkhya, which forms the basis of the philosophical discussion in Bk. ii. Matter, it is true, is in no sense created by God, but exists from eternity; it is, however, subject to incessant mutation and change. All its products and effects are transitory; its influences, especially those of pleasure and pain, come and go, and they do not therefore deserve that man should regulate his conduct by them (ii. 14).

Over-against this mutability of all the products of matter is set the immutability of the soul. The latter, indeed (the soul, the self), resembles matter, in so far as both are eternal and indestructible; for that which is, ever has been, and ever will be: 'existence cannot be predicated of that which is not, nor non-existence of that which is' (ii. 16). The main contrast, however, between soul and matter consists in this, that the former is never subject to change. In reality the soul dwells within the body absolutely inactive, 'neither acting nor inspiring action' (v. 13–15), and remains unaffected by all the influences and acts of matter. This thought is elaborated in choice language in the 2nd Bk. of the Bhagavad-Gītā. He who knows that the soul is the true I, which abandons the worn-out bodies and enters into new ones, as a man puts off old clothes and puts on new (ii. 22), that the soul can neither be hurt nor destroyed, laments not over human suffering and death, *i.e.* over events which affect merely the perishable body.

All this is pure Sāṅkhya doctrine. Nevertheless the conception of the spiritual principle in the Gītā is essentially different from that of the Sāṅkhya system; it is decidedly more religious than philosophical. According to the Gītā as representing the belief of the Bhāgavatas, the individual soul does not lead a separate existence from all eternity, but it has become severed as a part from the Divine soul (xv. 7, cf. also xvi. 18, xvii. 6). Individual souls are therefore of Divine origin. They have entered into a union with matter, which is incapable of effecting any change in the souls themselves, but by which life and consciousness have been brought into the universe. It is the duty of man to behave in such a way that his soul may be able to return again to its origin, to God.

We now come to the *practical* part of the doctrines of the Gītā. Here two ways of salvation are contrasted with one another, one of which consists in withdrawal from the life of the world, and seeking after knowledge, the other in acts conformable to duty and free from desire. Although the second way is repeatedly described as superior (iii. 8, v. 2, xviii. 7), and, to judge from the whole tenor, is to be regarded as the true ethical ideal of the poem, the author has nevertheless not ventured to reject the way of salvation by renunciation of the world, and abstract knowledge. The conception that deliverance from the cycle of existence was to be won by meditation in complete isolation from the world, had been for centuries so deeply rooted in all thoughtful circles among the Indian peoples that it could no longer be seriously assailed. No course remained open but to concede a place to the two ways side by side with each other, and to teach that both right action and the knowledge which implies non-action or abstinence from works lead to salvation. From the fact that in the Gītā now one and now the other standpoint is adopted, and at times the ideal of quietism is placed unreservedly above that of activity (vi. 3), all sorts of inconsistencies and ambiguities have arisen, which a decided rejection of the quietistic standpoint would have avoided. The Bhagavad-Gītā reconciles the two views by explaining that action in fulfilment of duty, which is performed without regard to success and without any personal interest, ceases to produce fruit, and accordingly for the actor does not result in any continuance of worldly existence. Action of this nature, therefore, as far as consequences are concerned, is equivalent to the abstinence from action of the way of knowledge.

The knowledge which is to be attained by the quietistic way of salvation is described in several passages of the Gītā, precisely on the lines of the Sāṅkhya system (xiii. 23, xiv. 19), as a discrimination of soul and matter; and as a consequence of this discrimination release from the necessity of re-birth is assured to him who knows, without regard to conduct (xiii. 23). This may be looked upon as an isolated recognition of the pure Sāṅkhya ideal. In general the view of the Bhagavad-Gītā is that saving knowledge is not limited to the discrimination of soul and matter, but this discrimination is to be regarded merely as a condition preliminary to the *knowledge of God*; it is this that first really opens the way to the highest salvation.

The second way of salvation, the unselfish discharge of duty, is incessantly enjoined in the Bhagavad-Gītā in the most varied manner. But the mere discharge of duty would not lead to the goal so long as there is still associated with it any expectation of fruit. What is commanded must be done without passion, with quietness and equanimity, with an even regard for every one, esteeming indifferently the pleasing or displeasing, pleasure or pain, good or evil fortune, with no trace of desire or personal interest. If a man acts in this frame of mind, without vexing himself with regard to transitory material results (ii. 14), solely according to the precepts of duty and the Divine example (iii. 22), leaving to God the outcome of all his works, his works are not subject to the law of retribution (iv. 22, 23, ix. 27, 28, xviii. 12, 17). The requirements here laid down necessitate the rejection of the Vedic conception of the merit of works, and this is expressed in the original Gītā without any limitation. All the ceremonies of the Brāhmanical ritual minister, indeed, throughout to individual desires, and therefore stand in sharp contrast to the ethical ideal of the Gītā. 'Abandon all sacred rites,' it is said in xviii. 66; and similarly, in ii. 42–45, unconcealed contempt is expressed for the promises of the Veda, which take account only of the material world and offer only transitory reward (cf. also ix. 20, 21). Indifference towards the prescriptions of the Vedic ritual is therefore also a preliminary condition for the

attainment of salvation (ii. 52, 53). In this requirement, again, pure Sāṅkhya doctrine is assumed, as will be plain to every one acquainted with the Indian systems of philosophy.

Whether, however, it is the one or the other way of salvation that is followed, a hindrance that lies in the natural disposition must be overcome. When it is said in iii. 3 that 'the creatures follow their nature,' and when in xvi. 1 ff. a distinction is drawn between men who are born to a godlike existence and those who are born to the existence of demons, this predetermination is to be conceived as an effect of previous merit or guilt. Nothing is said in the Gītā of a real predestination; rather it is apparent that, throughout, moral freedom is taken for granted. It is left to man's option whether he will contend with the hindrances that lie in the path to deliverance or not, whether he will seek to reach a lower or the highest goal. On the way to the latter, natural ignorance hinders the practice of knowledge (v. 15), as natural desire hampers the performance of duty, and is man's real enemy to the observance of duty (iii. 37, 43). But unbelief also and scepticism are fatal (iv. 40). Moderate ascetic (*yoga*) practices are recommended as aids to the successful combating of these hindrances (v. 27, 28, vi. 10 ff., viii. 10, 12 ff.). Even if a man is not successful in mental abstraction, these *yoga* observances are not useless, for such a man will be re-born under favourable conditions, and will ultimately reach the supreme goal (ii. 40, vi. 41 ff.).

We now come, finally, to the most important demand which the Gītā makes upon those men who stand in need of deliverance. As is well known, the poem is the anthem in praise of *bhakti*, or believing and trustful love to God. With unerring certainty love to God leads to the goal alike by the way of knowledge and by that of unselfish performance of duty. The entire poem is full of this thought, and it was composed with a view to its exposition. From love to God knowledge of God arises (xviii. 55), and in consequence the believer refers all his deeds to God and leaves their results to Him. To every one, without distinction of birth or regard to his former conduct, *bhakti* assures deliverance, even to evil-doers, women, Vaiśyas, and Śūdras (ix. 30–32). No transient impulse, however, of love is in question; the whole being of man must be filled with unchanging love to God. When this is the case, a man's thoughts, even in the hour of death, will be directed towards God. Especial importance is attached to this point in the Gītā (viii. 5, 9, 10, 13), because a man enters into that form of existence of which he thinks in the hour of death (viii. 6).

What, then, are we to conceive to be the condition of the soul that has been liberated from earthly existence and has attained unto God? Unconsciousness, in harmony with the doctrine of the Sāṅkhya-Yoga? Does the soul, having been part of the Divine Soul before its separation from it, lose its individuality on its return to its origin? No. Deliverance is conceived as the state of blissful peace of the soul, whose individual life continues in the presence of God. How, indeed, on the assumptions of the Sāṅkhya-Yoga, the soul can lead a conscious existence without entering into relation with matter the Bhagavad-Gītā does not explain. Evidently a view is set forth here which dates from the most ancient period of the Bhāgavata religion, and which from antiquity has formed a pillar of this faith; in spite, therefore, of the subsequent introduction of elements from the Sāṅkhya-Yoga, this doctrine maintained its ground against the contrasted teaching of the two philosophical systems. A confident faith helped to remove the methodical difficulties which must have been the result.

On the whole, however, the religious and philosophical doctrines of the *original* Bhagavad-Gītā, as the above account shows, were clear and defined. Their clearness is greatly impaired by the pantheistic redaction. The form of the poem, as it has come down to us, is full of internal contradictions, seeing that in it at one time the personal God (Kṛṣṇa), at another the impersonal world-soul (Brahman), is presented as the supreme first principle—sometimes the two are also identified; and again, at one time conscious continued existence in the presence of God is put forward as the highest goal of human endeavour, and at another absorption into the world-soul.

It is difficult to determine the period of the composition of the work. We shall not, however, go materially wrong if we assign the composition of the original Gītā to the 2nd cent. B.C., its redaction to the 2nd century of our own era.

In conclusion, a few words must be devoted to the question of Buddhist or Christian influence in the Bhagavad-Gītā. Buddhist influence may perhaps be traced in the recommendation of the golden mean in Bk. vi. 16, 17; and this idea may be supported by a reference to the occurrence of the word *nirvāṇa* in the preceding verse. Since, however, the application of the term is not at all limited to the linguistic usage of Buddhism (*brahmanirvāṇa* occurs four times in the recension of the Gītā), and since the conception of a wise moderation is explained on general human considerations, Buddhist influence must be regarded as very doubtful, or may at best be due to very distant and indirect sources.

The question of the influence of Christianity on the Gītā is more important. Such an influence has often been asserted, and as often disputed. In the case of the *original* Bhagavad-Gītā, the date, which on reliable grounds may be assigned to it, is decisive for a negative answer. The historical possibility of the author of the *redaction* being acquainted with the doctrines of Christianity must unquestionably be admitted; but there are no grounds for regarding this view as even probable, much less certain. No thought is found in the Gītā which may not be satisfactorily explained from the rich storehouse of ideas at the disposal of the Indian peoples, or from their characteristic mental disposition.

LITERATURE.—The literature of the Bhagavad-Gītā is of an extent that it is almost impossible to survey. A detailed account of the manuscripts, editions, and translations of the Bhag., together with the native commentaries and the expositions of European scholars, is given by Adolf Holtzmann, *Das Mahābhārata und seine Teile*, vol. ii., 1893, pp. 121–153. No year has passed since the appearance of this volume in which there have not been issued further Indian contributions to this literature. Of older works special mention should be made of the essay of W. von Humboldt, *Ueber die unter dem Namen Bhagavad-Gītā bekannte Episode des Mahābhārata*, Berlin, 1826; of later works, the translations of K. T. Telang, *SBE*, vol. viii., 2nd ed., Oxford, 1898; J. Davies, 3rd ed., London, 1893; R. Garbe, Leipzig, 1905; L. Barnett, London, 1905; C. Johnston, N.Y. 1908. Cf. also Sir Monier Monier-Williams, *Indian Wisdom*[2], 1875, p. 136 ff.; E. W. Hopkins, *Religions of India*, London 1896, p. 389 ff.; R. W. Frazer, *Literary History of India*, London, 1898, pp. 207, 235 ff.; M. Winternitz, *Geschichte der indischen Litteratur*, i. Leipzig, 1908, pp. 365–376. R. GARBE.

BHĀGAVATAS.—See BHAKTI-MĀRGA, p. 540[b].

BHAIRAVA.—Bhairava is a name of Śiva, meaning 'fearful.' Originally it was only an epithet of the third member of the Hindu trinity in his 'fear' form. As such the word is found quite early, but the worship of Śiva under the special (separate) form of Bhairava is of recent date. Eight, sometimes twelve, forms of this Bhairava-Śiva are then recognized, those commonly used being 'Bhairava the Black' and 'Bhairava the Dog.' Śvāśva, 'he that has a dog for his horse,' is also a frequent designation of Bhairava. He has a female consort called Bhairavī. All of this side of Bhairava, however, is purely classical,

derived from Śiva's epithet. But Bhairava has another side, which is indeed the popular modern side of his character, having nothing to do with the Brāhmanic god. This is derived from the village-god, Bhairon, a peasant personification of the field-genius, and often confused with the Bhūmiya form of the earth-god. This Bhairon has passed through the usual stages. First a peasant godling, then made by the Brāhman priests an attendant of their god, then representing that higher god, and finally, as at present, the only form of the god (Śiva) recognized by the peasants of several communities, chiefly in northern India. The chance resemblance of name facilitated the identification of the peasant Bhairon with the priestly Bhairava, and the attributes of the great god were transferred by the worshippers of the little god to their own godling. A further identification has already begun with the Brāhmanic hero Bhīm, and he is therefore known as the 'club-god,' having taken over from Bhīm the weapon associated with that hero. At present it is impossible to distinguish fully the characteristics of the Śiva form of Bhairava from those of the Bhairon form. Other forms of the same name are Bhairoba and (in middle India) Vitoba. The worship of Bhairava is found in Benares and Bombay, and throughout the agricultural districts of northern and middle India, as far north as the Panjāb. In the north he is revered chiefly as a black dog. In middle India his favourite image is that of a snake-girded drummer, or simply of a red stone. As a village-deity he is worshipped with milk offerings, in towns, especially in the north, with spirituous liquors; and his exclusive adherents are ignorant peasants in the country and dissolute Yogis of the towns. But as an attendant on Śiva he has a recognized though subordinate place in the respectable temples of the great god.

E. WASHBURN HOPKINS.

BHAKTI-MĀRGA.—1. Introduction.—*Bhakti-Mārga* (the *bhakti*-path) is a general name given to those sects of modern Hinduism which lay stress on the importance of *bhakti*, or devotional faith, as a means of salvation, as opposed to the 'works-path' (*karma-mārga*) and the 'knowledge-path' (*jñāna-mārga*). The doctrine of *bhakti* is the foundation of modern Vishnuite Hinduism, and is professed by at least 150 millions of the inhabitants of India. The only other book-religion of modern India, whose believers are numerically important, is Śaivism. The latter is confined mainly to special localities; and even here, not only are there also many Vaiṣṇavas, but several Śaiva sects teach the doctrine of *bhakti* as directed to Śiva. The stronghold of Śaivism may be taken to be that part of India which lies east of the longitude of Benares. All India west of that line may be taken, so far as Hindus are concerned, as on the whole Vishnuite.

The word *bhakti*, with the allied words *Bhagavat* and *Bhāgavata*, is derived from the Sanskrit root *bhaj*, meaning, in this case, 'to adore.' *Bhakti*, therefore, has the primary meaning of 'adoration,' while *Bhagavat* means 'the Adorable One,' and *Bhāgavata* 'a worshipper of the Adorable One.' As a religious term *bhakti* is defined* as 'an affection fixed upon the Lord'; but the word 'affection' (*anurakti*) itself is further defined as that particular affection (*rakti*) which arises after (*anu*) a knowledge of the attributes of the Adorable One.

The best official account of *bhakti* is contained in the *Aphorisms* of Śāṇḍilya, a work of unknown date, but modern, which, with a commentary, was translated by Cowell in 1878. After defining *bhakti*, as above explained, the writer further states that it is not knowledge, though it may be the result of knowledge. Even those who hate the Adorable may have knowledge of Him. It is not worship, etc. These are merely outward acts, and *bhakti* need not necessarily be present in them. It is simply and solely an affection directed to a person, and not a belief in a system. There is a promise of immortality to him who 'abides' in Him. 'Abiding' means 'having *bhakti*.' *Bhakti* is not a wish. A wish is selfish. Affection is unselfish. It is not a 'work,' and does not depend upon an effort of the will. The fruit of 'works' is transient, that of *bhakti* is eternal life. Works, if they are pure, are a means to *bhakti*. To be pure, they must be surrendered to Him, *i.e.*, the doer must say, 'Whatever I do, with or without my will, being all surrendered to Thee, I do it as impelled by Thee.' Good actions, done for the good results which they produce in a future life, do not produce *bhakti*, but are bondage.

Bhakti, if looked upon as 'faith,' is not 'belief.' That may be merely subsidiary to ceremonial works. Not so *bhakti*. Belief is at best merely a subsidiary preliminary to *bhakti*. We have seen that knowledge may produce *bhakti*. The converse is not true. *Bhakti* is the terminus. We cannot *know* by *bhakti*, we can only *recognize* by it—a term which implies previous knowledge.

It is by its signs or 'fruits' that we know that *bhakti* is thoroughly confirmed. Such fruits are respect and honour paid to the Adorable, sorrow for sin, doubt of every other object but the Adorable, celebration of His praise, continuing to live for His sake, considering everything as His, regarding Him as being in all things, resignation to His will, absence of anger, envy, greed, and impure thoughts.

The highest *bhakti* may be directed not only to the Adorable in His highest form, but also to any of His incarnations, such as Kṛṣṇa, Rāma-chandra, and so on. The object of the Adorable in becoming incarnate was pure compassion in its highest sense. No earthly compassion is purely disinterested. His alone is disinterested. He became incarnate, and descended from His high estate, solely to abolish disinterestedly others' woes.

So far Śāṇḍilya. As a religious technical term, *bhakti* is a most difficult word to translate. Probably 'faith,' in the sense of 'devotional faith,' and not of mere 'belief,' is its best representative in English, but unless 'faith' is taken in this special sense, the word is apt to be misleading. 'Devotion' gives an idea as incomplete as 'faith'; for, though devotion is a necessary element of *bhakti*, it does not imply the *after* sense which is insisted upon by the teachers of the cult. It is devotion arising *after* the acquirement of belief. In the present article, the word 'faith,' understood as above, will be employed as the equivalent.

(*a*) *Signification and Indian origin of the word 'bhakti.'*—The use of the word *bhakti* as a religious technical term is comparatively late in Indian literature. This was to be expected, for faith requires a personal deity as its object, and for many centuries after Vedic times all Indian religious literature was confined to one form of thought which was incompatible with belief in the existence of such a God. This was the pantheistic Brahmaism* of the earliest Upaniṣads and of works based upon them (see VEDĀNTA). In the sense of 'love directed to God' the word appears first in Buddhist works of the 4th cent. B.C.; and it was also about the same time quoted in one of his rules (IV. iii. 95), with the same meaning, by the Sanskrit grammarian Pāṇini. It is fully established as a religious technical term in the older parts of the *Bhagavad-Gītā* (*q.v.*), which belong to the two centuries immediately preceding our era, and was subsequently freely used in all Sanskrit literature, both sacred and profane.

Devotional faith implies not only a personal God, but one God. It is essentially a monotheistic attitude of the religious sense. If, therefore, we assume that the word *bhakti*, as a religious technical term, cannot be traced to a period earlier than the 4th cent. B.C., it is important to inquire how far back we can trace the feeling which it represents. This feeling was very old in India. We occasionally come across what it is difficult to distinguish from *bhakti* even in Vedic hymns, especially those dedicated to Varuṇa. But this incipient monotheism fell still-born from the singers' lips. The untaught multitude adhered for many centuries to the genial, hearty, polytheistic nature-worship of their Vedic ancestors, while the Brāhmans—in that part of India the sole reposi-

* Śāṇḍilya, I. 2.

* This is the convenient name given by Hopkins to the unsystematized Brāhmanical teaching of the earliest Upaniṣads before it had developed into the systematized Vedānta of Śaṅkara.

tories of the learning of their time—carried their speculations into the region of pantheism. The origin of the monotheism from which *bhakti* sprang must be sought elsewhere than among the Brāhmans of Northern India.

The migration of the Aryans into India was a long process, extending over many generations. The earlier comers were separated from the later ones by differences of custom, religion, and language. There were internecine quarrels among them, which ultimately resolved themselves into one group of tribes establishing itself as the most powerful. This group, represented in history by the Kuru tribe, had settled in the tract known as the *Madhyadeśa* or 'Midland,' and corresponding to the country near the modern Delhi and to its immediate north. It was the Aryan language spoken in the Midland that in later times developed into Sanskrit. It was in the Midland that the Vedic hymns were collected and compiled, and it was here that the Brāhmans consolidated their priestly power and gained the social supremacy which subsequently extended over the whole of India, and which they have never lost. All the old religious literature which has come down to us had, if not its origin, at least its publishing centre, in the Midland.

(*b*) *Indian monotheism and its probable origin.*—The word 'Midland' suggests an 'Outland,' also inhabited by Aryans, encircling the Midland on the East, South, and West. In those days, besides the Brāhmans, the Aryans had another leading class—that of the *Kṣatriyas*, or warriors. In the earlier times these shared with the Brāhmans the right of sacrifice, which in the Midland was afterwards monopolized by the latter. It has long been recognized that the Aryans of the Outland were not, in later Vedic times, so thoroughly subjected to the religious influence of the Brāhmans as their kindred of the Midland. In the Outland the thinkers belonged rather to the Kṣatriya class, to whose learning and critical acumen witness is borne even in contemporary Brāhmanical writings. It was in the Outland that the old atheistic system of philosophy—the Sāṅkhya—took its birth, patronized and perhaps founded by Kṣatriyas. Here, later on, Śākya Siṁha and Mahāvīra, both Kṣatriyas, founded respectively the Buddhist and the Jain religions; and here, during the thousand years that precede our era, while the Brāhmans of the Midland were developing their pantheistic 'Brahmaism,' the leading spirits of the Kṣatriyas thought out their monotheism.

Śākya Siṁha and Mahāvīra were by no means the only Kṣatriyas of the Outland who were celebrated for their learning. Janaka, the famous king of Mithilā, was not merely intimately connected with the origins of the Bhāgavata religion, but also took a prominent part in philosophical discussions with Brāhmans of many varying views. According to the *Bhāgavata Purāṇa* (III. xxi. 26), even Kapila, the founder of the Sāṅkhya system, was descended from a *Rājarṣi*, and was therefore a Kṣatriya. The *Bṛhadāraṇyaka Upaniṣad* (II. i. 1 ff.) and the *Kauṣītakī Brāhmaṇa Upaniṣad* (iv. 1 ff.) both tell us how Gārgya, a Brāhman of the Outland, was actually taught by the Kṣatriya Ajātaśatru of Kāśī. To the east and south of the Midland lay the country of the Pāñchālas. Here lived the Kṣatriya Jaivali, who, according to the *Chhāndogya Upaniṣad* (I. viii. 1 and V. iii. ff.) put the Brāhmans to silence and taught the Brāhman Gautama. He even (V. iii. 7) claimed that his system of religious thought belonged to the Kṣatriya class alone. Again, in the same work (V. xi.) we find ourselves in another part of the Outland, the Kaikēya country of the western Panjāb. Five great theologians come to a Brāhman with hard questions, which he cannot answer. So he sends them on to a Kṣatriya, Aśvapati, the king of the land, who solves their difficulties. These Upaniṣads were all Brāhmanical, and their authors had no temptation to extol the learning of the Kṣatriyas. On the contrary, when they got a chance, they ridiculed it. Thus the teaching of an opponent is made short work of by the author of the *Śatapatha Brāhmaṇa* (VIII. i. 4, 10), who contemptuously compares it to 'the words of a Kṣatriya.'

We have no literary evidence as to the train of reasoning by which this doctrine of monotheism was reached, but to the present writer it appears more than probable that it was a development of the sun-worship which was the common heritage of both branches of the Aryan people—the Iranian and the Indian.

All the legends dealing with the origins of the Bhāgavata religion are connected in some way or other with the sun. According to the *Mahābhārata* (xii. 12983), the Adorable Himself taught the religion to the seer Nārada, who taught it to, amongst others, the sun, who communicated it to mankind. The greatest and most worshipped of all the incarnations of the Adorable—that of Rāma-chandra—was by human origin a descendant of the sun, while Kṛṣṇa, the other great incarnation, was descended from the moon, and with him the branch of the lunar race to which he belonged ceased to exist. Several of the legends connected with Bhāgavata saints are also connected with the sun. Sugrīva, Rāma's ally, had the sun for his father. Many legends are told about Draupadī, the wife of the five Pāṇḍavas, but in the *Acta Sanctorum* of the Bhāgavatas, the *Bhakta-māla*, only one is thought worthy of mention, and that is connected with a miracle performed by Kṛṣṇa with the aid of a marvellous cooking-pot given to Draupadī by the sun. Satrājit, Kṛṣṇa's father-in-law, was a sun-worshipper, and received from the sun a jewel that became the subject of many stories. One of the very earliest heretics recorded in Brāhmanical literature was Yājñavalkya. According to the *Viṣṇu Purāṇa* (III. v. ff.), he refused to obey his preceptor's command to join in worship with people whom he styled 'miserable and inefficient Brāhmans.' He explained that he acted 'in' or 'for' *bhakti* (the MSS differ), and rejected so much of the Yajur Veda as he had learnt from his teacher. He then departed and worshipped the sun, who imparted to him a new and schismatical Yajur Veda of its own. With this he betook himself to the Janaka referred to above, a famous king of the Outland, and the legendary father-in-law of Rāma-chandra. The *Bṛhadāraṇyaka Upaniṣad* (III. i.) tells how he discussed religious matters with Janaka and converted him, and how he disputed with and silenced orthodox Brāhmans. According to Bhāgavata eschatology, the saved soul first of all passes through the sun on its way to the Adorable after death. Nimbārka, the earliest of the Bhāgavata reformers, is traditionally said to have been an incarnation of the sun, and to have started his career by making the sun stand still. Even at the present day the sun is given the title of 'Bhagavat' by the peasants of Northern India. In modern language *Bhagavat Sūrya*, the Adorable Sun, becomes *Sūruj Bhagavān*. Finally, in the later stages of the Bhāgavata religion, the Adorable is identified with Viṣṇu, a deity who, in the oldest Indian literature, was worshipped as a sun-god.

(*c*) *Founder of the monotheistic Bhāgavata religion.*—Under any circumstances, whether this monotheism was a development of sun-worship or not, the following facts may be taken as accepted by most students of the subject:—The founder of the religion was one Kṛṣṇa (Krishna) Vāsudeva, a Kṣatriya. His father's name was Vasudeva (hence the patronymic of Vāsudeva), and his mother's Devakī. He was the pupil of a sage named Ghōra Āṅgirasa, who taught him 'so that he never thirsted again.'* He belonged to the Sātvata sept of the Outland Yādava tribe. In the older parts of the *Mahābhārata* he appears in the twofold character of a mighty warrior and of a religious reformer. He called the object of his worship the *Bhagavat*, or the 'Adorable,' and his followers called themselves Bhāgavatas, or 'Worshippers of the Adorable.' The religion was first adopted by the people of his own tribe, and gradually spread over the greater part of the Outland. Before the 4th cent. B.C., as in the case of the founders of many other religions, he was himself given Divine honours, and under his patronymic of Vāsudeva became identified with the Adorable. In its original form the religion was strongly mono-

* *Chhāndogya Upaniṣad*, III. xvii. 6.

theistic. Vāsudeva taught that the Supreme Being was infinite, eternal, and full of grace, and that salvation consisted in a life of perpetual bliss near him.*

2. History of Bhāgavata religion.—i. *FIRST STAGE.*—There has always been manifest in India a tendency to combine religion with philosophy, and, this being fostered by the speculative inclinations of the Kṣatriya class, it followed that, as time went on, and as interest in philosophical questions spread amongst the people of India, monotheism, as expressed by the Bhāgavata religion, was given a philosophic basis. The pantheistic Brahmaism of the Midland was altogether opposed to this monotheism, and the Bhāgavatas naturally turned to those systems of philosophy which had sprung up in the freer atmosphere of the less Brāhmanized Outland. There were two of these systems—the ancient Sāṅkhya† (*q.v.*) and its daughter, the Yoga (*q.v.*). These two systems influenced not only Bhāgavatism, but also two other important religions founded by Kṣatriyas—Buddhism and Jainism.

The Sāṅkhya system is based on pure atheism. It categorically denies the existence of any Supreme God. Moreover, it does not concern itself with ethics. The Bhāgavata religion, on the other hand, had a God, and from the first was strongly ethical in character. The bridge between those two opposing conceptions was afforded by the Yoga philosophy. The belief in the power acquired by the practice of *yoga*, or concentration, a kind of shamanism, had existed in India for centuries, and this became a branch of philosophy when the acquired power was intended to be utilized for the obtaining of the knowledge demanded by Sāṅkhya. The Yoga teaching inculcates morality, and the ethical tendency of Bhāgavatism led it to ally itself with this development of Sāṅkhya rather than with the parent system.

A system of philosophy, as distinct from a religion, is a matter for the learned alone, and the doctors of the Yoga system readily accepted an alliance with a religion, such as that of the Bhāgavatas, which brought the popular beliefs to their side. They paid a price for it. They added a God to the Sāṅkhya system, and Yoga became theistic. The God whom they accepted had nothing to do with their philosophy. The idea was added on from outside without organically affecting it. On the other hand, the philosophy supplied the Bhāgavatas with a number of technical terms, not the least important of which was the word *yoga* itself. With them the word gradually changed its meaning from 'concentration of thought' to 'devotion to God.' It thus approached the meaning of *bhakti*, but did not include the idea of love, which is an essential part of the signification connoted by that word. We shall see that in later times the word *yoga* received still further development. Another technical term which the Bhāgavatas borrowed from Sāṅkhya-Yoga was a frequently used title for 'God,' viz. *Puruṣa*, or the 'Male.' This was the word employed by the Sāṅkhyas for the human soul. According to the Yoga system, the shadowy God which it adopted was merely a particular soul possessed of supreme knowledge and power. To Him was given the title of the Puruṣa *κατ' ἐξοχήν*, and this name was adopted by the Bhāgavatas as an alternative name for the Adorable. As time went on, other names were also applied to Him, such as Nārāyaṇa, a patronymic from *Nara*, the Primal Male, and, as already explained, Vāsudeva. These bring us down to the end of the first stage of the development of the Bhāgavata religion, which we may roughly fix as coinciding with the conclusion of the 4th cent. B.C.

ii. *SECOND STAGE.*—(*a*) *Its absorption by Brahmaism.*—The second stage is marked by the capture and absorption of Bhāgavatism by the Brahmaism of the Midland. It is most probable that the immediate cause of this fusion was, as Prof. Garbe suggests, the life and death struggle between the Brāhmans and the adherents of the other great religion of the Outland, Buddhism. With Buddhism the Bhāgavatas had nothing in common. In Brahmaism there was at least a shadowy Pantheos. The Brāhmans were thus enabled to win over the Bhāgavatas to their side in the contest, but, like the teachers of Yoga, had to pay a price for the alliance. That price was, first, the identification of the Adorable with an ancient Vedic sun-god, Viṣṇu (Vishnu), still a popular object of worship among the polytheistic lower classes of the Midland; and, secondly, the confession of the religious orthodoxy of the Kṣatriya monotheism. The process was an easy one. Legends were discovered of Brāhmans who performed Kṣatriya functions, of Kṣatriya families that became Brāhmans, and even of the great Bhāgavata teacher, Janaka, becoming a Brāhman. It became convenient to remember that Manu, the great lawgiver, was a Kṣatriya, and Manu himself is made by his commentator to say that even a Brāhman can in certain circumstances go to a Kṣatriya teacher.* Finally, the Midland had one incarnation of Viṣṇu, Paraśu-Rāma, a Brāhman by birth, who had become incarnate merely for the destruction of Kṣatriyas. In consequence of the alliance with the Bhāgavatas, the Brāhmans had now to confess that this hero was ultimately defeated by the first Kṣatriya incarnation, that of Rāma-chandra. In the official Brāhman account (*Rāmāyaṇa*, I. lxxv. ff.) the unpleasant fact is slurred over, but it is nevertheless fully admitted.

The incorporation was, in short, carried out in exactly the same way as that in which we see Brahmaism extending its frontiers at the present day. The process is going on now before our eyes. Local or aboriginal deities are discovered to be identical with Śiva or some other member of the Brāhmanical pantheon, and the distinction of caste is conferred upon the converts. Usually they are declared to be Rājputs, or, in other words, of the Kṣatriya class. The aboriginal customs and beliefs are at first left untouched, and in a couple of generations no more ardent supporters of the claims of the Brāhmanical priesthood are to be found than those who are still fetish-ridden savages. In much the same way the Bhāgavatas became a sect of Brahmaized anti-Brahmaists. The treaty of peace is found in the older parts of the celebrated *Bhagavad-Gītā* (which see). All the noblest ethical sentiments found herein are clearly of Bhāgavata origin. In it the deified Vāsudeva is fully identified with Viṣṇu, but not yet with the Brahmaist Pantheos; and Kṛṣṇa, the personal name of Vāsudeva the Kṣatriya, is also given admission to the circle of Brāhmanical gods as an incarnation of the same deity.

As time went on, that occurred which history has

* In the above, and in what follows, the present writer has freely utilized the researches of Prof. Bhandarkar and of Prof. Garbe, whose conclusions have been amply borne out by his own inquiries. It must, however, be explained that some Sanskrit scholars are not prepared to accept these statements in their entirety. It may be noted that Bhāgavatas are often called 'Pāñcharātras.' This is, properly speaking, the name of one of the sects into which the religion was divided.

† The present writer is unable to follow Prof. Deussen in his theory that Sāṅkhya is a development of Vedāntism.

* See, for instance, *Mahābhārata*, xiii. 2914, 2397; *Śatapatha Brāhmaṇa*, xi. 6. 2, 10 (*tato brahmā Janaka āsa*); *Viṣṇu Purāṇa*, iv. iii. 5; Someśvara on *Mīmāṁsa Sūtra*, i. iii. 3; *Matsya Purāṇa*, cxxxii. 115; Manu, ii. 241.

many times since repeated, and Bhāgavatism fell more and more under the sway of the Brāhmans. We see this earliest in the later parts of the *Bhagavad-Gītā*, which belong to the first two centuries after our era. In Northern India, where the influence of the Midland was strongest, the Bhāgavatas even admitted the truth of Brahmaism, and identified the Pantheos with the Adorable, although they never made pantheism a vital part of their religion. It never worked itself into the texture of their doctrines, but was added to their belief as loosely as their own monotheism had been added to the Yoga philosophy. In the later Bhāgavata scriptures it is proclaimed and recognized, or silently ignored, according to the passing mood of the writer. At times we come across a misty divinity, personal and gracious it is true, yet of whom they can say in Brahmaist language that He is the great 'WHO?'*, and regarding whom they can only postulate that He is neither being nor not-being.† At another time, within the same work, the Deity is represented as possessing form and substance. At one time He is said never to have been seen by mortal eye, and at another time He reveals Himself in bodily form to some favoured saint. The text-books of this Brahmaized Bhāgavatism are the latter part of the twelfth book of the *Mahābhārata*, known as the *Nārāyaṇīya*, and the famous *Bhāgavata Purāṇa*.‡

(*b*) *Worship of incarnations.*—This alliance with Brahmaism had one general effect. It removed the Adorable farther from His adorers. He became less definite, and we can well believe that even in those days true believers began the cry which has become the creed of a sect in later years, 'See ye the Unseeable' (see ALAKHNĀMĪS). Bhāgavatism thus began to fail to supply the craving felt in every human heart for a personal object of adoration, and the need was met by a development of the theory of incarnations. The Adorable was represented as becoming incarnate in various forms, on various occasions, and for various purposes. To these incarnations, instead of to the Adorable Himself, the *bhakti* of the Bhāgavatas now became directed.

The idea of a god becoming incarnate is very old in India (see art. INCARNATION). We find legends on the subject in Vedic literature. Here, sometimes one god, sometimes another—Brahmā, Viṣṇu, or Indra—becomes incarnate to save the gods or to conquer the world. By the time that Bhāgavatism was received into the Brāhmanical fold, these legends had become detached from other gods, and all centred round the person of the popular sun-god Viṣṇu. He it now was who, perhaps as a relic of totem-worship, became incarnate as the Fish, the Tortoise, the Boar, the Man-lion, the Dwarf, and so on. Then heroes, first semi-Divine and next wholly human, were added to the list, such as Rāma-chandra, Kṛṣṇa, or even the Buddha. The list of incarnations, or 'descents' (*avatāra*), drawn up by Brāhmanical orthodoxy contained ten instances; and two of these, that of the Kṣatriya Rāma-chandra, and that of the Kṣatriya Kṛṣṇa, were late additions, almost certainly added to the list in obedience to Bhāgavata susceptibilities, just as the name of the Buddha may have been added to draw weak-kneed Buddhists into the Brāhmanical fold. We have already seen how the Kṛṣṇa of the incarnation bore the personal name of Kṛṣṇa Vāsudeva. Rāma-chandra, 'the glory of the Solar Race,' was also a famous Kṣatriya hero of the Outland, and was son-in-law of the Janaka previously mentioned. To the Bhāgavatas, Rāma-chandra and Kṛṣṇa were naturally the favourite incarnations, but in their later books the list became much extended, the Adorable being represented as becoming incarnate no less than twenty-four times. These incarnations became the direct object of worship. As Tulasī-dāsa said to one of those who called upon men to 'see the Unseeable,' 'Why dost thou endeavour to see the Unseeable? Pray thou to Rāma, and all at once is seen.'

(*c*) *Worship of the Śakti.*—About this period there also arose the idea of the *Śakti*, or energic power, of a divinity as a separate personality. The worship of the energic power became a prominent feature in the cult of Śiva, but it is also found among the Bhāgavatas. Among them, as Viṣṇu has been identified with the Adorable, so his spouse Lakṣmī is looked upon as the Adorable's energic power. She is one with Him, and yet distinct from Him, 'neither confounding the persons nor dividing the substance.' So entirely is she looked upon as one with Him that the text-books are deliberately silent about her; for, say they, 'She has done all that He has done, and when we tell of Him we tell of Her.' And yet, on the other hand, she also appears as the active agent in spreading abroad the true faith, which she learnt from Him. The Bhāgavata monotheistic deity has therefore become a Trinity in Unity, consisting of the Supreme, His incarnations, and His energic power. The resemblance to the Christian doctrine of the Trinity is marked, more especially when we remember that, among the Syrian Christians, the Holy Ghost was declared to be a woman, and was identified with the Virgin Mary. It is quite possible that the Bhāgavata trinitarian doctrine developed under early Christian influence (see below).

(*d*) *Relation of Bhāgavatism to popular polytheism.*—Side by side with this Bhāgavata monotheism there had always been the polytheism of the lower orders, with its great gods, Brahmā, Viṣṇu, and Śiva, and its millions of godlings. Bhāgavatism did not require any denial of these from its converts. We have seen that it had identified Viṣṇu with the Adorable Himself. Brahmā was relegated to a lower place. We shall see later that he was looked upon as a finite being, created by the Adorable to superintend the general carrying out of His orders. The dread god Śiva or Rudra, appeased only by bloody sacrifices, could not be so disposed of. His worshippers were very many, especially in the Outland, where, in early times, under the name of Pāśupatas, they, like the Bhāgavatas, had been strongly influenced by Sāṅkhya-Yoga. The 344th section of the 12th book of the *Mahābhārata* contains an interesting legend of a terrible fight between Rudra and the Adorable. Brahmā intervenes and pacifies Rudra, who acknowledges the Adorable's superiority. Then the Adorable says to Rudra (13293), 'He who knows Me, knows Thee. He that follows Thee, follows Me. There is no difference between Us two.' According to another legend preserved in the 343rd section of the same book, towards the end of a cycle of time the Adorable becomes subject to wrath (at the wickedness of the world), and therefore Rudra is born from his forehead. The sum of all this is that the Bhāgavatas accepted Śiva as a form of the Adorable, and thus in legends we find the most pious Bhāgavatas, such as, for instance, Chandrahāsa, performing their morning devotions to the Adorable Himself, and continuing them in a temple devoted to Rudra or his bloodthirsty spouse Durgā. The numerous other gods of Hindu polytheism were easily disposed of. They were classed as merely subordinate creatures of the Adorable, given special

* *Ka* (*Nāradīya Bhakti-sūtras*, i. 2).

† *Mahābhārata*, xii. 13190.

‡ The *Bhāgavata Purāṇa* is a very late work, and perhaps should preferably be classed with post-reformation literature. See below.

powers or functions in order to carry out His will.

All this time the Bhāgavatas, while they were estopped from denying the truth of Brahmaist pantheism, were still nominally professors of Sāṅkhya-Yoga. The result was a series of attempts to unite the opposing lines of thought—one an unsystematized pantheism founded on the idea that everything is part of the One, the other a systematized dualism based on the essential difference between matter and spirit. The first endeavours are to be found in the latest parts of the *Bhagavad-Gītā*. Attempt after attempt, given forth under the authority of highly honoured names, such as that of the Sāṅkhya teacher Pañchaśikha, of the learned Bhāgavata king Janaka, or of a female ascetic named Sulabhā, appears in the twelfth book of the *Mahābhārata*, and these finally settled down into the form in which we find them in the third book (section xxiv ff.) of the *Bhāgavata Purāṇa*. It is impossible to consider this result as a system of philosophy. The two opposing lines of thought, each intelligible in itself, could no more combine than oil and water, and this so-called 'Paurāṇik Sāṅkhya' can be described only as a medley of unrelated and mutually contradictory conceptions.* It has nevertheless exercised the greatest influence on the pious and more uncritical minds of India, and has to be reckoned with in dealing with the religious history of that country. Its influence is most strikingly manifest in the change that it has brought about in the meaning of the word *yoga*. We have already seen that the meaning had changed from 'concentration of thought' to 'devotion.' Even in the *Bhagavad-Gītā* this term became subdivided into *karma-yoga*, or the disinterested practice of duty, and *jñāna-yoga*, the purely theoretical side of religion. Later on, under the influence of the 'Paurāṇik Sāṅkhya,' we meet three kinds of *yoga*. *Karma-yoga* is now no longer the disinterested practice of morality, but has become attendance to religious ceremonial obligations. These give purification, and lead to *jñāna-yoga*, which is now the concentration of the mind on the Adorable, and this finally to *bhakti-yoga*, in which the devotee is full of nothing but faith, and sees nothing but the Deity.†

This brings us down to the end of the millennium after our era. In the early part of the 9th cent. A.D. the celebrated pantheistic philosopher Śaṅkara gave system to the ancient Brahmaism of the Midland, and created the Vedānta (*q.v.*) philosophy. His system, far more rigid than the Brahmaism on which it was founded, compelled him vigorously to attack the Bhāgavata monotheism, hitherto grudgingly recognized as orthodox. His assaults resulted in the Bhāgavatas not only assuming a position of defence, but also taking up two differing lines of counter-attack. On one line they remained faithful to the old alliance with Brahmaism, and contented themselves with combating Śaṅkara's arguments only so far as they were incompatible with their interpretation of Brahmaist teaching. On the other line, the alliance with Brahmaism was finally broken, and a return was made to the old Sāṅkhya-Yoga doctrines which had been abandoned, or partly abandoned, in favour of Brahmaism. The dispute culminated in the 12th cent., the leading representatives of the two lines of counter-attack being respectively Rāmānuja and Madhva, both inhabitants of Southern India.

iii. *THIRD STAGE. TENETS.*—With the appearance of these two great reformers commences the third stage in the development of the Bhāgavata religion—the modern *Bhakti-mārga*. It will here, therefore, be convenient to consider the tenets of the Bhāgavatas as they were fixed by the reformers at the commencement of this third stage of their development. Our materials are (1) the *Bhagavad-Gītā*, (2) the *Nārāyaṇīya* section of the twelfth book of the *Mahābhārata*, and (3) the *Bhāgavata Purāṇa*, as the old authorized scriptures, and the *Bhakta-māla* and numerous other works founded on it, as what might be called the 'New Testament' of the Bhāgavata religion. An account of the pre-reformation doctrines will be found in the article BHAGAVAD-GĪTĀ.

(1) *Monotheism and a God of grace.*—There is one and only one God, named the Bhagavat, the Adorable; Nārāyaṇa, the Son of the Male; Puruṣa, the Male; or Vāsudeva. He exists from eternity to eternity. He is therefore defined as 'the Endless' (*ananta*), 'the Imperishable' (*achyuta*), and 'the Indestructible' (*avināśin*). He is the Creator of all things out of matter, to which is given the Sāṅkhya-Yoga name of *prakṛti*, *pradhāna*, or 'the indiscrete' (*avyakta*). The original belief about matter seems to have been that He created it out of nothing, but in the mixed philosophy of the sect we sometimes come across statements agreeing with the dualistic Sāṅkhya-Yoga theory that *prakṛti* has existed independently from all eternity. From God issue all souls (*jīva*), which henceforth exist for ever as distinct individuals and are indestructible. He has created Brahmā, Śiva, and the countless subordinate deities to carry out His orders in creating and ruling the world, and to promulgate the true religion. He generally leaves the burden of ruling the world upon their shoulders, but, as occasion demands, from time to time in His infinite grace (*prasāda*)* He Himself becomes incarnate to relieve the world from sin or His followers from trouble. The greatest and most perfect of these incarnations (*avatāra*) are those of Rāma-chandra and Kṛṣṇa; but there have been twenty-three in all, and one is yet to come. *India thus owes the idea of a God of Grace—of the Fatherhood of God—to the Bhāgavatas.*

(2) *Process of creation.*—The principles according to which creation is held to have developed resemble those of Sāṅkhya-Yoga (see SĀṄKHYA), but, owing to the assumed necessity of connecting the immaterial Vāsudeva with the material world, are more complicated. The Adorable, who in this connexion is usually called Vāsudeva, is represented as passing in succession through three *vyūhas*, or phases of conditioned spirit. Vāsudeva first produces from himself *prakṛti*, the indiscrete primal matter of the Sāṅkhyas, and at the same time passes into the phase of conditioned spirit known as *saṁkarṣaṇa*. From the association of *saṁkarṣaṇa* with *prakṛti* there springs *manas*, corresponding to the Sāṅkhya *buddhi*, or the intellectual faculty, and at the same time *saṁkarṣaṇa* passes into the phase of conditioned spirit known as *pradyumna*. From the association of *pradyumna* with *manas* springs the Sāṅkhya *ahaṁkāra*, or consciousness, while *pradyumna* passes into a tertiary phase of conditioned spirit known as *aniruddha*. From *ahaṁkāra* and *aniruddha* spring the Sāṅkhya *mahābhūtas*, or grosser elements, with their respective qualities, and also the deity Brahmā, who from the elements fashions the earth and all that it contains.†

(3) *Bhakti and salvation.*—*Bhakti* directed towards the Adorable is the only means of salvation. It must be directed to Him or to one

* So also Garbe, *Sāṅkhya-Philosophie*, 52 ff. The *Bhāgavata Purāṇa* probably belongs to the 13th cent. A.D.

† So Nārāyaṇa Parivraj in the *Artha-pañchaka*, quoted by Bhandarkar, *Search for Sanskrit Manuscripts . . . during the year 1883–84*, p. 68.

* The doctrine of *prasāda*, or grace, has formed an essential part of the Bhāgavata religion so far back as literature takes us

† For further details see Colebrooke, *Essays*, i. 437 ff., and Barnett's translation of the *Bhagavad-Gītā*, p. 48 ff.

of His incarnations, and to no other. The religion in this respect is strictly monotheistic. This is partly hidden by our translation of the word *deva* by 'God.' By a Bhāgavata, the word *deva* is used with exactly the same meaning as the Hebrew word *'elōhīm*. The latter sometimes signifies the Supreme God and sometimes His ministering spirits. In our versions of the OT the distinction is shown by translation, but this is not done by English writers on Indian religion, who always translate *deva* by 'God.' The word *deva* is applied not only to the Adorable, but also to His ministering spirits, Brahmā, and so on. These subordinate *devas* may, it is true, be the objects of worship, but this is δουλεία ('veneration'), not λατρεία ('adoration'), which latter is reserved for the Adorable alone. The Bhāgavata scriptures over and over again insist that the true believer must be a unitarian monotheist—an *ekāntin*.

(4) *Works and salvation.*—The question then arises as to how far works (*karma*) are necessary for salvation. This has been as much discussed in India as in Europe. The Bhāgavatas solve the problem by stating that works act only indirectly. Every work, good or bad, has its result, or, as they say, its fruit (*phala*). A good work, done for the sake of its fruits, may result in giving the soul a life of felicity in some other world, but this felicity will be merely temporary. As soon as the fruits have worked themselves out, the soul returns to this world, and to the weary round of birth and re-birth. But if a work is *niṣkāma*, or disinterested, *i.e.*, is not performed for the sake of its fruits, but is simply dedicated to the Adorable and laid before His feet, He accepts it and confers His immortal nature upon its fruits. Then the Adorable Himself enters the heart of the doer and begets therein the virtue of *bhakti*, and it is this *bhakti* that finally gives eternal salvation. *India thus owes the preservation of the doctrine of Faith to the Bhāgavatas.*

(5) *Immortality of the soul.*—We have seen that the individual soul was considered to be a part (*aṁśa*) of the Adorable, emitted by Him to a separate conscious existence. Once so emitted, it exists for ever as a separate conscious entity. Agreeably to the universal Indian belief in the doctrine of transmigration, the soul is chained to its round of births and re-births until it is saved by *bhakti*. A soul, like those of certain Divine beings, may be saved from the first, and is then known as *nitya-mukta*, 'saved from eternity,' but the ordinary human souls are not of this nature, and are classed under four heads. These are (*a*) *baddha*, those who are 'tied' to things of this life, and who are not in the way of salvation; (*b*) *mumukṣu*, those in whom there has been awakened a consciousness of the want of salvation, and who 'desire it,' but are not yet fit for it (we should call these 'awakened sinners'); (*c*) *kevala*, or *bhakta*, the pure in heart, who are 'only devoted' to the Adorable, and who are thus on the way of salvation through possessing *bhakti*; and (*d*) *mukta*, the 'released,' or saved. These last enjoy a perpetual, conscious, independent existence at the feet of the Adorable (*Bhagavat-pada*). Their only joy is serving and waiting upon Him (*kaiṁkārya*). They do not become Him, but become 'like Him' and remain in everlasting bliss. *India thus owes to the Bhāgavatas the belief in the Immortality of the Soul.*

(6) *Eschatology.*—When the soul, thus saved, leaves its earthly body, it first enters the sun as the door.* There its subtle body (*liṅga-śarīra*) is consumed and it becomes an atomic entity (*paramāṇubhūta*). Thence it enters the God, first in the phase of *aniruddha*, then in that of *pradyumna*, then in that of *saṁkarṣaṇa*, and finally the Supreme Adorable, who, by a confusion with Brahmaism in the passage now quoted from, is called 'The Supreme Self.' As in the rest of their philosophy, there is in their eschatology little that is clear and consistent. Brahmaism and Sāṅkhya-Yoga are inextricably mixed up, but the continued separate existence of the soul after it has reached the Adorable is certainly a tenet that is held through all their self-contradictory mysticism.

(7) *Sin.*—The root idea of sin is anything which is incompatible with *bhakti*. Every sin is a work (*karma*) and necessarily bears its fruit, just as much as any good work. Sins are classed as involuntary (*ajñāta*) and wilful (*jñāta*). An involuntary sin can be expiated by ceremonial acts. These expiatory works, provided they are disinterested, *i.e.*, not performed merely as counterbalances to the involuntary sins, reach the Adorable and give the everlasting fruit. As for wilful sins, when a man is devoted to disinterested works, or is in the way of *bhakti*, he does not usually commit such; and if perchance he do, then the Adorable, who is the Lord of good works, Himself forgives the sin of the evil works. A favourite comparison is with a paid workman and a slave born in the house. If a paid workman (*i.e.* a doer of interested works) does any damage, he has to make it good to his employer; but if damage is done by a faithful slave, who works not for reward but for love (*i.e.* the doer of disinterested works), the master bears the loss, and none of it falls upon the slave.*

The above doctrines represent the stage to which the Bhāgavata religion had developed by the 15th cent. of our era; but they have remained unchanged, as the doctrines of the *Bhakti-mārga*, to the present day. In their main principles they are the doctrines of the *Bhagavad-Gītā* and of the *Nārāyaṇīya*, which are, of course, much older.

3. **The four churches of the reformation.**—Since the revival of Bhāgavatism in the 12th and following centuries, the *Bhakti-mārga* has been divided into four *Saṁpradāyas*, or churches, viz. the *Śrī-saṁpradāya* founded by Rāmānuja, the *Brahma-saṁpradāya* founded by Madhva, the *Rudra-saṁpradāya* founded by Viṣnusvāmin, and the *Sanakādi-saṁpradāya* founded by Nimbāditya.

(1) *Attitude of each to the Vedānta.*—The essential differences between these churches consist in the attitude which they assume towa ds the Vedānta philosophy of Śaṅkara. It is specially stated by Bhāgavata writers† that they form really one church, and that the differences are only apparent. Further, each church has become divided into sects, but none of these is opposed to its mother-church. It has been given a name and a separate recognition only on account of the preferences (*ruchi*) of particular teachers in laying emphasis on particular points.

The Vedānta doctrine is fully described elsewhere (see VEDĀNTA), and here it will be sufficient to devote a few lines to the discussion of the particular points objected to by the Bhāgavata reformers. Being purely monistic, it is generally known as the *advaita-mata*, or doctrine of non-duality. Its professors claim to be *smārtas*, *i.e.*, 'holders to tradition,' or 'orthodox.' The Bhāgavatas allow them the title and condemn the tradition. An essential part of its teaching is the doctrine, usually stated to be an invention of Śaṅkara himself, of *māyā*, or illusion. To this the Bhāgavatas raise the strongest objection, and one of their commonest nicknames for a follower of Śaṅkara is that of *māyā-vādin*, or declarer of

* *Mahābhārata*, xii. 13383 ff.

* 'Bhakta-kalpadruma,' in *JRAS*, 1908, p. 347.

† *e.g.* by Hariśchandra in the *Vaiṣṇava-sarvasva*.

illusion. Śaṅkara's Supreme Deity (Bráhma*) is an absolutely impersonal, quality-less being who can obtain an unreal existence only by association with *māyā*. The soul is really a part of Bráhma individualized by association with *māyā*. When released from *māyā*, the soul is again merged in Bráhma and loses its identity.

All Bhāgavatas agree in rejecting the entire doctrine of *māyā*, with all its consequences. The Supreme Deity, the Bhagavat, is personal by nature. The soul, as already said, is also personal and individual by nature, and, once emitted, lives for ever. It is never merged in the Bhagavat.

The Śrī-saṁpradāya is the most important Bhāgavata church which, while rejecting Śaṅkara's Vedāntism, remains faithful to the alliance with the old Brahmaism. The Bhagavat, identified with the Pantheos or Bráhma of the Upaniṣads, is a Pantheos, but a personal Pantheos in whom everything that is exists, and who is endowed with every imaginable auspicious quality. Matter and soul alike proceed from Him, and He pervades all things as their *antaryāmin*, or Inward Restrainer. The doctrine of this church is therefore also monism, but, to distinguish it from Śaṅkara's, it is called a *viśiṣṭādvaita-mata*, or doctrine of qualified non-duality. The teaching of this sect is said to have been communicated by the Adorable to His spouse, or energic power, Lakṣmī, also called Śrī. Hence the name of the Saṁpradāya. She taught a demi-god named Viṣvak-sēna, who taught Śaṭhakōpa, and eighth in descent from the last named, in succession of master and pupil, came Rāmānuja, who flourished in the 12th cent. A.D. For further particulars see RĀMĀNUJA.

Madhva's Brahma-saṁpradāya represents the other line of defence of the Bhāgavata religion. He broke the alliance with Brahmaism and returned to the old dualism of Sāṅkhya-Yoga. His teaching is therefore said to be a *dvaita-mata*, or doctrine of duality. The sect describes Śaṅkara's Vedānta as disguised Buddhism, and lays particular stress on the five eternal distinctions, viz. (*a*) between God and the soul, (*b*) between God and matter, (*c*) between the soul and matter, (*d*) between one soul and another, and (*e*) between one particle of matter and another. Although in other respects preaching the ordinary Bhāgavata doctrines, Madhva prefers to call the Supreme 'Viṣṇu,' rather than 'Vāsudeva' or 'Bhagavat.' His followers call themselves Mādhvas or Madhvāchārīs (*q.v.*), and claim to have received the doctrine originally from Brahmā, sixth in descent from whom, in succession of teacher and pupil, came Madhva. Hence the name of the Saṁpradāya. As may be expected, the rupture with Brahmaism brought upon them vigorous attacks from the followers of Śaṅkara, and in one work, entitled the *Pāṣaṇḍa-chapeṭikā*, or 'Slap in the Face of Heretics,' they are all, as a body, genially consigned to the utmost torments of hell.

The Rudra-saṁpradāya is the most modern of all the sects. Viṣnusvāmin lived in the early part of the 15th cent.; but his followers, in order to give the authority of age to his opinions, state that he had previously existed some 4500 years earlier, and that it was then that the doctrines were first promulgated by him. They were originally communicated by the Adorable to Rudra, or Śiva, who passed them on to mankind, Viṣnusvāmin being fifteenth in descent from him in the line of teacher and pupil. His family belonged to the south of India, and his converts were mostly made in Gujrāt. One of his pupils, Lakṣmaṇa Bhaṭṭa, migrated to Northern India, where his son Vallabha (or Vallabhāchārya) became an energetic apostle of the church which is now usually called after his name, his disciples being known as Vallabhāchārīs (*q.v.*). The doctrines of this church are known as *śuddhādvaita-mata*, or doctrine of pure non-duality. According to them, the Adorable has three attributes, viz. *sat*, 'existence,' *chit*, 'consciousness,' and *ānanda*, 'bliss.' The soul is the Adorable with the attribute of bliss suppressed (*antarhita*), and inanimate matter is the Adorable with the attributes of consciousness and bliss suppressed. When the soul is 'released,' it regains the attribute of bliss, and thus becomes for ever identical in nature with the Adorable.

The Sanakādi-saṁpradāya (see NIMĀVATS), founded by Nimbārka or Nimbāditya, is certainly the oldest of the Bhāgavata churches.* Its founder is said to have been an incarnation of the sun. The Adorable in His incarnation as a swan (*haṁsa*) taught Sanaka and his brethren, the mind-born sons of Brahmā, who taught Nārada, who taught Nimbārka. The doctrine of this church is called *dvaitādvaita-mata*, or doctrine of dualistic non-duality. While admitting that the soul and matter are distinct from the Adorable, it holds that they are nevertheless intimately connected with Him, as its coils are connected with a serpent, or as its waves are with water. The Adorable is incomprehensible, but is manifest in the book of Nature, in which the natural objects form the letters constituting the words. The letters may be in different alphabets although the sounds are the same, and hence the actual facts of the incarnations, or the truth or falsehood of the accounts concerning them, are of small importance, so long as we read the Divine love that lies behind them. The church has suffered much from persecution. It is said to have been extirpated by the Jains and to have been resuscitated by a certain Nivāsa.†

(2) *Clerical and lay life.*—The members of each of these four Bhāgavata churches are divided into two classes, which we may conveniently call 'clerical' and 'lay.' The latter includes the great mass of the believers, who look to the former for religious guidance. The status of the clerical class varies according to sect. Usually these teachers are unmarried, leading, or professing to lead, an ascetic life; but sometimes, as for instance in the case of most sects of the Rudra-saṁpradāya, the clergy are encouraged to marry, and to live in the world as men of business and family. The ascetic clergy (*bairāgīs* [*q.v.*]) mostly lead a wandering existence, singly or in bodies, subsisting on such alms as they can collect. When old or infirm, they settle down in one of the numerous *maths*, or monasteries, scattered all over India. These monasteries also serve as rallying points for the travelling brethren, where any of them can find food and shelter for a reasonable time. Each is governed by a *Mahant*, or Superior, and is usually endowed with property which is under his management.

(3) *Subsequent history of each church.*—The slight philosophical details which differentiate the churches having been discussed, it will now be convenient to consider the development of each during the past seven centuries.

(*a*) *Śrī-saṁpradāya.*—Rāmānuja, who is said by his followers to have been an incarnation of Śeṣa, the serpent of eternity, belonged to Southern India, and studied and lived the best part of his life at Conjeeveram near Madras. Although teaching the theoretical equality of all castes, the teachers and leaders of his church were invariably Brāhmans, and persons of low caste were not even admitted as disciples. The mother-church has always been strongest in Southern India, where it took its birth, and where it has still numerous monasteries. It has

* Care should be taken to distinguish between Bráhma (or Bráhman) (neut.) the impersonal Pantheos of the Upaniṣads and Śaṅkara, and Brahmā (or Brahmán) (masc.) the personal member of the well-known Hindu triad (Brahmā, Viṣṇu, and Śiva).

* The *dvaitādvaita-mata* is referred to in the *Prabōdha-chandrōdaya*, a work dating from the end of the 11th cent. A.D.

† Hariśchandra, *Vaiṣṇava-sarvasva*.

never been very popular in Northern India. Rāmānuja laid down the strictest rules of conduct, even eating and drinking being bound by the most minute regulations. We have seen that in the centuries immediately following our era the faith of the Bhāgavatas was preferably directed not to the Adorable Himself, but to one of His numerous incarnations. Rāmānuja did not confine his followers to any particular one of these, but that of Rāma-chandra was usually preferred. We have also seen that Lakṣmī, Viṣṇu's spouse, looked upon as the Adorable's energic force, was considered as identical with the Adorable Himself. Hence many Rāmānujas preferred to direct their faith to her.

Fourth or fifth in spiritual descent from Rāmānuja there rose, late in the 14th cent., a teacher named Rāmānanda. He was a disciple of Rāghavānanda, the *mahant* of the monastery founded by Rāmānuja at Seringapatam in the later years of his life. Rāmānanda quarrelled with his superior on a question of discipline, and, migrating to Northern India, there founded a sect of his own called the Rāmānandī. Its principal doctrinal peculiarity is the insistence that the Rāma-chandra incarnation is the one which should be the chief object of faith in the present age. Its followers are hence also called *Rāmāvats*, or Rāmaites. Rāmānanda, instead of preaching and writing in Sanskrit, as had hitherto been the custom, taught in the vernacular, and thus brought his doctrines within reach of all classes. He also interpreted the Bhāgavata doctrine of the brotherhood of man in its most liberal sense, and admitted all castes, even the lowest, not only as lay members of the sect, but also as teachers. The fact that it was a question of discipline on which he had broken with the Rāmānujas led him to release his followers from the shackles which he had found inconvenient. They observed no particular ordinances in eating or bathing, and were named by him *Avadhūta*, or liberated.

Numerous sub-sects trace their origin to this branch of the Śrī-saṁpradāya, each of which forms the subject of a special article in the present work. See KABĪR-PANTHĪS, KHĀKĪS, MULŪK-DĀSĪS, RAI-DĀSĪS, and SENĀ-PANTHĪS, which are the most important of the sub-sects. The catholicity of Rāmānanda's teaching may be gathered from the fact that he numbered among his twelve chief disciples, or apostles, a Musalmān (Kabīr), a barber (Senā), and a low-caste *chamār*, or leather-worker (Rai-dāsa), each of whom founded a sub-sect. Kabīr's teaching was mixed not only with Christianity (see below), but also with Musalmān Ṣūfīism, which led him and his followers to neglect the worship of the incarnate Rāma-chandra, and to identify the name of Rāma not with the incarnation but with the unincarnate Adorable Himself, to whom, under the name of Rāma, *bhakti* was to be directly offered. From his schism, if it can be called a schism, there branched out two other important sub-sects, one of which has left its mark upon the political history of India—the Sikhs and the Dādū-panthīs. The great bulk of the Hindu population of Northern India, however, still adheres to the original Rāmānandī doctrines; and this sect has become the local mother-church, preserving friendly relations with its various sub-sects, although these are divided into two branches by the Kabīr schism. The most important later teacher of the Rāmānandī church was Tulasī-dāsa (end of 16th century), the great poet. He did more towards popularizing the worship of the incarnate Rāma-chandra than any of his predecessors, and his great epic, the *Rāmāyaṇa*, has been truthfully described as 'the one Bible of 100 millions of people.' It is read and studied even by members of the other Bhāgavata Saṁpradāyas.

Another member of the Rāmāvat church also deserves special mention. This is Nābhā-dāsa, or Nārāyaṇa-dāsa, a contemporary of Tulasī-dāsa, and the author of the *Bhakta-māla*. This, with its commentary by Priyā-dāsa, a member of the Brahma-saṁpradāya, may be called the *Acta Sanctorum* of the four churches. It is a storehouse of legends regarding the saints, ancient and modern, of the Bhāgavata religion. The importance of this book for a just comprehension of the religious attitude of modern Hinduism cannot be over-rated, and it is a matter for regret that the great difficulties of the text have deterred European students from its study. In its original form few natives can understand it nowadays, but numerous translations into modern Indian languages have made its contents familiar to every follower of the cult. For Northern India, it and Tulasī-dāsa's *Rāmāyaṇa* are the two text-books of modern Bhāgavatism.

(*b*) *Brahma-saṁpradāya.*—Madhva, or Ānandatīrtha, the founder of this church, was also a native of Southern India (see MADHVĀCHĀRIS). He was originally a Śaiva, but became converted to Bhāgavatism in his later years. The doctrines of the sect do not single out any particular incarnation of the Adorable for special worship, but in Northern India it has taken Kṛṣṇa as its principal object of adoration. The church is strongest in Southern India, where it has numerous monasteries; it has few votaries in the North, though they are said to have increased of late. The clerical members are Brāhmans, and profess celibacy, but the lay votaries are members of every class of society except the lowest. The church is an attempt at a compromise with Śaivism, and the votaries of the two religions pay adoration to each other's gods.

The Vaiṣṇavas of Bengal, who look upon Chaitanya (*q.v.*) as their founder, are said to be a branch of this church, of which, according to the *Bhakta-kalpadruma*, Chaitanya was himself a member. But the tenets of the Bengal Vaiṣṇavas approach much more nearly those of the Rudra-saṁpradāya.

(*c*) *Rudra-saṁpradāya.*—As already stated, the Rudra-saṁpradāya is now practically represented by the Vallabhāchāris (*q.v.*). Two or three other and unimportant sects are also referred to it. The incarnation of the Adorable which is specially worshipped by this church is that of Kṛṣṇa. The form of the devotional love of this and other Kṛṣṇa-worshipping sects is not that of a son to a father, as in the case of the Rāmāvats, but the love of a maid for a man; and this has given rise in later times to an erotic and sensual aspect of religion which has sometimes led to the most lamentable excesses. Kṛṣṇa's human spouse, Rādhā, is looked upon as an incarnation of the Adorable's energic power, and sometimes one is the object of worship, sometimes the other, and sometimes both conjointly. The clergy of the church marry and live comfortable lives, and their example is followed by the laity, who may be of any caste, but mainly consist of the opulent and luxurious members of society. Another very widely diffused form of worship, especially amongst women, is that of the *Bāla Gopāla*, or Infant Kṛṣṇa. The cult is widely extended over Northern India and the Bombay Presidency. A sub-sect is that founded in the 16th century by Mīrā Bāī, a famous princess and poetess of Rājputāna. Here the special object of worship is Kṛṣṇa Raṇachhōṛ (see MĪRĀ BĀIS).

The Vaiṣṇavas of Bengal profess much the same tenets as those of the Vallabhāchāris, and Vallabha himself was Chaitanya's father-in-law (see above under the Brahma-saṁpradāya). The Rādhā-vallabhīs, another sect which worships Kṛṣṇa and Rādhā, are also akin to the Vallabhāchāris, but they are counted as belonging to the next, or Sanakādi-saṁpradāya.

(*d*) *Sanakādi-saṁpradāya.*—This church is now of small importance. Its few adherents, who are known as Nimāvats, are found in Northern India and in Rājputāna. They are mostly adorers of Kṛṣṇa (for further particulars see NIMĀVATS). One important sect is nominally sprung from this church, that of the Rādhā-vallabhīs. It was founded by one Harī-vaṁśa, surnamed Hita, who was born in 1559 and was a Nimāvat. His teaching was little in accordance with that of his church, being nothing but a development of the tenets of the Vallabhāchāris. The tendency towards erotic mysticism which distinguishes that sect is here carried to an extreme. Rādhā, the representative of the Adorable's energic power, now throws even Kṛṣṇa himself into the shade. He is given a subordinate position under the title of *Rādhā-vallabha*, or 'Rādhā's husband,' and this name has given its title to the sect. The worship is directed almost entirely to Rādhā as the spouse of God. For further particulars see RĀDHĀ-VALLABHĪS, SAKHĪ-BHĀVAS and CHARAṆ-DĀSIS.

(4) *The guru.*—A striking characteristic of modern Bhāgavatism is the extravagant respect shown to the spiritual teacher, or *guru*. The first line of the *Bhakta-māla* gives as the essentials of religion *bhakti*, *bhakta*, *Bhagavanta*, *guru* ('faith, a faithful devotee, the Adorable, and the *guru*'); and this aptly illustrates the importance attributed to the last-named. Any one will admit that the first three are essentials, but few Westerns would think of adding the fourth. The rule that respect be shown to a spiritual teacher is very old in India. In ancient times, perfect obedience was required from his pupil. He was the pupil's second father, more to be venerated than even his natural progenitor. Once, however, the state of pupilage was over, the obligation of obedience ceased, and only respect and gratitude were subsequently required. But in modern Hinduism this proper attitude is greatly exaggerated. While some of the sects, and notably the Kabīr-panthīs, inculcate the greatest care in the selection of a guru, once selected he is to be obeyed implicitly throughout life. His voice is declared to be the voice of God, and the fullest devotion in word, act, and deed must be rendered to him. Some sects go further than others. The devotion is carried to incredible extremes among the Vallabhāchāris. The devotee of this sect offers his body, soul, and substance to God, and, as the Gusāin (properly 'Gosāī'), *i.e.* the guru, is in the later works of the sect identified with the Deity, these are in reality dedicated to him. 'By the act of dedication, a man submits to the pleasure of the Gusāin, as God's representative, not only the fruits of his wealth, but also the virginity of his daughter or of his newly-married wife.'* It is fair to explain that few sects go to this length, and that in most, although the guru is revered as an incarnation of the Deity, his influence extends only to the sphere of morality. This is one more example of the tendency in India, as elsewhere, to deify the founder of a religion. The first Bhāgavatas deified Vāsudeva, and their successors deified, in their turn, the great men who founded their churches and their sects.

* Growse, *Mathurā*, p. 266.

Lastly, they took the further step of deifying their spiritual directors.

(5) *The mantra.*—No Hindu can become a member of a sect without the permission of a guru belonging to the sect. He is at first in the position of an inquirer, and when the guru considers him fit for admission, he whispers into his ear an initiatory formula (*mantra*), corresponding, as Mr. Growse points out, to the *In nomine Patris*, etc., of Christian baptism. These formulas are generally kept secret; but we know that the earliest, dating from pre-reformation times, was the 'twelve-syllabled' *Oṁ namo Bhagavate Vāsudevāya* ('Oṁ! reverence to the Adorable Vāsudeva'). In later times, as sectarian differences increased, the Supreme became differentiated into His incarnations. Thus, the *mantra* of the Rāmānujas is the 'six-syllabled' *Oṁ Rāmāya namaḥ* ('Oṁ! reverence to Rāma), while that of the Vallabhāchārīs is the 'eight-syllabled' *Śrī-Kṛṣṇaḥ śaraṇaṁ mama* ('the holy Kṛṣṇa is my refuge').

(6) *Sectarian marks.*—Each sect is distinguished by certain marks placed by the more pious members upon the forehead or other part of the body. Thus the Rāmānujas have two perpendicular white lines, with a transverse streak connecting them above the nose. In the centre is a perpendicular streak of red. In the Brahma-sampradāya, a yellow spot is substituted for the red streak, and special marks are also branded on the shoulders and breast. It may be mentioned that worshippers of Śiva also put sectarian marks upon the forehead. As a guide for distinguishing the followers of the two religions, we may say that, as a general rule, while the essential parts of the Bhāgavata marks consist of perpendicular lines, those of the Śaiva sects are horizontal.

(7) *Bhakti and its 'flavours.'*—Later Bhāgavata writers have spent much time over the question of *bhakti* and the various modes in which it reveals itself. These modes are called *rasas*, or flavours, and as it would be difficult to understand the simplest treatise on *bhakti* without being familiar with at least the main principles according to which these flavours are held to be developed, the following brief account will be of service. The writers employ the terminology of the Indian system of poetics, but the categories are different.

Every religious attitude depends upon an objective 'dominant emotion' or *sthāyi bhāva*, considered as an abstract entity, apart from the person experiencing it. There are five of these dominant emotions: (1) resignation (*praśānta bhāva*); (2) obedience (*dāsya bhāva*); (3) friendship (*sākhya bhāva*); (4) tender fondness (*vātsalya bhāva*); (5) passionate love (*rati bhāva*). It will be observed that these are arranged in an ascending scale of emotional force.

These 'dominant emotions' may have 'accessory emotions' (*vyabhichārī bhāva*, or *sañchārī bhāva*). These are not essential to the dominant emotions, but may go along with and co-operate with them, either permanently or occasionally. These accessory emotions are thirty-three in number, and are such as 'disgust with worldly things' (*nirveda*), apprehension (*śaṅkā*), painful thoughts (*chintā*), and the like.

Each of these dominant emotions, whether accompanied by an accessory emotion or not, produces a corresponding subjective psychic condition or experience, technically called *rasa*, or flavour, in the person who is subjected to it. These flavours are, in the order of the corresponding underlying dominant emotions: (1) the resigned flavour (*śānti rasa*); (2) the obedient flavour (*dāsya rasa*); (3) the friendly flavour (*sākhya rasa*); (4) the tenderly fond flavour, (*vātsalya rasa*); (5) the passionately loving flavour (*śṛṅgāra rasa*, or *mādhurya rasa*). The last, which is the highest stage, is also called the 'king of flavours' (*rasa-rāja*) or the 'glorious flavour' (*ujjvala rasa*).

Every flavour must have an 'exciting cause' or 'excitant' (*vibhāva*) in order to induce the experience from the underlying dominant emotion, and such excitants may be either 'essential' (*ālambana*) or 'enhancing' (*uddīpana*). The absolutely essential excitant is the object towards which the underlying dominant emotion of resignation, obedience, or the like, is directed, *i.e.* the Supreme Deity. Such an excitant is called 'absolutely essential' (*viṣayālambana*). But an excitant may be 'relatively essential' (*āśrayālambana*). It then excites a flavour, the dominant emotion of which is not immediately directed to the Supreme. Such for instance is Sītā the spouse of Rāma-chandra. She can be the relatively essential excitant of the flavour of passionate love, *i.e.*, she causes the subjective flavour to arise in the heart of the devotee from the corresponding dominant emotion considered as an objective abstract entity. This ultimately leads to the flavour of passionate love directed to her husband, Rāma-chandra, who, being an incarnation of the Supreme Deity Himself, is the absolutely essential excitant.

An enhancing excitant is such an excitant as the qualities, actions, gestures, or beauty of any of the essential excitants. For instance, Rāma-chandra's cherishing of those who take refuge in him, or his love for those who serve him, is an enhancing excitant of the flavour of obedience.

When the psychic condition, or flavour, of a dominant emotion has been thus excited, certain effects occur. These are called 'ensuants' (*anubhāva*). The most important of these are the natural expressions of emotion (*sāttvika bhāva*), which are here enumerated in order of usual occurrence: (1) arrest of motion (*stambha*); (2) trembling (*kampa*); (3) disturbance of speech (*svara-bhaṅga*); (4) change of colour (*vaivarṇya*); (5) tears (*aśru*); (6) sweating (*sveda*); (7) thrills (*pulaka*); (8) unconsciousness (*pralaya*). Other ensuants may be spiritual, such as a feeling of devotion, rapture, and so on.

From the above it will be seen that the Hindu love for classification has been carried even into the province of religious emotion. It will also be noticed how closely the Indian religious experiences, and especially the phenomena attendant on what we should call 'conversion,' agree with what we observe in Christian countries.

(8) *The niṣṭhās.*—Every true Bhāgavata from his birth has his vocation allotted to him by the Adorable. For instance, his vocation may be to preach the gospel, or to wait upon saintly men, or to love hearing the scriptures, or to sing psalms, or even merely to lead a moral life. Each of these vocations is called a *niṣṭhā*; and every created being who is faithful to the Adorable must belong to at least one of them. He may belong to two or more, if the Adorable so will. These *niṣṭhās* are twenty-four in number, each being under the special protection of one of the twenty-four incarnations believed in by Bhāgavatas. In the catalogues of saints, each is carefully allotted his *niṣṭhā*, and is classified and grouped accordingly.

4. General aspects of the Bhāgavata reformation.—Nothing is more striking in the history of India than the rapidity and completeness with which the Bhāgavata reformation of the Middle Ages was accomplished. At first sight it almost seems as if a new doctrine, coming from some unknown land, had suddenly been revealed, and had swept with irresistible force in one mighty wave across the peninsula. Great modern scholars, men like Lassen and Weber, were found declaring that the only possible explanation was that the doctrine of *bhakti* arose in India as a more or less direct reflexion of Christianity. The late Professor Cowell himself, when writing in 1878 the preface to his translation of the *Bhakti-sūtras*, confessed that the date and history of the origin of the doctrine were unknown, and, in fact, it is only within the last few years that we have been able to pierce the cloud of mystery that surrounds it. The first to throw light upon the subject was Professor Bhandarkar; and though the conclusions arrived at by him in the year 1887 have been disputed, his labours have been the foundation of all subsequent inquiries. The next important step was not taken till the year 1905, when Prof. Garbe fixed with approximate certainty the date of the *Bhagavad-Gītā*. We can now be as sure as we can be of anything in the history of Indian literature, that portions of this poem are pre-Christian; and, as *bhakti* is taught therein, we can safely assert that the doctrine, however Christian may be its appearance, is of indigenous Indian origin.

Nevertheless, although one is based upon the other, a whole world of difference lies between the Bhāgavatism of the reformation and that of the *Bhagavad-Gītā*. Like the Brahmaism of the Midland Brāhmans, the pre-reformation Bhāgavatism was the religion of a class—the warriors. It was taught in a learned language, and was practised by learned Kṣatriya kings and men of

note.* It had its ritual and its five solemn sacrifices, and was therefore a religion of the wealthy. As has more than once been remarked,† official Vaiṣṇavism is a costly religion, while Śaivism is a cheap one. Bhāgavatism, after the identification of the Bhagavat with Viṣṇu, can hardly have been a religion of the lower castes or of the poor. In other words, it was not a religion of the people. The alliance with Brahmaism still further parted it from the lower orders. The theory of absorption peculiar to that form of belief, but now dallied with by Bhāgavatism, had nothing in common with their hopes or fears. As Hopkins rightly says,‡ 'the ordinary mortal is more averse from the bliss of absorption than from the pleasures of heaven.' At this time, and during the centuries immediately succeeding the Christian era, the needs of the common people were amply supplied by two other religions of the Outland—by Buddhism and, for those who craved for a personal God, by Śaivism. Bhāgavatism in its pure form came to be professed by fewer and fewer, and from the 9th cent., when all thinking India fell under the spell of the genius of Śaṅkara, it practically disappeared. Only at rare intervals do we come across references to it in literature and inscriptions.§ Śaṅkara himself mentions *bhakti* only once in his great philosophical work, and merely to dismiss it with contempt. It was in Southern India that the lamp of Bhāgavatism was kept burning, though with but a feeble light,‖ and it was in the South that it revived through the teaching of the four great leaders whose names have been mentioned. Then arose Rāmānanda, and within half a century Bhāgavatism became the leading religion of India. Yet there is as great a difference between the monotheism of the *Bhagavad-Gītā* and that of Rāmānanda as there was between the teaching of Plato and that of St. Paul. It now became as fully the right of the despised classes, of Musalmāns and of unclean leather-workers, as of people of repute. From Rāmānanda's time it was to the poor that the gospel was preached, and that in their own language, not in a form of speech holy but unintelligible. No one who reads the Indian religious literature of the 15th and following centuries can fail to notice the gulf that lies between the old and the new. We find ourselves in the face of the greatest religious revolution that India has ever seen—greater even than that of Buddhism, for its effects have persisted to the present day. Religion is no longer a question of knowledge. It is one of emotion. We visit a land of mysticism and rapture, and meet spirits akin, not to the giant schoolmen of Benares, but to the poets and mystics of mediæval Europe, in sympathy with Bernard of Clairvaux, with Thomas à Kempis, with Eckhart, and with St. Theresa. In the early years of the reformation the converts lived and moved in an atmosphere of the highest spiritual exaltation, while over all there hovered, with healing in its wings, a Divine gospel of love, smoothing down inevitable asperities, restoring breaches, and reconciling conflicting modes of thought. Northern India was filled with wandering devotees vowed to poverty and purity. Visions, trances, raptures, and even reputed miracles were of every-day occurrence. Rich noblemen abandoned all their possessions and gave them to the poor, and even the poorest would lay aside a bundle of sticks to light a fire for some chance wandering saint. Nor were these converts confined to the male sex. Of devout and honourable women there were not a few—Mīrā Bāī, the queen-poet of Udaipur, who gave up her throne rather than join in the bloody worship of Śiva; Bāṅkā, the poor woodcutter's wife, who could not be tempted by a purse of gold; the chaste Surasurī with her tiger guardian; Gaṇeśa Derānī, the queen of Madhukara Sāhi of Orchha, who hid the wound inflicted by a mad ascetic, lest her husband should take indiscriminating vengeance; the penitent Magdalen of Delhi, who gave her life and the only art that she possessed, her dancing, to the service of the deity in whom she had taken refuge; and many others. Of men, there were Hari-dāsa, the sweet singer, to hear whom Akbar disguised himself as a menial servant and travelled far; Nanda-dāsa, the hymn-writer, whose last words were a prayer that his soul might stand 'very close and near' the Adored; Chaturbhuja, the apostle to the savage Gonds, who taught that right initiation meant 'being born again'; Gopāla, who when smitten on one cheek turned the other to the smiter; Vilvamaṅgala, who looked after a woman to lust after her, and, because his eye offended him, made himself blind; the unnamed king, who for the same reason cut off his right hand and cast it from him; Sūra-dāsa, the blind bard of Agra; and, most famous of all, perhaps the greatest poet that India has produced, Tulasī-dāsa, the teller of the deeds of Rāma.*

The question naturally arises, whence did Rāmānanda receive the inspiration that produced this marvellous change; and an attempt is made to answer it in the following paragraphs.

5. Influence of Christianity.—The question as to how far Christianity has influenced the *Bhakti-mārga* has been much discussed. We have seen that it must now be taken as settled that the idea of *bhakti* is native to India, and that the existence of Bhāgavata monotheism can be traced back to very ancient times. It is still, however, open to us to consider the possibility of post-Christian Bhāgavatism being affected by the cognate teachings of the Western form of belief. The facts appear to be as follows:

Large colonies of Nestorian Christians and Jews migrated to the Malabar Coast in the 1st cent. A.D., and settled in Southern India in the early centuries of our era. The former have been there ever since. They had a bishop at Kalyāṇa on the Malabar Coast in the 6th cent., and another of their settlements was at the present shrine of St. Thomé, near Madras. There is a respectable tradition that the Apostle Thomas actually preached in North-Western India, and at any rate it is certain that the parts of Asia immediately adjoining had many Christian inhabitants. Not only was there in the early centuries of our era free and regular communication between India and the West, both by sea and overland, but during the same period India was more than once invaded from the North-West. In the year A.D. 639 the famous Indian king Śīlāditya of Kanauj, a patron of the Bhāgavatas, received a party of Syrian Christians, headed by the missionary Alopen, at his court.† The author of the *Dabistān*,

* *Bhagavad-Gītā*, iv. 1, 2, distinctly says that it was a Kṣatriya religion.

† *e.g.* by Monier Williams, *Brāhmanism and Hindūism*, 1889, p. 62 ff.

‡ *Religions of India*, p. 418.

§ Bopadēva, the reputed author of the *Bhāgavata Purāṇa*, belongs to the post-reformation period (13th cent.).

‖ *e.g.* only one prince of the Valabhī kings, Dhruvasena I. (A.D. 526), is called a Bhāgavata. The others were Mahēśvaras, or worshippers of Śiva. Cf., however, the remarks on Śiva *Bhakti*, below.

* All these examples are taken from the *Bhakta-māla* (cf. the next section). The early writers were perfectly conscious of the change effected by the reformation. Priyā-dāsa says, 'the tree of *Bhakti* was once but a sapling, that might be stunted by a single kid. . . Now it hath climbed to the sky, with its glory spread manifest over the earth; for the basin from which its roots drew moisture was the bosom of the Holy. . . . Mark well its growth. Once but a feeble thing; now, shackled to its trunk, contentedly sway the mighty elephants of the passions' (*Bhakti-rasa-bodhinī*, 6).

† Edkins, *Athenæum*, July 3, 1880, p. 8. See also Takakusu,

which was written in 1645, describes (iii. 312 f.) how, when travelling in India, he had 'greatly frequented the meetings of Hindus, Jews, Magians, Nazáreans, and Muselmans'; and speaking of the Vedas, he says (ii. 45) that every one who pleases may derive from them arguments in favour of his particular creed, whether that creed be 'Hinduism, Judaism, Christianity, fire-worship, the tenets of the Sonites, or those of the Shîâs, etc.'

Finally, there were the Jesuit missions to India in the latter part of the 16th cent., and their arrival at the court of the Emperor Akbar in the year 1580. They had churches in Agra, Delhi, and Lahore till Shāh Jahān came to the throne in 1628, and the Delhi church survived till the invasion of Nādir Shāh in 1789. We thus see that from the first centuries of our era Christianity has always been present in India, and that, both in the North and in the South, Hindus had every opportunity of becoming acquainted with its tenets.

Although there are many remarkable verbal coincidences, it is improbable that the latest parts of the *Bhagavad-Gītā* contain passages suggested by our Scriptures. As for the earlier portions, chronology renders it impossible. But in one of the latest passages of the *Mahābhārata*, written at least three hundred years after Christ, if not considerably later, there is an account of a visit paid by three saints to a 'White Continent,' where the people were of fair complexion, and endowed with a perfect *bhakti* that did not exist in India. A description is given of their worship which certainly suggests reminiscences of a Christian religious service, and many believe that the passage is based upon the tales of travellers who had come across Christian communities in those parts of Asia which lie north of the Hindu Kush. Besides this, there are other passages in the later parts of the *Mahābhārata* which it is difficult to believe are not borrowed from our Gospels, especially from that of St. John. These have been collected by Hopkins (*India Old and New*, p. 145 ff.). Two of his examples may be cited here. Kṛṣṇa, the incarnate Deity, is described as 'the unborn (*i.e.* the eternal) and ancient one, the only son of God, born of a virgin, very part of God'; and again, it is said of him that 'He, the guardian of his flock, the sinless God, the Lord of the world, consented to the death of (himself and) his race that he might fulfil the words of the seers.' A striking innovation, dating from about the 6th cent. A.D., was the divinity attributed by the Bhāgavatas to the *child* Kṛṣṇa. Hitherto he had been a religious teacher and a warrior, regarding whose childhood, as is usual in such cases, legends not essential to his character had accumulated. But from the 6th cent. onwards the greatest prominence is given to his childish miracles and freaks, and to his adolescent pastoral life in the country round Mathurā. It is the infant god, the *bambino*, brought up among the cowherds of Gokula, who is now a favourite object of worship. His mother Devakī, hitherto hardly mentioned, is now portrayed, like a *Madonna lactans*, suckling the infant Kṛṣṇa. His birth coincides with a massacre of the innocents, and we have other and new legends of 'the restoration to life of a woman's son, the healing of a cripple, and the pouring of a box of ointment over Kṛṣṇa' (Hopkins, *op. cit.* p. 163). Kennedy (*JRAS*, 1907, p. 951 ff.) suggests that all this is a Hindu adaptation of the Christian stories brought into the Gangetic Doāb by Gūjar immigrants from the North-West. Whether these legends have been borrowed or not may possibly be doubted, but all hesitation vanishes when we read the orthodox liturgy of the festival of Kṛṣṇa's birthday. The old legends of the birth and childhood are perfectly well known, but, as long ago shown by Weber, the ritual does not adhere to them. It actually alters the story in material facts to make it agree with the narratives of the nativity as contained in the early chapters of St. Matthew and St. Luke. Vallabha found this child-worship current in Mathurā, and adapted it to the needs of his own *Kṛṣṇa-bhakti*. As Hopkins (p. 167) says:

'So decided is the alteration and so direct is the connexion between this later phase of Krishnaism and the Christianity of the early centuries of our era, that it is no expression of extravagant fancy but a sober historical statement that in all probability the Hindus of this cult of the Madonna and Child have in reality, though unwittingly, been worshipping the Christ-child for fully a thousand years.'

The religion of Rāma presents other aspects of the case. We have seen that the modern worship of the incarnate Rāma commenced with the teaching of Rāmānuja, and was spread over Northern India by Rāmānanda and his followers. In Rāmānuja's time the Christians of St. Thomé had become paganized. They had given up baptism, while they retained the Eucharist; and a kind of mixed, or rather joint, worship, half Christian and half Hindu, had established itself in the ancient shrine. That Rāmānuja and his followers imbibed much of this teaching admits, to the present writer at least, of but little doubt. Owing to the similarity of the ground ideas of 'faith' and *bhakti*, it would indeed be extraordinary if the two religions, once brought into contact, had not influenced each other. That the Hinduism influenced the Christianity has been established as an historical fact, and that alone shows the probability of the converse also being true. According to Indian tradition, Rāmānuja was born, brought up, and spent the best part of his life near St. Thomé. In his early years he was a Vedāntist, and while he was still a young man it was in this neighbourhood that he became converted to Bhāgavatism, thought out his systematized qualified monism, refuted in a famous discussion his old Vedāntist teacher, and suffered much persecution.* Much the same as in the case of early Christianity, it is to Rāmānuja's persecution and flight from Conjeeveram that Bhāgavatism owes its acceptance over the greater part of India. Except the sects founded by Vallabha and Hari-vaṁśa, the conditions of which were altogether peculiar, the other churches have comparatively little influence beyond the localities in which they arose. But the Śrī-saṁpradāya had within it a driving force that carried it all over India from Cape Comorin to the Himālaya. Its special characteristic was the importance given to faith in a personal God, and particularly to Rāma-chandra represented as an incarnation of the Adorable, still retaining the same personality in heaven, remembering and sympathizing with the sorrows and trials of humanity. It is true that *bhakti* also plays a prominent rôle in the other churches; but it has not, with the exception of the two sects just mentioned, acquired the supreme importance in them that it has gained in the Śrī-saṁpradāya. That this is owing to the view taken of the personality of Rāma-chandra is self-evident; and though it cannot be said that the attributes with which he has been clothed are strange to the old epic accounts of him, still Christian influence may reasonably be claimed for the stress laid upon them to the comparative exclusion of others. The root conception of the

I-tsing, p. xxviii., note 8. It was at the court of this king that the poet Bāṇa refers to the presence of Bhāgavatas and Pāñcharātras (*Harṣacharita*, tr. Cowell and Thomas, p. 236).

* The similarity of the cases of Rāmānuja and Madhva is worth noting. Both were converts from Vedāntism, and both were within reach of Christian influence. Madhva was a man of Uḍipi, close to Kalyāṇa, where there was an old Christian bishopric.

Deity has been profoundly modified. The noble and pious hero has become a God of love (*δυνάμενος συμπαθῆσαι ταῖς ἀσθενείαις ἡμῶν*). The love, moreover, is that of a father for his children, not that of a man for a maid, as in the ardent *bhakti* of Vallabha and Hari-vaṁśa.

Another point of coincidence is worth noting—the institution of the *mahāprasāda*, or sacramental meal. Such meals are found in many religions, but the procedure of those partaken of by the members of the Śrī-saṁpradāya shows points of agreement with the Christian Eucharist that cannot be mere matters of chance.* The consecrated elements are even reserved for administration to the sick, and the communion, which is shared in only by those who feel themselves worthy, is followed by a love-feast attended by all members of the sect present at the time.

But it is in the literature of the church that we find the most evident reminiscences of Christianity. Kabīr, one of Rāmānanda's twelve apostles, speaks of the Word in language which is but a paraphrase of the opening verses of St. John's Gospel, and quotes sayings of our Lord almost verbatim. The authorized text-book of all believers—the *Bhakta-māla*—also contains numerous parallels to the sayings of our Lord. Attention has been drawn to several of these in the preceding section, and they need not be repeated. Here we may notice another alteration of an old legend—an alteration to make it agree with an occurrence of the most solemn hour of Christian history. In the *Mahābhārata*, Kṛṣṇa is represented as washing the feet of Brāhmans. The story, as altered by the *Bhakta-māla*, makes the incarnate God wash the feet of the disciples. In another story, which is specially mentioned as 'beloved, but hitherto not well-known,' a poor wretch is taken in and honourably entreated because he is a stranger, and therefore equivalent to Rāma. He is then told that if he has faith he can walk on the sea. He has faith, and does so.

It is possible that everything was not necessarily taken from the Nestorian Christians. There was free intercourse by sea between Christian countries and Southern India, and this may account for other coincidences, in which it is not always easy to say which side has borrowed from which. Such is the fact that the word employed in India, both by Śaṅkara and Rāmānuja, for the personal Deity was *Īśvara*, the exact equivalent of the Greek *Κύριος*. This may possibly be a pre-Christian coincidence. In early Christianity there was the same remarkable reverence for spiritual teachers that we have observed in Bhāgavatism. According to the *Didache*, such a teacher was to be 'known as the Lord.' In both religions there was the same extravagant belief in the mystic power attached to the *name* of the incarnate God. Thomas à Kempis speaks of the 'holy utterance, short to read, easy to retain, sweet to think upon, strong to protect,' just as Tulasī-dāsa praises 'the two gracious syllables, the eyes as it were of the soul, easy to remember, satisfying every wish, a gain in this world and felicity in the next.'† In both religions there are the same discussions as to the relative efficacy of faith and works, and as to the truth of the opposing doctrines of 'irresistible' and 'co-operative grace.' The change in the Indian idea of sin is also noteworthy. Till Rāmānuja's time, sin was disobedience to the rules of religion laid down in text-books, and was to be avoided as entailing certain consequences in a future life. Since then it has been defined as anything not done in faith. Sin is sin because it is incompatible with the nature of the incarnate God of Love, and, as quoted in the abstract of Śāṇḍilya's work given above on p. 539, even good works not done in *bhakti* partake of the nature of sin. Each of these instances of agreement taken singly might be an accident, but their cumulative effect, combined with the whole style and tone of the modern *bhakti* literature, is irresistible.

The political history of India at this period must also be taken into account. Maḥmūd of Ghazni's seventeen invasions commenced in A.D. 1001. He was succeeded by dynasty after dynasty of Musalmān conquerors, broken in 1398 by the terrible suffering entailed by the invasion of Timur. Not till Akbar ascended the throne in 1556 had the Hindus peace, and a century later the oppression was renewed by Aurangzīb (*q.v.*). For more than five centuries, from 1001 to 1556, India lay prostrate and bleeding under the feet of conquerors of alien race and alien religion. This was the period of the reformation.

To sum up the foregoing:—It is certain that in the early centuries of our era Christians visited India, and were received at a royal court. It is extremely probable that the inhabitants of Northern India were acquainted with the early Christianity of Bactria and the neighbouring parts of Central Asia, that they greatly respected it, and that they admitted that its professors possessed *bhakti* to a degree more perfect than that which ever existed in their own country. It is possible, and perhaps probable, that the worship of the infant Kṛṣṇa was a local adaptation of the worship of the infant Christ introduced to India from the North-West, and the ritual of Kṛṣṇa's birth-festival has certainly borrowed from Christian authorities. But it was in Southern India that Christianity, as a doctrine, exercised the greatest influence on Hinduism generally. Although the conceptions of the fatherhood of God and of *bhakti* were indigenous to India, they received an immense impetus owing to the beliefs of Christian communities reacting upon the mediæval Bhāgavata reformers of the South. With this leaven, their teaching swept over Hindustan, bringing balm and healing to a nation gasping in its death-throes amid the horrors of alien invasion. It is not overstating the case to say that in this reformation India re-discovered faith and love; and the fact of this discovery accounts for the passionate enthusiasm of the contemporary religious writings. In them we behold the profoundest depths of the human heart laid bare with a simplicity and freedom from self-consciousness unsurpassed in any literature with which the writer is acquainted.

6. Muhammadan influence.—The syncretism of the Bhāgavata religion has not stopped at Christianity. The later reformers, some of whom were converts from Islām, also imported into it the elements of Ṣūfīism, which will readily be recognized, and are universally acknowledged. It is sometimes difficult to decide whether a particular sectarian doctrine has been borrowed from it or from Christianity. Ṣūfīism itself has been influenced by Christian mysticism, and the doctrine of Divine love which is its distinguishing mark is so akin to the teaching of the reformed *bhakti*-churches that it could hardly fail to influence the teaching of those Bhāgavatas whose youth had been passed in a Musalmān atmosphere. But Ṣūfīism did not influence Bhāgavatism until it had reached Northern India, and, being little known in the South, it never inspired the ground doctrine of any one of the four churches.

7. Bhakti directed to Śiva.—It may be stated as a broad rule that all the followers of the Indian *bhakti-mārga* are Vaiṣṇavas. Śiva, the other

* For the whole procedure see Westcott, *Kabīr and the Kabīr Panth*, 1908, p. 127.

† For further Christian examples see Growse, *Translation of Tulasī-dāsa's Rāmāyaṇa*, i. Do. 24.

great deity of Indian worship, is associated with ideas too terrible to suggest loving devotion. There are, however, in Southern India, Śaiva sects which practise a *bhakti* cult. We have seen how the Vaiṣṇava Bhāgavatism of Northern India became infected with Brahmaism in the first few centuries of our era. In Southern India the stricter Bhāgavatas, who desired to retain their monotheism intact, began to direct their devotion to Śiva in preference to Viṣṇu, who was now, in the North, partly identified with the pantheistic Bráhma.* It is most probable that in this way there arose the Śiva-*bhakti* now sometimes met with in the South. Śiva was even provided with incarnations, such as Vīrabhadra, in imitation of those of Viṣṇu, to whom the love and devotion could be directed.

It may here be mentioned that all Indian sects agree that Śaṅkara, the promulgator of Vedāntism, was an incarnation of Śiva. Bhāgavata doctors get over the difficulty by explaining that, when the world was filled with Buddhism and other heresies, the Bhagavat directed Śiva to become incarnate and to preach a false doctrine invented by himself, so as to turn people from the Bhagavat, and thus manifest his glory by the consequent destruction of unbelievers. In other words, followers of Vedāntism were born to be damned for the greater glory of a gracious and merciful God.

The Sittars (*q.v.*), a Tamil sect, may also be noted in this connexion. Although nominal Śaivas, they are strict monotheists, who teach that 'God and love are the same.' There are other instances in Southern India of attempts to reconcile Śaivism with Bhāgavatism. The most important of these is the Brahma-saṁpradāya, founded by Madhva, already described. Regarding the true Śiva-*bhakti*, which is professedly a cult of Śiva or his incarnations, very little is known, and the subject deserves more study than it has hitherto received.

LITERATURE.—The official Sanskrit text-books of the Bhaktimārga are the Śāṇḍilya *Bhakti-sūtras*, and the Nārada *Bhakti-sūtras*. Both are quite modern works. The text of the former was edited by J. R. Ballantyne in 1861, and translated by E. B. Cowell in 1878, both appearing in the *Bibliotheca Indica* of the Asiatic Society of Bengal. Hariśchandra (see below) wrote a Hindi version of the Śāṇḍilya work under the title of the *Bhakti-sūtra-vaijayanti*, and of the Nārada under the title of the *Tadīya-sarvasva*.

There is no European work dealing with the subject as a whole. The earliest account of the doctrines of the Bhāgavatas is that given by Colebrooke, read in 1827, and published in the first volume of the *Transactions* of the *RAS*. Like everything that came from his pen, it is scholarly and accurate, and in some particulars has been the foundation of all subsequent accounts of the Bhāgavata religion. It was re-published in his *Miscellaneous Essays*, 1837 (i. 437 ff.). The history of the origin of this form of belief was first given by R. G. Bhandarkar in his *Report on the Search for Sanskrit Manuscripts in the Bombay Presidency during the Year 1883–84* (Bombay, 1887) p. 68 ff., and, more fully, in 'The Rāmānujiya and the Bhāgavata or Pañcharātra Systems,' in *Verhandlungen des VII. internationalen Orientalisten-Congresses* (Arische Section) (Vienna, 1888), p. 101 ff. His views were adopted and developed by R. Garbe in the Introduction to his German tr. of the *Bhagavad-Gītā* (Leipzig, 1905). L. Barnett, in the Introduction to his Eng. tr. of the same work, has given an independent and shorter account of the cult of Vāsudeva, in which much valuable information will be found that lay outside the lines of Garbe's thesis. An abstract of the *Nārāyaṇīya*, with an Introduction by G. A. Grierson, will be found in the *IA*, 1908.

For Rāmānuja, see the special article. The best account of his qualified monism will be found in pt. i. of G. Thibaut's tr. of the *Vedānta-sūtras* (*SBE*, xxxiv., Oxford, 1890). For the other three reformers and the churches founded by them, as well as for the various sects, see the special articles. Bhandarkar, already quoted, gives accounts of the teaching of Rāmānuja, Madhva, and Vallabha. The leading work on modern Bhāgavatism is H. H. Wilson, *Sketch of the Religious Sects of the Hindus*, which originally appeared in vols. xvi. and xvii. of the *Asiatic Researches* (1828–32, re-published, London, 1861). Although to a certain extent out of date, Wilson's work must still be the foundation for all inquirers into modern Hinduism. Most of the popular works on the subject are mere réchauffés of what he has written, including most of his mistakes. Of more modern works which contain original research, F. S. Growse's *Mathurā, a District Memoir*[2] (Allahabad, 1880), gives much valuable information which will not be found elsewhere. E. W. Hopkins's *Religions of India* (Boston and London, 1902), is also replete with new material collected from many sources, and illumined by many suggestive remarks. Among works written by natives of India, the *Bhakta-māla* of Nābhā-dāsa, with its commentary by Priyā-dāsa, is all-important. It has often been printed in the original and also translated into modern Indian languages. A convenient Hindī paraphrase is the *Bhakta-kalpadruma* of Pratāpa Siṁha (Lucknow, 1884). It is impossible to understand reformed Bhāgavatism without a familiarity with the contents of the *Bhakta-māla*, but its many difficulties have hitherto deterred most students from the task of studying it. The late Hariśchandra of Benares, who was a devout Bhāgavata, wrote a number of works in Hindī dealing with the history of his religion. The more important are the *Vaiṣṇava-sarvasva*, the *Vallabhīya-sarvasva*, and biographies of Rāmānuja and Vallabha. These, as well as the *Bhakti-sūtra-vaijayanti* and the *Tadīya-sarvasva*, can be found in a collection of his works published at intervals during the closing decade of the 19th cent. at Bānkipur, and entitled the *Hariśchandra-kalā*.

For Early Christianity in India, see A. C. Burnell in *IA* iii. 808, iv. 153, v. 25. A. Weber in his well-known articles on the *Kṛṣṇa-janmāṣṭamī* (Eng. tr. in *IA* iii. 21, etc., vi. 161, etc.) deals with the ritual of the Kṛṣṇa birth-festival; and although all his arguments are not now accepted, his main results are universally admitted to be true. An article by the present writer (who does not adhere to all the details then advanced by him) on 'Modern Hinduism, and its Debt to the Nestorians,' in *JRAS*, 1907, may be read for the sake of the discussion to which it gave rise, and which is printed in the same volume. See also J. Kennedy, 'The Child Kṛṣṇa, Christianity, and the Gujars,' *ib.* p. 951 ff. The most complete and sane summary of the whole question is Hopkins's 'Christ in India,' in *India Old and New* (New York and London, 1902). It is, of course, earlier than the two papers just mentioned. The Bhāgavata doctrine of works is dealt with by G. A. Grierson in *JRAS*, 1908, p. 337 ff.

GEORGE A. GRIERSON.

BHANGI.—The sweeper or scavenger caste of Hindustan, who at the Census of 1901 numbered 656,668. The caste probably takes its name, on account of the drunken habits of its members, from Skr. *bhaṅga*, 'hemp.' With the Bhangīs may also be conveniently grouped other scavenger tribes of Northern India—the Chūhrā (probably from Hindī *chūṛā-jhāṛnā*, 'to sweep up rubbish'); the Ḥalālkhor, 'one to whom any kind of food is lawful'; and the Mehtar, or 'prince,' a mock honorific term for this and other menial occupations. This group of castes numbered in all, at the Census of 1901, 2,168,594. As regards distribution, the vast majority of them were found in the Panjāb (1,316,517) and in the United Provinces (461,993). In Bengal they number only 40,971, their duties being performed in this province by still more degraded tribes, such as the Ḍom (*q.v.*) and the Hāṛī (*q.v.*). Classified according to religion, about three-fourths profess to be Hindus and nearly one-fourth Muhammadans, the small balance calling themselves either Sikhs or Animists. But the more respectable Hindus, Muhammadans, and Sikhs utterly refuse communion in worship or in the social observances of life to people whom they regard as out-castes, and believe that their touch, or even their mere presence, involves pollution.

The sweeper castes, as a whole, are the modern representatives of the Chaṇḍāla of Manu (*Institutes*, x. 12, 29, 30), who are regarded by the lawgiver as the offspring of a Śūdra father and a Brāhman woman, thus marking the Aryan abhorrence of marriage relations between women of the ruling race and men of the conquered Dravidian races. They acquired the title of Anta-vāsin or Ante-vāsin, because they were required to dwell outside the limits of the homestead. Their sole wealth must be dogs and asses—both animals which the orthodox Hindu still regards as impure. Their clothes must be made out of the cerecloths of the dead; their dishes must be broken pots, and their ornaments of rusty iron. No one who is careful of his religious duties must hold any intercourse with them, and they must marry among themselves—a rule which probably dates from early Buddhist times, when caste was only in the making. By day

they may roam about to seek work; they must be distinguished by the badges of the Rājā, and they must carry out the corpses of any who die without kindred. They should always be employed to slay those whom the law sentences to be put to death, and they may appropriate the clothes of the slain, their beds, and their ornaments.

The word Chaṇḍāla, probably a Dravidian term, but sometimes derived from the Skr. *chaṇḍa*, 'evil,' 'cruel,' 'mischievous,' is nowadays used only in a contumelious sense, and the so-called Chaṇḍāla caste of Bengal call themselves Nāmaśūdra; and their higher subdivisions, with characteristic jealousy, apply the title Chaṇḍāla to the lower, who in their turn pass it on to the Dom. In short, the title Chaṇḍāla may have been a generic title for the meaner non-Aryan races, who at an early period were reduced to servitude, and compelled to perform the more odious duties in the Aryan commonwealth. But at the present time the viler duties assigned to the Chaṇḍāla of Manu —the conveyance of corpses and the task of acting as public executioners—have passed to the Doms, and the Bhangis now owe their social degradation to their performance of the duties of scavengering. The rise of the present Bhangī caste seems, from the names applied to the caste and its subdivisions, to date from the early period of Muhammadan rule, and their appearance indicates that they are a mixture of various races, who for some reason or another have incurred social ostracism.

1. *The cult of Lāl Beg.*—The Bhangī legends and rites of worship centre round the person of their saint, Lāl Beg, about whom many wonderful tales are told. From the mass of folklore connected with him little can be definitely ascertained. He has been connected with the *rākshasa*, or demon, Aruṇakarat, and as Aruṇa in Skr. is a title of the sun, and *lāl* in Persian means 'red,' some connexion has been traced between his cult and earlier Hindu beliefs. Others would connect Lāl Beg with the *lāl Bhikshū*, or red-clad monk of Buddhist times; and he is also in some inexplicable way mixed up with the cult of Vālmīki, the poet-sage who compiled the epic of the Rāmāyaṇa, and who has also been adopted as their patron deity by low castes like the Aheria (*q.v.*) and Bahelia (*q.v.*). In the names of the tribal sections some vague indications of totemism appear, but these must not be pressed too far.

2. *Other Bhangī deities.*—The Bhangīs, as might be expected from the mixed origin of the caste, follow a combination of different faiths. The basis of their religion is the characteristic Animism of the Dravidians, but to this they have added elements derived from other sources. In the United Provinces a large number of them worship as their patron saint Lāl Beg, and with him is combined or confounded the Pachpiriyā (*q.v.*) cult of the Pāñchoñ Pīr, or five saints. In Central India Lāl Beg has no temple, but is often represented in villages by a flat stone upon which two footprints are carved, and over them a rude mud shelter, marked by a red flag, is often erected. In Rājputāna, when sacrifice is being offered to him, they cut the throat of the fowl victim in Musalmān fashion (*ḥalāl*).

Higher up the Ganges valley their favourite saint is Gūgā, or Zāhir Pīr, who, they believe, possesses the power of healing the blind, lunatics, and lepers, and bestowing offspring upon barren wives. His shrine is a small round building with a courtyard, decorated with flags hung from the neighbouring trees, and provided with poles, one of which is appropriated as a perch for the deity whenever he attends in answer to the prayers of his devotees. The offering to him is a leaf or branch of a sacred tree and some grains of millet. The cenotaph is rubbed with sandalwood, which imbibes the powers of the saint, and is taken away and used as a cure in various maladies. Sometimes a goat is offered, and the meat is consumed by the worshippers. Another favourite Bhangī saint is Ghāzī Miyāñ, supposed to be a Musalmān hero slain in one of the early invasions of Oudh. His 'marriage' is his most important feast, and there seems some reason to suspect that it is a survival of the rite of symbolic marriage of the earth, the Mother, with her male counterpart, the object of the rite being the promoting of the fertility of the earth, one of the leading features of the Dravidian religion. The Bhangīs venerate besides these a host of deified ghosts or spirits, generally those of the locality in which they happen to reside. Those who are professing Muhammadans add to the monotheistic creed of Islām a number of beliefs derived from the more primitive Animism.

3. *The religion of the Ḥalālkhors.*—The creed of the Ḥalālkhors has less Musalmān admixture, and more closely resembles that of the Ḍom and his kinsman the Bāñsphoṛ (*q.v.*).

4. *The religion of the Panjāb Chūhrās.*—The religion of the Chūhrās of the Panjāb is equally involved and perplexing, and the researches of Maclagan have done little more than increase the mystery by which it is surrounded. In the Sirsa district, they, like their brethren in the United Provinces, worship Lāl Beg, a god without form or dwelling-place. The worshipper makes a small shrine of earth, and puts over it a stick with a piece of cloth as a flag, offers a little butter or grain as a sacrifice, and prays to be delivered from sickness and other trouble. The Chūhrās are said not to believe in the transmigration of souls; but they say that the good go to heaven after death, where they spend their time bathing and sitting at ease, and enjoy happiness; while the bad go to hell, where they are tormented with wounds and fire until the deity is pleased to release them. How much of these beliefs is original and how much has been derived from Hindu, Musalmān, or even Christian sources, it is impossible to say. By other accounts they seem to believe in a Supreme Being, with whom Lāl Beg is only an intercessor. They are said also to have family-gods (*kuldeo*), whose names they never divulge, and to whom offerings are made on holidays, and at births and deaths in the family. Possibly this is a form of ancestor-worship. In the Jālandhar district Vālmīki is said to be known as Bālā Shāh, and his shrine is surmounted by five small pillars, on which lamps are lighted every Thursday. When the spring harvest is gathered in, the Chūhrās assemble at his shrine, slay a black ram, and prepare a quantity of bread. On these they feast, presenting part of the food to the deity, and making offerings of cloth and small coins, which are taken by the attendant at the shrine.

In the Panjāb, when Chūhrās adopt the Sikh faith, they are known as Maẓhabī, 'the religious.' These Maẓhabī Sikhs form a valuable element in the Indian army. They, like all converts, are particularly scrupulous in religious matters, but most Sikhs of other castes keep them at a distance. When a Chūhrā is circumcised and becomes a Muhammadan, he is ordinarily known by the title of Muṣallī, 'the righteous,' or Kotānā. But the faith of Islām sits lightly upon such people, and their religious fervour largely depends upon the price of grain. When times are good, the Chūhrā adopts Islām, and is admitted to the privilege of smoking with Muhammadans. When times change for the worse, and he is in straits to find a living, he often relapses into his original Chūhrā beliefs, because he thus gains a wider range of diet, being allowed to eat carrion and lizards. If times improve, he again repeats the Musalmān creed (*kalima*), and becomes again a Muṣallī.

BHĀRHUT or BHARAHUT (the proper form of the name seems to be Barhut, but some write it Bharaut and Barāhat).—A village situated in Baghelkhand, 95 miles S.W. of Allāhābād, in Northern India, famous as the site of the great Buddhist *stūpa* discovered here by Cunningham in 1873. The *stūpa*, circular in form, was surrounded by a splendid carved railing with four openings towards the four cardinal points. It was thus divided into four quadrants, each of which consisted of sixteen pillars, joined by three crossbars, and covered by a massive stone coping. At each entrance the rail was extended, to form, as Cunningham believed, a gigantic *swastika*, or mystic cross. On each side was a splendid ornamental arch, or *toraṇa*. The medallions of these pillars are filled with most interesting sculptures—compositions of lotus and other flowers, and a number of scenes derived from Buddhist legend and history. Many of these represent scenes taken from the Jātakas, of which some twenty have been identified by Subhūti, Rhys Davids, and Hultzsch. Perhaps the most interesting of all is that of the Jetavana monastery at Srāvastī, recording the purchase of Jeta's garden by Anāthapiṇḍika, who covered the surface of the ground with gold pieces (Hardy, *Manual of Budhism*[2], 1880, p. 219; Kern, *Manual of Indian Buddhism*, 1884, p. 28). One bas-relief appears to represent a scene in the life of Rāma, which is supposed by Cunningham to be by far the earliest notice which we possess of the great solar hero and his wife. The sculptures, which extend over about a century, are particularly interesting as illustrating the dress and social and domestic life of the people of Northern India in the period after the death of Alexander the Great. They have been discussed by Grünwedel (*Buddhist Art in India*, 1901, 23, 40 ff., 141).

Images of the Buddha are wholly absent from the older sculptures at Sānchī and Bhārhut.

'Even in cases where the presence of the Lord must be presumed, it is indicated by symbols—footprints, a wheel, a seat, or altar, above which is an umbrella with garlands. A scene on the sculptures of Bhārhut represents Ajātaśatru kneeling before the footprints of the Lord, whereas the inscription distinctly says: "Ajātaśatru pays his homage to the Lord"' (Kern, *op. cit.* 94).

Among the numerous sculptures, there are no naked figures, as at Sānchī and Mathurā. All, and especially the women, are well clad, and their heads are generally covered with richly figured cloths or brocades. One gateway and a portion of the railing have been removed to the Indian Museum at Calcutta.

Cunningham assigns the *stūpa* to the Aśoka period, somewhere between B.C. 250 and 200. Hultzsch reads an inscription mentioning the Suṅgas, successors of the Maurya dynasty, on a pillar erected by Vātsī or Vāchhīputra Dhanabhūti, which gives a date in the 2nd or 1st cent. B.C.

(1883) 1 ff.

W. CROOKE.

BHĀṬ, CHĀRAN (the former from Skr. *bhaṭṭa*, a respectful term applied to a Brāhman or man of high caste, probably connected with *bhartṛi*, 'bearer,' 'master'; the latter, Skr. *chāraṇa*, 'a wanderer,' 'a singer').—The caste of family bards and panegyrists, found throughout Northern India, which at the Census of 1901 numbered 385,993, of whom 52,164 were described as Muhammadans, and the remainder as Hindus, with a small minority professing the Sikh and Jaina faiths. Tod compares them with the Belgic genealogist of Gibbon who 'riots in all the lust of fiction, and spins from his own bowels a lineage of some thousand years.' The Bhāṭs are most numerous in the United Provinces, but they are found in smaller bodies all over Northern India, and a few have penetrated as far south as Hyderābād. The Chāraṇs, again, numbering at the same Census 74,014, are practically all Hindus by religion, and are mostly confined to the Presidency of Bombay and the province of Rājputāna.

Bhāṭs are generally supposed to be descended from a Kṣatriya father and a Brāhman widow. They have been connected by Nesfield with 'those secularized Brāhmans who frequented the courts of princes and the camps of warriors, recited their praises in public, and kept records of their genealogies.' But to this Risley objects that if the Bhāṭs of the present day are descended from a class of degraded Brāhmans, if, in other words, they are a homogeneous offshoot from the priestly class, it is difficult to understand how they come to have a number of sections which are not Brāhmanical and which appear to resemble rather the territorial groups common among Rājputs. There is no exact parallel to this supposed case of Brāhmans, however degraded, shedding their characteristic series of eponymous sections, and adopting those of another type. On the other hand, there is nothing improbable in the conjecture that Rājputs also may have become bards to the chiefs of their tribe, and Risley is inclined to regard them as a heterogeneous group made up of Brāhmans and Rājputs, welded into a single caste by virtue of their exercising identical functions. He grants, however, that the inviolability of the Bhāṭ's person, accepted in Western India towards the end of the 18th cent., tells in favour of their Brāhmanical origin, 'while the theory of Roth and Zimmer, that the first germ of the Brāhman caste is to be sought in the singers of Vedic times, may perhaps be deemed to tell in the same direction.'

1. *Religion of the United Provinces Bhāṭs.*—In the United Provinces those Bhāṭs who profess Hinduism are Hindus of the most orthodox kind, being by sect generally Vaishṇavas or worshippers of Vishṇu, or Śāktas, followers of the Mother-goddesses. But in addition to the god peculiar to their sect they worship other gods—Śiva in the form of Gaurīpati, *i.e.* 'lord of Gaurī,' 'the white one' (a title of his consort Pārvatī), Barē Bīr, Mahābīr, and Sārdā. Barē Bīr, 'the great hero,' seems to be the ghost of some deified worthy of the tribe. He is honoured by making a plastered square in the courtyard, and placing within it a lighted lamp. Mahābīr, 'the great hero,' is another name for Hanumān, the monkey-god. He is worshipped by painting a representation of him with red lead upon a brass tray, before which cakes, sweetmeats, and other bloodless offerings are laid. Sārdā is a corruption of the name of the goddess Sarasvatī, the patron of learning and eloquence, who naturally is worshipped by a caste of bards. Side by side with this worship of the orthodox kind they have adopted some of the local Animistic beliefs, as is shown by the cult of Birtiyā, for whose worship they employ a priest from the degraded Chamār or currier caste, who sacrifices a young pig, buries the head in the earth, and carries off the rest of the flesh as his perquisite. In other districts of the same Provinces they worship the Mother-goddess, Bhavānī or Devī, particularly when epidemic disease prevails.

2. *Religion in Bengal.*—In Bihār their religion differs little from that of the average middle-class Hindu, representatives of all the regular sects being found among them; and the caste as a whole cannot be said to favour the tenets of any particular sect. In Eastern Bengal, however, they are said to be mostly Śakti-worshippers. In Bengal, as in the United Provinces, they retain traces of primitive Animism in the worship of minor gods, who are propitiated with sacrifices of he-goats, with offerings of wheat, sweetmeats, coloured cloth, and vermilion, the eatable portions of the offerings being divided among the members of the household.

3. *Inviolability of Bhāṭs and Chāraṇs.*—One peculiarity common to both Bhāṭs and Chāraṇs is their inviolability—a belief based on the combina-

tion in them of the duty of herald with that of bard, a principle as old as the days of Homer, when Odysseus spares Phemius, the bard (ἀοιδός) (*Od.* xxii. 331). It is principally from West India that the stories come of what is called *trāgā*, that is to say, the custom of self-wounding or suicide performed by members of this caste when exposed to attack while in charge of treasure or entrusted with other responsible duties. In almost every part of Kāthiāwār, at the entry of villages, are to be seen the *pāliyā*, or guardian stones, erected in honour of Chāran men and women who killed themselves to prevent the capture of cattle, or to enforce their restoration by the predatory Kāthi tribe. The names of the victims, with the date and circumstances of their death, are recorded on the stones, and a rude sculpture shows the method in which the sacrifice was performed, the man generally killing himself on horseback with sword or spear; the woman transfixing her throat with a dagger. In this part of the country the Chāraṇs have now somewhat fallen from their high estate on account of permitting widow re-marriage and worshipping the local Mothers, Khodiyār, 'the mischievous one,' or Āsāpūrā, 'she that accomplishes desires.'

BHĪLS.—1. Introduction.—The Bhīls (Skr. *Bhilla*, which Caldwell [*Dravidian Grammar*[2], 464] believes to represent the Dravidian *Billa*, 'bowman,' from *vil*, *bil*, 'bow') are one of the non-Aryan races of India, usually included under the unsatisfactory name 'Dravidian,' inhabiting the hilly country in the West and Central parts of the Peninsula. They seem to have been the chief of a group of tribes occupying a large portion of the hill country, now included in Mewār, Mālwā, Khāndesh, and Gujarāt. In the early Sanskrit writings they appear to be included under the names Pulinda and Nishāda, general terms applied to the non-Aryan races when they came in contact with the lighter-coloured race from the north. They have been identified with the Phyllitai (Φυλλῖται) of Ptolemy (VII. i. 66; McCrindle, *Ancient India as described by Ptolemy*, 159 f.), a term which, like the Skr. *Parṇa-śavara*, seems to have been used to denote the 'leaf-clad' non-Aryan tribes, now represented by the Juāngs of Chotā Nāgpur, in the Vindhyan and Sātpura ranges, which stretch westward from the Gulf of Cambay to the lower Ganges valley. Their predominance during early times in W. India is implied in the fact that in many States in Rājputāna, Mālwā, and Gujarāt, when a Rājput chief succeeds to the throne, his brow is marked with blood drawn from the toe or thumb of a Bhīl, by which he secures blood-covenant with the early lords of the country, and the protection of their priesthood against the local evil spirits. The right of giving the blood is claimed by certain families, and the fact that the person from whose veins the blood flows is believed to die within a year fails to damp their zeal for the maintenance of the custom (*Trans. RAS* i. 69). At the Census of 1901 the Bhīls numbered 1,198,843, of whom 569,842 were found in the Bombay Presidency, 339,786 in Rājputāna, and 206,934 in the States of Central India. These, the three principal groups, differ to some degree in religion, custom, and culture, and may be conveniently treated separately.

2. Legends of origin.—As a whole, the Bhīls seem to have preserved little tribal tradition; and, of course, they possess no tribal literature. Their legendary lore, as we find it, is intended to explain their present degraded condition. The most common account of their origin tells that Mahādeva (Śiva), sick and unhappy, was one day reclining in a shady forest, when a beautiful woman appeared, the first sight of whom effected a complete cure of all his maladies. The intercourse between the god and this stranger resulted in the birth of many children. One of the sons, who was from infancy distinguished alike by his ugliness and vicious habits, slew the favourite bull of his father, for which crime the angry deity cursed him and expelled him from the haunts of men to dwell in the woods and mountains. His descendants have ever since been known as Bhīls and Nishādas—terms that denote outcasts (Malcolm, *Mem. of C. India*[2], i. 518 f.; A. K. Forbes, *Rās Mālā* [1878], 78 ff.).

3. Bombay branch.—These clans are found in various parts of Gujarāt, as well as in the wild region of N. Khāndesh and the Dāng forests, where they form one of the most wide-spread and characteristic forest tribes. Their occupation in Gujarāt, which is typical of the tribe in other districts, is that of peasants, labourers, woodmen, and watchmen. When they cultivate, they follow the custom of periodically burning down patches of jungle, and sowing coarse grain crops in the ashes; others collect catechu and similar forest produce, while the women gather fruits and wild berries as food. Many of them still maintain their reputation as thieves and cattle-lifters, which is often noticed by the Muhammadan historians and by the writers of reports in the early period of British rule (*BG* ix. pt. i. 300, iii. 219, vi. 27). It is said that the Bhīl is more truthful than the high-caste Hindu; but this is doubtful. In Gujarāt, when a Bhīl is being sworn as a witness, he is seated with his face towards the sun, with a handful of grain bound in the hem of his garment, and a handful of dust laid on his head; he must then walk twice or thrice round the horse-image of the god Bābā, and swear by the cushion on which the chief of his clan sits (*ib.* ix. pt. i. 300 n.). Their system of agriculture and the dread of witchcraft prevent the establishment of settled villages; and their rude, sometimes round, huts are scattered through the jungle which they occupy. Their dress is extremely scanty; but the women ornament themselves with much rude jewellery. In Khāndesh the hill Bhīls are catholic in their diet, eating various kinds of grain, vegetables, forest fruits and berries, fish, goat's flesh or mutton, carrion, animals that have died by a natural death, and probably in remote places the flesh of the cow (*ib.* xii. 85).

They fall into two main divisions: (1) those who are partly Rājput, inhabit the plains where they have in some cases acquired Rājput status, and adopt Rājput names for their clans; and (2) the more or less pure Bhīls, who occupy the more inaccessible tracts (*ib.* ix. pt. i. 295). This distinction of culture affects their religion, that of the Rājput Bhīls corresponding to the Hindu rule, that of the jungle branch preserving more of the primitive animistic beliefs. Thus, in Khāndesh the wildest clans worship only Vāghdev, the tiger-god, who, under the kindred titles of Bāgheśvar (Skr. *Vyāghra-īśvara*, 'tiger-lord') or Banrājā (Skr. *vana-rāja*, 'lord of the wood'), is worshipped by the allied tribes in the hill ranges west of the Bhīl country (*PR* ii. 213). Some who are more influenced by Hinduism worship Mātā, the Mother-goddess, and Mahādeva or Śiva; while some, again, who are more civilized, worship the ordinary local Hindu deities, such as Khaṇḍoba, Śitalā Mātā, the smallpox Mother-goddess, and

others (*ib.* xii. 93). In Gujarāt the branch of the tribe which claims kinship with Rājputs worships specially Kālikā Mātā, the Mother-goddess, in her more awful form. Here the jungle-dwelling Bhīl worships hardly any of the orthodox deities, except Devī, the impersonation of the female energy. But when he visits her temple, contrary to his usual practice, he releases, after dedication, the victim which he offers to her. According to Enthoven, the Mātā, or Mother-goddesses, are represented by symbols rather than by images—by wooden posts, earthen horses, wicker baskets, and winnowing fans (*Bombay Census Rep.* 1901, i. 63). This appears to be a local development, as the cult of the horse seems elsewhere to be connected with that of ancestors. The jungle Bhīl respects Muhammadan shrines, and makes offerings to Muhammadan saints. Besides this, he retains many of the primitive animistic beliefs. He reverences the moon and swears by it; but he chiefly worships spirits and ghosts. This worship is usually performed in high places, the shrine consisting of a pile of stones on the summit of a hill, where he occasionally makes a blood-offering to appease the spirits of evil. In the forest, near an old tree or spring, often at some spot selected by mere chance, but which he believes to be the haunt of spirits, he offers rude earthenware images of horses, jars, and beehive-shaped vessels. The horse-images seem among the non-Aryan tribes to be intended as steeds on which the spirits of the dead may ride to heaven; and the jars and other vessels are regarded as the abodes of spirits. We thus find a crude ancestor-cult attached to the animistic beliefs. The ritual of the death rites shows that the tribe recognizes, in a vague way, the existence of the soul after death. When the *rāval*, or death priest, comes to preside over the death feast, by which food is conveyed to the souls of the dead, he brings with him two small brass images, one said to represent the horse of the moon, the other a cow and calf. The latter having been placed in a pool of milk, the death chant is sung, after which the cow-image is laid on the ground. The horse-image, which is usually made out of the anklets of the widow, is presented to the *rāval* at the close of the obsequies (*BG* ix. pt. i. 304 f.). The purport of the rite is obscure; but it seems to be intended that the cow and horse, by a process of magic, may be placed at the service of the ghost of the deceased. When the spirits of the forest are being worshipped, beams are raised, poised on two uprights sometimes 12 ft. high, which the officiant mounts to sacrifice a goat or a cock (*ib.* ix. pt. i. 301). This form of 'ladder sacrifice' is found in other parts of India. It is used by the Musahars of Bengal in the worship of the *bīr*, or malignant spirits, and by the Dosādhs of the United Provinces in eclipse observances (Risley, *Tribes and Castes*, ii. 117; Crooke, *Tribes and Castes*, ii. 355). In Upper Burma, a man who aspires to become a diviner has to climb a ladder and sit on a platform set with sharp spikes; if he receives no injury, his powers are recognized (J. Anderson, *Mandalay to Momien*, 1876, p. 81). In Khāndesh the Bhils suppose that spirits reside in stones, which are smeared with red lead (a substitute for a blood-offering) and with oil. An animal sacrifice and an oblation of spirits are sometimes made at such stones, portions of which are thrown into fire in the belief that the demons delight in the sweet savour, after which the worshippers and their priest consume the flesh and liquor (*BG* xii. 93). Animal-worship, except the reverence paid to the horse, is not common. Ghoṛā Dev, 'the horse-god,' is a general object of worship. In Gujarāt, if a prayer has been granted, clay images of horses are made, and placed round the shrine-image or in the spirit haunt; and in many of their legends the plot turns on the assistance given by an enchanted horse. Only the clans most under the influence of Hinduism kill neither the cow nor the blue bull (*Portax pictus*); the jungle-dwellers have no reverence for the cow, kill it, and eat its flesh. There are no signs of snake-worship. They have a firm belief in omens of the 'meeting' class, which are usually associated with animals (*JAI* ix. 400; *Asiatic Quart. Rev.* vii. 461 f.).

4. **Festivals.**—In Gujarāt their festivals are chiefly connected with the ancestor-cult. The only regular Hindu festivals which they observe are those of the spring equinox (Holī, Shimgā), and the autumn equinox (Dasahra), and the feast of lights (Divālī) at the full moon in October–November. The first two, which are in origin forms of sympathetic magic to promote the growth and ripening of the crops, are accompanied with rude merriment and indecency (*GB*[2] iii. 306). At the Holī they celebrate, possibly with the object of expelling evil spirits, a mock fight between men and women—an incident witnessed and described by Bishop Heber among the branch of the tribe in Central India (*Narrative of a Journey*, 1861, ii. 86 f.; *GB*[2] iii. 95 ff.; *PR* ii. 176, 321). At the same feast some clans, as is the case in N. India, practise the rite of walking through a trench filled with burning embers, without, it is said, injury to the performers (*BG* vi. 29, xii. 93 n.; *PR* ii. 317).

At the Divālī, or feast of lights, they make a thanksgiving to the gods near the shed of the cattle, the protection of which is the main object of the feast. The ground near the shed is cleaned and a small circle is made with rice. In this circle seven balls of boiled rice or maize are placed on seven leaves. A fire is lighted and fed with butter. A man, generally the housemaster, lays his hands on five chickens, throws water over them, and offers them, saying, 'O Dharma Indra! We offer this sacrifice to thee! During the coming year keep our cattle free from disease, increase them and be kindly!' At the same time another man cuts the throats of the fowls. A third man sprinkles spirituous liquor on the ground, saying, 'O Dharma Indra! we pour this spirit to thee!' The cattle, with their horns painted red, are then let out of the shed, those of the headman leading the way. All are driven over the body of a Bhīl, who lies on the ground face downwards. This is probably a survival of an actual rite of human sacrifice. The invocation of Indra shows the influence of Hinduism; but the rite is part of the primitive Animism.

At the Dasahrā feast they sow barley in a dish full of earth, and keep it watered and tended for nine days, after which it is offered to the goddess Devī—a magical rite found in other parts of the world, which has been described by Frazer under the title of 'the Gardens of Adonis' (*BG* ix. pt. i. 305 ff.; Frazer, *Adonis, Attis, Osiris*[2], 194 ff.).

When rain holds off and scarcity is feared, the women go with bows and arrows to the shrine of the village-goddess, abuse her, smear her image with filth,* and leap and dance; finally, they raid a neighbouring village, seize a buffalo, the owner seldom offering resistance, and drive it back to their own village, where it is beaten to death with clubs, and the flesh shared among the raiders. They say that the intention is to shame the gods into pity, and to convince them how hard the times must be when the women are compelled to resort to acts of violence (*BG* ix. pt. i. 311). When epidemic disease prevails, asses are made to plough a piece of ground (an unnatural act intended to call the attention of the gods to their troubles), and a small cart is placed before the shrine of the god who is supposed to have been offended at some neglect, and to have brought the pestilence. The cart is then believed to move of its own accord, and accompanied by a scape animal, a goat or buffalo, carries the plague beyond the limits of the village (*ib.* ix. pt. i. 311).

5. **Priesthood.**—Except among those clans which are subject to Hindu influence, Brāhmans take no part in the public or domestic rites. The exorcist, whose duty it is to propitiate the malignant gods

* For a remarkable case of obscene ritual cursing of a goddess, see the account of the Gangammā festival in Malabar (*Bulletin Madras Museum*, iii. 267 f.).

and spirits, is known as the *bhagat* (Skr. *bhakta*, 'worshipper'). His reputation depends on his occasionally becoming possessed by the Mother-goddess, when he mutters and shakes, foams at the mouth, eats raw flesh or drinks blood, and pretends to know both the past and the future. The Rājā of the Bāriyā State, in the Agency of Rīwākāṇṭha, holds a feast every twelve years in honour of a god known as Bābā Dev, 'divine father,' on the Devgad hill, when a Bhīl *bhagat* becomes possessed by the god, and foretells the condition of the crops and the fortunes of the Rājā's family (*ib.* vi. 29 f.). The duties of the *bhagat* are to consecrate household gods, to perform tribal and family rites, to secure the fertility of the crops, to heal the sick, and to thwart the machinations of enemies. In cases of sickness, he places grains of black gram (*Phaseolus mungo*) or rice on a leaf, which he passes round the head of the patient. By examining the grains, he decides whether the sick man has been attacked by an evil spirit or by one of his offended dead ancestors. The latter usually appear in the form of human beings, but sometimes in that of a bear or other wild beast. When their worship is neglected, they show their anger by throwing stones or sticks at their descendants, or by pinching them at night. They can be appeased by making an offering at their graves. The attack of an evil spirit is treated by means of incantations, and striking the patient gently with the branch of a tree. The *bhagat* is also the witch-finder; and in former times, before the period of British rule, witches were subjected to cruel ordeals, tortured, or even killed (*ib.* ix. pt. i. 302). The second class of priests is the *rāval* (Skr. *rājakula*, 'royal family'), a title, like that of the *bhagat*, obviously of Hindu origin, replacing the name of the original medicine-man. His chief duty is to preside over the funeral feast, and to propitiate the deceased ancestors. The dead are buried in deep graves or under stone cairns, the intention being to prevent the return of the ghost. On the return from the grave a fire is lit in the house of the dead man, and into it some woman's hair is sometimes dropped (cf. Frazer, *Pausanias*, iv. 136 f.). The death tabu is finally removed by the mourners passing their hands and feet through fragrant smoke, and by washing the shoulders of the corpse-bearers with a mixture of oil, milk, cow-dung, and cow-urine (*BG* xii. 91 f.).

'In the case of the decease of a Bhīl of importance, it is not uncommon for the grave in which he has been interred to be opened some two months after burial, the opening being only sufficient to disclose the head of the corpse. The wasted features thus brought to light are anointed with red lead in the same manner as the irregular shaped stones which are common objects of worship among this primitive people.* After anointment the deceased is worshipped, and the grave is then re-closed. Without this ceremony the full rights of ancestorship are not, it is alleged, obtainable. The worshippers are by no means necessarily relations of the deceased' (*Bombay Census Rep.* 1901, i. 68).

6. **Central Indian branch.**—These inhabit principally the wild hilly tracts which separate Mālwā from Nimār and Gujarāt. According to Malcolm (*Memoir of Central India*[2], ii. 181), their religious rites are confined to 'propitiatory offerings and sacrifices to some of the Hindu infernal deities,' especially Śītalā Mātā, the smallpox Mother; they also pay reverence to Mahādeva, from whom they claim descent. The Barwānī sept, which is one of the most primitive, is said to have a well-defined system of sept totems, each sept reverencing a special tree or animal. If the totem be a tree, they never cut or injure it; men bow when passing it, and women veil their heads. The tribal *tatu*, however, is said never to be a representation of the totem. Luard (*Central India Census Rep.* 1901, i. 197 ff.), who gives this account, adds that, 'as a rule, some spirit is supposed to live in the tree or other object.' It may be suspected that we have here an instance of confusion between totemism and tree- or animal-worship.

* For similar customs in India see those of the Maravan and Urāli of Madras (*FL* v. 36; Thurston, *Ethnographic Notes*, 202), the Khāsī (*JAI* i. 131), and the people of Nicobar (*ib.* xxxii. 209, 220 f.).

7. **Rājputāna branch.**—The religion of this branch has been fully described by T. H. Hendley (*JRASBe* xliv. [1875] 347 ff.). In the Mewār hills their primitive beliefs have been, to some extent, affected by Brāhmanism. Their shrines are cairns, erected on high hills, and containing clay or pottery images of the horse. Over these, poles adorned with rags are erected. Beside these are platforms of stone, on which are placed upright slabs, generally plain, or merely named after a god, and daubed with red paint or carved in the shape of Hanumān, the monkey-god. Their favourite deities are Śiva, or Mahādeva, and his consort in her various forms as Pārvatī, Devī, or Mātā, of whom Hendley (*op. cit.* p. 349) gives a list. One of them, known as Vājar Mātā, is specially worshipped by women who desire offspring. The tombs of Muhammadan holy men are also respected. Sacrifices consist of goats offered to Devī or Mātā, the flesh, after dedication, being eaten by the worshippers. The influence of Hinduism is shown in the fact that their priests are drawn from the Hindu ascetic Yogī order.

'The Bhīl has a very dim idea of a future state. He believes the soul goes before the gods, and that the spirits of the dead haunt places they lived in during life. He also holds that there is a limited transmigration of souls, especially in spirits becoming evil ones. Eclipses and the motions of the heavenly bodies are deemed to be the play of their gods, and they howl with the Hindu when the moon is eclipsed' (*ib.* 350). No tombs or cenotaphs are constructed; 'but a few days after death a relative of the deceased is said to be informed in a dream that the spirit has taken up its abode on a neighbouring hill, whereupon friends and connexions proceed to the place and erect a platform of stones, and leave there a quantity of food and liquor' (*ib.* 354).

According to Bannerman (*Census Rep.* 1901, i. 142), besides the Kul-devī, or family-goddess, Mahādeva and Hanumān, the monkey-god, are everywhere worshipped. In parts of Mewār, Rishabnāth (*i.e.* Ṛishabhadeva, the first Jaina Tīrthakara, or perfected saint) is worshipped by the Bhīls—a proof of the widely spread influence of that religion in W. India in mediæval times.

W. CROOKE.

8. **Language.**—Bhīls are usually credited with possessing a special language of their own, which has been named *Bhīlī*. It is probable that these wild tribes did once speak a language belonging to the Dravidian or to the Muṇḍā family, but they have long since abandoned it. At the present day they speak a mongrel form of the Gujarātī spoken by their more civilized Aryan neighbours to their west. Their speech varies according to locality, and, in the District of Khāndesh, in the Bombay Presidency, has become mixed with Marāthī, the fusion of the two main languages resulting in a well-marked and interesting dialect known as Khāndēśī.

The general Bhīl jargon has some peculiarities of pronunciation which it shares with the dialects of North Gujarāt and, through them, with other languages of the extreme North-West of India, from Sind to the Hindu Kush. These are the pronunciation of *s* as a rough *h*, as in *hōnō* for *sōnō*, 'gold'; the tendency to disaspiration and to harden soft

mutes, as in *kōḍō* or *khōḍō* instead of *ghōḍō*, 'a horse,' *līṭō* for *līdhō*, 'taken,' *ṭāhī* or *ḍāhī*, 'a cow'; and the frequent elision of a medial *r*, as in *kōi* for *kōri* or *kari*, 'having done,' *dūu* for *dūru*, 'far.' These peculiarities, although striking, and possibly giving clues to ethnologists, do not authorize us to class the so-called *Bhīlī* as an independent language.

LITERATURE.—C. S. Thompson, *Rudiments of the Bhīlī Language* (Ahmedābād, 1895); G. A. Grierson and S. Konow, *Linguistic Survey of India*, vol. ix. pt. iii., *The Bhīl Languages and Khandēśī* (Calcutta, 1907). G. A. GRIERSON.

BHĪLSA.—Bhīlsa is the name of a village in Central India. The name has been applied by Cunningham in the title of his book, *The Bhilsa Topes*, to the whole district, about 24° N. by 77° E., in which the village is situated. It is a hilly, well-watered district of considerable natural beauty. Cunningham, for instance (p. 320), speaking of the Satdhāra Hill, says:

'The hill on which the tope stands forms here a perpendicular cliff, beneath which flows the Besāli river through a deep rocky glen. The view up the river is one of the most beautiful I have seen in India.'

He then describes the view; and has similar remarks (p. 342) on the beauty of the view from the Andherī Hill. As the principal summit was called Chetiya-Giri, 'the Shrine Hill' (*Mahāvaṁsa*, xiii. 5), and Chetiya is used of pre-Buddhistic shrines, it was probably already, before the Buddhist movement, the site of one of those sacred places on the hill-tops where tribal festivals used to be held. If that be so, this may have been one of the reasons which led the Buddhists to choose the peak as the site of their hermitages, and of their religious and educational establishments.

This main summit is now called Sānchī (*q.v.*). Remains have also been found at Sonāri, Satdhāra, Bhojpur, and Andhēr. At Sonāri there are two large square terraces, one on the top of the hill, the sides of which are each 240 ft. in length, and one a little lower down, the sides of which are 165 ft. in length. The centre of the larger terrace was occupied by a solid hemispherical dome, or tope, 48 ft. in diameter, rising from a cylindrical plinth 4 ft. in height. At the height of about 30 ft. the top of the dome was level and surrounded by a stone railing now broken away. The remains of it were found by Cunningham at the foot of the dome. Cunningham sank a shaft down the centre of the dome, but found nothing. The original height, including that of the ornamental structure which occupied the centre of the levelled space at the top of the dome, must have been about 50 feet. Outside the S.W. corner of this square terrace on which the dome stood was a solid square pile of masonry, level at the top, from 12 to 15 ft. high according to the undulations of the ground, and measuring 36 ft. along each side. A flight of steps 4½ ft. wide leads from the hillside to the summit. This was evidently the site for a building of some sort, no doubt constructed entirely of wood, as nothing remains to show for what purpose it was intended. Round the foot of the dome ran a paved processional pathway enclosed by a carved stone railing, with gates at the four cardinal points. Both this and the railing round the top were of white stone brought from a distance. The tope itself was built of the claret-coloured stone found on the Sonāri Hill. There are short dedicatory inscriptions on portions of the lower railing, cut in Pāli characters of approximately the 3rd cent. B.C., giving the names of the donors of those portions.

The dome which occupied the lower terrace of 165 ft. square was of a slightly different construction. It was solid like the other, built of stone without mortar, 27½ ft. in diameter, rising from a plinth 4½ ft. in height, the plinth resting on a cylindrical foundation 12 ft. high. The level top of this foundation was reached by a fine double flight of steps, 20 ft. in breadth, leading on to a circular pathway, 6 ft. broad, running all round the dome. The height of the whole had been about 40 ft. from terrace to summit. There was no trace of any stone railing. On a shaft being sunk down the centre of the dome five relic-caskets were found, each inscribed with the name of the person of whose funeral pyre portions were enclosed in the casket. Two of these are names of missionaries who, according to the chronicles (*Dīpavaṁsa*, viii. 10, and *Mahāvaṁsa*, xii. 42), were sent to the Himālaya regions after the close of the Council at Patna, held in B.C. 254.

The discovery of these names was of the utmost importance for the criticism of the Buddhist chronicles written in Ceylon. They are given in the inscriptions as those of missionaries to the Himālaya. Some centuries afterwards they are found in the chronicles in the list of the missions sent out, as those of the men who were sent to the Himālaya. The inscriptions, buried in Northern India, were, of course, unknown in Ceylon. The traditions handed down in the island were sufficiently well guarded to have preserved these details accurately throughout this long interval of time.

Besides these two great topes, there were on the top of the Sonāri Hill six smaller ones arranged in two rows to the south-east of the larger terrace. These had all been opened before Cunningham's visit in 1852, and he found nothing in them.

On the Satdhāra Hill, three miles across the valley from Sonāri, there are seven topes remaining on as many terraces. The largest of these solid domes was no less than 101 ft. in diameter, and its height must have been approximately 75 feet. Nothing was found in it. There were three of the solid basements, such as the one found at Sonāri, on which must have stood other buildings probably made of wood. In a second, much smaller tope, 230 ft. to the N.N.W. of this huge pile, were found two caskets, empty, but inscribed with the names of Sāriputta and Mahā Moggallāna, the two principal disciples of Gautama, the Buddha. A third tope had a diameter of 24 ft., and contained relic-caskets, but no inscription. Four smaller ones, all of which had been previously opened, contained nothing.

The topes at Bhojpur, which are very numerous, stand on the southern end of a low range of hills on the opposite side from Sonāri and Satdhāra of a broad valley through which flows the river Betwā. The largest stands in the centre of a levelled terrace, 252 ft. long by 214 ft. broad, and was 61 ft. in diameter. The next in size had a diameter of 39 feet. In a third of only 31 ft. diameter the relic-caskets bore names otherwise unknown. Cunningham examined 33 other topes on the slopes of this range of hills, but they had been previously opened; and nothing of importance, and no inscriptions, were found in them.

The Andherī topes are perched on the northern declivity of a pear-shaped hill facing Bhojpur across another valley. These are on the very edge of the cliff, about 500 ft. above the plain; and the position is a very fine one, commanding a wide outlook over the Bhīlsa district with its dome-surmounted peaks and fertile valleys. The topes are only three in number, respectively 35 ft., 19 ft., and 15 ft. in diameter. At each of them inscriptions were found, some of the names recurring also at Sānchī, and belonging to contemporaries of Aśoka. One of them is Moggali-putta, who may, or may not, be the same as the Moggaliputta Tissa who presided at Aśoka's Council at Patna, and who is the traditional author of the *Kathā Vatthu*, the latest book in the Buddhist Canon, and the only book in it which is ascribed to a particular author.

Aśoka, when on his way to take up the viceroyalty of Ujjain during the last years of his father's life, stayed in the Bhīlsa district, and married a local lady, daughter of a merchant at Vedisa named Deva. Three children were born to them; and then Aśoka succeeded to the throne on the death of his father. As the marriage was a *mésalliance* he left his wife behind, and she brought up the children. Two of them, Mahinda and his sister Saṅgha Mittā, were afterwards the famous missionaries who carried Buddhism to Ceylon. It is recorded how Mahinda, before he departed on the mission, went to Bhīlsa to take leave of his mother, and stayed there at a *vihāra* she had built (*Dīpavaṁsa*, xii. 8–34; *Mahāvaṁsa*, xiii. 1–14; *Samanta Pāsādikā*, p. 318 f.; *Mahābodhivaṁsa*, p. 115 f.).

It is sufficiently clear from these notices that the district was, in the 3rd cent. B.C., and probably earlier, an important centre of Buddhist activity. The massive terraces and solid topes are all that remain of the outward signs of this activity; but its intellectual results are still working in Ceylon, and in a less degree in the Himālaya regions.

T. W. RHYS DAVIDS.

BHṚIGU.—The word *bhṛígu* occurs twenty-six times in the Rigveda,* always in the plural† except twice, where it is singular; and as each of the two passages in question is identical in purport with some other where the plural is used, it may be assumed that even as a singular the word has a collective force. Indian tradition, however,—to anticipate a little—interprets the sing. *bhṛígu* as denoting the ancestor of an ancient race of seers, and the plur. as denoting his descendants.

In the Rigveda the Bhṛigus are associated mainly with the legend of the acquisition of fire by the human race. The Bhṛigus, having discovered Agni in the bosom of the waters (ii. 4. 2; x. 46. 2), or having received him from Mātariśvan (i. 60. 1,‡ iii. 5. 10, x. 46. 9), introduced him amongst men (i. 58. 6, iii. 2. 4), deposited him in wood (vi. 15. 2), and caused him to become luminous in that substance (iv. 7. 1), bringing him forth either by friction (i. 127. 7, x. 46. 9, i. 143. 4) or by their songs (x. 122. 5).

In two passages (iv. 16. 20 and x. 39. 14) the Bhṛigus are referred to as waggon-builders: 'We have composed a song for Indra (or, for the Aśvins) [as skilfully] as the Bhṛigus [build] a waggon.'§ Roth's conjecture (*Pet. Worterb. s.v.* 'Bhṛigu'), that the word that stood originally in these passages was *ṛibhavo*, finds some support in Sāyaṇa (on x. 39. 14: *karmayogād ṛibhavo bhṛigava uchyante*), but the present writer believes that we have here the primitive nucleus of the legend, *i.e.* that *bhṛígu* was originally merely a name for a 'handicraftsman,' one of those who, working with wood, might quite naturally be the first to discover that that substance could be ignited by friction.

The other Rigveda passages‖ are rather colourless. The Bhṛigus appear as the sacrificers of remote antiquity, and along with the Aṅgirases and Atharvans (x. 14. 6); people invoke Agni in the same manner as did the Bhṛigus,* Aṅgirases, and Manu (viii. 43. 13). Indra is expected to help as he has helped the Bhṛigus and the Yatis (viii. 3. 9,† 6. 18; cf. 3. 16). They stand on an equality with the gods in viii. 35. 3 and x. 92. 10. A more personal aspect is shown in ix. 101. 13, where people are advised to drive away the niggardly dog, as the Bhṛigus [drive away] the Makha, but unfortunately we possess no further information regarding this Makha. We seem to have a historical reference in vii. 18. 6, where the Bhṛigus, along with the Druhyus, are spoken of as vassals‡ of King Sudās.

In the Atharvaveda *bhṛígu* is mentioned four times—once (xviii. 1. 58) in a strophe identical with one in the Rigveda. In iv. 14. 5 it is indefinite, merely saying that sacrificers should go to heaven along with the Bhṛigus. In ii. 5. 3 it is said that Indra clove the Vala asunder as Bhṛigu (nom.) conquered his enemy intoxicated with soma; in the same strophe the Yatis are again referred to (cf. above, Rigv. viii. 3. 9 and 6. 18), but, strange to say, it is stated here that Indra killed Vṛitra like the Yatis (acc.). The fourth passage (v. 19. 1), however, is a most interesting one: Sṛiñjayas, Vaitahavyas perished because they injured Bhṛigu. We shall return to this reference below.

In the later Vedic, as also in the epic literature, Bhṛigu stands forth as the progenitor of a celebrated family of priests; many of his posterity, the Bhṛigus—and Bhārgavas, 'scions of Bhṛigu'—are mentioned individually by name, and for the most part they enjoy a great reputation. Bhṛigu himself was held to be of Divine origin, as is attested by so ancient an authority as the *Aitareya Brāhmaṇa* (cf. iii. 33–34): the seed of Prajāpati was cast into the fire by the gods, in order that it might not be spoilt; from that which first flamed forth arose Āditya (the sun); from the second (flame) came Bhṛigu, who was adopted by Varuṇa, and hence Bhṛigu is a son of Varuṇa; that which the third time flashed brightly forth (*adīdet*) became the Ādityas, and that which the coals (*aṅgāra*) were became the Aṅgirases, etc. A similar story is told in the *Śatapatha Brāhmaṇa* (i. 4. 5. 13) regarding the origin of Atri. Yāska (Nir. 3. 17) combines the two legends, saying that the first to arise from the beam (*archis*) of the fire was Bhṛigu,§ then Aṅgiras from the coals (*aṅgāra*), and thirdly Atri from the same place.¶ The *Bṛihaddevatā* (v. 97–100) gives a similar version. In the *Mahābhārata* (xiii. 85. 96 ff.), Bhṛigu, Aṅgiras, Kavi, Marīchi, Kaśyapa, Atri, etc., are said to have sprung from seed of Brahman which had been cast into the fire.¶ According to the *Mahābhārata* (i. 66. 41), Bhṛigu was generated from the heart of Brahman, while in the *Bhāgavata Purāṇa* (iii. 12. 23) he is said to have issued from Brahman's skin.

That Bhṛigu was adopted by Varuṇa is intimated also in the *Mahābhārata* (xiii. 85. 124; cf. i. 5. 8); and so he appears as Bhṛigu Vāruṇi in a legend (*Śatap.* xi. 6. 1. 1), which we shall narrate presently, in *Taittirīya Āraṇyaka*, ix. 1,** and in Kātyāyana's

* We leave out of account the word *bhṛigavāṇa*, which is at least cognate, and occurs thrice in the Rigveda, as its meaning is doubtful.

† *Bhṛiguvát* (Rigv. viii. 43. 13) is of course, as such, ambiguous, though Sāyaṇa explains it as *yathā bhṛiguḥ*.

‡ *Bhṛigu* in the singular here.

§ The interpretations of x. 92. 10 given by Ludwig (*Der Rigveda*, 1876–88, i. 262, iv. 237): 'Für Götter durch Tüchtigkeit gelten allgemein die Bhrigu'; and by Macdonell (*Vedic Mythology*, 140): 'The Bhṛigus showed themselves as gods with their dexterity,' are unfortunately inadmissible, as the verb used here, *sam-chit*, bears a different meaning in other passages.

‖ Cf. Macdonell, *loc. cit.*

* *Bhṛiguvát.* † *Bhṛigu* in the singular.

‡ In the opinion of the present writer, as vassals by compulsion.

§ Here derived from *bhṛijjati*, 'to roast': *bhṛijyamāno na dehe.*

¶ *Atraiva tṛitīyam ṛichhatīty ūchus tasmād Atriḥ* (*Śatapatha*, i. 4. 5. 13, *atreva tyad iti*).

¶ Cf. 13. 85. 105 f.: *bhṛig ity eva bhṛiguḥ pūrvam aṅgārebhyo 'ṅgirābhavat | aṅgārasaṁsrayāch chaiva kavir ity aparo 'bhavat | saha jvālābhir utpanno bhṛigus tasmād bhṛiguḥ smṛitaḥ.*

** The story in *Taitt. Brāhmaṇa*, i. 8. 2. 5, according to which Bhṛigu sprang from a third part of Indra's force, is a mere theological speculation, designed to support the idea that a Bhārgava must have been present as Hotṛi at the festival in question.

Anukr. to the Rigveda, which speaks of him, or Jāmadagni, as the composer of Rigveda ix. 65, and of him, or Chyavana, as the composer of x. 19 (both of these individuals being of Bhṛigu's line). Beyond this, the later Vedic texts add relatively very little to our information regarding Bhṛigu. All that is worthy of interest is the legend just alluded to (*Śatap.* xi. 6. 1. 1 ff.).* It is narrated here that Bhṛigu deemed himself wiser than his father Varuṇa, who, observing this, sent him upon a pilgrimage, on the understanding that on his return he should relate what he had seen. By Varuṇa's instructions he journeyed to all the four quarters of the earth. He met with dreadful things on every hand; he saw men cutting their fellow-men in pieces, and then distributing and devouring the fragments. When he asked them why they pursued such a course, he always received the same answer: 'These men dealt thus with us in the other world, and we now deal with them in the same way.' He also inquired if there was no possible reconciliation, and received the reply: 'Certainly; your father knows of it.' He comes at last to the region lying between the East and the South,† where he sees two women, one beautiful, the other passing beautiful,‡ and between them a black man with yellow eyes, and with a stick in his hand. Bhṛigu is terrified, and returns home. From his dejected condition Varuṇa perceives that he has 'seen,' and then (8 ff.) shows him the meaning of what he has seen. But the explanation is certainly a disappointing one from our point of view, being simply a piece of absurd symbolizing in regard to certain features of the Agnihotra festival.

Amongst other references to Bhṛigu in the Brāhmaṇa literature we ought to mention *Kāuṣītaki Brāhmaṇa*, xxx. 5, where the Aitaśāyanas are spoken of as the worst of the Bhṛigus.§ In the earlier texts the Bhṛigus and the Aṅgirases are closely connected, and *bhṛigvaṅgirasaḥ* indeed is actually used as a title of the Atharvaveda.‖ They are likewise often found together in the *Mahābhārata* and the *Purāṇas*. Apart from these notices, Bhṛigu is mentioned, along with Atri, Aṅgiras, etc., mainly in the list of Brahmarṣis and patriarchs.¶ It is in these texts, of course, that he at length stands forth as in all respects a *Ṛṣi* of primitive times, while in *Mahābhārata*, iii. 99. 69 and xii. 3. 19 he is even exalted to the Devayuga.

It is recorded, moreover, in the *Mahābhārata* (i. 5–7,** ix. 47. 17–22, xii. 343. 55) that Bhṛigu, incensed because his wife Pulomā had been betrayed into the hands of the Rakṣas Puloman by Agni, cursed the latter, and ordained that he must suffer the penalty of consuming everything, no option being allowed.†† Agni rebels against this, resigns his function,‡‡ and hides himself.§§ Gods and men, however, find him indispensable, institute a search, and discover him at length in his retreat. But Agni resumes his work only after Brahman has intervened with conciliatory words, and given the assurance that he is to be the devourer of all things, not with his whole body, but merely as the fire of digestion and as the consumer of flesh.* Here, therefore, the story of Agni's withdrawal, which is already alluded to in the Rigveda as a well-known fact, is associated, strangely enough, with a curse uttered by Bhṛigu, the Vedic myth regarding the discovery of fire (see above) being thus simply reversed.

The *Mahābhārata* in another passage (xii. 343. 62) also makes mention of a curse spoken by Bhṛigu. Umā, the daughter of Himavat, was loved by Rudra, but Bhṛigu also sought to win her. Himavat, however, had to reject the latter's advances, Rudra being already the accepted suitor.† Bhṛigu, enraged at this refusal, utters against Rudra the malediction that no precious stones shall be found in him, 'and to this day the word of the *Ṛṣi* holds good.' Another legend tells how Bhṛigu, by means of a curse, rescues Agastya from the tyranny of Nahuṣa (xiii. 99–100).‡

These are all the really important myths relating to Bhṛigu himself, so far as found in the epic literature. There are numerous other legends, however, which relate to individual members of the Bhṛigu family. A special instance is the story of Chyavana, the son of Bhṛigu, which goes back even to the Rigveda;§ while Gṛitsamada, the author of the second *Maṇḍala*, ranks as a descendant of Bhṛigu.‖ As a recital of the various narratives in question, however, would go beyond the scope of this article, we confine ourselves to a congeries of myths which relate to the Bhṛigus in a general way, and which may, perhaps, throw light upon the passage in the Atharvaveda (v. 19. 1) cited above for further notice.

The following narrative is found in ***Mahābhārata***, **i. 178. 11 ff. (to the end of 180):**

King Kārtavīrya was lord of the sacrifice to the Bhṛigus, and used to load them with gifts. After his death his successors fell into penury, and began to importune the Bhṛigus for money. Only some of these, however, acceded to the request; others buried their money in the earth, while some, again, handed theirs to Brāhmans. Then the Kṣatriyas sought the money by digging, and, having discovered it, they were so moved with rage that they slew every Bhṛigu they could lay hands upon, not even sparing the child in the mother's womb. One of the women ¶ held her yet unborn babe hidden on the haunch.** But the Kṣatriyas heard of the matter, and approached the mother with the design of killing the child. Then the child forced a way through the mother's side, stood forth before the assailants, and blinded them with the splendour of his appearance, thus forcing them to cry for mercy. In order to avenge the sufferings undergone by the Bhṛigus, Aurva resolved to blot the whole world out of existence, but was induced by the entreaties of his ancestors to sink the fire of his wrath in the depths of the ocean.††

Thus the massacre of the Brāhmaṇas, according to this legend, is followed by no expiation—a circumstance which is out of keeping with the normal scheme of such narratives, and in particular with the characterization of the Bhṛigus as specially revengeful.‡‡ It need not surprise us, therefore, that in other passages of the epic and the *Purāṇas* a great deal is said regarding the great extinction of the Kṣatriyas by the 'Bhārgava' Paraśurāma.§§

‖ The Anukr. to the Rigveda makes mention of the following Bhārgavas as authors of hymns: Iṭa (x. 171), Kavi (ix. 47–49, 75–79), Kṛitnu (viii. 79), Gṛitsamada (ii. 1–3, 8–43, ix. 86. 46–48), Chyavana (x. 19), Jamadagni (iii. 62. 16–18, viii. 101, ix. 62, 65, 67, 16–18, x. 110, 137. 6, 167), Nema (viii. 100), Prayoga (viii. 102), Vena (ix. 85, x. 123), Somāhuti (ii. 4–7), and Syūmaraśmi (x. 77–78).

¶ According to *Mahābhārata*, i. 66. 46, this was *Āruṣī*, the daughter of Manu and the wife of Chyavana.

** *ūru*; whence the son received the name Aurva, 'risen from the haunch.'

†† Where it has eversince remained, as hell-fire (*vaḍavāmukha*, *vāḍavānala*, *aurva*; see also Harivaṁśa, 2554 ff.). We have here another case of a Bhṛigu connected with a fire-legend.

‡‡ Cf. also *Mahābhārata*, xiii. 92. 45: *bhṛigavo hy atiroṣaṇāḥ* | *loke mithyāpravādo'yam*.

§§ See especially ***Mahābhārata*, iii. 116–117** and for the

It is alleged, however, in these passages that the original cause of the feud was that King Kārtavīrya (or his sons) had stolen a calf of the sacrificial cow of Jamadagni.* Paraśurāma, who happened to be absent at the time, learns of the atrocity on his return, and kills Kārtavīrya with an arrow. The sons of the latter avenge his death by slaying the aged Jamadagni. Then Paraśurāma takes an oath that he will extirpate the entire race of the Kṣatriyas, and 'thrice seven times did he clear the earth of the Kṣatriya caste.'†

Here, once more, the crime perpetrated against the offspring of Bhṛigu is a seizure of their property, and the culprits are again descendants of Kartavīrya. Now the latter are quite distinctly spoken of as kings of the Haihayas.‡ The Haihayas and the posterity of Kārtavīrya, however, include also the Tālajaṅghas,§ whom the Bhṛigus are reported to have conquered, as the Aṅgirases conquered the Nīpas, as Bhāradvāja the Vaitahavyas.‖ But the narrative in *Mahābhārata*, xiii. 30,¶ says that the Vaitahavyas, too, belonged to the Haihayas. Let us now examine the passage in Atharv. v. 19. 1: *bhṛiguṁ hiṁsitvā sṛiñjayā vaitahavyāḥ párābhavan*. The idea at once suggests itself that the incident recorded here should perhaps be connected with the epic legends just referred to. In that case, however, the celebrated song in Atharv. v. 18, immediately preceding the passage before us, appears in an entirely new light. We cannot here discuss the matter in detail, but we may at least quote strophes 10–11:** 'They who ruled over a thousand, and were themselves ten hundred, the Vaitahavyas, when they devoured the cow of the Brāhmaṇa, perished (11). The cow herself, when slaughtered, came down upon the Vaitahavyas, who had roasted for themselves the last she-goat of Kesaraprābandhā.' If this interpretation be correct, then the *bhṛigum* of v. 19. 1 should be regarded as meaning the Bhṛigu-family, while Kesaraprābandhā (v. 18. 11) might perhaps be identified as the wife of Jamadagni.††

As regards the etymological explanation of the word *bhṛigu*, we have already noted that Yāska (Nir. iii. 17) connects it with *bhṛijjati*, 'roast,' while according to *Mahābhārata*, xiii. 85. 105, it is derived from the onomatopœic *bhṛig*, the 'crackling' of fire. Macdonell‡‡ suggests *bhrājati*, 'to shine.' Bergaigne§§ considers the Bhṛigu-myth of the Rigveda to be merely a more developed form of the tradition regarding the descent of fire, and identifies Bhṛigu with Agni. According to A. Kuhn‖‖ and A. Barth,¶¶ the Bhṛigus are personifications of the lightning-flash. Kuhn (*op. cit.*[1] 13 ff., [2] 14 ff.), on the assumption of the linguistic equation *bhṛigu* = *φλέγν*, tried to harmonize the Greek myth regarding the descent of fire with that of the Veda. A. Weber*** had previously called attention to the affinity of *bhṛigu* and *φλέγν*, and propounded the theory that the tradition (*Śatapatha*, xi. 6. 1) outlined above is a relic of primitive Indo-Germanic mythology. 'The name Bhṛgu,' he says (p. 242), 'corresponds to a nicety with the Greek *φλέγν* in the name of Φλεγύας and of the Φλεγύαι, who on account of their arrogance were condemned to the harsh penalties of hell, while in this story Bhṛigu for arrogance is sent there to be a looker on.' But Weber must nevertheless admit that relevant passages of the Rigveda will not fit in with the idea of a punishment of the wicked in hell; and, in fact, any one who with unbiased mind compares the entire group of Greek and Roman myths about Phlegyas and the Phlegyæ* with the Indian group connected with Bhṛigu and the Bhṛigus, will be of one mind with the present writer in holding that in these we have two entirely different cycles of myths, and that accordingly the phonetic parallelism between *bhṛigu* and *φλέγν* † is a mere coincidence.‡

LITERATURE.—The literature has been given throughout the article. E. SIEG.

BHUIYĀ, BHUINYĀ ('men of the land,' 'autochthones,' Skr. *bhūmi*, 'the land').—A Dravidian caste found in the western districts of Bengal and in the Mirzapur district of the United Provinces. The term is naturally of rather vague significance. In the Census of 1901 the name includes people from all parts of the Empire. Under the names of Bhuinyā, Bhuinyār, Bhuiyā, Bhumiā, 789,078 persons are recorded, of whom the vast majority are found in Bengal.

1. *Religion in Bengal.*—Dalton, describing them in the Tributary State of Bonai, states that they have their own priests called Deorī and sacred groves known as Deotā Sarā, dedicated to four deities, Dāsum Pāt, Bāmonī Pāt, Koisar Pāt, and Borām. The first three are brethren, but there is some difference of opinion whether Bāmonī is a male or a female deity. This illustrates the vagueness of their conception of her. Borām is the sun,—a title also found among the Orāons (*q.v.*),—and he is also worshipped under the name Dharm Deotā. There is no representation of him, but the other gods are to be found, each in a stone in the sacred grove. Borām, as the Creator, the first and greatest of their gods, is worshipped at the sowing season, with the offering of a white cock. In cases of sickness, goats are offered to Dāsum Pāt and to his brethren. On such occasions the goat is given by the owner of the house in which the sick person resides. At other times the victim is provided at the common cost of the people. The sacrifices are offered at the foot of a sacred tree in the grove; only men partake of the meat, and the Deorī receives the head.

The Bhuiyās of South Lohārdagā are more advanced in the direction of orthodox Hinduism, and the bloodthirsty tutelary goddess, Ṭhakurānī Mātā, to whom less than forty years ago the Hill Bhuiyās of Keonjhar offered the head of the obnoxious minister of their chief, has now become the Hindu Durgā, to whom a Bhuiyā priest makes offerings of goats and sheep, the flesh of which is eaten by the worshippers. Besides this, their chief deity, they have a host of communal ghosts, like the evil spirits which beset the Muṇḍās (*q.v.*) and Orāons (*q.v.*). 'To appease these ghosts,' says Risley, 'by occasional offerings of fowls and rice, and thus to guarantee the community against the consequences of their ill-will, is the special function of the village Pahan, who levies small subscriptions for this sort of spiritual insurance. The tribal deities Rikhmun [probably Skr. Ṛishi-muni, "holy saint"] and Tulsī-bīr ["Tulsī, the hero"] belong to a different and less primitive type. Rikhmun is believed to be the original ancestor of the tribe; while Tulsī-bīr was a restless and valorous Bhuiyā, who made war upon the gods until they appeased his wrath by admitting him to divine honours. I venture the conjecture that both Rikhmun and Tulsī-bīr are merely transmuted totems.' It seems simpler to suppose that we have here cases of tribal ancestor- and hero-worship. And it is well to note that the names of these deities, which must have come from the Hindus, show that the cult

must have arisen, or at least have been re-named, under Hindu influence.

2. Religion in the United Provinces.—In the United Provinces the Bhuiyās have advanced further in the direction of Hinduism than their brethren in Bengal. Their chief deity is Kālī, who, as in the case of Ṭhakurānī Mātā, has probably succeeded some aboriginal goddess, such as the Paurī or Pahārī Devī of the Bhuiyās of Singhbhūm. Kālī's shrine is a rude thatched hut, in which a mound of earth raised upon a platform represents the shrine of the goddess. They also worship, by the agency of the *baigā* (wh. see), the *dih*, or village gods, and the Earth-goddess Dhartī Mātā, with a sacrifice of goats, young pigs, and fowls. Among their legendary heroes is Lahang Bīr, who is propitiated by the rite of fire-walking. The worshipper, possessed by the spirit of the hero, is said to sustain no injury by walking over burning coals or by rolling his body among thorns. An instance of tree-worship appears in the rite at the Anant-chaudas festival in the rainy season, when a dance round a branch of the Karama tree (*Anthocephalus cadamba*) is made the occasion for licence and rude debauchery. A man killed by a tiger becomes a dangerous ghost, and is worshipped at the *baghaut*, a shrine erected at the place of his death. The field-deity is Hariyārī Devī, 'the Mother-goddess of greenery,' and to her the *baigā* offers a sacrifice of fowls and an oblation of spirits at the end of the harvest season. They are careful to propitiate the dead by making offerings of food to them. This is done simply through fear lest the ghosts, if neglected, may come back and vex the living. It thus does not amount to ancestor-worship in the true sense of the term.

BHUTĀN.—Bhutān is a long, narrow mountainous country occupying the southern slopes of the Eastern Himālayas for a length of about 220 miles. Its breadth from the Tibetan border to the Indian plains averages about 90 miles. It is bounded on the north by Tibet, on the west by independent Sikkim and the Darjīling District of Bengal, on the south by the province of Eastern Bengal and Assam, and on the east by Tibet and the territory of semi-independent tribes.

This art. will sketch the life and ethics of the Bhutānese. For their religion see next article.

The origin of the people is uncertain. The most likely theory is that the country was originally inhabited by peoples from the South, and was conquered some centuries ago by invaders from Tibet, who drove from the mountains the old dwellers, except those who were made slaves by the conquerors. The present inhabitants bear unmistakable trace of close affinity in appearance with the Tibetans, and this is the more striking the farther north they live. Those who inhabit the more southern parts give evidence of intermingling with the darker peoples of the plains, and of the influence of more unhealthy regions. Comparatively few Bhutānese are to be found on the outer ranges abutting on the plains. These have of late years been largely occupied by Nepāli immigrants, whose habits and customs remain much the same as those of their land of origin (see NEPĀL). The country is sparsely populated. No certain information is available as to the population, though an estimate of 110,000—90,000 Bhutānese, 30,000 Nepālis (with a few hundred Lepchas from Sikkim)—is probably over rather than under the mark.

There is no written code of laws in Bhutān. The inhabitants say that they had such a code, but it got lost in the course of their frequent fightings. The poverty and lawlessness of the people are expressed by a Tibetan proverb: 'In Bhutān there are no handles to the pots, and no law in the land.' Might has been right. The Government officers are usually unsalaried, with the inevitable result of extortion and injustice. The country has been priest-ridden in the extreme by the Lāmas, who, it is asserted, give the worst of examples from the moral point of view. The population has declined. The unsettled political state of the country has accounted for this to some extent, but polyandry and other vicious customs have probably had greater influence. Polyandry is more prevalent in the northern parts, where the connexion with Tibet is closer. It is excused on the ground of poverty, and is probably on the decline. A woman who marries the eldest brother often becomes also the wife of the other brothers. Polygamy, too, is practised by some. Government officers sometimes keep wives in different parts of the country, but the practice is being prohibited by the rulers. The marriage tie is loosely held. Chastity has been at a discount, and the proportion of the people suffering from venereal diseases is appallingly large. Woman naturally holds a freer and more independent position than in India, and does more than her share of the work of the house and the field. As a whole, the men are indolent and addicted to strong drink. Physically they are robust and muscular. Their chief amusements are archery and quoits. In character they may be described as plucky, hot-tempered, truculent, avaricious, and unforgiving. While cruel to their enemies, they are kind and charitable towards their friends. The better classes are courteous in manner. Slavery or serfdom is prevalent, and on the Indian frontier is a village largely inhabited by escaped slaves. Punishment for crimes is severe. For continuance in theft the penalty is to lose the right hand and the left foot. Capital punishment is inflicted by drowning in a river. Religious exercises are well attended to. The people are superstitious and ignorant. Education has made little or no progress, and is unknown outside the monasteries. Personal cleanliness is sadly neglected. Judged by present-day Western standards, the Bhutānese are certainly not an attractive people.

There are many indications, however, that a better day is dawning in Bhutān. A few of the boys are showing a desire for Western education. The strong character and higher ideals of the present Mahārājā, and the notable change which has come over a few individuals who have been influenced by contact with European civilization, are hopeful signs. The recent unification of power in the hands of the Mahārājā bodes well for the political future of the land, and its consequent more settled state will beneficially affect its moral condition. The people are a sturdy stock, and once awakened out of their lethargy and exclusiveness, and delivered from the domination of the Lāmas and the evils of polyandry, there is every prospect of their becoming a strong, independent, and forceful race, and of the country entering upon a career of prosperity before unknown. During the late war with Tibet, the rulers eventually threw themselves enthusiastically on the British side, and they are more amenable than ever to the advice of the Political Agent.

J. A. GRAHAM.

BHUTĀN, BUDDHISM IN.—Bhutān, or more correctly 'Bhotān' (*i.e.* 'the end of Bhot [or Tibet']', the Sanskritic name by which this country is known to Europeans through the Bengalis of the British Indian province bordering it), is a large independent principality situated in the south-eastern Himālayas, wedged in between Tibet, Sikkim, and Assam. Its wild valleys are sparsely peopled by a semi-savage Mongoloid tribe which calls itself 'Duk-pa' (spelt *hBrug-pa*), a term which is also employed to denote the form of Lāmaism that is professed in

the country. The Duk-pa Buddhism, as found in Bhotān, where it appears to be the sole recognized form of religion therein prevalent, is of the primitive unreformed type of Lāmaism, and is very thickly overlaid by aboriginal animistic cults and the gross worship of malignant devils, so as to be scarcely recognizable as Buddhism at all, save for a few externals in the way of symbolism and a little deeply-embedded ethical teaching of Śākya, the Master.

Buddhism appears to have entered this country for the first time about 300 years ago, when in the beginning of the 17th cent. A.D. a Lāma from the adjoining border of Southern Tibet invaded Bhotān at the head of a band of Tibetan soldiers and forcibly occupied the country. This Lāma, named Z'ab-drung Nag-dbaṅ rnam-rgyal, established a hierarchy, somewhat on the model of that of the Grand Dalai Lāma of Lhāsa, and it still survives. Nominally, this Bhotānese Grand Lāma, or high priest, is literally a priest-king, who bears the Indian title of *Dharma Rājā*, or 'Religious King,' and combines in his hands both the spiritual and temporal rule, whilst his succession is arranged on the re-incarnation theory, by which, on his decease, his spirit is supposed to transmigrate into the body of a newly-born male child, who is to be searched for and identified by omens and supernatural portents. The regulation of the succession in this way is kept in the hands of the Lhāsa priests, who usually send a 're-incarnation' from Lhāsa or Central Tibet. During the minority of this re-incarnated priest a regent is appointed for the management of the temporal concerns, and is called *Deb-Rājā*, or 'Provincial Regent or Governor'; and he seems usually to be a secular chief. The pretentious and divine nature claimed by the Grand Lāma of Bhotān is evident in his full title as given on his seal: 'Chief of the Realm, Defender of the Faith, Equal to Sarasvatī [the Hindu goddess of learning] in learning, Chief of all the Buddhas, Head Expounder of the Commentaries, Caster out of Devils, Most Learned in the Holy Laws, God incarnate, Absolver of Sins, and Head of the Best of all Religions.'

Technically, the Duk-pa form of Lāmaism is an offshoot of the hermit section of Lāmas called *Kar-gyu-pa*, who follow the practice of the Tibetan saint Milaraspa in laying especial stress on residence in caves as a means of gaining magical powers; though otherwise the doctrines are generally similar to those of the old unreformed Lāmaism (*Nying-ma*). This Duk-pa sect arose on the rocky Tibetan hills which border upon Bhotān, and on its establishment in this latter country it adopted a fictitious so-called inspired 'revelation' alleged to have been unearthed by a Lāma named Saṅ-gyas-gliṅ, by means of which the priests were enabled to relax still further the Buddhist obligations, whilst admitting of the retention *en bloc* of the popular spirit-worship and witchcraft. Amongst the monks only a few profess to be celibate, but it is doubtful whether any even of these are really so. The distinctive hat is of a red colour, and that of the head Lāma bears as a badge a vertical cross formed by two thunderbolts, with reference to a legend of thunder-dragons (*Duk*) which is related in explanation of the etymology of the sectarian title 'Duk-pa.' The Bhotānese laity as well as the priests, unlike the Tibetans, shave their heads.

The monasteries and temples are of the general shape and appearance of those in Tibet, but roofed over with wide wooden eaves to shed off the excessive rain which falls in this climate. The largest monastery is at Tashi-cho', which is the residence of the Dharma Rājā and the capital of the country. It has been visited and described by Manning, Bogle, Turner, and others, and is said to have about 1000 monks, though other accounts place the number at 500. In British Bhotān there are small Duk-pa temples at Kalimpong and Pedong near Darjīling. The total number of Duk-pa priests cannot be stated with certainty, but has been estimated at about 5000, or about 1 to 10 of the population. Only about half reside in cloisters, the remainder being employed as State officials and traders. There are also a considerable number of hermits and a few nuns.

BIBLE.

[W. SANDAY.]

THE word 'Bible' has come to mean substantially a sacred book. Thus we might say that the Qur'ān is the Bible of Muhammadans. When we speak of '*the* Bible,' we mean the sacred book of Christians. But this is a derived sense. Our English word comes from the Greek through the Latin. The Greek original meant simply 'books' in the plural; τὰ βιβλία was a particular collection of books, or more strictly of rolls. In this sense the use of the word goes back to the prologue to Ecclesiasticus (*c.* 130 B.C.); cf. 1 Mac 12^9. When the Greek βιβλία was transliterated into Latin, it came to be treated as a singular and a feminine.

The earliest example of this use known to the writer is that given by Sir James Murray, *OED*, *s.v.*; it occurs in a library catalogue of the 9th cent. (Becker, *Catal. Biblioth. Antiq.* p. 42, cf. p. 172). Jerome used the term *bibliotheca [sacra]* (du Cange, *s.v.*)—an expressive designation of the 'divine library' compressed into a single volume; and this term occurs frequently in the catalogues of the 9th and 10th cents. (Becker, *op. cit.* pp. 4, 13, 16, 17, 24, 43, 59, 60, etc.). The word characteristic of Cassiodorus (*c.* 487–580) is *pandectes*; we remember that Justinian published his *Pandects* in 533, and Cassiodorus his *Institutes* about 544.

At the time when the books which we call the Bible were written, the usual form for a book to take was the roll. After the invention of writing, the material of books varied somewhat with time and place. The Babylonians wrote with a sharp point on clay. The Hebrew collection that we call the OT was written mainly, if not entirely, on skins. With the natural conservatism which obtains in matters of religion, the Jews to this day make use of leather and of the roll form for the sacred volume. The graphic scene (Jer 36) in which Jehoiakim cuts to pieces and burns the roll that had just been read to him will give an idea of the outward appearance. The Greek books that we call the NT were produced under a different and more advanced civilization, that of the Græco-Roman empire. By this time the material commonly used for books was papyrus (2 Jn^{12}); and it is probable that most of the books of NT were originally written on papyrus (though parchment is mentioned in 2 Ti 4^{13}). But alike in the case of OT and of NT the form adopted was that of the roll, with the text written in slender vertical columns. The volume was held in both hands, with one or two columns exposed to view at a time, and was rolled up with the left hand and unrolled with the right as it was read.

There was a conventional size for the roll, which determined roughly the length of a book. It was for this reason that the Twelve Minor Prophets were written on a single roll and counted as a single book. In the oldest Hebrew tradition, as given in the Talmud (*Bābā bathrā*, 14) and still observed in German and French MSS, the order of the Prophetical Books is that of length: Jer., Ezek., Is., Min. Proph., corresponding to each other as 24 : 21 : 19 : 17 (Budde). [In like manner in NT the usual order of the Pauline Epistles is roughly that of length.] From the custom of writing more than one shorter book on the same roll has arisen, quite innocently, the attribution of some writings that were originally without name to wrong authors, *e.g.* several anonymous compositions that now go under the name of Isaiah, a similar anonymous composition (or compositions) added to the prophecy of Zechariah, etc.

The Christian Bible then was a double collection of rolls. That is its external description, but only external. It is of more importance that both volumes consisted of *collections*, and that both

these collections were regarded as *sacred*. We shall have to follow the line of inquiry thus suggested for both OT and NT. And when we have done so, we shall have to consider how the Bible is regarded, or ought to be regarded, at the present day. In other words, the main treatment of our subject will naturally be historical, but the final summing up will be rather doctrinal; and the history should take such a form as to explain the doctrine.

It should be explained at the outset that in what follows the broad results of criticism, as at the present time widely accepted, are presupposed. That is to say, the usual literary analysis of the Hexateuch and the Historical Books, and so much of the criticism of the Prophets and other books as is common to the best writers, are taken for granted. It is also taken for granted that a line is practically drawn across the history by the promulgation of the Book of Deuteronomy in B.C. 621; those portions of the literature which assume the single authorized centre of worship and the fully developed hierarchical system of Priests and Levites being placed after that date, and those which do not make these assumptions being placed before it. These fundamental principles of criticism have now been before the world for so long, and they have been so closely and severely tested in the daily work of so many competent and able scholars, that at least in the opinion of the present writer they must be regarded as verified and established. The standard for most English students is substantially that of Driver, *Introd. to the Literature of the OT* (cited as *LOT*; from 1891).

The ablest presentation of the other (more completely conservative) side is Dr. Orr's *Problem of the OT* (from 1906). The present writer has much sympathy with Dr. Orr's view of the religious character and use of OT; indeed, it is part of the purpose of this art. to show that a view not essentially dissimilar emerges naturally from critical study on the lines of Dr. Driver and most at least of his English allies, though it is no doubt true that a different construction is put upon the facts by some in Great Britain and by a greater number on the Continent. It is also probably true that there is still room for considerable correction of critical theories in detail. But as a whole the writer finds it impossible to think that Dr. Orr's position is permanently tenable, or that the main lines of the construction opposed to his have been proved to be untenable. The principle underlying the present art. is that on its literary and historical side the Bible must be studied like any other book (*e.g.* like Livy, or like the mediæval chronicles, which supply a better parallel for some parts of the problem), but that it does not therefore follow that in other respects, and in particular as a religious revelation, the Bible is only on the same level with these. The object is to discover how far the analogies with other books and other religions extend, and what there is in the Bible that detaches itself from, and rises above, the broad phenomena of other religions.

In so wide and intricate a field it is inevitable that experiments should be constantly going on; and the recent incursions of the Assyriologists and students of Comparative Religion have been of this character. It cannot be said that either these experiments or others (like those of Prof. Eerdmans of Leyden) have really brought the question any nearer to the standpoint of Dr. Orr. It would be truer to say that recent years have seen a consolidation and general strengthening of the position criticized.

I. *HISTORY OF OT.*

I. How the Books of OT came to be written. We begin by asking ourselves how, humanly speaking, did the books of OT come to be written? It is just on this side that we find the same kind of influences at work as in other ancient literature. There is a general agreement among scholars that the oldest pieces in OT, and those most nearly contemporary with the earlier events described, are the Songs.

(1) *Fragments of ancient Song.*—There is more analogy than we are apt to suppose between the beginnings of Israel and the beginnings of Greece. The literatures of both peoples began with poetry, and not with prose. Sometimes one sees the generalization broadly laid down that all national literatures began with poetry; and this is doubtless widely true; but it can hardly be proved of the oldest civilizations of all, those of Babylonia and Egypt. We are struck, however, by the resemblance between the bards of the *Odyssey*, Phemius and Demodocus, singing to the lyre in the halls of chieftains, and the fragments of primitive song preserved in the Bible. The difference is due simply to the different conditions and state of society. The scene is not the almost feudal banquet in the hall of the noble, but the tribal gathering round the well (Nu $21^{71.\ 18}$, Jg $5^{11.\ 16}$). And the character of the songs is just what we might expect; they are impassioned utterances of the natural man: laments for the dead (2 Sam $1^{19\text{-}27}$ $3^{33f.}$), exultation over the fallen foe (Gn 4^{23}, 1 Sam 21^{11}), denunciation of the enemy (Nu $21^{27\text{-}30}$. 23^{7}), or of the backward and faithless friend (Jg $5^{17.\ 23}$), and praises no less fervent of the helpful ally (Jg $5^{14.\ 15.\ 18}$) even though stained with treachery (*ib.* vv.$^{24\text{-}27}$). But, along with this, we note a very genuine and enthusiastic devotion to Jahweh as Israel's God: the wars of Israel are His wars (Nu 21^{14} 1 S 18^{17} 25^{28}); Israel cannot prosper without His blessing (Jg $5^{2.\ 3.\ 9.\ 11.\ 13}$). This implies quite definitely, though, of course, in general terms, the great covenant at Sinai (compare the reference in Jg $5^{4.\ 5}$). Some of the songs are quoted expressly from the Book of Jashar, *i.e.* 'of the Upright,' apparently a book in which were sung the deeds of the heroes or worthies of Israel, where the name at least suggests something of that moral standard which began to be enforced as Israel's side of the covenant, just as 'the righteous acts of the Lord' (Jg 5^{11}) were the acts of His covenanted succour.

(2) *Continuous history in Prose.*—The snatches of song to which reference has been made, scattered and fragmentary remains of a larger body, have come down to us embedded in later texts. The latest of the songs, however, must have been little earlier than the narrative in which they are found. By the time of David a prose style must have been fully developed by the side of the poetry. The comparatively settled conditions and rapidly advancing civilization of the reigns of David and Solomon soon gave the impulse to historical composition, of which we have a fine example in the story of David's court and family contained in 2 S 9–20, with which should go 1 K 1. 2. So admirable is this narrative, so fresh and living, so truthful in its general tenor,—recording events as they really happened, without undue preference either for one party or for another,—that more than one leading scholar (*e.g.* Budde after Duhm) has traced it to 'the archives of the house of Abiathar,' the priest who followed the fortunes of David from the time when he was fleeing before Saul, but was involved in the conspiracy of Adonijah, and compelled to retire in disgrace to his home at Anathoth (1 K 2^{26}).

As Thucydides in his exile set himself to write the history of the Peloponnesian War, so Abiathar may have used his retirement to describe the events in which he had borne an active part. Without laying too much stress on the person of Abiathar, his name may well be taken as a symbol of the conditions under which this earliest and best of all the specimens of Hebrew historical writing was composed. In 1 Samuel there are two distinct strains running side by side, and several times leading to duplicate versions of the same event. It is quite possible that the earlier strain may be a continuation backwards of the narrative of 2 S 9–20. It is also possible that in these nearly contemporary chronicles we are to see the beginning of the school which first took in hand to trace back the history of Israel to its origins, and in the pursuit of these carried its researches into the traditions of the race as far back as Creation itself. Such was the work of the so-called Jahwist (known by the symbol J). If both in this case and in other later cases scholars have recourse to what may seem the refinement of distinguishing successive hands as J^1 J^2 etc., all that is meant is that there is reason to suppose that the work was produced not so much by a single author as by a school, in which one writer took up the pen from

another, as the monks did in the *scriptoria* of the Middle Ages. These writers are usually anonymous, for the idea of literary property in such departments as history had not yet arisen; indeed, it never became established among the Hebrews as it did among the Greeks.

When once the example was set on so substantial a scale as by J, it is not surprising that it should have been followed. What J did in the Southern Kingdom, after an interval of time E did in the Northern. There, too, a school of historians seems to have taken root, who, like J, undertook to commit to writing the folklore current among the Northern tribes, especially Ephraim. This Northern school would seem to have been more directly under the influence of the prophets, who by this time had become powerful. We know that the prophets joined together in bands or companies, and it is not impossible that the writing of history may have been one of the forms of their activity (cf. Kautzsch, 'Rel. of Israel,' in *HDB*, vol. v. p. 656[b]). It is interesting to possess two lines of tradition so clearly and strongly marked as J and E. It would seem that after a period of separate existence, perhaps after the fall of Samaria in B.C. 722, when the spiritual leaders of the Northern Kingdom naturally took refuge with their brethren of the South, the two lines were definitely brought together in a combined narrative, JE.

(3) *The writing Prophets of the earlier period.*—So far we have had to do with literature that was not in its primary purpose moral or religious. The national traditions, as they were first committed to writing, seem to have told an unvarnished story. They reflect the national character, with its undisciplined passions and its traits of cunning deceit and fierce revenge. These features are prominent enough in the somewhat distant and idealized biographies of the patriarchs: they are still more prominent in the wild scenes of the Book of Judges; and they are prominent even in the life of Saul and the family history of David. Throughout all these periods we can see that the religion of Israel was as yet very imperfectly moralized; and it was by no means a pure monotheism. It began, like the religions of the nations around, with the cult of sacred stones and trees; it tolerated the use and worship of images ('teraphim,' Gn $31^{19.\ 30.\ 34}$, Jg 17^{5}, 1 S 19^{13}; 'ephod' [possibly], Jg 8^{27} 17^{5} 18^{14-20}; 'strange gods,' Gn 35^{4}, Jos $24^{2.\ 14.\ 23}$).

These things should not be thought of as idolatry. They did not begin to be idolatry until the revelation contained in the Second Commandment had been clearly given and clearly apprehended. Before that time they were rather helps to worship, enabling the primitive man to realize that he had an object of worship outside himself. It was not to be expected that he should take in all at once so vast an idea as that of a Maker of heaven and earth. He was obliged to use crutches or stepping-stones to higher things.

And yet it was not for nothing that the work of Moses lies in the background. Even the earlier documents show a consciousness that Israel had a special mission among the nations. It was in pursuance of this mission that Abraham had been called from the East, and that the fortunes of his descendants were subject to a Divine guiding, bringing good out of evil (Gn 50^{20}). We might say generally that this side of things comes out in proportion as the prophetical influence makes itself felt, and therefore especially in the later strata of the narrative. Sometimes this is to the detriment of the history as such: contrast, *e.g.*, the treatment of the origin of the monarchy in the earlier version (1 S 9^{1}–10^{16} $11^{1-11.\ 15}$ $13^{2-7a.\ 15b-18.\ 23}$, 14) and in the later (1 S 7. 8. 10^{17-24} 12. 15).

The literature so far, as we have said, shows indeed to some extent a religious influence and shaping, but not as yet a definite and predominant religious purpose. We come to this first in the works of the so-called 'writing Prophets.' Prophecy had been from the first an essentially religious institution, but in its earlier phases the forms that it assumed were crude and rudimentary (1 S 10^{5-13}). The action of Nathan in the reign of David is a clear advance upon this (2 S 7^{1-17} 12^{1-25}). These activities culminate in the energetic reforms of Elijah and Elisha. But by this time, as we have seen, the prophets had probably begun to put the hand to the pen in the form of history. The impulse to this may have come with the general advance of civilization; in the court of David and Solomon there were already secretaries and perhaps a 'chronicler' (2 S 8^{16}, 1 K 4^{3} RVm). But there seems to have been something more than this general tendency at the beginning of written prophecy. There was a higher form of prophecy and a lower. The professional prophets fell into a groove, and contented themselves with repeating the accepted maxims, which were religious in their origin but did not represent the deeper insight of religion. Such a lower truth was the doctrine that had grown up of an impending judgment, a 'day of the Lord,' upon the heathen. It arose out of the genuine, if self-regarding, attachment of Israel to its God, and the confident belief that He would one day avenge His people upon their enemies and oppressors. But it was a startling novelty when the prophet Amos announced that this judgment would be turned against Israel itself, just because it was the chosen people (Am 3^{2} $5^{18.\ 20}$ 6^{8} 7^{7-9} $8^{2.\ 3}$ 9^{1-4}). As this announcement was of the nature of protest, and ran counter to all the popular ideas, it was not unnatural that the prophet should wish to place it permanently on record, so that his words might be verified by the event. We know that they were so verified, and the same kind of motive seems to have been present with the other prophets of judgment and doom. These were the greatest of the prophets, and their scathing and searching addresses were the strongest of all the influences brought to bear in the building up of Israel as a people for God.

It does not, indeed, follow that prophecy could be only in one key, and critics have probably gone too far in eliminating the notes of hope and promise. An Isaiah, when the occasion came, could himself bind up the wounds which he had made. But it is characteristic of the prophets to resist the tendencies of the natural man, and to be always pointing the people upwards to higher things.

The Prophetical Books stand out as the most characteristic and the most truly inspired of the contributions which God made through Israel to the religious education of the world. Written, many of them as with the heart's blood, in danger and suffering (Amos, Jeremiah), or under the sting of bitterest personal experience (Hos 1–3, Ezk 24, and we may surely add Is 53), they were always above the highest level of their surroundings, and the truths brought out in them form a continuous revelation.

(4) *The history of Law as far as the Deuteronomic Reformation.*—The Hebrew tradition certainly was not wrong in ascribing the importance that it did to the work of Moses. We repeatedly find the lines of later development converging backward upon that work. Although the belief to which it gave expression may be more correctly described as Henotheism than as Monotheism—although, that

is, it denoted rather the concentration of Israel's devotion upon one God than the absolute assertion that there was no God but one—it nevertheless contained within itself the seeds of the later Monotheism. The Deuteronomic 'Hear, O Israel; the Lord our God is one Lord,' is only a step beyond what Moses must have taught, or what God taught Moses.

There is also every reason to believe that the Heb. tradition was right in connecting the work of Moses with a great historical crisis and deliverance, though the account both of this and of the religious crisis that followed appears to have come down to us with a certain amount of idealization. What we have is no contemporary record, and not even a record based to any extent upon writings now lost but once more nearly contemporary. Perhaps the only instance in which we can lay the finger on such an ancient authority is the Song of the Well in Nu $21^{17.\ 18}$, with the other songs in the same chapter (vv.$^{14f.\ 27\text{-}30}$), for both Ex 15 and Nu 23. 24 are probably later. The Egyptian plagues and the story of the Exodus are idealized. So, too, is the description of the giving of the Law from Mount Sinai. In other words, from the point of view of strict historical fact the narrative of these events bears to the narrative of the revolt of Absalom the same kind of relation as (let us say) in Livy the narrative of the taking of Rome by the Gauls bears to the narrative of the Hannibalic Wars. In the one case folklore has been at work, in the other case not, or very sparingly. Just as there survived throughout the East the indistinct memory of a great destructive flood of the Euphrates or the Tigris, so also within a narrower circle there must have survived the memory of some portentous volcanic eruption, which the folklore of Israel came to associate with the greatest event in its religious history. Such association was very natural, because it was phenomena of this kind—thunder and lightning, storm and tempest, earthquake and volcano—that brought home to the Hebrew mind, as nothing else did, the presence and the power of God. So it came about that, when the more remote traditions of Israel were being collected in the earlier days of the monarchy, the story of the Wanderings in the Wilderness and the legislation of Sinai assumed their present form.

There is little doubt that a nomadic period, which may have been broken for a time by partial settlement in Egypt, preceded the permanent settlement of Israel in Canaan.* And we may well believe that Moses, taking advantage of the events of which we have spoken,—and indeed specially raised up and inspired by God for this purpose,—may have joined together the tribes in closer confederation, and cemented the bonds between them by a great and impressive religious foundation, which lived in the imagination of the people as the giving of a Law. If we seek to know more clearly the nature of this law-giving, we may find it described in Ex 18 (JE), where Jethro asks Moses:

'What is this thing that thou doest to the people? why sittest thou thyself alone, and all the people stand about thee from morning unto even? And Moses said unto his father-in-law, Because the people come unto me to inquire of God: when they have a matter, they come unto me; and I judge between a man and his neighbour, and I make them know the statutes of God, and his laws.

Or the description becomes still nearer (if we do not suppose too high a degree of organization) in the verses a little further on, where Jethro advises:

'Be thou for the people to God-ward, and bring thou the causes unto God: and thou shalt teach them the statutes and the laws, and shalt show them the way wherein they must walk, and the work that they must do. Moreover thou shalt provide out of all the people able men, such as fear God, men of truth, hating unjust gain; and place such over them, to be rulers of thousands, rulers of hundreds, rulers of fifties, and rulers of tens: and let them judge the people at all seasons: and it shall be, that every great matter they shall bring unto thee, but every small matter they shall judge themselves: so shall it be easier for thyself, and they shall bear the burden with thee.'

This description, though dating, as it would seem, from the time of the monarchy, preserves to a remarkable extent the true features of the method by which Moses wielded his authority. If we could reproduce the actual facts, it is probable that he made use of the ordinary tribal machinery of *shaikhs*, or 'elders'; but he himself must have held a more commanding position, and the decisions and laws that he gave were doubtless given as oracles from God.

In the light of what we now know about the much older Babylonian Code of Ḥammurabi, it would not be at all surprising if Moses committed some of his laws to writing. And these laws might well be the nucleus of those that have come down to us in the Pentateuch. Scholars seem to be agreed that the oldest collection that can be marked off as such is the so-called 'Book of the Covenant' (Ex 20^{22}–23^{33}). We may leave it to OT specialists to determine the succession of the different laws. The Pentateuch does not appear to have been complete until the time of Ezra.

For us it is more important to notice the landmark formed by the publication of the main body of the Book of Deuteronomy. This is perhaps the greatest of all the landmarks in the history of Israel; there is none in regard to which there seems to be a clearer division between that which falls on one side of the line and that which falls on the other. There is also a special interest in the Book of Deuteronomy, because its promulgation by king Josiah is a typical event in the process by which the OT acquired its binding authority. This event is thus described in a document that appears to be contemporary:

'And the king sent, and they gathered unto him all the elders of Judah and of Jerusalem. And the king went up to the house of the Lord, and all the men of Judah and all the inhabitants of Jerusalem with him, and the priests, and the prophets, and all the people, both small and great: and he read in their ears all the words of the book of the covenant which was found in the house of the Lord. And the king stood on the platform (RVm), and made a covenant before the Lord, to walk after the Lord, and to keep his commandments, and his testimonies, and his statutes, with all his heart, and all his soul, to confirm the words of this covenant that were written in this book: and all the people stood to the covenant' (2 K $23^{1\text{-}3}$).

We have here a solemn religious act by which king and people alike—the king in the name, and with the full consent, of the people—accept the book read before them as expressing the Divine will, and take its precepts as binding upon themselves. This is the essential meaning that, as applied to a book, is contained in the epithet 'canonical,' which means 'authoritative,'* and authoritative because in its ultimate origin Divine.

We call this a 'landmark in the history,' but we do so only because the description is so full and explicit. It is not to be supposed that the idea was a new one, or that it was applied to Deut. for the first time. It is anticipated by the description in Ex $24^{3\text{-}8}$ (E) of the no less solemn acceptance of the 'book of the covenant' (Ex 20^{22}–23^{33}, or the nucleus of that section). But, indeed, both descriptions only represent the full acknowledgment by the whole community of that which was contained implicitly from the first in the manner in which we have seen that the legal decisions and statutes were given—as oracular responses from God. The laws given by Moses were not given in his own name but in the name of God, and they were accepted in the same sense by the people as

* This is one of the current views challenged by Prof. Eerdmans (*Exp.* 1908, pp. 118 ff., 193 ff., 345 ff.) and defended by Prof. G. A. Smith (*ib.* p. 254 ff.).

* Cf. esp. Zahn, *Grundriss d. Gesch. d. NT's Kanons*², p. 10.

coming from God. In precisely the same way Hammurabi is represented as 'receiving his laws from the seated sun-god Šamaš, the judge of heaven and earth' (Johns, *Oldest Code*, p. ix). It is the common ancient conception, but at the same time a central conception to which all the habits of thought are adapted; and who shall say that it does not express substantial truth?

(5) *The later stages of History, Prophecy, and Law.*—We have seen how the earliest stages of Hebrew literature were an instinctive natural product, growing out of the national life, and receiving a permanent form by being committed to writing. Only the very earliest stages retained their original naïve simplicity. Even here (as in the Song of Deborah) the religious interest became more and more dominant. From the modern point of view, which expects that history shall be history written for its own sake and with no ulterior aims, the process is one of deterioration. More and more history comes to be written with a purpose; the prophetic ideal, the legislative ideal, the ideal of worship, get the upper hand. All three have a common root in the conception of communication with God by means of oracles; the statutes of the lawgiver and the priestly regulations for worship are equally invested with an oracular form; they are presented as having a Divine sanction behind them. So the religious interest becomes all-embracing and all-absorbing. Israel becomes the people of religion, and even its instinctive products, which might at first have been described as secular, acquire a definitely religious character.

At each new revision this character is impressed more deeply upon the historical writings. The same school which produced Deuteronomy—a coalition, as it would seem, of priest and prophet, a succession in which prophet wore the garb of priest or priest the garb of prophet—besides its great work in the sphere of law also turned its attention to history. It, too, made its own collection of older historical writings, and, as it did so, it took care to point the moral of the successive stages that the history of Israel had gone through, by hortatory or didactic paragraphs inserted at appropriate places. Thus the historian becomes a preacher, and his narrative is at the same time a sermon. It is from this point of view that we should learn to look at it and judge it. It is no longer in place to expect the disinterestedness of the secular annalist; we should look rather at the earnestness which aims at converting the people from the error of their ways and bringing them to serve the Lord.

Two more periods of literary activity complete the production of canonical history. (i.) The fifth century saw the gradual composition of the last main element in the Pentateuch (the Priests' Code, or P), and its incorporation with the already existing writings (J, E, JE, D) so as to form the Pentateuch as we now have it. It would seem that P was for the most part written in Babylonia, and that it was in fact the 'book of the law' which Ezra brought with him and promulgated in Jerusalem in the year B.C. 444. By the end of the century it had been worked up into our present Hexateuch. (ii.) Ezra and Nehemiah appear to have left behind them memoirs, which after a hundred years or rather more were embodied, along with a continuous and systematic review of the history so far as it related to Judah from David onwards, in our present books 1 and 2 Chron., Ezr., and Nehemiah.

This later historical writing is similar, though not quite identical, in its character. It has not the freshness and living human interest that marked the older narratives, nor yet the moral fervour of the Deuteronomic school. The dominant interest is now antiquarian, expressing itself in the form of lists, inventories, chronological summaries, and genealogies. In P there is a great mass of systematized law; and in Chron. there is a marked tendency to enlarge on details of worship. In both cases the style is, as a rule, dry, formal, and statistical; such warmth as there is in Chron. is thrown mainly into the liturgical descriptions and into such a view of the history as was natural from the standpoint of the priesthood.

In Prophecy, two great figures stand out, both belonging to the period of the Exile: Ezekiel (*c.* 592–570 B.C.), and the so-called 'Second Isaiah' (*c.* 546–536 B.C.), followed by a lingering train of lesser personalities (Hag., Zech., Obad., Mal., Joel, Jonah) and perhaps some fragments (Is 24–27, Zec 8–14) now bound up with larger works. Ezekiel is a significant and characteristic figure, who has a strong message to deliver, and marks with equal boldness the close of one age and the opening of another. Second Isaiah (Is 40–55) reaches perhaps the highest point of spiritual insight in the whole OT. Even the lesser names, although associated with some decline of literary force and originality, are yet all those of men who have some message from God both to their own and to future ages.

We have already spoken of the considerable codifying of law which belongs to this period. It must not be supposed that all the laws which are thus put on record represent actual existing usage. There is a tendency towards symmetry and system; the writers do not hesitate to set down not only what is, but what they think ought to be. A striking example of this may be seen in the ideal picture of the temple and its services in Ezk 40–48. But even in the Pentateuch there is not a little that was probably never actually put into practice.

The narrative of Neh 8–10 illustrates vividly the attitude of mind towards the Law which was by this time becoming common to both leaders and people. The proceedings which accompanied the promulgation of the Priests' Code were evidently modelled upon those with which we have seen that Josiah introduced and enforced the legislation of Deuteronomy. Only the ceremonies are yet more prolonged and yet more solemn, and the effect proved to be more lasting.

(6) *The Hagiographa*: (i.) *Psalms*, (ii.) *Wisdom Literature*, (iii.) *other Books*.—The central force in the history of Israel was the *prophetic spirit*, which we may take in a wide sense as attaining to permanent expression not only in the prophetic writings proper, but also in the laws and institutions which made up the concrete framework of the national life. The prophetic writings embodied great principles both of belief and practice, a high conception—gradually becoming still higher and purer—of the being and character of God, and a growing stringency and elevation in the sense of His moral and spiritual demands upon man. It was essentially the same spirit and the same principles which took effect in the work of the lawgivers, from Moses onwards. The special purpose for which Israel as a nation had been raised up was to serve as a standing example of these higher views of God and of moral duty which were the outcome of the spirit that we have called prophetic, but which was really common to prophets and lawgivers, and expressed itself in the two main branches of Hebrew literature, Prophecy and Law.

In these two branches what we may call the creative forces at work in the nation reached their fullest development; but the consequences were felt over a wider area; indeed the prophetic spirit

(if, for short, we may call it by that single name) gripped hold of the national life as a whole and made itself felt in outlying branches of the literature that did not so obviously receive their stimulus from above as Prophecy and Law. The Jews had a general name for these less central and creative writings—*Kĕthūbīm* or *Hagiographa*. These again fall into three classes: (i.) Psalms of David (so called), with the addition—outside the stricter Canon—of the Psalms of Solomon (so called); (ii.) the Wisdom literature, including Proverbs, Job, and Ecclesiastes, and—outside the narrower Jewish Canon—the Wisdom of Solomon (so called), and the Wisdom of Jesus the son of Sirach; and (iii.) certain other books, not all of the same description, and more limited in number in the Palestinian Canon than in that of Alexandria. The Jewish tradition does not exactly follow this classification by subject, but marks off the three greater poetical works: Psalms, Proverbs, Job, and the so-called 'Five Rolls'—Cant., Ruth, Lam., Eccl. (*Koheleth*), Esther—which were read respectively at the five church festivals: Passover, Weeks, the fast of 9th Ab, Tabernacles, and Purim. With this division were reckoned three books of which we have in part already spoken, Dan., Chron., Ezra-Nehemiah. For our purpose it may be better to keep to the classification by subject.

(i.) *Psalms.*—Although the Psalms are not creative in the same sense as the Prophets and the Law—in other words, although they do not supply their own principles from within but rather derive them from without—they are hardly of less capital importance in the history of Religion; because they are typical and classical examples of a *genus* which is of the deepest significance in the sphere of the religious life. If Prophecy and Law embody those leading truths which (as of Divine implanting) may be described as the gift of God to man, the Psalms represent the response of man to God. They cover the whole field of devotion: praise and thanksgiving, and prayer—with the preparation for prayer in penitence and confession, the laying before God alike of the joys and difficulties and sorrows of life, whether on the larger scale of the nation or on the smaller scale of the individual.

There are not wanting analogies to the Heb. Psalms, especially in the religious literature of Babylonia; but by common consent the Heb. Psalms take the first place, and indeed many of them are not surpassed even by the ripest productions of Christianity. The Psalms supply the ideal and pattern on which the whole devotional response of man to God has modelled itself throughout every one of those branches of religion which trace back their origin to Israel. To say this is to claim for them—and to claim beyond possibility of dispute or question—an unique place in religious history. In the case of the Psalms it is perhaps not so much the substance that is a new creation as the form and mode of expression, the underlying attitude of the soul, when it approached the presence of its God.

From the beginnings of Heb. religious poetry, there are two distinct strains in which the poet speaks: he speaks in the name of the community or nation collectively, and he speaks for himself as an individual. We may take the Song of Deborah as a specimen of the first of these classes, and the Lament of David over Saul and Jonathan as a specimen of the second. In the earlier ages there can be little doubt that the former style preponderated. It was, of course, inevitable that an individual utterance should from time to time express individual emotion; even when he sang as spokesman for the community, the Heb. poet could not help expressing the collective emotion as it was reflected in his own breast. But this was a different thing from the habit of introspection which must have become much more common after the Exile, when the national existence was broken up and the doctrine of individual responsibility had been clearly and strongly asserted. We shall be safe in referring to a post-exilic date the more introspective portions of the Psalter.

But indeed it is probable that the main body of the Psalter belongs to this later date. There is probably truth in the description of the Psalter as 'the hymn-book of the Jewish Church,' and as belonging to the time when the self-consciousness of the Church was freer and stronger than that of the nation. At the same time it seems to us a mistake to lay down any hard and fast line, or to suppose that few or none of the Psalms go back to the time before the Exile. In particular, we should be inclined to treat as pre-exilic most of the Psalms which are addressed to, or speak of, the king. There may be a greater number of early Psalms than is sometimes supposed, under the disguise of later modifications and adaptations.

(ii.) *Wisdom Literature.*—The history of the so-called 'Wisdom Literature' of the Hebrews is closely parallel to that of the Psalter. The 'wise men' form a class by the side of the priests and prophets (Jer 18^{18}). Practically this class is found in all rising civilizations; there was a natural tendency to look up to those who by age and experience and native shrewdness showed themselves capable of giving good counsel. In the East particularly, this class is clearly marked; it is found in the neighbouring nations as well as in Israel. Edom appears to have had a high reputation in this respect (Jer 49^{7}, Ob ^{8}, cf. Job 2^{11}); and so, too, had Egypt and the 'children of the east' (1 K $4^{30f.}$). In Israel no one equalled King Solomon in fame (1 K 4^{29-34}). This fame led to collections of proverbs being attributed to him (Pr 1^{1} 10^{1} 25^{1}), just as collections of Psalms were attributed to David, though it does not follow that all parts of the collections really go back to this early date. The 'wisdom' of the Hebrews differed from the philosophy of the Greeks, though it held the same kind of place in the national life. With the Greeks, philosophy belonged to a higher stage of intellectual culture; in Israel, wisdom consisted mainly in sagacious maxims bearing upon the conduct of life, though sometimes it was conceived in a higher sense, and personified as a principle guiding the Almighty in His work of creation, and determining appointments of human society (Pr $3^{19f.}$ 8, Job 28).

We observe a gradual progress, in respect both of substance and of form. Proverbs, like poetry, were in the first instance a natural spontaneous product of the soil; it was only by degrees that they came to be artistically treated as a form of literature. As such they became more elaborate and more complex as time went on; they begin with short and pithy sayings, and only gradually expand into connected paragraphs, like the praises of Wisdom in Pr 1–9. In point of elaboration, as in profundity of treatment, the climax is reached in the Book of Job. In this we have the sustained and searching discussion of one of the deepest problems that exercised the Hebrew mind. It is a mark of later date as the themes become more and more religious. The personifications of Divine Wisdom are perhaps due to the influence of the *Diaspora*, and through it of Greek philosophy. It is in this direction especially that we see development in the Wisdom of Jesus the son of Sirach, and in the Alexandrian Book of Wisdom. Ecclesiastes is a Jewish product, also late, of a

frame of mind not much represented in Hebrew literature—the tendency to scepticism and pessimism, which is, however, kept within bounds by the ingrained religious habit of the nation. This book no doubt stands on the extreme verge of the OT Canon, and it was only after a struggle that it maintained its place there. But we may be glad that this type too should have received its consecration. For all men there are times when sorrow is better than laughter, and it is better to go to the house of mourning than to the house of feasting (Ec 7^{2-3}).

(iii.) *Other Books.*—We have now accounted for nearly all the books included in the Jewish Canon, but a few remain. Of these the most important is the Book of Daniel. This is a continuation of the older Prophecy, with a considerable change of form, which becomes what we now call 'apocalyptic.' It had had some precursors in the older prophetic books (especially Is 24–27 and Joel); but from the time of the Maccabees onwards the new type definitely took the place of the old. It was distinguished from this by throwing its pictures into the more distant future; it is persistently eschatological, supernatural, and, we might say, mythological—in the sense that it makes free use of imagery derived in part from ancient myths that are not confined to Israel.

The Book of Daniel was the first of a series which extended over nearly three centuries. It was the only book of its class which found its way into the Bible, until it received a companion in the Christian Apoc. of St. John. The apocalyptic literature arose in the first instance in a time of distress and trial, and the strongest impulse was given to it in such times. The Book of Daniel was written to cheer the suffering saints in the great persecution of Antiochus Epiphanes. The oldest apocalyptic portion of the Book of Enoch appears to have been produced about the same date. 4 Ezra and Apoc. of Baruch were called forth in like manner by the destruction of Jerusalem in A.D. 70. But it does not follow that every apocalyptic writing was a product of the same conditions. Dr. Charles has recently shown good reasons for assigning the Testaments of the Twelve Patriarchs, which are partly apocalyptic, to the comparatively calm and settled time of John Hyrcanus (B.C. 135–105).

Another special *genre*, which we find distributed among different sections of the Canon as the Jews divided it, was the instructive tale—instructive in different ways, and admitted into the Canon for different purposes. Such would be the very pleasing idyllic story of Ruth, the deeper religious message of Jonah (which won for that book a place among the Prophets), the patriotic legend of Esther. Lamentations is really a small collection of a special group of Psalms. The Song of Songs is in like manner a collection of the kind of lyrics that were specially in use at marriage festivities.

2. Formation of the OT Canon.—We have traced the growth of OT as a number of separate books composed along the lines of the different branches of Hebrew literature. We have tried—very roughly—to put the several books into their places in the history of this literature, and to indicate their general relations to similar phenomena among the neighbouring nations. We might call this the 'natural history' of the first part of the Bible. We have indeed, it may be hoped, left room to see that there may be in the origins of this series of books something more than a natural history. But we are as yet some way from having explained how the OT came to be received as a sacred volume. Between the point which we have reached and the further point which marks the completion of OT as a body of canonical writings there intervene two main stages: (i.) the collection of the books into a volume with certain definite subdivisions; and (ii.) the investing of this volume with certain attributes by virtue of which it was regarded as sacred. The first is an external process raising only, or at least primarily, questions of quantity or dimensions—the number of books to be included in the volume. The second process relates rather to quality—the growth of a fuller and more consciously realized conception of the attributes belonging to the volume.

For both purposes it may be well to take our start from a point which happens to stand out distinctly, neither at the beginning nor at the end, but in the middle of the process. This point is supplied by the Prologue of the Wisdom of Jesus the son of Sirach, commonly known as Ecclesiasticus. The Prologue is the work of the grandson of the original author of the book, which he translated into Greek about the year B.C. 130. The younger writer refers several times to the religious literature of his nation. He speaks of it always under three heads: 'whereas many and great things have been delivered unto us by the law and the prophets, and by the others that have followed in their steps'; 'my grandfather Jesus, having much given himself to the reading of the law, and the prophets, and the other books of our fathers'; 'not only these, but the law itself, and the prophecies, and the rest of the books.'

(1) *Contents of the OT Canon.*—The threefold division, as we have just seen, corresponds to a triple collection of books embraced within a larger unity. The three collections appear to have succeeded each other in order of time, and the order of time was also, from the Jews' point of view, that of relative importance.

The five books of the Law were brought together first, as it would seem, about B.C. 400, at the end of the period of active and concentrated study that we associate with the names of Ezra and Nehemiah. The final collection and codification of the legal material inherited from the more distant past or produced to give roundness and completeness were the first-fruits of the labours of the new class of scribes. The marking off of the legal books proper (Pentateuch) was an innovation. The older documents extended further than this, J supplying in addition parts of the Book of Joshua (Hexateuch), and E perhaps running on into Samuel. From the point of view of Ezra and Nehemiah the main object was political and religious re-organization, the re-establishment of the people under stable conditions; for them, history as such was subordinate. They had a high conception—the very highest—of the obligation of law, the origin of which they believed to be in the fullest sense Divine. This deep sense of the obligation of law comes out in the narrative of Neh 8–10. The five books of the Law thus became the nucleus of the Jewish Bible. Even the Prophets, when they came to be added, did not attain to the same absolute and unqualified authority. A writer like Philo (*ob.* after 40 A.D.) builds his whole system really on the Law, and treats the rest of the OT as a kind of appendix to it.

For the completion of the collection, or Canon, of the Prophets we go down about two centuries to *c.* 200 B.C. The number of the prophetical books, according to the Jews' reckoning, was eight. The Historical Books were counted with the Prophets, as having for the most part prophets for their authors. Among the Jews, 1 and 2 Sam. and 1 and 2 Kings were contained in single rolls and were not divided; so that there were four

'Former Prophets,' as they were called (Josh., Judges, Sam., Kings), and four 'Latter Prophets' (Is., Jer., Ezek., XII.), what are now known as the Twelve Minor Prophets being all contained in a single roll. The proof that the second division of the Canon was complete by B.C. 200 is supplied by the enumeration of 'the Twelve Prophets' in Sir 49^{10} (the original work of the son of Sirach dating from about B.C. 180). This marks the end of a period which begins with the interest shown by the prophets of the Exile in the works of their predecessors (Ezk 38^{17}, Is 44^{7} 46^{10} 48^{3}, Zec $1^{4ff.}$ 7^{2-7}). The actual collection of the Prophetical Books was doubtless a further work of the scribes. It is to be noted that Jonah was included in the volume of the Twelve, though this book was not exactly a prophecy in the same sense as the others (it might seem to come rather under the head of the edifying tale); but the teaching of the book is thoroughly prophetic, a practical exemplification of Jer 18^{7-8}.

When the grandson of the son of Sirach introduced his grandfather's work to his countrymen and others in Egypt, a third division of the Canon was in process of formation, but not as yet so closed as to be beyond receiving additions. We may infer this, partly from the vagueness of the title ('other books,' 'rest of the books'), partly from the fact that the Book of Daniel and certain Psalms composed in this period (for at least Pss. 44. 74. 79. 83 may probably be set down as Maccabæan) were admitted into it. It would appear that this division must have been closed, roughly speaking, about B.C. 100, as the Psalms of Solomon (composed B.C. 70–40) could no longer be included, but form a separate collection outside.

(2) *Palestinian and Alexandrian Canon.*—It was in the course of the 1st cent. B.C. that the process of adding books to the OT was checked and came to an end. Edifying books went on being composed in Palestine as well as among the *Diaspora*, but by degrees there grew up a reluctance to place them on the same footing with the older Scriptures. It can only have been quite gradually that this reluctance gained strength sufficient to lead to the drawing of a definite line that was no longer to be passed. We have seen how the little collection of Psalms composed about B.C. 70–40 was marked off from the Psalter of David and inscribed with the name of Solomon. This shows that the authorities—in other words, the Rabbinical schools, which were by this time in full swing—were giving attention to the matter and trying to lay down a definite rule. But in spite of their efforts they were not at once completely successful. We may see this from the freedom with which books afterwards set aside as apocryphal were still quoted in NT. The real conclusion of the OT belongs to the sixty years or so between the fall of Jerusalem and the rising under Bar Cochba (A.D. 132–135). It was part of the general settlement brought about by the commanding influence of the group of Rabbis headed by R. Akiba. The settlement in the case of the Canon was based upon existing usage, which was at last formally sanctioned and defined by the religious leaders of the nation. The work by which this was done was necessarily retrospective; it was a process of reflexion based on reasoning and issuing in a decision that had the force of a dogma. The reasoning comes out clearly for the first time in a well-known passage of Josephus (*c. Apion.* i. 8), where the prophetic inspiration is traced down to the time of Artaxerxes (B.C. 465–424; but Jos. appears to mean Ahasuerus or Xerxes; cf. Ryle, *Canon*, p. 161 n.); books written before this date were inspired, but not those written beyond it. There were differences of opinion as to the limit, and there was a good deal of faulty criticism abroad, the real date of many books being forgotten; but the principle of authority co-extensive with inspiration was definitely affirmed. In the same passage we have the first enumeration of the sacred books, which are equal in number with the (22) letters of the Hebrew alphabet. Here again we may see at work the speculations of the Rabbis. According to another reckoning which prevails in the Talmud, the number of the books was twenty-four, Ruth being separated from Judges, and Lam. from Jeremiah. According to yet another, there were twenty-seven in all, which were still equal to the Heb. alphabet, the five final letters being added for the double books. Such learned trifling was characteristic of the time; it was the way in which the Jewish mind sought to give expression to its idea of permanence and law inherent in the nature of things.

In the meantime the close connexion between Jerusalem and Alexandria, which had continued so long as Palestine remained a province of Egypt (to about B.C. 198), though it did not entirely cease, was loosened, and the Greek-speaking or Hellenistic Jews, whose greatest strength was in Egypt, went on a way of their own, not regulated by the schools of the Rabbis. In the copies of the Greek OT an arrangement of the books, differing somewhat from that of the Heb. and more according to subject, was adopted; and other edifying books were added more freely to the older collection. Thus arose the fuller Alexandrian Canon, which was taken over in the main by the Christian Church when it broke with Judaism.

An additional proof that, even when the list of books was provisionally formed, it was not so fixed as it afterwards became, is supplied by the state of the text. In the older books, Sam., Kings, Jer., Job, a comparison of the LXX with the Heb. shows many marked variations; and in some that belong to the later stratum, such as Dan., Esther, Ezra, Tobit, the differences are so great as to amount to another form of the book. This condition of things, without invoking deeper considerations, would be enough to prove that the idea of the Canon was still fluid. And it is in full agreement with these phenomena that the final determination of the Canon at the beginning of the 2nd cent. A.D. appears to have gone along with an authoritative revision of the text. It has been demonstrated, especially by Lagarde, that all existing copies of the so-called Massoretic Text are traceable to a single copy of the time of Hadrian, of which not only the trivial peculiarities but even the blunders are faithfully reproduced. And a late story current in Arabic expressly stated that the extant MSS were all copied from a single original that was rescued from Bitther, where R. Akiba met his death.

(3) *The idea of the Canon.*—Thus it appears that the full conception of the OT Canon as a strictly circumscribed collection of sacred books was the ultimate result of a process spread over a long period. The strict circumscription was in the first instance peculiar to the Jews, from whom it was taken over (though in a qualified sense) by St. Jerome, and it was revived by the divines of the Reformed Church in the sixteenth century.

How far does this sharp division correspond to the real facts of the case? What substantial grounds are there for setting apart the Canonical Books of OT as in a special sense the Word of God? Our next step must be to try to indicate these grounds and to show how what was at first an instinctive deference came by degrees to be a reasoned belief and an accepted doctrine.

(*a*) *Ground of the idea.*—When we speak of the Bible as the Word of God, we are using language that arose in prophetic circles and was at first used to describe the prophetic message. The prophet was regarded as God's spokesman, one who communicated to his fellows a message put into his mouth by God, shaped in his mind by direct Divine influence, and accepted by those to whom it was delivered as expressing the Divine will. When the prophet spoke, he spoke as God's mouthpiece; his own personality dropped out of sight;

he prefaced what he had to say by the formula, 'Thus saith the Lord.'

This conception was wide-spread through antiquity. It lay behind the belief in the oracles, *e.g.* of Delphi or Dodona. But nowhere else was the belief so strong as it was in Israel. In the case of the classical nations we seem to be in the presence of something tentative and limited. There was the belief that a reply might be given to definite questions, and such replies were given, and for whole periods together (*e.g.* especially in the era of colonization in the 8th and 7th cents. B.C.) exercised a beneficent influence over the fortunes of the Hellenic race. But at other periods (*e.g.* the Persian Wars) the oracle took the wrong side, and its utterances were often halting, obscure, and ambiguous. There is a great interval between phenomena like these and the confident burning faith of the Heb. prophets and their unflinching enthusiasm in the cause of God and of morality. And although the interval is to some extent bridged over by the many steps and degrees between the lower and the higher forms of Heb. prophecy, it is only right to remember that the higher forms triumphed so completely that they entirely dominate the prophetic literature, and it is only through incidental allusions and the narrative of the historical books that the existence of the lower forms can be at all adequately realized.

The prophet was a man with a message from God; and at first this message was delivered by word of mouth, and it was only occasionally that it was preserved by tradition and so came to be embodied in writing (*e.g.* 2 S 12^{1-6}, 1 K 11^{29-39}). But a time came when (as we have seen) the prophet himself began to write down his own prophecies; and it is in this way that the *corpus* of prophetic writings has survived and confronts us with permanent witness to their greatness. It is hardly necessary to add that the essential qualities of prophecy belonged to the spoken word, and the written word did but add to this the property of permanence. But in the history of religion that one addition was of first-rate importance. It fixed the supernatural or providential element in the history of a single race, and converted it into a possession of all humanity for all time.

It is natural to seize upon these phenomena of prophecy as the most typical and central of those which made of the OT a sacred book. But they are more typical and central in the impression which they make upon us than they were in the actual course of history. The prophetic writings have been preserved, and we can see in them the psychological process out of which they arose. The whole activity of the prophets is laid bare before us to a degree that hardly obtains for any other product of Israel's religion. The pre-prophetic period is also to a large extent pre-historic. Such knowledge as we have of it has come down to us through folklore, or imperfectly controlled oral tradition. In order to form a realistic conception of the earlier period, we have to eke out the historical data with inferences backwards from later but more contemporary descriptions. It is in this way that we have to reconstruct our conception of the work of Moses. But we can succeed in this sufficiently to verify the impression which the whole subsequent history of Israel forces upon us as to the epoch-making character of that work. We have already hinted (p. 564 f.) at the general conception that we are led to form of the work of Moses. We should perhaps think of it most adequately as a combination of the priestly and prophetic functions, or as a form of prophecy which was not only the continuation of a work already begun, but the foundation of a long line of subsequent development. In any case the figure of Moses must exceed those of even the greatest of the later prophets in magnitude. By this it is not meant that the sum-total of the Mosaic revelation, so far as it can be reconstructed, is richer in contents than later stages of the revelation built upon it. The very fact that it is earlier and foundation-laying would exclude this. But the laying of foundations must always as such possess a significance that can never belong to any part, even the finest part, of the superstructure.

The Heb. people were therefore essentially right in their estimate of Moses; and if, on the score of criticism, we are compelled to make considerable deductions from the direct historical value of the narrative of the Pentateuch as it has come down to us, there are none to be made from the proportions of the dim but grand figure which looms behind it, or from the work which God accomplished through this in many ways most colossal of His human ministers. It is therefore not without reason that the Law lies at the base of the Jewish Canon, and that all the rest is subordinate to it.

There is a sense in which it is really subordinate, and another sense in which it is not. We may understand this from the way in which OT is treated in NT. We can see from many allusions, both in the Gospels and in the Epistles, that the historical importance of Moses was abundantly recognized both by our Lord and by His Apostles. It is not explicitly discussed and defined, because there was no necessity for such discussion. It was simply taken for granted as the axiom of every pious Jew. But the time had come, after all those centuries, for a new advance in the religious education of the world. And therefore it was that a greater even than Moses gave a new law from the hillside behind Capernaum. And it is not surprising that in this new law there should be elements that have their roots in the Prophets and Psalms even more distinctly than in the Books of Moses. Isaiah is the 'evangelical prophet' in a sense in which such a name could not be given to Moses; and yet the Greater Prophet of the future was to be like Moses, and not like Isaiah.

It must be allowed that, as compared with these two great divisions, the Law and the Prophets, the rest of the OT stands in a subordinate and supplemental relation. But, here again, the very idea of 'supplement' should save us from undue depreciation. A structure that admits of being supplemented is incomplete without its supplement. What a gap would be left in OT if we were to strike out the Psalms! The sense of what that gap would mean may bring home to us the value of the Psalter in the scheme of Revelation. And, in like manner, although the loss of the Wisdom Books might not be so acutely felt, it is one that we should be very loath to incur. And even the Song of Songs brings in a touch of human nature, like the flowering of a lily or a rose, that could ill be spared.

These outlying books may be described as examples of 'applied religion.' Some are higher in the species, and some are lower; some are nearer the great generative centres, and some are more remote; some are simpler and more rudimentary, and others more advanced. But they are all alike symptoms or outlets of those eruptive spiritual forces which lay at the heart of Israel as a nation, and were at once the evidence and the expression of its special mission from God.

(*b*) *Extension of the idea.*—So far we have spoken of the actual course of the growth of the Hebrew literature and of the special qualities inherent in it. These qualities are not identical

with those implied in the doctrinal conception of the Canon, but they are the ultimate facts which led up to that conception. They belong to the process of growth which, like such processes generally, is apt to be unequal in its different parts. The doctrinal conception of the Canon implies a completed process, and takes the shape of reflexion upon an accomplished fact.

We have been trying to analyze those elements in the original Scriptures which caused them to be regarded as sacred books. But the idea of sacredness in itself is not in the first instance cut and dried; it is progressive, and admits of degrees. It is this, and we see that it is this, so long as we regard it as an attribute of the living product. But when once the process of living growth has ceased, when the mind turns back upon the finished and stationary result, and sums up its reflexions in logical form, the closer touch with fact is apt to be lost, and the propositions which take its place become dogmatic and artificial. From the time that there were religious writings in Israel at all, they were regarded as sacred; but there is a certain amount of interval and inference between this instinctive reverence and the formulated definition of sanctity which by the time of Christ had won its way to general acceptance, at least in those Pharisaic circles which held control of the future. The inferences seemed to lie very near at hand; they were easy and natural: a book is sacred; it is the Word of God; does it not follow that it must be also perfect, incapable of error, absolutely binding in all its parts, a finished whole from which nothing could be subtracted and to which nothing could be added? These consequences did not really follow, but we cannot be surprised that they should have seemed to do so.

It is just here that the difference between older and newer views of the Bible comes in. The older view was in effect identical with that formulated by the Rabbis in the first century of our era. The newer view is not traditional, but aims at being scientific; it aims at correcting the current conception by a renewed comparison with the original facts. And the main effect of this renewed comparison is to make us stand by the old ideas of sacredness and inspiration, but at the same time disengage them from inferences wrongly though naturally deduced from them. To say that the Bible is sacred, and that the Spirit of God breathed in the men who wrote it, is not the same thing as to say that it is infallible, especially on points remote from its purpose as revelation. The one set of attributes can be verified, the other cannot.

(c) *Canonical and Apocryphal.*—The technical term used by the Rabbis, where we say that a book 'is canonical,' is that it 'defiles the hands.' That is only another way of saying that it is sacred; the person using it must be ceremonially purified before he can come in contact with other things. Until he has done this he is 'under a tabu,' and the contact with a sacred thing compels him to undergo a ceremony of purification. Our word 'canonical' is less expressive; it only means that the book is 'on the list,' *i.e.* the authorized list of the sacred volumes. That, at least, was the earliest Greek use; in Latin the word acquired a more active sense of authority.

The correlative term to 'canonical' is 'apocryphal,' which means, properly, 'hidden, or withdrawn from public use.' But this idea of 'hidden books' is ambiguous, and might be used in opposite senses according to the purpose of the hiding. A book might be 'hidden' because its contents were esoteric, or beyond the understanding of the vulgar; or it might be hidden because its contents were harmful. We can see that the two senses might meet, inasmuch as what was harmful for one might be helpful to another. But we may say broadly that the two senses succeeded each other. A number of books were composed which by their authors and in certain circles were highly valued because of their mysterious contents, intended only for the select few. But in course of time and in other circles they fell out of favour and were suppressed or withdrawn, for the converse reason, because they were thought to be pernicious for the many. The standard of judgment was that of Judaism; and the writings in question were in the first instance more particularly the Jewish Apocalypses (like the Book of Enoch, 4 Ezra, Apoc. of Baruch). In the century before, and in the century after, the Christian era, many works of this kind were composed, and at first they exercised considerable attraction. It is a mistake to suppose that in principle and from the outset there was any direct opposition to them on the part of the Rabbinical authorities. But at the time when the Jewish Canon was being definitely formed, they began to go out of favour, and in the 2nd cent. A.D. Judaism more and more turned its back upon them. The most scholarly among the Christian writers (Origen and Jerome), whose opinions in the end carried the day, were in touch with Judaism; and so it came about that what the Jews rejected the Christian Church ended by also rejecting, at least in the circles that had the greatest influence with the Reformers. And the word 'apocryphal,' which began by being used in a good sense, came to be used first in a neutral, and then in a bad one; esoteric writings were first prized, then tolerated, then excluded; the name which marked them as esoteric came to mark them as excluded; and all the excluded works were lumped together under the same title.

In the early ages of the Church the exclusion was only relative, and confined to a few learned men. Meantime the great body of the Church went on using freely the wider Alexandrian Canon, which admitted practically everything that was found edifying. The two standards went on side by side, with a certain amount of influence from the stricter upon that which was more lax. At the Reformation itself different shades of opinion prevailed in different quarters. The Reformed Churches were the most thoroughgoing; the Anglicans and Lutherans took up the intermediate position of Jerome; the Church of Rome does not endorse this, but permits a guarded use of the term 'deutero-canonical'—an invention of Sixtus Senensis in 1566.

LITERATURE.—Among the most recent and instructive works on the subject of this article are: Budde, *Gesch. d. althebr. Litteratur*, with Appendix on the Apocrypha and Pseudepigrapha by Bertholet (Leipzig, 1908) [Budde's *Kanon d. AT* (1900) is more restricted in scope]; Gunkel, 'Die isr. Literatur' (in *Kultur d. Gegenwart*, Berlin and Leipzig, 1906); Cornill, *Einleit. in d. AT* (from 1891; 6th ed., 1908); Hölscher, *Kanonisch u. Apokryph* (Leipzig, 1905). The comprehensive work ed. by Kautzsch, with the help of other scholars, *Die Heilige Schrift d. AT* (1894; 2nd ed. begun in 1908), and his *Apokryphen u. Pseudepigraphen* (1900), are of much utility. In English, we have a standard work in Driver's *Introd. to the Literature of OT* (from 1891); for the formation of the Canon, Ryle, *Canon of the OT* (1892); and a translation (by B. W. Bacon) of Wildeboer, *Origin of the Canon of the OT* (1895). Excellent editions of the Apocalyptic writings have been supplied by Charles; and Swete's *Introd. to the OT in Greek* (1900) is full of exact information as to the relation of the Heb. and Gr. Bibles. The present writer's Bampton Lectures on *Inspiration* (from 1893) may perhaps still be referred to. The reader will also naturally consult the Bible Dictionaries and Commentaries upon particular books (in the International series, the Westminster series, the Century Bible, etc.).

II. *HISTORY OF NT.*

In two points the history of NT resembles that of OT. Both proceeded in the first instance, directly or indirectly, from 'pneumatic' or inspired men, and yet both were written without any idea of founding a sacred book. These characteristics they have in common. In a single

instance (Apoc. of St. John) the attitude of the writer of the NT work is very like that of an OT prophet or apocalyptist; and he describes his book by the old name as a 'prophecy.' But in other respects the conditions under which the NT arose were different and peculiar. And before going further we must try to explain them.

How the Books of NT came to be written.—(1) *The Epistles.*—(i.) *Of St. Paul.*—The Life of Christ had been lived and ended. The fundamental *events* of the Christian Religion were all past and over. The Christian Church was launched on its career; the late comer Paul had joined the original Apostles, and had begun his new and adventurous work of planting churches in Gentile as well as in Jewish lands. This work had been going on for some years. A whole journey, taken up with preaching and church-founding, is recorded in the Acts (13^4-14^{28}), but has not left behind it any literature that is now extant. Another journey had begun and was some way advanced—it would be about the year A.D. 51—when a letter was written, followed by a second, which are both in our possession (1 and 2 Thess.). These two Epistles are the first beginnings of NT. It is highly probable that other letters had been written by St. Paul before them; occasions for letters would be as plentiful on the first journey as on the second, and St. Paul was evidently in the habit of using these occasions in a perfectly easy and natural way. But really the wonder is, not that such letters should have perished, but that the two of which we have just spoken and so many others after them should have survived. That they have done so is a measure of the strength of the impression which the personality of St. Paul made upon his contemporaries. It must have been felt from a very early date in his career by those among whom he moved, that these letters of his were no ordinary compositions, but that they well deserved to be prized and treasured. As correspondence, they began in the way natural to correspondence: the Apostle received news of his converts after he had left them; or he bethought himself of something that he wished to say but had not said; or his converts wrote to him, asking for guidance in the new relations upon which they had entered. These were just common incidents of daily life, though daily life involved in higher issues than those which occupy the mass of mankind. And St. Paul himself was no common man. It was not for nothing that his previous career should have been so eventful; it was not for nothing that he had first persecuted the faith which he came to preach; it was not for nothing that he had undergone the shock of his conversion, and that after it he had spent a prolonged time in solitude and reflexion; it was not for nothing that at Damascus, Jerusalem, and Antioch he had been at close quarters and in active discussion with leading spirits of the Christian society, apostles and prophets and teachers who were full of the Holy Ghost. He himself in marked degree was full of the Holy Ghost and of power (1 Co 2^4), and the effect of this was felt not only in the crises of action and life, but in the quieter moments in which he took the pen in hand. The consequence was that, even when the occasions which led to his writings were, or might seem to be, comparatively trivial, he never treated trivial things in a trivial way. Behind all that St. Paul wrote there was a vast momentum of character and spiritual experience and insight; and all this momentum came into play as soon as he put pen to paper. Small questions were settled on large principles; and these principles were laid down with exceptional clearness and force. And behind St. Paul's writing there was always the whole man; not intellect alone, or character alone, or spiritual experience alone, but the three things blended and fused together in an unique personality.

And then it has to be remembered that, when we speak of spiritual experience in the case of St. Paul, we are not speaking merely of subjective psychological processes; we are speaking of real and mighty influences proceeding from the living God. This opens out to us another side of the life of the Primitive Church. It is of course only in a very relative sense that we speak of even St. Paul as 'unique.' He in no sense created the extraordinary enthusiasm which, we can see, animated his churches. We can be sure that he did not let them fall below the level that prevailed elsewhere; the Epistles make it clear to us that they in no way fell below this level. But the movement that we find at work in St. Paul's Churches did not originate with them. It originated on what we call the Day of Pentecost, *i.e.* in near proximity to, and under the immediate influence of, the Resurrection. The fires were kindled in the Mother Church at Jerusalem, and in the first great colonies at Antioch and Damascus, before they spread to the sphere of the missionary labours of St. Paul. It was a contagion, like the effect of leaven, that passed from one individual Christian to another. The life of the Churches was as far as possible removed from a dead and humdrum existence. A great wave of enthusiasm, which was something more than enthusiasm, swept through them all; or rather, not a single wave but a succession of waves, a succession so sustained that it seemed to be continuous. St. Paul himself did but share in this. He knew perfectly well that whatever endowment he himself possessed was not self-generated; it was not at all that he lashed himself up into a state of excitement which required extraordinary expression. It was a force outside him that seized upon him and would not let him go. As in the case of the old prophets, the call when it once came to him was irresistible; it was useless to fight against it; as he himself says, a necessity was laid upon him (1 Co 9^{16}). The necessity came from the Spirit of Christ. We cannot do better than study the Epistles of St. Paul if we wish to understand what the working of the Spirit of Christ was. It is true that this working took some forms that to us at the present day are apt to seem uncouth (1 Co 12. 14); they were attended by physical phenomena that are apt to seem abnormal. It was to be expected that a great movement affecting masses of men should affect them in ways corresponding to the ideas current at the time. Many modern writers speak as though this were the sum of the whole matter, and as though we from the lofty platform of the discipline of science could afford to look down upon these humble phenomena. Humble they may be in themselves, but they cannot be taken by themselves; they are so far from being the sum of the whole matter that they are only as it were the rippling upon the surface of the real movement. Look, again we may say, at St. Paul's Epistles. How much is there in them of the speaking with tongues, or even of the working of miracles, such as the healing of the sick? These things certainly are implied, but they are behind the scenes; and the Epistles of St. Paul have enough to occupy us that is not behind the scenes. He himself put these phenomena into their right place, though he did not under-value them. They were just a single, and very partial, expression of that mighty force which possessed his whole soul and being. If we look at the Epistles with insight and discrimination and with a sense of the true proportions of things, we shall have no difficulty

in seeing where this force really breaks out in the main stream of its volcanic working. There are certain Epistles that we instinctively call the 'Great Epistles'; we call them so because the inspiration of which we are speaking is so visibly and unmistakably strong in them. But to form an adequate estimate, we must not confine ourselves to just so much as we see; we must take the evidence which they supply as to that which we do not see. It is to some extent a matter of accident—of Divinely-guided accident perhaps, but of that which we are in the habit of calling accident—what kind of subject-matter the inspiration has to deal with; but the same moving force is at work in small things as well as great. For instance, it would be natural enough to say that there was less of inspiration in 1 Co 5–8. 12. 14. 16, or even in 9–11, than there is in chs. 1–4. 13. 15; but it is not exactly that there is less inspiration; it is the same inspiration at work all the time; but it is this same inspiration dealing with lower things.

It is convenient to use the old-fashioned word 'inspiration.' It may well be questioned whether there is any other that better expresses the facts. We mean by it the evidence of indwelling Deity in man. We no longer suppose that this indwelling Deity imparts infallibility to every chance utterance relating to external nature or man. Really, from the modern point of view, it is hardly infallibility of any sort for which we are looking. The Divine impulse and the human expression are so inextricably mixed together that we can rarely, if ever, arrive at that which could be called infallible in the strict sense. But, after all, the idea of infallibility is only a notion of the head; and these head-notions have come to be at a discount. So, although the search for infallibility is weaker than it was, we should by no means say the same of the search for the Divine. It is the presence of this that we look for in the Epistles of St. Paul, and that we find in such abundant measure. And even the modern man, when he has found it, goes on his way rejoicing, like one that findeth goodly pearls.

It may be objected that this view of inspiration is vague in comparison with the old idea. That is just its merit. The old idea was definite enough, but it did not correspond with the facts. The new idea leaves room for a width and depth of meaning that is not, all of it, expressible in language. We can see something of the working of inspiration, and we can see something of its results. In the case of St. Paul these appear in his singular wisdom in the management of men, in his strong and clear grasp of a new type of character, in his deep insight into the attributes and will of God and His providential dealings with mankind.

The letters of St. Paul, as we have seen, from an early date made a great impression on those to whom they were addressed; and this impression soon spread to enemies as well as friends (2 Co 10^{10}). This encouraged the Apostle to make a more extended use of the letter form as a vehicle for instruction. Some of his letters, like the Epp. to Romans and Ephesians, expand into regular treatises. They cover a large area of the wide field of Christian teaching. And yet they are still at bottom essentially letters (Deissmann, *Licht vom Osten*, pp. 165–167); in each case the Apostle has definite recipients before his mind. If this is less marked in the case of Eph. than elsewhere, the reason is that it was in the first instance a circular letter addressed to several Churches at once.

Of late years attention has been called (especially by Deissmann) to the fact that there existed in antiquity, and especially about the Christian era, two distinct types of letters: the ordinary letter, arising naturally out of given conditions and addressed to definite persons, and the 'epistle,' which was a more formal composition intended for a wider public, though for literary reasons couched in the form of an open letter. The consciousness of the existence of this species of composition may have had some slight influence upon St. Paul, and still more perhaps upon some other Christian leaders; but the weightier contents of some of the Epp. grew spontaneously out of the circumstances of the case, and were a natural development of his own work by an original and unconventional mind.

We have assumed above the genuineness of all the Epistles that bear the name of St. Paul. This is in accordance with the deliberate opinion of the present writer. At the same time, it would not be right to disguise the fact that the genuineness of some at least of the Epistles is questioned, and that it does in fact stand upon a different footing in some cases and in others. We may really mark off descending grades of clearness and certainty. Putting aside the extravagant views of certain Swiss and Dutch critics, who would reject the whole body of Pauline Epp., but whose doubts have met with no support from the best authorities, and may now be regarded as definitely silenced, there would be a first class of seven Epp. which may be set aside as practically certain (1 Thess., Rom., Gal., 1 and 2 Cor., Phil., Philem.). To these may safely be added 2 Thess. and Col., which are indeed questioned, but on very insufficient grounds. There is more reason, but still (as it seems to us) insufficient reason, for hesitation as to Eph.; and perhaps a little more again as to the three so-called Pastoral Epp., 1 and 2 Tim., Titus.

(ii.) *Other Epistles.*—The Epistles of St. Paul are the typical and primary example of the epistolary literature of NT. But a further group of writings of a similar character has come down to us: Ep. to Hebrews as an outlying member of the Pauline collection, not by St. Paul himself, but by a writer of a kindred spirit, a near ally or (less probably) a direct disciple; and besides this the seven so-called 'Catholic Epistles.' All these writings follow as it were in the wake of St. Paul. He gave the impulse which led to their composition, and to a considerable extent determined their form. It is possible enough that, even though St. Paul had never lived or had never written, the force of circumstances would have brought into being a *genus scribendi* corresponding more or less to our present Epistles; but the dominating personality of the Apostle of the Gentiles, and the reputation which his letters so quickly gained (2 Co 10^{10}), gave both a stimulus and a model for imitation. The Ep. to Hebrews is indeed a letter (13^{22-25}), but it partakes more of the character of another class of writing that we have not yet mentioned, the philosophical *diatribe* (Deissmann, *op. cit.* p. 171). This is rightly described as the first work of Christian literature in the technical sense. St. Paul was not naturally a writer, but a man of thought and action who was driven into writing; the author of Ep. to Hebrews was a practised stylist, we may believe with some literary experience behind him, who instinctively cast his ideas and exhortations into a rhetorical form. Something of the same kind, though with less highly developed rhetoric, attaches to the greater Catholic Epistles—1 Pet., 1 Jn., James. We may see this at once from the wide and vague address of the two that have addresses: 1 Pet. is destined for 'the elect who are sojourners of the Dispersion' in the more northerly provinces of Asia Minor; James 'to the twelve tribes which are of the Dispersion.' Perhaps in the first case a few copies may have been sent to some of the leading churches, but in the second case the address would amount to little more than a formula for publication; we may suppose that copies would be given to strangers who happened to be in the neighbourhood of the Apostle, and that would be all. 1 Jn. has no

epistolary matter or any indication that it is intended for a particular class of readers, beyond the use of the second pers. plur.; and so it comes nearer still to the *diatribe*. When this is said, it is not intended that the writer deliberately adopted the *diatribe* form, but only that the existence of this class of literature helped unconsciously to shape the expression of his ideas. 2 and 3 Jn. are genuine letters on a small scale. 2 Pet. and Jude are both rather artificial compositions, which appear to have taken shape at no great distance from each other.

1 Pet. is not only modelled in general outline upon the Pauline Epp., but it also borrows directly from some of these (*e.g.* Rom., Eph.) in parts of its substance; and James may be said to have been produced by echoes of the Pauline teaching. But it by no means follows that this amount of derivativeness prevents the Epp. from possessing a high spiritual value. James supplies a judicious corrective for exaggerations of Pauline doctrine, and its moral teaching is at once elevated, simple, and sincere. 1 Pet. deals with profounder problems in a profounder spirit, and is at the same time a good example of the principles on which the Church was administered by its leaders. We must reckon with the possibility that something of the form of this Epistle is due to Silvanus, whom the Apostle used as his amanuensis (cf. Milligan, *Thess.* p. 125 f.). 1 Jn. in like manner is a fit pendant to the Fourth Gospel, and comes with all the impressive weight of the personality of its author. The two smaller Epp., while they reflect definite local conditions, are also evidently the work of one accustomed to wield power, and accustomed to take thought for the spiritual welfare of those whom he governs.

Ep. to Heb. is anonymous: the question both as to its authorship and as to the community to which it was addressed is intricate and difficult to bring to a clear conclusion; there is no agreement, and hardly even a tendency to agreement, at the present time. Yet the attestation of the Ep. is very early (Clem. Rom.); and its value and interpretation are not much affected by the points in dispute. There is equally early proof of the existence of Ep. of James; and 1 Pet. and 1 Jn. are also very well attested. 2 and 3 Jn. really do not need attestation any more than Philem., and they go with 1 Jn. as Philem. goes with Col. 2 Pet. appears to belong to the group of pseudepigraphic writings that bear the name of St. Peter (along with Gosp., Apoc., and Preaching of Pet.). But that does not prevent it from having some good matter (esp. ch. 1 and 3^{3-18}). Beyond some impressiveness of common Christian background there is not much that is distinctive in Jude, and the circumstances of its origin must remain vague. There are no better candidates than the traditional authors for the ownership of 1 Pet., Ja., 1, 2, 3 Jn. The last group at least may be ascribed with confidence to the Ephesian Presbyter John, whether or not he is to be identified with the Apostle the son of Zebedee. There are, however, some few questions which arise as to 1 Pet. and Ja. which with our present knowledge we are not in a position to answer.

Literature.—As to Hebrews, the main bifurcation of views is between Barnabas (Tert. and perhaps Roman tradition) as author and some limited congregation in Rome as address, and authorship mediately Pauline (through Lk. or Clement [Clem. Alex., Orig.]) and some community in Palestine. Apollos was a guess of Luther's. Novel and interesting suggestions have been made by Harnack, *ZNTW* (1900), and Ramsay, *Luke the Physician* (1908), p. 301 ff. The most thorough and satisfactory discussion of 1 and 2 Pet. is by F. H. Chase in Hastings' *DB* iii. 779; but for the possible share of Silvanus in the composition of the first Ep., see G. Milligan, *Thess.* (1908) p. 125 f.

(2) *The Gospels and Acts.*—We have seen in what an incidental and spontaneous manner the epistolary portion of NT arose and grew to considerable dimensions. The Gospels are a class of writings peculiar to Christianity. To understand them we must consider how they too arose. For the first years after the Lord's Resurrection there was no need or demand for writings of any kind. All this time the Church was living in the expectation of its Master's speedy return. It was an attitude of hope, looking upwards for the sign of the Son of Man in the heavens. Only by degrees did the intenser hope begin to subside. Meantime there can be little doubt that individual Christians, the disciples in Galilee and Jerusalem with the women and the relatives of the Lord, would compare notes with each other, with greater or less activity of intercourse according to the degree in which they were thrown together. But very few of the disciples will have had any sort of literary habits, and there would still be no idea of writing. If we go, not by any external chronology, but by the quality and character of what was written, we should probably not be wrong if we were to say that the first two chapters of St. Luke are the oldest evangelical fragment or document of NT. They are in any case the most archaic thing in the whole volume. In these chapters it might be said that Christianity was not yet out of its Jewish swaddling-clothes; the *Benedictus*, for example, is composed entirely from the standpoint of the Jewish expectation and not of the Christian fulfilment. But whoever first set them down in writing,—and this very archaic character compels us to believe that they were written,—they were in any case not at once published. They were written to satisfy the interest of a small and private circle; and they must for a number of years have been confined to that circle. Not until St. Luke came across them were they in the way towards anything like publication.

The first two chapters of St. Matthew's Gospel seem to have been in a similar position. They too appear to represent the tradition of a small circle, for a considerable time kept to itself. It is natural to think of this tradition as further removed from the facts than in the case of St. Luke. There are not the same guarantees of early date, and there is more reason to suspect the influence on the narrative of parallel situations in OT. At the same time we must not fail to notice the convergence of these two traditions, otherwise so independent, upon the Virgin Birth and the Birth at Bethlehem.

And yet these opening chapters of the two Gospels stand very much by themselves. They are altogether apart from the main stream of tradition current in the Churches. This was concerned, as we might naturally expect it to be concerned, with that part of our Lord's career which was lived directly under the public eye, and of which there were a number of living witnesses. Yet these witnesses, for reasons which have been explained, did not at first begin by setting down their recollections in writing. They doubtless made use of them in their own preaching, and they also handed them on to others who would utilize them in the same way. But the motive at work at first was not what we should call historical or biographical. It was exactly expressed by the peculiar word 'Gospel.' This was practically a coinage of the first Christians, sanctioned by, or even perhaps originating with, our Lord Himself, to express the message of hope and salvation addressed to a disheartened and despairing world. The ground of hope and salvation centred mainly in the Life and Death and Resurrection of Jesus Christ Himself. And therefore the earliest preaching was in its main contents a preaching of these things, in part a narration and description of them as facts, and in part an enlarging upon their profound significance in the spiritual sphere. This second aspect of 'the Gospel' is what meets us most frequently in the Epistles of St. Paul. But the other aspect is there implied if not expressed. We have specimens of it in important passages like 1 Co 11^{23-26} 15^{1-8}. Such narratives must have entered largely into the παραδόσεις of which we have repeated mention (1 Co $11^{2.\ 23}$ 2 Th 2^{15} 3^{6}). But in its urgent expectation of the Second Coming the Church did not at first

lay great stress on these historical facts. It presupposed them always, and it was fully assured of them as facts; but it was so well assured of them that it did not find it necessary to be constantly reminding itself about them. Its treasure was, where its heart was, in the heavens; it was more intent upon the future than upon the past, even such a past.

The impulse to the setting forth of the historical side of the Gospel came through the work of missions. On this side it soon proved necessary to supplement the oral teaching of St. Paul and the other missionaries. Especially was this the case in the newly-founded Gentile communities. These, we must remember, had to be built up from the very first. They had a great many elementary lessons to learn. Even the Jews, with the OT in their hands, had much to learn. They had to take in and to assimilate all the new teaching by which Christianity was distinguished from Judaism. The earliest Evangelical document of which we have any trace (except perhaps Lk 1. 2)—the earliest Evangelical document that was in any strict sense a possession of the whole Church—was the little book, corresponding to the common matter of Mt., Lk. (see p. 576 below), which scholars are now in the habit of calling Q, and which used (as the present writer believes, rightly) to be identified with the Matthæan *Logia* mentioned by Papias (Eus. *HE* iii. 39). We describe this work as intended for the whole Church, because there was certainly no circumscribing line beyond which it was not intended to travel, though the writer probably had in his mind Palestine and the Nearer East, *i.e.* that part of the East that was nearer to himself. The leading purpose of this little book appears to have been to set before its readers (the new converts in the different Churches) some account of the Christian ideal, the character and mode of life expected of them as Christians. It was felt that this could be best done by collecting together a number of typical sayings and discourses—*i.e.* shorter and longer sayings—of Christ. There was no idea of writing a biography, and not even in this case of composing a 'Gospel' (or full statement of the redeeming acts of Christ), but only a brief exemplar to set before the eyes and minds of converts.

Valuable as this was, it was sure not to satisfy for long the needs of Christians. It contained only a small part of the Gospel, and what they wanted was the whole Gospel. As time went on, and the expectation of Christ's Second Coming became weaker, Christians were thrown back upon themselves. They felt that they had time to reflect, and they began to reflect, upon the grounds of the faith that was in them. They had had these grounds 'placarded before their eyes' (Gal 3^1) by a number of preachers, including the greatest. But they were, so to speak, 'written on water.' They made their impression, but they were soon forgotten, and there was no guarantee of their permanence. It was the consideration of this state of things which impelled the Christians at Rome who surrounded St. Peter in the last days before his death to apply to his secretary, St. Mark, to rescue from oblivion the substance of the teaching they had had from him. St. Mark complied with their request, taking this teaching of St. Peter's as the nucleus of his work, but expanding it from materials which came to his knowledge in other ways. So arose the first complete Gospel.

When once this Gospel was given to the world, nothing could be more natural than that it should supply a pattern for others. It met (as we say) 'a felt want'; and from that time onwards St. Mark's Gospel was taken as at once a pattern and a basis of similar compositions. The Gospel that we know as St. Matthew's was just a combination of the substance of St. Mark's Gospel with Q and not a large amount of other material added by the editor. The portion derived from Q was so important—extending probably some way beyond the common matter of Mt. and Lk.—that it soon came quite to supersede the separate circulation of Q; the smaller work died out, and the larger took over its name; it passed as the work of St. Matthew (*a potiori parte*), though the framework of it was derived from St. Mark. In like manner, our present Gospel of St. Luke is also a combination of St. Mark with Q, but with a larger proportion of added matter from some further source, or sources, to which St. Luke alone had access, and to which he seems to have attached a special value.

The Second Gospel, which was the first of the three in order of time, was a sketch that we may call biographical (though it did not aim, and could not have aimed, because of the scantiness of the material, at the completeness of a modern biography). Still it took a narrative form; and its leading motive was reverence for the historical Person of Christ, and the desire to promote a like feeling of reverence and faith in others. Like St. Mark's Gospel, St. Matthew's (with the qualification mentioned above) was addressed to the Church at large. St. Luke's, on the other hand, was written at least in the first instance for the use of a particular individual, who appears to have stood to the writer in what we should call the relation of a 'patron' (Lk $1^{3t.}$). The success of this first volume, in the accomplishment of its purpose, encouraged the Evangelist to add to it another, which lies before us under the title of 'The Acts of the Apostles.' It is still addressed to the same Theophilus, and is written on the same historical lines as the Gospel. The Acts, however, can hardly have been included in the writer's original plan; because its opening paragraph differs so considerably from the conclusion of the Gospel (contrast, *e.g.*, Ac 1^3 with Lk 24^{50}) that it seems safe to infer that the second volume was of the nature of an afterthought. Whether, by the time that he came to the end of this second volume, the author had conceived the idea of producing a complete 'trilogy' is perhaps slightly suggested by the way in which the volume closes, but must remain an open question.

The Fourth Gospel is generally held to stand rather by itself. It is without doubt the latest of the Gospels, and is written with a knowledge of the other three. At the same time it is not, like the First and Third, a compilation from materials already existing. On the view taken in this article, it is a retrospect by a writer of commanding position and authority, presupposing what has been already done, but adding to it from the stores of his own experience and reflexion. In some points—none of a fundamental character—it corrects the work of predecessors; on other points it supplements their statements; but, most of all, it reinforces and deepens the impression which they had left on the most central topic of Christian teaching. It is a mistake to suppose that the Fourth Gospel is essentially different in character and purpose from the other three. When St. Mark heads his work, 'The beginning of the gospel of Jesus Christ, the Son of God,' he is virtually saying the same thing as when St. John says, 'These things (or signs) are written that ye may believe that Jesus is the Christ, the Son of God; and that believing ye may have life in his name' (Jn 20^{31}). This declaration of his purpose by St. John is only an emphatic expansion of the claim that his work too is a 'Gospel,' *i.e.* a message and assurance from above of life and salvation through Jesus Christ. It is not a mere biography, like the

ordinary secular biographies; it does not aim at any completeness as a record of events or teaching. More than any of his fellows, the Fourth Evangelist concentrates himself upon the proof that Jesus Christ was all that Christians supposed Him to be. Incidentally he sets right some few things that had been 'forgotten or misdelivered'; he fills up some gaps, like the great gap which omitted all or nearly all that had been done in Judæa. But the great thing that the Fourth Evangelist did and aimed at doing was to re-affirm, with the consciousness of first-hand knowledge and conviction, the faith of the Church in its Lord and Master.

In asserting thus much of the Fourth Gospel, we do not assert that its author was raised above all possibilities of human error; we do not even assert that this very concentration of aim may not have had some prejudicial effect upon his narrative, considered simply as a narrative. What we do contend for is that the conviction to which he gives expression is the honest and first-hand conviction of one who had unique opportunities of basing his belief on fact.

The views implied above as to the origin and character of the first three or 'Synoptic' Gospels are substantially those which are held at the present time by a majority of scholars. It is very generally agreed that our present First and Third Gospels rest upon previously existing documents. One of these documents is neither more nor less than our present Gospel of St. Mark. A second may be approximately reconstructed from the common matter of St. Matthew and St. Luke which is not found in St. Mark, with the addition perhaps of some portions of St. Matthew to which there are no parallels in St. Luke, the latter writer having been compelled by lack of space to omit them. It is conceivable, though less probable, that there may be a few sections peculiar to St. Luke which also originally belonged to this document. But, in our opinion, this peculiar matter is better referred to some special source or sources to which St. Luke alone had access. The present writer fully believes that the two important extracts from the work of Papias preserved by Eusebius relate, the one to our extant Gospel of St. Mark, and the other to the second document disclosed by criticism which in the extract is referred to the Apostle St. Matthew. He believes that the authority quoted for these statements is none other than the writer of the Fourth Gospel, the John who played such a leading part at Ephesus towards the end of the 1st century A.D. He would observe that the statements made bear a great stamp of verisimilitude, just because they are so little obvious and not at all such as could be inferred from a superficial study of the Gospels. The statement about St. Mark in particular points to criticisms upon that Gospel (especially as to its want of completeness and chronological order) that we can understand being made at an early stage in the history of the Gospel, and by no means so well later. It is interesting to note the calm matter-of-fact way in which the Fourth Evangelist (if it were really he) speaks of his predecessors' work; and we believe that it throws a welcome light upon the composition of his own Gospel. The tradition, for which we are ultimately indebted to Clement of Alexandria (Eus. *HE* vi. 14), that the Fourth Evangelist, while he was satisfied with the treatment of the more external facts in the other Gospels, himself sat down to compose a 'spiritual gospel,' seems to us to describe the real course of things better than any of the conjectures of modern scholars. It is to us rather an open question whether John of Ephesus is to be identified with John the son of Zebedee, though we lean to the probability that he was. In any case we have little doubt that he had been a personal disciple and follower of our Lord, though a youthful one.

(3) *The Apocalypse of St. John and other Writings.*—Only one more work remains to be considered of those included in our present Canon. This is the Apocalypse of St. John, which holds a similar place in NT to that which the Book of Daniel holds in OT. We have already pointed out that the author throughout describes his own book as 'a prophecy,' in the same sense in which that word is used in OT. It corresponds, however, rather to the later type of prophecy as it is seen in the apocalypses, than to that of the older prophets. The writer is not less certain than any of the older prophets that what he writes was put into his mind by God. We shall try to estimate the significance of this later; but in the meantime it should be noted that, in spite of this confident claim, it was not until the fourth century that this book definitely secured its place in the Canon.

The formation of the Canon, and discrimination of the books which were, or were not, to be included in it belong rather to the next article It will be seen there how, first, the Epistles of St. Paul, and then the Gospels, came to be collected; how they were then read for edification in the churches, and how by degrees they acquired a character for sanctity which ended by placing them upon the same footing with OT. There was not at first a clear dividing line at which the books belonging to the NT were complete, and beyond which no others could be admitted. The fixing of any such line was a retrospective act of the Church, reflecting upon the books which lay before it. And the process by which it did this was spread over a long time, and was hardly matured until the end of the 4th century—if it can even then be said to have been matured, when the process by which the ultimate decision was arrived at was rather one of ripening instinct and the natural gravitation of events than anything like the application of exhaustive criticism.

A sharp line does not separate the writers who fall just within the Canon from those who fall just outside it. As the writer of Wisdom and the son of Sirach, while they draw a distinction between their own writings and the older Scriptures, yet appear to claim for themselves a lower degree of inspiration (see the writer's *Bampton Lectures*, pp. 259–262), so also can we trace in Clement of Rome and Ignatius something at once of the same kind of distinction and the same kind of claim. And just as we found the MSS of the LXX adding freely to the Canonical Books whatever seemed to them to make for edification, so also do the oldest MSS of NT add works that properly belong to the sub-Apostolic age to those which are products of the Apostolic. And yet, as we have seen the consciousness grow up that the prophetic inspiration gradually exhausted itself, so also we observe a tendency to locate the higher activity of the Holy Spirit within a definite period, which is more and more identified with that of the Apostles. And the very claim on the part of the Montanists to possess within their own body a continued operation of the old gifts only led, by way of reaction, to a stronger delimitation of the privileged area and a clearer rejection of all that fell outside it. It took something like a century of gradual but imperceptible development to harden the conception of the NT Canon; and then it took about two centuries more to determine finally the number of books that were to be included in it.

III. *THE PERMANENT SIGNIFICANCE OF THE CANON OF OT AND NT.*

By the end of the 4th cent., broadly speaking, the Christian Church was in possession of a complete Bible. Even then we must not speak too absolutely, because the Syriac Canon was not yet quite made up. For an œcumenical sanction of the existing list we must wait for the Quinisextine Council of A.D. 692. But for by far the greater part of Christendom the formation of the Canon was practically finished by about A.D. 400. From that time until the present generation the traditional conception of the Canon has been in possession of the field. It is only as part of the movement that is now commonly called Modernism that it has been seriously called in question. We shall give a typical example of the way in which it is now being challenged.

1. **The Modernist challenge.**—An able member of the advanced school, now deceased, in a pamphlet on the *Work and Method of so-called New Testament Theology*, cut at the root of the current conception in the following uncompromising terms:—

'If the New Testament writings arose in the course of a particular history and are the witnesses and documents of that history, then the question at once presents itself to us: Why should our science (*i.e.* the science of NT Theology) deal

precisely with these writings and only with these? The answer is: because they alone belong to the Canon. But that answer is not satisfactory. When once we strike out the doctrine of inspiration, the dogmatic conception of the Canon can no longer be maintained.

No New Testament writing was born with the predicate "canonical." The proposition "A writing is canonical" only means in the first instance that *after the fact* it was *declared* to be by the leading authorities of the Church between the second and fourth centuries—perhaps after all kinds of vacillation in their decision. On this subject the history of the Canon is sufficiently instructive.

Whoever then still regards the conception of the Canon as valid thereby submits to the authority of the bishops and theologians of those centuries. Whoever does not acknowledge that authority in other matters—and no evangelical theologian does acknowledge it—is only acting logically when he also calls it in question here.'

It is fair to the writer to add a slight concession which he goes on to make:

'No one is therefore called upon to deny that the ancient Church, in its New Testament, brought together *on the whole* that which was from a religious point of view the most valuable, and *on the whole* that which was also the oldest and therefore in a documentary sense the most important not only of the literature that is known to us, but of all that was in circulation at the time, and that it formed a collection that is deserving of all praise. But this verdict includes the admission that the boundary lines between the canonical and the nearest extra-canonical literature are at all points altogether fluctuating.'

In order to follow up the consequences drawn from these premisses, it is worth while to quote one more paragraph:

'If, then, we are not to embrace the New Testament writings under the point of view of "an experience after the fact," which has nothing to do with their original character, they must not be considered as canonical, but only as writings that appertain to primitive Christianity. . . . The boundary line for the subject-matter of our science should be drawn at the point where a real break begins to appear in the literature. The standard for this is naturally not to be sought in religious value.'*

This is trenchant and clear enough in all conscience. The writer is certainly right in basing his argument upon the abandonment of the idea of Inspiration. If that idea is thrown over, the consequences as he states them really follow. But ought we to throw over that idea?

Here again it is fair to observe that, when the writer speaks of 'striking out the idea of inspiration,' he probably means the full dogmatic conception of verbal inerrancy as it was asserted or reasserted in the 16th century. But we have already tried to show (p. 571[a]) that this was from the first an extension, and an undue extension, of the original idea. The Christian is not called upon to go beyond this idea; and, by adhering to it, he keeps within the range of what is strictly verifiable.

2. The reply.—It is true that no book either of the New Testament or of the Old 'was born with the predicate "canonical."' But we are prepared to maintain that all the books both of OT and NT, though no doubt with very considerable differences of degree, were born with the qualities which caused them to be labelled 'canonical'; in other words, with the marks that are summed up under the name of Inspiration. In sketching the history of the two Testaments, we have tried to indicate what those marks are. We have tried to show how at each point in the history there was a certain character impressed upon the literature which in due course came to be recognized as justifying its inclusion within the conception of a Sacred Book. It may be well for us to go back upon this character, and to consider it no longer—or, no longer primarily—in connexion with its place in the history, but with reference to its permanent validity among the body of Christian ideas and Christian doctrines.

(1) *The human aspect of Inspiration.*—If we were to try to sum up in a single word the common property which runs through the whole Bible, and which, broadly speaking, may be said to distinguish it from other literature of the kind, we might say that it consists in the peculiar energy and intensity of the *God-consciousness* apparent in the writers. A general term like this will perhaps best embrace the different modes and degrees in which this consciousness manifests itself. It is true that in some of the books there is such a shading-away of degree that it may be questioned whether those particular books are rightly included in the Canon, just as there are so many analogous phenomena in some books outside the Canon as to raise a doubt whether they are rightly excluded from it. It cannot be claimed that the judgment of the Jewish and Christian Churches is infallible. All we can say is that it is sufficiently near for practical purposes. On the whole, posterity has confirmed the original verdict within those limits of approximation which usually obtain in human affairs. For the purpose of our inquiry we may take the Canon as it stands.

From the question of degree we pass to the question of different kinds or modes. We may distinguish the inspiration, or God-consciousness, of the prophet, of the lawgiver, of the psalmist, of the wise man, of the apostle or prophet of NT. Of all these, as we have said, that of the prophet is perhaps the most characteristic. We call it so, not because it is essentially higher than other kinds, but chiefly because it is more easily recognized and described. The God-consciousness of a lawgiver like Moses must have been quite as strong and quite as penetrating as that of an Isaiah; but the difference is that, whereas in the case of Isaiah we can see the mind of the prophet at work behind the word in which the influence of the Holy Spirit has found enduring expression, in the case of Moses anything so clear and definite as this eludes our search, and we have to be content with inferences backwards from analogies for which we have more contemporary attestation. We are more fortunately situated again in the case of the NT apostles. There once more we can see the mind of the writer at work, and form some conception of the intensity with which it works. The chief drawback in the case of Psalms or Wisdom Books is the anonymity of the writers, which makes the evidence they supply comparatively fragmentary and limited. And yet some of the Psalms can hardly be surpassed for depth and intimacy of communion with God.

The characteristic feature in the writing prophets is the unwavering confidence with which they assume their own commission from God. When they speak, the language they use is as though God Himself were speaking through them. We repeat that even this language does not proceed from a higher level of spiritual experience than that of St. Paul. No words either of OT or of NT enter into competition with those which we call 'words of the Lord.' We only treat the prophetic utterances as typical and as lending themselves more easily to analysis and comparison.

Looking at them in this sense, we observe that they do in fact stand alone in religious literature. For the assurance with which they are spoken, for the coherence and continuity which they present spread over a succession of centuries, for beneficence of effect upon the religious history of a people, for the impressiveness which they still retain as we look back upon them, they are practically unique.

To put all this at its lowest term, to say only that the Prophetic Books of OT were books composed under these psychological conditions, is still to claim that they are *sui generis*. The Christian looks back upon them still as he looks back on no other books besides.

Doubtless the view which the prophets took of their own calling has in it an element belonging to

* W. Wrede, *Über Aufgabe u. Methode d. sog. neutest. Theologie* (Göttingen, 1897), p. 11 f.

the time at which they spoke and wrote. Even so, that element does in some ways only strengthen their claim. It is very doubtful whether the experience of modern times will ever supply anew examples of such complete concentration of thought and aim upon the things of religion. We must allow for this utter concentration as an advantage which they possessed and which is not likely to be possessed again.

Of all the books which have attempted a psychological analysis of the prophetic consciousness, the present writer does not know one that grapples with the ultimate problem more directly than A. B. Davidson's *Old Testament Prophecy* (Edinburgh, 1903). Dr. Davidson asks some searching questions:

'When God spake to a prophet, was the latter conscious of two things, namely, of the fact that God was speaking, and also of what He spake? When the word of God came to him, did its being the word of God manifest itself to him in some distinctive manner, apart altogether from the contents? Or rather, was not the feeling of the prophet in all probability something like our own,—that double kind of feeling which we express by saying that any opinion we have is *God's truth*? . . . The same question would arise as to the kind of pressure under which the prophet felt himself to be. Did the kind of feeling he had of impulse to speak differ from the feeling men still have of impulse to utter any pressing truth that lies upon them, such men as fervent, religious teachers, or lofty, earnest statesmen? And when truth suddenly dawned upon the prophet's mind, which formerly he strove unsuccessfully to reach by means of reflexion, did the feeling he had at such a moment differ from the feel-' ig men still have when, oftentimes in peculiarly spontaneous frames of mind, difficulties are broken up, and problems solved almost involuntarily, which before resisted all conscious and direct efforts of the mind?' (*op. cit.* p. 111 f.).

We may pause for a moment to remark that, when a modern writer or speaker in order to strengthen an asseveration describes it as 'God's truth,' he is probably influenced by the traditional estimate of the Bible, and means that what he is saying is as true as if it were written in the Bible; in other words, it corresponds to the highest conception that he has of truth.

There is no reason to deprecate these modern analogies. In the effort to enter into the mental state of the prophets, we can but start from the nearest experience of our own; and the cases described are the nearest to which we have access. They bear the same kind of relation to our modern habits of thought as the language used by the prophets bears to theirs. We have seen that there was an element in their presuppositions which is wanting or much feebler in our own. That element really fits into their place in history; it is part and parcel of their whole conception of God and the world, and in particular of the relation of the Divine call to themselves. The main question that we have still to ask is, how far this conception of theirs was in agreement with the facts. But that carries us on to the next subject of our inquiry, the estimate of the prophetic message (as typical of the whole Biblical revelation) when it is seen from the side of God rather than of man.

(2) *The Divine aspect of Inspiration.*—The question that we now proceed to ask amounts to saying, Were the prophets, and the other Biblical writers represented by them, justified in the claim they make to speak for God, to use the kind of language that naturally issues from special communion with Him? Granting that this language was from their point of view wholly sincere, does it appear to be warranted when it is regarded from the other side—the side of God's providential ordering of the world and of history? We shall apply two criteria: (*a*) Is it a credible mode of statement that God has held this kind of communication with man? and (*b*) Does the Bible in particular commend itself as embodying such communication? Taking as a concise expression of the Biblical theory the famous passage He 1$^{1f.}$ 'God, having of old time spoken unto the fathers in the prophets by divers portions and in divers manners, hath at the end of these days spoken unto us in his Son,' can that still be accepted as a reasonable description from the double point of view that has just been stated?

(*a*) The question is whether, allowing for the naive and simple language of primitive times, the idea of God speaking to man and through man still expresses a substantial truth. Given a spiritual interpretation of the universe, assuming that behind the world of phenomena there is a supreme Spirit which has brought it into being, there has been a wide-spread belief that this Spirit desires to be known, and has caused itself to be known, by the most intelligent of its own creatures. It is a modern expression of this belief when the poet says:

'Speak to Him thou for He hears, and Spirit with spirit can meet—
Closer is He than breathing, and nearer than hands and feet.'

The whole idea of Spirit 'speaking to' spirit is, of course, metaphor; the operations of spirit cannot be described otherwise. But if we think of the spirit of man as personal, and if we are obliged to invest the Spirit of God with personal attributes, then it must be allowed that the wide-spread belief to which we have referred harmonizes with the rest of our conception of the relation of God to man.

But if we are to suppose that God has 'spoken to' man, how should He speak? How should Spirit speak to spirit? Surely it is very credible that the method of communication chosen might well be through the influence of the higher Spirit upon the lower, not in equal degree upon all individuals but pre-eminently upon some. That is the way in which the Bible appears to describe the relation of God to man; and, simple as the language is, it seems very difficult to improve upon it. Science does not as yet seem capable of describing the facts of the case in more appropriate terms.

(*b*) But then we have also to ask whether the Biblical revelation, as we call it, is of such a kind as to approve itself to us as rational beings. As the course of it is now unrolled before us according to critical views (so far as they can be justified) of OT and NT history, there certainly does seem to be a broad correspondence between this department and other departments of God's dealings with His creatures. The history of the inorganic universe presents what we call a process of evolution; the history of life on the earth up to the advent of man is also expressed in terms of evolution; man himself as a social being has developed in accordance with ascertainable laws; and when we come to consider him as a religious being, we find again that his career has been on the whole one of gradual and progressive advance. At the present stage of our knowledge and apprehension all this appears to be homogeneous and consistent. The different parts of the Divine economy tell the same kind of story. The Christian faith, as its data lie before us in the Bible, seems, naturally and without forcing, so to fall into its place in relation to the rest of the development as to furnish it with its fitting completion or crown. Everything may not as yet have been worked out to our full satisfaction; but it seems in a fair way to be, and there are at least no valid grounds for supposing that any other mode of statement of the culminating stages of religious history will be established in preference to it. This seems to be as good verification as we can expect to have.

If we look steadily at the contents of the Bible from this point of view of 'an increasing purpose,' they seem quite worthy to have come from God. If we take them as a revelation of what God Himself is and of the method of His dealings with mankind, and if we bear in mind that this revelation has

been gradual and progressive, it is difficult to conceive one that could have been better or more completely congruous with the expansion of human thought as a whole. There is impressed upon the writings which make up the Bible a breadth and variety, an intensity and purity of religious life, that are without parallel in any other literature in the world. That is the fact which we seek to express in the doctrine of Inspiration. We know no other explanation for it than a special action of the Spirit of God. That may well be a way of speaking that is relative and imperfect. The Holy Spirit is not bound. It is not confined to any one channel. It permeates all forms of life, one after this manner and another after that. It is the same Spirit, though there are diversities of working. These diversities, or the names that we give them, are relative to our human apprehension, which cannot help classifying and defining. It cannot help observing what it calls 'degrees' and 'kinds' of operation. And this particular kind of operation that we see in the Bible is at once the highest and the most powerful that we know. It is a movement of the Divine Spirit through a long succession of human spirits, a movement which the poetic imagination of the Biblical writers themselves compared to the *wind*. And for us too that old illustration has acquired a new point. We understand more now of the nature of wind, and the analogy becomes all the more forcible. We think of a current of air, drawing in from the wide seas, charged with fresh supplies of ozone and all the other chemical constituents that vitalize and strengthen the activities of heart and brain. Such a vitalizing, such a strengthening, was that gift of God which we call Inspiration. We see the results; we can only imagine the process, and express it in the tongue of the children of men.

3. Correction of older views.—The progress of knowledge is progress in accuracy of description and definition. There are certain fundamental thoughts, wide-spread in space and time, going back to remote antiquity, and common to many races of men. The idea of an inspired and sacred Book is one of these thoughts. The common name 'inspiration' covers all its varied meaning; just as the common name 'God' covers a whole gamut of conceptions from lowest to highest. As time has gone on, the conception of God has been sifted and purified, and a like process must take place with the idea of Inspiration. It is certainly not to be denied or rejected; but it must be brought into closer correspondence with the facts.

Necessarily at first the idea was vague, figurative, and (if we must call it so) crude. To the prophet Ezekiel there is given a roll of a book which he is commanded to eat (Ezk 2^{9}–3^{3}). This is a very concrete and symbolic way of saying that he must absorb into himself a message which he is charged to deliver. In that period 'between the Testaments,' when the idea of an inspired book definitely crystallized, the attributes that most stood out were those of authority and infallibility. A book that came from God must needs be in all respects authoritative and infallible. It was an instinctive rather than a reasoned idea; but so instinctive and so natural that it held sway more or less completely for about twenty centuries. But in the course of last century it came gradually to be seen that this conception does not hold good. There are certainly some ways—many ways—in which the Bible is not infallible, and therefore not in the strict sense authoritative. More and more the authority of the Bible has come to be restricted to the spheres of ethics and religion. But more and more it is coming to be seen that, even within these spheres, allowance must be made for difference of times. All expression, even the most perfect in its kind, is necessarily conditioned by the sum-total of the body of thought of the period to which it belongs; and it has to be *translated* into the corresponding language of each succeeding period. It is impossible simply to transfer, in crude blocks without change, the thought of one age into another. From this point of view we do not so naturally look at things under the category of *authority*. It might be said that, in place of the category of authority, we think rather of the process of *assimilation*. The main question for us in these days is how much we can assimilate of the Bible. And when we speak of assimilation, we mean an act of the whole man, intellect, emotions, and will. That is the great problem before us. The working out of it is for us as the breath of life. And the material that the Bible supplies to us is as rich and as abundant as ever it was in the ages of most implicit and unquestioning faith. Our questions are not—or at least ought not to be—the questions of doubt, but only the throes and efforts of a more scientific, *i.e.* of a more accurate, apprehension.

LITERATURE.—The books of which the writer has made most use in the second half of this article are Deissmann, *Licht vom Osten* (Tübingen, 1908); Heinrici, *Der litter. Charakter d. neutest. Schriften* (Leipzig, 1908). A. B. Davidson's posthumous *OT Prophecy* (Edinburgh, 1903), from which some interesting extracts have been made, suffers as a whole from the fact that it consists of lectures spread over a considerable period of time, and all parts of it are not equally critical. Many other books might have been used: *e.g.* the *Einleitungen* of Jülicher, Weiss, Zahn, and Barth, Jülicher's 'Religion Jesu' (in *Kultur d. Gegenwart*, I. Abt. 4), and tracts on *Die Entstehung d. NT*, by H. J. Holtzmann (1904), C. Clemen (1906), W. Wrede (1907). But the subject is one that the writer has had before his mind ever since he wrote his *Oracles of God* (1889) and Bampton Lectures on *Inspiration* (1893), and he thought it better to state independently the views at which he has himself arrived.

Introduction.—Libraries might be filled with the literature to which the little book which we call the Bible or 'the Book' has given rise, and every day witnesses some new contribution to it. But no one as yet has made a comprehensive investigation of the influence which it has exerted upon the Christian Church and the life of Christian peoples

as a whole. For a long time no such question was felt to arise. Attention was confined to the theological teaching on the Bible in the Church, and then to the history of exposition, the Text and the Versions. One or two special problems were also discussed. Strictly speaking, the only comprehensive treatment of the subject is M. Kähler's *Gesch. der Bibel in ihrer Wirkung auf die Kirche, ein Vorschlag*, 1902, further developed as a contribution towards the establishing of the authority of Holy Scripture in *Dogmatische Zeitfragen*[2] (i. *Zur Bibelfrage*, 1907, pp. 266–435). What Kähler sets forth in a general way, and with the definite theological purpose of showing the significance of the Bible for the Church ('testimonium Spiritus Sancti in ecclesia'), needs to be worked out in detail and from a purely historical standpoint. The author of this article hopes to do this; but there is much preliminary work to be done, and the following sketch may induce some one to take it in hand.

The best method would be to trace the Bible in the Christian Church down through the centuries and give an account of its history. But in the narrow limits to which this article must be confined, the manifold effects produced by the Bible will come to light more clearly if we deal with each sphere separately. It must be added that the ordinary division of Church History into ancient (to 600), mediæval (to the Reformation), and modern does not by any means correspond to the separate lines which we have to follow. It is true that the Reformation is an important factor in all that is concerned with the effect of the Bible on piety, and perhaps also on public life. But it was not till the time of the 'Enlightenment' (about 1750) that the learned investigation of the Bible altered the methods which it had followed from the first. While our divisions, therefore, must be determined by the subject-matter, we shall endeavour to treat every topic in its historical development.

LITERATURE.—Apart from Kähler, reference can be made only to popular literature, mostly from Bible Societies: A. Ostertag, *Die Bibel und ihre Gesch.*, Basel, 1853, [3] 1857, [5] 1892, tr. into Fr. by Dufour with pref. by Guizot, 1857; L. N. R. (Mrs. Ellen Ranyard), *The Book and its Story*, Lond. 1853, tr. into Germ. by G. T. Phillips, with pref. by Krummacher, Elberfeld, 1858, also into Fr., 1861; H. von der Goltz, *Die universale Bedeutung der Bibel*, 1865; B. F. Westcott, *The Bible in the Church*, 1889; M. Kähler, *Die Bibel das Buch der Menschheit*, 1904; O. Zöckler, *Die Bibel in der Gesch. des Glaubens*, 1900; H. Vollmer, *Vom Lesen und Deuten heiliger Schriften*, 1907. L. Diestel's masterly *Gesch. des AT in der Christlichen Kirche*, 1869, and Ed. Reuss's *Gesch. der heil. Schriften des NT*[6], 1885, are standard works of German scholarship; they deal, however, only with parts of the subject. Reference should here be made also to *Die Bibel, Ursprache u. Übersetzungen* (from Hauck's *PRE*[3] ii., iii.), Leipzig, 1900, and art. 'Bible' in Hastings' *DB*. The *Catalogue of the Brit. Mus.* is very valuable for its bibliography on this subject: *Bible*, 1892, Appendix, 1899; also the *Hist. Cat. of the Br. and For. Bib. Soc.*, vol. i. (Eng.) 1903.

I. *ORIGIN OF THE BIBLE.*—1. **Church and Synagogue; the Old Testament.**—Christianity came from the lap of Judaism. It received from its mother a sacred book with definite ideas about it and a complete system of exposition.

The sacred writings of the Synagogue existed in twofold form. The foundation was formed by the Torah, or Law of Moses, the highest authority for faith and morals, worship and questions of law, since the proclamation under Josiah in B.C. 621. It reached its final form in the time of Ezra and Nehemiah (*c.* 430). About the year B.C. 200 there were added to this the Prophets, consisting of the four earlier—Joshua, Judges, Samuel, Kings—and the four later—Jeremiah, Ezekiel, Isaiah, the twelve Minor Prophets; and some time later a collection of writings of various content, *Kethubim* or *Hagiographa*. Designations like 'the Law,' 'the Law and the Prophets,' 'the Law and the Prophets and the other books of our fathers' (prol. to Sir.), to denote the whole Bible, show the gradual stages of its development, and also certain differences of value within the unity. At the time of Christ this stage was already reached by the Rabbis of Palestine. The discussions in the 2nd cent. A.D. about the canonicity of Ezekiel and the Song of Solomon have to do with the question of exclusion, and show that the formation of the Canon was not a matter of collection but of selection. The aim of the Canon was to winnow the materials to hand, and the motive was doctrine, not devotion. In the Greek Diaspora the development was not quite the same. As can be clearly learned from Philo, strict canonicity was accorded only to the Torah, which was translated as early as the time of Ptolemy Philadelphus (B.C. 285–247). Alongside of it, however, there was in use a much larger range of writings, mostly translated from the Hebrew, though a few of them were written in Greek, and all possessed of a *quasi*-canonical value. These were classified upon a different principle—historical, poetical, prophetic. It is an older stage of development that is represented in the sole authority of the Torah with the addition of an unsifted mass of other writings; but development went on here also, and the idea of canonical value passed from the Torah to the rest.

This twofold form of the Jewish Bible was full of significance for Christianity. Jesus, His first disciples, and the Jewish Christians of Palestine, understood by the Bible the Hebrew form of it used by the Rabbis. What Paul and Gentile Christians possessed was the Greek Bible in the Alexandrian form, including, *e.g.*, the Wisdom of Solomon.* But the knowledge that there was another form of the Bible never disappeared in the Gentile Church. In the year 170, Melito, bishop of Sardis, brought home with him from a journey to Palestine a list of the OT books which alone were recognized there (Eusebius, *HE* iv. 26. 14). Origen gives a similar list in comments on Ps 1 (*ib.* vi. 25. 2). Eusebius himself owed his knowledge to Josephus (*HE* iii. 10). But neither he, nor Athanasius (*Epist. fest.* 39, A.D. 367), nor any other Greek Father made any practical use of his knowledge. To them the Holy Scripture was the Greek Bible. It was otherwise in the case of Jerome. As he went back upon the Hebrew original, he took over the canon of his Hebrew teachers. His influence in the Western Church served to keep the knowledge of this difference between the Hebrew and the Greek Bibles alive, and more and more taste inclined to the Hebrew *veritas*. The Reformation brought the crisis. Luther followed Jerome in making a sharp separation between the canonical books and the 'Apocrypha,' but nevertheless incorporated the latter in the Bible as 'useful to read.' On the other hand, at the Council of Trent (Sess. iv., 8th Apr. 1546), Catholicism took the last step in the line of tradition, and did away with every shade of difference between the various books of the wider Canon. The Calvinists proceeded on a different line, and, breaking away from tradition, simply removed the Apocrypha from the Bible altogether. Thus they became victims of a vague and wrong use of the word 'Apocrypha,' which they owed to Jerome. To-day the British and Foreign Bible Society prints the Bible without the Apocrypha. The Bibles which the Continental societies distribute contain it, as did also the Bible upon which King Edward VII. took the oath at his accession; and the Anglican Church appoints regular lessons from the Apocrypha. In these diverging practices we see reflected the difference between the Canon of the Palestinian Rabbis and that of the Diaspora.

* On the extent to which the Wisdom of Solomon influenced St. Paul see Ed. Grafe, *Theol. Abhandlungen* dedicated to C. v Weizsäcker, 1892.

The idea of the Canon of the Holy Scripture involves its unconditional authority as the regulative principle of all thought and action. The ground of this authority is always found in its Divine origin—a phrase which can be understood in very different ways. Neither in Judaism nor in Christianity is it ever claimed for the Bible that it 'fell complete from heaven,' as it is among the Elkesaites, though at a later date Christianity knew something of 'letters from heaven.' Its historical origin was too clearly seen in the book itself. Moses, no doubt, is said to have received from God the tables on which the commandments were inscribed, but elsewhere he names himself as the author of the Torah; and so it was also with the prophets and the books which go by their names. No distinction was made between prophetic inspiration and literary activity. The latter was conceived as following mechanically upon the Divine dictation, so that Moses was able to describe his own death. But this was not enough. Even the minimum of human and historical that was involved in the recognition of different authors was stripped off by the growth of legend, which affirmed that by the help of Divine inspiration Ezra restored the whole body of writings lost at the destruction of Jerusalem. This brought the unity of the Canon into relief even in its origin. The Diaspora did not tarry behind this rabbinical development of the idea of inspiration. The story of the 72 (70) translators, which was originally applied only to the Pentateuch, was extended to the whole OT, and had added to it these further features: that the 70 translators did their work separated from one another, that they all finished at the same moment with a loud Amen, and that the 70 copies were found to be in entire agreement.* This is a conception of inspiration quite in line with that which we find in the legend of Ezra. The young Gentile Church viewed the Greek Bible, the so-called Septuagint, as immediately inspired, and not merely as derived from an inspired original.

The third point is that this high estimation of the Bible decided the course which its exposition was to take. It was not a matter of arriving at the historical meaning and import of the author's words, but of making the Divine thoughts and demands conveyed by them fruitful in lessons for the present. The exposition of the Rabbis was composed in the main of *halakha*, that is to say, of practical interpretation of the Law, the purpose being to arrive at stricter rules, and so to erect a fence round the Torah. The great aim of Biblical scholarship was to hang mountains of *halakha* upon every tittle of the Law. This was done by combining the most various passages and by paying attention to the most external coincidences and haphazard details, and was bound to lead directly away from the original purport of the Law. Another kind of exposition was the so-called *haggada*. It was similar in method but different in aim, not legal, but doctrinal or theological. It sought to explain away all expressions in the Bible which offended current theological views and practices, *e.g.* anthropomorphisms, anthropopathisms, departures from ordinary custom, and other features which belonged often to an older stage of development. Over and above that which lay to hand in the Bible, it wove with bold fancy an entirely legendary history. The two methods agree in treating the single verse or even the single word as sufficient in itself, and in allowing themselves to be guided by any arbitrary combination. The so-called 7 Rules of Hermeneutics, which are said to be given by Hillel, and enlarged to 13 by R. Ishmael, to 32 by R. Eliezer, are only an attempt to form this arbitrary method into a system.

Here, too, the Greek Diaspora took a way of its own. The Greek philosophical schools, and the Stoics in particular, had developed a system of allegorizing the venerable texts of antiquity so as to impart to them a modern sense. Besides the meaning which appeared on the surface, the words of Homer were credited with a second significance—the really important one. Zeus stood for the world, or the soul, or immaterial existence. From his head sprang Athene or Gnosis.* The fights and love-adventures of the gods were to be treated as symbolic of cosmological and psychological facts. Homer would be guilty of impiety if he did not mean this to be done (*πάντως γὰρ ἠσέβησεν, εἰ μηδὲν ἀλληγόρησεν*, pseudo-Heraclit. *Alleg. Homer*, 1). It was easy to transfer this method to the Bible, and with the help of allegory it was possible to demonstrate in Moses the Platonic or the Stoic system, or a system which borrowed from both. Such is the course taken by Philo—just as arbitrary as the Rabbinical method, but yet different, and, if we may say so, more systematic, because Greek in spirit. The Rabbis started from the text and made this or that of it as chance directed. In the case of Philo, what he had to unfold from the text was fixed from the beginning, or rather what he had to read into it in order that he might find it there. Primitive Christian exegesis followed these two paths. The method of Jesus, despite all His originality, and also the Pauline method, remind us of the Rabbis. In the Ep. to the Hebrews and in the Ep. of Barnabas we see the Alexandrian method clearly. And yet there does exist a difference, not so much of method as of aim. While the aim of the Rabbis is always a *halakha* or a *haggada*, and while Philo leans towards the ideas of his own eclectic philosophy, Christian exegesis takes its direction from the person of Christ. The whole OT is a witness to Him. Jesus treats it thus, and so do His disciples. Through the influence of this notion, it happened that Jesus was Himself conceived as the originator of this witness, and identified with the inspiring Spirit of God; *οἱ προφῆται ἀπ' αὐτοῦ ἔχοντες τὴν χάριν εἰς αὐτὸν ἐπροφήτευσαν* (Barn. v. 6). Notwithstanding the unhistorical nature of the exegesis, it thus contains a historical element. There is a reciprocal effect of prophecy and fulfilment which gives rise to typology. It is true that this method shares the defects of allegory: the words are given another sense than that which really belongs to them. But, as distinguished from allegory, it makes good its claim to existence, because, proceeding upon a pre-established harmony between the two, it gives to history a real as well as a typological value. Philo finds in Abraham only the idea of wisdom and piety, while Paul sees in him the father of the faithful, with a faith which was in principle the same as that of Christians. It is allegorizing when Paul simply dispenses in 1 Co 9^9 with the literal sense of Dt 25^4, and when Barnabas interprets the commandments respecting food in the same moral fashion as the Neo-Pythagoreans. It is typology, however, when in 1 Co 10^{1-11} Paul treats the history of the Exodus as actual but at the same time typical. We find the same thing in the Epistle to the Hebrews, with its doctrine of the provisional but widely significant character of the OT expiatory sacrifices. It is neither rabbinical nor Philonic.

The method of using the Holy Scripture in Divine service was developed also in the Synagogue. There were the readings from the Law (*Parashiyôth*)

* For the various forms of this legend see the passages collected in P. Wendland's *Aristeæ Epistula*, 1900, p. 85 ff.

* Cornutus, *Theologiæ Græcæ Compendium*, ed. C. Lange, 1881; *Stoicorum veterum fragmenta*, coll. by von Arnim; H. Vollmer, *Vom Lesen u. Deuten heil. Schriften*, 7–11.

and the Prophets (*Haphtarôth*), the Targum, or translation in the popular tongue, and the Midrash, or devotional exposition. The Synagogue practised the singing of psalms, and its liturgy had a Biblical form. All these the primitive Christian Church took over and enriched with additions of its own.

Already, too, there were to be found in Judaism the private study of the Law, the regulation of the whole life by *halakha*, and the misuse of the Bible for magical ends which its deification made inevitable. This was the case in other religions possessed of sacred books—Islām, Buddhism, and Parsiism—and cannot be regarded as brought over straight from Judaism. Similar ideas give rise to similar customs.

2. **The New Testament.**—Christianity added a New Testament to the Old. Like most great founders of religion, Jesus left nothing written behind Him, nor did He give His disciples any commission to write. Mt 28[20], Mk 14[9], 1 Co 1[17] have reference to oral teaching. The pen first became necessary to correspond with distant Churches and to record memories of Jesus as the number of eye-witnesses decreased. Neither Paul nor the Evangelists think of placing their writings on a level with those of the OT. That distinction might rather be claimed for the Revelation of St. John, which, as the work of a Christian prophet, contains a revelation of God like the OT (cf. Rev 22[18f.] with Dt 4[2]). To be sure, inspiration is also claimed by a Christian community for its epistle of exhortation addressed to a sister Church (Rome to Corinth, 1 Clem. lix. 1, lxiii. 2). The Pauline Epistles as well as those of the martyr Ignatius were perhaps collected in the lifetime of their authors, and the four Gospels were put together soon after the appearance of the fourth. At meetings for Divine service these were read like the OT. But so also were new letters as they came to hand, and prophetic writings like Hermas (see p. 602). This was not yet the same thing as a NT alongside of the Old. That did not come about until a sharp distinction was drawn between canonical and uncanonical, authoritative and unauthoritative compositions. The deciding consideration was not liturgical use, but dogmatic authority. A holy book of revelation was required as the foundation of ecclesiastical doctrine. Marcion, who rejected the OT, made a Bible for his reformed Christian Church out of 'the Gospel' and 'the Apostle.' In opposition to this, the Catholic Church formed a NT consisting of the four Gospels, the Pauline Epistles (including the Pastoral Epistles), the Catholic Epistles, the Acts of the Apostles, and the Revelation of St. John, and placed it alongside of the OT. This NT grew to form a unity with the OT, shared the dogmatic value placed upon it, and was subjected to the same expository system. In this sense the Bible was complete by the time of the old Catholic Fathers—Irenæus, Tertullian, Clement. The notion of a Canon in this sense is first found in Origen. Here, too, it can be observed that the formation of the Canon was more a matter of choosing than of collecting. The Muratorian Fragment, where the first actual list of Canonical books is found, excludes the Apocalypse of Hermas, and mentions that the Apocalypse of Peter is already rejected by some people. Down to the 5th cent. the question was whether single books were not to be expunged. Learned interests and ecclesiastical practice were often found to be in opposition, and the result was a compromise like the Canon of Eusebius (*HE* iii. 25). In the case of Athanasius (*Epist. fest.* 39) and in the West, ecclesiastical considerations had the preponderance. In spite of the Church's adherence to the idea of the Canon, there was no lack of patience shown towards local differences in its composition. The Syrian Church acknowledged two, at most three, of the seven Catholic Epistles. The Alexandrian Church would have nothing to do with the Revelation of St. John, which was so highly prized in the West. The result of this was scholarly disputation, but no disturbance of the Church's unity. Finally, as in the case of the Calendar, a compromise between the chief Churches, Rome and Alexandria, was almost universally accepted.

LITERATURE.—B. F. Westcott, *Canon of the NT*, 1855 (⁶1889), out of date; Th. Zahn, *Gesch. des NT Kanons*, 1888–92, *Grundriss*[2], 1904; A. Harnack, *Das NT um das Jahr 200*, 1889; H. Holtzmann, *Die Entstehung des NT*, 1904; H. Lietzmann, *Wie wurden die Bücher des NT h. Schrift?* 1907; J. Leipoldt, *Gesch. des NT Kanons*, 1907; C. R. Gregory, *Canon and Text*, 1907; W. Bauer, *Der Apostolos der Syrer*, 1903.

3. **Old and New Testament.**—Thus from about A.D. 180 the Christian Church possessed a Bible composed of two parts of different origin, one taken over and one formed by itself. What this meant is best shown by a comparison with the Muhammadan Qur'ān. There an entirely new book of purely native origin, and containing the revelation of the prophet Muhammad himself, takes the place of the religious books of the Jews and the Christians.

Christianity has strongly opposed every attempt to remove the OT, and will oppose, too, the modern Marcionitism. It lays stress upon the close relationship of the two parts (see III. 3), and rightly so. The OT is the pledge of historical continuity, and without it Jesus and primitive Christianity cannot be understood. It is a safeguard against such arbitrary interpretations of the NT as are inspired by Greek philosophy, syncretic mysteriosophy, and modern speculation or mysticism.

It has to be admitted that the union of the two involves a great danger, into which from time to time the Church has fallen. When, instead of their close relationship, their unity or identity is maintained, Christian worship is bound to sink to the level of the pre-Christian and inferior religion of the OT. The legal or formal conception of religion, so natural to mankind, and believed in the OT to be the object of Divine desire, can easily obscure the elevation and purity of the gospel ideal.

LITERATURE.—E. Kautzsch, *Die bleibende Bedeutung des AT*, 1901 (²1902); Ed. Grafe, *Das Urchristentum u. das AT*, 1907; M. Kähler, *Dogmat. Zeitfragen*[2], i. 279 ff.; R. L. Ottley, *Some Aspects of the OT*, 1897.

II. *SPREAD OF THE BIBLE.*—In the OT the Church received a book which existed in many and often very different copies. The Gospels and the Apocalypses were probably published in numerous copies to begin with. The Epistles were originally intended neither to be preserved nor to be multiplied, but it was not long before they came to be looked upon as Holy Scripture. The Church had the great task laid upon it of preserving and circulating all these various writings which, outwardly separate, were one in spirit.

1. **Transmission.**—For the multiplication of Bibles the Christians, like the Jews of earlier times probably, were at the outset entirely dependent upon voluntary labour. Any one who wished to possess a copy of the Scriptures had to make it himself or ask some brother to do so for him. It was only later, when well-to-do people associated themselves with the Church, that the

Bible came to be dealt in by booksellers in the ordinary way of business. A number of slaves, trained for the purpose in tachygraphy and calligraphy, were placed by a friend at Origen's disposal. His friend Pamphilus got copies of many books made, and then he corrected the copies himself.* It was his custom to carry Bibles about with him, and present them to people. Reference is also made to the purchase of Bibles or parts of the Bible (pseudo-Justin, *Quæst. ad Orth.* 134). The copying of Scripture soon came to be considered a peculiarly pious labour, and was largely undertaken by ascetics, *e.g.* the younger Melania.† Next to episcopal seats the monasteries were the great homes of Bible-copying, and before long of all kinds of literary work. So it was in the East at Constantinople in the monastery of Studium, and in the North in Russia, where, in the grotto-monasteries at Kiev, Hilarion made copies of books, while Theodosius devoted himself to prayer or span wool for the binding;‡ and even as far away as Sicily and Calabria, where the transmission of the Bible was marked by special characteristics of writing and text. So it was also in the West, where we are coming to discover with increasing clearness the differences which distinguished the various monastic schools. In the more ancient monastic foundations writing was confined to the younger men, the elders giving themselves entirely to prayer. Later on, and not with any advantage to the work, copying was often made a penance. Charlemagne showed his greatness by attending to even this small matter, and decreed that the Holy Scriptures should be copied only by grown-up men, and not by schoolboys (capit. A.D. 789, 72; 805, 3). With the rise of the universities in the 13th cent. the booksellers pushed the now profitable industry of Bible-production. It is to a bookseller's enterprise that we owe the so-called Paris Bible, whose appearance, with its divisions into chapters and other apparatus, was epoch-making in the West.§ Besides this, the Brothers of the Common Life (*q.v.*), a community founded by Gerard Groot († 1384), were very industrious as copyists.

Naturally it made a great difference whether a copy was made for one's own use or as a business order, for a private or for an ecclesiastical purpose. The MSS which have been preserved exhibit every grade from the crudest to the costliest. Two significant stages are to be noted. There was, in the first place, the change from papyrus, which was employed in the first three centuries for the Bible, to parchment. This involved the further change from roll to book form, books of papyrus being exceptional. The Church's multiplication of Bibles seems to have been largely responsible for the change. In the second place, there was the transition from parchment to paper, which had been making its way from the East since the 9th cent., but was only at a late date adopted for the Bible. There are no Greek paper MSS before the 13th cent., and no Latin ones before the 14th, while parchment codices remain in the majority up to the 15th century. Like the material, the style of writing also undergoes alteration. The flowing current hand of daily life is hardly met with in copies of the Bible. It is possible that the originals were written thus, but copies intended for reading in public all exhibit the somewhat more dignified style proper to books. First, there is the uncial, which after the 9th cent. yielded slowly and with peculiar transitional forms to the minuscule. Several MSS are known which are partly minuscule and partly majuscule (*e.g.* 566 and Λ of the Gospels; in the Gospel MS X the text is majuscule, the commentary minuscule; in other cases the marginal scholia added to the minuscule text are often written in very fine majuscule). In the West we have, at the transition from capitals and majuscule to minuscule, the national writing—Lombardic, Visigothic, and Irish.

The oldest papyrus MSS, of which only a few fragments are preserved [*e.g.* Genesis, *Brit. Mus. Pap.* 212; Psalms, *ib.* 230, Berlin, Leipzig (ed. Heinrici, 1903); the Prophets, Oxford, *Bodl. Gr. bibl. d.* 4 (pap.), Heidelberg (ed. Deissmann, 1904), etc.], were extremely simple. A single book or one or two together made a complete roll. The greater unity was indicated only by the leather covering in which several rolls were contained. In the 4th cent., however, no sooner had the Church formed its compact with the State than traces of luxury began to creep in. The oldest parchment Codices which we possess, viz. the Vatican and the Sinaitic, are huge Bibles, made evidently in response to an Imperial order, and intended for the churches of capitals. In this connexion Constantine's order to Eusebius (*Vita Const.* iv. 36) and the order of Constans mentioned in Athanasius (*Apol.* i. 297) have been thought of. These embrace the whole Old and New Testaments, but in the East this is extremely seldom the case. Not only the two Testaments, but also their separate parts, were usually handed down separately. In the West it was otherwise. There at an early date the so-called *bibliotheca* (very rarely in 1 vol., usually in 8, but up to as many as 14), or the πανδέκτης, made its appearance. It was not only their bulk, but also the manner in which they were executed, that made the oldest Bibles imposing. The wonderfully fine snow-white parchment of the Sinaitic MS seems to be of antelope skin. Both Chrysostom (*Hom. on Joh.* 32) and Jerome (*Pref. to Job*) complain of the luxury which even private people indulge in Bible MSS. Sometimes specially fine white parchment was taken; sometimes it was purple-coloured. Such MSS were not inscribed with ordinary, but with gold and silver ink: *e.g.* the Codices of Rossano, Patmos, Sinope (now Paris), and the Codex Argenteus at Upsala. We still possess an array of such precious Bibles, and, as a rule, they are associated by legendary tradition with the names of princes and princesses. The titles, initial lines, etc., are usually done in red, and initial letters beautifully ornamented. One instance is known where the text is in four different colours: the words of the narrator being in green ink, those of Jesus in red, those of His Apostles in blue, and those of His enemies in black (*Ev.* 16=*Par. Gr.* 54, sc. xiv.). From the 5th cent. onwards we find the addition of pictures (cf. VII. 4). In some cases these were placed under the text, as in the Vienna Genesis and the Sinope Matthew; sometimes they were separated from the text altogether, as in Cod. Rossanensis; in other cases they are found opposite the text, and arranged in a kind of table (*e.g.* the Itala fragments of Quedlinburg). In the East they often took the form of light marginal drawings; in the West they were often introduced into the text or set into the large initial letters. The range of these illustrations is wide. From the 24 pp. with 48 pictures that remain of the Vienna Genesis, it has been reckoned that there were 120 illustrations for Genesis and 510 for the whole Hexateuch (Wickhoff, p. 144). Such a wealth of illustration, however, is not common. The Sinope Matthew has only 5 pictures on 43 pages (out of a total of about 144), and the Syriac Gospels at

* J. A. Robinson, 'Euthaliana' (*TS* iii. 3, 1895), p. 34.

Florence, written A.D. 586 by Rabbūla, have only 4 scenes from Gospel history apart from the tables of the Canon and the dedicatory engraving. In the Middle Ages there were occasionally more illustrations, but one cannot speak of increase or decrease in their number. They were plentiful or sparse according to the wish of the person ordering, or the capability of the artist. The time of Justinian was distinguished for the fine nature of its MSS; so afterwards the Renaissance of the 10th cent. in the East, and the periods of Charlemagne and Otto in the West. As in the Synagogue the Karaites set themselves against all ornamentation of the Holy Scripture, so in the Christian Church opposition to these luxurious MSS was not lacking. The complaints of individual Fathers have already been mentioned. It is still more important that the Cistercians, as opposed to the pomp-loving monks of Clugny, forbade all artistic decoration of books. The Paris Bibles, executed in the ordinary way of business (see above), exhibit quite a special style of simple red and blue. The Brothers of the Common Life write well but plainly, while at the beginning of the Renaissance great wealth of illustration again becomes a prominent feature.

The new art of printing with movable type came at once to the aid of the Scriptures, and the first printed book was a Bible. In the years 1453–56 Gutenberg's 42-line Bible made its appearance, and was shortly afterwards followed by the 36-line one. Externally these oldest printed Bibles resembled MSS. Printing sealed the victory of paper over parchment, but some examples of the oldest printing on parchment still exist. The movement for simplicity of finish, started by Paris booksellers, was maintained, although the first Bibles printed are not only masterpieces of printing, but are in some cases also beautifully illuminated. In place of illumination and pictures there soon appeared engravings on wood. These were either marginal or embodied in the text, and in the older Bibles they are often very numerous. The German Cologne Bible (1480) contains 110; the Italian Malermi Bible (1490) 383. Luther's NT of 1522 has woodcuts by Lucas Cranach. Later on these became fewer. At last they were omitted altogether, and the Bible acquired its present sober appearance. Never, however, has there been an entire absence of picture-Bibles, though it must be said that the addition of pictures serves less for ornamentation than for instruction. Speaking generally, the effort now is to make Bibles as cheap and as easy to handle as possible, and to increase their number. In the Middle Ages almost the only complete Bible was the *bibliotheca* of 8 folio vols., and the first printed Bibles were of gigantic proportions. The size, however, has always become less and the price always lower, till we have now reached the pocket Bible and the penny NT. Attempts have lately been made to secure something finer. The 19th cent. produced a series of beautiful picture-Bibles. Some of these are completely illustrated by the same artist, as, *e.g.*, Schnorr von Carolsfeld (1852 ff.), Doré (1865), and Tissot (1896). In others we find reproductions of the famous old masters, *e.g.*, R. Pfleiderer (1896). The aim of these is to assist the eye by bringing vividly before it what has been read. The historical character of modern exegesis, however, makes use of archæological and geographical illustration to explain the Bible (Pfeilstücker, 1887; Müller-Benzinger, 1900).

2. Translation.—Besides the preservation of the Bible, its circulation was also necessary, and this involved the task of translation. The gospel soon left the soil of Palestine and the Aramaic speech. As a world-religion Christianity employed the universal language, Greek, even in Rome. The Church used the OT in the Greek translation or LXX. The other translations by Theodotion, Symmachus, and Aquila seem also to have been possessed of importance, especially at the outset, in controversies with the Jews. Their use, however, which was facilitated by Origen's giant work, the *Hexapla*,* sank to mere scholarly ornamentation. Almost all the books of the NT were composed in Greek. The Hebrew Gospel of Matthew, of which report had spoken since the time of Papias, was really a lost work. The Hebrew original of the Epistle to the Hebrews originated in an unlucky guess of an Alexandrian scholar. The Latin originals of the Gospel of Mark and the Epistle to the Romans are inventions of the Middle Ages. As late as the year 200 the Roman Hippolytus wrote in Greek, though in Africa Tertullian already composed in Latin. Whether he employed a Latin Bible in his work, or translated from the Greek Bible, is not yet beyond the range of doubt. From that point onwards, however, Greek visibly declined. About 250, at the time of Novatian, the language in Rome, as also in Gaul and Spain, was Latin. Celtic and Iberian, like Punic, do not seem to have reached a Christian literature though they continued to be spoken by country people. In the East, Aramaic-Syriac again gained strength; in Egypt the native language (Coptic) assumed a new Hellenized form. This was a movement that the Church could not think of opposing. She had to share in it if she was to bring her Bible to the people. As yet there was no idea that the sacredness of the Bible was to be sought in its incomprehensibility. Thus at the beginning of the 3rd cent. certainly, if not about the end of the 2nd, there appeared Latin, Syriac, and perhaps Coptic translations. The origin and early history of these versions are still very obscure. What is certain is that in the OT the LXX formed the basis (the Hebrew text being employed nowhere except in Syria), and in the NT remarkably free texts differing much from those otherwise known to us. It is possible that different translations came into being independently of one another; perhaps the first translation was much edited and gradually approximated in language to various Greek texts. Generally at the outset translations are exceedingly free. One can trace the joy which was felt in the new treasure, the difficulty of finding adequate expressions, the attempt to express the thought in the form most familiar. There is to be observed an inward assimilation of the gospel, a transference of it into the common thought and speech. Not till afterwards did philological accuracy make its appearance, with the high valuation of the letter characteristic of theology. So it is always: first Luther, then Weizsäcker; first AV, then RV.

* Fragments were collected by Field in 1875; new finds have been made by Mercati in the Ambrosian Library at Milan, and by Schechter and Taylor in the Genizah at Cairo.

Almost simultaneously there came the revisions which established themselves throughout the Church—the Latin revision in 378 ff. by Jerome, and the Syrian by Rabbūla about 410. The Vulgate established itself only after a keen struggle with the Vetus Latina; but before the Peshiṭṭā the Vetus Syra disappeared, leaving almost no trace. The Latin tradition approached the Syrian also in the fact that Jerome made a new translation of the OT direct from the Hebrew. In the case of the Copts, according to present research, it was less a gradual process than a conjoining of various dialects. Yet here, too, further investigation will likely show a succession of Akhmīmic, Sahidic, and Bohairic, representing not only dialectic but also textual differences, and corresponding in some measure to the African, European, and Italian of the Vetus Latina.

To these oldest and constantly developing translations which reveal the spread of Christianity in the first three centuries, there have to be added in the 4th and 5th cents. the Gothic and the Armenian together with the Georgian and the Ethiopic. These not only indicate the further spread of Christianity, but also bring to light its power as a civilizing agent. As so often in the later history of missions, the translation of the Bible is the first literary work in these tongues, the first monument of a system of writing developed for the purpose from the Greek. The Gothic Bible survived the rapid overthrow of that proud people only as a literary relic. The Codex Argenteus (now at Upsala), one of the most beautiful Bibles of the ancient Church, is a worthy witness to their former splendour. At the same time the translation, which was evidently executed from the Greek text in the Balkan peninsula, and afterwards brought into conformity with the Latin in Italy, shows the wanderings of the people and the different civilizing influences under which they came, just as we can observe in the Armenian Bible the displacement of the originally predominant Syriac by Byzantine influences. The Georgian Bible lived till the 19th cent., when it died through the Russianizing of this ancient Christian Church. The Armenian Bible, which in the time of the Crusades had points of contact with the Latin, was threatened by the same fate, but still exists. The general view that after this period Oriental Christianity was paralyzed is disproved by the missionary labours which were carried on by Greeks, and especially by Syrians, to the very farthest East. We have, indeed, no traces of ancient Indian and Chinese translations of the Bible (about 781, however, according to the Nestorian inscription of Singan-fu [J. Legge, 1888], 27 books of Jesus, *i.e.* the NT, were known in China), the reason being that the Syriac Bible was everywhere used even among the Thomas-Christians in India. Among the Syrians themselves, however, there arose new translations more learned than popular in character. Following the Greek very closely, Paul of Tella translated the OT (616–617), and Philoxenus of Mabūg the NT (508), the latter being revised by Thomas of Harkel (616). There does not seem to have been any Persian Bible before the 14th century.* On the other hand, the domination of the Arabs after the 7th cent. in Syria and Egypt brought a whole series of translations into existence, and these to some extent displaced the older Coptic and Syriac versions. Subsequently, when Spain was overrun, the same thing happened there, though the translation in that case was from the Latin. The 9th cent., which gave the Slavs a Bible of their own as the first written work in their language, saw also the beginning of Anglo-Saxon and German translations. Like Charlemagne, King Alfred was intensely patriotic, and favoured the popular tongue both in Divine service and in literature. But Latin, having the support of the Church, kept the lead, and the national language suddenly disappeared. In the time following, the oldest translations were forgotten.

Apart from poetical renderings of the Bible, only fragments were preserved till the end of the 12th cent. brought new motives of another kind. On the one hand, there was the popular religious movement associated with the name of Peter Waldes, which spread from South France towards the S. and E. as far as Bohemia. On the other hand, there was the sudden outburst of nationalism, suggesting to us in many ways our own time, which can be traced simultaneously in France, England, and Germany, and, however paradoxical it may seem, found its centre in the *studium generale* of Paris University. Thus there came to be two series of Bible translations in the popular tongue. From Paris University, which gave to the Latin Bible the form that was to obtain in the later Middle Ages, there came, through the use of an old Norman Psalter and Apocalypse, the French Bible. To us it is known chiefly in connexion with the *histoire écolâtre* of Guyard des Moulins as the 'Bible historiale.' With it there stand in more or less clear connexion some Dutch Bibles. Of more importance was the set belonging to S. France. It influenced the whole S. of Europe as far as Bohemia until Albigensian and Waldensian tendencies spread widely. The Italian as well as the Catalonian Bibles come originally, not from the Vulgate direct, but from the Provençal translation. It was only afterwards that they were conformed to the Vulgate and polished in language. Distinct from these there is only the Castilian Bible, which was translated in 1422 at the instance of Luis de Guzman by Jewish and Christian scholars in common on the basis of the original text, and was a forerunner of the great Polyglot Bible of Cardinal Ximenes. A side-piece to this is formed by the so-called Græcus Venetus (ed. by O. von Gebhardt, 1875), a new translation of the OT, which was probably a private work of the 14th cent. and never attained to any considerable influence. In the 14th cent., in England, Bohemia, and Germany simultaneously, the work of translation was again revived under Waldensian influence. John Wyclif (†1384) gave his people the first complete translation of the Bible. It is known in about 170 MSS, including the revision by John Purvey. Hus and his friends revised the somewhat older Czech Bible, and thus fashioned the pattern that was to regulate the future. In Germany no such great name appeared before Luther. There we find a great number of independent translations which have been carefully classified in Walther's thorough work on the subject. He mentions 34 Branches and 24 Psalteries, also 6 Branches and 8 Psalteries in the dialect of Lower Germany; altogether over 200 MSS and over 50 printed works. The most important Branch, to which the 14 pre-Lutheran printed Bibles belong, points in its origin to Bohemia and the time of Charles IV. Not till the 15th cent. did the northern lands receive translations of their own.

With the single exception of the Castilian, all these go back directly or indirectly to the Vulgate,

* It should, however, be borne in mind that the Pahlavi *Šikand-gūmānig Vijār* (late 9th cent.) contains a number of fragments of both the OT and the NT, cited in anti-Christian polemics and apparently derived from a Syriac version, with possible traces of the Targum of the pseudo-Jonathan (Gray, in *Actes du xiv. congrès international des orientalistes*, i. 182–186, Paris, 1905); and other fragments in an Iranian dialect (probably Sogdian) have recently been discovered by the expedition of Grünwedel and Le Coq to Chinese Turkestan (F. W. K. Müller, *ABAW*, 1904, Appendix, pp. 34–37 and *SBAW*, 1907, pp. 260–270).

whose influence is also traceable in the later forms of the South Slavonic Bible which was originally inspired from the East. Its influence was first broken by Humanism, which made the original text generally accessible, and also sought to replace the Vulgate of the monks by Latin translations of its own: Santes Pagninus, Erasmus, Seb. Münster, Castellio, etc. The first really effective factor, however, was the German Reformation. The importance of Luther's translation is shown by a twofold consideration. In the first place, in spite of many attempts in Germany, no other translation has been able to secure a position alongside of it. In especial the numerous attempts of the Catholics prior to the Council of Trent to oust Luther's by another translation show the great importance of his work, and all the more so since he was able to show that they systematically stole from him. The later Protestant attempts are not, as a rule, intended to enter into competition with Luther's Bible, but are meant for scholars. In the second place, even outside of Germany, the popular translations of the Reformation period are nearly all influenced more or less by it. Christian III. of Denmark gave an express order that the Danish Bible was to resemble Luther's as nearly as possible. There are further to be named as modelled on Luther's work—apart from the Zürich and Low German Bibles mentioned above—the Swedish, Finnic, Lithuanian, Lettic, Slavonic, Croatian, and Hungarian Bibles. From the time of Tindale the English Bible has contained a strong stream of Lutheran influence, which the Authorized Version still preserves, in spite of the opposing influence of the Douai Bible, which goes back to the Vulgate, and of the Genevan Bible of the Calvinists, which follows Beza. There is a remarkable difference between the evolution of the English Bible and that of the German. Luther's work was the first and the best, while in England the first work did not prove at once the matchless masterpiece, but the Bible finally established itself as the product of a century's labour. This enables us to understand how it was that England decided upon a thorough revision sooner than Germany, where the revision (1863–1892) was executed with the greatest caution.

Properly speaking, the Romanic translations are the only ones belonging to the Reformation that are entirely independent of Luther. In these, Humanism (Castellio, Calvin, Beza) won a greater influence, but when they were not killed altogether by the counter-Reformation they underwent constant alteration.

In most lands the following centuries have seen all sorts of attempts at improvement and also new and scholarly translations. These, however, cannot cope with the work of the fundamental creative Reform period. Notice must be taken, however, of the isolated attempts which were made from time to time by Catholics when a warmer Christian piety inspired the effort to find relief from Jesuitical oppression. In the 19th cent. an entirely new element appears. The work of Bible-translation has been greatly stimulated by the B. and F. B. Soc. in the interests of flourishing missionary enterprise. What we saw in the early Christian centuries, viz. that the effort to make the Bible available gave to peoples a written language and literature, is being widely repeated nowadays. In the year 600 the Bible (or parts of it) existed in about 8 languages; by 1500 it had been translated into 24; in 1600 the number had risen to quite 30 (the older translations being now replaced by new). During the last 100 years the number has advanced to nearly 400, and there is hardly a tongue in the world into which at least portions of the Bible have not been translated.

3. Circulation.—How great the number of MS Bibles once in existence was we can no longer reckon accurately. Probably we are inclined to under-estimate them. The Diocletian persecution made away altogether with those of the first three centuries which did not perish naturally through the frailty of papyrus. The storms of natural migration in the W., the inundation of Arabs in the E. and S., and the outbreaks of iconoclasm in Byzantium, were responsible for great destruction. There were times when parchment was so scarce that Bible MSS (contrary to the command of the Church) were used as palimpsests. Later on they were employed for binding. Remembering all this, we shall draw no false conclusion from the small number still to hand. While the circulation in ancient times was great, and in Byzantium even enormous, in regard to the W. at the beginning of the Middle Ages we must indulge very modest notions. According to the old book-catalogues (see G. Becker, *Catalogi bibliothecarum antiqui*, 1885), a royal foundation like St. Vaudrille about the year 800 did not possess a complete Bible, and Boniface had to be satisfied with parts. But from century to century the circulation increased. When we find the Bible altogether wanting in the later catalogues of the 13th cent., the explanation must be that it was not inventoried with other books. The number of MSS grew steadily with the increase of wealth, culture, and religious interest. Of Greek MSS we possess still the two complete Bibles of the 4th cent. and the two belonging to the 5th cent. (ℵ, B, A, C). There are also 7 portions of the OT, and 14 of the NT, besides fragments on papyrus, the number of which increases every year. Belonging to the 6th cent. we have 5 OT and 28 NT MSS, and belonging to the period between the 7th and the 10th cents. there are 18 of the OT, and about 80 of the NT, all these being uncial MSS. To these have to be added about 2000 Gr. minuscule MSS of the NT which date from the 9th to the 16th cent., while the number of OT MSS preserved cannot as yet be accurately determined. The Latin MSS which we still possess go back to the 4th cent., as do also the Syriac and the Coptic. We are acquainted with 400 Latin and 100 Syriac MSS of the NT dating from the 4th to the 10th cent., and 3000 Latin MSS in all. So far as the OT is concerned, no classification has been made. When it is remembered what a labour it was to make a fair copy even of one Gospel, it is possible to estimate the pains that were devoted to the multiplication of the Bible. But when we think of the millions of Christians who have lived since the 4th cent., those numbers will seem rather

small. For the later part of the Middle Ages about 170 MSS of Wyclif's Bible, and over 200 German MSS enumerated by Walther (see § 2), give some idea of the spread of the Bible.

The invention of printing altered the conditions. Every setting up of type meant a great number of copies. Till this time every copy was a thing by itself, with its own faults and its own excellences, but these were now extended to the whole edition, which might run to any number desired. In the first stages of printing the editions were not large. Gutenberg and Schöffer cannot have made more than from 100 to 200 impressions from every setting, and the prices were so high that it still paid to copy a printed pattern by hand (see the Greek NT copied by Zwingli from Erasmus's ed. at the Stadtbibliothek of Zürich, C. 163). Even when an edition mounted to 1000 copies, its circulation remained within narrow bounds, as is proved by the numberless reprints. Up to 1500 there have been counted 109 Latin printings, and from 1500–1520 the number is 56. In German there were 17, in Italian 10, in French 4, and so on. Even when these figures are multiplied by 100, or even 1000, we reach no great total. In the first two centuries of the Reformation the Bibles reached what according to our present ideas is a very small circulation, however large it may seem as compared with past ages.

Improvements in the process of printing made larger editions possible. Freiherr von Canstein could boast that in his establishment at Halle, between the years 1710 and 1719 he had made 100,000 copies of the NT in 28 editions, and 40,000 Bibles in 16 editions (8 in 8vo, and 8 in 12mo). Now the B. and F. Bible Soc. prints in one year almost 1,000,000 Bibles, more than 1,000,000 NT's, and 3,000,000 parts of the Bible; in all 5,000,000. We must remember, too, that the oldest printers earned their living by their work, that the Bible was an article of commerce, and that, although Luther took no pay for his services, yet the printers made a large enough charge. It was the voluntary support of friends of the Bible like the Baron von Canstein (†1719), the Society for Promoting Christian Knowledge (since 1698), and the Christentumsgesellschaft of Basel, extended by Urlsperger (since 1780), that made it possible to aim at a real circulation of the Bible among the people. This was finally realized by the Bible Societies which after the foundation of the B. and F. B. Soc. in 1804 established themselves everywhere (Basel, 1806; Stuttgart, 1812; Berlin and Dresden, 1814; America, 1816; Paris, 1818, etc.).

In many places in our own day every married couple is presented with a Bible as a marriage gift. Every schoolboy possesses one. Among soldiers the Bible is diligently circulated, and in the mission field it is spread with great zeal. Often it is given for nothing, and usually the price is astonishingly small. Never has the Bible been so easy to acquire. What one cannot but regret is that this extensive circulation does not go hand in hand with a high estimation of the Book of books among the great mass of men. The colporteur was right when he gave it as the result of his 20 years' experience, that to make a present of the Bible is easy but not effective.

III. *AUTHORITY OF THE BIBLE.*—1. Titles and citations.—That the Bible was authoritative was an axiom taken over by the Church from the Synagogue (see above, I. 1). The words which the first Christians used to make reference to the OT, 'The Scripture saith,' were extended by their successors to the whole Bible—OT and NT alike. 'Scripture saith,' or 'It says,' was synonymous with 'God saith.'* Soon the Scripture came to be known as ἡ ἁγία γραφή, *sacra* or *divina scriptura*, or, to commemorate its formation out of single books, αἱ θεῖαι γραφαί, *divini libri*. From the 3rd to the 5th cent. the Latins gave the name of *lex Dei* to the whole. Vincent of Lerinum used the designation *sanctæ legis volumina*. The Greeks described it as τὰ ἱερὰ λόγια (='oracles'). τὰ βιβλία is the favourite expression in Chrysostom. From *biblia*(*-orum*) was derived in late Latin the feminine form *biblia-æ* (cf. *gaudia*), and this form was carried over into all other tongues. *Sacra pagina* and *sacra elogia* were used by mediæval scholars, and at the time of the Reformation the usual designation was *literæ divinæ* or *sacræ*. The expression *veritas dicit* (='Scripture saith'), as distinguished from *auctoritas* (='ecclesiastical doctrine'), was taken by the scholastics from Augustine, who, however, employed it specially of the words of Jesus.

A single verse from the Bible was always considered the word of God. In the Middle Ages occasionally, and frequently by Carlstadt and Zwingli, *verbum Dei* is used to describe the whole Bible. Luther employs 'Word of God' in a sense different from the Bible or Holy Scripture (='verbum prædicatum'), but the terms are interchangeable even with him. In later Protestant theology the phrase is common. It is a favourite expression of Pietism, which also introduced hymns on the Bible, *e.g.* 'Teures Wort aus Gottes Munde' (Benj. Schmolck, †1737).

Often the whole Bible is designated by its parts. As the Jews used the phrase 'Moses and the Prophets' (Lk $16^{29ff.}$, Jn 1^{45}) or 'the Law and the Prophets' (Mt 5^{17} 7^{12} 22^{40}, Lk 16^{16}, Ac 24^{14} 28^{23}), so we find 'the Lord and the Apostles' or, more seldom, 'the Gospel and the Apostles.' In Hippolytus this fourfold division is the usual one, while Hegesippus says, 'the Law and the Prophets and the Lord,' and Clem. Al. 'the Prophets, the Gospel, and the words of the Apostles.' The whole Bible is also referred to as 'the Prophets and the Apostles' (*e.g.* Murat. Canon, 79 f.). This corresponds to the *Vetus et Novum Testamentum* or Tertullian's *Instrumentum*. 'The Lord' was used specially to indicate the Gospels, so much so that the Marcionites claimed the Lord as the author of their Gospel, just as they claimed Paul as the author of their Apostolos (Adamantius, *Dial.* ii. 13, p. 84). As the Prophets and the Apostles also acquired their authority from Him, it was possible to say, 'the Lord in His Prophets and Apostles.'

With the growth of scientific accuracy, the formula of citation became more adequate. The deliberate indefiniteness of Philo (εἴρηται γάρ που καλῶς) is still found in a Gnostic like Valentinus (ὥσπερ εἴπέ τις), but the growth of Biblicism does not favour it. Paul mentions the prophets by

* B. B. Warfield, *PRR*, 1899, pp. 472–510.

name (*e.g.* Ro $9^{25.27}$), and it becomes general to name the specific books: *Μωϋσῆς ἐν Ἐξόδῳ, ἐν τῇ πρώτῃ τῶν Βασιλέων, Παῦλος ἐν τῇ πρώτῃ πρὸς Κορινθίους.* Tertullian says, 'Habes Genesim, habes Danielum.' In one instance Origen defines the passage more exactly by the *στίχος* number. The Eusebian sections of the Gospels, arranged in ten canons for purposes of comparison, served the whole Middle Ages as a handy concordance. After the 4th cent. we meet with chapter-divisions, which differed among the Greeks and the Latins. Citations were made by the titles or the first words of the chapter. It was not till the Middle Ages that they were made by the number of the chapter. This became common in the 13th cent., when the Paris Bible established itself everywhere (see above, II. 1). There we have the chapter-divisions of Stephen Langton, with 8 subdivisions of each chapter (A–H), serving the purpose of the *concordantia biblica* of the Paris doctors. Not till modern times did the easy method of verse-enumeration come in, and with it the practice of exact citation. The germ of this was found in a concordance which R. Isaac Nathan formed in 1447 (printed Venice, 1523; taken over in Santes Pagninus's Lat. Bible, 1528). The NT was divided into verses by Robt. Stephen in 1551, on a journey from Paris to Lyons. The fact that it was done 'inter equitandum' is, unfortunately, only too evident. Moreover, in different editions there are variations. Above all, the bad habit of setting the number of the verse in the text, or printing each verse separately, destroyed the connexions, and deepened the impression that every verse was complete in itself. As the result of Bengel's initiative, the custom has recently become more general of making larger paragraphs. On the other hand, the minuteness characteristic of recent critical exegesis has made an advance upon the division into verses, and such citations as Ro 1^{16a} or Rev 1^{1d} are now used.

Literature.—C. R. Gregory, *Prolegomena*, 140–182; Scrivener, *Introd.* i. 56–71; O. Schmid, *Über verschiedene Einteilungen der h. Schrift*, 1892; E. von Dobschütz, *Vulgatastudien*, 1895; J. Chapman, *History of the Vulgate Gospels*, 1908.

Formulas of citation have another side. Veneration of the Holy Scripture and its authors finds increasing fullness of expression in them. Soon what we meet with is not 'Isaiah says,' 'Peter (or Paul) writes,' but 'The Holy Prophet Isaiah says,' 'The Holy Apostle Peter writes,' and 'According to the Blessed Paul.' In this connexion, the otherwise almost valueless epithet of martyrs, *μακάριος* (*beatus*), continued long in use. Even this, however, is not enough. Peter must be called *ὁ κορυφαῖος τῶν ἀποστόλων, princeps apostolorum*, John *ὁ ἐπιστήθιος*, Paul *ὁ τρισμακάριος*. The ordinary title is *οἱ θεηγόροι*. In the Byzantine Renaissance *δαυϊδικῶς* or *ψαλμικῶς εἰπεῖν, Σολομώντεια ἔπη*, are favourite phrases to introduce quotations from the Psalms or Proverbs, and a citation from the Gospels is hardly ever introduced without words like *τὸ ἅγιον εὐαγγέλιον διαπρυσίως βοᾷ*. As compared with such Eastern verbosity, Western formulas always appear simple. But *sanctus apostolus dicit* has really the same significance. It is an expression of unconditional veneration, and emphasizes Scriptural authority. It makes no difference here that in the Middle Ages prophets and apostles shared this epithet with the doctors of the Church. These also possessed the weight of authority. The Reformation retained 'St.' Matt., 'St.' Mark, etc., and in Romance lands and England 'St.' Paul is still usual. It was the period of 'Enlightenment,' with its purely human handling of Scripture, that first stripped off, even in the form, all such symbols of authority, returning thus to the simplicity of the early Church. With a false conception of accuracy, the Gospel 'according to' Matthew, Mark, Luke, or John was spoken of, the ancient Church desiring to express by *εὐαγγέλιον κατὰ . . .* nothing more than the unity of the Gospel amidst the variety of its literary forms.

However various these formulas may appear, they nevertheless establish the one important fact of the unconditional authority of every word in the Bible. The mention of the various authors is due to a conscious or unconscious instinct for accuracy. It is not upon them, but upon the Bible itself, that authority rests. In every century we find numerous instances of wrong sources given for quotations (*e.g.* Mt 27^{9}). This only shows how little depended upon any personal authority. The prophetic name is a guarantee of Scripture; prophets and apostles are possessed of authority because they are 'holy Scripture,' and all that stands in Scripture is authoritative, even when it is neither a prophet nor an apostle who speaks, but a very unholy mortal. Mt 19^{5} quotes a word of Adam as God's word. Jn $11^{50f.}$, spoken by Caiaphas, contains a Divine prophecy. The Bible as a whole and in every word of it is authoritative.

Literature.—On the names of the Bible, see Suicer, *Thesaurus*, 1682, *s.v.* *βιβλίον, γραφή*; du Cange, *Glossarium*, *s.v.* 'Biblia.' On citations, see Harnack, *Dogmengesch.*[3] i. 337 ff. Formulas are collected, *e.g.*, from the *Didascalia* by Achelis, p. 333; from Didymus by Leipoldt, 38; from Diodorus by Harnack, 56.

2. **Inspiration of the Scriptures.**—Like the authority of the Bible, the idea of its inspiration was taken over from Judaism (cf. I. 1). No distinction was made between the Divine revelation accorded to the prophets and its preservation in writing (cf. Ro 1^{2}, He 1^{1}). We have the statement in 2 P 1^{21} that 'holy men of God spake as they were moved by the Holy Ghost'; but, besides this, the Scripture itself is said to be *θεόπνευστος* in 2 Ti 3^{16} (whence 'inspiration'). Descriptions like those of Ezk $1^{3f.}$, Zec $1^{8ff.}$, Rev $1^{10ff.}$ point to an ecstatic origin, and this idea, helped by the influence of Plato and Philo, was extended to writings that were not apocalyptic (Justin). At the same time, there is another view, according to which God speaks to men without any extraordinary ecstatic operation. Paul does not think that his Epistles are due to any supernatural inspiration. He draws a clear line between his own opinions and the absolutely authoritative words of the Lord, yet he claims the possession of the Spirit, and therefore authority for what he writes (1 Co $7^{10.25.40}$); so also Clement of Rome (i. 59), and even Origen (*de Orat.* 18). The pseudo-Clementine Homilies (xvi. 18) formulate a theory to the effect that the revelations which are not due to ecstasies (*ἄνευ ὀπτασίας καὶ ὀνείρων*) are preferable to those which are, and the Church adopted this view. She dismissed books like the *Shepherd* of Hermas, and repudiated the Montanistic prophets and similar phases; but she claimed inspiration for her bishops. And if Ignatius and even Cyprian still think of visions and ecstasies in this connexion, the inspiration of Synods, which Constantine solemnly proclaimed so early as the First Ecumenical Council of Nicæa, had little in common with ecstasies. The *θεοφόροι πατέρες*, or inspired Fathers, contended with arguments drawn from the Bible and logic, sometimes even with the fists, and the result depended upon the decision of the majority, while ecstatic revelation rests on the authority of a single inspired person. At the Council of Trent it was a standing joke that the Spirit came from Rome in fetters; and with regard to the infallibility of Papal utterances, no one ever dreamed of ecstasy. Naturally the idea of the Bible's inspiration corresponded with this. The Alexandrians were critical of style. Eusebius and Augustine talked harmlessly of the literary methods of Biblical authors—that was in line with their ideas of inspiration. When, however, exegetical science weakened, and the popular monastic ideas of visions

and ecstasies spread, we find these notions appearing more frequently, and in popular literature they found vivid expression. Prochorus' picture in the Acts of John of how the Gospel of John came into existence (ed. Zahn, p. 154 ff.) shows that its origin was conceived as quite ecstatic. This influenced art, and the task of investigating the way in which inspiration is represented would repay labour. As the Muse appeared to the poet Aratus, so the Divine Wisdom appeared to the Evangelist Mark (Cod. Rossan.). A hand beckons out of heaven; a dove whispers in the ear; we hear also of inspiration following the drinking of a cup (2 Es $14^{37f.}$). The idea of a book-roll which the seer had to swallow (Ezk 3^1, Rev 10^9) has its artistic analogy in the so-called *traditio legis*, 'giving over of the law,' to Peter. So far as is known, the notion of a book fallen direct from heaven, like that which Oriental Gnosticism developed in regard to the book of Elxai, and to which ecclesiastical piety gave some colour in the so-called 'letters from heaven,' was never applied to the Bible as such. Athenagoras (*Leg.* 9) illustrates the operation of the Holy Ghost by the picture of the flute-player who blows into the instrument and makes it sound. Ps.-Justin (*Coh.* 8) and Chrysostom speak of the lyre upon which the Holy Ghost plays; there are different strings, but they give forth a harmony. The conception is quite spiritual. Much more realistic is the picture of the pencil (*stylus*) of the Holy Spirit which we find in Gregory I. In the Middle Ages the representation gradually took a more popular form, and single individuals like Agobard of Lyons and Abelard protested against it in vain. It was never thoroughly developed in theory. Luther's lively piety, like the oldest Christianity, combines faith in Divine inspiration with quite human ideas as to the method: he gives a vivid picture of the way in which one prophet uses the writings of the others. In his hands the ancient traditions which mediævalism brought down alongside of its theory of inspiration became of importance again. But orthodoxy did not follow him here. It ranged itself on the side of the strictly supernatural idea of inspiration, and carried the view to its extremest consequences. The Biblical authors are only the hands and pens of the Holy Spirit. They are perhaps *notarii et actuarii*, but never can they be called *auctores*. That epithet belongs to God or to the Holy Ghost alone. From Him proceeds not only the impulse to write, but also the matter and the method (*suggestio rerum et verborum*). In the end all human participation in the composition of Scripture is denied. Men wrote, but did not understand or know what. This inspiration of the letter, applied to the Textus Receptus of the NT and to the Textus Massoreticus of the OT, is at last extended to the mere accessories; above all, to the punctuation of the Hebrew (John Gerhard, †1637; John Buxtorf, father, †1629, and son, †1664). The theory was embodied in an ecclesiastical confession (*Formula Consensus Helvetici*, 1675), but as a theological system it was soon overturned by actual facts. Mill's multitudes of variants destroyed the theory of textual inspiration. Deism and 'Enlightenment' sought out every little contradiction and absurdity. Biblical philology renewed the criticism of style. Soon rationalistic theology spoke of a purely human Scripture.

The attempt of 19th cent. theology to revive the old orthodox doctrine has been vain (Kölling, *Theopneustie*, 1891). Even in the milder form, which added to the personal inspiration of prophets and apostles (Schleiermacher) a particular guidance only *in actu scribendi* ('kanonische Inspiration,' Luthardt), it was not able to secure a hold. The newest phase of religious-historical inquiry gives wide scope to ecstasy again, but Protestant theology tends always more and more to the conviction that the old conception of *θεοπνευστία* is not the one best suited in our time to express the actual significance and authority of the Scripture. Inspiration applies to men, not to written words.

Rabaud, *Hist. de la doctrine de l'inspiration des saintes écritures*, 1883; W. Sanday, *Inspiration*, 1893; H. Cremer, in *PRE*[3] ix. 183–203: Kähler, *Zur Bibelfrage*, 1907; A. Houtin, *La Question biblique au xxe siècle*, 1906, 27 ff.; F. Watson, *Inspiration*, 1906; M. Dods, *The Bible, its Origin and Nature*, 1905.

3. **Doctrine.**—Of course it is not enough to see in the books of the Bible only historically interesting monuments of old Israelite and old Christian literature. They were and are more than this to Christendom. From the beginning they were held to be immediately binding upon the present.

One of the first tasks of Christianity was to put the OT in the same position of authority as the NT. Primitive Christianity, filled with the living power of the Spirit, strongly emphasized the newness of the Divine revelation given in Christ as compared with the OT stage of religion. Paul did away with the Law which was the kernel of the OT in Judaism, and yet he argued with words of 'the Law.' He cast aside the nomistic system, and yet held the Law to be Holy Scripture. That could not continue. The Gnostics and Marcion rejected the authority of the OT altogether; the Church sought to discover a more positive relationship to the OT Law. In the ceremonial rules of the OT the writer of the Epistle to the Hebrews found the type and prophecy of the saving work of Christ. Barnabas considered that he had only to transmute the Ceremonial Law by allegorical interpretation into moral commandments to show that it was constantly obligatory, and that the verbal understanding of it by the Jews was a mistake into which the devil had brought them. I Clem. comes very near to deducing the principles of Christian worship from the ceremonial system of the OT, and the 3rd cent. actually did so. Tertullian (*de Monog.* 7) extracts laws for the Christian life from the OT. Later authors like Cyril of Alexandria make the sacerdotal and sacrificial law somewhat spiritualized, the basis of Christian ecclesiastical order.

When the difficulties which arose in the controversy about legalism were removed, the value of OT prophecy caused the OT to be claimed as the sacred book of Christendom, in opposition to the Jews, who made it their own special possession, and it was declared to be inseparably associated with the NT. The same Christ, the same Spirit, spoke in prophets and apostles. Marcion's criticism only served to make the Church all the more zealous in maintaining the complete unity of the two Testaments. They were the two breasts of the Church (Hippolytus on Canticles, i. 344). Very soon all sense of difference, all thought of any gradation in time, disappeared. Out of the unity of the Spirit there was evolved a mechanical uniformity, a complete equality of the contents of all parts. Even the first verses of Genesis were made to witness to the deepest mysteries of the Christian faith, the high dogmas of the Trinity, and the participation of the Son in Creation. *ἐν ἀρχῇ ἐποίησεν = ἐν τῷ υἱῷ* (cf. Harnack, *TU* i. 3, 130 ff.). Protestant orthodoxy went even further than this in the discovery that בְּרֵאשִׁית contained the initial letters of the Trinity, אָב, בֵּן, רוּחַ twice over.

In spite of this purely dogmatizing method, it was never altogether forgotten that revelation underwent an historical development. It is this feature that constitutes the peculiar charm of the Antiochene school for us, and raises the Dutch federal theologians above their own orthodox pre-

decessors. In the new orthodoxy of the 19th cent. the Erlangen school (Hofmann) laboured this thought at great length. These, however, are only individual instances, and hardly affect the doctrine of Biblical authority. They did not attain to a recognition of any differences of value in the books of the Bible. Whatever was found in the Bible was canonical and authoritative.

The dogmatic elaboration of this theory began with Origen's *περὶ ἀρχῶν*, and his results were adopted by his pupil Theognostus. As the Synagogue never dealt systematically with questions of the kind, the Greek theology had quite a new field here. In the West, Augustine's *de Doctrina Christiana* laid the foundation. Augustine declares repeatedly and strongly that only the canonical Scriptures are unconditionally binding (*de Nat. et Grat.* lxi. 71; *Epist.* lxxxii. 3. 24). But we find none the less that he sets ecclesiastical authority alongside of, or rather above, the authority of the Bible more markedly than the Alexandrians. The often-quoted remark is well known (*c. Epist. Manich.* 6): 'ego vero evangelio non crederem nisi me catholicæ ecclesiæ commoveret auctoritas.' This supplied the Middle Ages with a standard. The authority of the Bible was the very highest: it was absolutely infallible; everything that was found in it had to be believed whether understood or not. All this, however, was due to the living authority of the Church, and that because of two considerations: (1) it was the Church that formed the Bible as such; the Church decided which books were canonical and which were not; and (2) the Church alone had to say what was contained in the Bible, in other words, how it was to be interpreted. Even heretics appealed to the Bible, and often with a great show of right. That made a superior authority necessary—the Church. Tertullian declares that in combating heresy the Scriptures should not be referred to for proof (*de Præscr.* 19). Similarly Salvian (*de Gub. Dei*) complains that the Arians drew their proofs from the Bible, while the Catholics employed force. Naturally it was always maintained that the authority of the Bible lay in itself, came from its Divine origin. The Church could never invest with canonical authority a book that was not Divine. But—and this is the important point in the mediæval Catholic conception—the Church took over the guarantee of canonicity. Hence came the fixing of the Canon by Councils, from the Synods under Damasus and Augustine down to the Councils of Trent and the Vatican. The correct interpretation, however, was obtained from the 'unanimous consent of the Fathers,' and in this way the Fathers, who were credited to a certain extent with the same inspiration as the Scripture, came to be equally valuable authorities. Employed in the first place to interpret, they were afterwards called in to supplement Scripture. Thus there arose the idea of the double tradition, *ἐγγράφως* and *ἀγράφως* as the Greeks said, *in libris scriptis et sine scripto traditionibus* as the Council of Trent expressed it. The question whether the revelation given in Scripture was sufficient to answer every religious inquiry received different replies within the Catholic system. The really correct answer was in the affirmative, and allegory supplied a means of drawing anything out of Scripture that was wanted. In mystic circles, however, the view was always maintained that God supplemented what He had given to the Church by immediate revelations to chosen individuals. Montanism, which brought a new and extensive revelation, the Church repudiated, just as at a later date she did also the *evangelium æternum* of the Spiritualists and the visions of many fanatics. But the visions of Saint Birgitta and similar phenomena she acknowledged; and at the present time the question is being vigorously discussed in Catholicism, how far the visions of Catherine of Emmerich can be safely reckoned credible supplements to the Gospel story in regard to the life of Jesus and the Virgin Mary. From the time of Anastasius of Sinai until the present day there have not been wanting pious men who believed that they could cajole or wrest from evil spirits some light upon the mysteries of the other world.

In this domain the Reformation brought the crisis. The 'reformers before the Reformation,' as Wyclif, Hus, etc., were called, were representatives of Augustinianism, and as such of a Biblicism within Catholic ecclesiastical bounds. Zwingli and Calvin represent a Biblicism that overran these bounds but finally took its stand upon the same formal principles. Creeds of the Zwinglian and Calvinistic type nearly all contain decisions in regard to the Canon of the Bible. It was quite unobserved that this only continued ecclesiastical or synagogue tradition in opposition to the decisions of the Roman Church and the Council of Trent. It is quite otherwise with Luther. Not only did he shatter the authority of the Pope, the Councils, and the Fathers, but also from the idea of the dominating authority of Scripture he stripped off everything formal. Not because something was found in Scripture but because it witnessed to Christ, because he traced God's word in it, was it authoritative in his view. 'The right principle to follow in the criticism of all the books is to ask whether they show Christ or not, for all that is Scripture points to Christ (Ro 3^{21}), and St. Paul wants to know nothing save Christ (1 Co 2^{2}). What does not teach Christ is not apostolic even though St. Peter or St. Paul teaches it; what preaches Christ is apostolic even though it comes from Judas, Annas, Pilate, or Herod' (Pref. to Ep. of James, 1522, Erlangen ed. 63, 157). This valuation according to content, harmonizing as it does with personal experience, gave Luther the opportunity not only of criticizing the ecclesiastical Canon (he makes the NT end with 3 John and calls Hebrews, James, Jude, and Revelation an appendix like the OT Apocrypha), but also of claiming value for other writings like the *loci* of Melanchthon, and investing them with the same value as the Bible. It is true that Luther did not carry this principle to its logical conclusion. His contests with fanatics who trusted entirely to the inner light compelled the Reformer, who was at heart conservative, to lay all the importance on the historically given revelation, *i.e.* the Scripture. However much he distinguished in theory between the word of God and the Scripture, yet he found it easy to identify them, and he could then (as in the Lord's Supper) insist stubbornly upon the letter of the Scripture. The Lutheran Church has inherited both these views from him. Lutherans always speak of the *verbum Dei*, but they do not imply any formal limitation to certain books (no Lutheran confession contains a catalogue of the Canon). The phrase has reference only to the content of the Bible, the revelation of God's grace in the Law and the Gospels. On the other hand, the Lutheran Church developed the doctrine of the authority of the Bible in scholastic fashion, so that it became possible to speak of Bibliology as well as Theology and Christology. And Bellarmine had a certain amount of right on his side when he spoke of the 'paper Pope of the Protestants.' Nevertheless the distinction between a formal and a material principle in Protestantism belongs to the Calvinistic theology, and first became a feature of Lutheran dogmatics in the 19th century (Ritschl, *Zeitschr. f. Kirchengesch.*, 1876, 397 ff.).

In opposition to the mediæval conception which,

under the influence of the Neo-Platonic idea of God and in the interests of ecclesiastical authority, emphasized the mysterious, difficult, or unintelligible elements and the insufficiency of the Bible, Protestant dogmatics laid all the stress on its clearness and sufficiency (*perspicuitas et sufficientia*), and emphasized, along with its authority, its *efficacia* as a means of salvation. This made its authority—in the true Reformation spirit—altogether dependent on the *testimonium Spiritus Sancti internum*. But this witness, in consequence of the mechanical way in which inspiration was conceived, was extended to things which had nothing to do with the inward experience of a pious Christian. Pietism, having no great scientific interests, was very well satisfied; honest Rationalism admitted that it had never perceived any trace of this witness of the Holy Spirit. The scholastic system was broken up, and no artificial reconstruction was possible. Under Schleiermacher's lead the theology of the 19th cent. worked zealously and honestly to solve the problem of how the authority of the Bible should really be conceived and be impressively founded. There was plenty of fierce controversy. In opposition to the overthrow of all authority by the liberal theology, conservative circles sought support for the authority of the Bible elsewhere. Grundtvig seizes, as Lessing did, upon the Apostles' Creed as the living word of God. Calixtus's *Consensus patrum quinquesecularis* (1629) finds a powerful echo in the Oxford Movement in England. Between the two extremes numerous endeavours of a mediating character assert now the religious interests attaching to the absolute authority of the Scripture and now the scientific aspects of its historical limitations. It has to be said that a satisfactory solution will be found only when the Bible is felt to speak to the human heart with the authority of God. This experience must be expressed in clear theological terms. In religious matters the authority of the Bible is absolute, but only in religious matters. Its authority is internal, not external.

Schrift*, 1902; K. Timme, *Luthers Stellung zur h. Schrift*, 1904; K. Walz, *Die Lehre der Kirche von der h. Schrift nach der Schrift selbst geprüft*, 1884; J. Reinhard, *Die Prinzipienlehre d. luth. Dogmatiker*, 1906; P. Gennrich, *Der Kampf um die Schrift in der deutschevang. Kirche des 19 Jahrh.*, 1898 (with a complete bibliography); J. Estlin Carpenter, *The Bible in the 19th cent.*, 1903; A. Houtin, *La Question biblique chez les Cath. de France au xixe siècle*, 1902, *au xxe siècle*, 1906.

4. Practical significance.—From the very first the authority of the Bible was concerned with dogma, that is to say, it was used to prove the articles of faith. It was in this way that the Messiahship of Jesus was demonstrated by primitive Christians and afterwards by apologists in the controversy with Jewish Christians. Cyprian brings together *testimonia adversus Judæos*, **i.e.** proof passages, and he thus provides the pattern of Scriptural proof for many centuries. Soon this method came to be employed in the dogmatic disputes arising within the Church. Athanasius collects proof from Scripture of the unity of the Son with the Father—a course that was all the more necessary since the Arian party pointed out the un-Biblical character of the word ὁμοούσιος. The Cappadocian Fathers gathered proof passages in support of the Trinity. In the Monophysite and Monothelite discussions the practice was extended, with the difference that citations from the Fathers were now added to those of the Scripture; and in the disputes regarding iconoclasm John of Damascus and the patriarch Nicephorus as well as the hostile party made collections of the same kind from Scripture and tradition. Augustine begins his work *de Trinitate* with a very detailed Scripture proof (i.–vii.), and then (viii.–xiii.) adds a dogmatic elaboration. This example was followed by all scholastic theologians, and the practice attained to still greater importance after the removal of all other authorities by the orthodox theology of Protestantism. For every single topic of the system all *loci probantes* in the Scripture were carefully gathered, and their interpretation became more and more a subordinate discipline to scientific dogmatics, viz. the so-called *theologia biblica*, out of which, after a long process in which it underwent complete transformation, there arose at last the independent discipline which is now called 'Biblical Theology.' Modern theology has long seen that an enumeration of Scripture passages torn from their context is not only a forcing of the Bible but also no real proof of the dogma in question. Dogmatic theology, however, emancipates itself but slowly from the old method of Scriptural proof. It is bound to do so more and more, because with the grossly supernatural idea of inspiration the proof which rests upon it vanishes also. How different is Hofmann's attempt to reach a new kind of Scripture proof, in which everything is made to turn upon the context—upon the general view of Scripture. At the present day even this is considered by most to be too external a method, especially as Hofmann's attempt to show the organic unity of the whole content of Scripture cannot be described as happy. It is somewhat different when P. Lobstein sets the organic method of proof from Scripture over-against the atomistic. It is only a real harmony with the fundamental ideas of the Bible that can be legitimized by dogmatics. Wendt departs from the normative significance of Scripture, and has recourse to the teaching of Jesus as the only norm.

The old theology took pride in ranging itself under the authority of the Bible, in making its infallible statements the basis of its findings. As a matter of fact, what it did was to make the Bible subservient to its system. It put its views into the Bible only to drag them out again in emphasized form. That is perhaps made most evident by the numerous works on the *Hexaëmeron* (the 'six days' in Gn 1). What was there that the short account of creation was not made responsible for? All the knowledge which the cosmological speculation of Greece and late Judaism thought it had discovered was held to be already contained in Gn 1. This was the case everywhere—an entirely mechanical idea of revelation, as if God had torn asunder the details of His revelation and strewn them over the whole sacred book, in order that men might painfully gather them together again, as if He had purposely kept things mysterious in order that theologians might sharpen their wits on them.

But the Bible returned good for evil. It admitted of continual glimpses into the true nature of revelation, into the actual course of history, and provided facts which necessitated the correction of the dogmatic system. If the theoretical recognition of the right relationship between Scripture and doctrine is an achievement of recent times, yet it is possible to arrange the whole history of theology and dogma in particular under the point of view of a gradual process of biblicizing. In ancient as in modern times, there were instances of theologians who did not make the Scripture a cover for their own ideas, but propounded and solved their problems from the Bible. To these belong the Antiochene theologians, and above all Calvin, whose *Institutio* deals with much whose only claim was that it seemed to him to be required by the Bible. In later times, Bengel and J. T. Beck, with the Württemberg Biblicists as a whole, proceed on the same lines. The history of salvation which is contained in the Bible con-

tinually reacts against the attempts of dogmatics to do violence to it. As we learn from the apocryphal Acts of John, the Greeks made out their Saviour to be a docetic appearance only, and the Cross an idea; but the doctrine of Cerinthus is already a compromise with actual history: Jesus, a true man, for a time bearer of the æon Christ. Our Fourth Gospel goes further in the direction of actuality: Jesus Christ, wholly man and at the same time the full revelation of God. Alongside of the Synoptic representation of the human life of Jesus, this might appear in the nature of a theological supplement. In combination the effect was more potent. Not the Arian but the Nestorian Christology indicates a reaction of Bible history against dogmatic speculation. In Monophysitism Docetism takes a new lease of life. Alongside of the Gospels stood Paul. His influence was hardly felt for centuries, and the Greek dogmatics can be understood almost without him, but when Augustine was captured by him, Paulinism kept Christendom busy until in Luther a herald of Divine grace still more congenial to the Apostle of Justification by Faith arose. As in the ancient Church, so also was it in the modern. The theological labours of orthodox scholarship always moved further away from the facts of history. Each party endeavoured to establish the truth of its own doctrine of the Bible. Hence Werenfels of Basel (†1740) said of it:

> 'Hic liber est in quo quærit sua dogmata quisque,
> invenit et pariter dogmata quisque sua.'

But the proof from Scripture, however perverted and coerced, necessitated the continual study of the Bible, until in the time of 'Enlightenment' it shook off the chains of dogmatic tradition and established its claim to existence again. This becomes even clearer when we follow up the history of piety (see below, VII. 2, p. 612).

Though the authority of the Bible is concerned chiefly with dogma, it is not exclusively so. The Bible regulates the whole Christian life, and especially the life of the Church. Here more than anywhere the OT foundation comes to light with its legal conception (cf. p. 589). It is sufficient to recall how large a space the Decalogue occupies in Christian instruction. Along with the *precepta Dei* there appear the *consilia evangelica*, the latter often not less strictly handled than the former. In Catholicism the Bible is the foundation of ecclesiastical organization as well as of ecclesiastical law. Here, indeed, the proof from Scripture is as arbitrary as in dogmatics. All Christian festivals and the hours of prayer were grounded on the Bible; also the legal rights of the clergy. Such an un-evangelical theory as the union of all spiritual and material power in the hand of the Pope had to take refuge in the figure of the two swords (Lk 22^{38}). The Papal bull in which Leo X. banned Luther's doctrine (15th June, 1520) begins with references to Ps 74^{22} 80^{13}. Protestantism carried this method of founding all its theories upon Holy Scripture much further. In Calvinism the strictest legalism regulated not only the ecclesiastical but also the whole public life (see VII. 3), until, with the secularizing of culture on the one hand, and the altered historical conception of the Bible on the other, the fact established itself more and more that in the records of long past ages ideals might be found for the individual and social life, but never again an immediate legal system.

So in the most recent times the idea of any external authority pertaining to the Bible is everywhere losing ground. This will not be to the injury of Christianity, if only at the same time the untold inner value of the Bible as the unparalleled religious guide-book and the inexhaustible fountain of religious inspiration gains wider recognition.

Muhs, *Die Kritik und die Stellung zur h. Schrift* (1905); W. B. Carpenter (Bishop of Ripon), *My Bible*, 1884, Germ. tr. by L. Pfeiffer, 1902. Cf. art. APOLOGETICS, vol. i. p. 621.

IV. *BIBLICAL STUDIES.*—1. Methods.—Much against the original intention of the Bible, the Church looked upon it as a book for theologians, a book which as the source of all dogmatic and theological knowledge called for thorough study. The Gnostics were the first to handle it in this scientific way, and the Alexandrians adopted the method. It is true that the Catechetical school was interested more in philosophy than in history. Great as were the services which Origen rendered as a Biblical scholar, he was not a Biblical theologian, and in his school philosophy always maintained the upper hand. Even his admirer and successor, the blind Didymus of Alexandria, whose interest in exegesis was greater than that of others, gave the chief place to dogmatics. In the strict sense of the term we hear of exegetical lectures only in the school of Antioch. Such lectures were delivered by Lucian, Diodorus, and Theodore, and later by Paul the Persian after the flight to Nisibis. Here among the Nestorians outside the Empire there was established a regular school for the scientific study of the Bible. Among the Greeks and Latins it was sometimes by means of commentary and sometimes by 'answers to correspondents' (*Erotapokriseis, Quæstiones*) that Bible instruction was carried on. The services of the monasteries in this connexion were of more value to the ascetic view of the Bible than to its scientific study (see VI. 3). At the same time, both in East and West, the monasteries were for long the only places where the study of the Bible was fostered. In their libraries lay the old commentaries of the Fathers. From them excerpts were taken for handier use (*e.g.* from Gregory the Great by Paterius, Odo of Clugny, etc.), and these were made into new compilations. Pupils were taught the Bible. It was all very elementary, but it nevertheless supplied the means by which, to some degree, the continuity of scientific study was maintained. The credit here is due to the Rule of St. Basil and its renewal by Theodore of Studium, and in the West to Cassiodorus and the later Benedictines. The Fourth Lateran Council of 1215 required that in every cathedral-school at least one theologian should be appointed who would instruct priests and others in the Bible (*in sacra pagina*). In the Academy of Constantinople, founded by Bardas about 860, no theology of any kind was taught. Even in the oldest high schools of the West—the legal school of Bologna and the medical school at Salerno—it was the same. In the case of Paris the studies were entirely scholastic to start with, and not Biblical at all. The Bible first received recognition at the universities when the mendicant friars—the Franciscans first and then the Dominicans—joined their monastic schools to them. Even then the *lectiones biblicæ* were delivered in the monasteries before a mainly monastic audience—as a practical preparation for the cure of souls. It is true that a course of Bible instruction was part of the ordinary curriculum. In Paris there was a fixed course for the scholars extending over four years. The bachelor had to lecture

cursorie on the Bible for two years. But in both cases the Bible was hurried over with all possible speed as a stepping-stone to the 'sentences.' Roger Bacon (*Opus min.* 328) complains of the excessive value laid upon the sentences of the Lombard which the influence of Alexander of Hales caused people to prefer to the Bible itself.

All this was changed at the Reformation. Luther, himself a monk, attached supreme importance to exegetical lectures, as did Melanchthon and Calvin. In Zürich there was established the so-called 'Prophecy,' *i.e.* the public discussion of Scripture among theological students in the form of debate. This was taken up by Pietism in its *collegia biblica* again after Protestant orthodoxy had almost fallen back into the old mistake of the scholastic method. What Spener established in Frankfort was more of the nature of a prayer-meeting. A. H. Francke and his friends in Leipzig desired real lectures in the form of Bible-exposition. Their success proved the need of them. Since that time the study of the Bible has won a leading place within the Protestant teaching of all denominations. It is a fixed feature of the work of the German universities, and specialization becomes commoner every day. Even in the Roman Church more value is beginning to be laid upon it, as is shown by the Encyclica 'Providentissimus Deus' of Leo XIII. (18th Nov. 1893) and the formation of a Bible Commission in 1901, as well as by a series of works which these called into being. Attempts are frequently made to show that the Roman Church has always zealously furthered the study of the Bible, but the arguments which have been gathered (by Falk *e.g.*) only prove the opposite.

2. Textual criticism.—When we consider the Bible as the object of scientific study, one of the first things to demand our attention is the critical labour bestowed upon its text. The earliest Christians had no idea of anything of the kind. We learn this from the freedom of the citations from the OT which are contained in the NT. It must be admitted that the Jewish complaints about Christian interpolations in the LXX text were not without foundation (see, *e.g.* Ex 17^{14} in Barn. 12^{9}; Justin's citation of Ps 96^{10} in *Dial.* 72–73; Ps 37^{14} and 50^{9} in the Leipzig papyrus, edited by Heinrici, *Beitr.* iv. 1903). In the first two centuries nearly all the various readings of the NT came into existence, the majority of them by deliberate alteration of the text, many for the sake of style, and several in the interests of dogma (Jn 1^{18}, 1 Ti 3^{16}, He 2^{9} etc.). The most noticeable instances of this are provided by the heads of schools and churches, like Marcion and Tatian. The beginning of theology in the Church, however, gave rise to a systematic criticism of the text, such as we find in Irenæus's fine treatment of the variant 616 for 666 in Rev 13^{18} (*adv. Haer.* v. 29, 30). We know very little of the textual criticism by the Artemonites in Rome. All the more brightly, however, shines the star of the master Origen, though his great work in the OT province, the *Hexapla*, where the original text and the various versions are set side by side with the avowed intention of purifying the LXX text, led, it must be owned, to greater confusion (E. Schwartz, 'Zur Geschichte der Hexapla,' in *GGN*, 1903, 693 ff.). There is no evidence of a similar work for the NT, or, indeed, of any recension of the text at all, but in the numerous commentaries there is rich material for it. Even Origen could not establish his work everywhere. Different places developed different texts spontaneously. When the ecclesiastical authorities began to pay attention to this fact, revisions by the particular Churches came into existence in the various provinces. We know from Jerome (*Præf. in Paralip.*) that in Egypt the recension in use was that of Hesychius, in Syria that of Lucian, and in Palestine that of Pamphilus, the pupil of Origen. Lagarde, Bousset, Rahlfs, and others have begun to detect traces of these recensions in the still existing MSS, which, however, mostly give a mixed text. Hesychius is fond of choosing the shortest of competing readings, Lucian makes a broad text by comparing and combining, and Pamphilus admires a good Greek style. Everywhere in these ancient exegetical works we find notes on textual criticism, drawn usually, either directly or indirectly, from Origen's *Hexapla* in the OT and from various MSS in the NT. The deciding factor of criticism was sometimes dogma and sometimes the authority of individual scholars (cf. the scholion to Jn 7^{53} in A). Often readings were rejected as the falsifications of heretics, but often the heretics were right in their counter-complaint. For examples of Trinitarian interpolation, see 1 Co 8^{6} in the Cappadocian Fathers and 1 Jn 5^{7} in the Latin Church. We possess a wonderful instance of the careful tradition of a text in the Peshittâ, which is almost devoid of variant readings. In the case of the Copts the numerous scholia testify to continual comparison with the Greek text on the one hand and with the Arabic on the other. In Constantinople the influence of Chrysostom established the later Antiochene text, without, however, ousting the others entirely. The Athos-Codex, discovered by von der Goltz, and the labours of an Arethas, show how much interest was taken in criticism at Constantinople even in the 10th century. The continual revisions of the old versions, of which we have spoken above, are also evidence of textual criticism, whether they are concerned only with deciding between various translations or go back to the original. In the West, Cassiodorus in the 6th cent., and Theodulf and Alcuin in the 9th, did excellent work in the critical revision of the Vulgate; but none of them gained a hold. Every province, every order, every monastery, had a tradition of its own, which was based in some cases upon the work of some great individual Greek or even Hebrew scholar. In the *correctoria biblica* these traditions were laid down for guidance in the correcting of copies of the Bible. The Cistercians employed as their norm a copy by Abbot Stephen Harding; the Franciscans adopted the corrections of William of Mara; the Dominicans followed Hugo of St. Caro; the Augustinians had as their pattern a Windesheim Bible. The keen criticism of Roger Bacon proves that the success of the Paris text was due more to the renown of the *studium generale* than to its inherent excellence.

Even the introduction of printing made no difference at first. The oldest Latin prints are reproductions of a single MS. So far as the LXX is concerned, the Complutensian, the Aldine, and the Sixtine, with their reprints, represent three classes of texts. Erasmus formed the text of his NT out of very few and very late MSS. The next editors, especially Stephen and Beza, made use of others. Humanism did not rise beyond a dilettante textual criticism, and employed few materials. Still, printing brought about that which up till now was impossible, viz. the supremacy of a single

text (apart from the small errors that are unavoidable in a reprint). This was done for the Vulgate by the (Sixtine) Clementine text of (1590) 1592, which owed its origin to the carrying out of a decree of the Council of Trent. So far as the Greek text was concerned, the high esteem attached to the *textus jam ab omnibus receptus* was due to a bookseller's advertisement, the text itself being Stephen's text of 1550 in the Elzevir reprint of (1624) 1633, which was itself influenced by Beza's editions. In the year 1707, John Mill shattered all faith in the infallibility of this text by the 30,000 various readings which he found in about 80 MSS. The task of gathering together various readings, to which this Englishman devoted himself, was continued by Johann Jakob Wetstein, a Swiss who had settled in Holland (1751–52); the Saxon Chr. Fr. Matthæi, who collected and stole in Russia (1782–88, 1803–07);* the Viennese F. C. Alter (1786–87); the Dane Andr. Birch (1788); and the Catholic professor of theology at Bonn, J. M. A. Scholz (1823). The climax was reached in the editions of the Englishman S. Pr. Tregelles (1844, 1857–72), and above all in the diligent and fortunate work of G. Fr. Const. Tischendorf in Leipzig (1841, viii. crit. maj. 1869). Tischendorf used in his work 15 majuscule codices which he discovered, among them the Sinaitic (ℵ) found in 1844 and 1859. He made new editions of 21 MSS,† and collected testimonies from the Versions and the Fathers as no one before him had done. Since that time some extremely valuable finds have been made. Von Soden has made the attempt to work through all the minuscules catalogued by Gregory and Scrivener. An enormous amount of industry is employed upon the investigation of texts, especially by German and English scholars. But this is not the last word in textual criticism. What is of the utmost importance is that the right method of passing judgment upon tradition should be followed. The Württemberg theologian Joh. Alb. Bengel (1734), with his method of distinguishing between different families of texts, here took the first step. His motive was love for God's word, in which even the slightest particular was golden in value. The rationalist, Johann Salomon Semler of Halle, carried this on, and introduced to German science the labours of the Dutch Arminians and the French Catholic Oratorian Richard Simon. He was joined by Johann Jakob Griesbach of Jena (1774–77) and Hug of Freiburg (1808), the former a Protestant, the latter a Catholic, who laboured more fully the scheme of the text-recensions which sprang from the ancient Church—a course continued in our own time most successfully by W. Bousset in his *Textkrit. Studien zum NT* (1894). While these all started from the textus receptus, improving, shortening, and transposing it, C. Lachmann, the Berlin philologist, took up Richard Bentley's suggestion (1742), and established the principle that the start should be made, not from the late printed text, but from the ancient MSS: it was possible to give the text of the 4th cent. with certainty instead of that of the 16th. Further progress is due to the two Cambridge friends, B. F. Westcott and F. J. A. Hort, whose great service was that they overcame the scruples of conservative English theology in spite of Dean Burgon's violent attacks. Their carefully elaborated method was considered by many to represent all that was attainable. C. R. Gregory, O. von Gebhardt, and E. Nestle were content to compare Tischendorf and WH. The great agreement of the newer text-critics from Lachmann to WH in their opposition to the textus receptus is shown very clearly by the editions of F. H. A. Scrivener (1859, revised by E. Nestle, 1906), though that was far from the intention of the strongly conservative author. A new textus receptus, however, was and must be an impossibility. With fine instinct Hort himself called special attention to a series of Western readings which he did not consider genuine, but which for the history of the text were well worthy of note. The more thorough investigation of the history of the oldest translations, especially the Vet. Lat. and the Vet. Syr., with which latter Mrs. Lewis's find at Sinai first made us acquainted, has led to more and more attention being attached to them. Now it is clear that not only all the important variants were in existence before the 4th cent., but also that it was just the so-called Western text that was most widely circulated in the 2nd century. In opposition to WH, a great number of English scholars, in particular F. C. Burkitt and J. R. Harris, with the Germans F. Blass, E. Nestle, etc., give this text, which was current from Carthage to Edessa, the highest place, while others, like Jülicher and Wellhausen, advocate an eclectic method. And, indeed, the history of the text can be of service now only in making clear the later developments of the text. In most cases, what it does is to bring us to a stop before the fact that two readings, equally witnessed and equally wide-spread, reach back to the earliest time. If we are not satisfied with a choice of two readings, or assume, like Blass, two editions by the Biblical author himself, then it is to exegetical considerations that we must look for finality. Thus, the method which B. Weiss has always advocated and practised has to be combined with the other one, based on the history of the text.

In the matter of the OT, lower criticism was not so active. Here the tradition of the Synagogue was the guide. So early as the 2nd cent. this had fixed the consonantal text and its pronunciation (by oral traditions in the first instance) so firmly that it never altered. The so-called Massorah, which was committed to writing in the 8th to 10th cents. made an effort to attain an almost faultless multiplication and tradition of the text. Although the oldest Hebrew MSS do not go beyond the 9th cent. A.D., it is yet possible to maintain that we possess the text of the 2nd cent., and that it is to hand in print (Soncino, 1488, Brescia, 1494 [Gerson]; Complutensian Polyglot, 1514–17; *Biblia Rabbinica Bombergiana*, ii., Ven. 1525–26). Even the collections of numerous variants which B. Kennicott (1776–80) and de Rossi (1784–88) have brought together do not go beyond this Massoretic revision. On the other hand, the old translations, especially the LXX, the Samaritan text, and several papyri of recent discovery, show that there was a pre-Massoretic text. While editors down to Delitzsch-Baer and Ginsburg (1894) conceived their task to be the reproduction in the most exact form of the Massoretic text with all its delicacies of punctuation, the newest editions (Haupt, *SBOT*, 1893 ff.; Kittel, *Bibl. Heb.*, 1905–06) make it their aim, with the help of the versions and of conjecture, to reach an older text. How far that has been successful, and what value is to be attached to the LXX traditions, are still open questions.

In the investigation of the ancient versions of the Bible, whose value for textual criticism is increasing from day to day, excellent work has been done, especially by English scholars. There are, *e.g.*, the new Oxford editions: the Vulgate by J. Wordsworth and H. J. White (1889 ff.), the Peshiṭṭā by G. H. Gwilliam (1901), the Northern Coptic (Bohairic) NT by G. Horner (1898 ff.); while Cambridge provides us with the Septuagint by A. E. Brooke and N. McLean (1906 ff.), the Old Syriac Gospels by F. C. Burkitt (1904), the Peshiṭṭā Psalter by W. E. Barnes (1904), etc.

* O. von Gebhardt, *Centralbl. f. Bibliothekswesen*, xv., 1898.
† C. R. Gregory, *Prolegomena*, 25 ff.

The main point, however, is that the claim of the Biblical text-critic is now recognized on all hands, and that criticism has almost entirely freed itself from the dogmatic prejudices which so long met it with opposition. It carries on its work by a scientific method. Naturally in this particular case, with the rich and complex nature of its materials, the method receives special application. It is to be regretted that this is often forgotten by philologists who labour upon the Bible. Yet the method remains entirely scientific, and in principle could be applied in any similar field of study.

LITERATURE.—Gregory, Scrivener, Nestle, von Soden (see II. 3); Hammond, *Textual Criticism*, 1894; M. R. Vincent, *A History of the Textual Criticism of the NT*, 1899; Kenyon, *Handb. of Text. Crit. of the NT*, 1901; E. Rüegg, *Die NTliche Textkritik seit Lachmann*, 1892; B. Weiss, *Textkritik der Apocalypse*, 1891, *Kath. Briefe*, 1892, *Paul. Briefe*, 1896, and *Evangelien*, 1899; H. 3. Higher criticism.—Along with the criticism of the text, and often hand in hand with it, there has always gone the literary and material criticism. It is not a modern discovery; only the methods have changed here also. The relation between the higher and what is called the lower criticism is characteristic of the different periods. The awakening scientific consciousness attaches chief importance to the criticism of the text, while higher criticism comes afterwards. So long as science is bound by tradition and the dogma of the Church, it confines itself as much as possible to the former, and even tries to find in it the solution of higher literary problems. Modern instances may be cited in A. Klostermann, Ed. König, and Fr. Blass. As soon, however, as it becomes free, it lays the stress upon the latter, without, however, neglecting those questions which arise in connexion with the text.

Literary criticism finds its starting-point in the formation of the Canon itself. If the pre-condition of any book's canonicity is its prophetic or apostolic origin, then the book itself and the tradition concerning it must be examined to discover whether such origin can be claimed for it or not. The Muratorian Fragment, *e.g.*, denies canonicity to the *Shepherd* of Hermas, because it is neither of prophetic nor of apostolic origin. The Epistle to the Hebrews, which Roman tradition rejected as anonymous, must come from Barnabas (Africa) or Paul himself (Alexandria) to secure recognition. This was the motive which prompted the gathering of literary information regarding the individual books of the Bible, such as Eusebius of Cæsarea in particular collected with great diligence. In some cases this information found its way into the Bible MSS in the shape of prologues, titles, and subscriptions, and in a certain measure it kept alive all through the Middle Ages the knowledge of the origin of the books of the Bible. Its collection into the Bibliotheca Sancta of Sixtus of Siena († 1599) was done in this mediæval spirit. It was with the same material that the Protestant theology of the 16th and 17th centuries worked, and even modern critical investigators cannot dispense with tradition, however much they may subject it to examination.

The criticism of the ancient Church proceeded in the first place not upon literary and historical, but upon dogmatic considerations. It was from dogmatic motives that in Asia Minor the so-called 'Alogi' rejected all Johannine writings, that the Roman presbyter Gaius declared the Apocalypse to have come from the hand of Cerinthus, and that Dionysius of Alexandria reached the fine conclusion—adopted among the very latest scholars—that there were two Johns working in Ephesus simultaneously. We have the clearest evidence of this in the casting aside of everything which came from the Twelve Apostles by Marcion, who combined with this the hypothesis of an interpolation of the Gospel (Luke) and the Epistles of Paul. The repudiation of the OT also by Marcion and many Gnostics has a dogmatic basis in the dualism between the creating and the redeeming God, this being the shape which the Pauline antithesis—law and grace—took among pagan Christians. Along with this we find all manner of stages, from partial to complete recognition of the OT, often with very fine differentiation of the contents according to their significance and value (Ptolemæus, *Ep. to Flora*; Harnack, *SBAW*, 1902).

Criticism, however, became more minute. Just as Marcion in his antitheses called attention to a great number of contradictions between the OT and the NT (*e.g.* Is 45[7], Lk 6[43]; Ex 3[21], Lk 10[4]; 2 K 2[23f.], Lk 18[15f.]), so inconsistencies in the NT itself soon came to be observed. The Muratorian Canon and the Monarchian Prologues deal with the differences which mark the beginning and the end of the Gospels. The disparity between the two genealogies forms the subject-matter of a correspondence between Julius Africanus and Aristides (Euseb. *HE* i. 72 ff., cf. F. Spitta, 1877). Eusebius deals with the various accounts of the appearances of the risen Lord. It was the opponents of Christianity who called attention to these difficulties. The Jews questioned the Christian proof from prophecy and the credibility of the Gospel tradition. There were also heathen philosophers like Celsus, and very notably Porphyry, who declared the OT to be incredible and full of myths, and pointed out inconsistencies in the Gospels themselves. It is against Porphyry or Hierocles that the *Apokritikos* of Macarius Magnes is directed. Ecclesiastical theologians, who were as little capable of a real literary and historical survey as their opponents, were driven in this combat to a method of harmonizing, which at all costs had to explain away those inconsistencies; and they prided themselves that they successfully accomplished this task, by means of a mental ingenuity that was often surprising. One has the impression, it is true, that they did not feel any great certainty themselves, for instead of one explanation they often offer a choice, or they smother the question at issue by abusing the malevolence of unbelief and doubt. This was the course taken by Augustine himself, whose *de Consensu Evangelistarum* is probably the best work which the ancient Church produced in this field (see iii. 40–50: the harmonizing of Jn 19[14], 'the sixth hour,' and Mk 15[25], 'the third hour'). But Christian readers also observed difficulties—often very subtle ones—in reading their Bibles, and they demanded the explanation of them from their spiritual advisers. This is shown very clearly by Jerome's correspondence with his lady friend in Rome, and later by Alcuin's interchange of letters. In this way there arose the rich literature of Biblical *Erotapokriseis*, or *Quaestiones*. So long as these critical questions were put in the faith that the inspired Scriptures were infallible and free from inconsistency, and in the blind trust that the theologians of the Church were able to solve every problem of the kind that could arise, they were welcomed as a means of exercising and displaying the mental acumen of ecclesiastical theologians.

But whenever these inconsistencies were seriously entertained they were at once condemned as heresy. The Manichæans, who continued the critical tradition of the Marcionites, gave the Church most trouble in this matter, and they were followed by Paulicians, Albigenses, and all the tendencies which were gathered together under the name of Catharists. Even within the Church itself rationalistic views were to be found. In the 9th cent. Abbot Hucbert of St. Maurice made fun of our Lord's saying in Mt 11^{29}—a piece of unparalleled levity. In 1376 the Parisian students declared that the Gospel, like other books, contained what was fabulous and false, but their thesis was immediately condemned by the bishop. Such frivolous criticism as this could not possess any lasting effect.

The Humanists introduced a new feature into criticism. They were no longer content only to hand down Patristic references, but they also—especially Laurentius Valla and Desiderius Erasmus (*Annotationes* and *Paraphrases*)—attached real importance to them. It is this that enables us to understand Carlstadt's criticism of the Canon (1520; K. A. Credner, *Zur Gesch. des Kanons*, 1847, p. 291 ff.) and the later treatment of the question by the Lutheran dogmatists from Chemnitz to Gerhard. Their distinction between canonical and deutero-canonical books corresponds generally to Eusebius's *homologumena* and *antilegomena*. Quite different was Luther's position (see III. 3). In his case literary and historical considerations were entirely secondary. It was his personal faith that was the decisive element. The books which did not bear clear testimony to Christ he considered non-apostolic. His principle was a purely religious, we may say dogmatic, valuation without any literary or historical considerations. Even in the same book one verse might be apostolic in this sense and another not. According to this view, the old idea of the Canon as representing the united authority of the Apostles was lost sight of. It was the last step in what may be called the dissolution of the Canon. Luther himself, however, did not admit this result, but identified the principle upon which he proceeded with the literary method of the Fathers and the Humanists. His own opinion was that Hebrews, James, Jude, and the Apocalypse should be excluded from the NT. There he drew a clear line. But he was far too conservative and cautious to wish to press such a personal judgment upon others. He felt that he possessed the power and the right to make an alteration upon the Canon, but he left it as it was. Gradually the line which he drew disappeared, and the consciousness of any difference of value within the Canon faded away. Later dogmatists were unaware of it. Only the order which Luther's Bible follows bears witness, in its variation from tradition, to the critical experiment of the reformer.

The new period of Biblical criticism began about the middle of the 18th cent., at the time of 'Enlightenment.' The way was prepared for it on the one hand by the pains which Catholics expended to destroy faith in the infallibility of the Bible, the Protestants' paper Pope, and on the other hand by the strictly scientific method of investigation which was adopted by the Arminians. The new feature was that it was no longer the traditions about the separate books that were made to speak, but the books themselves. Richard Simon attacked the trustworthiness of the Bible text; Astruc, Louis XIV.'s physician, by his discovery of the two strata distinguished by separate Divine names in the Pentateuch, assailed the ordinary view of the origin of the books of the Bible. The hypothesis of the two sources was taken over later by the Protestants, and further developed and extended. Ilgen and Hupfeld (1853) discovered the 2nd Elohist. Deuteronomy was disentangled, and finally J E P and Dt were found to have undergone a series of redactions. In spite of its great significance for the understanding of Israel's religious development, the dispute as to the age of these sources between the school of Ewald and that of Reuss, Graf, and Wellhausen, in which the latter emerged victorious, is quite a secondary matter compared with the fact that the gradual growth of the Pentateuch from different sources and strata ranging over centuries is acknowledged generally. Even such conservative theologians in Germany as the late Franz Delitzsch, Ed. König, and H. Strack no longer refuse to admit this fact. In Scotland, Robertson Smith was the pioneer. So much progress has now been made that not only does Haupt's 'Rainbow Bible' (1893 ff.) bring the various sources before the eyes of all who are versed in Hebrew, but learned and popular new translations like those of Kautzsch (1894), Kuenen, Hooykaas, Kosters, and Oort (1897 ff.) exhibit them also to the laity. Upholders of the Mosaic authorship of the Pentateuch are almost entirely dumb, while books like Schlatter's *Einleitung in die Bibel* (Calw, 1889, 3rd ed. 1901), which come from and are intended for evangelical circles, set forth the principles of this criticism as the result of the latest investigation.

Naturally this did not stop at the Pentateuch. The method spread automatically to the other historical books of the OT. Those same sources of which we have spoken include Joshua also, while in the case of Judges, Samuel, and Kings the conditions are largely similar. The prophetical books, especially Isaiah, but also some of the Minor Prophets, bear evidence that they are not unities; so, too, the poetical books, Job, Ecclesiastes (Siegfried), Proverbs. The 'Psalms of David' themselves confess that they do not all come from his pen, and the fact was always recognized. Theodore of Mopsuestia in his day connected some of them with princes of the Maccabæan dynasty. The systematic investigation of different collections, strata, and dates led to the conclusion that there was as little of David in the Psalms as there was of Moses in the Pentateuch. The results of OT criticism are in matters of detail quite fluctuating. The revision of ideas about the development of Israel's religion, which we owe to the comparative history of religion, will lead to many modifications (Br. Baentsch, *Altoriental. u. israelit. Monotheismus*, 1906). But the necessity for criticism and the method which is to be followed are established (E. Kautzsch, *Abriss der Gesch. des AT Schriftums* [a supplement to his translation], 1894).

In the field of the NT, which has been separating itself from the OT more and more for a century, the topic which has received most investigation since 1750 has been the Synoptic problem. So far as any literary relationship between the Gospels was thought of in former times, the view most widely taken was that of St. Augustine, that the order observed in the Canon was also the historical order. With astonishing rapidity, however, various possibilities were now put to the test: (1) the use of the oldest Gospel by more recent ones, (2) a common source, and (3) independent use of oral tradition. Gradually a combination of these various hypotheses emerged as the only possible solution, viz. the use of Mark by Matthew and Luke, with the addition of a common source, and much drawn from oral tradition. In matters of detail this leaves room for any number of suggestions, and science can hardly come to any

definite conclusion, because no explanation can be found to clear up the whole question. But the principle has been found, and will never again be lost sight of. In regard to the rest of the NT books, it was questions of genuineness that exercised critics until the middle of the 19th century. What had to be proved, in the first place, was the claim of the various books to canonicity, *i.e.* their genuineness, integrity, and trustworthiness. Rationalistic critics confined their attention to single and often very external points. Schleiermacher and his school made a real advance in the literary method. But it was Baur that first achieved a general conception of the significance of each book from a consideration of the place which it filled in the general development of primitive Christianity. Subsequent examination proved Baur's conception to be false, resting, as it did, upon Hegel's philosophical scheme of the movement of ideas through thesis, antithesis, and synthesis. The conception of the separate books as having been written with the express intention of making them effective factors in the contest between the Church parties is now given up. What is left, however, is the necessity for dealing with each individual book as a whole, and finding out the part which it played in a great development. The method which was followed by Baur (and still by Holtzmann), of starting from the criticism of the Canon, has yielded more and more to the literary method (Reuss, Jülicher, Krüger, von Soden). The great advance from the scientific point of view consists in the fact that Biblical criticism has attained the greatest possible freedom from all dogmatic prepossessions. Externally this is shown in the fact that the question of genuineness is now discussed quite calmly, conservative theologians occasionally denying it, while critical theologians often maintain it or pronounce a *non liquet*. Recent criticism also speaks freely of different sources, and propounds theories of interpolation or some similar literary attempt at solution. Baur held only the four chief Pauline epistles to be genuine, but now the majority of them (eight to ten) are recognized. It has to be admitted that the integrity of 2 Cor. is still keenly disputed. The radical criticism of the Dutch school, which repudiates all the apostolic epistles, finds as little support as that of the few who desire at any price to maintain the genuineness of all. The Acts of the Apostles is everywhere handled upon the theory of different sources, though the methods differ much in detail. How much vigour used to be spent on the discussion of the genuineness, the Johannine origin of the Fourth Gospel, and the Revelation *pro et contra!* At the present time we have an increasing number of attempts to show that neither is a unity. Undoubtedly this search for rents or joinings, these outvying theories of sources and interpolations, may become to some extent unnatural. But in the meantime they form the most valuable instrument we have —an instrument which is not yet by any means worn out.

LITERATURE.—The Ancient Church: K. J. Neumann, *Hippolytus von Rom*, 1902, p. 144 ff.
The Middle Ages: H. Reuter, *Gesch. der relig. Aufklärung im Mittelalter*, 1875–77.
Recent times: T. K. Cheyne, *The Founders of OT Criticism*, 1893; W. Robertson Smith, see I. 1; H. Holzinger, *Einleit. in den Hexateuch*, 1893; C. A. Briggs, *The Higher Crit. of the Hexateuch*, 1893 (3rd ed. 1897); Baron Fr. von Hügel (Cath.), *The Hist. Method and the Documents of the Hexateuch*, 1898; J. Orr, *The Problem of the OT*, 1907; W. G. Jordan, *Bibl. Criticism and Modern Thought*, 1909; H. S. Nash, *The Hist. of the Higher Crit. of the NT*, New York, 1900; L. Pullan, *NT Criticism*, 1907; H. Holtzmann, *Lehrb. der Einleit. in das NT*[3], 1897; A. Jülicher, *An Introd. to the NT*, Eng. tr., Lond. 1904; B. Weiss, *Manual of Introd. to the NT*, Eng. tr., Edin. 1887–88; Th. Zahn, *Introd. to NT*, Eng. tr., Edin. 1909.

4. Exegesis.—All criticism, higher and lower, is ultimately only a means to the correct understanding of the text. It is a serious mistake to suppose, as has sometimes been done, that criticism is an end in itself. Literary criticism is a part, a very important part, of exegesis as it is now understood, just as allegory was its most important feature in former times.

We have already learned that the Christian Church found elaborate exegetical methods to hand, and have seen how she provided these with new aims. The allegorical method, which the Stoics developed and the Jews of Alexandria applied to the OT, discovered a hidden and profound meaning, such as was alone worthy of the old conception of God and His Spirit, and this meaning, often with the utmost disregard for the plain sense of the words, it tried to establish by all kinds of artifices. In contra-distinction to philosophical speculations which disregarded history, Christianity was by its whole nature bound up in history. The notion of prophecy and fulfilment took the place of the Platonic *noumenon* and *phainomenon*. Thus it comes about that the history of Christian exegesis is a continual conflict between a historical interpretation and the old allegorical method. The Gnostics, who were the first real exegetes and wrote commentaries to the OT and the NT, fell under the influence of this latter method in its most marked form. The Gospel dealt not with the earthly life of Jesus, but with events in the supramundane world. Heracleon understood the saying that Jesus went down to Capernaum (Jn 2^{12}) as referring to the descent of the æon Christus from the region of light into this material world. Among the twelve apostles the traitor Judas was the lowest of the twelve æons, and his fall brought the world of sense into being. At the same time, the Apologists adopted a method of interpretation which reminds us of the exegesis of Palestinian Rabbinism and early Christianity, mainly in the form of fulfilment of prophecy. It was reserved for the theologians of Alexandria to remove this contradiction by maintaining the rightfulness of both methods, considering them, however, to represent two separate stages. In especial there was Origen's brilliant formula that, as man contains body, soul, and spirit, so exegesis shows the strictly verbal, the moral, and the mystical senses, challenging, supplementing, and qualifying one another. This theory of the greatest thinker and Biblical scholar in the ancient Church continued to dominate exegesis. He himself, however, did not always put it into practice, and there were very few of his followers who had the capacity to do so. The majority of them made his allegorical method a means of coaxing from the text things which it did not contain at all. The interpretation of the parables provides an instance. No regard was had for the simple hortatory lesson of the parable of the Good Samaritan. The parable was the representation of Christ's own work of salvation from the Fall to the Judgment-Day. There were some who went further in this direction than others. Origen's school contained a Pamphilus and a Eusebius as well as the great Cappadocians. The Alexandrians were the keenest allegorizers. At the same time they were spiritualists in regard to the eschatology of the ancient Church, while a section of Christian theologians (Nepos, Methodius) accepted it literally. More important was the exegesis of Lucian's school. These Antiochenes wrote Greek, but there was evidently a Semitic element in them. They understood Syriac and Hebrew and had sympathy with Rabbinical exegesis. Thus in the case of Diodorus of Tarsus and his greater pupil Theodore of Mopsuestia, exegesis is much less allegorical than typological (though the two are always inter-

woven), and occasionally it becomes almost wholly historical in method.

As this Antiochene school acquired much influence in the Greek Church through the great preacher Chrysostom, whose expositions were quite unfettered by school tradition, so through Theodore, the interpreter κατ' ἐξοχήν, it assumed quite supreme influence among the Syrian Nestorians. We are astonished to find among these in the late Middle Ages excellent commentators like Išodad and others, while the Monophysites followed the Alexandrian traditions. Bar-Hebræus, in exegesis as in politics, approximates to both. The school of Antioch gained influence also in the West. The much used *Instituta regularia divinae legis* of Junilius are reproductions of the lectures of Paul of Nisibis.* Ambrose was a faithful follower of Origen; and Augustine, in spite of his more practical Latin nature, which made him akin to the Syrians, resembled him greatly. He has laid down the principles which he followed in *de Doctrina Christiana*. Tychonius and Eucherius wrote text-books on the allegorical method. But it was Jerome who, under the direct influence of Rabbinical exegesis and a verbal understanding of the original, brought about the change from the method of Origen and the Cappadocians to an exegesis that fixed the verbal or grammatical sense and made interpretation historical. In practice, it must be admitted, he himself fell short; but the effect of his influence is to be seen in the fact that the West has never quite ceased to be alive to the significance of a verbal and historical exegesis. In general, in the Middle Ages there was a much more active exegetical movement among the Latins than among the Greeks. In the 6th cent. there began the period of *catenae*, that is to say, exegetical compilations from various authors. At first the authors were named; then the names were omitted; the excerpts were connected by some suitable phrases, and then the Byzantine compiler placed his name before the result. It may be said without fear of contradiction, that since the time of Justinian hardly a new exegetical thought has found expression—at least in the way of sound interpretation. The same conditions prevailed in the West until the 12th century. The Carlovingian commentators give nothing of their own, and make a formal excuse when, once in a way, they venture to add something to the authority of the Fathers. These commentaries, destitute of any spark of individuality, differ from one another only in the way in which they combine Ambrose, Augustine, Jerome, Pelagius, etc. Ultimately, however, the speculations of scholasticism infused new life even into exegesis. The Patristic exegesis was displaced by a dialectic method. The theory of the fourfold sense of scripture became developed:

> 'litera gesta docet; quid credas allegoria;
> moralis quid agas; quo tendas anagogia;

and it was carried into practice with almost painful consequences. For example, Lk 2^{21} means (1) verbally, that Jesus was circumcised on the 8th day (the best time for the operation), (2) allegorically, the eight parts of Holy Scripture, (3) morally, the eight stages of repentance, (4) anagogically, the octave of the Resurrection, the eight ages of the world, the eight blessings of future salvation (*Leg. aur.* 13). This method, like that of the Rabbis, thinks nothing of placing the most varied and often contradictory interpretations side by side. They are gathered in from all quarters, and the more the better, provided only that by a good *partitio* the appearance of some system is maintained. At the same time there is preserved a certain philological element fostered by Jerome's works, especially his *Interpretatio nominum hebraicorum*, and Isidore's *Etymologica*, though now and again by an independent acquaintance with the language. As a great many of the monasteries taught Greek, so we find an occasional Hebrew scholar, controversies with the Jews making a knowledge of Hebrew necessary (Sam. Berger, *Quam notitiam linguae Hebraicae habuerint Christiani medii ævi temporibus in Gallia*, 1893). Roger Bacon († c. 1292) was an excellent philologist. He found fault with the scholastic exegesis of his time, because it confined itself to *divisiones per membra varia*, after the manner of artists, forced concordances after the manner of jurists, and rhythmic consonances after the manner of the grammarians (*Opus min.* 323). It resulted probably from the controversy with the Rabbinical exegesis that Nicolaus of Lyra († 1340), the Minorite, first set up the principle of literalism in complete clearness, though, indeed, his acceptance of a *duplex sensus literalis* became a side-door to allegorical interpretation. Knowledge of the Rabbinical exposition increased through Jewish converts like Paul of Burgos, and therewith also the doubt as to the sole accuracy of the Patristic exegesis.

Here, now, we meet with the Reformation exegesis, whose principle was that the literal sense was the only right one. The new religious principle of confidence in the revealed God overcame the Neo-Platonic delight in mystery. The new interest which Humanism awakened in the original languages also helped (Reuchlin, Erasmus). Its effect is seen in Melanchthon and Calvin more than in Luther, to whom the religious motive was always the deciding one. It has to be said that exegesis did not by any means free itself at once from the custom of centuries. The example of the Fathers produced an after-effect, and all the more so since exegesis continued to be preponderatingly interested in dogma or edification. However diligently exegetes laboured, systematic interests held the first place in the orthodox period, and the exposition of Pietism aimed always at practical edification. Rationalism, which read the Bible no longer as God's word, but as the product of human composition, arrived, in theory at least, at a purely historical exegesis, whose aim was to establish clearly what the author really meant by his words. In the working out of this, however, it came to grief, and indeed fell into the mistake of modernizing. It could not think of the Biblical authors as less enlightened than it prided itself on being. It was only last century that historical exegesis came to be practised; and at the close of the century it was practised to excess in the effort to exhibit the views of the Biblical writers with archaic realism, and to render as clear as possible the difference between the ideas of then and now. Exegesis received a tremendous impulse. Everywhere great enterprises were called into life, chiefly by the collaboration of several exegetes.

Exegesis still exhibits the greatest possible differences in dealing with the text, but the principle that the meaning is to be reached by means of a grammatico-historical exegesis is being more firmly established. It cannot fail to become more widely recognized, moreover, that such an exegesis needs no supplementing to become theological. To explain the Bible historically means to grasp and expound it in its spirit, and the spirit of the Bible is religious. It is matter of rejoicing that this idea is gaining ground among exegetes, and we may rejoice too in the fact that more attention is given now than formerly to form, and that, following Herder's successful start, æsthetic questions receive consideration. At the same time the beauty of the Bible will never

* Kihn, *Theodor von Mopsuestia und Junilius Afr. als Exegeten*, 1880.

reveal its chief aspect. Theological exegesis has rather to learn from the general investigation of the history of religions. When the old conception of inspiration is given up, it follows that in the domain of exegesis the isolating of the Bible in regard to language and subject-matter must cease. As the OT cannot be understood without the study of Babylonian texts, so in the NT regard must be had not only to the OT, but also to profane sources. Religious ideas are to be followed up in their general development in the history of humanity and not only of Israel. What we find peculiar to the Bible has to be observed as carefully as what it possesses in common with other sources. Exegesis is not to be dissolved into isolated studies in religious history; it must make its aim the understanding of the religious personalities which speak to us in these writings as bearers of Divine revelation.

It would take us too far to add to this sketch of exegesis a detailed survey of individual exegetes and their services. Much of the Patristic work is lost. A beginning has just been made in the task of recovering these older works from excerpts made by succeeding ages (*e.g.* Apollinaris of Laodicea, H. Lietzmann, 1904; Petrus of Laodicea, G. Heinrici, 1908; Titus of Bostra, J. Sickenberger, 1901, cf. C. H. Turner in *HDB*, ext. vol. 484 ff.) in connexion with the investigation of mediæval compilations (Heinrici, art. 'Catenen' in *PRE*[3], iii. 754 ff.; H. Lietzmann, *Catenen*, 1897; Karo-Lietzmann, *Catenarum Græc. Catalogus*, 1902; M. Faulhaber, *Die Prophetenkatenen*, 1899; J. Sickenberger, 'Die Lukaskatene des Niketas von Herakleia,' *TU*, new ser., vii. 4, 1902; A. E. Schönbach, *Über einige Evangelienkommentare des Mittelalters*, 1903 [*SWAW*, cxlvi.]; Ed. Riggenbach, 'Die ältesten latein. Kommentare zum Hebräerbrief,' in Zahn's *Forschungen*, viii. 1, 1907; J. Haussleiter, *Victorin von Pettau*, 1900; A. Souter, 'The Commentary of Pelagius on the Epp. of Paul,' 1907 [*Proceedings of the Brit. Acad.* ii.]; H. L. Ramsay, 'Le Commentaire de l'apocalypse par Beatus de Liebana,' in *RHLR*, 1902). Notwithstanding all investigation, the greatest part will remain lost. On the *Glossa ordinaria* of Walafrid Strabo, the authoritative text-book of mediæval exegesis, and the commentaries of Nicolaus of Lyra, which were often printed together with the *Glossa*, see Ed. Reuss and R. Schmid in *PRE*[3] xx. 790, xii. 28. A bibliography of modern exegetical literature would need a volume to itself.

In place of the old collections of *Critici sacri* (1660) and the Synopses of M. Polus (1669) and Starke (1733 ff.), we have in Germany, for the OT, specially the Biblical commentary of Keil and Delitzsch (1861 ff.) and the short commentary of Strack and Zöckler (1884 ff.), both conservative. From the critical standpoint we have Hitzig's short text-book (Knobel, Dillmann, etc., 1841 ff.), now superseded by the commentaries of Nowack (1892 ff.) and of Marti (1897 ff.). For the NT we have Meyer's critical and exegetical commentary (1832), still a standard work in its new editions (by B. Weiss, Wendt, Heinrici, and others), and de Wette's short exegetical handbook (1836 ff.), superseded by Holtzmann's short commentary (1889), which has itself been supplemented by Lietzmann's essentially philological text-book (1906). A more conservative commentary began to be published by Zahn in 1903 ff. Of a more practical nature are the Bible-works of Josias Bunsen (1858 ff.) and J. P. Lange (1857 ff.); recently J. Weiss (1906). England has the *Speaker's Commentary* (1871 ff.), the *Pulpit Commentary*, by Dean Spence and J. S. Exell (1880 ff.), the *International Critical Commentary*, edited by Driver, Plummer, Briggs (1895 ff.), and Robertson Nicoll's *Expositor's Bible* (1895 ff.). France has the fine unified work of Ed. Reuss, *La Bible* (1874–81). Catholicism has to add to the *Cursus Scripturae Sanctae*, by the Jesuits Cornely, Knabenbauer, and Hummelauer (1886 ff.), something a little more modern in the *Manuel Biblique* by Vigouroux (1881 ff.).

LITERATURE.—Ed. Reuss, *Gesch. der h. Schriften des NT*[6], 1887, pp. 574–679; L. Diestel, *Gesch. des AT in der christl. Kirche*, 1869; H. Holtzmann, 'Das Problem der Gesch. der Auslegung' (*Heidelberger Festschrift*, 1880); G. Heinrici, art. 'Hermeneutik,' in *PRE*[3] vii. 718–750; F. W. Farrar, *Hist. of Interpretation* (*BL*, 1885), 1886; G. H. Gilbert, *Interpretation of the Bible*, 1908; H. Dechent, *Herder und die aesthet. Betrachtung der h. Schrift*, 1904; Eb. Schrader, *Die Keilinschriften und das AT*, 3rd ed. by H. Zimmern and H. Winckler, 1903; A. Jeremias, *Das AT im Lichte des alten Orients*[2], 1906, *Babylonisches im NT*, 1905; H. Gunkel, *Zum religionsgeschichtl. Verständnis des NT*, 1903; E. von Dobschütz, *Der gegenwärtige Stand der NT Exegese*, 1906; J. Weiss, *Die Aufgaben der NT Wissenschaft*, 1908.

5. **Biblical sciences.**—Exegesis presupposes the subsidiary sciences of philology and archæology, and includes the general, historical, and systematic study of the Bible's contents. In this sense the Biblical sciences have always existed, although the strictly scientific method is a modern achievement.

It is easy to undervalue the scientific labours of the early Church upon the Bible. It is true that these were often of an elementary character, and not devoid of the element of fancy. We possess an instance of this in the explanation of Biblical names in the *OS* (ed. Lagarde, 1870, [2]1887), which, though ultimately traceable to Philo, is probably rightly considered the work of Origen. It is preserved only in Gr. excerpts, and in the Lat. revision by Jerome. Eusebius's Biblical topography, also translated by Jerome, is of the same kind (*Eusebius' Works*, vol. iii., by Klostermann, 1904). Here, alongside of monstrosities like the Hebrew derivation of Latin proper names (Pilatus = פה לטש), we find excellent geographical notes. All through the Middle Ages these explanations of names were considered such valuable aids to allegorizing, that the two translations by Jerome were usually bound up with the Bible. Many of the homilies presuppose the use of alphabetically arranged collections of texts such as we find in concordances. The concordance which was organized in the 13th cent. (*c.* 1243) by Paris theologians under the lead of Hugo of St. Caro, and afterwards revised and improved by Franc. Luca, Hub. Phalesius, Balth. Tournaire, Dutripon, etc., was certainly not the first attempt of the kind. Fragments of even a Coptic work of this kind are preserved (Pleyte and Boeser, *Manuscrits Coptes du Musée . . . à Leyde*, 1897; O. von Lemm, *Kopt. Misc.* lii. 4–7).

Aids of a mnemonic kind to the understanding of the Bible were sought with special diligence. This purpose was served by the *Synopsis Script. Sacrae*, which may perhaps have come from Chrysostom himself, and by many of the *capitulationes*. The *Hypomnesticon* of the so-called Josephus Christianus contains all that was considered worthy of remark (*PG* cvi.). The most curious work of this kind is the *Caena Cypriani*, probably a Gallic product of the 5th cent., revised by Rabanus Maurus about 840 (ed. Harnack, *TU*, new ser., iv. 3, 1899). The Middle Ages made both Gr. and Lat. *versus memoriales*, in which the contents of the different books and various Biblical questions were contained. In the 15th cent. what was called the *Ars Memorandi* appeared in the form of a block-print. This whole material requires to be thoroughly collected and investigated.

We have already dealt with the literary material and its tradition. On the one hand, there were the *Church History* of Eusebius (tr. by Rufinus) and Jerome's *de Viris illustribus*, to which must be added the pseudo-Athanasian *Synopsis Scr. S.*, and also Isidore of Seville's *Proœmiorum liber* and

de Ortu et Obitu Patrum. On the other hand, there were the *Prologues* (ὑποθέσεις, *argumenta, praefationes*). In this way there was produced a work similar to the Jewish Massorah, equally anonymous, indefinite in date, growing with time, and fluctuating in tradition. Under the name of 'Euthalius,' the portion referring to Paul, the Acts, and the Cath. Epp. has received special attention and investigation, though without as yet quite definite results. What the ancients called εἰσαγωγὴ εἰς τὰς θείας γραφάς (*e.g.* Adrianos, *c.* 430) does not correspond to what we understand by Biblical introduction. It was what we should now find in some handbook on Biblical hermeneutic. It belonged to the same class as the *Instituta regularia divinae legis* of Junilius Africanus, who lived in Constantinople and took them from the lectures of Paul of Nisibis (551), the *Liber de VII regulis* of the Donatist Tychonius Afer, Augustine's *de Doctrina Christiana*, bk. iii., the *Formulæ Spiritalis Intellegentiae* of Eucherius of Lyons, and similar interpretative works.

Biblical history, in spite of its importance for teaching (see V. 3), did not receive scientific treatment in the older period. Mingled with general history, it appears in the form of *chronicles* by Hippolytus, Junilius Africanus, Eusebius, Hieronymus, and many others. For the purpose of apologetics, Augustine put sacred and profane history side by side in his great work, *de Civitate Dei*. The unified presentation of tradition, with some additions from universal history, and here and there a critical note upon various attempts at harmonizing, was best found in the *Historia scholastica* of the Paris teacher, Petrus Comestor († 1179), and the *Speculum historiale* of Vincent of Beauvais (*c.* 1264). The *Lives* of Jesus, which increased so much in number towards the end of the Middle Ages, belong entirely to the literature of devotion. The most widely circulated of such Lives was the *Vita Jesu Christi*, by the Carthusian Ludolf of Saxony (*c.* 1330). The Biblical theology which Roger Bacon demanded, in contrast to the scholastic sentences, remained a pious wish.

It was not till within modern times that Biblical sciences actually appeared. Their cradle was found in Holland among the Arminians. It was there that the great foundation compilations were made both in classical and in Biblical philology and archæology. For the study of the Hebrew language Reuchlin's labours provided the start (1506), and his work was extended mainly by the elder Buxtorf († 1629; *Thesaurus Grammaticus* and *Lexicon*). From the Dutchman, Alb. Schultens († 1750), Johann Dav. Michaelis († 1791) took over the comparative method. In the work of Gesenius († 1842) this combined with the statistical to produce a system which was considered a pattern for long. Then J. Olshausen († 1882) and, above all, B. Stade († 1907) applied the historical method developed by Germanic philology to the study of Hebrew with the greatest success. In the case of the NT the Biblical philology of Georg Pasor († 1637, Franecker), Sal. Glassius († 1656, Jena), and Joh. Jakob Wetstein († 1754, Amsterdam) was again taken up by Ernesti's school at Leipzig, and reached in the *Grammar* of J. B. Winer (1822) and Grimm's *Lexicon* (1867) a position which it maintained till the knowledge of Hellenistic popular speech, made possible by the new papyrus discoveries, widened the horizon (A. Deissmann, *Bibelstudien*, 1895, *Neue Bibelstudien*, 1897, *Licht vom Osten*, 1908). In the 19th cent. the Erlangen school and H. Cremer renewed the attempt to isolate the language of the Bible as much as possible, but this newest turn made the idea of *philologia sacra* impossible. Classical philologists now work in competition with theologians in this field (F. Blass, *Grammatik*, 1896; E. Norden, *Antike Kunstprosa*, 1898; Thumb, *Die griech. Sprache im Zeitalter des Hellenismus*, 1901). In regard to *physica sacra*, the course has been the same. The *Hierozoïcon* of Sam. Bochart († 1667) and similar compilations still show us the transition from the manual of science based upon revelation to the modern archæological method which we find in our newer Bible dictionaries. Biblical archæology has won its way from a collection of scholarly observations to a unified presentation of the subject, made possible by the idea of evolution, to which we owe the fact that archæology has become a fruitful subject of study for the history of religion.

It is owing to the activity of the Palestine Exploration Fund and the Deutscher Palästina-Verein that Biblical geography, formerly a mere collection of travel-notes, is coming to form a systematic and complete discipline, showing how to appraise the witnesses of tradition by reference to local conditions (Fr. Buhl, 1896). Geography is thus becoming an important aid to Bible history, which is no longer content merely to repeat tradition or even to criticize tradition, but is gradually winning its way to a general view of the actual historical development, with its motive powers, including persons as well as ideas. In this process naturally the unity of the Biblical point of view is more and more lost sight of. We have the History of the People of Israel (Ewald, Renan), or, more accurately, Israelitish and Jewish History (Wellhausen). Distinct from that, there are the History or the Life of Jesus (Keim, P. W. Schmidt, B. Weiss, and many others), and the History of Apostolic and post-Apostolic Times (Weizsäcker, Knopf, McGiffert, Vernon Bartlet). The Middle Ages did not altogether reject secular evidence, and now the bringing of Biblical history into the frame of general history is a principle. The background acquires increasing significance through the Egyptian and Assyro-Babylonian discoveries and the clearer knowledge which we possess of Judaism and Hellenism in NT times, and threatens, under the influence of the modern positive treatment of history, almost to overshadow the really important features. By way of reaction, we have the treatment of the 'history of salvation' by itself.

A greater degree of advance than in those Biblical subsidiary sciences is to be observed in the two comprehensive disciplines which in the academic studies of our time bear the traditional names of 'Biblical Introduction' and 'Biblical Theology.' It was the 18th cent. that first transformed these into the independent sciences which they now are, through an entire re-arrangement, in the spirit of historical criticism, of the material received from the Middle Ages and orthodox theology. From scattered traditions concerning the Biblical books and their authors there arose the historico-critical introduction to the OT and the NT by the subjection of the material to external and internal criticism. The Scriptures themselves were carefully examined to discover how far they corresponded with traditional views about them. This negative procedure, which was due to the dogmatic consideration of canonicity, was superseded by the literary method (see above, 3), which acknowledges the Scriptures to be part of a great development. In this field the distinction between canonical and uncanonical books remains more and more outside consideration (see the collections of the apocryphal and pseudepigraphic books of the OT by Kautzsch, 1900, and of the NT Apocrypha by Hennecke, 1904; the splendid editions of R. H. Charles and M. R. James; Budde's *History of Hebrew Literature*, 1907; the Histories of old Christian Literature by A. Harnack, 1893, and G. Krüger, 1895). Con-

trariwise on the philological side, the Jewish-Christian literature is given a place in the general literature of the Orient and Greece (von Wilamowitz, in *Kultur der Gegenwart*, i. 8², 1907; Gunkel, *ib.* i. 7).

The so-called Biblical theology, which originated in the collection of passages to prove dogma, first became an independent study as a system of Biblical dogma urged by Pietism, in opposition to the scholastic dogma of orthodoxy. Soon it began to draw historical distinctions (OT and NT and then their various parts), and developed into a representation of the various Biblical systems of doctrine. Hegel's philosophy taught us to see therein a complete development. Thus we arrive at the modern study of the religious history of Israel and Judah and early Christianity, the doctrinal element being more and more consciously subordinated to the study of pious feeling and its effects in the life and thought of men. In place of the Divine story of revelation, we find a history of human piety and pious ideas. In view of the current conception of science, this is unavoidable. But faith is always at liberty to recognize in such human piety and its continual advance the effect of Divine revelation. In this distinction of methods of treatment (scientific and devotional) there lies the guarantee of sound development.

Altogether, the present position of Bible study is quite remarkable. No age has seen such intense study; no age has spent such a wealth of mental energy in Bible investigation; no age has produced such a rich literature on the Bible. The field is so enlarged and the labour so minute, that individuals can hardly keep the whole field in view. Therein lies a danger, and each individual discipline must always remember the common aim. Above all, the study of the OT must never lose sight of its goal in the NT, and the study of the NT never lose sight of its foundation in the OT. Otherwise the living nerve will be snapped; and, however necessary scientifically a clear view of the external relations of the Bible is, on the one hand, it must be remembered, on the other, that the Christian interest which confines itself to the Bible is equally justified. The methods which theology employs in its Biblical sciences are the same as those of all other sciences, but the standpoint is different. The interest with which it handles the material is the interest of Christian piety.

LITERATURE.—G. Hoberg, *Überblick über die Entwickl. u. den Fortschritt der bibl. Wissenschaften auf christl. Boden von ihrem Anfang an bis zur Jetztzeit*, 1902: C. A. Briggs, *The Study of Holy Scripture*, 1899.

History of Biblical Introduction: H. Holtzmann, *Lehrb. der hist.-krit. Einleit. in das NT*³, 1892, 1-16; Jülicher, *Einleit. in das NT*⁶, 1906, pp. 7-21.

History of Biblical Theology: B. Stade, *Bibl. Theol. des AT*, 1905, i. 6-11; H. Holtzmann, *Lehrb. der NT Theol.*, 1897, i. 5-22.

History of Biblical Archæology: W. Nowack, *Lehrb. der hebräischen Archäol.*, 1894, pp. 15-24.

History of Biblical Philology: Winer's *Grammatik*⁸, revised by P. W. Schmiedel, 1894, pp. 4-15.

There is as yet no history of Biblical History, but see H. Vollmer, *Vom Lesen und Deuten h. Schriften*, 1907.

History of Research in the Life of Jesus: C. Hase, *Gesch. Jesu*, 1876, pp. 150-174, more objective than A. Schweitzer's *Von Reimarus zu Wrede*, 1906, which is dominated by its eschatological point of view.

The best information as to the enormous growth of Biblical literature in the last decades is to be found in the *Theologische Jahresbericht*, founded in 1881 by Pünjer, continued by Lipsius, H. Holtzmann, and now ed. by Krüger (OT reviewed by Siegfried, Baentsch, Beer, Gressmann, Volz; NT reviewed by H. Holtzmann, A. Meyer, Knopf, J. Weiss, etc.). In addition there is the *Theologische Rundschau*, ed. by W. Bousset and W. Heitmüller—since 1897.

In place of the *Jahrbücher für Biblische Wissenschaft*, by H. Ewald (1849-1865), and similar publications, such as Hilgenfeld's *Zeitschr. für wissenschaftl. Theologie*, 1858-1907, we now have the *Zeitschr. für AT Wissenschaft*, by B. Stade (now K. Marti), 1881, and the *Zeitschr. für die NT Wissenschaft und die Kunde des Urchristentums*, by E. Preuschen, 1900—a testimony to the progress of specialization. In America there are devoted to Biblical studies in especial the *Journ. of Bibl. Lit.* (1880 ff.) and the *Bibl. World* (1893 ff.), and in Britain the *Expositor*, 1875 ff., the *Expository Times*, 1899 ff., and the *Interpreter*, 1905 ff. For scientific Biblical research by the Catholics of France the central point is the *Revue Biblique*, by Lagrange, 1892; in Germany, the *Biblische Studien* of Bardenhewer, 1895 ff., and the *Biblische Zeitschrift* of Göttsberger and J. Sickenberger, 1903.

In encyclopædic form the whole material is offered at an earlier stage by G. B. Winer, *Biblisches Realwörterb.*³, 1847 f.; D. Schenkel, *Bibellexicon*, 1869-73; E. Riehm, *Handwörterb. des bibl. Altertums*, 1884, 2nd ed. 1893-94; Wm Smith, *Dictionary of the Bible*, 1863 (Amer. ed. Smith-Hackett, 1892; 2nd Eng. of vol. i., ed. Smith-Fuller, 1893); J. P. Migne, *Scripturae Sacrae Cursus Completus*, 1861-63; Hamburger, *Realencyclopädie für Bibel und Talmud*, 1883 ff.

All these, however valuable they were in their own time, are now superseded by recent works. Now we have the exhaustive articles of Hauck's *Realencyc. für Prot. Theol.*³, 1896-1908. There are also the *Kalw. Bibellexicon*, by P. Zeller², 1893; H. Guthe, *Kurzes Bibelwörterbuch*, 1903; J. Hastings, *Dict. of the Bible*, 1898-1904, *Dict. of Christ and the Gospels*, 1906-08, and *Dict. of the Bible*, in one vol., 1909; T. K. Cheyne-J. S. Black, *Encyc. Bibl.* 1899-1903; F. Vigouroux, *Dict. de la Bible*, 1895 ff.; *Jewish Encyc.* 1901 ff.—an imposing array, in itself a proof of the high standard to which Biblical science has attained in our time.

V. *THE BIBLE IN DIVINE SERVICE.*—The Bible was not only the authoritative standard of Church doctrine in the hands of the learned theologian; it was also the book from which the Church drew instruction and exhortation, consolation and inspiration. It was a book to be used in Divine service, just as it had been in the Synagogue. Here we come upon the great distinction between Christian and all other forms of worship. The object elsewhere is to produce some theurgic effect. The idea is to operate upon the Deity through sacrifice and prayer, and by effective symbolism to attain to some connexion, some union, with the god. This is the case in the heathen world generally, and also in the temple-worship of Judaism. Only in the Synagogue and in the Christian form of service is the central place given to God's word, as it speaks to the assembled congregation out of the sacred book with voice of instruction, edification, and exhortation.

LITERATURE.—A. C. A. Hall, *The Use of Holy Scripture in the Public Worship of the Church*, 1903.

1. Reading.—The use of the Bible in the services of the Church has been rich and varied. In the forefront stands reading. In the Synagogue the practice followed was the continuous reading of whole books. In the course of three years, *e.g.*, the Law with 154 *parashiyôth* was read through. The young Christian Church adhered to the same plan. It is to be regretted that we know nothing very definite about the reading of the Bible in the first three centuries. But from the acquaintance with the books of the Bible which is taken for granted, and which in many cases could have been gained only through the services of the Church, we may conclude that it was extensive. It is certain that the Law and the Prophets, and afterwards the Gospels and the Epistles, came to be read *seriatim*. In his description of the Christian service about 150, Justin speaks of the reading of the ἀπομνημονεύματα τῶν ἀποστόλων (*i.e.* the Gospels) and the συγγράμματα τῶν προφητῶν (*i.e.* the OT—or is it the writings of Christian prophets, in other words, Apocalypses, that he means?) μέχρις ἐγχωρεῖ (*Apol.* i. 67). These last much-disputed words seem to lead to the conclusion that there was no special division of the Scripture into portions for reading, and that the time allotted to it was not definitely fixed. Justin's statement is perhaps best understood by comparison with the custom which the present writer found in some outlying Swiss churches. At the beginning of the service, and while the congregation was still gathering ('donec totus populus congregetur,' *Can. Hipp.* xxxvii. 203), instead of the organ playing, which is customary in other places, the teacher read from the Bible, and after going through several chapters in succession suddenly broke off at the entrance of the clergyman. Naturally there

was more read than the OT books and the Gospels. The Divine service for which the congregation assembled afforded opportunity for bringing newly-received letters from other churches to the knowledge of the congregation (1 Th 5^{27}, Col 4^{16}), and also written addresses from distant teachers and prophets (He 13^{22}; II Clem. 19), particularly the records of revelations (Rev 1^{3} 22^{18}; Herm. *Vis.* ii. 4. 3). In the beginning probably some distinction was drawn between the reading of the sacred Scripture and the reading of these new letters. But the custom of reading these over and over again (see Dionysius of Corinth *ap.* Euseb. *HE* iv. 23. 11, on I Clem. and the letter from Rome by Soter) was itself enough to give them a place alongside of Holy Scripture. The effect of this was twofold. On the one hand, the extent of Scripture read in this way was increased. There are 4th and 5th cent. MSS which contain the Epistles of Clement (*Cod. Alex.*; cf. the *Syr. Codex*, dated 1170, at Cambridge and *Can. Apost.* 86), the *Shepherd* of Hermas, and the Epistle of Barnabas (*Codex Sin.*), and Athanasius makes Wis., Sir., Est., Jth., Tob., *Didache*, and Hermas into a special class of *ἀναγινωσκόμενα* (*Epist.* 39, A.D. 367). On the other hand, the Church insisted on having everything uncanonical excluded from the reading of the Bible in public worship (Synod of Laodicea, 363 [?], Can. 59; Carthage, 397, Can. 39; Westcott, p. 540)—a step specially directed against the introduction of the Apocryphal literature fostered by Montanists, Marcionites, Manichæans, and Priscillianists. The limitation to what was canonical was never quite adhered to in the mediæval Church. So early as the 4th cent. the custom was adopted of reading Martyrdoms of Saints on the days dedicated to their memory (Carthage, 397, Can. 39: 'liceat autem legi passiones martyrum cum anniversarii eorum dies celebrantur'; Liturg. Gall. *PL* lxxii., xc.). The Roman Church, always specially cautious—as, *e.g.*, in the matter of the Epistle to the Hebrews (Euseb. *HE* iii. 3. 5)—refused for a long period to read them in the services of the Church, on the ground of uncertainty of authorship and suspicion of heretical falsification (*Decr. Gelas.* v. 16, Preuschen, 151). Very soon there thus came about the reading not only of the passions of the martyrs, but also of other sacred legends (Augustine allowed miracles of healing to be read [*de Civ. Dei* xxii. 8]). All through the Middle Ages the Bible shared the honour of being read in church with these books of legends and passions. The Reformation really established the principle of reading only the Bible.

In the matter of the choice of passages for reading, the various national churches developed various practices. The Aquitanian pilgrim (Silvia, or Etheria) presents us with a picture of the extremely rich supply of readings on Easter Friday in Jerusalem (*Itin. Hieros.*, ed. Geyer, p. 89). The Syrian practice, laid down in the *Apost. Const.* ii. 57, viii. 5, seems to prescribe two lessons from the OT, one from the Epistles and one from the Gospels. Tertullian bears witness that the Roman Church and the African Church of his time followed the same custom: 'legem et prophetas cum evangelicis et apostolicis litteris miscet' (*Praescr. Haer.* 36). OT lessons are also presupposed in *Praes. Hær.* 51, *Monog.* 12, *adv. Gentes*, 22. At the time of Cyprian these seem to have been wanting in the African Church (*Epist.* xxxiv. 4, xxv.). Three readings—Prophetic, Epistolary, and Gospel—are known in the Asia Minor Church (Basil, *PG* xxxi. 425), as also in Gaul (Germanus of Paris, *PL* lxxii. 90, Liturg. Gall. *ib.* 171 ff.) and in Spain (*Liber Comicus*, ed. Morin; *Anecdota Maredsolana*, i., *Liturg. Mozarab.* ed. Cabrol-Leclerq I.). But here, too, the OT lesson was often wanting.

Later on, the number of readings was everywhere reduced to two—Epistle and Gospel. This was the case in Rome, perhaps from the time of Damasus (if it was really Jerome who compiled the first *comes*), and certainly from the time of the *Sacramentarium Gregorianum* (*PL* lxxviii. 25). The order followed—Prophets, Epistles, Gospels—is evidently everywhere considered an ascending one. That is shown in the special treatment of the Gospel. While the other lections were left to the *anagnostes* (placed in the beginning almost on the same level as the prophets as being a pneumatic, but later on taking a place among the lower clergy [Harnack, 'Über den Ursprung des Lektorats,' in *TU* ii. 4 (1886), 57 ff.]), the reading of the Gospel was reserved for a deacon or a presbyter (*Canon. Apost.* ii. 57; Sozom. vii. 19, 6). At Easter the bishop himself read (*Peregr. Silviae*, p. 73, Geyer; Sozom. *loc. cit.*). Candles were first lit for the Gospel-reading (Jerome, *adv. Vigil.* 7, *PL* xxiii. 361; Isidore, *de Offic. eccl.* ii. 14, *PL* lxxxiii. 793) [cf. Bellarmine, *de Reliquiis Sanctorum* ii. 3 (Rome, 1613, ii. 775)]. The *laudes* ('hymns') were to follow the lesson from the Gospel and not that from the Epistles (*Syn. Toledo*, 633, Can. 12, Mansi, x. 622).

Gradually the habit of reading certain books at certain periods of the Church year became fixed (*Lectiones annuæ*, Augustine, *PL* xxxv. 1977). In Lent, Genesis was read (Chrysostom, *PG* liii. 22); in Easter week, Job (pseudo-Origen on Job, *PG* xii. 103; Ambrosius, *PL* xvi. 1040); on Maundy Thursday, Jonah (Ambr. *l.c.* 1044); on Good Friday, in many churches of Palestine, the Apocalypse of Peter (Sozom. vii. 19); on the four Easter days, the reports of the Resurrection according to Matthew, Luke, Mark, John (Augustine, *PL* xxxviii. 1156; Fulgentius, *PL* lxv. 903 f.). Between Easter and Whitsuntide, the Gospel according to John and Acts (Chrys. *PG* li. 97; Augustine, *PL* xxxv. 1433, xxxviii. 1426) were read; in Spain during this season the Apoc. of John (*Syn. Toledo* 633, Can. 17, Mansi x. 624), and in Gaul the Acts and the Apocalypse (Germ. Par. *PL* lxxii. 90). On Victor of Capua see *ZNTW*, 1909, pp. 90 ff., 175 ff.

The Euthalian apparatus contains a system of *lectio continua* for the Epistles of the NT in 57 *ἀναγνώσεις* (see G. Rietschel, *Lehrb. der Liturgik* i. 1, 225). Chrysostom (*Joh. Hom.* 57, 1, *PG* lix. 311) clearly implies the *lectio continua*.

Soon, however, it came to be that special lessons were taken for every day, the reason probably being that the lessons had to be suited to the commemoration of the particular saint for the day. Gennadius (*Vir. ill.* 80) mentions the presbyter Musæus of Marseilles († 460) as the compiler of a pericope system of this kind. It is certain, however, that at the same time various systems of the kind came into existence, *e.g.* that of Claudian of Arverni (Clermont), referred to by Apollin. Sidonius (*Ep.* iv. 11). These were frequently combined with the older system. The Armenian Church broke through its *lectio continua* only on the great feast-days when it had special lessons. The Greek Church had a peculiar system of *sabbatokyriaka*: besides the *lectio continua* for the days of the week, there was also a special system of pericopes for Saturday and Sunday (so in a great many Gr. MSS; cf. C. R. Gregory, *Textkritik*, i. 327 ff.). Excellent service has been done by E. Ranke in investigating the very confused history of the various pericope systems. In the Middle Ages Charlemagne was the first to give attention to this matter. Improvements were essayed in all countries, usually in the vain endeavour to bring about uniformity. The Roman practice established itself more and more generally. It was this *usus Romanus* that the Reformers found

to hand, and there were many attempts at improvement. These have not ceased even in modern times, nor has any unanimity been reached even in the churches of Germany. In 1898, *e.g.*, in Prussia, besides the usual lessons from the Epistles and the Gospels, others were introduced, in which OT passages were included. The lectionary put together for Rhineland by Nitzsch, and the Bavarian system revised by Thomasius, contain a series of OT lessons extending over a year, while in the Palatinate the system in use extends to a four years' course.

There is great uncertainty as to the motives which induced the choice of the different pericopes. Many of them owed their existence to chance, and were afterwards justified by ingenious theories.

In the ancient Church the principle was always strictly adhered to that the reading of Scripture was for the congregation, and must therefore be intelligible. When this was not immediately possible for everybody, the reading was accompanied by translation, just as formerly in the Targums of the Synagogue. In the whole of the Western half of the Empire Greek was almost everywhere read and understood. In many parts of Syria and Egypt recourse was had to oral explanation, until translations in the respective tongues were made. In the case of Jerusalem we know that the Greek lessons and also the Greek sermon were immediately translated into Syriac for the people, and when there were pilgrims present from the West a translation was made for them into Latin (*Peregr. Silviae*, p. 99, Geyer). In the same way in the West, translations of the Latin were given in the Celtic, Punic, and Iberian tongues.

In any case it was understood that the whole congregation could follow the reading. Attention to the reading of Scripture is mentioned in an episcopal letter of the 4th cent. (Petrus Alex. [?], C. Schmidt, *TU*, new ser. ii. 4[b], 5) as the most important part of the Sunday regulations. The reading of Scripture was also expected to produce a direct effect upon the hearers. In a great number of records of conversion the crisis was reached suddenly while some passage of Scripture was being read in Divine service. Athanasius relates that the conversion of St. Anthony (*Vita*, ch. 2, *PG* xxvi. 841) was due to his chance hearing of Mt 19[21]. Augustine remembered this at his own conversion, when, hearing a voice say 'Tolle, lege,' he took the Scripture and read Ro 13[13] (*Confess.* viii. 12, 29). It was hearing Mt 19[29] read that induced Hypatius, a youth of 18 years, to leave his home, though the biographer states naïvely enough that his father had previously thrashed him (*Vita*, by Callinicus, p. 9, ed. Bonn). Similar stories are related of Babylas the actor (Moschos, *PG* lxxxvi. 2880), and of Simeon Stylites (Lietzmann, *TU*, 3rd ser., ii. pp. 2, 20, 81, *Synaxarium Constantinopolitanum*, 1 Sept).

Not until the Middle Ages did it happen that in almost all churches, both Oriental and Latin, the Holy Scripture was read in a tongue unintelligible to the people. Even Charlemagne would have none of this, and demanded that wherever necessary there should be an interpreter. This practice, however, entirely ceased, until in the 13th cent. some attempt was again made to have the sermon delivered in the language of the country. Thus a custom which arose only through tenacity of ecclesiastical practice and clerical remissness was afterwards justified by the theory that a holy speech was seemly for the Holy Scripture. The abandonment of intelligibility was connected with the development of the Catholic service to a business of the priests, before and for the passively interested congregation. The Reformation broke away from this idea of worship and from the view of sacred unintelligibility, and returned to the principle of the ancient Church.

LITERATURE.—P. Glaue, *Die Vorlesung heil. Schriften im Gottesdienst*, 1906; E. Ranke, *Perikopensystem*, 1847; Scrivener, art. 'Lectionary' in Smith-Cheetham, *DCA* ii. 550 ff.; G. Rietschel, *Lehrb. der Liturgik*, i. 1900, 223 ff.; W. Caspari, art. 'Perikopen,' in *PRE*[3] xv. 131–159; artt. in *ExpT* from Oct. 1905 to May 1907.

2. Preaching.—The reading of the Scripture was not all. An attempt was made to come still more to the congregation's aid. To the reading there was nearly always added an exposition, with a hortatory, explanatory, and devotional application (cf. Lk 4[17ff.]). According to Justin (*Apol.* i. 67), the reading was followed by an admonitory and inspiring address by the presiding presbyter. The second Epistle of Clement seems to be a homily on Is 54–56 (Knopf, *Preuschens ZNTW* iii. 206 ff.; cf. *Acta Petri c. Simone*, 20; Augustine, *de Civ. Dei* xxii. 8, p. 611, 9, 10; *CSEL* xl. 2).

Often the preachers refer in the introduction of the sermon to the passage of Scripture read. This is the practice of Augustine, Cæsarius of Arles, Petrus Chrysologus of Ravenna, Chrysostom, and even Theophanes Kerameus. Bede often begins, 'Lectio sancti evangelii quam modo, fratres, audivimus . . .' At a later date the words used were, 'Post illa verba s. scripturae,' and hence from the 14th cent. the name *postilla*, 'postil,' was applied to collections of sermons (Nicolaus of Lyra, Geiler of Kaysersberg, Luther, etc.).

In many cases these sermons are nothing more than the devotional exposition of the Scripture. This is the nature of the homilies of Origen, who, besides his commentaries and scholia, expounded almost the whole of the sacred Scripture. We are acquainted with 17 homilies on Gen., 13 on Exod., 16 on Levit., 28 on Numbers, 13 on Deut., 26 on Joshua, 9 on Judges, 4 on 1 Sam. and 1 on 2 Sam., 1 on 2 Chron., 2 on Ezra, 22 on Job, more than 100 on Psalms, 2 on Proverbs, 8 on Eccles., 2 on Song of Sol., 32 on Isaiah, 45 on Jeremiah, 14 on Ezekiel. There are 25 homilies on Matt., 39 on Luke, 27 on Acts, 11 on 2 Cor., 7 on Gal., 2 on Thess., 1 on Titus, 18 on Heb.—altogether close on 500. In the same way we possess continuous expositions of whole books of the Bible in the form of sermons by Ambrose, Augustine, Chrysostom, etc. In Lent there was a sermon every day, and on Sundays there were two. The peculiar method followed by Chrysostom is worthy of remark. First he gives a complete practical exposition of the passage, and then in a second part he deals with some theme that has often very little connexion with it.

A special kind of such exposition is represented by the discourses which Jerome delivered in the monastery (ed. Morin, in *Anecd. Mareds.* ii.). These have not been preserved in their complete form, but only as they were written down freely afterwards from shorthand notes. Occasionally he expounds a Psalm, and immediately afterwards a passage from the Gospels (*Rev. Ben.* xix. 30). The so-called little catecheses of Theodore of Studium originated in the same way (ed. Auvray and Tougard, 1891; cf. A. Gardner, *Theodore*, p. 82 ff.).

But even where sermons do not deal with continuous passages in this way, as in those of Petrus Chrysologus of Ravenna and Maximus of Turin (both about 450), the majority of them have texts from the Bible as their foundation. Even occasional addresses are joined to a definite text, and the sermons are so full of Scripture references, that, despite their elevated rhetoric, they amount to centos made from passages of the Bible, as, *e.g.*, the opening sermon delivered by Gregory of Nazianzus at the Council in 381 (Mansi, iii. 529 ff.).

Gennadius (*Vir. ill.* 100) boasts of the extraordinary facility which his countryman, Bishop Honoratus of Marseilles, showed in extempore preaching, and accounts for it mainly by his rare acquaintance with Scripture.

It is true that in the matter of preaching, too, the Bible had to compete with the legends of the saints. Chrysostom and Augustine preach a great deal about the glorious deeds of the martyrs and the miracles of the saints. In the collections of sermons which are characteristic of the later Middle Ages, such as the *Homiliarium* of Paulus Warnefrid * made to the order of Charlemagne, or the *Homiliae Toletanae*,† sermons of both classes are found side by side. Later on a distinction was drawn between the *sermones de tempore* (on the Biblical pericopes of the Church year) and *de sanctis* (on the legends of the saints), *e.g.* by Hildebert of Tours († 1134), Bonaventura († 1274), Heinrich of Frimar (about 1340), Pelbart of Temesvar (about 1500), and many more.

Generally speaking, in the Middle Ages the sermon fell more and more into the background or assumed a barren form. In many Oriental churches it almost ceased. Among the Copts the only preacher was the Patriarch, and he preached only once a year. The Byzantine liturgy has scarcely a proper place for the sermon. The Western mass can not only do without it, but is then much more of a unity. Hence it is that the sermon is often a feature of supplementary services. But even where we find it in ordinary connexion with the reading of the Bible in the later Middle Ages, it has wandered far from its original purpose. It has become dogmatic, and is Biblical only so far as scholasticism operates with the authority of the Bible for its own purposes. It was otherwise in popular preaching, and especially preaching in the languages of the country, such as the exhortations of the Franciscans like Berthold of Regensburg († 1272); the German preaching of the mystics and popular men like Tauler († 1361) and Geiler of Kaysersberg († 1510); and in England Richard Rolle of Hampole († 1349).

Nevertheless it must be acknowledged that it was not till the Reformation that preaching again returned to its task of expounding the Bible. Apart from exceptional cases like Mathesius's sermons on Luther's life, Sermons on the Catechism or the Hymn-book, or even the modern experiment of preaching upon Schiller, the Holy Scripture is acknowledged in all Protestant Churches as the exclusive foundation of the sermon. It cannot be denied that, partly through the coercion of the pericope system, but chiefly in consequence of the scholastic tendency of thought in the orthodox period, its connexion with the text often became very loose. In Pietism, however, the connexion again gained strength, and to-day it may be laid down as the general requisite of Protestant preaching that it should be in keeping with the text, or, in other words, Biblical. In Luther we meet again with the exposition of whole books in a series of sermons—a form that has lately gained much vogue (*e.g.* the four Gospels in 'Predigten und Homilien,' ed. by Kögel, in association with Dryander, Frommel, and Pank, 1889 ff.).

Even where, in opposition to the style of homily which follows the text step by step (developed with special success by Menken), the so-called thematic sermon is preferred, not only is the theme drawn out of the text or chosen because of its close connexion with the text, but also in its elaboration the effort is made to exhaust the text as far as may be.

* F. Wiegand, in Bonwetsch-Seeberg, *Studien zur Gesch. der Theol. u. Kirche*, i. 2.
† G. Morin, *Anecd. Mareds.* i. 1893.

In addition to this, we have within recent times the Bible-class by way of supplement to the sermon. It was introduced by Pietism (Collegium biblicum directed by Spener and A. H. Francke), and is becoming more and more common. In entire freedom from the compulsion of the pericope, which is still followed in some churches, it supplies a connected system of Scriptural exposition.

LITERATURE.—Hering, *Gesch. der Predigt*, 1897; Schian, in *PRE*[3] xv. 623–747; *Altdeutsche Predigten*, ed. A. E. Schönbach, 3 vols. 1886–91; G. Dargan, *A History of Preaching*, 1905; J. Ker, *Lectures on the History of Preaching*, 1888.

3. Catechetics.—Besides the sermon as a means of explaining the Holy Scripture, we must not forget the instruction given in catechetics. In the classic form which it bore in the ancient Church this began with a survey of Bible-history, having regard to its typological and allegorical significance. A splendid instance is given in the newly-discovered work of Irenæus entitled *εἰς ἐπίδειξιν τοῦ ἀποστολικοῦ κηρύγματος* (*TU* xxxi. 1, 1907). In Jerusalem during the Lent season three hours daily were given to this instruction (*Peregr. Silviae*, p. 97; cf. Augustine, *de Catechiz. rudibus*).

With regard to the catechumens, the teacher could take for granted their wide acquaintance with the Holy Scriptures. The reading of Scripture took place during the first part of the service, to which catechumens were admitted (*missa catechumenorum*); they, indeed, were the 'hearers' (*ἀκροώμενοι*). Over and above this, Cyril of Jerusalem exhorted his catechumens to diligent reading in private of the Scriptures recognized by the Church (*Cat.* iv. 33 ff., *PG* xxxiii. 493). In the West, indeed, the creed (*symbolum*) was more emphasized than the sacred Scriptures, and so it happened that, as time went on, instruction in the Bible received less attention. The age of Charlemagne was content with the Decalogue and the Paternoster.

This catechetical tradition influenced even Luther, although, so far as was possible, he strove for the widening and deepening of Bible knowledge. When the practice of catechetics received a fresh lease of life in connexion with confirmation under pietistic influence, Biblical material came to be more handled again, and nowadays the catechism most favoured is that which adduces many Bible-texts as proofs or is altogether couched in Biblical phraseology. Bible-history forms a main subject of popular education. Where this is not the case, or the religious aspect is neglected, the attempt is made to make up, for what has been missed, by Sunday Schools and Children's Services. The modern tendency of the Herbart-Ziller school to make the Biblical history yield to other narratives (*Märchen*, Robinson Crusoe) undervalues the religious and moral, and therefore the pædagogic, value of the Scriptures. Modern theology of the historico-critical school, too, has raised many objections to the old method of treating Bible-history. It is not, however, merely a matter of history, but of the spirit in which it is handled. Bible-history is not now what it was in the Middle Ages, the history of humanity. For us it is but a history of faith. The important feature is not the knowledge of history, but the perception of faith. The aim must be to get the child to reach beyond the history into the spirit of the prophets and the perfection of Christ. This being so, the newer critical Biblical science sets religious instruction

the difficult task of making the Bible a cherished and beloved book to the child, of investing it with honour and authority in his eyes, and at the same time of making him adopt such an attitude towards it as the knowledge of defects and mistakes in its record of history and natural history will not disturb. See art. CATECHISMS AND CATECHIZATION.

LITERATURE.—H. Vollmer, 'Beitr. zur Gesch. des bibl. Unterrichts,' in *Mittheil. der Gesellsch. f. deutsche Erziehungs- und Schulgesch.* 1904, *Monatschrift f. d. kirchl. Praxis*, 1904, and *Evangelische Religionslehre*, 1906; Caspari, art. 'Gesch. biblische,' in *PRE*[3], vi. 619–22; J. Hoffmann, *Die h. Schrift, ein Volks- und Schulbuch in der Vergangenheit*, 1902; E. Chr. Achelis, *Der Dekalog als katechet. Lehrstück*, 1905; E. Kautzsch, *Bibelwissensch. u. Religionsunterricht*, 1900.

4. Prayer and praise.—To the direct devotional value of the Bible in reading and exposition there have to be added yet other elements of Biblical origin. Nearly all the liturgical formulæ—Amen, Alleluia, Hosanna, Kyrie Eleison, Gloria, and Pax—find a place here. The single exception to this in the ancient Christian liturgy is the *Sursum Corda*, whose origin still remains uncertain. The Lord's Prayer, which is to be heard at every Christian service, is Biblical, and so also are the different forms of the Benedictions. The Reformed Churches have also the Decalogue as a part of the service, while—the difference is significant—the Lutherans adhere to the Credo of the Catholic mass, usually in the form of a hymn of faith. The foundation and the language of most prayers are Biblical. Often whole Psalms are taken over, or single passages from the Psalms are worked in. The Psalter as the prayer-book of personal devotion is dealt with in VI. 1 and 3.

Then also there is the singing of psalms. In the ritual of the Temple this formed a most important part of the service, almost all the spoken part. In meetings of the Synagogue also it had a part to play. So it was immediately adopted by the Christians and diligently cultivated. It is disputed whether by *ψαλμοί, ὕμνοι, ᾠδαὶ πνευματικαί* (Col 3[16], Eph 5[19]) we are to understand the Psalms of the OT or specially Christian poems (or both together). The canonical Psalter was of course completed, but the poetry of the Synagogue was not yet exhausted, as is witnessed by the eighteen 'Psalms of Solomon' from the period subsequent to B.C. 63. The exalted mood of the early Christians, the wonderful experience of the new salvation, must have fostered poetry. 1 Co 14[15. 26] as well as Pliny's statement 'Christo quasi deo carmen dicere' suggest new Christian poems. We find samples of these in 1 Ti 3[16], Rev 11[15. 17f.] 12[10ff.] 15[3f.] 19[1f. 5. 6ff.]. But these fragments, like the hymns in Luke's Gospel (*Magnificat* 1[46ff.], *Benedictus* 1[68ff.], *Nunc Dimittis* 2[29ff.], *Gloria* 2[14] [cf. 19[38]]) show clear dependence upon the OT patterns. In their form, too, they follow the Semitic rhythm and not the Greek prosody. The same may be said of the eleven psalms of repentance in the *Pistis Sophia* which are modelled on the Biblical psalms. The Greek form was first brought into Christianity by the heads of Gnostic schools who were possessed of literary culture. The Muratorian Fragment mentions Marcionite and Basilidian psalms. The Naassene hymn in Hippolytus, v. 10, already possesses the Greek form, as does also the hymn to Christ in Clemens Alex. (*Paed.* iii. 12 fin.). The hymns of the Syrian Bardesanes and his son Harmonius were famous, and it was to repress them that Ephraim wrote others. At the same time, Ambrose in the West laid the foundation of Latin hymnology. The poems of Gregory of Nazianzus and Synesius are not much concerned with congregational worship. At this time, however, a tendency made itself felt in the Church to have the congregational praise restricted to the Canonical Psalter (which included, in addition to the 150 [151] Psalms, the 9 [10] *ᾠδαί, cantica*: Ex 15, Dt 32, 1 S 2, Hab 3, Jon 2, Dn 3 [Apoc], Lk 1, 2, as they are gathered together in Codex A and in a great number of subsequent MSS and liturgies) in order to counteract the attempts of heretics (Arians, Apollinarists, etc.) to misuse the Church hymns for their own special ends (see Conc. Laod. 363 [?], Can. 59: *ὅτι οὐ δεῖ ἰδιωτικοὺς ψαλμοὺς λέγεσθαι ἐν τῇ ἐκκλησίᾳ οὐδὲ ἀκανόνιστα βιβλία*; cf. Theodoret, *HE* ii. 24 [19], iii. 10 [6], iv. 22 [19]). The *Apost. Constit.* (ii. 57) require the singing of the Davidic psalms between the readings from Scripture. Two tendencies thus run through the whole history of Church praise. The more severe of these adheres to the Biblical psalms. They formed the basis of mediæval worship, and still hold the chief place with Roman Catholics and Anglicans. In the strictly Calvinistic Churches they were in invariable use, though in paraphrastic versions. On the other hand, the Church has never ceased to produce poetry. Influenced by the Syrians, Romanus brought hymns to the Greeks in the 6th century. John of Damascus put in place of such free compositions the more correct and formal Canon, which is still used by all the Oriental Churches, Greek and Slavonic. In the West, from the time of Ambrose down to the end of the Middle Ages, there was an unbroken line of hymn-writers, and soon alongside of the Latin hymns of the Church others in the popular speech were abundant. In Germany these were specially numerous, and the Reformation introduced a new and powerful stimulus. By their paraphrases of what was ancient and their new compositions, Luther, Paul Gerhardt, and many others have supplied us with the highest that is possible in the strong and fervent expression of Christian faith and pious feeling. Here the Biblical psalm is found usually in the form of the motet, which is sung by the choir as an addition to the congregational praise. From the very beginning the Lutheran Churches have devoted special attention to praise, and thereby not only has the Roman Catholic Church been roused to new activity, but the later Calvinistic Church has been induced to permit, alongside of the Psalms, hymns which in the meantime displace the old psalms more and more. In view of what has been said about the ancient Church, it is certainly not mere chance that in Dissenting circles hymns play such an important part. A pious Moravian legitimizes his opinions by declaring them to 'conform to Scripture and the hymns.'

It has to be said that the distinction between Biblical psalms and Church hymns is in the main a formal one. Often the hymn is nothing but a free poetic rendering of the psalm; cf. *e.g.* Luther's 'Ein feste Burg' with Ps 46 and 'Aus tiefer Not' with Ps 130. The congregation is rightly kept in mind of this by the quotation of the text in the hymn-books. The best and most effective hymns are of this nature, and they show to great advantage when compared with the martyrolatry of Greek and Roman hymns and the sweet emptiness of the hymns belonging to modern sects. Instead of any opposition between Biblical psalms and Church hymns, it is, in fact, more correct to speak of the direct and indirect effect of Biblical hymns upon Christian worship, and it will be found impossible to rate either too highly.

5. Biblical symbolism.—It was not only the spoken word that was Biblical. The whole service was intended to bear a Biblical stamp. This, it is true, involved a great danger. The NT has little to say on the subject of worship; the OT has a great deal. This being so, it soon happened that in the Christian service analogies were discovered with the OT priestly and sacrificial system, and the service was thus lowered to a pre- and sub-Christian level. We find the fullest expression of this in Cyril of Alexandria, whose work on worship in spirit and in truth is just an allegorical transference to Christianity of the OT sacrificial laws. The later Greek Mystagogy (Theodore of Andida, 11th cent.) made an endeavour to carry through the idea of a parallelism between the history of salvation (especially the life of Jesus) and the liturgy. In the West, Isidore of Seville (†636), in his *de Officiis ecclesiasticis*, set the precedent of justifying all Church usages by the Bible (cf. Rabanus Maurus, *de Clericorum institutione, de Ecclesiastica disciplina*; Walafrid Strabo, *de Exordiis et incrementis rerum eccles.*; Wilh. Durandus, *Rationale divinorum officiorum*; Honorius of Autun, *Sacramentarium*).

We do not know how far these interpretations of Divine service, written for the instruction of the clergy, found their way among the people, but from the walls of the church the Bible stories and ideas shone down even upon the unlearned, in beautiful pictures. The large wall-spaces of the ancient Christian basilicas (*e.g.* Santa Maria Maggiore) formed early picture-books of this kind. In the East an extremely complicated system of decorating church-interiors was established, partly in brilliant mosaic (Hagia Sophia, San Marco, Capella Palatina at Palermo), partly in varied colours (cave-churches of Cappadocia, the monasteries on Athos). The Roman churches of the West were also, as a rule, richly decorated. Gothic art resolved those picture-cycles into a system of statues, into groups of sculpture. The Renaissance baroco and rococo returned to coloured decorations, though the original educative purpose now disappeared behind the artistic idea of ornamentation. The Biblical stories had occasionally to yield to the accessory of lovely landscape (as in Poussin's pictures in S. Pietro ai Monti in Rome). According to the principles of the newer art, the understanding of the pious beholder can no longer be helped, as was formerly the case, by inscriptions. So far as Lutheran Protestantism is concerned, the pictures which decorate the panels of the galleries in churches are only by way of ornament. They are far too small to be effective. Lately, Ed. von Gebhardt has endeavoured with great success to decorate the Friedenskirche at Düsseldorf with large and effective Gospel designs. Calvinism rejects entirely, or rather forbids, every kind of pictorial ornamentation. Instead, it makes some Biblical text in large letters speak from the wall to the assembled congregation. In the 17th cent., when the Graf von Dohna, till then a Lutheran, turned Calvinist, the family tombstone at the church of Mohrungen (Prussia), which was ornamented with a representation of the Holy Trinity, was whitened and inscribed with verses from the Bible. Calvinism has also in some cases made the reading of the Bible take the place of organ music. The liturgy begins with the recitation of the Decalogue. In this domain it is the Bible—in somewhat legal fashion indeed—that rules the whole Divine service.

Denkmäler*, vi., 1908.

VI. *THE BIBLE IN PRIVATE USE.*—1. The Bible in the Christian home.—The Bible was not only a book to be used by learned theologians or for liturgical purposes. From the first and always it aimed at being the devotional book of every Christian. That was its special end and value. At the time of Jesus the Jews had the OT, and, as Wellhausen says, 'Die Bibel war die Fibel,' 'The Bible was the first reading-book.' Timothy knew the Holy Scriptures 'from a child' (2 Ti 3^{15}). Some of the books of the NT were written as aids to private devotion (Lk 1^{1-4}). The passage 2 Ti 3^{16} applies not only to the public but also to the private use of the Bible. It is probable that in the early period many Christians were limited to the public reading of the Bible, as they possessed no books of their own. In the opinion of the present writer, however, the number of Bibles to be found in private houses in the first three centuries has been under-estimated by Prof. C. Bigg (*The Church's Task under the Roman Empire*, 1905, p. 28). Paul presupposes quite a remarkable acquaintance with the OT among the members of his Churches. Polycarp writes to the Church at Philippi (12^{1}): 'Confido enim vos bene exercitatos esse in sacris litteris.' We learn from Tertullian that the reading of the Bible in common was one of the practices of the Christian home, and he urges this fact as an argument against 'mixed' marriages, because in such a case the custom becomes impracticable (*ad Uxorem*, ii. 8). In the *Didascalia of the Apostles* (ch. ii.) Christians are exhorted in the following terms: 'Sit at home and read in the Law, in the Book of Kings and in the Prophets and in the Gospel which is their fulfilment,' while in ch. xxii. the rod of discipline (Pr 13^{24} 19^{18} 23^{13}) is interpreted as the word of God, in which youth must be diligently instructed. Family prayers, as well as those of the Church, are Biblical in character. The morning-prayer makes reference to Lk 2^{14}, the evening-prayer to Ps 113 and Lk $2^{29ff.}$. The grace before meat, preserved in *Const. Apost.* (vii. 49), is drawn from Gn 48^{15}, Ps 136^{25}, 2 Co 9^{8}. The real prayer-book is the Psalter; Christian maidens sit at the distaff and sing about the Divine revelation (Tatian, *Orat.* 33); husband and wife entertain one another with psalms and hymns, and vie with one another as to who shall best sing to God's praise (Tertullian, *ad Uxorem*, ii. 8). On the occasion of Monica's death, when Augustine and his son Adeodatus were overcome by grief, Euodius took the Psalter and intoned the 100th Ps., all present making response (Augustine, *Confess.* ix. 31). All the teachers of the first centuries counted upon this private use of the Scripture, and encouraged it (Justin, *Apol.* 44; Cyprian, *Ep.* i. *ad Donatum*). Pamphilus is said always to have kept copies ready to give to Christians who desired them (Hieronymus, *ad Ruf.* i. 9). The Acts of the Diocletian persecution indicate the extent to which the Christians honoured and defended the Bible as their sacred possession and their dearest treasure. More than one martyr was discovered while reading the Scripture, and brought to account for it, *e.g.*, Euplius of Catana, who read Mt 5^{10} 10^{28} before the judge, and, when asked why he had not obeyed the Emperor's injunction (dated 24th Feb. 303) to deliver up all Bibles, quietly answered: 'Quia Christianus sum et tradere non licebat magisque expedit mori quam tradere' (cf. *Mart. s. Irenae*, and Eusebius, *Mart. Pal.* 8. 4). The reproach which

was made against the Catholics by the Donatists, 'velut traditores in persecutione divinarum scripturarum,' was keenly felt by the former as an attack upon their Christianity. No difference was made later on when the time of Constantine began to see the masses streaming into the Christian Churches, except that exhortations to use the Bible at home were rendered more frequent by the neglect of the custom. Chrysostom assumes that his hearers possess a Bible, in which they can read the text at home; if they do not, he urges them to buy one. In many places a Bible was probably laid out for public use. The lending of sacred books was considered to be pleasing to God. The diligent reading of the Bible took a specially high place among the virtues and merits of holy men and women. The acquaintance which these people had with the Bible was really astonishing. The sermons of the great preachers of the time were composed of Biblical quotations, and preachers counted upon their hearers to take note of and understand them. Pilgrimages to the scenes of sacred story, which at this time were becoming more and more common, added to the knowledge of the Bible a certain knowledge of localities, however superficial and superstitious it may have been. The Aquitanian pilgrim (Silvia or Etheria?) informs us that at each place the pertinent passage of Scripture was read to the pilgrims.

With the collapse of the ancient civilization and the decay of learning, the following centuries, naturally enough, brought a decline in the reading of the Bible. There came times when it was rare to find the art of reading outside the monasteries. Perhaps in the boudoir of a great lady there was still opportunity for the study of the Bible and Virgil. The laity, whether prince or peasant, and even the secular priests, were illiterate. We hear complaints about the meagre acquaintance with the Bible to be found even in the ranks of the clergy. Charlemagne had to insist upon every priest knowing at least the Catechism. Petrus Damiani († 1072) and Æneas Silvio (Pius II., † 1464) complained similarly of the small knowledge which priests possessed as compared with heretics. The Bible exerted only an indirect influence through the medium of preaching, poetry, and pictures, and even that was shared with much other material. It was not till the 12th cent. that the people again began to show a wide interest in the Bible as such. This movement, though viewed with suspicion by the Church, and occasionally violently opposed, continued and increased in intensity and extent in proportion as ecclesiastic theology and piety became dissociated from the Bible. There were circles where Biblicism went so far as to remove from the Bible everything that was not strictly Biblical, as, *e.g.*, the prefaces—a purism to which sometimes even the prologue to the Gospel of Luke (1^{1-4}) was sacrificed. But though the Bible was really the devotional book of these circles (Thomas à Kempis, Geiler of Kaysersberg on *Right Reading of the Bible*), the circles themselves were limited. Only few possessed a Bible, and the attempts to make it accessible to all in the adjoining rooms of churches benefited only individuals, and helped study rather than devotion.

With the aid of the new art of printing the Reformation first made the Bible in reality the people's book. From that point onward one can speak of daily Bible-reading as a Christian duty. Along with the hymn-book and the Catechism, it is the only book that many evangelical Christians know. It is their manual of devotion, and still more their reading-book. The wider circulation of the Bible, which followed the improvements effected upon printing, made its acquirement increasingly easy. At the same time, however, competition increased. Thus we find that, simultaneously with the widest circulation of the Bible which has ever been reached, there is a decline in the pious use of it. Here, however, there is this comfort to be laid to heart, that where it is read a really pious desire is the motive. Many German Bibles are wisely prefaced by A. H. Francke's fine 'Kurzer Unterricht, wie man die h. Schrift zu seiner wahren Erbauung lesen solle.' Then also the emphasizing of the supreme verses of Scripture by special type, which we find in many Bibles, is significant. These are the utterances in which the *testimonium Spiritus Sancti internum* ever reveals itself in experience, in which the troubled soul finds richest consolation, inspiration, and strength. We find this illustrated in an old family Bible mentioned by Hesselbacher. It was underlined in the 18th cent. by his great-grandfather in four different colours. 'What touched the sin of my heart:—Black. What inspired me to good:—Blue. What comforted me in sorrow:—Red. What promised me the grace of God in eternity:—Gold' (cf. with this the Gospels mentioned above, p. 583b, belonging to the 14th cent. and written in four colours of ink, in order to see the difference between the objective treatment of the Bible by the Catholics and its subjective treatment by the Evangelicals, who always kept in view the thirst of their own sinful hearts for comfort). Naturally, we have no documentary evidence of the reading of the Bible in families or in retirement. An unusually favourable opportunity is afforded in the letters of Bismarck to his wife, from which we learn that the Bible was read daily by one of the greatest statesmen, one, too, who was certainly no pietist. Naturally, in biographies and memoirs there is little said of the devotional reading of the Bible in the quiet closet or in the small family-circle; it is taken for granted or considered immaterial. All true effect of Bible-reading takes place in secret. So far as it is possible to observe, it would seem that the desire for God's word and the eternal truth which the Bible contains is again on the increase (A. W. Robinson, *Co-operation with God*, 1908, 114).

LITERATURE.—Bartlett and Peters, *The Bible for Home and School*, 1898; C. G. Montefiore, *The Bible for Home Reading*, 1896, 1899.

2. Bible-reading by the laity.—In the ancient Church every Christian could obtain access to the Bible, and exhortations to read it were general. The idea characteristic of late Judaism, that certain Scriptures were to be confined to a select circle, is to be found only in the pseudo-Clementine Homilies—a fact which is to be connected with the sectarianisms of Jewish Christianity and esoteric literature. Elsewhere the warning is limited to the reading of heretical works (Cyril of Jerusalem, *Catech.* iv. 33). The sacred Scriptures included those which were for use in church and those which were for private devotional use (cf. Murat. Canon. on the *Shepherd* of Hermas). But the canonical Scriptures were to be within everybody's reach. Athanasius reproaches heretics with preventing people from reading the Bible. Chrysostom combats the idea prevalent among the laity that the reading of the Bible was a thing for the clergy and monks. Later on this giving up of the Bible on the part of the laity led to its being withdrawn altogether, exactly as in the case of the communion cup. There came a time when laymen could not read, and when they had again learned the art they were not allowed to read the Bible. This was part of the mediæval system of keeping the laity in dependence upon ecclesiastical authority, and was based upon the idea of the unfathomableness of the mysteries which the Scripture contained. The traditional exegesis of the Church was the only means of reaching these, and the laity, left to themselves, always

wandered from the track. As a matter of fact, where Bible study was fostered in lay circles, there was to be found, as a rule, an anti-hierarchical, anti-clerical, sectarian tendency. It was believed that, in the Bible-reading conventicles of South France and Lorraine, Albigensian and Catharist tendencies were to be observed. Thus Innocent III. wrote to the Bishop of Metz that conventicles of the laity for the purpose of reading the Bible were to be suppressed. The study of the Bible was to be encouraged, but theological training was necessary: the *profunditas* of the sacred Scripture was so great that even scholars could not quite understand it; the *arcana fidei* were not for every man. Ex 19[12] was the passage which was founded upon in this connexion: the beast that touched Mount Sinai was to be stoned. Of course this did not amount to a general prohibition of the reading of Scripture by the laity, but it bore a close resemblance to it, and without doubt the tendency gained ground. Against the Bible in the popular tongue especially, a continual, though sometimes veiled, and certainly unsuccessful war was waged. Where the Church had no patience with these conventicles, people were driven into the arms of the sectaries, because it was these—especially Albigensians, Waldensians, Wyclifites, and Hussites—who gave the laity free access to the Bible and a free field for its exegesis, which developed in increasingly acute form upon anti-papal, anti-ecclesiastical lines. This made the Church all the more anxious to keep its members apart from the movement. Soon it came to be that the reading of the Bible brought people under the suspicion of heresy. The decrees passed by Councils of the 13th and 14th centuries against the reading of the Bible by Waldensians, Wyclifites, Beghards, and Beguines were followed by occasional local prohibitions like that of Archbishop Berthold of Mainz (1485). This caused printers of the Bible not perhaps to suspend operations, but to omit their names from their work. In the period prior to the Council of Trent, therefore, we cannot speak of any general prohibition of the Bible. It was a time of unreadiness and confusion, when mystic piety contended with ecclesiasticism for the supremacy.

The crisis was brought about even in Catholicism by the Reformation, which successfully established the unconditional right of every layman to the Bible. It rested upon the *perspicuitas*, that is to say, the intelligibility of the Scripture to the ordinary pious mind—the victory of the devotional use of the Bible over the theological—and compelled Catholicism to take up a more definite attitude to the whole question. In England the first endeavour to spread the gospel brought about a persecution which recalled the time of Diocletian. The Council of Trent (Sess. iv. *Decr. de editione et usu sacrorum librorum*) decreed, *ad coercenda petulantia ingenia*, that the exposition of Holy Scripture was to be guided by ecclesiastical tradition or the *unanimis consensus patrum* (cf. Conc. Vatic., Sess. iii. *Const. de fide*, c. 2). Resting on this decree, the Pope announced that only Bibles containing annotations approved by the Church could be published, and their use was dependent upon the special permission of the *parochus*, or the bishop of the diocese. Practically this was almost the withdrawal of the Bible. The Protestant Bibles were assailed, especially by the Jesuits, as falsified and dangerous to the soul. The same treatment was meted out to the Jansenists, especially in connexion with the translation and exposition of du Quesnell (Clement IX., *Const. Unigenitus*, 1713, *prop.* 79–82). In 1794 Pius VI. condemned *prop.* 67 of the Synod of Pistoja, which stated that the neglect of Bible-reading was innocent only in the case of inability to read, and that this neglect was responsible for the great ignorance in matters of faith. Hardly had the Jesuit order again attained influence when the Bible Societies in Catholic spheres were everywhere suppressed. Leo XII. published an encyclical against them in 1824, and Pius IX., in the syllabus of 1864, § 4, condemned them along with Socialism, Communism, and Secret Societies (*e.g.*, Freemasons) as *ejusmodi pestes*. It is one of the most remarkable indications of an internal change of system that there is at present in Italy a 'Società di San Girolamo' for the spreading of the Gospels among the people, which has a cardinal for its protector, and whose patron Pius X. is said to have been, before he took his place upon the Papal throne.

Within all Protestant Churches the Bible is the assured possession of the laity, and any isolated opposition to it is hopeless. The great necessity now is to emphasize, along with the right to the Bible, the duty of a true use of it in opposition to the contempt in which it is now widely held.

Moulton, *The Modern Reader's Bible*, 1907.

3. The Bible in monasteries and reading-circles.—From the moment when the masses entered the Church, and a distinction came to be drawn between half-Christians and whole-Christians, that is to say, between the secular world on the one hand, and monks, ascetics, and conventuals on the other, Bible-reading among Christians as such decayed, while in ascetic circles, where religion was taken seriously, it increased. Chrysostom was aware of the opinion popularly entertained that the Bible was for priests and monks. As a matter of fact, it was in ascetic circles like those which gathered round Jerome and Rufinus that Bible-reading was most diligently fostered. Melania, *e.g.*, a noble Roman lady who renounced the world entirely, read the whole Bible four times every year, and knew large portions of it by heart. Jerome was quite pestered by the puzzles which his admirers put him from Scripture. Marcella showed intelligence in her queries, and suggested real difficulties; the less gifted Paula adopted more the style of the modern Biblical riddle. The same thing was repeated in the court of Charlemagne, where Alcuin was looked upon as an oracle for the solution of all difficulties. We possess the correspondence of two nuns of the 6th cent., and find it to be entirely composed of passages from Scripture.

In these pious circles the Psalter, as the daily prayer-book, played the chief part. The Egyptian anchorites passed days and nights in reciting psalms which they learned by heart. This was held to be the surest weapon against the temptations of Satan. In the monasteries the *Psalmodia* (chanting of psalms) was regulated (at Studium and St. Maurice chanting never ceased, one choir relieving the other [Acœmetæ]). At the same time, a free field was left to the piety of the individual. It was in the monasteries, too, that the reading of Scripture was most practised. Not only were several services held every day (or were provided for by the regulations), but at meal-times, etc., some book was read aloud. Sometimes it was the Scriptures, sometimes it was legends of the martyrs or lives of the monks. In the early period of the Middle Ages the monasteries were the only places where the Scriptures were to be found. Only there was it known how to use them and communicate them in some degree to the people. The monasteries

were the homes of writing, reading, meditation, and study. In the schools of the various orders we have already seen that Biblical sciences were fostered.

This condition of things was altered by the Reformation, in so far as the distinction between whole- and half-Christian was now done away with. It was impossible, however, to remove the distinction between those who desired with their whole soul to be Christians and those who were Christian only in appearance. With all the emphasis which it laid upon the right and the duty of all Christians to read the Bible, Protestantism also possessed small circles of particularly zealous friends of the Bible. Just as these circles occur here and there in modern Catholicism, often in connexion with some monastery, *e.g.* Port Royal, so in Protestantism the influence of Pietism made itself felt. The necessary impulse was given by the *pia desideria* of Spener, who thus came into line with the work of his opponent, Carpzow, in Leipzig. Thus there originated 'Collegia Philobiblica.' At the outset these combined the features of the exegetical lecture and the devotional meeting, as was also the case with the Zürich 'Prophecy'; but afterwards the strictly scientific lecture of the university became more and more separated from the devotional meeting of the Church. The latter frequently stood in a sort of opposition to the Church service, as in the case of the Lay-preachers of Württemberg and the Stundists of Russia; but it found acceptance outside the strictly pietistic circles, and came to be a regular part of Church life in the shape of a week-day service. The more strongly pietistic circles possess reading-circles of their own, as well as Bible-classes for students and schoolboys. It is here that extraordinary achievements in the way of continuous Bible-reading are accomplished. It reminds us of what we are told about ascetics in the ancient Church, when we hear that the whole Bible from Gn 1^1 to Rev 22^{21} was read through several times in one year (A. H. Francke is said to have read the Hebrew OT seven times in one year). The tables of lessons which are published by many societies (*e.g.*, the Prussian Bible Society) distribute the material of the Bible over a year, not in continuous portions, but in selected passages.

LITERATURE.—Falk, *Bibel am Ausgange des Mittelalters*, 56 ff.

4. Substitutes and favourite passages.—It was not always in its complete form that the Bible was in use. The substitutes which existed alongside of it were of great importance, and in the Middle Ages exerted a greater influence than the immediate use of the Bible. There were the select passages for Sunday in the so-called Plenaries, Postils, and Books of the Gospels and the Epistles. These were intended to be used not only in the services of the Church, but also, as is shown by the MSS and copies printed in the popular tongue, in private devotions, partly at least to explain the reading of the Bible in the Church service. There were also excerpts from the Bible in the form of Bible histories (*Bible historiale*, 'History-Bible'). These were characterized by the almost complete absence of the more important Didactic Books, the Prophets, and the Apostolical Epistles. Then also there were rhymed Bibles, containing the same material, but in verse, which, though not by any means good, was easy to remember. To these must be added the picture-Bibles, with their short descriptive paragraphs, including the so-called *Biblia Pauperum* ('Bible of the Poor'), which contained from 24 to 48 woodcuts illustrating the most important events in the OT and the NT in harmony. Lastly, there was the *Ars Memorandi*, where the contents of the four Gospels were suggested in rebus fashion. Towards the end of the Middle Ages these were widely circulated instead of the Bible, not only because the great majority of the people were still too ignorant to read the Bible, and because the Church did not wish them to do so, but also because the piety of the age took more delight in the marvellous stories which the Bible contained than in the hard fare of the Prophets and the Epistles of Paul. Even for the Psalms a substitute existed in the *Psalterium Puerorum*, a collection of certain Psalms much employed in Divine service, and of other important features in Christian instruction, *e.g.* the Lord's Prayer and the Creed.

The Reformation demanded that the whole Bible should be given to the people and made free to everybody. Some difference of attitude, however, can be observed in the two Protestant Confessions. In Lutheranism the Catechism, with Biblical notes, took the place of the Bible to a large extent both in private use and in ecclesiastical teaching, while Calvinism adhered to the Bible itself. At the same time, the mediæval substitutes continued in use, especially in schools, where Bible-history formed the foundation of the entire education, as it will probably do for long, in spite of recent attacks. The efforts which are now made to give a due place to the Prophets and the Apostles, as well as the Historical Books, are significant and deserving of success. On the other hand, the desire for a school- and home-Bible that shall be intermediate between Bible and Bible-history is to be looked on with suspicion, both from the educational and from the ecclesiastical point of view.

The pious Bible-reader of the old school read the whole Bible as the word of God. But it may be observed that various parts of the Bible produce various effects, according to the period and the people. In the ancient Church and the Middle Ages, Paul is little understood and valued, and yet Pauline reactions mark the critical epochs both in theology and in the Church. Mysticism adheres either to the Song of Songs or to John. The Spiritualists who broke with the Church, the fanatics of the Reformation period, and many sects of modern Protestantism, build almost entirely upon the Revelation of John. In the later Middle Ages there were wide circles where the historical parts of the Bible were the only parts known, and even these only indirectly, through the so-called history-Bibles—that is to say, Scripture excerpts, with many legendary additions from extra-Biblical sources. The Didactic portions, the Prophets and the Apostolic Epistles, had to be re-discovered. The 'Enlightenment' laid supreme value upon the moralizing Wisdom-literature. As has been recently noted, Frederick the Great's favourite book was Ecclesiastes. Of the Gospels, Luke's edifying narrative has enjoyed the greatest vogue among pious readers, while speculative theology (*e.g.*, Schleiermacher's school) prefers John, and the historical school abides by Mark. Modern socialistic tendencies, again, do honour to the Epistle of James, which Luther once very wrongly threw into the fire as an 'epistle of straw.' Speaking generally, interest in the Bible, which under the influence of materialism and naturalism was reduced to a very low ebb at the close of the 19th cent., has again happily revived. The chief motive is the æsthetic one. Pearls of Biblical poetry are selected for books of wisdom and beauty (Freiherr von Grotthus). Works on the beauty of the Bible (A. Wünsche, 1906) and on the poetry of Christ's gospel (O. Frommel, 1906) find a grateful public. Modern investigation and criticism of the Bible are beginning to create interest (Schiele's *Religionsgeschichtl. Volksbücher*, and the more conservative *Biblische Zeit- und Streitfragen*, by Kropatschek). More and more space is being given to Biblical

material in popular collections, which are meant to provide a general culture (Goeschen's *Sammlung*, Teubner's *Aus Natur und Geisteswelt*, etc.). As the inevitable result of this, the religious interest in the Bible must receive a powerful stimulus, and Christian consciousness become re-awakened.

5. **The Bible and the Classics.**—The Bible satisfies Christian piety, but it nevertheless has its place in history as a link in a long process of civilization. This fact explains the speedy development of two tendencies. On the one hand, there were those who placed the Bible, the book of Christian devotion, side by side with universal literature. In their opinion, both were possessed of rights, and the Bible was in alliance with culture. On the other hand, there were Biblicists pure and simple. These condemned all reading of profane (*i.e.* heathen) literature as un-Christian, and put on a level with the Bible only the devotional Christian literature of a distinct ascetic colour. This was the view entertained in ascetic and monastic circles. Even in the ancient Church we meet with it in Syria, the home of ascetic tendencies. The *Didascalia* of the Apostles, *e.g.*, ch. ii., contains the following exhortation:

'Keep away from the books of the heathen. What hast thou to do with the strange words, the laws, and the lying prophecies which tempt young people from the faith? What fault hast thou to find with the word of God that thou stayest thyself upon heathen fables? Wilt thou read history? thou hast the Book of Kings; wise men and philosophers? then thou hast the Prophets, in whom thou wilt find more wisdom and knowledge than in the wise men and philosophers, because theirs are the words of God, who alone is wise; dost thou wish songs? then thou hast the Psalms of David; an explanation of the world? then thou hast Genesis, by the great Moses; laws and commandments? thou hast the Divine law in Exodus. Keep entirely away from all strange things which are in opposition to these.'

Later we find the same way of thinking in the monastic circles of Syria and Egypt, although it is to the everlasting credit of Syrian Nestorians that they communicated the Greek philosophy—Aristotle and his commentators—to the Arabs, from whom they were taken over again by Christians in the West. There is a typical presentation of this sentiment in the famous dream of Jerome. This master of rhetoric, who prided himself on his classical knowledge, wants the pious Eustochium to believe that he had been thoroughly chastised in the night-time for his admiration of Plautus and Cicero, and compelled to give up the Classics (*Ep.* 22)—a delicate little piece of rhetoric that quite gives its author the lie. This renunciation on the part of Jerome was not to be taken seriously. Later he insisted strongly that in education there should be a union of Christian and general culture, of the Bible and the Classics. But his fiction produced its effect, and in many a cloister-cell during the Middle Ages the dream was actualized.

It is true that the Greek theologians, and also the monastics, among whom were Basil and Theodore of Studium, etc., never quite gave up the idea of a union of classic beauty of form with Biblical content. Thus the Alexandrian Clement and Origen were steeped in Greek philosophy. Clement quotes the Bible with remarkable freedom, adopting a Greek style unawares. The same thing can be observed in the whole school of Origen (cf. the thanksgiving speech of Gregory Thaumaturgus). But his opponent Methodius, the Biblical realist, also writes a Christian symposium. Specially noteworthy, because they regulated the succeeding age, were the great orators of the 4th cent., Basil and the two Gregorys, who as young men at Athens had, along with their heathen comrades, familiarized themselves with the whole profane culture. Chrysostom, the pupil of Libanius, believed it his duty to apologize for the rusticity of Biblical Greek: the Apostles were uncultured fishermen, but that only made the miracle which the Holy Ghost effected by them the greater. At the same time, Chrysostom felt the peculiar strength of the Biblical language. He adorned his brilliant orations with Scripture quotations, and so gave them the impressiveness which lifts them above the contemporary speeches of heathen orators, with their hollow phrases. The monastic tendency in the 6th cent. sought to introduce the popular Greek, which resembled more closely the Semitic element in the Bible (John Malalas of Antioch). It would be a valuable service to investigate the influence which the language of the Bible exercised upon the popular legendary literature and Christian revisions of older material like the *Romance* of Alexander. But although monastic circles prided themselves no less on their modesty than on their simplicity of language, classicism, or the union of Christian and Greek culture, was always maintained in Byzantium, and after short periods of decline it never failed to revive. This was the case after the iconoclastic struggle in the 9th cent., chiefly through the instrumentality of Photius, and also, after the Latin invasion of the 13th cent., through the Palæologi. Arethas, the Archbishop of Cæsarea († *c.* 932), wrote a commentary on the Apocalypse, and studied Plato and Lucian diligently. Eustathius, the Homeric commentator, who was afterwards Archbishop of Thessalonica († *c.* 1192), complained bitterly of the want of culture on the part of the monks, who could not appreciate the treasures of the monastic libraries. This classicism was specifically Greek in character, and it was not transmitted by the Byzantines to the Slavonic peoples converted by them.

In the West the development took a somewhat different course. There Jerome and Augustine provided a model of the noble union of Biblical and secular culture. But, just as Jerome sometimes felt that the latter was forbidden fruit, so in the case of Augustine, from the moment when he entered the service of the Church, an increasing Biblical element is found to colour his views and language. Cassiodorus and Boethius were still familiar with pagan culture, but such familiarity soon ceased. What little culture survived the migration of the peoples is monastic and Biblical. At the Court of Charlemagne the first revival of learning occurred. Along with the Bible, Virgil was studied. The Emperor himself was liberal enough to appreciate the value of the German epics. But so early as the time of the monk-emperor, Ludwig the Pious, this disappeared. As a matter of fact, Plautus and Terence were still read even by pious nuns, but Hroswitha of Gandersheim endeavoured to suppress these heathen writers by her Biblical imitations. In the time of the Swabian dynasty there occurred another revival, and after the fall of the Empire (from middle of 13th cent. onwards) the foundation was everywhere laid of a real national secular culture, in opposition to ecclesiastical Latin. This spread from France to England and the German Imperial cities, and in an entirely independent manner it united Biblical and extra-Biblical material. Much more dangerous was the classicism of the Renaissance. In their admiration of the ancient form the Humanists made sport of the ancient religion as they understood it, and

some of them were ashamed of the Biblical element. This led to a strong Biblical reaction, especially in Calvinistic countries, while Lutheranism tried to reach a combination of both tendencies. The 'Enlightenment' confined strict Biblicism to a narrow pietistic circle, while general culture, characterized in some cases by tendencies hostile to religion and the Bible, spread more widely. Here, too, a wholesome reaction can be hoped for only from the perception that the Bible, in its true nature as the supreme book of devotion, can never come into collision with any other means of culture.

LITERATURE.—C. Neumann, *Byzant. Kultur und Renaissancekultur*, 1903; J. E. Sandys, *Hist. of Class. Scholarship*, 3 vols., 1906–08; G. Kaufmann, 'Rhetorenschulen und Klosterschulen, oder histor. und christl. Kultur in Gallien während des 5. und 6. Jahrh.,' in Raumer's *Hist. Taschenbuch*, 1869; Zappert, *Virgils Fortleben im Mittelalter*, 1851; Comparetti, *Vergilio nel medio evo*, 1872.

6. Misuse of the Bible.—Our sketch would be incomplete without some mention of the abuse of the Bible by misguided Christian piety. Although the idea that the Bible had fallen from heaven was never entertained, yet the conception of its sanctity had become so strong among the Jews that the roll of the Law was held to be inviolable. A Roman soldier who had seized one of these rolls was executed by the Procurator Cumanus to please the Jews (Josephus, *Ant.* XX. v. 4, *BJ* II. xii. 2). Copies which had grown useless had to be carefully preserved in sacred burying-places made for the purpose (the Genizah at Cairo has yielded a rich harvest of extremely valuable ancient copies of the Bible). This material notion of sacredness, which was familiar both to heathenism and Judaism, was at first quite foreign to Christianity. It soon found its way into the Christian masses, however, and made the Bible, like other sacred things, tabu. Especially was this the case with the book of the Gospels which, along with the Host and the likeness of Christ, speedily came to be one of the most effective guarantees of the presence of Christ Himself and His miraculous power. This was the origin of kissing the book—still an important feature of the liturgies of the East—and also of the double procession, first with the Gospels and afterwards with the Communion elements. The official valuation by the Councils gave to the Gospels, as representative of Christ, the place of honour. In the consecration of a bishop the Gospels were laid upon his head as the means of communicating the Spirit and Christ's indwelling, whereas they were placed in the reader's hand only as the symbol of his ecclesiastical function. They played a similar part in the consecration of the highest grade of Catharists. From the 4th cent. it became the custom to take the oath upon the Gospels, and on these occasions it was usual to turn up the beginning of John. In the Middle Ages we find, along with or in place of the Gospels which represented Christ, relics as representing the saints. The idea here is no higher than that which is embodied in the monastic legend that a Christian who was sorely beset by fleshly lust was enabled to resist temptation by having the Gospels hung upon his neck by a cord. One must beware of spiritualizing this to the extent of making it the psychological effect of reflexion upon the content of the book. It was to the book itself that talismanic virtue was ascribed. The explanation of inserting a finger or 'dipping' in the Bible is similar. The method which the Romans followed with Virgil and other authors whose works were considered inspired and sacred was taken over by Christians and applied to their sacred book (*sortes legere*), and, in spite of the opposition which it met at the beginning from ecclesiastical authority, this method of consulting the oracle about the future was long maintained among the people. We can observe the material view which was entertained of the magical qualities resident in the book, from the practice of writing the answers to the most usual questions on its margin. Such queries could also be answered by means of slips of paper or threads, but when the answers were read out of the Gospels they possessed a greater guarantee of being Divine oracles.

The magical effect of the Bible reached still further into the dark regions of human superstition. There were certain passages of Scripture which were considered specially effective in defence and attack. The Lord's Prayer, inscribed upon a disc of clay found at Megara, was certainly possessed of this significance, just as in ancient and modern times Jesus' letter to Abgar was attached to the doors in order to keep all evil and hurtful influences far away from the house and its members. A sheet of lead inscribed with the 80th Psalm, which Hiller von Gärtringen found in a vineyard on the island of Rhodes, belongs rather to the ancient formulas of malediction, by which evil was supposed to be brought upon some definite person. Chrysostom complained of the superstitious abuse of sayings from the Gospels (*δέλτια, εὐαγγέλια*) which women and children wore round the neck. Augustine relates how the Gospel of John was laid upon the head of those who were ill with fever. Gregory M. sanctioned by word and example what the Church till then contended against as abuse. In the later Middle Ages the only reason why this superstition in regard to the Bible decayed was the keen competition which it had to face in the superstitious valuation of saintly relics.

The Reformation destroyed the material notion of sacredness which lay at the basis of all this error. The bibliolatry which Lessing and others opposed in the time of 'Enlightenment' had nothing in common with this Biblical magic. It was the dogmatic valuation of the Bible as possessed of infallible authority. Evangelical Christians have in the Bible not a book that is to be handled with timidity and awe, but one which is for the intimacy of home and private devotion. Where searching with the finger or 'dipping' in the Bible still exists as a practice in Protestant circles (Pietists and Moravian brethren), it has acquired an inward and spiritual significance. At the same time it has to be said that the practice in Evangelical circles of making the Bible serve for pastimes (*e.g.* Biblical riddles) amounts to excessive familiarity and abuse; the Bible is to be handled not indeed with timidity, but with all due reverence.

LITERATURE.—For the ecclesiastical use of the Gospels see St. Beissel, *Gesch. der Evangelienbücher*, 1906, pp. 1–10, who tries to dissociate this use from every element of superstition; Kayser, 'Gebrauch von Psalmen zur Zauberei,' *ZDMG* xlii., 1888, 456; Hiller von Gärtringen, *SBAW*, 1898, p. 582; N. Wilcken, *APF* i. 430 ff.; Knopf, *Mitt. d. deutsch. archäol. Inst. zu Athen*, xxv., 1900, pp. 313–324; Joh. Ficker, *PRE*[3] i. 469; E. von Dobschütz, *PRE*[3] xviii. 537; E. Nestle, *ZNTW* vii. 96. See also art. BIBLIOLATRY.

VII. *THE BIBLE IN THE LIFE OF THE PEOPLE.*—The Bible is pre-eminently the book of religious devotion, but its operations are not limited thereto. They embrace the whole life of Christendom.

1. Bible and language.—The Bible has exercised great influence on the development of language. Not only have translations of the Bible made literature possible to a whole array of peoples by giving them a written language in the same way as missionary enterprise still does, but in other ways language has been powerfully influenced by the Bible. The Biblical vocabulary supplied Latin, and thence the Romance and German languages, with the terms 'manna,' 'Passover,' 'Sabbath,' 'angel,' 'devil,' 'Paradise,' etc. The Biblical structure

of sentences—loose co-ordination of clauses and *parallelismus membrorum*—has been largely adopted as a model. It may be noted that here three methods are to be distinguished: (1) The conscious imitation of the solemn music of the Prophets, which hardly exists in the ancient period, but of which Lamennais is a modern instance. (2) The allegorical use of Biblical names and expressions—a method specially favoured among the Greeks, who applied the typical names of the Bible to the men of the times (*πάλιν Ἡρωδιὰς μαίνεται*, Chrysostom). Speaking of the bull of Canonization dated 1228, which is composed in this style, Sabatier rightly remarks that one can learn the history of the Philistines, of Samson, and also of Jacob from it better than that of St. Francis. In later times the 'speech of Canaan' has been much adopted in pietistic circles, while it has been abhorred in others. (3) The unconscious absorption of familiar Biblical phrases—the normal and most widely spread form. Not only do the great preachers of the ancient Church and moderns like Bossuet, Schleiermacher, and Spurgeon employ the language of their Bible, but the masters of literature do so also. If Dante is the creator of modern Italian, Luther deserves the same title in regard to modern German, and it was through his translation of the Bible chiefly that his influence was felt. In reading Goethe, one becomes aware of his life-long familiarity with the Bible. The style of many Catholic authors shows that they do not have the same familiarity with it. It is an obvious mistake when Janssen's school attempts to transfer the credit which belongs to Luther to an obscure chronicler of the 13th cent., Eike of Repkow. In English-speaking countries the Authorized Version possessed the same importance. It came too late for Shakespeare, but even he could not have written as he did without the older translations. The best age of French literature has more than a temporal connexion with the Biblical activity of Port Royal. The influence which the Bible has exerted upon literature deserves to receive more attention than it has done in the past. That, however, would require a wider acquaintance with the Bible than most moderns possess. More than any other book, the Bible has contributed to the familiar phrases used by numberless people who know nothing of their origin. It is to be regretted that these phrases are often used in a sense quite false and entirely opposed to their original meaning.

LITERATURE.—R. v. Raumer, *Die Einwirkung des Christentums auf die althochdeutsche Sprache*, 1845; E. Stein von Nordenstein, *Über den Einfluss der Bibel auf deut. Sprache und Litt.* 1856; P. Frédéricq, 'Les Conséquences de l'évangélisation par Rome et par Byzance sur le développement de la langue maternelle des peuples convertis,' in *Bull. de l'acad. roy. de Belg.* 1903; A. S. Cook, *Bibl. Quotations in old Eng. Prose Writers*, 2 vols., 1898 and 1903; C. Wordsworth, *Shakespeare's Knowledge and Use of the Bible*, 1864; C. von Kügelgen, *Die Bibel bei Kant*, 1904; E. Höhne, *Umfang und Art der Bibelbenutzung in Goethe's Faust*, 1906; L. Rosenthal, *Schiller und die Bibel*, 1905; R. de la Broise, *Bossuet et la Bible*, 1890; J. Trénel, *L'ancien test. et la langue française du moyen âge*, 1904; G. Büchmann, *Geflügelte Worte*[21], 1903.

2. Bible and views of the world and human life.—To the language of the Bible must be added the general view which it takes of the world and human life; speech and thought are intimately related. The Bible contains no conception of the universe peculiar to itself. What we find in it is the view entertained by the ancient world, and especially the ancient East. To the early Christians there was nothing strange in this, because their own view resembled it, and where there were differences it was easy to harmonize them. The Scriptures themselves, covering as they did a space of 1000 years, were not at one in this regard. The transition from the Semitic to the Greek method of thought was effected as easily as in the domain of language. Plato and Aristotle were read into the Bible involuntarily. This is shown very clearly by the abundant literature on the *Hexaëmeron*. The Middle Ages looked upon this mixture of old Oriental Biblical ideas and Greek philosophy as authoritative ecclesiastical doctrine. It was surrounded by the nimbus of revelation, and was therefore infallibly true. Every consideration against it and every attempt to account for the world empirically (as Bacon, *e.g.*, demanded) was authoritatively suppressed. The effect of this was felt till within recent times. Luther was so far from seeing how little of the Bible there was in this ecclesiastical theory of the world, that he called Copernicus a fool (*Table-Talk*, Förstemann-Bindseil, iv. 575); the Roman Inquisition compelled Galileo to retract; Kepler encountered great internal and external difficulties in accepting the credibility of the Bible as it was conceived in his time; while Newton combined with the exactitude of his physical theories a Biblicism which we find it difficult to understand. The 'Enlightenment' completed what the Renaissance had begun. It secularized science and emancipated views of the world from all Biblical ecclesiastical authority.

The great discoveries of the 15th cent., the transition from the speculative methods of scholasticism to empirical research, not only in the domain of natural science but also in that of history, brought about an entire change of opinion. The confidence of the 'Enlightenment' and the modern love of truth have brought this clearly to light, and with it the immense gulf between the ordinary and the Biblical view of the world. Here we come upon the leading problem of the Bible for moderns. Can the Bible still possess value when it contains views about the world and man belonging to a stage of human thought now outgrown? That heaven (or the 3 to 7 heavens) arches over this earth, that the stars encircle it, that the earth is surrounded by the great ocean (only the parts bordering on the Mediterranean being then known), that its central point is Jerusalem, that all the peoples on the earth are descended from the three sons of Noah, who was rescued from the Flood, that their languages can be traced back to one single confusion—all these ideas represent only the primitive thought which the Biblical authors shared with their contemporaries in Babylon and Egypt. It cannot be denied that we have ceased to entertain these notions nowadays. But this admission does not by any means overthrow all Biblical authority. What the theology of the last decade has toiled to show and has succeeded in showing is gaining increasing recognition, viz., that the Bible is not a revealed text-book of nature and history, but that God speaks in it to men about the salvation of their souls. To every pious conception of the world and its course as a whole and in detail, the Bible will always be possessed of validity because of the way in which it sees God's hand in everything and teaches people to see God's saving intention in fortune and misfortune, the way in which it places the whole history of mankind under the point of view of an education to the stature of manhood and independence in Christ. In a word, the Bible will always remain the book of pious devotion, and such pious devotion will always be easily able to surmount any difficulties which arise from different conceptions of creation. As in language, a kind of translation is possible. What apologetics must learn, however, is to abandon the desire to justify every Biblical utterance, and after every discovery in natural science and history to begin at once to search about for some statement in the Bible which it confirms. That only leads to confusion where what is needed is clearness. It is true that, so long as men read the Bible, the

Biblical view of the world and human life will remain popular. Without regard to the millions of stars, men will speak of heaven as the Divine dwelling-place and the goal of pious desire, and of the earth as the central point of the Divine plan of salvation with man as its special object. In their thoughts about love and hate, joy and sadness, good and evil, they will speak of the heart and not the brain. But what there must be no doubt about is that these are only poetical forms of speech, which, though fully justified in ordinary life, ought not to be put on the same platform as what is strictly scientific.

Deissmann, *Joh. Kepler und die Bibel*, 1895; L. Günther, *Kepler u. d. Theol.* 1904; L. Keller, 'Bibel, Winkelmass und Zirkel,' *Monatshefte der Comeniusgesellschaft*, 1908.

3. **Bible and law.**—Of greater practical significance is the influence of the Bible upon the life of the people. The adoption of Christianity by the State made it necessary that the revealed book of Divine law should regulate constitutional law. As early as 400 a *Collatio legum Mosaicarum et Romanarum* was prepared (ed. Th. Mommsen, 1890; *Collectio librorum iuris anteiustinianei*, iii.). In most ancient Christian legislations this principle finds expression in the preface. The so-called Syriac-Roman statute-book (ed. by Bruns and Sachau, 1880) affirms that the law of Moses is older than that of all other nations, but declares that, since the time of Christ, the only obligatory law is the law of Christ given through the Christian emperors, Constantine, Theodosius, and Leo. As a matter of fact, this was etiquette more than anything else; for the legislation is drawn almost wholly from Græco-Roman law. The same thing may be observed in the case of German law. Alfred the Great placed the Decalogue in front of his *Laws of England*. The ancient Bavarian and Frisian codes, as well as those of the Swabians and ancient Saxons, contain introductions full of ecclesiastical Biblical ideas. The law itself, however, is national. There are only a few traces of any Christian Biblical influence to be observed. These may perhaps be made out, however, as early as Constantine's legislation. The abolition of branding the face is based upon the Biblical doctrine of the Divine likeness (*C. Th.* ix. 40. 2); the second marriage of a divorced person is punished except when in the first marriage the other partner was guilty of adultery (*C. Th.* iii. 16. 1, cf. Mt $5^{31f.}$); two witnesses are required (*C. Th.* xi. 39. 3, cf. Dt 19^{15}). The influence of Christianity becomes commoner under Theodosius, Leo, and Justinian, whose 'novels' (*i.e.* supplementary laws) refer directly to the *sacrae scripturae* (e.g. *Nov.* clx. 1). The severe language of the OT is echoed in the legislation of Charlemagne; the continually recurring *morte moriatur* of the pitiless Saxon law is Hebraic. Justification was found for the bloody persecution of heretics in the OT condemnations of the disobedient. Demands which were originally made by the Church to safeguard Christian morals were all incorporated in constitutional law under Charlemagne: keeping the Sabbath-day holy, the prohibition of interest, etc. What is still more important for Charlemagne's conception, however, is that the whole theocratic idea was considered to possess immediate significance for the present. He felt himself a modern David, Solomon, Hezekiah, Josiah. This state of things, however, soon gave way under the pressure of the ecclesiastical idea that the State was opposed to God and was to receive recognition only in the service of the Church. The conflict gave birth to the modern State, which takes no interest in ecclesiastical or Bible authority. In Biblicist circles the obligation of the OT, and especially of the commandments of the Gospel, is more and more emphasized. This gave rise to the refusal to take an oath (Mt 5^{34}, Ja 5^{12}) among many sects down even to the Mennonites, while the Church sought to Christianize the oath by furnishing it with the Trinitarian formula and causing it to be sworn on the Gospels, and in the Middle Ages on the relics of saints. It was from the OT that ecclesiastical law derived the prohibition of marriage with a sister-in-law, and from it also Joseph Smith drew the Mormon commandment of polygamy. In a purely legal way the Baptists of the Reformation endeavoured to realize the theocratic idea, as Calvin aimed at training Geneva to be a city of God. The Sabbath commandment still calls for Sunday rest in Calvinistic countries. These genuinely Biblical influences are to be distinguished from those which are due to the century-long effect of Christianity upon the life, the customs, and the legislation of the nations. It is to this latter influence, *e.g.*, that we owe the abolition of slavery—not in the 1st or in the 4th, but in the 13th cent. for N. Europe, and in the 19th for the S. and the New World. With this the Bible had no direct connexion, for in the American Civil War both sides took their stand upon Biblical authority. Here too, however, there was an indirect and educative influence exerted by the Bible upon the moral sympathy and social thought of mankind.

LITERATURE.—Troplong, *De l'influence du christianisme sur le droit civil des Romains*, 1844; C. Schmid, *Die bürgerliche Gesells. in der altröm. Welt und ihre Umgestaltung durch das Christentum*, 1857 (Fr. and Germ.); C. Bigg, *The Church's Task under the Roman Empire*, 1905; C. Ohr, *Der Carolingische Gottesstaat*, Leipzig, 1902; W. E. H. Lecky, *Hist. of European Morals*[12], 1899.

4. **Bible and art.**—Specially interesting is the powerful effect which Biblical *motifs* exercised upon art and through it upon the national consciousness. The Christians of the first centuries adorned with Biblical symbols not only the graves of their dead in the Catacombs, but also the articles which they employed in daily life—lamps, tumblers, etc. Noah in the ark with the dove, Jonah swallowed by the whale or lying under the gourd, Abraham's sacrifice of Isaac, etc., were favourite subjects. At first these scenes were of a purely symbolic nature. The 4th cent. began to show interest in the story, and continuous Bible illustrations are then found in MSS (cf. above, p. 583). But the picture became separated from the text; the illustrations suppressed and took the place of the text. In the famous Joshua-roll in the Vatican, supposed to be a 9th cent. copy of an ancient Christian original, there is a series of scenes with small inscriptions like those upon the Trajan and Marc. Aurelian pillar. Towards the close of the Middle Ages the history-Bible shrank more and more to a picture-book. Great favour was accorded to the *Biblia Pauperum*, a pictorial representation of the Gospel story with its OT types, and occasionally with explanatory notes. Picture-Bibles of this kind without any text, or with at most brief explanations like those which were made by Hans Beham (1537) and Mich. Graff (1536–53), were known occasionally also in the 17th and 18th cents., while the 19th returned again to the complete Bible and illustrated it.

Besides Bible illustration, however, there was the art of painting in general. The long walls of the basilicas were picture-books of Bible-history, and continued so until the end of the Romanesque period (cf. above, p. 606). Gothic art changed the telling of a story into the sculpture of individual figures, and preferred the multitude of ecclesiastical saints to the Biblical characters. Then the Renaissance went back again to Bible-story, and at

this stage it was ancient mythology instead of the legends of the saints that entered into serious competition with the Bible. The Churches were ornamented with stories from the Bible (Giotto's cycle in Padua, Madonna dell' Arena, indicates the beginning; and the culmination is found in the twelve scenes on the walls of the Sistine Chapel by Tintoretto, Botticelli, etc.). Private rooms also contained similar ornamentation, and it was in the *loggie* that Rafael executed his famous Bible in fifty-two pictures. So far as altar-pictures, stained windows, and other ornamentations are fostered in the modern Lutheran Church, the subjects are always drawn from the Bible instead of from favourite stories of the saints, as was the custom earlier.

Besides the sculpture of sarcophagi in the 4th and 5th cents., there is also the stone- and wood-work of the doors of churches (S. Sabina in Rome, S. Ambroggio in Milan). At a later date bronze-castings became usual (baptistery at Florence). The art of weaving was also employed in Bible-illustration. We hear of Biblical scenes not only upon hangings for churches (*vela*), but also upon private draperies (Asterius of Amaseia). In the Middle Ages, besides the rich ecclesiastical vestments, there were embroideries for household use. From the 15th cent. onward the crafts received a stimulus and showed a preference for Biblical material. Painted and inlaid cupboards and presses of the 16th and 17th cents. show whole rows of Biblical pictures, and even the easy-going Rococo period ornamented the toilet tables of its ladies with pictures from sacred history. Nor did this custom, in itself a profanation of the Scripture, cease until the art of the 'empire' began to look for themes in the Classics. The following period made extreme simplicity its goal, while to the eyes of modern naturalism Biblical themes present no attractions. This, however, is not to be deplored, for Biblical art must always be of a pious character.

The number of passages employed for illustration naturally varied very much. In certain branches of art a strict tradition came to be formed. Walls provided scope for more scenes than sarcophagi, and book-illustration made more detail possible. It would be a useful task to investigate systematically the differences which mark the various series of illustrations. Great interest attaches to the scenes which were preferred by individual periods and artists. To some extent it is possible in this way to discover what acquaintance with the Bible different periods possessed, not only in regard to the artists who were dependent frequently upon a pattern, but also in regard to the beholders upon whom the pictures—usually explained by notes—produced their effect.

It must not be overlooked here that the subjects were often drawn not directly from the Bible but from some intermediate source or other. The peculiar choice of scenes which the early period of Christianity made has been connected with their employment in sermons or in prayer. In the Middle Ages, St. Augustine's *de Civitate Dei*, the *Historia scholastica* of Peter Comestor, and the *Speculum historiale* of Vincent of Beauvais provided artists with their Biblical material. This explains the Apocryphal features, the story of Christ ranging from the birth of the Virgin Mary to her ascension and coronation. Not till the advent of Protestantism did the immediate influence of the Bible again assert itself strongly. Then there was a different choice of scenes and a different arrangement of them. Much legendary material was dispensed with, and in its place much that had long been unobserved was utilized. The finest service was here rendered by Rembrandt. As a good Calvinist, he was so familiar with his Bible that he could always find new and unused subjects for his etchings. He could always count, moreover, upon their being understood at once by the public. See ART (Christian), vol. i. p. 855.

Besides the graphic arts, the art of language and tone is also naturally concerned with the word of Scripture. Poetry has found its highest impulses in the Bible. In this field there is much bad rhyming to be met with, and literary recreations like the turning of the Gospels into Homeric and Virgilian centos are common (4th and 5th cent.). There are also the rhymed Bibles of the Middle Ages, and in the later period, influenced by humanism, we find the Christiades and Christeïs. But there are also masterpieces to be included here—the old Anglo-Saxon poetry, the *Heliand*, Milton's *Paradise Lost*, and Klopstock's *Messias*. This is to take no account of the inspiration, the images, and the expressions for which the greatest poets, Walther von der Vogelweide, Dante, Shakespeare, and Goethe, are indebted to the Bible. As a rule, Biblical poetry is epic, but occasionally, and especially in imitations of the Psalms, it is lyrical. The small dramatic element is specially interesting. Not the clumsy Byzantine Χριστὸς πάσχων (about 1100), which lays hands upon the verses of Euripides but despises all stage-craft and probably was never produced, not even the Biblical and legendary compositions with which the pious Hroswitha of Gandersheim († 1001) tried to suppress the comedies of Plautus among the nuns, but the ecclesiastical dramas of the end of the Middle Ages, which, with a gradually increasing and finally almost exclusive participation of the laity, brought the Bible-history to the popular eye and ear simultaneously in the most effective manner possible. Adam's fall, the stories of the patriarchs, and above all the life and bitter sufferings of Jesus, were lived over again by actors and audience, sometimes with the most emotional realism. Mediævalism was naïve enough simply to transfer the story to its own time in matters of costume and background. There was besides, however, a reciprocal action between the ecclesiastical drama and the reports which pilgrims brought about the holy places of Jerusalem.* Here, too, there was an admixture of the Apocryphal element. A complete play (four days) begins with the creation and goes on to the judgment day, following the Church practice rather than the Bible. Only a single instance, the Oberammergau Passion Play, has survived, in a greatly altered form, to our own time. Humanism and the Reformation opposed those plays equally, though from different motives, and when modern dramatic art makes an attempt to bring Biblical material upon the boards, cultivated Christian taste rightly feels it to be a profanation.

Protestantism possesses something which the more ancient period entirely lacked—the Biblical musical composition. The 'Bible sonatas' of Joh. Kuhnau († 1722) may be considered trifling, but the oratorios of Heinr. Schütz († 1672), J. Seb. Bach († 1750), and G. Fr. Händel († 1759) have attained to the most perfect artistic rendering of Biblical material. A distinction is marked by the fact that while a Palestrina felt his task to be the creation of Masses and Requiems, they devoted their attention to Cantatas (Psalms) and Oratorios. And if the Catholics Joseph Haydn († 1809) and H. von Herzogenberg († 1900) joined them, they did it under Protestant influence. When a Passion by Bach, with its moving arias between the recitatives, is compared with the mediæval Passion Play, the same difference meets us which we found in our comparison of the two coloured Bibles (see above, p. 607). In the one

* E. von Dobschütz, *Christusbilder*, 253 ff., 334*.

case, what we find is the objective presentation of history, in the other, the adoption of a subjective relation to it.

5. **Bible and hostile influences.**—The picture would be incomplete were we not to mention, along with the operations of the Bible, the counteractions which proceed from an impious spirit. We are not thinking here of the attacks upon the Bible by the heathen State under Diocletian (see above, VI. 1) or by the ecclesiastical and political hierarchy of the Middle Ages (see VI. 3), but of the opposition to the Bible which characterizes modern 'Enlightenment,' materialism, and socialism. The clever ridicule of a Voltaire, the absurd attacks of a Haeckel, and the vulgar insults of social-democratic literature, it must be said, are not really directed against the Bible as such, but against a false doctrine of the Bible. What has Balaam's ass that spake, or Joshua's sun that stood still—to mention two things most widely assailed—to do with the Sermon on the Mount or the great hymn on love (1 Co 13)? They show that the Bible is not inspired in the old mechanical sense, but that is not maintained any longer by any competent judges. They will not cause any pious reader who heeds God's voice to have any doubt in regard to the *testimonium Spiritus Sancti internum*, which he is always tracing. For the unfortunate antithesis between the Bible and Science, ecclesiastical theology is itself most to blame, for it made the Bible something that it was never meant to be

The chief enemy of the Bible is ignorance of it. Doubts and suspicions do not arise from Bible-reading, but they are communicated from outside to those who are not acquainted with the Bible. Of the whole book these people know only those passages which are attacked by the modern 'Enlightenment.' Consequently they hold it in contempt and even detest it as a hindrance to education and culture. Had they ever experienced any of the comfort and gladness which the pious reader can draw from its pages, they would be of a different opinion. The history of the Bible is an objective proof of its beneficent operation.

LITERATURE.—H. Köhler, *Socialist. Irrlehren von der Entstehung des Christentums*, 1899; H. Meinhof, *Bibl. Schutz- und Trutzbüchlein*, 1895.

In order to rob the Bible of its value, it has been pointed out that other religions make the same claim for their sacred books. That is true only to a limited extent. But the Bible does not need to dispute its position with the book of any other religion. 'This portion of universal literature is the most influential book that ever existed,' says Jülicher (*Introd.* p. 2); and Harnack (*Reden und Aufsätze*, ii. 168) speaks as follows: 'It is enough to reflect upon the Bible as the book of the ancient world, the book of the Middle Ages, and—though not perhaps in the market-place—the book of modern times. Where does Homer stand compared with the Bible? Where the Vedas or the Qur'ān? The Bible is inexhaustible. Each succeeding period has revealed some new aspect of it. The Doctor of Divinity is rightly called Doctor of the Sacred Scriptures. It is upon and round the Bible that all the studies of the theological faculties ultimately concentrate and group themselves. Whenever a single individual—layman or theologian—has been enabled to draw fresh and full out of the Bible and present to others what he has thus obtained, the inward life of Christendom has been raised to a higher level.'

E. VON DOBSCHÜTZ.

BIBLE CHRISTIANS.—See METHODISM.

BIBLIOLATRY.—This term usually means the excessive veneration of a book regarded as being Divinely inspired. The phenomenon is a religious one, and is found in the faiths known as 'book-religions.' It is to be noted, however, that our view of the merits of any given book-religion or sacred book will deeply affect our judgment as to the presence or absence of bibliolatry in that particular case. One who rejects the infallible authority of a certain book will see bibliolatry where another sees no more than a legitimate reverence. Hence, if we would accurately define the term, we must lay down the limits of its exact usage, seeking to determine not merely the qualities that give it a relative and variable applicability, but rather its essential characteristics. For this purpose a preliminary historical survey will be of service; after which we shall seek a more precise definition, and then proceed to a discussion of the causes and consequences of the phenomenon.

1. **Historical survey.**—Nearly all the higher religions are book-religions, *i.e.* their teaching is deposited in a sacred book, which ranks as a Divine revelation. These religions usually have a *clerus*, who regards himself as the official interpreter of the book, and bases his authority upon it, and whose concern it therefore is to have the book recognized as of Divine character. So true is this, indeed, that even where the book is of set purpose given to the people for their private instruction and edification, the *clerus* still remains its accredited interpreter. This is precisely what we might expect, since the homage paid to the book rests upon the authority of the community and of their representative, the *clerus*. This authority, however, commonly involves a perfectly definite doctrine as to the sacred volume—a doctrine which sets forth its unique position in the most express form. In fine, the *clerus* supports the authority of the book, and the book that of the *clerus*; and there are few exceptions to this general rule.

We must, however, bear in mind that no such sacred book is ever a complete whole from the outset, and that the several parts which go to the formation of the Canon are never appraised as absolutely Divine from the first. The truth is, indeed, that the deification of the work is always a later process, as will be shown by the following examples:—

(*a*) The *Vedas* (which, be it remembered, were not committed to writing till long after they had been collected, but were handed down orally from one generation to another by precise and highly elaborate methods) were not regarded by their writers as they are now regarded by the Brāhmans. The Vedic poets compare their work to that of the weaver or the carpenter. Their hymns are 'shapen in the heart, brought forth by the mouth,' or they are inspired by the Soma-cup. But at a later period they are looked upon as of Divine origin; the gods themselves are the authors. The poems are collected, and form a sacred code, declared to be infallible. Their authority, in the period of the Sūtras, is pitted against all gainsaying. Only the systems which recognize their authority are reckoned orthodox. The infallibility, the divinity, the eternity of the Vedas become dogmas. 'The immortal Veda embraces all created things'; so speaks the Law-book of Manu. The Brāhmans base their own authority upon the eternal Veda, and such support can be dispensed with only by those who, in virtue of a direct intuition, have become one with Brahma. This development is all the more striking in view of the fact that Brāhmanism looks upon no historical personality as its founder, around whom or whose apostles a sacred literature might have gathered.

(*b*) In *Buddhism* also there has grown up a sacred literature, though Buddha himself left behind him no legacy of written words. The sayings of Buddha, however, have been garnered in one division of the Tripiṭaka, though, of course, the authenticity of these cannot be vouched for in detail. But reverence

for a sacred book holds no such place in Buddhism as it does in Brāhmanism. In point of fact, it is admitted that Buddha did not reveal everything to his disciples: the Mahāyāna doctrine is said to have been taken from the breasts of the serpents which listened to his discourses; while, again, verses flash upon the minds of his disciples, notably Vangisa, by inner illumination. Hence it is maintained that that alone which is at one with reason can be the teaching of Buddha. Did Buddha himself not say that he had turned the wheel of doctrine in various ways, now rightly and now wrongly? Buddhism, in fact, lays too much stress on individual knowledge to be susceptible of a genuine bibliolatry; every man must for himself tread the path which Buddha trod. But the reverence subsequently accorded to Buddha as a deity doubtless opened the way to a species of bibliolatry, particularly when his followers became bent upon tracing back to him every detail of ordinance and doctrine; and the fact that the sacred writings of Buddhism became a nucleus for the accretion of endless commentaries shows again the importance of these writings for *clerus* and community alike.

(*c*) In *Parsiism* the law of Zarathushtra plays a great rôle. This religion, being of a more pragmatic type than the foregoing, bears a markedly authoritative character. He who would champion the cause of Ahura Mazda must stringently keep the law of Zarathushtra. This quite accords with the fact that the sacred word is regarded as the soul of the holy spirit, the holy *fravashi* of Ahura Mazda; that this word expresses itself in sacred formulas; that, in particular, such a formula is found in the *Ahuna-Vairya*, a prayer corresponding to the Buddhist's *Om mani padme om;* that generally the ceremonies are considered as of the utmost importance; and, above all, that the sacred book, the Avesta, is still acknowledged as a Divine revelation, even by the reforming party in Parsiism, though its language is now scarcely understood. The guardians of the tradition and of the authority of the revealed word are the priests, while the dogma of the Divine character of the sacred writings vested with authority the Atharvans, or priests of the later Avesta, as being the interpreters thereof.

(*d, e*) The two great Semitic religions, Judaism and Muhammadanism, have developed a bibliolatry in keeping with their authoritative character. The prophets of *Judaism* regarded their utterances as Divine oracles—a view which, however, did not exclude a certain elaboration of what they had experienced in the ecstatic state. The various writings show extensive traces of redaction. The Canon was of gradual formation. A beginning was made by the people pledging themselves upon oath to the acceptance of Deuteronomy; a further step was the obligation to observe the Torah of Ezra. The lower limit for the production of canonical books was the period of Ezra, although the collection of these works was made in three stages, viz. first, the Torah, in Ezra's own day; then the Prophets, about the middle of the 3rd cent. B.C.; finally, the Hagiographa, the strictures upon which, however, had not been silenced even at the beginning of the Christian era. At length, after the doubts regarding certain antilegomena had been set at rest by the Synod of Jamnia (A.D. 90) and Rabbi 'Akiba, all the books of the Canon were recognized by the Mishna (*c.* 200 A.D.). The traditional Heb. text is the Massoretic, as it existed in the reign of Hadrian, and its vocalization represents the pronunciation current at that time, while the actual vowel signs date from cents. 7–9 A.D. The Alexandrian version of the LXX had come by the time of Christ to enjoy such a repute that the OT quotations in the NT, as well as in Josephus and Philo, are taken from it. After the destruction of Jerusalem, however, the Jews in their growing exclusiveness began to rank the LXX as no better than Aaron's golden calf, mainly because the Church appealed to it in controversies with the Synagogue. In fact, the Jewish Canon of 'Akiba stood in such favour that arguments were founded upon its letters, and the minutiæ of its text were reckoned all-important. This reverence for the text was on all-fours with the theory of inspiration of which Philo is the most outstanding representative, viz., that the OT scriptures are the immediate product of the Spirit of God. Readers will not need to be reminded that in the Christian Church, particularly in Protestant orthodoxy, the Massoretic text, embracing even the vocalization, was regarded as plenarily inspired. Nevertheless, a corrective was furnished by Philo himself in his use of the allegorical method of interpretation, by means of which he could make a patchwork of Greek and Jewish materials without the risk of infringing the Canon—a practice which also found its way into the Church (St. Paul, Origen), while, again, Protestant orthodoxy controlled its exegesis by its Confessions. The first, within the pale of Judaism, to impugn this bibliolatry was Spinoza, in his *Tractatus theologico-politicus*, but it was of course impossible that such a theory of inspiration, extending even to the OT, could be permanently maintained by Protestantism.

In *Muhammadanism* we find an analogous reverence for the Qur'ān. Again, however, this does not represent the original state of things. Muhammad, of course, as a prophet, claimed to have received revelations, which he dictated, and even subjected to later revision. But he set no great store by the form of the revelations, altering it as he thought fit, and holding that the substance should live in men's hearts. Various scattered memoranda were extant at his death. Obbai had begun to gather the fragments together during the prophet's lifetime; Zaid subsequently arranged his literary remains in a corpus which became the basis of the definitive collection made under Othman. Under Abd al-Malik the text was fixed by means of vowel signs. By this time Muhammad's widow, 'A'isha, had announced that the prophet himself, with the assistance of the archangel Gabriel, had collated the Qur'ān with the original text in heaven. The doctrinal theory regarding the book was also a gradual growth. Under the Sasanians it became a civic dogma that the Qur'ān was a thing of time, neither supreme nor final. In opposition to the Mu'tazilites, however, the Mutakallim brought the doctrine of the non-created character of the Qur'ān to the front; while Ash'arī adopted a characteristic mediating position, holding that the heavenly original was from eternity, but distinguishing from it the earthly exemplar as the work of human hands. The Arabian philosophers Avicenna and Averroës differentiate also between the religion of the people and that of the scholar, asserting that it is the task of philosophy to furnish proofs for the faith which speaks in popular metaphor, and that a distinction must be drawn between the external word, which is for the masses, and the inner interpretation, which is for learned men. The doctrine of the Mutakallim eventually prevailed, and the Qur'ān was accepted as Divinely inspired, even to letter and sound, with punctuation and vocalization to boot. One sect of Muhammadans makes tradition co-ordinate with the Qur'ān. Muhammad had explained that in matters regarding which he had given no instructions men must act according to their own judgment. But after his death the need for an authority became clamant, precepts being desired for every detail of life. Accordingly there grew up the *Sunna*, or Tradition, which is said to have embraced the biography and utterances of the prophet. It was compiled by Abu Hurayra, but was received by only one sect, the Sunnis. In any case, it is certain that there arose such a reverence for the written word, the Qur'ān, as extinguished all liberty of thought.

(*f*) Finally, bibliolatry also appears at certain stages in the development of *Christianity*. At first Christianity had no Canon of its own, but simply appropriated that of the OT, which, however, it set in a new light. There sprang up, however, a distinctively Christian literature, which presently came to be used in worship. The story of Jesus, the Gospels, and the lessons read at the Church services formed the beginnings of the Canon. The selection of approved writings, which did not exist before the middle of the 2nd cent., is traditionally said to have been made at the *sedes apostolicæ*. The criterion was that the writings should be of Apostolic authorship, and conform to the Rule of Faith. The common substratum was the Rule of Faith itself, which grew around the Baptismal Formula, and at length appeared as the Apostolicum. How vague as yet were the limits of the Canon, appears from the fact that both Origen and Eusebius still speak of Antilegomena (Rev., James, Jude, 1 Peter, 2 Peter, 2 Jn., 3 Jn.) and accept the *Shepherd* of Hermas. Only at the Council of Laodicea (A.D. 360) was it decreed that none but canonical writings should be read in churches; and Augustine, at the Councils of Carthage (A.D. 393 and 397), was the first to determine the Canon for the Western Church, taking in the OT Apocrypha and Rev., while for the Eastern Church the Canon was fixed by the Trullan Council of A.D. 692, the *Apostolic Canons* being still attached to the NT. It is thus evident that the Canon is a group of writings which was ratified by the Church, and which, moreover, still required to be expounded by tradition, even as tradition had been a factor in the process of compilation. It was the Church that invested the Canon with authority, since it was the Church that laid down the conditions of canonicity. Though inspiration and sufficiency were ascribed to the Scriptures, thus giving them pre-eminence over all other literature, as containing a Divine revelation, yet they were read with the Church's eyes, and the doctrine held regarding them was an ecclesiastical doctrine, a dogma of the Church. Whoever appealed to the authority of Holy Writ, and at the same time took a course of his own, had to avail himself of the allegorical method of interpretation and the theory of the 'manifold sense' of Scripture. But, such courses notwithstanding, the fact remains that, when controversy arose, the word was interpreted on traditional lines, i.e. according to the *regula fidei* and the decisions of the Councils, which were now becoming recognized as infallible—a belief necessarily engendered by the sense of incompatibility between a fixed interpretation and the doctrine of the 'manifold sense.' In reality an infallible Scripture without an infallible interpretation would have been destitute of value. Only with the rise of the Churches of the *Reformation*, however, was the doctrine of Scriptural authority pushed to its final consequences, as the Reformers, following the example of outstanding personalities who lived at the close of the Middle Ages (Wyclif, Hus), and in view of the frequent errors of the Church tradition, and of the fallibility of the Church and its representatives, believed it possible to fall back upon the authority of Scripture alone. In this course they really proceeded upon their personal experience of faith; as we know, Luther himself criticized the Canon with faith as his criterion. But the Lutheran orthodoxy recognized the Canon as something given, and appealed to Scripture as the sole *norma et judex* in all matters of belief, thus surrendering the independent testimony of a living faith and the certitude which springs therefrom. Scripture must now be the basis of religion; man must now find God in it, since the theory of direct intercourse with God has been repudiated. Scripture has become the depository of the Holy Spirit; the *vis intrinseca et efficacia verbi* is the *ultima ratio* of our belief. Whereas, on the Roman Catholic view, the Church, as being in possession of the Holy Spirit, was the trustee of infallibility, in the Reformed Churches, this prerogative is accorded to Scripture. The written word is no less than God incarnate. It is *aliquid Dei; formaliter consideratum*, its place is not among created things at all; so Hollaz: '*male creaturis accensetur.*' Thus there grew around Scripture a group of attributes designed to signify that it was its own guarantee, e.g., *sufficientia, perspicuitas, facultas semet ipsam interpretandi, efficacia.* It is the sole arbiter

in matters of faith. Philo's doctrine of inspiration is thus again to the front. Inspiration was held to be verbal. The authors of Scripture were simply the pens (*calami*) of the Holy Spirit. It implied great naïveness to suppose that Scripture was self-interpreting, whereas, as a matter of fact, in this instance too it was interpreted in the sense of the Confessions.

The theory of the 'manifold sense' had now been abandoned, and the demand was all for grammatico-historical interpretation. But it is obvious that an absolutely infallible Scripture could be of no service without an infallible interpreter, which, according to the theory, should have been found in Scripture itself, but which was in fact sought in dogma. This view still survives, though only in less important communities. Those who desire to possess the Divine in a finite form, immediately present to the senses, who in their religion waive all claim to self-reliance, *i.e.* to personal experience of the indwelling Deity, will always hold with a community that proffers guarantees of salvation, in virtue either of its alleged possession of the Holy Spirit, or of its actual possession of objects which embody the Divine, such as the Host or a sacred book. When the early Protestant dogmatists took their stand upon Scripture alone, they forgot that the corpus of Scripture, the Canon, was a product of the Church, and that only an infallible interpretation of the Canon could make the infallible book infallibly intelligible. As a matter of fact, the logical outcome of the situation was the institution of a *ministerium verbi divini*, an office of the means of grace, the function of which was the proper exposition of the word—the work of the *clerus*.

The Reformed Church also maintained the view of verbal inspiration, but its pre-eminent and distinguishing feature was its doctrine of predestination. Hence the Scripture was for this Church but the infallible document from which men could ascertain the will of God, and in which the will of God was enshrined in all its purity. In this case it is the need of an authority which makes an infallible word necessary. But as the means of grace was not put in place of God, or, more generally, as the distinction between creature and Creator was still upheld, the Scripture was not deified. The Reformed Church was satisfied to see in Scripture the absolutely inerrant revelation of the Divine will, as something to be personally appropriated; but it likewise recognized that Scripture gave no information regarding the election of any particular person. Men must win the conviction of their own election from other sources; such certainty was in fact given by the Holy Spirit. But the claim for the unconditional recognition of Scripture as the expression of the Divine will was still held to be valid. The word is, so to speak, the Divine will *in persona*, in which man must acquiesce. Again, indeed, we see that the absolute infallibility and plenary inspiration of Scripture consort but ill with the principle of inner certainty. If such certainty be a fact, infallibility is superfluous. But if infallibility be necessary, then salvation is unconditionally dependent upon Scripture as the depository of the Divine will, and inner certainty is a chimera. Besides, that the community fixes the Canon is corroborated by the fact that the Reformed Confessions expressly enumerate the several books contained therein; and that scholars interpret in the sense of these Confessions is beyond the need of proof.

Bibliolatry, then, as the foregoing survey shows, is found in book-religions generally. Its essential character consists in the belief that a group of sacred writings is the plenary depository of the Divine Spirit, and that, as such, it is of eternal duration and of superhuman origin; that it transcends all created things, or that, at all events, it possesses the quality of absolute infallibility, being, in fact, the perfect channel of Divine revelation. In the eyes of those who so estimate it, such a book proscribes all criticism, and ranks as the one all-sufficient standard of appeal in questions of belief. We are thus dealing with a conception which is to be defined not quantitatively but qualitatively, *i.e.* which marks out the particular sacred book as possessing qualities absent from all other literature, namely, exclusively Divine authorship, absolute infallibility, immunity from all natural influences in its origin; and hence also its recognition as of unconditional authority, and its supremacy in comparison with all individual judgment. Absolute submission to this sacred book is the obligation of the bibliolater. Outside it there exists no final tribunal in matters of faith. It is all-sufficient, and shares in the sovereign prerogative of God.

2. Causes of bibliolatry.—We would first of all observe that bibliolatry never exists where religion has the character of spontaneity, or where the religious consciousness finds free and natural utterance. But whenever religion loses this spontaneous enthusiastic character, when the Deity is no longer supposed to manifest Himself directly, then, in place of such immediate intercourse with the Divine, there comes into operation the mediating function of the community and of its recognized sacred book. Men begin to feel the need of a guarantee of salvation, of a sacred authority, and this they find in Scripture only when they regard themselves as being, so to speak, yet in their nonage, *i.e.* at that stage of consciousness when man assumes his entire incapacity of making judgments regarding the Divine, and when the individual makes full surrender of his private judgment. The necessary condition for the acceptance of any new revelation is that it must move the souls of men. But it is only after a society has been constituted upon the basis of an accepted revelation that means are employed, in the succeeding generations, to preserve the original message. Accordingly the message is committed to writing, and in its written form is looked upon as the authentic source of the revelation. Now, the less capable people are of personally experiencing the truths thus won, the more eager are they to find guarantees thereof, and such they believe to exist in the inspiration and Divine character of the written word, and not in the actual message, which they could of course verify for themselves. In fact, even when the sacred writings contain such a maxim as 'Prove all things: hold fast that which is good' (1 Th 5^{21}), men still prefer not to 'prove,' but rather to give a blind adherence to the authority of the Divine book. But now, such a course can be justified only upon the assumption that this book is free from all human elements, and thus arises the theory of unconditional inspiration and the act of deification. Wherever we find men holding to a revelation in external and perfect form, we find also the need of infallibly preserving the revelation to all time, *i.e* of a Scripture whose inspiration is absolute, pure, and Divine.

The origin of bibliolatry is therefore in part subjective; it presupposes the complete religious nonage of man, and his need of an absolute authority, as also his lack of such genuine religious emotion as might furnish a personal experience of the Deity. But bibliolatry has likewise an objective source, viz. the belief in an external revelation supposed to be infallibly and unchangeably embodied in Holy Writ.

This explanation, however, does not cover the whole case. Since the seal of sacredness is stamped upon the Scripture not by the individual but by the community, bibliolatry in the event leads the former to recognize his dependence upon the latter; and when the individual assumes his entire incompetence in religious things, he will pin his faith, not to his own understanding, but to that of the expert, *i.e.* the *clerus*. Thus bibliolatry brings us back to the infallibility of the Church, upon which it originally rests, since it is the Church that determines the Canon. Such has been the process in the religions of India as in Muhammadanism, in Judaism as in Christianity. And if the same cannot be said of all, as, *e.g.*, Protestantism, which puts the Bible freely into the people's hands, the exception is but apparent, particularly in professedly orthodox circles, since, for one thing, the sacred book owes its prestige to the Church, which brought its contents together; and for another, the laity are dependent upon the translator; while, finally, orthodoxy holds to the necessity of a *ministerium verbi divini*, an office of the means of grace, by which Scripture shall be interpreted in the sense of the Confessions. The moment, however, that the Bible-worshipping laity casts about for an interpretation of its own, bibliolatry begins to wane, and is seen to be a mere transition stage; the unmethodical exegesis of non-experts reveals

such diversity as convinces even the unprejudiced observer that these interpreters are the victims of a subjectivity which but ill accords with their assumption of the purely Divine nature of Scripture. It thus becomes obvious that bibliolatry either issues in the recognition of an infallible Church, which delimits and interprets the Canon, or, in other words, in the supremacy of the *clerus*, of whose authority the Scripture provides the grand support; or else it disintegrates itself by subjective exegesis, thus losing whatever significance it may have had—a result ever the more certain the more religion is required to meet the needs of the age.

Not only, however, is bibliolatry indicative of a lower stage of the religious consciousness, and in itself untenable, but the very conception of revelation which underlies it is unsound. Were the Deity revealed in a manner which excludes the co-operation of the soul, such revelation would of course be purely objective, free from every human element, especially in the case of its authoritative document being unconditionally inspired. But in religion the chief thing is ever the intercourse of man with God, and a revelation that is truly such must always be some delineation of this intercourse. The conception of the individual soul as entirely outside the current of revelation, leading, as it does, to a belief in verbal inspiration and to bibliolatry, is radically unethical.

3. Consequences of bibliolatry. — The consequence of bibliolatry is that the people upon whom it is laid as an obligation become bound hand and foot to a fixed point of view—a result specially disastrous when the sacred book not only prescribes religious or ceremonial ordinances, but also enacts laws for social and political affairs. Muhammadanism wrecks itself upon the Qur'ān. The Christianity which is tied to a stereotyped interpretation of a supposed infallible book becomes ossified; and the same may be said of a Christianity which would make the Bible the standard for life as a whole, or which in particular cases uses random passages as oracles, thus assuming the individual's incapacity for moral freedom. The existence of innumerable commentaries to the sacred books of all religions is at least partly explained by the desire to find an interpretation which shall be of service to the contemporary generation, or to harmonize the writings with some private point of view. Men have often tried the experiment of combining their recognition of the absolute authority of Scripture with the germs of spiritual freedom; by the device of virtually emancipating themselves from the burden of the book, while preserving their nominal adherence to it by exegetic methods, they have striven to satisfy the demands of progress. Such methods, of course, do scant justice to the requirements of historical veracity. Then the ossification resulting from bibliolatry is sometimes kept in abeyance by dint of associating tradition, especially a *traditio constitutiva*, with Scripture. But in truth both interpretation and tradition are mere palliatives. Only on condition that religion be a living fact, and that the personal element therein be given its full due, and not suppressed, is the escape from bibliolatry sure. For then the venerable documents become but incitations to the personal experience of religion, and are by no means to be accepted without examination. It is impossible that a genuine piety should curb the spontaneity of the individual soul; it should rather animate the same in its various manifestations. Accordingly it is the privilege of the individual to assimilate whatever in the sacred volume answers to his own experience, and at the same time to subject the documents themselves to continuous process of criticism, in order to separate between what is merely temporary therein and their permanent eternal truth.
